Omar (c.581-644), second CALIPH, or ruler of ISLAM, also called Umar. He was converted to Islam in 618 and became a counsellor of Mohammed. He chose the first caliph, ABU BAKAR, in 632 and succeeded him two years later. Under his rule Islam spread by conquest into Syria, Egypt and Persia and the foundations of an administrative empire were laid. Omar was assassinated by a foreign slave.

Omar Khayyám (c.1048-1122), Persian poet, mathematician and astronomer. He received an extensive education, and early in his life wrote a treatise on algebra which so impressed Sultan Jalál ad-Dín that he was asked to reform the calendar. He was a master of philosophy and jurisprudence. His fame in the West is due mainly to a collection of verses attributed to him and which were freely translated by Edward FITZGERALD and published in 1859 as *The Rubáiyát of Omar Khayyám*.

Omayyads. See UMAYYADS.

Ombudsman, official appointed to safeguard citizens' rights by investigating complaints of injustice made against the government or its employees. The office was created in Sweden in 1809; Denmark adopted it in 1954 and Norway in 1962. New Zealand was the first Commonwealth country to appoint an ombudsman, in 1962; the UK followed in 1967 with a Parliamentary Commissioner for Administration. The first US state to appoint an ombudsman was Hawaii, in 1967.

Omdurman (Umm Durmán), city in NW central Sudan, on the White Nile, opposite Khartoum; chief commercial centre of the Sudan. The city served as the military headquarters of the MAHDI during the uprising of 1884; it was captured by the British in 1898. Places of note include the site of the Mahdi's tomb, the Khalifa museum and the university (1912). Industries include furniture, tanning, pottery, textiles, livestock and gum arabic. Pop. (1971) 258,532.

Omega Centauri, GLOBULAR CLUSTER in the southern Constellation of CENTAURUS. The finest example of its type, Omega Centauri is visible to the naked eye as a hazy patch and is resolvable with a small telescope. See also pp.995, 1015, 1020-1021.

Omega Workshops, business enterprise established in 1913 by Roger FRY with Duncan GRANT and Vanessa Bell to explore the application of NEO-IMPRESSIONISM and non-representational

art on designs for furniture, textiles, ceramics and other decorative and applied arts. The workshops opened in July 1913 in Fitzroy Square, London, and retained the services of young artists such as Wyndham LEWIS, Edward Wadsworth, William ROBERTS and Henri GAUDIER-BRZESKA. Their work however failed to make any real impact, and the company went into voluntary liquidation in 1919.

Omen, any phenomenon that can be interpreted as a portent of future events, either good or bad. Common omens in folk-beliefs include changes in weather or the behaviour of animals. See also DIVINATION; SUPERSTITION.

Omnibus. See BUS.

Omnivore, any creature that eats both animal and vegetable foods - two well-known examples are human beings and pigs. Raccoons, badgers and bears are also omnivorous animals, although they are usually classified as CARNIVORES. Omnivorous animals are characterized by having teeth adapted for cutting or tearing and pulping food.

Omsk, city in the Russian Republic (Rossijskaja SFSR) USSR on the Irtysh and Om rivers. Founded as a military town in 1716, it was made the administrative centre of w Siberia in 1824. During the civil war that followed the Russian Revolution of 1917, the city was the headquarters of the counter-revolutionary KOLCHAK government. It is now a major port, and manufactures agricultural machinery and textiles. Pop. (1970) 821,000.

Onager, fast-running animal related to the wild ass, found in semi-desert areas of Iran and India; the "wild ass" mentioned in the Bible (Job 39:5-8). The onager is a dun-coloured animal with a dorsal stripe which reaches the tip of the tail. Height at the shoulder: 0.9-1.5m (2.9-4.9ft). Family Equidae; species *Equus hemionus onager*. See also p.343.

Oncology, in medicine, study of TUMOURS and their effects on the body. See also pp.1062-3, 1072, 1095.

One Day in the Life of Ivan Denisovich (1962), novel by Alexander SOLZHENITSYN. Drawn largely from the personal experience of the author in various Soviet prison camps, the novel deals with one day in the life of a convict in such an institution. In addition to its documentary value, it is a work of considerable artistic merit, written with warmth and compassion.

Onega (Onezskoje), lake in Karelia (Karelian ASSR), in the USSR between Lake Ladoga and the White Sea; second largest lake in Europe. It drains SW through the River Svir to Lake Ladoga, and has numerous inlets and islands along its N shore. The chief port is Petrozavodsk. Area: 9,610 sq km (3,710 sq miles).

O'Neill, Eugene Gladstone (1888-1953), US playwright. His work covers a wide range of subjects and dramatic styles. His first full-length play, *Beyond the Horizon* (1920), won the Pulitzer Prize and in 1936 he won the Nobel Prize in literature. Much of his work is concerned with human tragedy, and he made use of themes from Classical Greek drama, eg his *Mourning Becomes Electra* (1931) is based on the *Oresteia* by Aeschylus.

O'Neill of the Maine, Terence Marne, Baron (1914-), ULSTER UNIONIST politician, who entered the Northern Ireland Parliament in 1946. He held office as Minister of Finance (1956-63) and Prime Minister (1963-69). Considered to be one of the most liberal of Unionists, he favoured increased political and civil rights for the Roman Catholic minority; despite this and increasing prosperity during his premiership, he did not appear to satisfy Roman Catholic grievances and failed to win what he saw as a mandate for moderation in the elections of 1969. He resigned and was created a life peer in 1970. See also p.1781.

Onion, hardy, bulbous, biennial plant of the lily family native to central Asia, and cultivated throughout the world for its large, strong-smelling, edible bulb. It has hollow leaves, white or lilac flowers and is most successfully grown in a dryish, well-drained soil, in a sunny location. Height: to 130cm (50in). Family

Liliaceae; common species *Allium cepa*. **Onnes, Heike Kamerlingh**. See KAMERLINGH-ONNES, HEIKE.

Onsager, Lars (1903-76), US chemist, b.Norway, who was awarded the 1968 Nobel Prize in chemistry for his development of a theory of irreversible chemical reactions. In 1931 he presented an explanation of the motion of IONS in solution which, although it received little attention at the time, has since been called the fourth law of thermodynamics. From this theory Onsager developed a technique for producing uranium-235 (the basic fuel of nuclear reactors) from uranium-238. This technique was put into large-scale operation in 1943 with the first gaseous diffusion plant at Oak Ridge, Tennessee, and remained the primary method for obtaining uranium-235 until the 1960s.

Ontario, province in SE Canada, bounded to the S by four of the Great Lakes - Superior, Huron, Erie and Ontario - and the USA. In the N is the forested CANADIAN SHIELD with its lowlands bordering on Hudson and James bays, and to the E and S are the lowlands of the St Lawrence River and the Great Lakes, where most of the people live and agriculture and industry are concentrated. Ontario is the most productive Canadian province in terms of industrial and agricultural output. Cattle, dairy produce and pigs are of importance to the farming economy. The chief crops are tobacco, maize, wheat and vegetables. The major industries are the manufacture of motor cars and transport equipment, food processing, metallurgy, chemicals, paper, machinery and electrical goods. The region of the Canadian Shield has many mineral deposits, including nickel, copper, iron, zinc, gold, silver and uranium. The major cities are Toronto (the capital), Ottawa (the national capital), Hamilton, Windsor and London.

A number of fur-trading posts were established in the region during the 17th century by French explorers. The area became part of New France, but was ceded to Britain in 1763. The population was expanded by British Loyalists fleeing the American colonies during and after the American War of Independence. Ontario was known as UPPER CANADA until 1841, when it joined with Quebec to form Canada. In 1867 The DOMINION OF CANADA was created and the province of Ontario was established. Area: 1,068,587 sq km (412,582 sq miles). Pop. (1976 est.) 8,300,000. See also p.1997.

Ontario, Lake, smallest of the GREAT LAKES, bounded by New York State, (S and E) and Ontario Province, Canada (S, W and N). Fed chiefly by the Niagara River, the lake is drained to the NE by the St Lawrence River. Part of the ST LAWRENCE SEAWAY, the lake is a busy shipping route, and pollution is a serious problem. The chief Canadian cities on Lake Ontario are Toronto, Hamilton and Kingston; on the US shore are Rochester and Oswego. Area: 19,684 sq km (7,600 sq miles). See also p.761, 761.

On the Origin of Species by Means of Natural Selection (1859), book by Charles DARWIN that describes his theory of EVOLUTION. As the naturalist on HMS *Beagle* (1831-36), Darwin observed that species of plants and animals are not fixed but adapt according to the environment, those adapting to make best use of the environment being the ones which ultimately endure - survival of the fittest. Although Darwin was not the first to suggest an evolutionary theory, he was the first to deny that God caused change by special creation, as proposed by LAMARCK. Because of this, the theory caused great controversy but was so well formulated that eminent scientists, especially T.H. HUXLEY, came forward to defend it and it is now generally accepted. See also pp.186-188.

Ontogeny, the total biological development of an organism, including the embryonic stage, birth, growth, body changes and death.

Ontology, in philosophy, branch of META-PHYSICS that studies the basic nature of things - the essence of "being" itself.

Onychophora, class of about 90 species of worm-like terrestrial invertebrates that live mainly in tropical regions. In evolutionary terms they lie between ANNELED worms and arthropods. They have as many as 44 pairs of legs. Length: to 15.2cm (6in).

Onyx, striped variety of the mineral CHALCEDONY. Black and white onyx is often used for making cameos; white and red forms are called carnelian onyx; white and brown, sardonyx. Most are found in India and South America.

Oolite, egg-shaped crystalline deposit, usually a millimetre or less in diameter, found in DOLOMITE or LIMESTONE. Its centre may be a grain of shell or quartz, which suggests to geologists that oolites grow in oceans or streams by accreting layers of calcium carbonate as they roll about in the turbulent water.

Oostende. See OSTEND.

Oosterhuis, Peter (1948-), British golfer. He won the British youth championship in 1966, and was chosen for the Walker Cup side in 1967 and for the Ryder Cup side in 1971. In 1968 and 1971 he represented England in the WORLD CUP. He was the leading golfer in the European order of merit from 1971 to 1974. He was accepted as a player on the US professional tour in 1975.

Ooze, deep-sea, fine-grained pelagic deposit containing material of more than 30% organic origin, with the rest comprised of clay derived from colloidal matter. Oozes are divided into two main types according to their chief constituents. Calcareous ooze at depths of 2,000 to 3,900m (6,562-12,792ft) contains the skeletons of animals such as foraminifera and pteropods. Siliceous ooze at depths of more than 3,900m contains skeletons of radiolarians and diatoms. See also p.239.

Opal, non-crystalline variety of QUARTZ, found in recent volcanoes, deposits from hot springs and sediments. Usually colourless or white with a rainbow play of colour in gem forms, it is the most valuable of quartz gems. Hardness 5.5-6.5; s.g. 2.0. See also pp.258, 260-261.

Op (Optical) art, US art movement, popular in the mid-1960s, that rejects all signs of representation and insists on non-objectivity. It often incorporates kinetic effects into designs of squares, lines, circles and dots to create optical illusions. Colour, too, is used in a powerful way to give a sense of depth to pictures. In the artist's attempt to generate perceptual response in the viewer, the ultimate effect of the work depends on the viewer's participation. See also pp.1762-1763, 1763.

OPEC (Organization of Petroleum Exporting Countries), established in 1960 by the world's substantial petroleum producers to determine the best means of safeguarding their interests. Its permanent secretariat, financed by members, provides financial and technical assistance as well as co-ordinating price changes. A biennial conference is held to determine policies, prices and related matters affecting petroleum exporting. The 13 members are Abu Dhabi (United Arab Emirates), Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia and Venezuela.

Opencast mining, stripping surface layers from the Earth's crust to obtain coal, ores and other valuable minerals. Since it does not require the sinking of shafts, tunnelling of galleries or underground working, it is less costly than underground mining. Large dragline excavators are employed to strip away surface layers, bulldozers and other mechanical shovels to distribute minerals and spoil, and lorries, railway wagons and overhead skips to carry minerals away for grading and processing. This form of mining is, however, restricted in many countries because of the damage it does to valuable land. Owners of opencast mines in Britain are obliged to restore the amenity value of land by landscaping and replanting after mining has ceased. See also pp.411, 458.

Open clusters, stellar CLUSTERS containing between about 20 and 1,000 stars and lying within our galaxy (the Milky Way),

mostly in its spiral arms. They are composed of stars which appear to have condensed from galactic clouds of the Milky Way, the brightest of which are comparatively young blue stars. See also pp.994-995, 995.

Open Door policy, arrangement allowing all nations equal commercial access to a particular country. Most often associated with China's early relations with the USA, it was first formally proposed in 1899 by US Secretary of State John Hay. It ended in 1949 following the Communist take-over in China.

Open Golf Championship, British, annual championship held at various golf clubs, open to professionals and amateurs. The first championship is usually considered to be the 36-hole, medal-play event held at Prestwick in 1860, won by Willie Park. It is now a 72-hole, medal-play event.

Open-hearth process, method of producing steel in a reverberatory FURNACE fuelled by natural gas or coal gas. Lime and other slag-forming materials such as scrap iron are added to molten pig iron. The furnace is made of refractory materials containing lime and magnesia for removing impurities. See also pp.396-397.

Open shop, employment situation in which a worker is able to choose whether or not to join a trade union; membership of the union is not a condition of employment. See also CLOSED SHOP.

Open University, The, form of British higher education chartered in 1970 as an alternative to conventional university training. Teaching, which started in 1971, is carried out mainly through television and radio broadcasts in co-ordination with specially prepared course material, as well as some personal tuition. It gives full undergraduate degrees in all its faculties: arts, educational studies, mathematics, science, social science and technology. An honours degree is obtained by completing eight course units which a student may complete over a period of several years. In the mid-1970s there were more than 50,000 students enrolled with the Open University.

Opera, stage drama that is sung. Its combination of several elements - acting, singing, orchestral music, set and costume design - makes for spectacular entertainment. Large opera companies have a permanent staff of singers, designers and stagehands, a musical director, conductor and orchestra. International artists are usually engaged for leading roles, and top producers are often hired for specific productions. For these reasons, opera is extremely expensive to stage. Few, if any, of the major companies run at a profit. The best-known opera houses include La Scala (Milan), the Opéra (Paris), Covent Garden (London), the State Opera (Vienna), the Festspiele (Bayreuth) and the Metropolitan Opera (New York).

Opera began in Italy about 1600. The classical style evolved in about 1750 and its greatest exponent was MOZART. Reforms in favour of more dramatic opera were introduced by GLUCK in the late 18th century, and the 19th century was dominated by the work of Giuseppe VERDI and Richard WAGNER. Twentieth-century opera has been marked by a profusion of styles by composers such as Giacomo PUCINI, Richard STRAUSS, Alban BERG and Benjamin BRITTEN. See also pp.1452-1453, 1598-1599.

Opera, soap, melodramatic serial, originally on radio, now also on television. Soap operas, whose abiding theme is the rocky road to love, began in the USA in the 1930s. In their early days they were sponsored by soap manufacturers.

Opera buffa, the style of Italian comic opera that developed in mid-18th-century Naples from comic intermezzi that in turn derived from interludes between the acts of either a spoken drama or OPERA SERIA. Light and simple in style, opera buffa introduced the concerted finale in which the principal singers sang an elaborate finale together. This was soon adopted by opera seria and was of the utmost significance for the subsequent development of opera. Fewer artificial male voices were

used than in opera seria and bass roles became more prominent. An early example of the style is *La Serva Padrona* (1733) by PERGOLESI.

Opéra comique, style of French opera that began in the late 18th century. A precedent of the style may be seen in the comédie-ballets of the mid-17th century composed by LULLY in collaboration with MOLIERE. The hallmarks of opéra comique are a witty plot involving some spoken dialogue, romantic rather than heroic subject matter and simple engaging music. André Grétry and Étienne Méhul were early exponents; other composers included AUBER, Adolphe ADAM and Louis Hérold.

Opera seria, the style of Italian opera in the 17th and early 18th centuries. The form of composition was bound by strict convention. The orthodox number roles were for three women and three men, the principal soprano part being invariably for high soprano and the leading and sometimes second male parts for CASTRATI (the third being sung by a tenor). Priority was given to virtuosic vocal display. The formalism and stylization of such operas prompted the development of OPERA BUFFA and once the latter had become established, composers such as Cimarosa paid equal attention to both styles.

Operation, treatment performed on a person to cure or arrest a disease or to remedy a condition. The most common operations are surgical ones, in which the doctor makes an incision in the patient's body, but strictly speaking any treatment which requires the doctor to use hands (or instruments) on the body is an operation. See also pp.1098-1099.

Operator, in mathematics, any symbol indicating that a particular manipulation is to be carried out to convert one function into another. For example, in calculus the operator D signifies differentiation with respect to x, so that Dy means dy/dx. Further, D can itself be manipulated algebraically: eg since $\int (dy/dx)dx = y$, then $I.Dy = y$, where I is the operator signifying integration.

Operetta, type of light OPERA involving songs, dialogue, dancing and an engaging story. Operettas developed from attempts by composers to reach wider audiences. Among the more significant of these were Johann STRAUSS, Arthur SULLIVAN (in association with William S. GILBERT) and Jacques OFFENBACH.

Operon, group of GENES on a CHROMOSOME comprising structural genes and an operator gene. The structural GENES direct the synthesis of ENZYMES involved in the formation of a cell constituent or the utilization of a nutrient. The operator gene responds to a molecule (called a repressor) and can exist open or closed. When the operator gene is open, the genes it controls are functional, producing PROTEINS. When interacting with the repressor, the operator gene is said to be closed.

Opheide, now obsolete brass wind instrument used in the early 19th century. It had keys (like a saxophone) and produced low notes, but was superseded by the development of the TUBA.

Opheism, beliefs of some Gnostic sects which arose in Syria in the early Christian era. Opheites worshipped the serpent, which they regarded as the symbol of the Godhead. They accepted the divinity of Christ, but denied the saving efficacy of the Crucifixion.

Ophthalmia, inflammation of the eye, either of the eyeball or of the conjunctiva (CONJUNCTIVITIS). It is usually caused by bacterial infection. In such cases the eye is painful and may appear bloodshot; treatment is usually with an eyewash. Much more serious types of ophthalmia are TRACHOMA, widespread in underdeveloped countries, and ophthalmia neonatorum of the newborn.

Ophthalmology, branch of medicine that specializes in the structure, function and diseases of the eye. It includes surgical and other treatment of eye disorders and the correction of defective vision. See also pp.136-137.

Ophthalmometer, instrument devised by

Hermann von HELMOLTZ in the 1850s to measure the curvature of the eye by the images reflected in it. It was later refined to measure the eye's capacity and its refractive irregularities.

Ophthalmoscope, instrument for examining the inner structure of the eye, invented by the German physiologist Hermann von HELMOLTZ in 1851.

Opie, John (1761-1807), British painter, best known for his historical scenes and portraits. His rather uneven style was influenced in its early stage by the work of REMBRANDT; later works were coarser in style. His paintings include *The Peasant's Family* (1784) and *The Murder of Rizzio* (1787).

Opitz, Martin (1597-1639), German poet who greatly influenced 17th-century German literature. In his verse, written during the THIRTY YEARS WAR, he experimented extensively with styles, and in his *Buch von der deutschen Poeterei* (1624) he theorized about the writing of poetry. His adaptation (1638) of Sir Philip SIDNEY's *Arcadia* and his own *Schäferley von der Nymphen Hercynie* introduced the pastoral form to Germany.

Opium, drug derived from the juice of unripe seed-pods of the opium poppy. Its components and derivatives have been used as NARCOTICS and ANALGESICS for many centuries. It produces drowsiness and euphoria and reduces pain. MORPHINE, CODEINE and papaverine are common opium compounds. British merchants were engaged in smuggling opium into China in the 19th century and opium dens flourished there. Attempts by the Chinese government to curtail the trade resulted in the OPIUM WAR. See also pp.1080-1081, 1081, 1091, 1618, 1622.

Opium War (1839-42), hostility between Britain and China over Chinese trade restrictions, especially on the illegal import of opium by Western traders, mainly British. By the Treaty of NANKING (1842) the Chinese were required to pay an indemnity for the cost of the war, forced to cede Hong Kong to the British, to open five ports for British trade and to allow British citizens in China to be tried in British courts. This marked the beginning of the so-called unequal treaties forced on China by the West.

Oporto, port city in NW Portugal, on the River Douro, 3km (2 miles) from its mouth on the Atlantic Ocean. An ancient Roman settlement, it was occupied by the Visigoths 540-716, the Moors 716-997 and taken by Alfonso I of Portugal in 1062. Oporto grew as a wine centre in the 17th century. The port wine is still exported; other products include fruit, cork and olive oil. Pop. (1974 est.) 1,389,800.

Opossum, New World MARSUPIAL animal. Opossums (known as possums in North America) are the only marsupials found outside Australasia. These tough, cat-sized mammals live mainly in trees and are omnivorous. They have silky grey fur (except on the long prehensile tail), and feign death when in danger - hence the expression "playing possum". The common opossum, *Didelphis marsupialis*, grows up to 50cm (20in) long, including a 30cm (12in) tail. Family Didelphidae. The rat opossum (Family Caenolestidae) is found in South America only. See also pp.91, 314.

Oppenheimer, Sir Ernest (1880-1957), South African mining and industrial magnate, b. Germany. Originally a representative of a diamond company, he helped to organize the conquest of German South West Africa in 1914 on the outbreak of WWI. In 1919 he formed the Consolidated Diamond Mines of South West Africa which soon became the dominant force in the world diamond market. In the 1930s he invested in copper mining in Zambia and gold mining in the Orange Free State. He was the member of parliament for Kimberley (1924-38).

Oppenheimer, Julius Robert (1904-67), US theoretical physicist. After early work in nuclear physics at the University of California, he was appointed director (1943-45) of the Los Alamos laboratory in New Mexico, where he was responsible for the construction of the first atomic

Opposition

bomb. In 1949, however, he strongly opposed the construction of the hydrogen bomb and in 1953 was suspended by the Atomic Energy Commission and declared a security risk. He was subsequently reinstated and presented with the Fermi Award for his contribution to science. See also p.574.

Opposition, in astronomy, position on the orbit of a superior planet at which the Sun, the Earth and the planet are in line, with the Earth located between the planet and the Sun. Only superior planets, with larger orbits than that of the Earth, can be in opposition to the Sun, and these may be observed most clearly at this time. See also p.956.

Opposition, Leader of the, the leader of the party which is runner-up in a general election and so does not form the government. As a political office in Britain it developed from the emergence of political parties in the House of Commons. The term "HM Opposition" was first used by John Hobhouse in 1826. Official recognition was given to the Leader of the Opposition in 1937, when the holder was granted a salary higher than that of an ordinary MP.

Opsomer, Isidore Edmond Henri, Baron (1878-1967), Belgian artist. He specialized in scenes of his native Antwerp and also achieved a reputation as a portrait painter. He was a leading influence on contemporary Belgian art.

Optical activity, the ability of some chemical compounds in solution and some crystals and transparent substances placed in an intense magnetic field to rotate the plane of POLARIZED LIGHT. Optically active crystals are used in polarimeters, instruments for measuring the degree of optical activity of chemical solutions. Optically active compounds are characterized by having molecules that are asymmetrical. Magnetic rotation of the plane of polarized light was discovered by Michael FARADAY in 1845 and is known as the Faraday effect.

Optical illusion, effect in which visual information is misinterpreted. The commonest optical illusions are those in which the expected visual signals, such as lines of perspective, are distorted or created artificially. See also p.796.

Optic nerve, second cranial nerve, which carries the visual stimuli from the retina of the eye to the visual centre in the cortex of the brain. That part of the retina where the optic nerve enters the eye is known as the blind spot. About 1 million optic nerve fibres comprise the optic nerve, and these fibres are arranged in such a way that impulses from the left side of the visual field travel to the right side of the brain, and vice versa. See also pp.136-137.

Optics, branch of physics concerned with the study of light and its behaviour. Fundamental aspects are the physical nature of light, both as wave-propagation and as particles (PHOTONS), and the reflection, refraction and polarization of light and its transmission through various media. These studies involve discussion of the properties of mirrors, lenses and lens systems (including that of the eye and those of optical instruments) and of optically active chemicals and crystals which polarize light. More generally, optics also deals with the wider subject of the ELECTROMAGNETIC SPECTRUM ranging from short radio waves to soft X-rays, called the optical spectrum. See also pp.850-863.

Optometry, science that deals with the examination of eyes and the prescribing of spectacles or contact lenses and exercises to correct defects in vision. It should not be confused with OPHTHALMOLOGY, the medical and surgical treatment of the eyes. See also p.136.

Opuntia, genus of cactus plants found from Canada to Argentina and characterized by small barbed bristles. They have cylindrical, rounded or, in the PRICKLY PEARS, flattened joints. Family Cactaceae. See also p.316.

Opus (Latin "work"), in music, term for the numerical classification of a work or group of works in a composer's output. It became widely used in the latter half of the 18th century, and works were ordered

according to the date of publication rather than of composition. The works of BEETHOVEN and SCHUBERT are numbered in this way. Later composers have, however, assigned an opus number to a work upon completion, regardless of publication date.

Opus Anglicanum (Latin for "English work"), type of English EMBROIDERY of the period c.1250-c.1350. Outstanding for the skilful use of silver gilt thread to provide a background to the figures, animals and birds depicted in coloured silks, it was highly valued throughout Europe. It was chiefly used for clerical vestments and many fine examples have survived, including the famous Syon cope.

Opus Dei, name of a Roman Catholic organization of laymen and a few priests in Spain, known particularly for its influence on political and religious opinion since the mid-1950s when Gen. FRANCO appointed several of its members to ministerial posts to further his economic policies. Founded by José María Escrivá de Balaguer y Albás in 1928, it supported the Nationalists during the war and rose to pre-eminence in the subsequent three decades. It aims to promote traditional Christian values. It was approved by the Vatican in 1950, and has several international branches. Its influence appears to have declined in the 1970s.

Oracles, in Greek mythology, communication or advice from the gods in answer to requests from men, usually taking place at the shrine of a god. At Dodona, the shrine of ZEUS, the rustling of oak leaves was interpreted by priests. At the oracle of APOLLO at Delphi, consultation was through the priestess (Pythia) who, in an induced trance, uttered unintelligible sounds. The priests translated these into appropriate although often ambiguous prose or verse. Another way of consulting was by casting lots or by "incubation", in which the enquirer slept in a holy area and received his answer in a dream. See also pp.1202, 1205.

Oradea, city in NW Romania, on the River Koros near the Hungarian border. Founded in 1080 by St Ladislav, it was destroyed in 1241 by the Tartars and rebuilt in the 14th century. It was held by the Turks from 1660 to 1692 and ceded to Romania by Hungary in 1919. Today it is the commercial centre for the surrounding agricultural region. Industries include chemicals, mining equipment and canned goods. Pop. (1970 est.) 137,700.

Oral contraception. See BIRTH CONTROL.

Oral literature, stories, histories, legends and myths originally conveyed by word of mouth rather than by written records. Their collection and study constitute an important branch of social anthropology. The best-known examples of such oral traditions come from Africa and from the North American Indians, although most preliterate societies preserved their heritage by means of memory and by its repetition in exclusive or public gatherings.

Oran, leading port city and department capital in NW Algeria, on the Gulf of Oran. Founded in the 10th century, it was taken by Spain in 1509, by the Turks in 1708 and re-taken by Spain in 1732. It was captured by the French in 1831 and developed by them as a naval base. Conflict between the French and native Algerians in the 1950s led to an exodus of the European population. It now exports cereals, wine and fruit from the surrounding market gardens. Pop. (1974 est.) 485,139.

Orange, House of, royal house of The Netherlands. Orange, a principality in France from the 11th century, was inherited by the NASSAU house of Germany. The Prince of Orange, WILLIAM THE SILENT, became Stadtholder of The Netherlands in 1579. Except for brief intervals, the House of Orange has ruled the country ever since, usually with popular support. King WILLIAM III of England was a Prince of Orange.

Orange, evergreen citrus tree and its fruit. There are two basic types. The sweet orange, of which there are many varieties, is native to Asia and widely grown in the USA and Israel. The fruit develops without

flower pollination and is often seedless. The sour orange is widely grown in Spain as an ornamental and for the manufacture of marmalade. Height: to 9m (30ft). Family Rutaceae; genus *Citrus*. See also pp.688, 688.

Orange River principal river of South Africa. It rises in the Drakensberg Mts N Lesotho and runs in an irregular easterly direction, forming the boundary between the Orange Free State and Cape Province, before reaching the Atlantic Ocean at Alexander Bay. The river is used for irrigation and supports many hydro-electric power plants. Length: approx. 2,093km (1,300 miles).

Orange Free State, province in E central South Africa, bounded by Natal (E), Transvaal (N), Lesotho (SE) and Cape Province (S and W). The region was inhabited by the Tswana peoples until the 19th century, when large-scale BOER immigration began. Conflict between the Boers and the British, who had annexed the region in 1848, led to the SOUTH AFRICAN WAR (1899-1902). In 1910 the colony became a province of the Union of South Africa. The economy is based on agriculture; cereals and fruit are produced. Industries include gold and diamond mining. Area: 129,153sq km (48,866sq miles). Pop. (1970) 1,716,350. See also pp.1606-1607.

Orangemen, members of the Orange Society, founded in Ulster in 1795. It was a political and sectarian society named after the Protestant WILLIAM III, formerly Prince of Orange, who defeated JAMES II at the Battle of the BOYNE on 11 July 1690, a victory celebrated now on 12 July, the date of a further Loyalist victory at the Battle of Aughrim in 1691. The Orangemen sought to maintain the Protestant succession and progressively strengthened their position in Northern Ireland, continuing as proponents of Protestant unionist opinion to the present day.

Orange River Colony (1902-10), name given to the ORANGE FREE STATE in the Treaty of Vereeniging, which recognized British annexation of the province. When it joined the UNION OF SOUTH AFRICA in 1910 it regained its former name.

Orang-utan, stout-bodied, thick-necked great ape native to forests of Sumatra and Borneo. It has a bulging belly and a thin, shaggy, reddish-brown coat. It swings by its arms or walks on branches when travelling through trees, but proceeds on all fours when on the ground. Height: 1.5m (5ft); weight: to 100kg (220lb); arm span: more than 2.13m (7ft). Species *Pongo pygmaeus*. See also PRIMATES; pp.103, 106.

Oranjestad, town on the W coast of Aruba Island in the Netherlands Antilles; the principal town of the island. Oil refining is an important industry. Pop. 14,500.

Oratorians, members of the Oratory of St Philip NERI, who began to ordain his followers at a church in Rome in 1564. It is the oldest of several Roman Catholic congregations of secular priests, who live under rules of obedience but without vows. PALESTRINA, a penitent of St Philip, composed some of the music for the services. A French Oratory was founded in 1611 by Cardinal de Bérulle, and Cardinal NEWMAN founded the English Oratory near Birmingham in 1848.

Oratorio, form of musical composition, usually sacred in character, for solo voices, chorus and orchestra, the first of which were presented in oratories (chapels) in 17th-century Italy. Emilio de Cavalieri, Giovanni Carissimi and Claudio MONTEVERDI were among the first exponents of the genre. Among outstanding examples are HANDEL's *Messiah* (1742) and STRAVINSKY's *Oedipus Rex* (1927).

Oratory, the art of speaking in an inspirational manner. An orator speaks in this way to gain support, eg for a political action or legal opinion. PERICLES, ARISTOTLE, the SOPHISTS and CICERO were early teachers of the art.

Orb, traditional symbol of a monarch's power. It is a sphere mounted by a cross, made of precious metals and stones and originally represented the universe as a

harmonious whole. The use of the sphere comes from the Romans; the cross was a Christian addition. An orb was first used at a coronation by the Holy Roman Emperor Henry II in 1014.

Orbigny, Alcide Dessalines d' (1802-57), French naturalist. He studied fossil remains in South America, proposed a theory of fossil stratification, and founded the modern field of micropalaeontology. He wrote *Journey to South America* (1835-47), and was responsible for the first full map of that continent (1842).

Orbit, elliptical path of a celestial body moving round another acting as the former's centre of gravitational attraction. Planetary orbits are described in numerical quantities from which the revolution period and mean orbital velocity are derived. By analogy, in the BOHR model of the atom, the paths ascribed to ELECTRONS are also called orbits. See also ORBITALS.

Orbitals, in atomic physics, regions in space around an atomic NUCLEUS in which ELECTRONS can move. There is a high probability of finding an electron in such an orbital, which can accommodate one or two electrons and has a shape and energy characterized by the atom's QUANTUM NUMBERS. In molecules, the bonding electrons move in the combined electric field of all the nuclei. The atomic orbitals then become molecular orbitals - regions encompassing two nuclei, having a characteristic energy and containing two electrons. These molecular orbitals, which can be thought of as formed by the overlap of atomic orbitals, constitute chemical bonds. See also pp.886, 892.

Orbits, the eye-sockets, cavities in the head containing the eyes.

Oragna, Andrea (c.1308-c.1368), Italian painter, sculptor and architect, real name, Andrea di Cione. He was one of the best and most influential Florentine sculptors of his time. His major extant work is a tabernacle for Or San Michele, Florence, of which he was head architect in 1356. See also p.1341.

Orchardson, Sir William Quiller (1832-1910), Scottish painter. From 1858, Orchardson's first works were white illustrations in the style of the PRERaphaelites. In 1862 he settled in London and was elected to the Royal Academy in 1877. *Napoleon on Board the Bellerophon* (1880) is his most widely known painting.

Orchestra, group of musicians who play together. The development of the modern symphony orchestra began in the 17th century with the addition of various instruments to the string orchestra: woodwind and later, brass instruments. By the late 18th century the woodwind section had been established, and the brass section by the end of the 19th century. Modern orchestras consist of between 80 and 120 players divided into sections: strings (violin, viola, cello, bass and harp); woodwind (flute, oboe, clarinet and bassoon); brass (trumpet, trombone, French horn and tuba) and percussion.

Orchestration, arrangement of music for various instrumental combinations. It had become an important aid to expression by 1700. BERLIOZ's *Treatise on Orchestration* (1844) was an early attempt to systematize the possibilities within the ORCHESTRA.

Orchid, any plant of the family Orchidaceae. There are about 35,000 species, and they are particularly common in the tropics. All are perennials and grow in soil or as epiphytes - air plants - on other plants. Parasitic and saprophytic species are also known. Colour and shape vary greatly between species, and flowers can be borne singly or in erect or pendant clusters. A club-shaped structure, the column, results from the fusion of male and female reproductive parts. All orchids have bilaterally symmetrical flower structures, each with three sepals. They range in diameter from approx. 2mm (0.1in) to 38cm (15in). See also pp.314, 347, 379, 382.

Orchis, genus of orchids found on rich, wooded slopes of central USA. The purple rose upper petals and the large white lower petal are borne in clusters of 2 to 15 flowers. The two leaves are smooth and long. Height: to 30cm (1ft). Family Or-

chidaceae; species include *O. spectabilis*. **Orcey, Baroness Emmuska** (1865–1947), Hungarian novelist who wrote in English. After studying art on the continent and in London, she wrote *The Scarlet Pimpernel*, and the publication of this international adventure story in 1905 made her famous. She later wrote sequels to this book and detective stories.

Ordeal, ancient manner of criminal trial practised in many societies in Europe during the Middle Ages. The three main types of ordeal were by divination, physical test and combat. In Britain, ordeal by fire, which was administered to freemen, involved grasping very hot metal. If the accused sustained no scars after three days he was pronounced innocent; otherwise he was guilty. Ordeal by cold water, used for the unfree, involved plunging the accused, trussed, into a cold pool; if he floated he was judged to be innocent. The guilt of clergy was ascertained according to whether they choked on a feather placed in food. Trial by battle was introduced by the Normans into England for the trial of knights. Trial by ordeal was abolished in 1215, and was gradually replaced by the jury system.

Order, in the systematic classification of living organisms, a taxonomic category that ranks below a class and above a family.

Order, in classical architecture, style and decoration of a column, its base, capital and entablature. Of the five orders, the Greeks developed three: the CORINTHIAN, DORIC and IONIC. The Tuscan and Composite orders were adaptations of these by the Romans.

Orderic, Vitalis (1075–c.1143), English monk and chronicler who passed most of his life in Normandy. His *Ecclesiastical History*, which takes events to the year 1143, is a rich source for the history of the Normans in Britain and on the continent.

Order of Chivalry, society of distinguished public figures in Britain. There are nine such societies, the oldest of which, the Order of the Garter, was founded in the mid-14th century as a secular version of the religious orders of knights formed during the CRUSADES. Other orders are the Scottish Order of the Thistle (1687), the Irish Order of St Patrick (1788), and those of St Michael and St George (1818).

Order of Merit, British honour founded by EDWARD VII in 1902. It is limited to 24 holders, people who have distinguished themselves in the armed forces or in the arts and sciences.

Orders in Council, orders issued by the British sovereign on the advice of the Privy Council. During the NAPOLEONIC WARS a series of such orders were used in 1807 to blockade European ports.

Ordinal number, number that indicates the position of a member in an ordered sequence or in a group. Thus "first", "second", and "third", are ordinal numbers; "one", "two", and "three" are cardinal numbers.

Ordination, ceremony of those Churches for whom the ministry is a sacramental office. At ordination a person becomes a member of the clergy, or a member of the clergy is elevated by one rank. Ordination is considered unnecessary by those Churches who see the ordaining of ministers as a personal matter for the individual, and not as a SACRAMENT (a matter for the whole Church).

Ordnance Survey, official mapping of Britain. Undertaken for defence purposes, it was started in 1791 with the creation of the Board of Ordnance. The first sheet, a one-inch map of Kent, was published in 1801. Revision is done by the Ministry of Housing and Local Government.

Ordovician period, the second-oldest division of the PALAEOZOIC era, 500 to 430 million years ago. All animal life was restricted to the sea. Numerous invertebrates flourished and included trilobites, brachiopods, corals, graptolites, molluscs and echinoderms. Remains of bones in coastal deposits mark the first record of the vertebrates. See also pp.55, 184, 185, 274–275.

Ore, mineral or combination of minerals from which metals and non-metals can be

extracted. It occurs in veins, beds or seams parallel to the enclosing rock or in irregular masses. Industrial rock deposits in beds, eg gypsum and limestone, are not called ores. See also LODE.

Örebro, city in central Sweden, E of Lake Hjälmaren and capital of Örebro province. It was the site of many diets including the 1529 diet by which the REFORMATION was brought to Sweden. Industries: shoe manufacture, paper and processed foods. Pop. (1970 est.) 90,900.

Oregano, dried leaves and flowers of several perennial herbs native to Mediterranean lands and W Asia. It was introduced into the West as a food seasoning, and has become popular in Italian and Mexican dishes. Family Labiatae.

Oregon, state of NW USA on the Pacific coast. The state is dominated by the forested slopes of the Cascade and the Coast ranges. Between the two lies the fertile Willamette Valley. The Columbia and the Willamette are the major rivers. Of prime importance to the agricultural economy are cattle, dairy produce, wheat and market garden products. Oregon produces more than 20% of the nation's softwood timber and wood processing is a major industry. Other industries include printing and publishing, food processing, fishing, machinery and primary and fabricated metals. Abundant hydro-electric power is produced in the state. Nickel, sand and gravel, and mercury are the main mineral resources. The major towns are Salem, the state capital, Portland and Eugene.

In 1792, Robert Gray sailed up the Columbia River, establishing a US claim to the area drained by the river. Several trading posts were established, mainly by the HUDSON'S BAY COMPANY and the NORTH WEST COMPANY. The OREGON TRAIL brought more settlers from 1842 onwards and the Oregon Territory was formed in 1848. It was admitted to the Union as the 33rd state in 1859. Area 251,180sq km (96,981sq miles). Pop. (1980) 2,632,663. See also p.2161.

Oregon trail, most popular route used by emigrants to the NW of the USA. It ran 3,200km (2,000 miles) from Independence, Missouri, to the Columbia river in Oregon. Fur traders explored parts of the trail from 1811–35 and about 12,000 people used it during the 1840s – so many in fact, that rats were worn which were visible for generations after. The trail was difficult in places, but was one of the few routes over the Rocky Mountains negotiable by horse or ox-drawn wagons.

O'Reilly, Anthony John Francis ("Tony") (1936–), British rugby union three-quarter who played for Old Belvedere, Leicester, Ireland and the British Lions. He appeared 29 times for Ireland, and, playing for the British Lions, he scored a record 16 tries in 1955, and a record 17 in New Zealand in 1959.

Oreopithecus, ancient primate of the Miocene and Pliocene epochs. In a genus by itself, fossil remains of the semi-erect, apparently vegetarian *Oreopithecus* have been found in S Europe and E Africa dating from over 7 million years ago. Height: approx. 1.2m (4ft).

Oresme, Nicholas (c.1325–82), French medieval philosopher who is also called Nicole d'Oresme. He was master of the College of Navarre in Paris and became Bishop of Lisieux in 1377. He wrote on economics, politics and natural science, making notable contributions to geometry which he applied to the laws of motion. He also discussed the possibility that the Earth rotates around other bodies.

Oresteia, trilogy of tragedies by AESCHYLUS, produced in 458 BC and consisting of *Agamemnon*, *The Libation Bearers* and *Eumenides*. It is the only surviving Greek trilogy and is Aeschylus' last and greatest work. Each play is complete and stands alone; together they explore the themes of crime, revenge and expiation.

Orestes, in Greek mythology, the son of AGAMEMNON and CLYTEMNESTRA, and brother of ELLECTRA. He killed his mother and her lover Aegisthus in order to avenge the death of his father whom Clytemnestra and Aegisthus had murdered. He is a

character in Aeschylus' *Oresteia*, Sophocles' *Electra* and Euripides' *Orestes*. **Orff, Carl** (1895–), German composer who helped to found the Günter School in Munich in 1925. He wrote opera in a neoprimitivist and rhythmic style. His best-known works are the scenic cantatas *Carmina Burana* (1937) and *Caelli Carmina* (1943), and the opera *Trionfo dell'Afrodite* (1953). See also p.1754.

Orfila, Matthieu Joseph Bonaventure (1787–1853), French chemist. He published his *Treatise on General Toxicology* in 1813, a work that led him to be considered the founder of toxicology.

Orford, 1st Earl of. See WALPOLE, SIR ROBERT, 1ST EARL OF ORFORD.

Orford, 4th Earl of. See WALPOLE, HORACE, 4TH EARL OF ORFORD.

Organ, musical keyboard instrument. The player sits at a console and regulates a flow of air to ranks of pipes producing rich and sometimes sombre tones. The early development of the organ is obscure but it was in use in Christian churches in the 8th century. Keyboards appeared in 12th-century Europe and reed pipes – in imitation of other instruments – c.1550. The modern organ dates from the BAROQUE period, when J. S. BACH wrote many highly innovative compositions for it. With the coming of electricity, the electric organ widened the field of possible effects still more. Albert SCHWEITZER and others have revived interest in Baroque organ music.

Organ, in biology, a group of tissues that form a functional and structural unit in a living organism. The kidney, for example, has as its main task the water regulation of the body. Such organs as the liver and the skin have many important tasks. Leaves and roots are examples of plant organs.

Organelle, part of a cell, such as a MITOCHONDRION or a flagellum, with a persistent structure and a specific function. It is to a cell what an organ is to an organism.

Organic analysis, in chemistry, term with two meanings. It is either the determination of the composition and structure of a chemical compound – how the compound is made up from its chemical elements, or it is the determination of the identity and quantity of particular organic compounds in mixtures and in such organic substances as tissues. See also pp.904–905.

Organic chemistry. See CHEMISTRY, ORGANIC.

Organic compounds, COMPOUNDS that contain the element CARBON; they are about hundred times more numerous than inorganic compounds. HYDROCARBONS contain carbon and hydrogen only, and are the basic structures which, when combined with atoms of other elements (eg oxygen, and nitrogen), form a vast range of compounds including those essential to life. See also pp.906–907.

Organic food, in gardening, food grown with the use of natural fertilizers derived directly from animals and plants, including manures, bone meal, blood, straw and compost. See also pp.668–669.

Organic functional groups, molecular groups, occurring in organic compounds, which largely determine their chemical properties. For example, alcohols (such as butanol, C₄H₉OH) all contain the ALCOHOL group -OH, and consequently they all form ESTERS and ionize in water. Other organic functional groups include the KETONE group -CO, the ALDEHYDE group -CHO and the CARBOXYLIC ACID group -COOH.

Organisation de l'Armée Secrète. See OAS.

Organization for Economic Co-operation and Development. See OECD.

Organization of African Unity. See OAU.

Organization of American States. See OAS.

Organization of Petroleum Exporting Countries. See OPEC.

Organ of Corti, complex structure of the inner ear of mammals, birds and reptiles, concerned with the final reception of inner ear movements resulting from sound waves striking the eardrum. It rests on a platform of membrane and bone which extends along the COCHLEA, and contains sensory hair cells that detect movements caused by sound waves and connect with nerve fibres that carry messages about these to the brain. See also p.139.

Organometallic compound, chemical compound in which one or more organic groups or radicals are bonded to an atom of a metal. Metallic carbonates (such as sodium carbonate) and salts of common fatty acids (such as sodium acetate) are usually excluded from this classification. Typical examples are metallic alkyl compounds (such as TETRAETHYL LEAD and triethyl aluminium), GRIGNARD REAGENTS (such as ethylmagnesium iodide) and compounds of transition metals.

Organon, name given to the logical works of ARISTOTLE. These comprise the *Categories*, and *Topics*, *On Interpretation*, *Prior Analytics*, *Posterior Analytics* and *Sophistic Refutations*. In medieval science, the *Organon*, which means "instrument", was thought of as a guide to rigorous scientific investigation. As works of philosophy they deal with the use of language in argument.

Organophosphates, chemicals in which the molecules contain at least one atom of carbon and one of phosphorus. The best-known organophosphates are some insecticides and certain nerve gases, essential nucleic acids and nucleotide enzymes. Organic derivatives of the phosphorus acids are important in the manufacture of fertilizers.

Organ-pipe cactus, CACTUS native to SW USA and South America. It has long columnar stems holding night-blooming flowers. Height: to 10m (33ft). Family Cactaceae; species *Lemaireocereus thurberi*.

Orgasm, physiological culmination of sexual stimulation, marked by general release of muscular tension and waves of localized contractions causing EJACULATION in the male and climactic spasms of vaginal muscles in the female.

Orient, The, term meaning the East. Formerly applied to all countries E of the Mediterranean, it is now restricted to Asia, especially the Far East.

Oriental art, painting and the plastic arts of China, Korea and Japan which, although not identical, belong to one essentially Chinese tradition. Their origins lie in the bronze pottery work of the SHANG dynasty of China (c.1600–c.1030 BC). By the 2nd century AD painting was important, culminating in the great landscapes of the 10th to the 14th centuries. The modern flowering of Chinese art occurred in the MING period, when elaborately ornamented ceramics and carved lacquer work achieved their highest expression. See also pp.1262–1263, 1266–1267, 1500–1501.

Orienteering, sport of Scandinavian origin. Similar to cross-country running but over rougher and more wooded terrain, it requires both athletic and navigational skills. Runners, each leaving at timed intervals, carry a map and compass with which to locate the control points around the course. The fastest to complete the course wins. Competitors normally choose their own routes between control points. The number of control points varies, there are sometimes over 20. Competitors under 15 years can run on courses under 3km (1.86 miles) long; the senior courses are usually of about 10km (6.21 miles). A variation is score orienteering, in which each control point is allocated a value and competitors score points according to the number of control points visited within a set time.

Orient Express, train that travels between Paris and Bucharest, by way of Vienna. First given the name Orient Express in 1883, its exact route has varied with political circumstances. Its heyday, between 1897 and 1914, ended at the outbreak of WWI. Although it used to travel through Czechoslovakia to Bratislava, after 1951 it ran from Vienna via Hegyashalom, Budapest, Arad and Brashov to Bucharest. The Direct Orient Express, which enabled passengers to travel (without changing trains) from Paris to Istanbul, ran from 1962 until 21 May 1977, when it was discontinued.

Origen (c.185–c.254), leading theologian of the early Christian Church. He was probably born in Alexandria, Egypt, and became famous as a teacher. He studied,

Original Sin

Orioles eat various types of fruit and, in the breeding season, insects.

Seige of Orléans; Joan of Arc (the Maid of Orléans) making her entry into the city.

Orpheus' music charmed Hades into letting Eurydice leave the underworld.

José Ortega y Gasset left Spain in 1936 to live in exile, not returning until 1945.

wrote and taught in Cappadocia and Palestine, and visited Arabia and Rome. His principal work was *De Principiis* (*On First Principles*). He defended orthodoxy against Gnosticism and introduced Greek philosophy into Christian writing.

Original sin, the sin committed by ADAM and EVE that caused their expulsion from the Garden of EDEN. Because Adam and Eve represent mankind, the term also applies to the innate tendency in man's nature to commit sin, and to any mortal condition that is not a state of GRACE.

Orinoco, river in Venezuela, rising in the Sierra Parima Mts in s Venezuela and flowing NW to Colombia, then N forming part of the Venezuela-Colombia border and finally E into the Atlantic Ocean. It was sighted by Christopher COLUMBUS in 1498 and navigated by Diego de Ordaz (1530-31). Length: approx. 2,062km (1,281 miles).

Oriole, name of two unrelated types of medium-sized songbirds. The oriole of the Old World (family Oriolidae) is brightly coloured, arboreal and feeds on insects, and lays two to five speckled white eggs in a cup-shaped nest. The New World oriole (family Icteridae) has similar colouring and builds hanging nests in trees for its two to six speckled white eggs. See also HANG-NEST.

Orion, spectacular equatorial constellation situated between Taurus and Lepus. It is visible from every inhabited part of the world. Four young stars, Betelgeuse, Rigel, Saiph and Bellatrix, form a conspicuous quadrilateral containing a row of three other stars representing the belt of Orion, the hunter. This constellation contains the Orion Nebula, and several binary stars. See also pp.988, 1007, 1011, 1017-1021.

Orissa, state in NE India on the Bay of Bengal; its capital is Bhubaneswar. It was ruled for centuries by several HINDU dynasties, was taken by Afghans in 1568 but soon afterwards came under the MUGHLS. The British occupied it in 1803. The coastal section was made part of Bihar and Orissa province in 1912 and a constituent state of India in 1950. Industries: fishing and mining. Area: 155,782sq km (60,147sq miles). Pop. (1971) 21,944,615.

Orkney Causeway, barriers and road connecting Mainland, Orkney islands, off the N coast of Scotland, with the islands to the S - Burray and South Ronaldsay. The causeway is also called the Churchill Barriers since it was built during WWII to prevent the passage of enemy submarines into the naval base of SCAPA FLOW.

Orkney Islands, group of islands off the N coast of Scotland which constitutes an independent administrative area (Orkney Region). Mainland (Pomona) is the largest in the group of about 70 islands, more than half of which are uninhabited. In recent years it has been one of the centres for the development of the North Sea oilfields but its people are trying to preserve their culture, which is traditionally independent of Scotland. Area: 974sq km (376sq miles). Pop. (1971) 17,075.

Orkneys, South. See SOUTH ORKNEYS.

Orlando, Vittorio Emanuele (1860-1952), Italian politician who supported Italy's entry into WWI in 1915 and was elected Prime Minister in 1917. He took part in the VERSAILLES Peace Conference (1919-20) but withdrew in disagreement with Woodrow WILSON and resigned in 1919. In 1920 he was elected President of the Chamber of Deputies. He initially supported the FASCISTS, but resigned in 1925 in protest against a Fascist electoral fraud. In 1946 he returned to the Assembly and became a senator in 1948. See also p.1672.

Orléans, name of a branch of the French Valois and BOURBON dynasties. It was created in 1344 by Philip VI for his son, who died without male heirs in 1375. In 1498 the duchy was united with the Valois when the Duc d'Orléans became Louis XII. The Bourbon Louis XIV gave the title to his brother Philip, whose descendants have held it since. The only member of the line to become king was Louis-

Philippe (r.1830-48). Because of their relationship with the Bourbons, the house of Orléans was often a source of intrigue against the Crown. After the French Revolution it became identified with constitutional monarchy and 19th-century liberalism.

Orléans, city in N central France, on the River Loire, 113km (70 miles) SW of Paris, and capital of the Loire département. It was besieged by the English during the HUNDRED YEARS WAR and relieved by JOAN OF ARC. After being briefly held by the HUGUENOTS during the Wars of Religion, the city was besieged by Roman Catholics in 1563 and held by them until the Edict of NANTES in 1598. Industries include tobacco, textiles and chemicals. Pop. (1975) 109,956.

Orléans, Siege of (1428-29), defeat for the English during the HUNDRED YEARS WAR. English troops began to besiege the city in Oct. 1428 and French attempts to relieve it failed until JOAN OF ARC took in supplies on 30 April 1429. A week later the Earl of Suffolk raised the siege. This French success was the turning point of the war.

Orley, Bernard van (c.1490-1541), Flemish painter and designer of stained-glass windows and tapestries. He also painted altar-pieces and portraits and became one of the best-known artists of his time.

Ormandy, Eugene (1899-), US conductor, b. Hungary. He went to the USA in 1921 and has been musical director and permanent conductor of the Philadelphia Orchestra since 1938. He is well known for his interpretations of the Romantic composers and for introducing many new works by 20th-century composers.

Ormolu, elaborate gilded decoration especially popular as ornament on the furniture and clocks of 18th-century France. From a wax or wooden model, a mould is taken and a cast made of bronze alloy. This is then CHASED and gilded and may be treated further for added metallic brilliance. Ormolu was also produced in England by Matthew BOULTON.

Ormonde, James Butler, 12th Earl and 1st Duke of (1610-88), Irish political leader. He supported the Earl of STRAFFORD against the Irish Roman Catholic rebels, defeating them in 1641. He was appointed Lord-Lieutenant of Ireland in 1644 and made peace with the rebels in 1649. Following the defeat of the Stuarts, he joined Charles II in exile in France. After the RESTORATION in 1660, Charles appointed him Lord-Lieutenant of Ireland 1661-69 and again 1677-84.

Ormonde, James Butler, 2nd Duke of (1665-1745), Irish military and political leader. He supported William of Orange at the Battle of the BOYNE in 1690 and in 1711 became commander of British forces during the War of the SPANISH SUCCESSION. In 1715 he was impeached for being a JACOBITE.

Ormuz (Hormuz), island belonging to Iran in the Strait of Ormuz between the Gulf of Oman and the Persian Gulf.

Ormuzd. See AHURA MAZDA.

Ornamentation, in music, term used to describe figurative embellishment. It may be written out in full by the composer, or indicated by the appropriate sign of musical notation which the musician then implements in performance. Such signs are those for the trill, turn and mordent. The other form of ornamentation, in widespread practice in Renaissance and Baroque music, was the improvised addition of embellishment by the performer.

Ornithology, study of birds. The science extends to tracing the development of all bird species; the theory currently accepted is that they evolved from the reptiles of the Jurassic period. Included in general ornithological studies are classification, structure, function, evolution, distribution, banding and migration, reproduction, ecology and behaviour. Museums (including the British Museum) and universities house collections of stuffed birds, skeletons and other preserved specimens. See also pp.3, 5, 72-73, 72-73, 74-75, 74-75, 76-77, 76-77, 80-83, 344-345.

Ornithopoda, suborder of bird-hipped

dinosaurs, including all semi-bipedal herbivorous forms. Early species were *Camptosaurus* and *Iguanodon*, while a later species was the *Hadrosaur* or duck-billed dinosaur. See also p.281.

Orogeny, in its modern, narrowest usage, the geological process by which a FOLD and FAULT in the upper layers of mountainous areas, and metamorphism in deeper ones, occurs. Each mountain region has its peculiarities, but there are similarities in all the processes of change in this study.

Oroville Dam, dam in N central California on the Feather river. It is the highest dam in the USA and was built between 1957 and 1968 to provide power, and domestic and irrigation water. Height: 235m (770ft). Length: 2,317m (7,600ft).

Orozco, José Clemente (1883-1949), Mexican painter. His wash drawings *Mexico in Revolution* (1911-16) have been likened in thematic treatment to the work of GOYA but Orozco's concern was to demonstrate the futility of war to the illiterate masses. He is renowned for his large murals which are EXPRESSIONIST in style, and often show allegorical subjects with political overtones. *Katharsis* (1934) and *National Allegory* (1947) are both excellent examples of his work.

Orpen, Sir William Newenham Montague (1878-1931), Irish painter. He is best known for his portraits and conversation pieces, which include *Homage to Manet* and *Café Royal* (1912). He was official painter at the Versailles Peace Conference (1918).

Orpheus, in Greek mythology, the son of CALLIOPE by APOLLO, and the finest of all poets and musicians. Orpheus married EURYDICE, who died after being bitten by a snake. He descended into HADES to rescue her and was allowed to regain her if he did not look back at her following him until they emerged together into the sunlight. He could not resist, and Eurydice vanished for ever. A legend has it that later in life he was torn to pieces by the Thracian women, but that his head, when thrown into the River Hebrus, floated, singing, to the island of Lesbos. Orpheus is usually depicted with the lyre he received as a gift from Apollo. See also p.1348.

Orphism, cult in ancient Greece based on the Orphics sacred poems on which the Orphic mysteries were centred. Initiation into the mysteries, an ascetic life and transmigration of the soul after death were the main elements of the cult.

Orphism, or orphic cubism, term invented in 1912 by APOLLINAIRE to describe a new art form combining elements of CUBISM, FUTURISM and FAUVISM. The style was first associated with the work of DELAUNAY and its other exponents exerted considerable influence in Germany through the works of KLEE and KANDINSKY. See also BLAU-REITER.

Orpine, various plant species of the genera *Sedum* and *Supervivum*, hardy perennials with fleshy leaves and stems. Their small flowers are white, yellow or red, and species of both genera have been used medicinally.

Orr, Robin Robert Kemsley (1909-), Scottish composer who studied with Alfredo Casella and Nadia BOULANGER and was professor of music at Glasgow University (1956-65) and Cambridge University (1965-76). His works include the operas *Full Circle* (1967) and *Hermiston* (1975) and the choral composition *Te Deum and Jubilate in C* (1953).

Orrery, apparatus designed for Charles Boyle, Earl of Orrery (1676-1731), consisting of a frame which represents the solar system, from which extend spindles ending in balls which can be moved about to illustrate the relative sizes, positions and movements of the bodies in the solar system. See also p.917.

Orrisroot, the rootstock or rhizome of several kinds of s European IRIS, especially the pale-blue Mediterranean species, also known as the "fleur-de-lys". When dug up and dried, orrisroot acquires the distinct scent of violets and is used in medicine and in perfumery.

Ortega y Gasset, José (1883-1955), Spanish philosopher and humanist. He was educated in the classic JESUIT tradition

and influenced by the neo-Kantians at Marburg University but later published an apologia, *Adan en el paraiso* in 1910. His most famous work, *The Revolt of the Masses* (1929), advocated political control by an intellectual élite. His other works include *The Mission of the University* (1930), *Man and People* (1957) and *Man and Crisis* (1956). He founded the Institute of Humanities in Madrid in 1948.

Orthoclase, mineral common in granitic rocks containing mainly potassium feldspar. It is a potassium aluminium silicate, $KAlSi_3O_8$, but also contains varying amounts of sodium feldspar, $NaAlSi_3O_8$.

Orthodontics. See DENTISTRY.

Orthodox Church, family of Christian national churches mostly of E Europe, also known as the Eastern Orthodox Church. The individual churches are independent but acknowledge the primacy of the Patriarch of Constantinople. They developed from the Church of the BYZANTINE EMPIRE, which separated from that of Rome in 1054 (the GREAT SCHISM) over doctrinal issues and the question of papal authority. After the capture of Constantinople by the Turks in 1453, the Russian Orthodox Church became the most influential, and is still by far the largest in the number of its adherents. The Orthodox Church stresses the role of the first seven ECUMENICAL COUNCILS in the development of its doctrines; it is noted for the splendour of its ritual, its devotion to saints, its restrictions upon married clergy and for the importance that religious art, especially in icons, has played in its history.

Orthography, the correct presentation of letters, words, phrases, clauses and sentences in handwriting or in printed type, according to accepted standards of language and society.

Orthopaedics, branch of medicine which deals with the diagnosis and treatment of diseases, disorders and injuries to bones, muscles, tendons and ligaments. The first institute specifically for orthopaedic treatment was founded in 1870 by Jean André Venel in Switzerland. See also pp.146, 147, 1071, 1071.

Orthoptera, order of insects represented by more than 20,000 species found throughout the world, especially in tropical regions; it contains KATYDIDS, CRICKETS, GRASSHOPPERS and LOCUSTS in the suborders Ensifera and Caelifera. The term was formerly used to group together the orders Dictyoptera (mantids and cockroaches), Phasmida (leaf and stick insects) and Grylloblattidae (grylloblattids). Most of the species feed on plants, have chewing mouthparts and undergo incomplete METAMORPHOSIS from egg to nymph and adult. EARWIGS, TERMITES and WESPAENIDAE are also considered to be Orthopteroid insects. Length: to 10cm (4in). See also pp.36-37.

Ortolan, small European BUNTING. It has an olive-green head and chest, a black back streaked with brown, a yellow throat, and pinkish underparts. It lays 3-6 eggs in a cup-shaped nest. Ortolans are regarded as a great delicacy, and thousands are trapped for food each autumn during their migrations to N Africa and the Middle East. Length: 16.4cm (6.5in). species *Emberiza hortulana*.

Orton, Arthur (1834-98), British tradesman who emigrated to Australia in 1852 and settled as a butcher in Wagga-Wagga, New South Wales in 1864. He claimed to be Roger Tichborne, heir to an ancient baronetcy in Hampshire. Orton initiated an ejection suit (1871-72) against Roger's nephew (who had succeeded to the baronetcy) but, in the longest such trial in British history, was found to be an impostor and imprisoned.

Orton, John Kingsley ("Joe") (1933-67), British playwright who specialized in black satirical comedies notable for their energetic dialogue and the outrageous predicaments in which their characters are presented. *Entertaining Mr Sloane* and *Loot* appeared in London in 1964 and 1965. *What the Butler Saw* was produced posthumously in 1969 after Orton's murder by his flatmate.

Oruro, capital and railway centre of Oruro department in w Bolivia. Industries

include mining of silver, tungsten, copper and tin. Pop. (1970) 119,700.

Orvieto, town in central Italy 47km (29 miles) wnw of Terni, on the River Paglia. It became an independent commune in the 12th century and came under papal rule in 1448. There are Etruscan ruins nearby. Industries: ceramics, wine, tourism. Pop. (1971) 25,195.

Orwell, George (1903-50), British journalist, critic and novelist, real name Eric Blair, b India. He served with the Indian imperial police in Burma (1922-27) and was wounded in 1936 while fighting for the Republicans in the SPANISH CIVIL WAR. His books include the autobiographical *Down and Out in Paris and London* (1933), *Homage to Catalonia* (1938), the anti-totalitarian fable *Animal Farm* (1945) and the novel *Nineteen Eighty-Four* (1949). See also p.620.

Ory, Edward ("Kid") (1886-1973), us jazz trombonist and bandleader. He formed his first band in 1911 and many of the most famous figures of early 20th-century jazz appeared with him, eg Louis ARMSTRONG, King OLIVER, Jimmy DODDS and Sidney BECHET. He made some of the earliest jazz recordings, and composed the well known *Muskrat Ramble*, in 1926.

Oryx, or gemsbok, any of four species of ANTELOPES. The male has a tuft of hair at the throat and both sexes carry long horns ringed at the base. Two species are almost extinct: *Oryx leucorhynchus* of Arabia and *O. dammah* in the Sahara Desert. *O. gazella* beisa of E Africa and *O. gazella gazella* of the Kalahari Desert in South Africa still survive in considerable numbers. Height: 1.2m (4ft). Family Bovidae. See also pp.318-319.

Osage Indians, tribe of North American prairie Indians. Hunters with a strong religious tradition, they settled at different times in Kansas, Missouri and Oklahoma. Numbering about 5,000 today, they have prospered since the discovery of oil on their Oklahoma reservation.

Osaka, capital of Ōsaka prefecture in s Honshū, Japan, at the mouth of the River Yodo the second-largest Japanese city and industrial centre. In the 4th century it was called Naniwa and was the capital of the country. The present city grew around the huge 16th-century castle of Hideyoshi. It was the site of the 1970 World's Fair. Industries: textiles, machinery, steel, chemicals, shipbuilding. Pop. (1979) 2,600,000.

Osborne, Dorothy, later Lady Temple (1872-95), English letter-writer. Her letters to Sir William Temple, before and after their marriage, are fine examples of the epistolary art and are also descriptive of 17th-century England.

Osborne, John James (1929-), British dramatist whose *Look Back in Anger* (1956) established his reputation as the "ANGRY YOUNG MAN" of the English theatre and introduced a wave of social realist drama. Other critical and popular successes at the Royal Court Theatre included *The Entertainer* (1957) and *Luther* (1961) but later works by Osborne such as *The Hotel in Amsterdam* (1968), *West of Suez* (1971) and *Watch It Come Down* (1976) provoked consistently critical hostility. His lively screenplay for the film *Tom Jones* (1963) won an OSCAR.

Osborne, Thomas, Earl of Danby. See DANBY, THOMAS OSBORNE, EARL OF.

Osborne House, mansion on the Isle of Wight, England, country home of Queen Victoria (who died there). It was built in the style of an Italian Villa between 1845 and 1848 by Thomas CUBITT to the designs of Prince Albert.

Oscar, name of two kings of Sweden and Norway. Oscar I (1799-1859; r. 1844-59) freed the press from the restraints his father, Charles XIV, imposed upon it and favoured the union of Scandinavia. Oscar II (1829-1907; r. Norway 1872-1905, Sweden 1872-1907) was the son of Oscar I and succeeded his brother, Charles XV. He abdicated the Norwegian throne in 1905, when Norway became independent of Sweden, and was succeeded by his son Gustavus V.

Oscar, properly an Academy Award, the prize awarded annually for services to the

cinema by the us Academy of Motion Picture Arts and Sciences. In a varying number of categories, such as Best Direction, Best Actor, Best Screenplay, five nominees have been voted for by members of the Academy since 1929. *Ben-Hur* (1959) holds the record number of Oscars for a single film (11) while Katharine Hepburn was nominated a record 11 times, receiving the award for Best Actress on three occasions. The gold-plated bronze statuettes stand 25cm (10in) high, weigh 3kg (7lbs) and are reputed to have been nicknamed after the Academy librarian's uncle Oscar.

Oscillator, in the physics of sound, a device for producing sound waves, as in a SONAR or an ultrasonic generator. In electronics, an oscillator circuit converts DC (direct current) electricity into high-frequency AC (alternating current). The many types include harmonic oscillators, which generate sinusoidal wave forms.

Oscilloscope, electronic instrument in which a cathode ray tube (CRT) displays an image of rapidly varying quantities, eg voltage or current. The input signal is usually fed to the vertical plates of the CRT; the electron beam which traces it on the screen being moved by a time-base generator within the oscilloscope. The result is generally a curve or graph on the screen, which can be calibrated and used for measuring the input signal.

O'Shea, William Henry (1840-1905), Irish nationalist. He was a supporter of the IRISH HOME RULE movement in the 1880s and 1890s. He tried to bring PARNELL and the LIBERAL leaders together on the issue in the years 1882 to 1884. By naming Parnell as the co-respondent in his divorce proceedings against his wife in 1890, he ruined his own and Parnell's career.

Oshogbo, city in sw Nigeria 80km (50 miles) NE of Ibadan on the River Oshun. It was part of Ijesha, a YORUBA kingdom, until the 19th century and in 1840 was the scene of a battle in which Ibadan, a Yoruba city state, defeated Ilorin, a Fulani state. Industries: textiles, cigarettes, cotton. Pop. (1975) 282,000.

Osier, any of various willows, especially *Salix viminalis* and *S. purpurea*, the flexible branches and stems of which are used for wickerwork. Osiers have long been cultivated from cuttings, but for strength, cross-fertilized varieties are used.

Osijek, chief city of Slavonia Region, N Yugoslavia, on the River Drava. It was developed around a fortress built on the site of a Roman settlement, and incorporated into Austria-Hungary in 1918. Industries: textiles, distilling, food-processing, shipping, shoe manufacture. Pop. (1971) 93,912.

Osiris, in Egyptian mythology, the god of the dead, son of GEB (the earth) and NUT (the sky). He is generally depicted as a mummified man wearing a feathered crown and bearing the crook and flail of a king. In the myths, Osiris was killed by his brother SETH and dismembered. His sister and wife ISIS retrieved and, in some traditions, reconstructed the corpse, and Osiris' son HORUS avenged his death. See also pp.1901, 1908.

Osler, Sir William (1849-1919), Canadian physician who in 1873 was the first to identify platelets in the blood. In 1888 he was appointed professor of medicine at Johns Hopkins University, Baltimore, which he developed into one of the foremost medical schools. He wrote *The Principles and Practice of Medicine* (1892), the leading medical text of the time and which is still published. Probably the most famous physician of that era, he gave his name to several medical terms, such as Osler's nodes and Osler-Vaquez disease.

Oslo, largest city and capital of Norway, in the SE at the head of Oslo Fjord. The city was founded by King Harald III in 1050 and became the capital in 1299. Largely destroyed by fire in 1624 it was rebuilt by Christian IV, who named it Christiania; it was renamed Oslo in 1925. Industries: machinery, wood products, food-processing, textiles, chemicals, shipbuilding and tourism. Pop. (1980) 454,872.

Osman I, or Osman Gazi (1258-c. 1326), considered the founder of the OTTOMAN

Orthoptera, the order of insects that contains some of the largest known species.

George Orwell's accounts of poverty in his novels were written from experience.

Oryx, or gemsbok, lives in arid areas, feeding at night on moist vegetation.

Oslo; the modern town hall was decorated by artists from throughout Norway.

Osman, Sir Abdul Rahman Muhammed

Ospreys make spectacular dives to scoop up fish in their talons.

Ostriches run at up to 65 km/h (40mph); even one-month-old chicks reach 50 km/h.

Wilhelm Ostwald was famous as a chemist and recognized as a writer and teacher.

Peter O'Toole at the Royal premiere of the film *Lawrence of Arabia* in 1962.

EMPIRE, who conquered NW Asia Minor and proclaimed his independence from the SELJUK TURKS upon the collapse of their empire after 1293. See also p.1354.

Osman, Sir Abdul Rahman Muhammed (1902–), Governor-General of Mauritius (1972–7). He studied law in Britain, and was appointed senior judge of the Mauritian high court in 1950. He served as acting Governor-General several times between 1970 and 1972.

Osmium, metallic element (symbol Os) of the third transition series, discovered in 1803 by Smithson Tennant. It occurs associated with platinum; the chief source is as a by-product from smelting nickel. Like Iridium, it is used in producing hard alloys. The tetra-oxide (OsO_4) is a powerful oxidizing agent. Properties: at.no.76; at.wt.190.2; s.g.22.57; m.p.3,045°C (5,513°F); b.p.5,027°C (9,081°F); most common isotope Os^{192} (41.0%).

Osmosis, diffusion of a solvent through a natural or artificial semi-permeable membrane (which blocks the passage of selected dissolved substances) into a more concentrated solution. Osmosis is a vital cellular process. Plant roots absorb water by osmosis; walls of living cells use it selectively to allow the passage of required substances. See also p.899.

Osmotic pressure, pressure exerted by a dissolved substance by virtue of the motion of its molecules. In dilute solutions it varies with the concentration and temperature as if the solute were a gas occupying the same volume. It can be measured by the pressure which must be applied to counter-balance the process of osmosis into the solution.

Osnabrück, city in N West Germany on the River Haase 93km (58 miles) NE of Dortmund. Negotiations for the PEACE OF WESTPHALIA in 1648 were undertaken there and it was made over to Hanover in 1815. Industries: iron and steel, textiles, papermaking, chemicals, machinery. Pop. (1979) 158,150.

Osprey, hawk that lives beside lakes and on the coast. It dives from the air to seize fish with its talons. It has a short hooked bill, broad ragged wings and a white head; it has brownish-black plumage on its back and a cream breast. Two to three white eggs, spotted with brown, are laid in a stick nest. In Britain it has become a rarity. Length: 51–61cm (20–24in). Family Pandionidae, species *Pandion haliaetus*.

Ossa, Mount, mountain peak in NE Greece. In Greek mythology the Aloidae tried to pile Mt Pelion on top of Ossa, in an attempt to reach heaven and overthrow the gods. Height: 1,978 (6,489ft).

Ossian (Oisín), legendary Gaelic warrior and poet of the 3rd century AD whose work enjoyed a revival of interest in Europe in the 19th century. His name was used by James MacPherson as the author of the latter's Ossianic poems in 1765, proven to be fakes after MacPherson's death.

Ossietzky, Carl von (1888–1938), German pacifist and journalist who was awarded the 1935 Nobel Peace Prize. In 1922 he helped to found the *Nie Weider Krieg* (No More War) organization and in 1927 became editor of *Weltbühne*, a liberal newspaper. In this he disclosed secret plans for German re-armament, which caused him to be accused of treason and sentenced to imprisonment in 1931. He was granted an amnesty in 1932 when Adolf Hitler became chancellor, and resumed editorship of the paper. Despite his precarious position he refused to leave Germany and was arrested again in 1933. He was sent to Papenburg concentration camp until 1936 when, suffering from tuberculosis, he was transferred to a hospital in Berlin in which he eventually died.

Ossification, process of BONE formation. Intramembranous bones develop from connective tissue cells which form a network of COLLAGEN fibres. These cells then differentiate into osteoblasts, which secrete bone-forming minerals that combine with the collagen to form the hard bone matrix. Endochondral bones develop from CARTILAGE, when certain cartilage cells change to osteoblasts. See also

pp.125, 146, 146, 147, 147, 1070–1071, 1070–1071.

Ostade, Adriaen van (1610–85), Dutch painter. His genre was village life, and he was trained by Frans Hals and later influenced by REMBRANDT. His works include *The Itinerant Fiddler* (1672) and *Carousing Peasants in an Interior* (c.1638). See also p.1445.

Osteichthyes, class of fish found in almost every environment. Their characteristics include a bony skeleton; a single flap (operculum) covering the gill openings, and red blood cells with nuclei. Most members of this class have scales. Osteichthyes first appeared during the Devonian period, when they were heavily armoured and lived in fresh water. See also pp.56–57, 276.

Ostend (Oostende), city and port in W Belgium, West Flanders province. From 1830 until the end of WWI it was a popular social centre; it was occupied by enemy forces during both world wars. Industries, fishing, shipbuilding, tobacco processing. Pop. (1970) 71,227.

Osteoarthritis, degenerative disease in which the CARTILAGE of the joints is destroyed. It may be caused by ageing or by postural or orthopaedic abnormalities, and may be relieved by PHYSIOTHERAPY, ANALGESICS or drugs such as CORTISONE. See also pp.1062, 1063, 1070, 1070.

Osteology, branch of medicine concerned with the study of the growth, structure, functions and diseases of BONES. See also pp.146–147, 1070–1071.

Osteomyelitis, inflammation of the BONE or bone marrow, usually as a result of infection. It is accompanied by fever, swelling and pain. The condition may be treated with ANTIBIOTICS or by surgery.

Osteopathy, an approach to medicine based on the theory that body strains interfere with normal body functioning and impair its ability to fight disease. The theory was formulated by Andrew Still in 1874, and the first school of osteopathy was opened in Kirksville, Missouri in 1892. Treatment is based on manipulative therapy of the musculo-skeletal system. Still's emphasis on treating the whole person remains an ideal of osteopathy.

Ostia, ancient Italian city 26km (16 miles) from Rome at the mouth of the River Tiber. It was Rome's naval base and commercial harbour from the 4th century BC to the 3rd century AD. The town became deserted by the 9th century, and excavation of the site was begun in the 19th century. See also pp.1228–1229.

Ostracism, practice carried out in Athens and some other ancient Greek cities whereby a majority of 6,000 citizens could vote for the banishment of an individual. The device was often used as a means of removing political opponents. Banishment normally lasted for up to ten years. No confiscation of property occurred.

Ostracod, also called seed shrimp, subclass of small CRUSTACEANS common in salt and fresh water. The African species *Mesocypris terrestris* is terrestrial, living in damp humus. Each has a rounded or elliptical carapace, resembling two halves of a clam shell. Length: 15–20mm (0.004–0.8in). See also p.35.

Ostrava, city in N central Czechoslovakia, near the confluence of the rivers Oder and Opava. In the Middle Ages, the city guarded the entrance to the Moravian lowlands. Industries: coal, iron, steelmaking, ship and bridge parts. Pop. 274,547.

Ostrich, largest living bird, found in central Africa. It is flightless and has a small, flat, down-covered head and long neck. Plumage is black and white in males, brown and white in females. The female scoops a hole in the sand for 10–12 large yellow eggs, which are incubated by her during the day and by the male at night. Height: to 2.5m (8ft); weight: to 155kg (345lb). Family Struthionidae; species *Struthio camelus*. See also pp.72, 319.

Ostrogoths. See GOTH.

Ostrovsky, Aleksandr Nikolayevich (1823–86), Russian dramatist. Many of his plays deal with the life of the Russian bourgeoisie. *Poverty Is No Crime* (1854), concerns a marriage of convenience. His best-known work is *The Storm* (1860).

Ostwald, Wilhelm (1853–1932), German chemist, b. Russia. He became professor of chemistry at Leipzig University (1887–1906), and remained in Germany for the rest of his life. His work on solutions led him to formulate Ostwald's dilution law. His process for preparing nitric acid and his research on catalysis became important for industry. He was awarded the 1909 Nobel Prize in chemistry.

Oswald, Saint (c.605–41), King of Northumbria (633–41). He was the son of ETHELFRITH but became a Christian and converted his people with the help of St Aidan from Iona. He defeated the Welsh King Cadwalla in 633 and became King of Northumbria, but was killed in battle by Penda of Mercia. Feast day: 5 Aug. See also p.1288.

Otago, statistical area in the southern part of New Zealand's South Island. The principal town is Dunedin. The chief industry is sheep rearing, and there is also extensive beef and dairy farming and wheat growing.

Othello (1604), play by William Shakespeare. One of Shakespeare's most tragic dramas, perhaps due to its treatment of an accessible theme – sexual jealousy – the play deals with the susceptibility, through ignorance, to corruption of the purest love. The interplay of Othello (a Moor) and Iago (his malignant tempter) is the crux of the play.

Othman (c.574–656), son-in-law of MOHAMMED. He succeeded Omar, becoming the 3rd caliph (644–56) of the expanding Arab empire, Cyprus and Bactria being conquered during his reign. He compiled an authoritative text of the KORAN, destroying all other versions. Revolts in Egypt and Mesopotamia against his methods of government led to his murder in 656. See also pp.1278–1279.

Othman I. See OSMAN I.

Otis, Elisha Graves (1811–61), US inventor who designed and manufactured lifts and escalators. His first invention (1852) was an automatic safety hoist for a lift in a factory for which he supervised the construction. His fame dates from 1856, when he installed a passenger lift in a New York store. In 1861 he patented a steam-powered lift. See also pp.456–457.

O'Toole, Peter (1932–), Irish stage and film actor. In the theatre, he gave exciting performances at Stratford-upon-Avon (1960) as Shylock in *The Merchant of Venice* and as Hamlet in the opening presentation of the National Theatre at the Old Vic, London (1963). His first important film role was the title part in *Lawrence of Arabia* (1962), after which he appeared in several other historical films, such as *Becket* (1964), *Night of the Generals* (1966) and *The Lion in Winter* (1968). In 1976 he played the title role in a television adaptation of Geoffrey Household's *Rogue Male*.

Otranto, resort town in S Italy located on the Strait of Otranto. Although it was a large settlement under the Romans, it was devastated in 1480 by the OTTOMAN Turks and declined in importance after that date. Its 15th-century castle is the setting for Horace WALPOLE'S GOTHIC NOVEL *The Castle of Otranto* (1765). Today fishing is the main activity. Pop. (1971) 4,240.

Ottawa, capital of Canada, in SE Ontario on the Ottawa River and the Rideau Canal, which divides the city into upper and lower towns. Queen Victoria chose it as capital of the United Provinces in 1858, and in 1867 it became capital of the Dominion of Canada. At Chaudière Falls hydro-electric power is generated for municipal and domestic use. Rich deposits of silica support a thriving glass-making industry and marble is processed there. Other industries include printing, publishing, sawmilling, pulp-making, food-processing and the manufacture of household appliances. More than 75,000 inhabitants are employed by the federal government. Pop. (1976) 304,462.

Ottawa Agreements (1932), economic agreements negotiated at the Imperial Economic Conference in Ottawa. Commonwealth countries were allowed to export most goods to Britain free of duty,

while Britain imposed new duties on imports from non-Commonwealth countries. This policy, named imperial preference, had been advocated by Chamberlain at the 1897 Colonial Conference. Trade preferences between the colonies and Britain were gradually removed following the Agreement on Tariffs and Trade in 1947.

Otter, semi-aquatic carnivore found everywhere except Australia. Otters have narrow pointed heads with bristly whiskers, sleek furry bodies, short legs with webbed hind feet and long tapering tails. The river otter (genus *Lutra*) of Europe, North and South America, Asia and Africa is small to medium-sized and spends considerable time on land. The giant otter (*Pteronura brasiliensis*) may reach a body length of 1.5m (5ft) with a tail of 60cm (2ft).

Otterhound, dog used for otter-hunting from the 13th century in England. It has a large, slightly domed, narrow head, and is heavily set with a sickle-shaped tail. Height at shoulder: 61–66cm (24–26in). **Otter shrew**, any of three species of aquatic mammals that live in equatorial Africa. They have long, pointed shrew-like faces, long bodies and flattened tails for paddling. They feed mainly on insects. The largest species is up to 64cm (25in) long. Family Tenrecidae; genera *Potamogale* and *Micropotamogale*.

Otto, the name of four Holy Roman emperors. Otto I (Otto the Great) (912–73; r.962–73) and German king (r.936–73) succeeded his father, Henry I, and after subduing German nobles invaded Italy in 951 to aid Queen Adelaide against Berengar II, who had succeeded her husband. Otto defeated Berengar, assumed the title "King of the Lombards" and married Queen Adelaide. In 955 he routed the Magyars at Lechfeld. On becoming emperor he revived the connection established by CHARLEMAGNE between the Roman empire and the Germans. Otto II (955–83; r.973–83), was the son of Otto I. He subdued a revolt by Henry, Duke of Bavaria, and in 978 France invaded Lorraine, which Otto regained in 980. Shortly afterwards he led an expedition to Italy to secure lands in the south but was defeated in 982. Otto III (980–1002; r.983–1002) succeeded Otto II while he was still an infant. Regents ruled for him until he assumed the throne in 994. Otto IV (c.1175–1218; r.1209–15) was elected German anti-king to Philip of Swabia in 1198. After Philip's death in 1208 he was recognized as king and crowned emperor in the following year by Pope Innocent III, but the pope withdrew his support when Otto invaded Italy. After a defeat in 1214 by the French, who were allied with Frederick II, the pope deposed him. See also pp.1294, 1294, 1295, 1321.

Otto I (1815–67), king of the Hellenes (1832–62). His rule of a newly independent Greece was unpopular because of its lack of a constitution. His efforts to overthrow the constitution imposed on him by the revolt of 1843 led to his deposition and exile in 1862.

Otto, Frei Paul (1925–), German architect noted for his lightweight designs, particularly of sports arenas and pavilions. Famous for his suspended roofs and inflated plastic structures, his buildings include the membrane roof for the Olympic Stadium, Munich (1972) and the hotel and conference centre in Mecca, Saudi Arabia (1966–75).

Otto, Nikolaus August (1832–91), German engineer who built a gas-fired engine (1861) which won a gold medal at the Paris Exhibition of 1867. He later built an internal combustion engine, based on the FOUR-STROKE CYCLE (also called the Otto cycle), that was the forerunner of most of today's engines. See also pp.420, 426, 427, 492.

Ottoman Empire, former state in Asia Minor, founded by OSMAN I in the 13th century. By the end of the 14th century it had absorbed the BYZANTINE EMPIRE and conquered Egypt and Syria during the 16th century. During the rule of SULEIMAN THE MAGNIFICENT (1520–66) the empire included much of SE Europe, W Asia and N

Africa. A series of debilitating wars was fought during the 17th and 18th centuries against Poland, Austria and Russia, bringing about a decline which continued until the dissolution of the empire in 1920 with the Treaty of SEVRES. The Turkish nationalists finally overthrew the sultan in 1922. See also pp.1355, 1355, 1560–1561, 1560–1561.

Otway, Thomas (1652–85), English dramatist. His best-known plays, *The Orphan* (1680) and *Venice Preserved* (1682) were high points of tragedy during the Restoration period, and notable for their departure from his contemporaries' formal style.

Ouagadougou, largest city and capital of Upper Volta founded in the late 11th century as capital of the Mossi empire. It was regarded as the centre of Mossi power until the French captured it in 1896. Industries: handicrafts, food processing, peanut growing. Pop. (1970 est.) 115,500. **Ouahran**. See ORAN.

Oud, Jacobus Johannes Pieter (1890–1963), Dutch architect. A member of the de STIJL group of geometric-abstract artists and co-founder of the review *De Stijl* with Theo van DOESBURG in 1917, he designed housing groups in a simplified style using reinforced concrete. He served as Rotterdam's official architect (1918–33), creating housing estates such as those of Tusschendijken (1920), Oud-Mathenesse (1922) and Hook of Holland (1927).

Oudenaarde, Battle of (1708), Allied victory over the French during the War of the SPANISH SUCCESSION. The Duke of MARLBOROUGH and Prince EUGENE OF SAVOY led 80,000 men in a march of 80km (50 miles) in 65 hours to relieve Oudenaarde, which was being besieged by 85,000 French troops. The French were forced to retreat, and ultimately to abandon the Spanish Netherlands.

Oudh (Ayodhya), ancient city of N central India in a district of Uttar Pradesh. It is one of the seven holy places of HINDUISM and has many monuments and shrines, including the mosque of RAMA's birthplace. It was a province of the Mogul empire during the 16th century.

Oudry, Jean Baptiste (1686–1755), French painter of animals and still lifes. He was court painter to Louis XV and illustrated La Fontaine's *Fables* in 1755. His *White Duck* (1753) is highly regarded. **Oughtred, William** (1575–1660), English mathematician. He invented several trigonometrical and algebraic signs and developed the first slide rule in 1632. He published *Clavis Mathematicae* in 1631 and *Trigonometria* in 1657.

Ouida (1839–1908), British novelist, real name Marie Louise de la Ramée. Her many vigorous, though often factually inaccurate, works include *Under Two Flags* (1867), *A Dog of Flanders* (1872), *Moths* (1880), and *A Village Commune* (1881).

Ouija board, in occultism, a board bearing the letters of the alphabet on top of which is a smaller movable board with a marker which, when pressure is applied to it, may point out letters. This apparatus is used by those wishing to obtain spiritualistic and telepathic messages. The name "ouija" comes from the French and German words for "yes"; *oui* and *ja*.

Oujda, city in NE Morocco, near the Algerian border, founded in the late 10th century by the Berbers and occupied by the French in 1844, 1857 and 1907. It is an important trade and rail centre handling regional agricultural and mineral products. Pop. (1971) 175,532.

Oulu, capital of Oulu province in W central Finland. It began to expand in 1590 and became a commercial centre in the 19th century. Its present-day industries include wood- and leather-processing and metalworking. Pop. (1970 est.) 87,224. **Ounce**. See LEOPARD, SNOW.

Our Mutual Friend (1864–65), novel by Charles DICKENS. It was his last complete work and suffered adverse criticism at first only to be reinstated later as one of his greatest works. The plot is a powerful exposition of the worth of the individual contrasted with his financial status.

Our Town (1938), three-act drama by Thornton WILDER about the effect of death on an ordinary family. The play is performed without scenery; a few props are arranged by the stage manager, who also introduces, interrupts and comments on the action.

Ouse, English river formed by the confluence of the rivers Ure and Swale, both of which have their source in the Pennines, N Yorkshire. It is navigable to York and is still an important commercial waterway, flowing SE and eventually joining the River Trent to form the River Humber. Length: 72km (45 miles).

Ousel. See OUZEL.

Outback, term applied in Australia and New Zealand to the inland areas of the continent. In the early days of settlement the name acquired a mythical quality as a land of adventure and opportunity which lured explorers inland. It remains, however, a rural, largely undeveloped region which is very sparsely populated.

Outboard motor, portable engine used to propel a type of motorboat. It incorporates the drive shaft and propeller and is either clamped to the stern or placed in a "well" specially built into the hull. A boat so equipped is very manoeuvrable, because steering is effected by rotating the whole assembly, including the propeller shaft.

Outbreeding. See CROSSBREEDING.

Outcrop, exposure at the surface of the Earth of an edge of rock stratum. This phenomenon may be caused by the erosion of soil by water, wind, ice (especially glaciers) or gravity.

Outer ear. See EAR.

Outer Hebrides. See HEBRIDES.

Outer Mongolia. See MONGOLIA.

Outlawry, in medieval law, act of placing a person who was in contempt of court outside the protection of the law. Conviction of major outlawry, as in a case of alleged treason, involved forfeiture of all property, and implied conviction, rendering the subject liable to be killed on sight. In other cases of civil or criminal contempt of court, outlawry implied the deprivation of civil rights and the forfeiture of chattels. It was abolished in civil cases in England in 1879, and in criminal ones in 1938.

Output device, computer, apparatus that transmits or records data from a COMPUTER. It may take the form of a modem for remote receipt of data, a hard-copy printer or recorder (eg a teletypewriter), a line-printer or an alpha-numeric display (a TV-type screen on which letters or numbers are presented). Other forms include digital to analog (D/A) systems that directly control various mechanisms and processes. See also pp.466–467, 467.

Outrigger, canoe-type vessel with a float or floats attached outboard of, and parallel to, the main hull. Such vessels are still used in the Pacific and Indian oceans.

Ouzel (ousel), heavy-bodied bird found in the mountains of Asia, Europe and the Western Hemisphere. The ring ouzel (*Turdus torquatus*) has black plumage, with a white chest collar. Family Turdidae.

Oval Cricket Ground, The, home of the Surrey County Cricket Club, in S London. It was first used as a cricket ground in 1845 and was the venue for the first TEST MATCH held in England (1880). It is traditionally the venue of the last match of each Test series played in England. It has a maximum capacity of about 17,000 people. Despite its name, its shape only approximates to an oval.

Ovary, in biology, the part of a multicellular animal or a flowering plant that produces egg cells (ova), or female reproductive cells; in vertebrates it also produces female sex hormones. In female human beings there is an ovary on each side of the uterus (womb). Controlled by the PITUITARY GLAND, each ovary produces two chief female sex hormones: OESTROGEN and PROGESTERONE, which in turn control development and functioning of the female reproductive system. See also MENSTRUAL CYCLE; pp.155, 155, 164–165, 164–165, 167, 1078.

Ovenbird, bird found in varying habitats in South America and named after the oven-shaped nests built by some species,

including the shaketail, spinetail and leaf-scraper. They are generally brownish or reddish-brown. Most feed on insects although some feed on seeds. Length: 12–23cm (5–9in). Family Furnariidae. See also p.76.

Overbeck, Johann Friedrich (1789–1869), German religious painter, founder and leader of the NAZARENE group. His importance is chiefly historical since the Nazarene movement was a critical transition from Classicism to ROMANTICISM in German art. See also p.1557.

Overbury, Sir Thomas (1581–1613), English writer and courtier who gained a reputation by his personal essays. For his hostility to the marriage of his friend, Robert Carr, to Frances Howard, he was put in the Tower by JAMES I. There he was poisoned to death by Carr and his wife.

Overfishing, the catching of too many marine creatures to maintain an ecological balance – the cause of the disappearance of stocks of food fishes and whales from the oceans, now a worldwide source of concern. It remains an international problem largely because of the inability of marine law to regulate fishing and WHALING, and to restrain individual nations from reducing once-rich areas to the point of extinction. The great whales, until recently plentiful enough to supply all nations of the world with a sufficiency of their products, have been overfished so badly that some species now face extinction, yet large catches are still being made, particularly by the USSR and Japanese fleets. Many other nations are also restrained only with the greatest difficulty from extinguishing fish stocks, leading to legal proceedings in the Court of INTERNATIONAL JUSTICE. See also pp.738, 744, 745, 750.

Overijssel, province in E central Netherlands, bordering West Germany (E), Drenthe province (N), IJsselmeer (W), River IJssel (SW) and Gelderland (S). Industries: machinery, weaving and food-processing. Area: 3,932sq km (1,518sq miles). Pop. (1980 est.) 1,018,208.

Overpopulation, in economics, situation in which production would be absolutely increased by a reduction in the numbers involved. It is more generally defined as a situation in which the total economic activity of a community is not adequate to supply all its needs. Overpopulation is therefore relative to the economic capacity of the area. It is often considered that most of South-East Asia is overpopulated. The issue of overpopulation, both on a global and a regional scale, has been much discussed since the late 1960s.

Overtone, usually a harmonic, a constituent of a musical note with a frequency which is a whole-number multiple of the fundamental note. Some instruments (eg cymbals), however, produce non-harmonic overtones. See also TIMBRE.

Overture, instrumental prelude to an opera or operetta; the term has now come also to include an orchestral composition in its own right, usually lively in character. Famous operatic overtures were composed by MOZART, eg to *The Marriage of Figaro*; ROSSINI, eg to *William Tell*; and WAGNER, eg to *Tristan and Isolde*. Notable concert overtures include the 1812 *Overture* by TCHAIKOVSKY.

Overt, Steve, British middle distance runner. He won gold medals in the 1,500 metre event at the 1978 European Championships and the 800 metres at the 1980 Olympics.

Ovid (43 BC–AD 18), Roman poet, full name Publius Ovidius Naso. A popular and prolific poet, he was exiled to an outpost near the Black Sea in AD 8. His works include *Amores*, short love poems (many praising his mistress Corinna), *Ars Amatoria*, a didactic work on how to get and keep a lover, and his masterpiece, the *Metamorphoses*, a collection of skillfully-woven mythological stories. *Tristia* (Sorrowful) is an autobiographical work written in exile.

Oviducts, tubes that connect the ovaries with the UTERUS and through which egg cells are released from the ovary. In mammals they are known as FALLOPIAN TUBES. These are lined with a tissue called the EPITHELIUM.

Oviedo

Oviedo, city of NW Spain, founded c. 760, 370km (230 miles) NW of Madrid and capital of Oviedo province. It has the University of Oviedo (1604) and a 14th-century cathedral containing the tombs of the Asturian kings. Industries include agriculture, arms manufacture and mining. Area: province 10,564sq km (4,079sq miles). Pop. city (1970) 154,117; province 1,045,635.

Ovulation, the release of a mature OVUM (egg) from the OVARY. In women one egg is released midway through the menstrual cycle, stimulated by FSH (follicle-stimulating hormone) and LH (LUTEINIZING HORMONE) derived from the PITUITARY GLAND. See also MENSTRUAL CYCLE; pp.164-165.

Ovum, egg or female GAMETE produced in an OVARY. After FERTILIZATION by the sperm it is capable of developing into a new individual. See also pp.164-165.

Owen, Alun Davies (1925-), British dramatist who used his experiences of Liverpool, where he grew up, in the television play *No Trams to Lime Street* (1959), the musical *Maggie May* (1964), the film *A Hard Day's Night* (1964) for the BEATLES and the stage play *Progress to the Park* (1959). Other plays for the theatre include *A Little Winter Love* (1963) and *The Male of the Species* (1974).

Owen, Daniel (1836-95), Welsh novelist. The son of a miner, he had little formal education, and became a tailor's apprentice at the age of 12. He began writing in his late 20s and vividly portrayed the Wales of his time. His novels include *The Autobiography of Rhys Lewis* (1885) and *The Trials of Enoc Huws* (1891).

Owen, Goronwy (1723-69), Welsh poet, scholar and clergyman. He studied medieval Welsh poetry and revived certain Welsh metrical forms in his work. In 1758 he emigrated to Virginia, where he lived until his death. Two of his more memorable poems are *The Day of Judgement* and *The Gem or The Precious Stone*.

Owen, Robert (1771-1858), Welsh social reformer. He believed that workers would be more productive if their environment were improved. He founded the New Lanark Mills in Scotland, where he paid high wages, provided better living conditions and, in spite of everything his opponents said, still made a profit. He set out his theories in a three-volume work, *New View of Society* (1813-21). See also pp.1473, 1565, 1567, 1694.

Owen, Wilfred (1893-1918), British poet. His poems of life at the front line during WWI include *Arms and the Boy* and *Anthem for Doomed Youth*. While recovering from a wound in 1917 he met Siegfried SASOON who encouraged him to write. After Owen's death in France, one week before the armistice, SASOON arranged for the publication of his poems. See also p.1674.

Owen Falls, waterfall in SE Uganda, on the Nile, just below Lake Victoria. The Falls, 20m (65ft), were submerged when the Owen Falls dam was constructed. The dam supplies hydro-electric power for Uganda and Kenya.

Owen Glendower. See GLYN DYR, OWAIN.

Owens, Jesse (1913-), US black athlete, b. James Cleveland Owens. While studying at Ohio State University he broke several world records for jumping, hurdling and running (1935-36). At the 1936 Olympics in Berlin he won gold medals for the 100m and 200m races, the long jump and his part in the US team's victory in the 400m relay. His 200m and long-jump records remained unbeaten for more than 20 years.

Owl, order of birds occurring throughout the world except at extreme latitudes. Owls are characterized by a round head, hooked bill, large eyes and long, curved talons. They are nocturnal, with keen eyesight and hearing, and feed on small birds, insects and mammals. Owls comprise two families: Strigidae include the tawny, snowy, little and eagle owls, while Tytonidae has the barn owl as its only member. Order Strigiformes. See also pp.73, 84, 187, 297, 304, 305, 307, 315, 319, 319, 325.

Ox, two domesticated species of cattle,

Bos taurus and *B. taurus primigenius*. The term is specifically applied to castrated males commonly used as draught animals. Many varieties of wild cattle, such as the African buffalo and the South East Asian gaur are sometimes called wild oxen.

Oxalic acid, poisonous colourless crystalline organic carboxylic acid whose salts occur naturally in some plants, eg sorrel and rhubarb. It is prepared artificially from carbon monoxide and sodium hydroxide and used for metal and textile cleaning and in tanning. Properties: s.g. 1.653; m.p. 101.5°C (214.7°F).

Oxalis, or wood sorrel, genus containing some 800 species of low-growing plants in wooded areas. The common wood sorrel (*Oxalis acetosella*) is a perennial of temperate Europe and North America. Its flowers are white, veined with purple. The plant's name comes from the Latinized Greek *oxalis* (acidic) because of its bitter taste.

Oxbow lake, crescent-shaped lake, often stagnant and filled with silt or marsh vegetation. Such lakes commonly occur in the lower courses of rivers which meander widely until higher pressure of water or mounting silt forces the river to carve a straighter channel. The name derives from the shape of the lake, said to resemble an ox's collar.

Oxenstjerna, Count Axel Gustafson (1583-1654), Swedish statesman and military strategist. He was appointed Chancellor of Sweden in 1612 under GUSTAVUS ADOLPHUS and was Vice-Regent (1614-16). After Gustavus's death in 1632 he was Regent of Sweden, and so the virtual ruler, until Princess Christina's coronation in 1644. He was a social reformer and, after Queen CHRISTINA's abdication in 1654, served her successor CHARLES X until his death.

OXFAM, formerly the Oxford Committee for Famine Relief, an international charity, formed in WWII and registered as a charity in 1948. It attempts to alleviate suffering due to poverty or natural misfortune in all parts of the world. From its headquarters in Oxford, England, OXFAM promotes research into the causes and prevention of famine and co-ordinates and encourages the public and national response to specific catastrophes, such as earthquakes, floods, droughts or the results of warfare. As a result of its policy to educate people so that they can solve their own problems, nearly three-quarters of OXFAM's overseas budget is devoted to long-term projects which include agriculture, nutrition, family planning and medicine.

Oxford, Edward de Vere, 17th Earl of (1550-1604), English courtier and poet. A favourite of Queen ELIZABETH I, he is sometimes accredited with the works of SHAKESPEARE - against which the best argument is that he died at too early a date. Poetry by him is published in *The Poems of Edward de Vere* (1921).

Oxford, Robert Harley, 1st Earl of. See HARLEY, ROBERT.

Oxford, city and county district in N Oxfordshire, s central England. The county town, Oxford, was founded as a trading centre and fort; it was raided by the Danes in the 10th and 11th centuries. Oxford is the seat of OXFORD UNIVERSITY, founded in the 12th century. Other buildings of interest are the Sheldonian Theatre (1662), the Ashmolean Museum (1683), an Observatory (1772) and many old churches and inns. Industries include the manufacture of steel and motor vehicles. The county district was created in 1974 under the Local Government Act (1972). Area: 36sq km (14sq miles). Pop. (1979 est.) 122,400.

Oxford and Asquith, Earl and Countess of. See ASQUITH.

Oxford Committee for Famine Relief. See OXFAM.

Oxford Group. See MORAL REARMAMENT. **Oxford Movement**, also called the Tractarian Movement or the Catholic Revival, the attempt by some members of the Church of England to restore the ideals of the pre-Reformation Church, from c. 1833 to the first decades of the 20th century. It was a reaction to the general

decline in religious sentiment and the development of liberal theology; its dominant interest was in the Church's ritual. The main proponents were John KEBLE, Edward PUSEY and John NEWMAN (who eventually became a Roman Catholic cardinal). The legacy of the movement remains as Anglo-Catholicism.

Oxfordshire, county in s central England, bounded in the NW by the Cotswold Hills and in the SE by the Chilterns, and drained by the River Thames. The chief town is Oxford. Area: 2,611sq km (1,008sq miles). Pop. (1979 est.) 551,700.

Oxford Union, The, debating society of Oxford University, founded in 1826 as the Oxford Union Society. For its first three years it had no fixed home but met in private rooms at various colleges. The building in which it is now housed was built in 1856 to 1857 by Benjamin Woodward.

Oxford University, English centre of learning which developed from the group of teachers and students who gathered in Oxford after the exodus of foreign-born scholars from Paris in 1167. The 13th century saw a gradual development of internal organization and a growing hostility between the scholars and the town. There was, however, little sense of community amongst the scholars until the foundation between 1249 and 1264 of the first three colleges, which were to become University, Balliol and Merton. The colleges of Oxford, which quickly increased in number, became almost autonomous. Although the bachelor degree existed in the earliest days of the university, pass and honours examinations were not instituted until 1800 by a statute which was the first of a series of 19th-century reforms, including the admission of women in 1878, which established the university as it is now. The 1970s saw the admission of women to the previously all-male colleges.

Oxidation, chemical reaction in which oxygen combines with another element or compound to form an oxide. Because oxidation entails a loss of electrons by the molecules with which the oxygen combines, the term is also used to define a loss of electrons even when oxygen is not involved.

Oxidation potential. See ELECTRODE POTENTIAL.

Oxidation-reduction, also called redox, chemical reaction involving simultaneous oxidation and reduction. In general, oxidation and reduction reactions occur together; thus in the reaction $Fe_2O_3 + 3C \rightarrow 2Fe + 3CO$, the iron oxide is reduced by the carbon, and the carbon is oxidized by the iron oxide. Carbon is the reducing agent; iron oxide the oxidizing agent. The term also describes reversible reactions as in the reaction between iron and tin compounds: $2FeCl_2 + SnCl_4 \rightleftharpoons 2FeCl_3 + SnCl_2$. Oxidation-reduction reactions are important in many biochemical systems.

Oxidation state, state in which an atom is potentially able to form a compound, depending on the number of electrons available to be transferred. It is quantified on a scale of oxidation numbers which indicate the degree of IONIZATION. Thus in the compound sodium oxide, Na_2O , sodium (Na^+) has an oxidation number of +1, and oxygen (O^{2-}) an oxidation number of -2. In CO-VALENT and COORDINATION (COMPLEX) compounds, the oxidation number is the electric charge that the atoms would have had if the compound was ionic; eg in the ion $[CuCl_4]^{2-}$, regarded as formed from Cu^{2+} and $4Cl^-$, the copper has an oxidation number of +2. Oxidation numbers are often used in the names of chemical compounds, as in iron II chloride ($FeCl_2$) and iron III chloride ($FeCl_3$), formerly called ferrous and ferric chloride.

Oxide, any inorganic chemical compound in which OXYGEN is combined with another element, or any organic compound in which oxygen is combined with one or more RADICALS. Examples of the latter are ethers, which have the general formula R_1-O-R_2 , where R_1 and R_2 are carbon radicals. Inorganic oxides are of six kinds, named here with examples: (1) acidic, non-metal oxides generally; (2) basic,

metal oxides generally; (3) neutral, carbon monoxide; (4) amphoteric (capable of being acidic or basic), aluminium oxide; (5) peroxides, barium peroxide; and (6) suboxides, carbon suboxide. **Oxide coatings**, coatings of incandescent filaments with the oxide of ALKALI metals or of a CATHODE with the oxide of alkali and ALKALINE-EARTH metals. It allows the production of thermionic emission at low temperatures.

Oxidizing agent, substance that causes oxidation reactions. Thus in the oxidation of carbon, $2C + O_2 \rightarrow 2CO$, oxygen is the oxidizing agent. Other common oxidizing agents include NITRIC ACID, HYDROGEN PEROXIDE, OZONE, potassium dichromate, ferric (iron III) compounds and potassium permanganate. See also OXIDATION-REDUCTION.

Oxley, John Joseph William Molesworth (1781-1828), Australian explorer, b. England, who became surveyor-general of New South Wales. He explored about 1,127km (700 miles) of the E coast between 1823-24, discovering the mouth of the Brisbane river.

Ox-pecker, two species of African birds of the genus *Buphagus*. Both are brown with wide bills and stiff tails and reach 22cm (8.5in) in length. They cling to cattle and big game and remove ticks and maggots. Family Sturnidae.

Oxus, River, in Persian mythology, river dividing the territory of the Persian Prince Rustem from that of his enemies the Turanians. It is mentioned by Matthew ARNOLD in his epic *Sohrab and Rustum* (1853) and is identified with the present day Amu Darya river in Soviet central Asia.

Oxyacetylene welding, the joining of metals by melting and fusing adjacent parts with a hot flame in which acetylene gas burns in pure oxygen. Oxyacetylene torches have two nozzles close together, from which the gases emerge to be ignited. The gases are supplied from pressurized steel "bottles" through flexible high-pressure hoses. See also WELDING; p.407.

Oxygen, common gaseous element (symbol O), discovered in 1774 by Joseph PRIESTLEY and independently (c.1772) by C.W. SCHEELE. It is the most abundant element in the earth's crust (49.2% by weight), and is a constituent of water and many rocks. It is also present in the atmosphere (23.14% by weight); it is extracted by fractional distillation of liquid air. The element is used in steelmaking, welding, the manufacture of industrial chemicals and in breathing and resuscitation apparatus. It is necessary for combustion and for the respiration of plants and animals. It is chemically reactive, and forms compounds with nearly all other elements. Properties: at. no. 8; at.wt.15.9994; density 1.429 gm/litre; m.p. -218.8°C; (-361.8°F); b.p. -182.96°C; (-297.3°F); most common isotope O^{16} (99.759%). See also OZONE; pp.888, 888.

Oxygen cycle, interchange of oxygen among agencies such as the atmosphere, the oceans, animal and plant processes and chemical combustion. The main renewable source of the earth's oxygen is the plant process of photosynthesis, wherein oxygen is liberated. Oxygen, dissolved in water, is utilized by aquatic life-forms in the process of respiration, a process essential to most living forms except anaerobic bacteria.

Oxygen process, or L-D process, method of producing steel first developed in Austria in 1952. Unlike the older BESSEMER and OPEN HEARTH PROCESSES which use air, the oxygen process uses jets of pure oxygen blown over the surface of the molten iron ore to convert it to iron.

Oxygen tent, device used in hospitals to provide a patient with an oxygen enriched atmosphere. It is used especially for patients suffering from heart failure or serious respiratory diseases.

Oxyhaemoglobin, the combination of haemoglobin in red blood cells with oxygen from the lungs, in which form oxygen is transported in the blood to all cells of the body. When oxyhaemoglobin gives up its oxygen to cells, a chemical

reaction is promoted which makes carbon dioxide (CO₂) from the tissues more soluble in the blood, for transport back to the lungs and elimination from the body. See also RESPIRATION; pp.158-159.

Oxytocin, or pitocin, peptide hormone secreted by the posterior pituitary; its principal effect is on myoepithelial cells of the breast, causing contraction of the ducts and ejection of milk. It also stimulates contraction of smooth muscle of the uterus, and plays a part in the induction of labour. See also pp.154, 167.

Oyster, edible BIVALVE mollusc found worldwide in temperate and warm seas. Its shell, usually with valves of unequal size, varies in shape according to environment. The European flat, or edible, oyster *Ostrea edulis* occurs throughout coastal waters. Family Ostreidae. See also pp.22-23, 22-23.

Oyster-catcher, sea-shore bird with a strikingly marked black-and-white stocky body and bright orange legs and beak. Oyster-catchers feed on molluscs, such as oysters and mussels, prising them open with their long beaks. Two to four sand-coloured eggs are laid in a depression scraped in the sand. Length: 43cm (17in). Family Haematopodidae; typical genus *haematopus*. See also p.335.

Oyster mushroom, common edible FUNGUS that grows on trees. It has a fleshy oyster- or fan-shaped cap, prominent gills and usually no stalk. Species *Pleurotus ostreatus*.

Ozark Mts (Ozark Plateau), eroded tableland in s central USA, extending from sw Missouri across NW Arkansas into E Oklahoma. Timber is an important industry, as are lead- and zinc-mining and tourism. Area: approx. 129,500sq km (50,000sq miles).

Ozenfant, Amédée (1886-1966), French painter and teacher. He was one of the founders of Purism, which holds that art must be ordered and precise, and in the spirit of the modern machine age. He wrote *Après le Cubisme* (1918) with LE CORBUSIER.

Ozone, unstable gaseous ALLOTROPE of oxygen (O₃). It has a characteristic pungent odour and decomposes into molecular oxygen. It is present in the atmosphere mainly in the OZONE LAYER. Ozone is prepared commercially by the irradiation of air, and used as an OXIDIZING AGENT, in the purification of water and for bleaching. See also pp.246-247, 246-247.

Ozone layer, general stratum or shell in the atmosphere of the Earth in which OZONE (O₃) is concentrated. It is densest at altitudes of 21 to 26km (13 to 16 miles). Produced by incoming sunlight, the ozone layer absorbs much of the solar ultra-violet radiation, thereby shielding the Earth's surface. Aircraft, nuclear weapons, and some aerosol sprays and refrigerants all yield chemical agents that can decompose the ozone in this layer and could lead to an increase in the destructive ultra-violet radiation reaching the Earth's surface. See also FLUOROCARBONS; pp.246-247, 246-247.

P

P, 16th letter of the alphabet, derived from the Semitic letter *pe*, the word for *mouth*. In the Greek alphabet the letter became *pi*, which was taken into Latin and given the shape it has today. In English *p* nearly always has the same sound, as in *pig* and *poke*, although it is silent in a few words, such as *pneumatic*. Combined with *h* it is pronounced like an *f*, as in *phase* and *pheasant*. See also pp.608-609.

Pa, MAORI village or group of dwellings. It was usually built on a hill, with elevated stages for ramparts, and stockades built around each terrace.

Paasikivi, Juho Kusti (1870-1956), Finnish statesman who was chairman of the delegation that signed a peace treaty with the USSR in 1920. He was President of Finland from 1946 to 1956.

Pabst, George Wilhelm (1885-1967), Austrian stage actor and film director. Mostly of a pessimistic nature, his works included *Die Freudlose Gasse* (*The Joyless Street*) (1925), *Die Büchse der Pandora* (*Pandora's Box*) (1928), *Komödianten* (*Comedians*) (1941) and *Der Letzte Akt* (*The Last Act*) (1954).

Paca, also called spotted cavy, shy, nocturnal tailless RODENT of South America; it is brown with rows of white spots and has a relatively large head. A burrow-dweller, it feeds mainly on leaves, roots and fruit. Length: to 76cm (30in). Family Dasyproctidae; species *Cuniculus paca*. See also p.314.

Pacemaker, heart, area of tissue in a vertebrate's heart that sets it beating at about 70 beats a minute. If it fails it can be replaced by a battery-powered electronic unit which stimulates the heart with tiny electrical impulses. The pulse is usually about two volts and lasts two thousandths of a second.

Pacheco, Francisco (1564-1654), Spanish painter and art writer who taught Alonso CANO and Diego VELÁZQUEZ. He became painter to the King of Spain in 1619. He is also the author of *El Arte de la Pintura*... (1649), an important document on the history of Spanish painting.

Pacher, Michael (1435-98), Austrian sculptor and painter who studied in Italy and was among the first to encourage the Renaissance in Germany. His masterpiece, the St Wolfgang altarpiece, is in the church of Sankt Wolfgang am Aberg, in the Salzkammergut region of Austria.

Pacific, War of (1879-84), conflict between Chile and the allied nations, Peru and Bolivia. The threatened take-over of Chilean holdings in the nitrate-rich province of Antofagasta induced Chile to send troops into the area, precipitating the war. Peru and Bolivia were thoroughly vanquished, Peru losing the provinces of Tarapacá and ultimately Arica too, while Bolivia became a land-locked nation with the loss of its only coastal province.

Pacific Islands Trust Territory, US territory including approx. 2,000 islands in the e central Pacific Ocean. Area: 1,860sq km (718sq miles). Pop. (1975 est.) 120,000. See p.2115.

Pacific Ocean, largest and deepest ocean in the world, covering approx. one third of the Earth's surface and containing more than 50% of the Earth's seawater. The Pacific extends from the Arctic Circle to Antarctica, and from North and South America in the w to Asia and Australia in the e. The w Pacific region contains many islands which rise steeply from a deep sea-floor. The e Pacific region is connected with the Cordilleran mountain chain, and there is a narrow CONTINENTAL SHELF. The central region is low-lying. The ocean is ringed by numerous volcanoes, known as the Pacific Ring of Fire. There is also a large number of islands in the Pacific, most of which are in the s and w and are known collectively as OCEANIA. The major islands are New Zealand, the Japanese group and the Malay Archipelago. There are numerous volcanic and coral islands. The principal rivers that drain into the ocean are the Columbia in North America and the Hwang Ho (Yellow) and the Yangtze (Ch'ang Chiang) in Asia. Its average depth is 4,300m (14,000ft). The greatest known depth is that of the Challenger Deep, sw of Guam in the Mariana Trench, which has a depth of 11,033m (36,198ft). The sw and se basins of the Pacific sea bed are separated by the Albatross Cordillera. The current pattern of the Pacific is made up of two gyres: N of the equator are the North Equatorial Current, the Kuroshio Current, the North Pacific Drift and the California Current; S of the Equator are the South Equatorial Current, the East Australian Current and the Peru (Humboldt) Current. The Equatorial Counter Current separates the two gyres. Most fishing in the Pacific Ocean is done on the continental shelves. Crab, herring, cod, sardines and tunny are the principal catch. Area: approx. 166,000,000sq km (64,324,000sq miles). See also pp.1940-1941, 1952-1953.

Pacific Scandal, incident in Canadian political history. In 1873 the leader of the Conservative government, Sir John Alexander MACDONALD, was accused of accepting campaign funds from Sir Hugh ALLAN in return for the building contract for the Canadian Pacific Railroad. The government was forced to resign.

Pacific Security Treaty. See ANZUS.

Pacific trench. See PACIFIC OCEAN.

Pacifism, philosophy opposing the use of war or violence as a means of settling disputes. Elements can be found in ancient Hebrew and early Christian theology and in later Anabaptist and Quaker beliefs. International pacifist groups were organized during the 19th century. The doctrines of Mohandas GANDHI, and in Britain of the Fellowship of Reconciliation, were based on pacifist philosophy.

Pacing. See HARNESS RACING.

Packard, Vance Oakley (1914-), US social critic. His works are powerful and uncompromising critical analyses of social evils and have been best-sellers. They include *The Hidden Persuaders* (1957) about advertising, *The Status Seekers* (1959) about social symbols and *The Waste Makers* (1960), which deals with planned obsolescence.

Packer, Sir Douglas Frank (1906-74), Australian magnate, chairman of the Australian Consolidated Press (1936-74).

Packer, Kerry Francis Bullmore (1937-), son of Sir Frank PACKER, whom he succeeded as head of the Australian Consolidated Press (1974). In 1977 he organized international cricketers into professional teams to play in the World Series Cricket tournament in Australia.

Packet ships, early steamships with sails, used to carry mail, passengers and freight at scheduled times, especially in coastal waters. The arrival of British transatlantic steam packets such as the *Sirius* in New York harbour in 1838 spurred us development of scheduled travel and initiated a century of travel by steamship.

Pack rat, or trade rat, any of 22 species of mainly nocturnal, herbivorous wood rats from North and Central USA. They live in deserts, wooded areas or high rocky regions and are generally pale, dark or reddish brown or grey. Length: 20cm (8in). Family Cricetidae; genus *Neotoma*. See also p.316.

Paddlefish, primitive bony fish related to the sturgeon and found in the basins of the Mississippi and Yangtze rivers. Blue, green or grey, it has a cartilaginous skeleton and a long paddle-like snout. Length: 1.8m (6ft). Family Polyodontidae.

Paddle steamer, early steam-powered vessel propelled by one or more paddle-wheels. One of the first paddle steamers, the *Charlotte Dundas*, was constructed by William Symington in Scotland in 1802, and was used for towing shipping on the Forth and Clyde Canal. In 1807, Robert Fulton in New York built the *Clermont*, a passenger steamer. Paddle steamers soon became popular for long river journeys, mostly on the Mississippi river. See also p.471.

Paddle tennis, bat and ball game invented in the USA after WWI. It is played with a wooden bat and a sponge-rubber ball on a court half the size of a LAWN TENNIS COURT. The rules are essentially those of lawn tennis, the chief difference being that only one serve is allowed. The net is only 2.5ft (76cm) high. The first official tournament was held at New York in 1924. The United States Paddle Tennis Association was formed in 1936.

Paddy field, field where RICE is cultivated underwater. Unlike most plants, rice thrives when submerged because oxygen is carried from the leaves to the roots. Rice paddies are flooded after the seedlings root, and are drained at harvest time. See also pp.677, 679.

Paderewski, Ignacy Jan (1860-1941), Polish pianist, composer and statesman who studied under Theodor LESCHETIZKY in Vienna, and became an internationally famous virtuoso. He wrote a piano concerto (1888) and a symphony (1907), and his opera *Manru* was first produced in Dresden in 1901. He became Prime

Minister and Minister of Foreign Affairs of the newly-created Polish state in 1919. In 1923 he returned to the concert stage. See also p.1754.

Padua (Padova), city in NE Italy; capital of Padova province, Veneto region. As Patavium, the city prospered under Roman rule. From the 12th to the 14th centuries it was a commune and developed as a centre of the arts. The 13th-century Eremitani church contains what is left of the frescoes by MANTEGNA and the 13th-century basilica of St Anthony has statues and reliefs by DONATELLO. Frescoes by GIOTTO and TITIAN are also in Padua. The University of Padua (1222) is the second-oldest in Italy. Industries: motor vehicles, textiles, machinery. Pop. (1979) 242,216. See also p.1351.

Padua, School of, Italian school of painting which became important in the 15th century through the works of MANTEGNA, DONATELLO and CRIVELLI.

Paeon, in Greek mythology, originally a hymn addressed to APOLLO as healer or deliverer from evil. Later, paeons were addressed also to other gods and were sung to mark military victories.

Paedophilia, adult preference for sexual relations with children. It is severely condemned in many societies and in most countries is a criminal offence. In 1977 a Paedophilia Society was established in England in an attempt to combat the public's prejudice against paedophiles.

Paganism, in modern usage, religious beliefs other than JUDAISM, CHRISTIANITY and ISLAM. First applied in Latin usage to those who did not accept Christianity. The term, which can be derogatory, is often applied to polytheistic religions.

Paganini, Niccolò (1782-1840), Italian violinist, the most famous virtuoso of his day. He enlarged the range of the violin by exploiting harmonics and mastered the art of playing double and triple stops (two or three notes at a time). Many of his compositions were technically demanding pieces for unaccompanied violin.

Page, Sir Earle Christmas Grafton (1880-1961), Australian politician. He was a founder of the Country Party, which he led from 1920 to 1939. He was Treasurer in the Page government of 1923-29, often called the Bruce-Page government. He held successive ministerial posts until 1956, and retired from parliament in 1961.

Page, Sir Frederick Handley (1885-1962), British aeronautical engineer who founded (1909) one of the first aircraft manufacturing companies (Handley Page Ltd) and is best remembered for the aeroplanes that bear his name. His company, the last British aircraft manufacturer to remain independent, went into receivership in 1970. See also p.571.

Page, William (1811-85), US painter of portraits, landscapes and historical subjects. Influenced by Venetian painters during a stay in Italy, he painted many prominent people of his day including John Quincy Adams and Robert and Elizabeth Barrett Browning.

Pageant, dramatic spectacle. The word is thought to derive from the type of cart on which MYSTERY PLAYS were staged in the Middle Ages. In the 20th century a pageant has become a procession of tableaux with a common theme. These were especially common in Britain from 1900 to 1930, and elements survive in London's annual Lord Mayor's Show.

Paget, Sir James (1814-99), British surgeon, a founder of the science of PATHOLOGY. He discovered the parasitic worm *Trichina spiralis* that causes TRICHINOSIS, described the bone disease osteitis deformans (PAGET'S DISEASE), and was among the first to recommend surgical removal of bone-marrow tumours.

Paget's disease, osteitis deformans, a chronic bone disease, most often occurring in middle age, in which the bones soften, causing deformity and the accumulation of calcium in the blood. It is named after Sir James PAGET.

Pagliacci, I (1892), two-act tragic opera written by Ruggiero LEONCAVALLO with libretto by the composer, first produced in Milan. Using the device of a play within a

Pagnol, Marcel

Paint; these three-cylinder refiners are one step in the manufacturing process.

Painted lady; the caterpillars of this butterfly feed mainly on thistle leaves.

Paintings are restored with modern tools such as an electric retouching pencil.

Ian Paisley is a militant Protestant leader central to Northern Irish politics.

play, the story is based on an actual incident in Calabria which involved the killing of a woman by her actor husband after a theatrical performance.

Pagnol, Marcel (1894–1974), French playwright and film director who wrote *Topaze* (1928), and the trilogy *Marius* (1929), *Fanny* (1931) and *César* (1937), which was later filmed. He directed a number of films, mostly comedies and screen versions of his own plays.

Pagoda, name given to an Eastern building in the form of a tower, which originated in India and spread with Buddhism to China, Korea and Japan. Pagodas are polygonal or square in plan and built in superimposed storeys out of stone, brick or wood. They usually form part of a temple and serve as shrines.

Pago Pago, capital of American Samoa, on a Tutuila Island in the sw Pacific Ocean. It has an excellent harbour and an international airport. There is a US naval base in the town. Pop. (1970) 2,451.

Pahang, state in E Malaysia, on the South China Sea. The region is mostly dense jungle and is sparsely populated. Products: rubber, rice, fish, coconuts, tobacco, hemp. Area: 35,931sq km (13,873sq miles). Pop. (1970) 503,131.

Pahoehoe, Hawaiian term for a basaltic lava flow that moves freely and cools with a smooth, rope-like surface. Lava of similar composition but which forms in rough irregular flows, often covered with clinkers, is known as aa.

Pain, intense sensation that warns the brain of injury to, or illness of, any part of the body; it is a sensation that is little understood, and can range from mild discomfort to acute agony. It may arise from the skin or from the deeper tissues of the body, possibly through the overexciting of free nerve endings in those tissues. Individual tolerance of pain varies, perhaps because of genetic differences but more likely because of cultural conditioning, eg members of different ethnic groups tend to have different pain tolerances.

Paine, Thomas (1737–1809), American political and religious writer, b. England. His radical and outspoken views greatly influenced colonial opinion during the American War of Independence. In his pamphlet *Common Sense* (1776) he demanded complete independence from England and the setting up of a strong federal union. A series of 16 papers, *The Crisis* was read aloud to encourage the Revolutionary Army. He returned to England as an ardent supporter of the French Revolution, defending its cause so vehemently in *Rights of Man* (1791–92) that the work was suppressed and he was charged with treason and fled to France. There he made enemies by speaking out against Louis XVI's execution. For more than 10 months he was in prison where he worked on *Age of Reason*, an agnostic argument. He sailed to America in 1802, and died on a farm given to him by New York State in appreciation of his writings.

Paint, coating applied to a surface for protective and decorative purposes. Paint is composed of pigment, or colour, and a vehicle (a liquid that suspends the pigment), which adheres to a surface and hardens when dry. Pigments are made of metallic compounds, usually oxides, or synthetic materials. Vehicles may be oils, water mixed with a binding agent, organic compounds, or synthetic resins, which may be soluble in water or oil. Water-based paints mix with water, oil-based paints with turpentine or various organic solvents. See also pp.608–609.

Painted lady, also called thistle butterfly, most widely distributed of all LEPIDOPTERA. It has brown, black, orange and white wing markings and its 5cm (2in) caterpillars feed on thistles or nettles. Family Nymphalidae; species *Vanessa cardui*.

Painterly, term derived as an attempted translation from the German word *malerisch*, which the art historian Heinrich Wölfflin used to define painters who use form in terms of colour and tone (as do Rembrandt and Titian) rather than in line (as does Botticelli). By extension, a painterly picture may also be one in which

"painterly" values – form, tone, colour, composition – are pre-eminent over other considerations, such as subject matter and literary content.

Painting, the art of using one or more colours, generally mixed with a medium (such as oil or water) and applied to a surface with a finger, brush or some other tool to create pictures. Paintings are among the earliest of historical records. The tradition found in the prehistoric cave art of France and Spain, survives among contemporary primitive tribes of, for example, Australia and Africa.

Painting in early civilizations such as that of Egypt was largely a matter of filling in with colour areas outlined by drawing. Little Greek painting survives (apart from that on pottery), but written records show that the Greeks had discovered the art of shading and of *TROMPE-L'OEIL* and achieved a standard of painting comparable with their sculpture. The Romans were greatly influenced by Greek art, as the only surviving examples, the fine FRESKO paintings at Pompeii and Herculaneum, demonstrate. In the early Christian and Byzantine periods traditions in mural painting and manuscript illumination were established that were to last throughout the Middle Ages, traditions in which a highly spiritual concept was fostered by Church patronage. In Italy the great Byzantine frescoes found an heir in Giotto's murals, which were the beginning of ventures into realism and experimentation; various Italian schools of painting arose – that of Florence gained ascendancy in the 14th and 15th centuries.

During the 15th century, as the patronage of the Church was increasingly augmented by that of secular princes, notably the MEDICI, and the humanist ideals of the RENAISSANCE took root, the range of subjects and techniques available to the artist widened enormously. Narrative religious themes now had to vie with pagan mythology, secular figures in landscape settings and pure landscape; and although the greatest masterpieces of MICHELANGELO, RAPHAEL and the Florentine masters were generally murals or altar pieces, this period also saw the first use of oil paint on canvas, the rise of the easel painting and the beginnings of GENRE PAINTING and pure portraiture. It was also the age of the perfection of the study of PERSPECTIVE and of a more natural approach to form and composition. To this creative legacy the great painters of the BAROQUE period added an unrivalled bravura brushwork and drama of vision. North of the Alps, where the Renaissance had spread more gradually than in Italy, the greatest achievements came with the Baroque exuberance of RUBENS and the superb genre, portrait and landscape pictures of Rembrandt and lesser 17th-century Dutch painters, whose choice of intimate, everyday subjects was the antithesis of the grand manner characteristic of the Italian masters and of the Italianate style adopted in France at the court of Versailles.

By the 18th century British painters had become established in portraiture, animal and landscape painting, although overshadowed by the great Venetian masters, TIEPOLO, GUARDI and CANALETTO, whose work was much admired in England. Various schools flourished, divided principally between Baroque and austere Classicism. The 19th century opened with the supremacy of NEO-CLASSICISTS such as Jacques Louis DAVID challenged by the new Romanticism of DELACROIX and GÉRICAULT. But both schools were superseded, first by IMPRESSIONISM and then by the succession of new movements in the late 19th and early 20th centuries. Most of these movements – including Impressionism, POST-IMPRESSIONISM, SYMBOLISM, FAUVISM, CUBISM, DADA and SURREALISM – originated in Paris, although Germany was the cradle of EXPRESSIONISM and Russia contributed SUPREMATISM. More recent major movements include ABSTRACT IMPRESSIONISM, developed fully by US painters, POP ART, OP ART and HARD-EDGE. See also articles on individual painters, periods, movements and techniques especially pages 1153–1824.

Paisiello, Giovanni (1740–1816), Italian composer, principally of operas of which he wrote more than 100. As court composer to CATHERINE II, THE GREAT of Russia (1776–84), he composed a new setting of Pergolesi's *La Serva Padrona* (1781) and *The Barber of Seville* (1782), which became popular throughout Europe until the version by ROSSINI superseded it.

Paisley, Ian Richard Kyle (1926–), political and religious leader in Northern Ireland. He founded the Free Presbyterian Church of Ulster in 1951, led anti-Catholic demonstrations in the late 1960s, and represented militant Protestant interests in the Northern Ireland parliament in 1970 and in the British House of Commons. In 1973 he was elected to the new assembly of Northern Ireland, but his opposition to the power-sharing executive helped lead to the re-imposition of direct rule from Westminster in 1974. See also p.1781.

Paisley, town in Strathclyde Region sw Scotland, administrative centre of the former county of Renfrewshire. Paisley is best known for its textile industry, in particular the Paisley pattern, and thread. Other products include boilers, chemicals and soap. Pop. (1971) 95,344.

Pajou, Augustin (1730–1809), French sculptor known for his decorative work at the Opera Houses in Versailles (1768–70) and for his many portraits. He worked for Mme DU BARRY and then for King LOUIS XVI. His works include *Psyche Abandoned* (1791) and the portrait of his master Lemoigne (1758).

Pakistan, officially named the Islamic Republic of Pakistan, nation in Asia NW of the Indian subcontinent. A poor country, Pakistan suffered from the loss of its E province – now the independent state of BANGLADESH – in 1971. Two-thirds of the population live off the land; wheat and rice are the chief crops. The manufacture of cotton textiles is the principal industry. Islamabad is the capital. Area: 803,943sq km (310,402sq miles). Pop. (1980 est.) 80,200,000. See p.2116.

Pakokku, port in w central Burma, 121km (75 miles) sw of Mandalay, on the IRRAWADDY river; capital of Pakokku district. The city was occupied by the British during the 19th century. The Communists held it from 1949 until 1955 when it was liberated by government forces. The Yenagat oilfields are nearby. Pakokku is a trade and shipping centre. Pop. 30,900.

Palade, George Emil (1912–), US cell biologist, b. Romania. He shared the 1974 Nobel Prize in physiology and medicine with Albert CLAUDE and Christian de DUVE for his contributions to an understanding of the structure and function of the CELL. Using sophisticated electron microscope techniques and other methods he discovered RIBOSOMES, which are the sites of PROTEIN synthesis in the cell.

Palā dynasty, Buddhist rulers of Bihar and Bengal from the mid-8th to the mid-12th century, founded by Gopala. His successor, Dharmapala (r.c.770–810), expanded Palā rule as far nw as Kanauj, the capital of the Pratihara dynasty. The Palas carried BUDDHISM into Tibet, but from the mid-9th century their power waned. See also pp.1252–1253.

Palaeobotany, study of fossil plants, a branch of PALAEOONTOLOGY.

Palaeocene, geological epoch that extended from about 65 to 54 million years ago. It is the first epoch of the TERTIARY PERIOD, when the vast majority of the DINOSAURS had disappeared and the small early mammals were flourishing. See also pp.103, 269.

Palaeography, study of early writing. In its broad sense the term includes all inscriptions; more narrowly it includes only writing done on wax, parchment, papyrus or paper.

Palaeolithic, period in history known also as the Old Stone Age, the earliest stage of man's history, from c.2 million years ago until between 40,000 and 10,000 years ago. It was marked by the use of stone tools and covers the history of the species from *Australopithecus* through Neanderthal Man to *homo sapiens*.

Palolo worm

Palaeogeology, Michael. See MICHAEL VIII.
Palaeontology, study of geological periods by the examination of fossil remains. The evidence of fossils enables the assessment of the composition, structure and age of rocks. The science, which is divided into palaeozoology and palaeobotany, established its independent status in the early 19th century with the work of CUVIER and LYELL.

Palaeozoic, third major era of geological time, after the Azoic and Proterozoic eras, lasting from 600 million to 225 million years ago. It is considered to have comprised six periods: Cambrian, Ordovician, Silurian, Devonian, Carboniferous and Permian. Invertebrate animals appeared in the Cambrian, fishlike vertebrates in the Ordovician, amphibians in the Devonian and reptiles in the Carboniferous. Plant life declined after its peak in the Carboniferous.

Palamas, Kestis (1859–1943), Greek poet who wrote in vernacular or demotic Greek. His lyrical poetry expressed the modern Greek poetic resurgence. *The Grave* (1898; translated 1930), a collection on the death of his young daughter, has great dignity.

Palate, roof of the mouth, comprised of the bony front part known as the hard palate and the softer fleshy part of the back known as the soft palate, from which the uvula hangs. The palate separates the mouth from the nasal cavities. See also p.1101.

Palatinate, two regions of West Germany: the Lower, or Rhenish, Palatinate is on the River Rhine; the Upper Palatinate is on the River Danube and forms part of Bavaria. The regions were politically united in 1329 and were important in the affairs of the HOLY ROMAN EMPIRE after 1356, when the count palatine of the Rhine became an imperial elector. The Palatinate was a centre of the German Reformation and its elector played an essential part in the outbreak of the THIRTY YEARS WAR. In 1946 the Lower Palatinate was incorporated into the state of Rhineland-Palatinate.

Palau Islands, island group in the w Pacific Ocean, in the Caroline Islands, nw of New Guinea and se of the Philippines. They are made up of approx. 100 islands, many of which are uninhabited; they are administered by the USA. Area: 179sq km (69sq miles). Pop. (1971 est.) 12,500.

Pale, The English, the part of Ireland under the control of the English following the Anglo-Norman invasion of 1171–72. It included Louth, Meath, Trim, Dublin, Kilkenny, Wexford, Waterford, Carlow and Tipperary. It shrank in the 15th century, but expanded again under the Tudors. From it comes the phrase "beyond the pale", meaning outside the bounds of civilized behaviour.

Palembang, port in SE Sumatra, Indonesia, on the Musi River; capital of South Sumatra province. The city served as the capital of the Hindu-Sumatran kingdom of Sri Vijaya in the 8th century. The Dutch took the city and established a trading post there in 1617 and a fortress in 1659. The sultanate of Palembang was abolished by the Dutch in 1825. The city has the Sriwijaya Universitas Negeri (Sri Vijaya State University) (1959). Exports: oil, rubber, coffee, coal. Industries: food processing, oil refining, rubber, fertilizers. Pop. 474,971.

Palenque, ancient city (c. AD 300–900) of the MAYA in Chiapas, s Mexico. Stucco sculpturing and panelling reached their finest expression at Palenque. The Temple of Inscriptions is one of the best preserved Mayan temples; other ruins have hieroglyphic inscriptions, reliefs and a large amount of plasterwork. See also p.1365.

Palermo, in NW Sicily, on the Tyrrhenian Sea; capital of Sicily and the province of Palermo. The city was founded by the Phoenicians in the 8th century BC. It passed to the Romans in 254 BC and prospered under the Saracens from the 9th to the 11th centuries. It was later ruled by the

(1130–40). Industries: shipbuilding, textiles, food processing, chemicals. Pop. (1979) 693,950.

Palestine, region on the E shore of the Mediterranean Sea; considered as a Holy Land by Jews, Christians and Muslims. The area has been continuously settled since 4000 BC. The Jews moved into Palestine from Egypt c. 2000 BC but were subject to the Philistines until 1020 BC, when Saul, David and Solomon established Hebrew kingdoms. The area came under Roman rule in 63 BC. In succeeding centuries Palestine became a focus of Christian pilgrimage. It was conquered by the Muslim Arabs in 640. In 1099, Palestine fell to the Crusaders; in 1291 they in turn were routed by the MAMLUKES. The area was part of the OTTOMAN EMPIRE from 1516 until WWI. It was exposed to Western influences through Russian Jews, immigrating after 1882, who started the ZIONIST movement. The British held a LEAGUE OF NATIONS mandate over Palestine after 1920 and attempted unsuccessfully to divide the country between Arabs and Jews as Arab nationalism developed. The Arabs feared the economic and political results of immigration as WWII and Nazi persecution brought many Jews to Palestine, and in 1947 Britain consigned the problem to the UNITED NATIONS. Most of ancient Palestine became part of the new state of Israel in 1948; the first of several ARAB-ISRAELI WARS occurred in that year. During the 1970s the PLO and other nationalist Arab groups asked for an independent Palestine for the Arabs. See also pp.1782–1783.

Palestine Liberation Organization. See PLO.

Palestine Mandate, authority vested in Britain by the LEAGUE OF NATIONS in 1920 to govern PALESTINE, which had been a Turkish province from 1516 until its conquest by British forces in 1917–18. In 1923 JORDAN was separated from the mandate. Britain withdrew from Palestine on 14 May 1948, when the independent state of ISRAEL was proclaimed. See also pp.1782–1783.

Palestrina, Giovanni Pierluigi da (c. 1525–94), Italian composer who spent most of his life in the service of the Church. His output of church music was immense and included complete masses, magnificats, litanies and about 600 motets in four to eight and twelve parts. The six-part mass *Assumpta est Maria* and the eight-part setting of the motet *Siabab Mater* are profound examples of polyphonic and rhythmic mastery, melodic balance and proportion. He also composed almost 100 secular madrigals.

Palgrave, Francis Turner (1824–97), British poet and anthologist who was professor of poetry at Oxford University from 1885–1895. He is best known for his anthology, *The Golden Treasury of English Songs and Lyrics* (1861).

Pali, ancient Indian language in which the Buddhist scriptures, or canon, were compiled in the first century BC. It is related to classical Sanskrit. It is still the liturgical language of the Theravada branch of HINAYANA Buddhism, the branch of Buddhism prevailing in Sri Lanka, Burma and Thailand.

Palissy, Bernard (c. 1510–89), French Huguenot potter. He experimented in enamel-work for 15 years and after 1556 produced smoothly glazed and richly coloured ware decorated with reptiles, insects and plants.

Palladian, architectural style especially popular in England. It derived from the buildings and theories of the 16th-century Italian architect Andrea PALLADIO, who based his work on Roman classicism, emphasizing symmetrical planning and harmonic proportions. Inigo JONES introduced Palladianism to England after visiting Italy (1613–14). The Queen's House, Greenwich, completed in 1635, is a fine example of this style. The revival of interest in Palladianism in the early 18th century, at the beginning of the GEORGIAN period, was led by Colin CAMPBELL and

and marked a reaction against the grandiose excesses of style during the latter years of Stuart rule. Representative of the style is Holkham Hall, Norfolk, begun in 1734 by William KENT. See also pp.1390–1391, 1430, 1546, 1547.

Palladio, Andrea (1508–80), Italian RENAISSANCE architect. He studied Roman architecture and published drawings of Roman ruins together with his own designs in *Four Books of Architecture* (1570) and through this work revived symmetrical planning and classical proportioning in architecture. His most notable buildings were villas and palazzos, usually with arch and column façades, such as the Villa Rotunda, Vicenza (c. 1550). See also pp.1390–1391, 1390.

Palladium, in Greek religion, representation of the goddess Pallas Athena. It was also the wooden image kept in the citadel to ensure the safety of Troy. It was supposedly thrown from heaven by ZEUS.

Palladium, precious metallic element (symbol Pd) of the second TRANSITION ELEMENTS, discovered in 1803 by W.H. Wollaston. It is found in nickel ores associated with platinum, to which it is chemically similar. Properties: at.no. 46; at.wt. 106.4; s.g. 12.02; m.p. 1,552°C (2,826°F); b.p. 3,327°C (6,021°F); most common isotope Pd¹⁰⁶ (27.3%).

Pallas, Peter Simon (1741–1811), German naturalist and geologist who by the age of 15 had formulated a new taxonomy for certain animal groups. From 1768 to 1774 he travelled throughout Russia and Siberia, finding a wide distribution of fossils and mammoths preserved intact in the tundra; he published the results of the expedition in *Journey Through Various Provinces of the Russian Empire* (3 vols, 1771–76).

Pallas, asteroid (minor planet) discovered in 1802 by Heinrich OLBERS; the second-largest asteroid. Diameter: 450km (280 miles); mean distance from the Sun 414,000,000km (257,000,000 miles); mean sidereal period 4.61yr. See also pp.954, 955.

Pallas' cat, rare, small, long-haired cat that lives in burrows or among the rocks of Asian deserts. It has small rounded ears, short legs and a compact body. The coat is silvery grey and yellowish brown with dark stripes on the face, back, forelimbs and tail. It feeds on small birds and rodents. Length: to 50cm (20in). Family Felidae; species *Felis manul*. See also p.318.

Pallava dynasty, rulers of s India from the 4th to the 9th century AD; their capital was at Kanchi. It is noteworthy especially for its DRAVIDIAN architecture, best exemplified in the "Seven Pagodas" of Mahabalipuram. See also pp.1252–1253.

Palm, family of trees found in tropical and subtropical regions. Palms are ancient flowering plants that date back to the early Triassic (225 million years ago). They have a woody, unbranched, columnar trunk with a crown of large, stiff leaves. The leaves may be either palmate (fan-like) or pinnate (feather-like). Instead of having true bark, palm trunks are covered with fibres which are often derived from the leaf stems. An economically important family, palms are the source of wax, oil, fibres, sugar and other foods. Height: 60m (200ft). Family Palmaeaceae. See also pp.286, 378, 691.

Palma (Palma de Mallorca), port and capital of Majorca (Mallorca) in the Balearic Islands, Spain; capital of Balearic province. The city has a Gothic cathedral (1230–1601), containing the tomb of King James II of Aragon, and a Moorish palace. Industries: tourism, pottery, leather goods, jewellery, wine, food processing. Pop. (1970) 287,038.

Palmas, Las, city on Grand Canary Island, Spain; capital of Las Palmas province. Its port, Puerto de la Luz, is the principal port of the CANARY ISLANDS and one of the busiest in Spain. Industries: fishing, vegetable and fruit production, tourism. Pop. (1975 est.) 328,187.

Palma Vecchio (1480–1528), Venetian painter, real name Jacopo d'Antonio

a Kiss, *The Three Sisters*, and his masterpiece, the *St Barbara Altarpiece*.

Palm Beach, town in SE Florida, USA, on the N end of an island separating Lake North, a lagoon, from the Atlantic Ocean. Settled in 1871, it grew rapidly after 1893, when Henry Flagler realized its potential as a resort and financed its planning. Pop. (1970) 9,086.

Palmer, Arnold Daniel (1929–), US golfer who was largely responsible for the growth in popularity of golf. In 1970 he was named Athlete of the Decade. He won the US Open Championship in 1960, the British Open in 1961 and 1962, and the Masters tournament in 1958, 1960, 1962 and 1964.

Palmer, Nathaniel Brown (1799–1877), US sea captain who in 1820 became the first to sight the Antarctic mainland, which he believed to be only an island. He was on a sealing voyage at the time and on the same expedition he also discovered the South Orkney Islands.

Palmer, Samuel (1805–81), British Romantic landscape painter, the most important follower of William BLAKE, whom he met in 1824. By about the age of 15 Palmer was already exhibiting at the Royal Academy. His years in Shoreham, Kent (1826–35) were his most productive. Many works of this period are in the Ashmolean Museum, Oxford. Palmer was rediscovered in the 1920s and 1930s; he influenced modern Romantic painters, including Graham SUTHERLAND. See also p.1579.

Palmerston, Henry John Temple, 3rd Viscount (1784–1865), British statesman and Prime Minister, who dominated the early and mid-Victorian political scene. He entered the House of Commons in 1807 and between 1809 and 1828 served as Secretary of War in successive Tory governments. In 1830, associating himself with the Whigs, he became Foreign Secretary in Lord GREY's Reform ministry, a position he held until 1834 and again from 1835 to 1841 and 1846 to 1851. During these periods he supported Liberalism in Europe and was a forceful protector of British interests in every part of the world. He was Home Secretary from 1852 and after an inquiry into the government's mishandling of the CRIMEAN WAR, he was Prime Minister from 1855 to 1858. His second administration (1859–65) ended only with his death and is seen in retrospect as a prologue to the Liberal government of 1868–74. See also pp.1590–1591, 1662–1663, 1662–1663.

Palmerston North, city of s central North Island, New Zealand. It is the seat of Massey University of Manawatu (1964). It is an agricultural trade centre with textiles, pharmaceuticals, electrical equipment and food-processing industries. Pop. (1970 est.) 51,000.

Palmyra, also called chiromancy, character divination and foretelling of the future by interpreting the patterns of lines and fleshy mounds on the human hand. There is no scientific basis for the belief that the structure of the hand has significance, although its condition may give an indication of the subject's occupation.

Palmitic acid, fatty acid which is a major constituent of vegetable oils and animal fats. Together with STEARIC ACID, it is the fatty acid most often present in soaps. Palmitic acid is a saturated compound, containing only single bonds, and has the formula CH₃(CH₂)₁₄COOH.

Palmyra, ancient city in central Syria, at an oasis on the N edge of the Syrian Desert. Traditionally founded by Solomon, it developed under the Romans in the 1st century and flourished AD 130–270. After capture by the Emperor Aurelian the city went into decline. It was later taken by the Arabs and the Mongols. See also pp.1232, 1247.

Palolo worm, polychaete ANNELED of the South Pacific that lives in holes among coral reefs, and is a nocturnal swimmer at breeding time. Its rear portion is filled with eggs or sperm; this part develops an eyespot. separates from the rest of the

Palomar, Mount

Palomar, Mount, peak in s California, 72km (45 miles) NNE of San Diego. It is the site of the Palomar observatory, which houses the 122cm (48in) Schmidt telescope and a 508cm (200in) reflecting telescope, the second-largest optical telescope in the world. Palomar is administered jointly with MOUNT WILSON OBSERVATORY under the name of the Hale Observatories. See also pp.918, 919, 920-921, 921.

Palomino, light saddle horse which is characteristically yellow gold with a white, silver or ivory mane and tail. Height: to 163cm (64in) at the shoulder.

Palpitation, abnormally rapid beating of the heart. It may occur after great exertion or strong emotion, or may be due to a disorder.

Palyology, study of spores, seeds and pollen; it is a part of such disciplines as archaeology, geography and palaeontology. Studies of pollen in lake sediments have provided much information about the vegetation, climate and environmental conditions in past ages. Palyology has also helped to deduce the patterns of land use and settlement of primitive man. See also p.271.

Pamir, mountainous region mostly in Tadzhikistan (Tadzhikskaja SSR) USSR, partly in NE Afghanistan and China. The region forms a geologic structural knot from which the Tien Shan, Karakoram, Kunlun, and Hindu Kush mountain ranges radiate. The climate is cold during winter with cool summers; the terrain includes grasslands and sparse trees. The main activity is sheep herding although some coal is mined. The highest peaks are Mt Communism, 7,495m (24,590ft) and Lenin Peak, 7,134m (23,405ft).

Pampas, large plain in s South America, situated mostly in Argentina. The humid Pampas is extremely fertile; dairy farming is practised and cereals are grown. The larger dry Pampas to the w, which includes the provinces of Buenos Aires, Santa Fe and Cordoba, supports mainly livestock grazing. The Pampas has a complex transport system focused on Buenos Aires.

Pampas grass, species of tall, reed-like GRASS native to South America and widely cultivated in warm parts of the world as a lawn ornamental. Female plants bear flower clusters, 91cm (3ft) tall, which are silvery and plume-like. Family Gramineae; species *Cortaderia selloana*.

Pamplona, city in N Spain, 32km (20 miles) from the French border, on the Arga river; capital of Navarra province. The city was taken in 778 from the Moors by CHARLEMAGNE. It passed to FERDINAND of Aragon in 1512. The French occupied the city during the PENINSULAR WAR. Pamplona is known for its annual fiesta de San Fermin, which includes the running of the bulls through the city streets. There is a 14th-century Gothic cathedral. Industries: sugar refining, brewing, textiles, wine, firearms, furniture, footwear, flour milling. Pop. (1970) 147,168.

Pan, in Greek mythology, the son of HERMES and the god of woods and fields, shepherds and their flocks. He is depicted with the horns, legs and hoofs of a goat. A forest dweller, he pursued and loved the DRYADS and led their dances while playing the syrinx, the pipes of his invention.

Panaetius (c.180-109 BC), Greek philosopher, founder of Roman stoic philosophy. Although loyal to the fundamental Stoic doctrines, his interpretation was less austere. He wrote less than other Stoics: none of his works has survived complete.

Pan-African Congress, occasional meeting of African leaders in the interest of African unity. It met five times between 1900 and 1927 and worked to bring gradual self-government to African colonial states. Its aims have been continued by the Organization of African Unity (OAU), formed in 1963.

Pan-African Games, major sporting tournament for the nations of Africa, except South Africa and Rhodesia (Zimbabwe). They have been held in 1965 and 1973. As well as track and field events, there are other sports such as basketball, table tennis, boxing, swimming, soccer and handball.

Pan-African Movement, loosely organized effort for the unification and independence of African nations and Black people everywhere. It began officially at the PAN-AFRICAN CONGRESS of 1900 in London, organized by W. E. B. DUBOIS and other Western Blacks. The movement materialized in 1963 as the Organization of African Unity (OAU), and has enjoyed a limited success, both in influence and in internal cohesion.

Panama, republic in Central America on the narrowest part of the isthmus joining North and South America. The economy is almost entirely dependent on the Canal Zone, the area astride the Panama Canal administered by the USA. The principal crops are rubber, coffee, cereals, bananas and cocoa. Deposits of copper were discovered there in 1968. The capital is Panama City. Area: 75,651sq km (29,209sq miles). Pop. (1980 est.) 1,890,000. See p.2117.

Panama, Isthmus of, narrow strip of land in s Central America, which connects South America with Central and North America. See also p.2005.

Panama Canal, waterway built by the USA (1904-14) to connect the Atlantic and Pacific oceans, opening a shorter route for trade to the Far East. The Isthmus of PANAMA, originally owned by Colombia and also the narrowest point of Central America, was chosen as the location. The original agreement between the USA and Colombia of 1903 was superseded by an agreement between the newly independent Republic of Panama, which had declared independence from Colombia and the USA also in 1903. Length: 82km (51 miles). See also pp.538-539, 2005, 2117.

Panama Canal Zone, also called merely Canal Zone, strip of land containing the PANAMA CANAL. The USA bought the strip in 1903 for \$10 million and an annuity fixed then at \$250,000 from the newly-independent Panama and the canal opened in 1914. From 1974 there were negotiations to give Panama additional revenue and jurisdiction over the canal. Area: 1,432sq km (553sq miles). Pop. (1975 est.) 44,000. See p.2005.

Panama City, capital of PANAMA. It was founded by Pedro Arias de Avila in 1519, and was an important port before its decline in the 17th century. It revived after the construction of the PANAMA CANAL; although no longer a port, it has shoe and textile industries. Pop. (1970) 348,704.

Pan-American Games, athletic competition for all countries in the Americas, similar to the OLYMPIC GAMES. The various events in this competition are modelled after the Olympics and have the same basic rules and regulations. The first games were held in 1951 in Buenos Aires, Argentina, and have since been held every four years.

Pan-American Highway, road system, which will be approx. 25,760m (16,000 miles) long when completed, linking the USA, Mexico, Central and Latin America. From 1923, the USA has financed those parts of the road through the smaller Central American states. The system, which includes the Inter-American Highway, will extend from Nuevo Laredo, Texas, through Mexico City to Panama City, to Valparaiso, Chile and then to Buenos Aires, Argentina.

Pan-American Union. See OAS.

Pan-Arab Movement, tendency towards political unification among Arab nations after gaining independence from Ottoman Turkey and Europe. An ARAB LEAGUE was formed in 1945, composed at first of seven states, but growing to 15 countries. It co-ordinated political, economic, and military activities through various treaties. The Arab Bank was formed in 1959. President NASSER of Egypt strengthened the movement, but his UNITED ARAB REPUBLIC (Syria and Egypt) lasted only until 1961. A union between Iraq and Jordan also dissolved in 1958. See also OPEC.

Panay, island in the central Philippines in the Visayan group; there are four provinces: Capiz, Antique, Aklan, and Iloilo. The interior is mountainous and drained

by the Panay River. The chief occupation is farming, and the island is famous for horse-breeding. Rice and corn are grown in the lowlands. The principal port is Iloilo. Industries: timber, sugar-refining, fishing. Area: 11,515sq km (4,446sq miles) Pop. (1970) 2,144,544.

Panchen Lama, second in the Tibetan Buddhist hierarchy and abbot of the Tashilhumpo monastery. The title was adopted in the 16th or 17th century. The Panchen Lama is believed to be the incarnation of the Buddha of Infinite Light, Amitabha. His role is more limited to spiritual matters than that of the DALAI LAMA, who ranks highest in the hierarchy. When the Dalai Lama fled to India in 1959 following the unsuccessful Tibetan revolt against the Chinese Communists, the Chinese government acknowledged the Panchen Lama as the true Tibetan leader. However, the fate of the last Panchen Lama is unknown. See also LAMAISM.

Pancreas, elongated soft gland lying behind the stomach to the left of the mid-line. It is a digestive organ, secreting various ENZYMES: trypsin which digests proteins, lipase which acts on lipids, amylase which acts on carbohydrates, and other minor secretions. These pass into the pancreatic duct and then into the common bile duct, which opens to the small intestine. The pancreas also contains the ISLETS OF LANGERHANS, which secrete the hormone INSULIN. See also DIABETES MELLITUS; pp.160-161, 160-161.

Panda, two mainly nocturnal mammals of the raccoon family. The lesser panda, *Ailuropus fulgens*, ranges from the Himalayas to w China. It has soft, thick, reddish brown fur, a white face and a bushy tail. It feeds mainly on fruit and leaves, but is also a carnivore. Length: 115cm (46in) overall. The giant panda, *Ailuropus melanoleuca*, is one of the rarest large mammals and inhabits bamboo forests in China (mainly Tibet). It has a short tail and a dense white coat with characteristic black fur on shoulders, limbs, ears and around the eyes. Although classified as a carnivore it eats mainly plant material - particularly bamboo shoots. Length: 1.5m (5ft); weight: 160kg (350lb).

Pandit, Vijaya Lakshmi (1900-), Indian diplomat, daughter of the Motilal Nehru and sister of Jawaharlal NEHRU. She led the Indian UN delegation (1946-48; 1952-53) and was president of the UN General Assembly (1953-54). She was also Soviet (1947-49) and us (1949-51) ambassador. She was High Commissioner to the UK (1954-61) and later became ambassador to Ireland; from 1964 to 1968 she was a member of the Indian Parliament.

Pandora, in Greek mythology, the first woman. She was created on ZEUS's orders as his revenge on PROMETHEUS, who had created man and stolen fire from heaven for man. Pandora was endowed with charm as well as with guile. She was sent to Prometheus's brother, Epimetheus, and brought with her a box that she had been forbidden to open. When she opened it, all the evils of the human race flew out. Hope remained at the bottom of the box.

Pangaea, name for the single supercontinent that is believed to have existed on Earth 200 million years ago. Theorists have reconstructed existing land masses with their continental shelves to form models of this one supercontinent. See also pp.200, 201.

Pangolin (scaly ant-eater), any of several species of toothless insectivorous mammals, covered with horny overlapping plates, that live in Asia and Africa. It has short, powerful forelegs with which it climbs trees and tears open the nests of tree ants, on which it feeds. Length: to 175cm (70in). Family Manidae; genus *Manis*. See also pp.87, 93, 93.

Pantpat, Battles of, series of battles fought on a strategically located plain in NW India. The Sultan of Delhi was defeated by BABUR in 1526, Akbar defeated the Afghans in 1556 and in 1761 Pantpat was the scene of the Afghan victory over the MAHARATTAS.

Pankhurst, Dame Christabel (1880-1958), British suffragette, eldest daughter

of Emmeline PANKHURST and supporter of her mother in the suffrage movement. She was educated for the Bar, but was refused admission because of her sex. She later became a prominent evangelist.

Pankhurst, Emmeline Goulden ("Emily") (1858-1928), British political leader of women's suffrage movement. With her husband Richard Pankhurst she worked to secure married women's property rights. When she set up the Women's Social and Political Union in 1903, the movement for women's suffrage became militant, and she was imprisoned. **Pan Ku** (AD 32-92), Chinese historian. He wrote the *History of the Former Han Dynasty*, which was completed by his sister after his death. It dealt with the previous 200 years and consisted of biographies of emperors and other prominent people, descriptions of major events and cultural history. He also wrote prose poems called fu.

Pannunjom, village in N South Korea, just s of the 38th parallel that divides North and South Korea. It was in this village in July 1953 that Communist and UN forces signed the armistice ending the KOREAN WAR.

Panna, third and highest level of the Buddhist life. Also written Prajna, the word means wisdom. The other two levels are *sila* (morality) and *samadhi* (concentration). The wisdom referred to concerns the direct apprehension of transcendent truths. See also p.1915.

Pannage, feudal levy paid by VILLEINS for the right to graze their pigs in woodland areas, especially for acorns. The rates ranged from a penny for a yearling pig to a half-penny for a younger pig.

Panning, method used by prospectors for separating silt, sand and earth from coarse pebbles which may contain minerals such as gold and diamonds. Scooped-up sediments were washed in a pan by agitating in a circular motion.

Pannini, Giovanni Paolo (c.1692-1765), Italian painter. He is best known for his views of Rome, some of which were imaginary, combining real buildings with ancient ruins. His work anticipated that of Hubert ROBERT. It includes *Roman Ruins with Preaching Apostle* (1753).

Pan-pipes, or **syrinx**, primitive musical wind instrument, probably from Asia. Several tubes of cane, reed, bamboo, or clay, of different lengths, are joined together side by side. Blown across one end, each pipe produces one note of a scale. Pan pipes are associated with the pastoral Greek god of fertility.

Pan Slavism, attempt to unite the Slavic peoples. In the early 19th century it was a movement interested in publicizing the common culture of the Slavs, but after 1848 it took on more specific political overtones. In the late 19th century the importance of pan-Slavism lay in that the strongest power in E Europe, Russia, was wholly Slav, and often seemed to aspire to the leadership of the Slavs who lived under the declining OTTOMAN and HAPSBURG empires.

Pansy, common name for a cultivated hybrid VIOLET. It is one of the oldest of European cultivated flowering plants. An annual or short-lived perennial, it has velvety flowers, usually in combinations of blue, yellow and white, with five petals. Height: to about 15-30cm (6-12in). Species *Viola tricolor*.

Pantaloon, elderly male character in the English HARLEQUINADE who was invariably the butt of Clown's jokes. In COMMEDIA DELL'ARTE, as Pantalone, he was represented as an elderly Venetian merchant, amorous, gullible and suspicious and always betrayed by his young wife COLUMBINE.

Panteism, religious system, contrasted with certain forms of DEISM, that stresses that God (or gods) and the universe are identical. According to this philosophy, all life is infused with divinity. No distinction is recognized between the Creator and creatures. The language of mysticism is frequently pantheistic. John Toland, the deist, originated the term in 1705.

Pantheon, in ancient times, a temple for the worship of all the gods in a specific

area. By extension, it was a building honouring illustrious public figures. The most famous example is the Pantheon in Rome, originally built by Agrippa (27 bc), rebuilt by Hadrian (125 ad), and converted into a church in the 7th century. Its dome was the largest built until modern times. The Pantheon in Paris was designed as a church (1764) Jacques Germain Soufflot and was dedicated during the French Revolution to the memory of great Frenchmen.

Panther. See LEOPARD.

Pantograph, mechanical device sometimes used by artists and draughtsmen to transfer a design from one sheet of paper to another, at the same or at a different scale. It is constructed as a frame of rods, linked together with adjustable pins, pivoted at one of the linkages and with a pointer at another. A pen or pencil at the further end of the frame traces an exact copy as the pointer is made to follow the lines of the original design. The name pantograph is also given to a similar structure on the roof of an electric locomotive which picks up current from an overhead conductor wire. See also p.794.

Pantomime, originally a dumb-show performance, in which actors conveyed meaning by symbolic movement, facial expression and gesture, sometimes accompanied by music. Popular in ancient Rome and in 17th and 18th-century Italy and France, it survives in Britain today as a Christmas extravaganza for children, with music and comic actors. See also MIME.

Pantothenic acid, VITAMIN of the B complex involved in the synthesis of acetyl COENZYME A.

Panufnik, Andrzej (1914–), Polish composer and conductor. He was conductor of the Birmingham Symphony Orchestra (1954–57). His works include the *Sinfonia rustica* (1948) and the *Sinfonia sacra* (1963).

Panzer, German word for armour, commonly used as an abbreviation of *Panzer kampfwagen*, meaning a tank. German Panzer divisions, consisting of tanks and their support units, were very effective in WWII. The main German tanks of WWII were the Panzer Mark IV, the Panther and the Tiger. See also pp.564–565.

Paolozzi, Eduardo (1924–), Scottish-born sculptor who studied in London and worked in Paris (1947–49). Despite several stylistic transformations, the constant theme in his work is his interest in machinery. Paolozzi created boxy chromium-plated sculptures evocative of jazz-age amusement arcades and picture palaces.

Papacy, office of the pope, the head of the Roman Catholic Church. The pope is nominated Bishop of Rome and Christ's spiritual representative on Earth. He is elected by the College of Cardinals as a successor to St PETER, traditionally regarded as the first Bishop of Rome. Until the REFORMATION the pope claimed authority over all Western Christendom. Since then his claim is over all members of the Roman Catholic Church. In Catholic Doctrine his authority is absolute and he is unable to err in a formal statement, such as a PAPAL BULL, concerning matters of faith or morality.

Papal Bull, official letter from the pope, written in solemn style, usually containing decrees relating to doctrine, CANONIZATION, ecclesiastical discipline, promulgation of indulgences or other matters of general importance. The name is derived from the Latin *bullā*, meaning "seal".

Papal infallibility See INFALLIBILITY.

Papal legate, personal representative of the pope sent on a mission. Legates can be of three kinds: a *latere*, nuncios or apostolic delegates. The office of legate *a latere* can now be held only by a cardinal. It was especially important during the Middle Ages.

Papal nuncio, diplomatic representative of the VATICAN, accredited to a civil government. Often of ambassadorial rank, he also acts as a liaison between the PAPACY and the Roman Catholic Church of the state to which he is accredited.

Papal States, independent territory in

central Italy under the rule of the popes from 756 to 1870. The territory varied in size at different times but for most of its existence comprised the areas of Italy known today as Lazio, Umbria, Marche and part of Emilia-Romagna. In 756 PEPIN THE SHORT, ruler of the Franks, granted the exarchate of Ravenna to Pope STEPHEN II, thereby establishing the pope's temporal power. Because of the rising power of the communes in Italy, the Babylonian Captivity (1309–77) and the GREAT SCHISM (1377–1417), the control of the PAPACY was weakened in the Middle Ages, never to recover fully. Annexed by France for most of the period between 1798 and 1809, the Papal States were restored in 1815, only to be annexed by Italian forces in the unification movement, Rome falling in 1870. The VATICAN CITY, last bastion of the pope's temporal power, was finally established in its present form by the LATERAN TREATY in 1929. See also pp.1268, 1295, 1295, 1661.

Papandreou, Georgios (1888–1968), Greek politician. During WWII he led a government-in-exile (1944–45) and after the war he served in several Social Democratic cabinets. He formed the Centre Union Party (1961) and became Prime Minister (1964–65) when his party won the 1964 elections. After the military coup of 1967 he was placed under house arrest.

Papaw. See PAPAYA.

Papaya, also sometimes called pawpaw, palm-like tree widely cultivated in tropical America for its fleshy, melon-like, edible fruit. Height: to 6m (20ft). Family Caricaceae; species *Carica papaya*. See also PE p.194.

Papeete, port town and capital of Tahiti and French Polynesia, on the NW coast of Tahiti in the Society Islands, S Pacific Ocean. It is a trade centre of the islands and the site of an international airport. Its exports include copra, mother-of-pearl and vanilla. Pop. (1971 est.) 24,000.

Papen, Franz von (1879–1969), German politician. He was a member of the Prussian parliament (1921–32) and was Chancellor of Germany in 1932. He lifted the ban on the Nazi militia and in 1933 helped Adolf HITLER to become chancellor, acting briefly as his vice-chancellor. In 1946 he was acquitted by the war crimes tribunal at the NUREMBERG TRIALS. See also p.1691.

Paper, sheet or roll of compacted cellulose fibres with a wide range of uses including packaging, writing, wall covering and clothing. The word "paper" derives from papyrus, the plant that the Egyptians used at least 5,500 years ago to make sheets of writing material. The papyrus reed was soaked, slit into strips, laid at right-angles and pounded and pressed into a sheet. The modern process of manufacture originated about 2,000 years ago in China and consists of reducing wood fibre, straw, rags and grasses to a pulp by the action of an alkali, such as caustic soda. The lignin and other non-cellulose material is then extracted and the residue is bleached. After washing and the addition of a filler to provide a smooth and flat surface, the pulp is rolled into thin sheets and dried. Papers of better quality are made from chemical pulps prepared in this way, but newsprint and other cheap papers are mechanical pulps made without chemical treatment and consist of finely-divided wood. See also pp.594–595.

Paperback, book published in paper covers and usually costing much less than any hardback (stiff-covered) counterpart. Various claims for several 19th-century originals have been made but the so-called Paperback Revolution was started by Allen Lane's Penguin Books in 1935. Developments in printing technology since WWII, especially the growth of large offset presses, have enabled publishers to maintain relatively long print runs and keep down the cost of paperbacks.

Paper money, or bank-note, printed note issued by a bank for a sum of money which it promises to pay to the bearer on demand. Bank-notes originated in England as receipts issued by goldsmiths for money deposited with them, the first being substitutes (or receipts) for money.

Their value depended on their being exchanged for gold. It was not until 1931 that they became money in their own right, ie inconvertible. See also pp.1260, 1860–1861.

Paper nautilus. See ARGONAUT.

Papier-mâché, 18th-century French art-material made from paper strips soaked in starch of flour and water and pressed into forms which were then painted. The British adopted the technique to produce a thin paper-board to make trays and mouldings which were popular in Victorian times. It is still widely used in the production of decorative objects.

Papilla, small nipple-like protuberance found in mammals and plants. In mammals papillae project into the EPIDERMIS from the DERMIS; they are found in many parts of the body including the mammalian inner ear and on the surface of the TONGUE. See also pp.142, 142.

Papillon, small dog developed from a 16th-century dwarf spaniel. It has a small head with large butterfly-like ears and a thin muzzle. The straight-backed body is set on slender legs, and the long, well-arched tail is carried over the back. The long, silky coat is white with darker markings. Height: 28cm (11in) at the shoulder.

Papin, Denis (1647–c.1712), French physicist and inventor who helped to develop the steam engine. He invented a steam digester – a pressurized container which demonstrated that increased pressure raises the boiling point of a liquid.

Papineau, Louis Joseph (1786–1871), French-Canadian political figure and insurgent. After a military and legal career, he was elected a member of the Quebec legislature in 1808 and became its Speaker (1815–37). His hostility to the British government in Canada incited his followers to rebellion (1837). With its failure he fled to the USA and then to France (1839). He was granted a full amnesty (1847) and returned to Canadian political life as a member of the House of Commons (1848–54), but he was unable to recapture his former influence.

Papp, Joseph (1921–), US stage director and producer. He founded the New York Shakespeare Festival in 1954 and has given many free performances of Shakespeare's plays. He produced Jason Miller's Broadway play, *That Championship Season*.

Papp, László (1926–), Hungarian boxer. A southpaw, he won three Olympic gold medals (1948 middleweight; 1952, 1956 light-middleweight). In 1962, as the first professional boxer from a Communist country, he won the European middleweight title and retained it until 1965.

Pappus of Alexandria (fl. AD 320), mathematician whose commentaries on EUCLID and PTOLEMY provide important sources for their work. He also wrote a handbook to Greek mathematical sciences, *The Collection*, and extended PYTHAGORAS' theorem to apply to any triangle.

Paprika, popular condiment, a red powder ground from the fruit of some species of CHILI pepper that grow in central Europe. It is particularly associated with Hungarian cuisine.

Papua New Guinea, independent nation of the W Pacific made up of the E half of NEW GUINEA and the neighbouring islands of the Bismarck Archipelago and Bougainville. The land is largely mountainous or covered with tropical rain forest. Most farming is at a subsistence level, but coffee, copra and cocoa are produced as cash crops. There are deposits of copper, natural gas, gold and silver. The capital is Port Moresby. Area: 475,369sq km (183,540sq miles). Pop. (1979 est.) 3,080,000. See p.2117.

Papuans, racially and culturally diverse aboriginal inhabitants of Papua New Guinea. The aboriginal highlanders live chiefly by subsistence agriculture; crops include taro and sweet potatoes, with coffee and copra grown as cash crops.

Papyrus, stout perennial water plant, native to S Europe, N Africa and the Middle East, and used by the ancient Egyptians to make a paper-like writing

material. Strips of the stem were arranged in layers, crushed and hammered to form a loosely textured porous kind of paper. Height: to 4.5m (15ft). Family Cyperaceae; species *Cyperus papyrus*. See also p.594.

Parable, short, simple story intended to convey a moral or religious message. Parables differ from allegories in that parables deal with events that might reasonably happen in nature and often feature humans rather than the animals of fables. The best-known parables are those of JESUS CHRIST in the NEW TESTAMENT, including the Good Samaritan, the Prodigal Son, the Sower and the Seed, and the Pearl of Great Price.

Parabola, mathematical curve, a CONIC SECTION traced by a point which moves so that its distance from a fixed point, the focus, is equal to its distance from a fixed straight line, the directrix. It is known as a conic section because it may be formed by cutting a cone parallel to one side. The general equation of a parabola is $y^2 = 4ax$. See also p.786, 786.

Paraboloid, mathematical solid figure in which all sections parallel to the axis of symmetry are PARABOLAS, and sections at an angle to this axis are other conic sections: ELLIPSES, HYPERBOLAS or CIRCLES.

Paracas, site on the Paracas peninsula of Peru of an Indian culture in three phases: Cavernas, Pinilla and Necropolis (900 BC–AD 400). The Cavernas people produced crude pottery; the Pinilla and Necropolis were noted for their fine pottery and textiles.

Paracelsus (c.1493–1541), Swiss physician and alchemist, real name Philippus Aureolus Theophrastus Bombastus von Hohenheim. He became professor of medicine at Basel, where his lectures discredited past and contemporary medicine and were preceded by the burning of the works of GALEN and AVICENNA. According to Paracelsus, the body of man is primarily composed of salt, sulphur and mercury, and it is the separation of these elements that causes illness. He introduced mineral baths and made opium, mercury, lead and various minerals part of the pharmacopoeia. According to his enemies, he died in Salzburg after a drunken bout. Others say he was thrown down a hill by hirelings of jealous apothecaries.

Parachute, folding umbrella-shaped device made of a light fabric such as nylon or terylene (dacron), used to reduce the speed of a falling body. It consists of a canopy connected by lines to a harness which holds the jumper or cargo. Before release all but the harness is packed in a small bag, seat, or chest pack. The unit opens at the pull of a ripcord. Parachutes are also used as brakes to shorten the landing run of high-speed aircraft and on drag-racing cars.

Parachuting, or sky-diving, sport in which parachutists jump from approx. 3,660m (12,000ft) and free-fall to about 670m (2,200ft) before opening their parachutes. Competition parachuting has events based on accuracy, in which the parachutist "steers" himself as close as possible to a target area, and events based on style, in which a series of manoeuvres are performed during the free-fall. Other events are free-fall relative work by two or more parachutists; para-gliding, using parachutes like wings; and para-ascending, where the parachutist is lifted into the air by a towing vehicle.

Paradise, in mythology and religion, a place of perfect happiness and contentment where all is beautiful and unblemished. In some cultures it is synonymous with HEAVEN. Christianity also associates it with the Garden of EDEN before ADAM and EVE were cast out.

Paradise fish, small, hardy freshwater fish, marked with red and blue bands. Found in S China, it was the first tropical aquarium fish to be introduced to Europe (1869). Family Anabantidae; species *Macropodus opercularis*.

Paradise Lost (1667), epic poem by John MILTON in BLANK VERSE. It originally consisted of 10 books but the revised edition of 1674 has 12. It tells the story of Satan's rebellion against God and of the Fall of

Paradise Regained

Man and is Milton's attempt to justify the existence of evil in this world. See also pp.1416-1417, 1416-1417.

Paradise Regained (1671), epic poem in BLANK VERSE by John MILTON, a sequel to *Paradise Lost*. Christ resists Satan's temptations in the wilderness and thus creates a new spiritual paradise for man. See also pp.1416-1417, 1416-1417.

Paradox, self-contradictory or absurd statement which conflicts with preconceived notions of what is reasonable or possible, but which is significant when considered from the appropriate viewpoint. A well-known paradox is that of Zeno of Elea, who reasoned that motion is impossible.

Paraesthesia, pricking or tingling sensation on the skin associated with injury or irritation of a sensory nerve.

Paraguay, landlocked republic in E South America. The economy is predominantly agricultural, the rearing of cattle being the most important activity. The principal exports are meat, timber, cotton, coffee and tobacco. Exports are transported through Argentina by river. The capital is Asunción. Area: 406,752sq km (157,047sq miles). Pop. (1980 est.) 3,000,000. See p.2117.

Paraguay, river in S central South America. It rises in SW Brazil, flows S to form part of the Brazil-Paraguay and Paraguay-Argentina border and empties into the River Paraná at the SW corner of Paraguay. Its chief tributaries are the Pilcomayo and Bermejo rivers; Asunción is the chief port. Length: approx. 2,550km (1,584 miles).

Parakeet. See PARROT.

Paraldehyde, colourless liquid ($C_6H_8O_4$) formed by the POLYMERIZATION of ACETALDEHYDE with sulphuric acid. It regenerates acetaldehyde on heating with dilute acids. It has a pleasant odour but disagreeable taste, and is used mainly as a HYPNOTIC DRUG.

Parallax, apparent change in position of an object, seen against a remote background, when the viewpoint is changed. The parallax of a star (annual parallax) is the angle subtended at the star by the mean radius of the Earth's orbit (one astronomical unit); the smaller the angle, the more distant the star. See also PARSEC; pp.916-917, 916.

Parallelogram, quadrilateral (four-sided plane figure) having both pairs of opposite sides parallel. Both the opposite sides and the opposite angles are equal. Its area is the product of one side and its perpendicular distance from the opposite side. A parallelogram with all four sides equal is called a RHOMBUS. See also p.795.

Paralysis, loss of voluntary movement in part of the body. It may result from injury, infection, poisoning, a tumour, damage to nerve cells or hysteria. Temporary paralysis is treated by removing the cause; permanent paralysis may be relieved by physiotherapy or surgery.

Paramagnetism, type of MAGNETISM displayed by such metals as platinum and magnesium, which, when placed in a magnetic field, are magnetized parallel to the field to an extent proportional to the strength of the field. This effect is much weaker than that in ferromagnetic materials such as iron, cobalt and nickel.

Paramaribo, port and capital of SURINAM, on the Surinam River, 21 km (13 miles) from the Atlantic Ocean. It was founded in 1640 as a British colony and was held intermittently by the British and the Dutch until 1816, when the Dutch finally took control. The city has a system of canals similar to those in The Netherlands. Exports include bauxite, sugar cane, rice, rum, coffee and cacao. Pop. (1971) 102,297.

Paramecium, freshwater, ciliated PROTOZOAN characterized by its streamlined "slipper" shape, defined front and rear ends, an oral groove for feeding, food vacuoles for digestion, an anal pore for elimination and two nuclei. Its stiff outer covering is studded with short hair-like cilia. Order Holotricha; species include *Paramecium bursaria* and *Paramecium aurelia*. See also pp.10, 11.

Paramnesia, in clinical psychology and

psychiatry, distortions of memory in which fact and fantasy become merged.

Paramount Pictures Corporation, US film production company formed in 1927. Early films included *The Ten Commandments* (1923) and the "Road" series. Paramount became part of Gulf and Western in 1966 and, although it had expensive failures in the late 1960s, *Love Story* (1970) and *The Godfather* (1971) broke box-office records.

Paraná, river in SE central South America. It rises in SE Brazil, flows S into Argentina, forming the SE and S border of Paraguay and joins the Uruguay River to form the Río de la Plata. It is an important route for inland communications. Length: 2,941 km (1,827 miles).

Paranoia, term in psychology for a disorder characterized by a systematically held, persistent delusion, usually of persecution or grandeur. It was coined by the German psychologist Karl Kahlbaum in 1863. A severe paranoia may be PSYCHOTIC or SCHIZOPHRENIC and it leads its victim to adopt DEFENCE MECHANISMS.

Paranthropus, fossil PRIMATE discovered by the British anthropologists Dr and Mrs Louis LEAKEY in the Olduvai Gorge, Tanzania, and now classified as a type of AUSTRALOPITHECUS.

Paraplegia, PARALYSIS of both lower limbs. It may be caused by injury to or disease of the spinal cord or by brain disorders.

Paraplegic Games, annual sports tournament for the semi-paralysed, officially named the International Stoke Mandeville Games, after the English hospital in Buckinghamshire, where they originated in 1948 with an archery competition. When possible, every fourth year they are held in the country staging the OLYMPIC GAMES, and there are also British Commonwealth Paraplegic Games to coincide with the COMMONWEALTH GAMES. Sports contested are archery, swimming, fencing, bowls, table tennis, snooker, weightlifting, throwing the javelin, discus, and hammer and sometimes basketball.

Parapsychology, scientific research into extra-sensory perception, such as TELEPATHY, CLAIRVOYANCE and PRECOGNITION. It developed from PSYCHICAL RESEARCH initiated in England in 1882 by a group of intellectuals who set about sifting and investigating reported paranormal events. In the 1950s sophisticated experiments began, using electronic equipment, and by the end of the 1960s parapsychology had become an accepted scientific study. See also pp.1892-1893.

Parasite, any organism that benefits at the expense of another or depends on it totally for its existence; usually the host is not destroyed by this relationship. Parasites occur in many groups of plants and in virtually all major animal groups. A parasite that lives within the host is called an endoparasite; a parasite that subsists on the host's exterior is an ectoparasite. Many parasitic PROTOZOANS, FLEAS, WORMS, insects and other arthropods can carry diseases such as MALARIA, ELEPHANTIASIS and amoebic DYSENTERY, or cause exterior sores or lesions which may then become infected. The CUCKOO and COWBIRD rely on other birds to rear their young, and are parasites. In parasitoidism, the relationship results in the death of the host, eg various flying insects lay their eggs on or in a host which becomes the food for the insect larvae. A hyperparasite is one which parasitizes another parasite. See also pp.20, 1060-1061, 1068, 1082-1083.

Parasitology, branch of biology that deals with the study of plant and animal PARASITES, organisms that depend on other organisms for their existence. It has a number of study areas such as veterinary, medical and agricultural parasitology.

Parasol mushroom, any of a family of common terrestrial fungi (Lepiotaceae) that have shaggy umbrella-shaped caps, especially *Lepiota procera*, which is considered one of the best edible species. Some parasols are poisonous and many resemble AMANITAS. See also p.355.

Parathormone, HORMONE secreted by the PARATHYROID GLAND. It helps to regulate calcium levels in the blood by promoting

the release of calcium from the bones.

Parathyroid gland, any of the four small endocrine glands, usually embedded in the back of the THYROID GLAND, that secrete the HORMONE parathormone, which controls the amount of calcium and phosphorus in the blood. Abnormalities of this endocrine gland can usually be treated with parathyroid extract and regulation of calcium and phosphorus intake. See also pp.154-155.

Paratyphoid fever, infection similar to TYPHOID FEVER but milder and of shorter duration. It is caused by various species of *Salmonella BACTERIA* (typhoid is caused by *Salmonella typhi*) which are carried in infected food and water.

Parcae, in Roman mythology, the three FATES, Nona, Decuma and Morta, who were sometimes said to be the daughters of Jupiter (Zeus in Greek). In Greek mythology they were the Moirae, named Clotho, Lachesis and Atropos.

Parchment, processed skins of animals such as sheep, goats and calves used as writing material; it was invented in the 2nd century BC, and is named after the ancient city of PERGAMUM. When made from calf or kid skin, parchment is called vellum. Today, "parchment" and "vellum" generally refer to high-quality PAPER made from wood pulp and rags.

Paré, Ambroise (1517-90), French physician regarded by some as the founder of modern surgery. In 1537 he was employed as an army surgeon and in 1552 became surgeon to Henry II, one of four French kings he served during his lifetime. As army surgeon he introduced new methods of treating wounds, described in his book *The Method of Treating Wounds Made by Harquebuses and Other Guns* (1545), and revived the practice of tying arteries during surgery instead of cauterizing them.

Pareja, Juan de (c.1605-c.1670), Spanish painter, sometimes known as El Esclavo (the slave) because he was a mulatto. Pareja studied under VELÁZQUEZ, who painted a greatly admired portrait of him during their visit to Rome (1649-51).

Parenchyma, soft tissue made up of non-specialized, thin-walled cells. It is one of the chief tissues of plant stems, leaves and fruit pulp; it stores nutrients and water, and helps to support plants. See also PHLOEM.

Paresis, tertiary SYPHILIS of the central nervous system which particularly affects the cerebral hemispheres of the brain; the condition is also called GPT or general paralysis of the insane. Untreated it causes gross deterioration of the personality, followed by progressive paralysis and death. It is much less common since the advent of PENICILLIN, which is an effective treatment for syphilis. Paresis can also mean slight or temporary paralysis. See also VENEREAL DISEASE.

Pareto, Vilfredo (1848-1923), Italian economist and sociologist. He studied the application of mathematics to economic theory and wrote *Manual of Political Economy* (1906). As a sociological theorist he concentrated on ruling élites and wrote *Mind and Society* (1916). See also p.1843.

Pariah, member of a low CASTE in the social order of S India whose touch pollutes those of high caste. In a broader sense, a pariah is any despised person, outside an approved social group.

Parietal bone, large flat bone on each side of the SKULL which forms the vault of the cranium. It joins with the frontal and occipital bones.

Paris, also called Alexandros, in Greek legend, the son of PRIAM and HECUBA. He was abandoned on Mt Ida soon after his birth, rescued by a shepherd and later had a son by Oenone. With APHRODITE's help he abducted HELEN, causing the TROJAN WAR, in which he slew ACHILLES. Oenone at first refused to heal her husband when he was wounded and, relenting too late, committed suicide after his death.

Paris, Matthew (d.1259), also known as Matthew of Paris, English monk and chronicler. He became the historiographer of the monastery of St Albans on the death of Roger of Wendover in 1236. His *Chronica majora* (Great Chronicle) is

Paramecium beat their cilia to direct food particles into their mouths.

Parasite: the malaria mosquito settles and feeds on a victim's arm.

Vilfredo Pareto examined the way science can be applied to study human behaviour.

Paris: in Rubens' *The Judgement of Paris* he awards the golden apple to Aphrodite.

one of the best sources for the history of Europe from the year 1235 to 1259.

Paris, capital of FRANCE, on the River Seine 375km (233 miles) from its mouth on the English Channel. The city proper consists of the Paris département, Ville-de-Paris, and its suburbs lie in départements of Seine-St-Denis, Val-de-Marne, Hauts-de-Seine, Val-d'Oise, Yvelines and Essonne. When the Romans took Paris in 52 BC it was a small village on the Île de la Cité on the Seine. Under the Romans it grew as an administrative centre. The city was the capital of the Merovingian Franks in the 5th century until 584. It was re-established as the French capital by Capetian kings in the 10th century. During the 14th century Paris rebelled against the Crown and declared itself an independent commune. The city suffered from civil disorder during the HUNDRED YEARS WAR. In the reign of LOUIS XIII Cardinal RICHELIEU established Paris as the cultural and political centre of Europe. The outbreak of the FRENCH REVOLUTION focused on the BASTILLE, which was stormed by crowds in 1789. Under the Bonapartes Paris assumed its modern form, especially during the reign of NAPOLEON III when Baron Haussmann was commissioned to plan the boulevards and parks. Although occupied in the Franco-Prussian War (1870-71) and WWII, the city was not badly damaged. Landmarks include the Cathédrale de Notre-Dame, Musée du Louvre, Les Invalides, Palais de Justice, Palais de Luxembourg, l'Opéra, Panthéon, Bibliothèque Nationale, Jardin des Plantes, Arc de Triomphe, Palais de l'Élysée, La Madeleine, St-Germain-des-Prés, Palais de la Bourse, La Sorbonne and Tour Eiffel. Paris still remains the hub of France despite recent attempts at decentralization and retains its importance as a cultural, commercial, and communications centre of Europe. Industries: car, marine and railway engineering, chemicals, textiles, clothing, printing and publishing, luxury goods. Pop. (city proper, 1975) 1,317,227; (metropolitan area) 8,549,898. See also pp.1322, 1336, 1396, 1397, 1442-1443, 1482, 1486-1487, 1582, 1587, 1601, 1651, 1653, 1658, 1660, 1743, 2037.

Paris, Congress of (1856), conference held to determine the peace terms after the CRIMEAN WAR. The Black Sea was made neutral water, open to all merchant marines and closed to warships. Moldavia and Wallachia were given semi-independence from Turkey.

Paris, School of, name given to 20th-century movements of painting which were focused in Paris, irrespective of the nationality of the artists. The school includes most of the modern masters.

Paris, Treaties of, several peace agreements negotiated and signed at Paris. They include three truces in the 13th and early 14th centuries between France and England (1259, 1286 and 1303), two preliminary treaties (1814, 1815) before the Congress of Vienna and the treaty which ended the CRIMEAN WAR (1856). They also include the treaties made between the Allies and Bulgaria, Finland, Hungary, Italy and Romania in 1946. The three most important such treaties in British history were the PEACE OF PARIS (1763), the PEACE OF PARIS (1783), and the Treaty of Versailles (1919) which resulted from the Paris Peace Conference at the end of WWI. See also pp.1561, 1672-1673, 1742.

Parish, in the Church of England, geographical area under the pastoral care of a clergyman, the "incumbent", usually a vicar or rector. It is a subdivision of a diocese, which is governed by a bishop.

Parity, in physics, term used to denote space-reflection symmetry. The principle of conservation of parity states that physical laws are the same in a left- and right-handed co-ordinate system. This was regarded as inviolable until 1956, when Chen Ning Yang and Tsung-Dao Lee showed that it was transgressed by certain interactions between elementary atomic particles. The term parity is also used in information theory to denote a coding method employed in message transmission to detect errors.

Park, Chung Hee (1917-79), President of South Korea (1963-79). He seized power in a military coup in 1961, ruled for two years as a general, then resigned from the army. He was elected President in 1963, 1967 and 1971. The head of the Korean Central Intelligence Agency, Kim Jae Kyn, assassinated him in October 1979.

Park, Mungo (1771-1806), British explorer. After working as a medical officer on a ship engaged in the East India trade he was asked by the African Association to explore the course of the River Niger. He explored 451km (280 miles) of the river, returning in 1805 to trace the river to its mouth, but was attacked by local people and killed.

Parker, Charles Christopher ("Charlie") (1920-55), us jazz alto saxophonist, nicknamed "Bird". He recorded with Dizzy Gillespie in the 1940s and was the most important of the founders of the jazz style called "be-bop" (now called "bop"), which opened up new rhythmic and harmonic possibilities for musicians. See also p.1756.

Parker, Dorothy (1893-1967), us author. A drama and book critic, the first of her three collections of satirical verse, *Enough Rope*, appeared in 1926. Her fame rests largely on her short stories satirizing aspects of modern life.

Parker, Matthew (1504-75), Archbishop of Canterbury (1559-75). He was chaplain to Anne Boleyn in 1535, Dean of Lincoln (1552-53), and a moderate in church matters. After ELIZABETH I had appointed him archbishop, he revised the 42 articles to 39 in 1562, and published the "Bishops' Bible" (1572).

Parkes, Sir Henry (1815-96), Australian politician, b. England. He emigrated to Australia in 1839. He was five times the Premier of New South Wales between 1872 and 1891. He worked for Australian federation, the ending of transportation of convicts and improvements in education. His latter efforts led to the Public Schools Act of 1866 which, together with legislation in 1880, resulted in compulsory free education.

Parkinson, Cyril Northcote (1909-), British historian and satirist who in 1958 proposed the "law" known as Parkinson's law relating to administration and business practice. It holds that work expands to fill the time available and, consequently, workers increase in numbers even though output remains unchanged.

Parkinson, James (1755-1824), British surgeon and palaeontologist who described PARKINSON'S DISEASE in 1817 and was the first to recognize that perforation of the appendix could be fatal. His many works include *Organic Remains of a Former World* (3 vols, 1804-11).

Parkinson's disease, chronic, progressive nervous disease occurring mostly in older males. Tremors, muscle weakness and fixed facial expression are characteristics of the disorder. The cause is not known, but viruses have been implicated. No cure exists, but physiotherapy and a drug, L-DOPA, may relieve the symptoms. See also p.1073.

Parlements, French courts of the ANCIENT RÉGIME, one at Paris and eventually 12 in the provinces. The provincial parlements were administrative bodies which carried out royal edicts. The Paris parlement, in addition, was the supreme court. They were abolished in 1790.

Parliament, legislative assembly that includes elected members and acts as a debating forum for political affairs. The parliament on which most other parliamentary systems in the world are based is the British Parliament. It emerged in the late 13th century as an extension of the king's council, and has been housed at Westminster since that time. It is the supreme power in the country. Parliament comprises the monarch, for whom members of the government act as servants, and two Houses: the HOUSE OF LORDS, an upper chamber of hereditary and life peers, bishops and law lords, has seen its power effectively limited in the 20th century to being the supreme court in the country and to delaying and altering legislation initiated by the lower house,

the HOUSE OF COMMONS. There are 635 members of the Commons (MPs), elected by constituencies with universal adult suffrage. There is a maximum of five years between elections. Since the 19th century Parliament has been dominated by a two-party system, although there are also members of the other parties and independent members, especially in the Lords. Generally the party that commands the most votes in the Commons forms the government; the second-largest party forms "Her Majesty's Loyal Opposition". The Prime Minister and his Cabinet are almost always MPs (although not necessarily members of the Commons); they are answerable to Parliament for their policies, and the activities and finances of their departments are subject to parliamentary scrutiny. Legislation can be introduced by the government or by private members; after passing three readings in the Commons, a BILL passes to the Lords for three further readings. After it has received the royal assent it becomes an ACT OF PARLIAMENT. See also pp.1342-1343, 1420-1427, 1544-1545, 1640-1641, 1718-1721.

Parliament, Houses of. See HOUSE OF COMMONS; HOUSE OF LORDS.

Parliament Act (1911), Act passed by the British Parliament to overcome the opposition of the House of Lords to BILLS passed in the Commons. It arose from the Lords' rejection of the Liberal budget of 1909. Money bills were to become law within a month of being sent to the Lords, the peers' opposition notwithstanding. Other public bills passed by the Commons in three successive sessions were also to become law. In 1949 the Lords' delaying power for public bills was reduced to one year.

Parliamentarians, people who sided with Parliament against CHARLES I before and during the ENGLISH CIVIL WAR. In the main they were drawn from the Puritan gentry and squirearchy. They wished to restore Parliament's position after 11 years of non-parliamentary government (1629-40), and to gain control over the king's ministers, the Church and the army. Their most prominent leaders were John PYM and Oliver CROMWELL. See also pp.1420-1425.

Parliamentary government, various systems of government which have in common an elected assembly of representatives of the community. In Britain the executive, judicial and legislative parts of government are all present in PARLIAMENT. The Crown is the executive (although it delegates its power to its ministers), the House of Lords is the high court of the realm and the House of Commons is the chief legislative organ. In the USA the executive (President), judiciary (Supreme Court) and the legislative (Congress) are separated. See also pp.1854-1857.

Parma, Alessandro Farnese, Duke of (1545-92), Spanish general. With JOHN OF AUSTRIA he led the Spanish suppression of the revolt of The Netherlands in 1578, and a year later was appointed governor of The Netherlands.

Parma, School of, Italian school of painting which flourished during the 15th and 16th centuries. Its most influential painters were CORREGGIO and his pupil PARMIGIANINO.

Parmenides (b.c. 515 BC), founder of the Eleatic school of Greek philosophy. His main extant work is a poem, *Nature*. Developing the concept of "being" in contrast to Heraclitus' concept of "becoming", he taught that being is eternal, indivisible and immutable. See also ELEATICISM; HERACLITUS.

Parmigianino, or Parmigiano, II (1503-40), real name Francesco Mazzola, northern Italian artist, a master of MANNERISM. He worked in Rome, Bologna and Parma. One of the first Italian painters who was also an important etcher, he is also famous for his drawings. His works include *Madonna with St Zachary* (c. 1530), *Vision of St Jerome* (c. 1527) and *Madonna with the Long Neck* (c. 1535). See also p.1398.

Parnassians, school of mid-19th-century French poets. They opposed the excessive

Paris: the Arc de Triomphe, begun 1806, stands 50m high in the Place de l'Étoile.

Dorothy Parker was famous for her sharp wit and liberated life-style.

Parliament: a view of the chamber of the House of Commons from the public gallery.

Parmigianino strove for a "grace" beyond that of nature: *Portrait of a Young Woman*.

Parnassus

Parrots can live to a great age. One is reported to have lived 80 years.

Sir Hubert Parry was a British composer, director of the Royal College of Music.

Parsnip, related to the carrot, is rich in vitamins A and C, and sugar.

The Parthenon has served as Greek temple, Christian church and Moslem mosque.

emotional aspect of Romanticism and sought to achieve meticulous precision in technique. The leader of the school was Leconte de Lisle and members included Charles BAUDELAIRE, François COPPÉE and SULLY-PRUDHOMME. Their poetry appeared in *Le Parnasse contemporain* (1866, 1871 and 1876).

Parnassus, mountain peak in central Greece. In ancient times, it was considered sacred to Apollo, Dionysus and the Muses and was the site of the sacred Castalian spring, which lies just above DELPHI, at the foot of the mountain. The Corycian Cave, associated with the Bacchic festivals, lies on a plateau between Delphi and the summit. Height: 2,457m (8,061ft).

Parnell, Charles Stewart (1846–91), Irish nationalist. He entered the British Parliament in 1875, vigorously supporting home rule for Ireland and rapidly taking over leadership of the Irish group in the Commons. To gain concessions, he embarked upon a policy of parliamentary obstruction. He was imprisoned (1881–82), but his power reached its peak in 1886 when GLADSTONE introduced the Home Rule Bill. After the bill was defeated, there were attempts to show that Parnell had been implicated in the PHOENIX PARK MURDERS; and although these allegations were shown to be false in 1889, the proof in 1890 of Parnell's adultery with the wife of one of his supporters led to a rapid decline in his influence. See also p.1642.

Parnell, Thomas (1679–1718), Irish poet who was a friend of Alexander POPE, Jonathan SWIFT and John GAY, and became a member of the Scriblerus Club. He contributed to the *Spectator*, and assisted Pope in his translation of the *Iliad*. His poems, including *Night Piece on Death* and *Hymn to Contentment*, were published posthumously by Alexander Pope. See also p.1548.

Parochial Church Council, administrative body governing a parish of the Church of England. Such councils were established in 1919 and for the first time gave the laity a real chance to participate in parochial administration. At the annual general meeting, presided over by the incumbent, the congregation elects lay council members for the following year (who meet usually once a month), elects one of two churchwardens, and discusses the financing of the church and any other general need.

Parody, literary composition in which another author's language and style are imitated and exaggerated for comic effect. In ancient Greece, ARISTOPHANES wrote parodies of AESCHYLUS and EURIPIDES. In England, Henry FIELDING's *Joseph Andrews* (1742) was a successful parody of Samuel RICHARDSON's novel *Pamela*, or *Virtue Rewarded*. Among 20th-century writers who have made effective use of parody are MAX BEERBOHM, James JOYCE and Stephen LEACOCK.

Parotid gland, largest of the SALIVARY GLANDS which form and secrete saliva. It is located just in front of and a little below the opening of the ear. It is the gland that becomes swollen during MUMPS. See also p.1077.

Parr, Catherine (1512–48), queen consort and sixth wife of HENRY VIII. She married her fourth husband, Thomas SEYMOUR, after the king's death in 1547. As queen, she tried to alleviate the persecution of Catholics and by her intercession the princesses Mary and Elizabeth were reinstated at court.

Parr, Thomas (Old Parr) (d.1635), Englishman who is alleged to have lived for 152 years. He died while visiting the court of CHARLES I, where he was introduced by the Earl of Arundel.

Parramatta, city in N New South Wales, Australia, on the Parramatta River. It is a w suburb of Sydney and a manufacturing centre, producing textiles, machinery and vehicle components. It was the first place to be settled in the expansion of the original settlement of Sydney Cove. Pop. (1971) 110,717.

Parthasius (fl.5th century BC), Greek painter who worked in Athens and was

famed for his studies of proportion. Particularly notable were two paintings, one of which depicted Theseus and the other the Demos, personifying the people of Athens.

Parrot, common name for many tropical and subtropical birds that are popular as pets. Parrots are brightly coloured and have thick, hooked bills. They include BUDGERIGARS, MACAWS, LORIES, LORIKEETS, PARAKEETS, KEAS, KAKAPOs and others. In the wild all nest in tree holes, rock cracks or on the ground. Pet parrots should be kept in clean, warm, large cages and provided with fresh air, water and proper food. Some can mimic speech. Length: 7.5–90cm (3in–3ft). Family Psittacidae. See also pp.303, 309, 310, 383.

Parrot fever. See PSITTACOSIS.

Parrot fish, any of the 80 species of marine fish of tropical Atlantic and Indo-Pacific oceans, identified by fused teeth resembling a parrot's beak. A coral-eating fish that goes through many colour changes, it builds a mucous cocoon for sleeping. Length: 11.3–120cm (4.5in–4ft). Family Scaridae. See also p.60.

Parry, Sir Charles Hubert Hastings (1848–1918), British composer. His mastery of choral music is best shown in *Blest Pair of Sirens* (1887), a setting of an ode by John MILTON. He is well known for his *Jerusalem* (1916), a unison song based on William BLAKE's poem. He also wrote many songs, five symphonies and an opera. See also p.1582.

Parry, John (1710–82), Welsh harpist and music collector, nicknamed Blind Parry. He was harpist to Sir Watkin Williams Wynne of Wynnastay for most of his life. With Evan Williams he edited the earliest published collection of Welsh music, *Ancient British Music* (1742).

Parry, Joseph (1841–1903), Welsh composer. He wrote many hymn tunes, as well as oratorios and cantatas, and in 1896 was honoured by the Llandudno Eisteddfod for his services to Welsh music.

Parry, Sir William Edward (1790–1855), British explorer and navigator. In 1810 he was sent by the Royal Navy to the Arctic to protect the whale population. He conducted five expeditions in the region between 1818 and 1827, on the last of which he attempted unsuccessfully to reach the North Pole.

Parsec, astronomical unit of length (symbol pc) equal to the distance at which the radius of the Earth's orbit subtends an angle of one second. It is thus the distance at which an object would have a PARALLAX of one second, using the Earth-Sun distance as the baseline. One parsec equals 3.2616 light-years or 3.034×10^{13} km (1.916×10^{13} miles).

Parsi, or Parsee, modern descendant of a small number of ancient Persian Zoroastrians who emigrated to Gujarat in India from the 10th century onwards. Modern Parsis follow a mixture of ZOROASTRIANISM and some Indian beliefs and practices. Now concentrated in Bombay, they are a small but active Indian minority.

Parsifal (1882), opera in three acts by Richard WAGNER with libretto by the composer based on a medieval legend. Wagner insisted that the work be performed exclusively at Bayreuth and his wife was successful in ensuring that his wish was honoured after his death. The first performance outside Bayreuth was given at the Metropolitan Opera, New York, in 1903.

Parsley, branching biennial herb, native to the Mediterranean region and widely cultivated for its tender, curled aromatic leaves used for flavouring and as a garnish. It has greenish-yellow flowers and tiny, seed-like fruits. Height: to 0.9cm (3ft). Family Umbelliferae; species *Petroselinum crispum*. See also pp.686, 708–709, 709.

Parsnip, biennial vegetable native to Eurasia. It is widely cultivated for its edible white taproot. The plant has many leaves, deeply and finely lobed. Parsnips flourish in deep, rich soil. The roots develop slowly until cool weather sets in, and then they mature quickly. Family Umbelliferae; species *Pastinaca sativa*. See also p.684.

Parson bird. See TUI.

Parsons, Sir Charles Algernon (1854–1931), British engineer and inventor, owner of an engineering works at Newcastle. He invented the Parsons compound steam turbine, which was introduced in about 1884. He added a condenser in 1891, and adapted it for maritime use in 1897. See also p.422.

Partch, Harry (1901–74), US avant-garde composer who not only created musical works according to his own system, but also created the instruments on which they were to be played. His works, often borrowing elements from American and Oriental music, includes *The Bewitched* (1955), a dance satire, *Delusion of the Fury* (1966) and music for films.

Parthenogenesis, in biological reproduction, the development of a female GAMETE or sex cell without fertilization (rarely is a male gamete produced), leading to the production of offspring without the involvement of a male gamete. This process occurs naturally among lower plants and some higher ones and invertebrate animals such as APHIDS, BEES, WASPS and ANTS; it can also occur in organisms that are capable of sexual REPRODUCTION. Artificial parthenogenesis may be caused by electric shock, mechanical stimulation, inorganic salts, organic acids or temperature changes. See also p.30.

Parthenon, temple of the goddess Athena erected (447–432 BC) by Pericles on the ACROPOLIS in Athens. The most perfect example of a DORIC temple, it was created by the architects ICTINUS and CALLICRATES and the master sculptor PHIDIAS. The huge gold and ivory statue of Athena which it once housed was destroyed in ancient times and its inner chambers and porticos were ruined by an explosion in 1687, during the Venetian attack on Athens. Most of the surviving sculptures were removed by Lord ELGIN in 1801–03. The surviving outer structure and sculptural pediments testify to the perfection of its design. See also pp.1212–1213.

Parthia, region in ancient Persia, generally corresponding to the modern Iranian province of Khurāsān. It was the seat of the Parthian empire (founded c.250 BC), which at its peak extended from the Euphrates to the Indus.

Parthians, ancient semi-nomadic people, skilled riders and archers, thought to have been of Scythian origin. In c.250 BC they rebelled against their SELEUCID overlords and founded an empire that extended from the River Euphrates to the Indus and reached its height in the 1st century BC. Influenced by Greek and Seleucid culture, they nevertheless created their own art and architecture. They were eventually defeated by the Romans (39–38 BC) and later overrun by the SASSANIDS under Artashir I (AD 224).

Partial differential equation, type of DIFFERENTIAL EQUATION used when a function depends on two or more independent variables. For example, a wave in three dimensions has an amplitude (U) which depends on time t and also on the three distance measurements x , y and z along mutually perpendicular axes. The differential equation representing the wave is

$$\frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} + \frac{\partial^2 U}{\partial z^2} = \frac{1}{c^2} \frac{\partial^2 U}{\partial t^2}$$

where c is the wave's velocity. The symbols

etc., are called partial derivatives and express the rate of change of U in the x direction, etc., only. Partial differential equations are extensively used in physical science.

Partial eclipse. See ECLIPSE.

Partial pressure, pressure that each gas in a mixture would exert if it were present alone. The pressure of an ideal-gas mixture is the sum of the partial pressures of its components (Dalton's law of partial pressures). See also pp.836–837.

Particle accelerator. See ACCELERATOR, PARTICLE.

Partita, late 17th- and 18th-century term for a collection of short musical pieces, now generally termed a SUITE; in the early 17th century it meant a variation. J. S.

BACH wrote partitas for harpsichord and for violin, and the term has been used by some 20th-century composers, as in WATSON's *Partita* for orchestra (1957).

Partnership, company or business organization owned by two or more people, who may have equal or unequal shares. Usually liability is unlimited, so that each partner is responsible for the debts incurred by the company. See also COMPANIES; CORPORATION.

Partridge, Eric Honeywood (1894-1979), New Zealand philologist and author who lived in Britain after 1921. He is famous for his detailed studies of the English language, among which are *Usage and Abuse* (1947), *A Dictionary of Slang and Unconventional English* (1961) and *Shakespeare's Bawdy* (1968).

Partridge, any of several species of game birds found throughout the world. True partridges of Europe belong to the pheasant family (Phasianidae), and include the common partridge *Perdix perdix*, which has been introduced to North America. It lives on heathland, sandy scrub and farmland and feeds on plants and insects. It makes a ground nest under bushes and lays 9-20 green-brown eggs. See also pp.736-737.

Parts of speech, categories that define the ways words can be used according to the grammar of the English language. The main parts of speech are NOUN, adjective (describing a noun), PRONOUN, VERB, adverb (describing a verb), PREPOSITION, conjunction (conjoining two ideas) and interjection. Many of these can be sub-classified further. Not all languages, however, can be divided into parts of speech in this way; nouns and verbs are the only universally applicable categories.

Parvati, in Hindu religion, "daughter of the mountain", wife of the god SHIVA; she is the beneficent manifestation of the goddess Shakti. Her children were the elephant-headed Ganesha and the six-headed Skanda. She is always depicted as a beautiful woman.

Parzival, early 13th-century epic poem written in Middle High German by Wolfram von Eschenbach. Based largely on the work by CHRÉTIEN DE TROYES, it deals with the legendary knights of KING ARTHUR and the quest for the Holy GRAIL. It is notable for its lyricism, and the relative seriousness with which it deals with the Anglo-French romances.

Passay, city in central Luzon in the Philippines, on the E shore of Manila Bay; a residential suburb of Manila. Passay is a commercial centre and has Araneta University (1946) and Manila's international airport. Many tourists go there for its nightclubs. Pop. (1975) 240,913.

Pascal, Blaise (1623-62), French scientist and mystic. A child prodigy, he had written a book on conic sections by the time he was 17 years old. Later, with Pierre de FERMAT, he laid the foundations of the mathematical theory of probability. He also contributed to calculus and hydrodynamics (devising PASCAL'S LAW) before retiring from science in 1655 to devote himself to religious and philosophical writing, of which *Pensées* is his best-known work.

Pascal's law, concept formulated in 1647 by the French scientist Blaise PASCAL. It states that the pressure applied to an enclosed fluid (liquid or gas) is transmitted equally in all directions and to all parts of the enclosing vessel, if pressure changes due to the weight of the fluid can be neglected. It is the basic principle by which hydraulic machinery works. See also pp.836-839.

Paschal, the name of two Roman Catholic popes and an ANTIPOPE. Saint Paschal I reigned from 817 to 824. Paschal II (r. 1099-1118), a BENEDICTINE, served as a papal legate to Spain under URBAN II. He sponsored the First CRUSADE and opposed lay investiture. The antipope Paschal reigned from 1164 to 1168.

Pascin, Jules (1885-1930), US painter, born in Bulgaria. He is best known for his sensitively-drawn nudes, which include *Nude with Red Sandals* (1927) and *Les Deux Amies* (1924). After making his name in Germany as a cartoonist for

satirical journals, he turned to painting, working in France and the USA and becoming a US citizen in 1920.

Pascoli, Giovanni (1855-1912), Italian poet and scholar. His unhappy youth is reflected in *Myrica* (1891; *Tamarisks*). Later works include the lyrical *Canti di Castelvecchio* (1903; *Songs of Castelvecchio*) and the nationalistic *Poemi del Risorgimento* (1913; *Poems of the Risorgimento*).

Pas-de-Calais, French name for the Strait of DOVER, which connects the English Channel to the North Sea. It is also the name of a French département.

Pasha, honorary title given by Ottoman sultans to ministers, governors and military officials within their empire. It was officially abolished by Turkey in 1934 but its use persisted in certain other countries (notably Egypt and Iraq) formerly under Ottoman rule.

Pasht. See BAST.

Pashto (Pushtu), one of the two major languages of AFGHANISTAN, the other being Persian. Pashto is spoken by about 12 million people in E Afghanistan and N Pakistan. It is historically the language of the Pathan tribes and is written in an adapted Arabic alphabet. One of the Iranian languages, it thus forms part of the INDO-EUROPEAN family of languages.

Pasig, river in SW Luzon, the Philippines; it drains the Laguna de Bay NW through the city of Manila to empty into Manila Bay. During the Spanish colonial period the river was important to inter-island trade. Its port facilities have now declined. Length: 23km (14 miles).

Pasmore, Victor (1908-), British painter, a founder of the EUSTON ROAD SCHOOL. In the 1950s, possibly due to a period of collaboration with Ben NICHOLSON, his work became more abstract and had an important influence on the development of post-war British painting. His abstract paintings, eg *Abstract in Black*, *Indian Red and Lilac* (1957), were largely succeeded by three-dimensional constructions in wood or plastic, eg *Projective Painting in White, Black and Ochre* (1963). See also p.1764.

Pasolini, Pier Paolo (1922-75), Italian poet, novelist and film director. A Marxist, he wrote about urban poverty with great realism in novels such as *Ragazzi di vita* (1955) and *A Violent Life* (1959). Films he directed include *The Gospel According to St Matthew* (1964), *Oedipus Rex* (1967) and *The Decameron* (1970). His last film was *Falo* (1975), a controversial allegory of FASCISM.

Pasque flower. See ANEMONE.

Paschendale, popular name of the WWI battle officially known as the Third Battle of Ypres. It was begun by Britain on 31 July 1917 and lasted for three months. Attempting to advance on a 15-mile front, the appallingly wet weather kept the British army virtually trapped in the Flanders mud. Although German losses were heavy, Britain's were even heavier and the objectives of keeping Russia in the war and preventing Germany from sending reserves to the Italian front were not achieved. See also p.1671.

Passenger pigeon, extinct species of migratory bird, rather like a large version of the European TURTLE DOVE. Once extremely numerous in North America, the birds were slaughtered by the thousand for meat until the wild flocks were finally destroyed. The last captive specimen died in 1914. Species *Ectopistes migratorius*.

Passer, Ivan (1933-), Czechoslovakian film director. He trained under Milos FORMAN. His first film was *A Boring Afternoon* (1964). *The Legend of Beautiful Julia* (1968) was the last film he made in Czechoslovakia before moving to the USA, where he directed *Born to Win* (1971).

Passeriformes, perching birds, the largest order of birds, containing about half of all known species, in 57 families. It includes the true songbirds, such as robins, blackbirds and thrushes; the crow family; swallows and martins; birds of paradise and many more. Perching birds have grasping feet on which one toe points backwards and the other three point forwards, thus

enabling the birds to grip and remain steady on their perches. See also p.72.

Passfield, Baron. See WEBB, BEATRICE (NEE POTTER) and SIDNEY.

Passion, The, in Christian theology, the suffering of Christ from the time of His praying in GETHSEMANE till His death on the cross. Passion Sunday is the fifth Sunday in Lent; Palm Sunday then Easter follows.

Passion flower, numerous species of climbing tropical plants which probably originated in tropical America. Flowers are red, yellow, green, or purple; the outer petals ring a fringed centre. The leaves are lobed and some species produce edible fruits, eg granadilla and calabash. Family *Passifloraceae*. See also p.375.

Passion fruit, fruit of the passion flower. The fruit is a berry, often of delicate flavour, yellow or purple in colour. In many species it is about the size of a hen's egg, but in *Passiflora quadrangularis* it weighs up to 5kg (11lb). Genus *Passiflora*. See also p.375.

Passion play, dramatic presentation of Christ's passion, death and resurrection originally developed in medieval Europe. The best-known example of this tradition is still held every ten years in OBERAMMERGAU, West Germany, to fulfil a vow made by the villagers in 1634 during an outbreak of plague.

Passover (Pesach), also called the Feast of the Unleavened Bread, Jewish festival of eight days commemorating the EXODUS from Egypt and the redemption of the Israelites. Symbolic dishes are prepared, including bitter herbs (maror) and unleavened bread (matzot) to remind the Jews of the haste with which they fled Egypt, and by extension of their heritage. It is a family celebration, at which the Haggadah is read, Christ's Last Supper, at which He instituted the EUCHARIST, was a Passover meal.

Passport, government-issued document facilitating travel to and from different countries. Its use became widespread after WWI. A passport identifies its holder as a citizen or national of a specific country and under that country's protection. Some countries also require visiting passport holders previously to obtain visas (authenticating endorsements).

Passy, Frédéric (1822-1912), French economist and writer. In 1867 he founded the International and Permanent League for Peace and in 1889 was a founder of the Interparliamentary Union. He shared the first Nobel Peace Prize in 1901 with Jean Henri DUNANT. Passy's many works include *The Question of Peace* (1891) and *The Economic Causes of Wars* (1905).

Pasta, starchy food made from semolina, which is derived from durum wheat. Traditionally associated with Italian cooking, it is normally served with a sauce. Pasta comes in a variety of shapes and sizes, including vermicelli, spaghetti, ravioli, macaroni and lasagne. See also pp.678, 679.

Pastel, painter's medium, used in Western painting at least since the Italian RENAISSANCE of the 15th century and introduced into France in the 18th century. It is a mixture of chalk, pigment and gum water, usually found in the shape of a stick. Its most illustrious modern users have been DEGAS, MANET, WHISTLER and MATISSE.

Pasternak, Boris (1890-1960), Soviet poet, novelist and translator who came to symbolize the struggle between the artist and a hostile political environment. Up to the purges of the 1930s, his published works included *The Twin in the Clouds* (1914), *My Sister, Life* (1922), *Safe Conduct* (1931) and *Second Birth* (1932). He then turned to translating and did not publish any more original work until WWII. After the death of Stalin he began work on *Dr Zhivago* (1957), his novel best known in the West. Although never published in the USSR, its themes, the defence of the individual's right to personal happiness and implicit criticism of the government, offended officials and he was expelled from the Soviet Writers Union. He was also compelled by official pressure to retract his acceptance of the 1958 Nobel

Prize in literature. He lived in virtual exile in an artists' community near Moscow for the remaining years of his life.

Pasteur, Louis (1822-95), French chemist and one of the founders of the science of microbiology. He made many important contributions to chemistry, bacteriology and medicine. He discovered that micro-organisms can be destroyed by heat, a technique, now known as PASTEURIZATION, used to destroy harmful micro-organisms in food. Pasteur also discovered that he could weaken certain disease-causing micro-organisms - specifically those causing anthrax in animals and rabies in man - and then use the weakened culture to vaccinate individuals against the disease. See also pp.1087, 1092, 1096, 1636.

Pasteurella pestis, BACTERIUM responsible for PLAGUE. This highly infectious disease was endemic in Europe until the 17th century, although probably at its worst during the BLACK DEATH in the 14th century. It is now confined to remote areas of Asia. The bacterium is carried by the rat flea and infects man through the wound caused by the flea's bite.

Pasteur Institute, research organization in Paris founded in 1888 as a centre for the prevention and cure of RABIES. It was headed by LOUIS PASTEUR until his death in 1895. It is still one of the world's foremost biological research centres.

Pasteurization, process of controlled heat treatment to kill bacteria, discovered by LOUIS PASTEUR in the 1860s. Milk is pasteurized by heating it to 72°C (161°F) and holding it at that temperature for 15 seconds. Alternatively, it may be heated to 62°C (143°F) and held for 30 minutes.

Pastiche, imitation or forgery in which elements from several works by other artists are recombined by the author to give the impression of an original work. It may also mean a work in which the elements are combined in an obvious way to produce a parody. In the past, the word referred only to the visual arts, but it is now applied to any parody in any area of the arts.

Paston letters (1422-1509), correspondence of four generations of the wealthy, landowning Paston family, vividly illuminating contemporary life and underlining Paston support for the Lancastrians during the WARS OF THE ROSES. See also pp.1376-1377.

Pastoral, in literature, work portraying shepherds or rural life in an idealized manner to contrast this innocence with the corruption of the city or royal court. In Classical times THEOCRITUS and VIRGIL wrote notable pastoral poems, which were known as eclogues. Eclogues were revived during the RENAISSANCE by such poets as DANTE, PETRARCH, BOCCACCIO and SPENSER. JOHN MILTON and Percy Bysshe SHELLEY were noted for their pastoral elegies and certain poets, such as William WORDSWORTH and Robert FROST, have been referred to as pastoral poets because their work has a rural setting.

Pastoralism, a form of subsistence agriculture that involves the herding of domesticated livestock. Societies practising this are small, restricted by the large amount of grazing land needed for each animal. Indigenous pastoralism is widespread in N Africa and central Asia, but in the Americas is confined to the Andes. See also NOMAD.

Patagonia, region in Argentina, E of the Andes Mts, extending to the Strait of Magellan. The area was colonized in the 1880s despite protracted border disputes between Argentina and Chile; the present boundaries were set in 1902. Most of Patagonia is located on plateau lands crossed by the Rio Negro, Chubut and the Santa Cruz rivers which flow to the Atlantic Ocean. Until recently sheep rearing was the main source of income. Oil production has now become important and coal and iron ore are mined in the S. Area: 805,490sq km (311,000sq miles).

Patatas, large, reddish-grey MONKEY native to grassy woodlands and scrub forests of central Africa. It is ground-foraging and omnivorous, active by day, and lives in groups often led by a large male. Family

Patchouli

Cercopithecidae Species *Erythrocebus patas*.

Patchouli, species of East India mint that yields a fragrant brownish yellow essential oil. The leaves yield a heavy perfume used in the Orient and in the manufacture of soaps. Family Labiatae; species *Pogostemon patchouli*.

Patch test, test for hypersensitivity or allergy. Small pieces of linen or paper are impregnated with substances to which the subject may be sensitive. These are placed on the skin for a specific time. The subject's reaction is then observed.

Patella, or **kneecap**, large flattened, roughly triangular bone just in front of the joint where the femur and tibia link. It is surrounded by bursae (sacs of fluid) that cushion the joint. See also p.147.

Patener, Joachim (c.1485–1524), Dutch painter. His pictures reveal the influences of Antwerp Mannerism in their use of colour, jagged mountains, rocky shores and tiny figures such as in his *Flight into Egypt* (1520), *Baptism of Christ* (1520) and *St Christopher* (1524).

Patent, privilege granted by LETTERS PATENT to the inventor of a new product or process. A patent excludes others from producing or making use of the invention for a limited period (in Britain, 16 years).

Patent medicine, medicine sold over the counter for which a prescription is unnecessary. Such medicine, labelled only with a registered brandname or trademark, need not list its constituent ingredients; because of this lack of information patent medicine was for long a derogatory term, since its secrecy concerning the contents allowed the sale of many useless concoctions. Now, however, strict legislation controls are enforced.

Pater, Jean Baptiste Joseph (1695–1736), French painter and follower of WATTEAU. His paintings, which include FÊTES GALANTES and military scenes, display sensitive colouring but lack the technical proficiency of Watteau.

Pater, Walter Horatio (1839–94), British author and critic. An admirer of the art of the Italian Renaissance, he believed passionately in the importance of art to life, an attitude which had great influence on Oscar Wilde. Pater put forward his theories in *Studies in the History of the Renaissance* (1873) and his novel *Marius the Epicurean* (1885).

Pater Noster (Our Father), Latin name for the LORD'S PRAYER.

Paterson, Andrew Barton ("Banjo") (1864–1941), Australian poet and novelist. He edited *Town and Country Journal* for many years and was famous for his BUSH BALLADS including *Waltzing Matilda* which appeared in 1917. *The Man from Snowy River* (1895) and *Old Bush Songs* (1905), two books of verse, and the novel *An Outback Marriage* (1906) are among his better-known works.

Paterson, William (1658–1719), Scottish financier. He founded the BANK OF ENGLAND in 1694, but resigned as a director the following year. He then pursued his DARIEN SCHEME and accompanied the 1698 expedition to Darien. After the failure of this scheme in 1699 he returned to London and became financial adviser to WILLIAM III.

Paterson, city in N New Jersey, USA, on the Passaic River 23km (14 miles) N of Newark. The city was founded in 1791 by Alexander HAMILTON as a planned industrial community. From 1792 to 1794 cotton-spinning mills were set up, and by 1836 Samuel Colt had begun the manufacture of the Colt revolver. A silk industry was established shortly afterwards. Many of the original workers' homes and factories remain on a national historic site. Industries: clothing, chemicals, plastics, paper, food products. Pop. (1973) 143,372.

Pathans (Pashtuns), MUSLIM tribes who constitute the major racial group in SE AFGHANISTAN and NW PAKISTAN. They speak an eastern Iranian language, PASHTO (divided into two dialects), and are composed of 60 tribes practising both PASTORALISM and more settled farming. Disputes among the warlike Pathans commonly result in fierce blood-feuds.

Pathé, Charles (1863–1957), pioneer French film producer. He made a fortune by making and selling phonographs and went on to found Pathé Frères and Pathé Gazette. He produced many short films and is credited with having made one of the first long films, *Les Misérables* (1909).

Pathet Lao, Laotian left-wing political group. It was founded in 1950 and soon joined the Viet Minh in opposing French rule in Indo-China. Although legalized in 1956, the Pathet Lao began armed resistance to the American-backed Laotian government during the 1960s, and by 1975 became the governing party in Laos. See also p.2089.

Pathogen, micro-organism which causes disease in plants or animals. Animal pathogens are most usually BACTERIA or VIRUSES, whereas plant pathogens are most usually FUNGI or VIRUSES.

Pathology, study of diseases, their causes and the changes they produce in the cells, tissues and organs of the body. Of basic importance in medicine, pathology covers three main areas of approach: the symptoms of a disorder; the causative agents, such as bacterium, virus or poison; and the damage to the tissues or organs caused by these agents. While pathologists are not involved in the treatment of disease, their studies are of immense importance to the understanding, and so cure, of diseases.

Patience, any of a multitude of card games played by one person alone. Almost all involve setting out a number of cards in a particular arrangement and either by using the remainder or by exposing some at a time, collecting cards one by one in order in suits.

Patience, or Bunthorne's Bride (1881), light opera in two acts by Arthur Sullivan, libretto by William Gilbert. It satirizes the aesthetic movement of the 1870s. It was first performed at the Opéra Comique in London, then transferred to the Savoy Theatre. This first run lasted for 408 performances, and it has remained popular ever since.

Patina, green incrustation that forms on the surface of old weathered bronze or copper. Since this has an aesthetic value in sculpture, the term has come to mean any coating wrought by age that gives character to an object or surface.

Patmore, Coventry (Kersey Dighton) (1823–96), British poet. An assistant librarian at the British Museum for many years, his poetry reflects his interest, unusual at the time, in 17th metaphysical poetry. *The Angel in the House* (1854–63) and *The Unknown Eros* (1877), both of which deal with various aspects of love, are among his best-known work. He became a Roman Catholic in 1864 and subsequently also wrote on religious themes.

Patna, city in NE India, on the River Ganges, 464km (290 miles) NW of Calcutta; capital of Bihar state. The city served as the capital of the ancient Mauryan empire (325–185 BC) and the Gupta empire (AD 320–545). Patna was taken by the British in 1763. It has a palace built by Ashoka c.270–230 BC and the University of Patna (1917). It is the distribution centre for a rice-growing region, and a commercial centre. Pop. (1971) 473,001.

Pato, Argentinian game in which two teams of four horsemen attempt to put a ball (like a football with six leather handles) into their opponents' goal, a net suspended from a 2.7m (9ft) post. Players punch or throw the ball, ride with it at arm's length, or retrieve it from the ground while at full gallop. A hybrid of polo and basketball, it is played over six eight-minute periods on a rectangular field measuring 210 x 82m (690 x 270ft). Originally a live duck was used.

Paton, Alan Stewart (1903–), South African novelist and reformer. He gave up teaching in 1935 to take charge of a school for delinquent African boys. Strongly opposed to APARTHEID, he helped found and became president of the Liberal Party in 1953. *Cry, the Beloved Country* (1948) and *Too Late the Phalarope* (1953), two of his best-known works, deal with racial oppression.

Pátrai (Patras), port in central Greece, on

the Gulf of Pátrai; capital of Akhaia department. A leading member of the Second Achaean League, the city led a revolt against the Macedonians in 280 BC. Pátrai was a Roman military colony in the late 1st century BC under Augustus, under whom it developed into a prosperous port. It was held by the Ottoman Turks from 1458 to 1687, and from 1715 to 1828, when it passed to Greece. There is a university (1966). Exports: currants, tobacco, wine, olive oil. Pop. (1971) 111,607.

Patriarch, title given to a few exalted bishops in the Christian Church. In ancient times there were three: of the West, of Antioch and of Alexandria. Constantinople was added in 381, Jerusalem in 451. In the Western Church there are now 11 patriarchs.

Patriarchy, social organization based on the authority of a senior male, usually the father, over a family group. It is based on the absolute authority of the male and purely patriarchal societies are therefore rare. Consequently the term is now seldom used by anthropologists.

Patricians, aristocrats of the early Roman Republic. The word comes from the Latin *pater* (father), which was used to describe members of the SENATE. The Patrician class controlled the government, the army and the state religion. Until 445 BC a PLEBEIAN could not marry a patrician but by means of a struggle lasting for 200 years the plebeians gradually came to hold more and higher positions. By 287 BC they could hold almost any post and the privileges of the patricians were effectively removed. By the end of the Republic the number of patrician families had declined from the 81 of c.367 BC to 30.

Patrick, Saint (fl. 5th century AD), patron saint of Ireland, b. Britain; also called "Apostle of the Irish". Facts about his life are much confused by legend. What is known of him comes almost entirely from his autobiography, *Confessio*. Abducted by marauders at 16, he was carried to Ireland and sold to a local chief. After six years as a herdsman, during which period he became increasingly religious, he escaped. In response to a dream, he returned to Ireland as a missionary, establishing an episcopal see at Armagh. His missionary work was so successful that Christianity was firmly established in Ireland before he died. By tradition he also banished snakes from the country. Feast day: 17 March. See also pp.1268–1269, 1269.

Patroclus, companion of ACHILLES. Wearing the armour of Achilles during the TROJAN WARS, he was killed by HECTOR. Achilles' bones were buried in the same tomb as those of Patroclus.

Patterson, Floyd (1935–), US boxer. The first man ever to regain the world heavyweight championship, he was also, at 21, the youngest to hold the title. He was the Olympic light heavyweight champion (1952), and beat Archie MOORE (1956) in Chicago for the heavyweight title. He lost the title to Ingemar Johansson (1959) in New York City, regained it from Johansson (1960) in New York City but lost it to Sonny Liston (1962) in Chicago.

Patti, Adelina (1843–1919), Italian soprano, full name Adela Juana Maria Patti; one of the greatest exponents of BEL CANTO. She made her debut in 1859 in New York and sang regularly at Covent Garden from 1861 to 1885 in operas by BELLINI, DONIZETTI, MEYERBEER and others. She was the most popular and highly paid singer of her day. See also p.1598.

Patton, George Smith, Jr (1885–1945), US general. A graduate (1909), of the US Military Academy at WEST POINT, in WWI he served with the American Expeditionary Force (AEF) in France, where he became familiar with tank warfare. A controversial and highly successful officer, he commanded a tank corps in North Africa and the 7th Army in Sicily in WWII. After the D-DAY invasion in 1944, he commanded the Third Army in its dash across France and into Germany. As military governor of Bavaria after the war he was

criticized for leniency to Nazis and was removed to command the US 15th Army. He was fatally injured in a car accident.

Paul, Saint, apostle of Jesus Christ, missionary and author of many epistles in the NEW TESTAMENT. Named Saul at birth, he was brought up in Tarsus as a Greek-speaking, educated Roman citizen and a Jew, in which religion he became a PHARISEE. Travelling to Damascus to persecute Christians, he received a vision of Jesus and on the spot became a fluent and energetic evangelist and teacher of Christianity. While proclaiming that Jesus was the MESSIAH who sacrificed himself to atone for the sins of mankind, Paul's major theme (described as Hellenistic as opposed to Judaeo-Christian) was that Christianity was not a revised form of Judaism, that the Jewish Law and Priesthood had been superseded, and that Christianity was for the salvation of all. He travelled widely, founding and visiting many small communities before being taken as a prisoner to Rome, where he died in unknown circumstances, c.65 AD.

Paul, name of six Roman Catholic popes. Paul I was pope 757–67. Paul II (1417–71; r.1464–71) was born Pietro Barbo. A patron of scholars, he established the first printing press in Rome. Paul III (1468–1549; r.1534–49) was born Alessandro FARNESE. He inspired the COUNTER-REFORMATION by convening the Council of TRENT in 1545, and patronized the JESUITS. He encouraged Michelangelo to complete his paintings in the SISTINE CHAPEL and was portrayed by Titian. Paul IV (1476–59; r.1555–59) was born Gian Pietro Carafa in 1476. An indefatigable opponent of Protestantism and the Jewish faith, he increased the efficiency of the INQUISITION in Rome and established the ghetto in the city. He also tried to abolish corruption in the VATICAN. Paul V (1552–1621; r.1605–21) was born Camillo BORGHESI. He forbade English Roman Catholics to take the oath of allegiance to their king, as James I demanded of them. Paul VI (1897–1978; r.1963–78) was born Giovanni Battista Montini. He was ordained in 1920 and entered the Vatican diplomatic service in 1923. He was Archbishop of Milan (1954–63). As pope, he reconvened the Second Vatican Council, and in 1965 became the first pope to visit Asia. He has tried to foster ecumenism. In 1968, he opposed the use of artificial contraception. See also pp.1406, 1790–1791.

Paul I (1754–1801), Tsar of Russia (1796–1801). The son and heir of CATHERINE II (the Great), he re-established the principle of hereditary succession and instituted repressive measures to protect Russia from the influence of the FRENCH REVOLUTION. Paul's erratic conduct and his hostility toward his son, Alexander, led to his murder by nobles and military officers, in 1801. See also p.1552.

Paul I (1901–64), King of the Hellenes (1947–64), brother and successor to George II. In 1938 he married Princess Frederika of Brunswick. During his reign he followed a pro-Western policy and received US aid to help Greece's economic recovery after WWII. He was succeeded by his son, CONSTANTINE II.

Paul (1893–1976), Prince of Yugoslavia, acted as regent to King PETER II from 1934–41. He failed to solve the problem of increasing pressure from CROATIA and SERBIA for national autonomy and his pro-AXIS policy, culminating in his making Yugoslavia a signatory to the anti-Comintern pact in 1941, caused his overthrow in a bloodless coup.

Pauli, Wolfgang (1900–58), US physicist. His work on the QUANTUM THEORY led him to his EXCLUSION PRINCIPLE (the Pauli principle), which relates the quantum theory to properties of atoms. He received the Nobel Prize in physics in 1945 for this work. In 1931 he postulated the existence of the NEUTRINO and lived to see his prediction verified in 1956.

Pauling, Linus Carl (1901–), US chemist. He studied in Europe and at the California Institute of Technology, where he later became a professor. His early

work on the application of WAVE MECHANICS to molecular structure, detailed in his book *The Nature of the Chemical Bond* (1939), led to the Nobel Prize in chemistry in 1954. He also worked on the structure of PROTEINS. A keen protagonist of nuclear disarmament, he was awarded the 1962 Nobel Peace Prize. His work on DNA nearly anticipated the findings of CRICK and WATSON, when he suggested, in the 1950s, that protein molecules were arranged in a helical structure.

Paulinus, Caius Suetonius (fl. 1st century AD), Roman governor of Britain from AD 59 to 61. He suppressed the rising of BOADICEA and the Iceni with some brutality in 61. Later he led Otho's troops against Vitellius.

Paulus or Paulus Macedonicus, Lucius Aemilius (c. 228–160 BC), Roman general and administrator, scion of an illustrious family. As consul (182 BC) he conquered the Ingauni, a Ligurian people. The Third Macedonian war between Rome and King Perseus had been waged indecisively since 171 BC and Paulus accepted a second consulship to fight in Macedonia. He defeated Perseus (168) and organized Macedonia into four republics which had to pay an annual tribute to Rome. Plutarch wrote his life.

Pavage, medieval tax levied in Britain for the repair and maintenance of roads, dating at least from the 12th century and most common in towns. With the growth of towns this duty of road maintenance fell increasingly on parish as well as borough authorities, and from them devolved to their successors, the local councils.

Pavane, stately court dance, fashionable in Italy, Spain, France and England during the 16th and 17th centuries when it was paired the GALLIARD. The music for the dance was in 2–2 or 4–4 time, and the dance comprised many curtsies, advances and retreats. The pavane as a musical form continued to develop after the dance lost popularity.

Pavese, Cesare (1908–50), Italian poet, novelist and translator. His translations of British and American novels had considerable influence on Italian literature of the time. His imprisonment for anti-fascist activities in 1935 and his work with the Resistance between 1943 and 1945 strongly influenced his own creative writing. His works include the novels *The Political Prisoner* (1949) and *The Moon and the Bonfires* (1950).

Pavlov, Ivan Petrovich (1849–1936), Russian neurophysiologist. His early work centred on the physiology and neurology of digestion, for which he received the 1904 Nobel Prize in physiology and medicine. However, he is best known for his classical (Pavlovian) conditioning of behaviour in dogs. This work had a permanent effect on Russian psychology and a profound effect on the development of BEHAVIOURISM in the USA. His major works (in translation) are *Conditioned Reflexes* (1927) and *Lectures on Conditioned Reflexes* (1928).

Pavlova, Anna (1885–1931), Russian ballerina who made her debut at the Maryinsky Theatre, St Petersburg, in 1899. She toured in Europe and the US and left Russia in 1913 to tour with her own company. She was considered the greatest ballerina of her time and excelled in *Giselle*, *The Dragonfly*, *Autumn Leaves* and the *Dying Swan*, choreographed for her by Michel FOKINE in 1905. In addition to her conventional repertoire, she often performed ethnic dances of Poland, Russia and Mexico. See also p.1758.

Pavo, or the Peacock, southern constellation of Corona Australis; one of the four constellations known as the Southern Birds. The only bright star is Alpha, of second magnitude. Kappa is a CEPHEID VARIABLE star with a magnitude range of 4 to 5.5 and a period of 9.1 days. See also pp.1016, 1016.

Pawnbroker, moneylender who accepts movable goods as security on loans. Such things as jewellery, furs and household goods are exchanged for a loan of money and a ticket. Within a certain period the article may be redeemed by producing the ticket and paying the interest on the loan.

The rates of interest are high, but regulated by law. The trade existed in China at least 2,000 years ago.

Pawnee, Caddoan-speaking tribe of North American Indians. They are related to the Arikara who once occupied the Central Platte and Republican River areas in Nebraska. In the mid-1970s some 1,000 lived on reservations in Oklahoma.

Pawpaw. See PAPAYA.

Pax, in Roman mythology, female personification of peace. She was less honoured in Rome than was VICTORIA (Victory) and became significant only during the reign of the Emperor Augustus. It was not until AD 75, under VESPASIAN, that a temple was finally dedicated to her.

Paxinou, Katina (1900–74), Greek actress. Besides performances in Classical Greek tragedy, she has acted in English films such as *For Whom the Bell Tolls* (1943) and *The Miracle* (1960). Her most famous roles on the stage include Mrs Alving in IBSSEN'S *Ghosts* (1940) and Bernarda in GARCÍA LORCA'S *The House of Bernarda Alba* (1954), both in English versions.

Paxton, Sir Joseph (1803–65), British architect and landscape gardener, knighted for his design for the CRYSTAL PALACE to house the Great Exhibition in 1851. As chief gardener to the Duke of Devonshire Paxton became familiar with greenhouse construction and built the Great Conservatory at Chatsworth (1836–40), in which he experimented with a system of glass and metal construction. The Crystal Palace, designed so that all the parts could be factory-made and constructed on site, was epoch-making as the first completely prefabricated building. Paxton, who was elected MP for Coventry in 1854, oversaw the design of many large country houses, including Mentmore. See also p.1565.

PAYE, short for Pay As You Earn, the British system of paying income tax by a deduction from current earnings. It was first introduced in 1944 and is now the most common method by which employees pay income tax.

Payer, Julius von (1842–1915), Austrian explorer who accompanied Karl Weyprecht on the expedition (1872–74) which discovered and named Franz Josef Land. In 1874 he turned to the painting of such adventurous subjects as *The Bay of Death*, *Abandoning the Ship and Never to Return*. **Payload**, portion of a rocket containing the scientific instruments, warhead, astronauts or other elements involved in the mission objective. Because of the enormous fuel needed to overcome Earth's gravity, only a fraction, about one-thousandth of a rocket's total weight is generally available for payload. In civil aviation the term refers to the revenue-producing part of the aircraft's load, whether it is passengers, freight or both.

Paz, Octavio (1914–), Mexican poet who is considered among the ablest writers of his generation. His work has gone through many phases, from MARXISM to SURREALISM and to oriental philosophies, but its dominant characteristics are a search for harmony and a desire to make language more melodious. His works were published in English in *Selected Poems* (1963). See also p.1774.

Pea, climbing annual plant (*Pisum sativum*), probably native to W Asia. It has small oval leaves and white flowers which give rise to pods containing wrinkled or smooth seeds that are a popular vegetable. It grows to 1.8m (6ft). There are many varieties. The early dwarf pea (var. *humile*) is a low-growing plant and has small pods. The snow, or sugar, pea (var. *macrocarpum*) has soft, unlined edible pods. Family Leguminosae. See also pp.667, 680–681, 684.

Peabody, George (1795–1869), US financier and philanthropist. He made an early fortune from a chain of grocery stores, and after settling in London (1837), he helped to support US credit following the panic of 1837. He is chiefly remembered for his philanthropic work, including financing tenement clearance in London and the construction of the

PEABODY BUILDINGS by the Peabody Trust. He also founded the Peabody Institute at Baltimore and the Peabody museums at Yale and Harvard universities.

Peabody Buildings, dwellings erected in London, largely at the instigation of George PEABODY, an American philanthropist. He provided funds for the clearance of slums and built in their place pleasant flats, of small dimensions and with modest rents, to rehouse workers. Today they are administered by the Peabody Trust.

Peace, river in Canada formed at the junction of the Finlay and Parsnip rivers in E central British Columbia. It flows E through the Rocky Mts, then N across the plains to join the Slave River at Lake Athabasca. The river was explored between 1792 and 1793 by Sir Alexander MacKenzie. It was an important route for fur-traders. Length: 1,924km (1,195 miles).

Peace Corps, US government agency which sends young volunteers to developing countries to provide skilled manpower and to promote friendship. The corps was established in 1961 by Pres. John F. KENNEDY and in 1971 it merged with Action, an agency combining several volunteer programmes. Volunteers must be US citizens and at least 18 years old; there is no upper age limit. They are invited to the host country to work on specific projects, often to do with teaching or agriculture.

Peace movement, term for many organizations that have worked to achieve international peace. The first international peace congress met in London in 1843. The most important contemporary societies are the World Council of Peace (1950), the Christian Peace Conference (1958) and the International Peace Research Association (1964).

Peace of Paris (1763), treaty ending the SEVEN YEARS WAR. Britain gained almost all of French Canada, Louisiana E of the Mississippi River, Senegal and the West Indian islands of the Grenadines, Dominica, St Vincent and Tobago. Guadeloupe, Martinique and three smaller West Indian islands occupied by Britain during the war were returned to France. In India, France was forced to recognize the supremacy of the EAST INDIA COMPANY. See also p.1540.

Peace of Paris (1783), treaty ending the war between Britain and the 13 American colonies, which were supported by their French and Spanish allies. Britain recognized the independence of the 13 colonies. Their northern boundary was drawn along the line of the St Lawrence River and the Great Lakes. Spain retained most territory, all lands W of the Mississippi river and S of the 31st parallel (W and E Florida). Gibraltar, occupied by Spain during the war, was returned to Britain. See also p.1541.

Peace of Westphalia (1648), name for a combination of treaties signed between various states, effectively ending the THIRTY YEARS WAR. For three years the heads of state of all European countries (except the outlying ones of Russia, England, Poland and Denmark), negotiated the treaties at the Westphalian towns of Münster and Osnabrück. It was the first great European diplomatic congress. The chief gainers of territory were Sweden and France, the latter obtaining important influence in Alsace and Lorraine and German lands, at the expense of the Austrian HAPSBURGs. See also p.1407.

Peace Prize. See NOBEL PRIZES.

Peach, small fruit tree native to China and grown throughout temperate areas. The lance-shaped leaves appear after the pink flowers in spring. The fruit has a thin, downy skin, white or yellow flesh, and is classified as either free-stone or cling-stone. It is eaten fresh or preserved. Height: to 6.5m (20ft). Family Rosaceae; species *Prunus persica*. See also p.689.

Peacock, Thomas Love (1785–1866), British writer of satirical poetry and romances. A friend of SHELLEY, Peacock published several works, including his first volume of poems in 1806. The novels *Headlong Hall* (1816), *Melincourt* (1817)

and *Nightmare Abbey* (1818) were published before he entered the service of the East India Company in 1819.

Peacock. See PEAFOWL.

Peacock, any of several butterflies whose wings have a pattern of eyespots, resembling those on the tails of peacocks. In Europe the name is given to *Inachis io*, a Vanessa butterfly whose caterpillars feed on nettles. See also p.42.

Peafowl, any of several species of exotic birds of Asia and Africa. The resplendent male is called a peacock and the female a peahen; peacock has become the common name for both sexes. The male has a 150cm (60in) tail which it can spread vertically as a huge semicircular fan with a pattern of eye-like shapes. The body of the male may be metallic blue, green or bronze, depending on the species. Hens are almost as big as the males; they lack the dramatic tail and head ornaments and are generally brown, red or green. In captivity, white birds may occur. In the wild peafowl inhabit open, lowland forests, flocking and roosting in trees. Eggs are laid in a ground nest. Length of body: 75cm (30in). Family Phasianidae; genera *Pavo* and *Afropavo*. See also p.310.

Peak District (The Peak), plateau area in Derbyshire, N central England, at the end of the Pennine Chain; the Peak District National Park was established in 1951. The highest point is Kinder Scout, rising to 636m (2,088ft). Area: 1,404sq km (542sq miles).

Peale, Charles Wilson (1741–1827), US miniaturist, portraitist, and museum director. In 1782 he opened a small portrait gallery in Philadelphia and in 1786, his interest in natural history led him to open the Peale Museum, the first major US museum.

Peanut. See GROUNDNUT.

Pear, tree and its fruit, native to N Asia and S Europe and grown throughout the world in temperate regions. The tree has a cone shape and clusters of white flowers appear among the glossy, green leaves. The greenish-yellow, brownish or reddish fruit, picked unripe and allowed to mature in storage, is eaten fresh or preserved. Height: 15–23m (50–75ft). Family Rosaceae; species *Pyrus communis*. See also pp.688–689, 688.

Pearl, hard, smooth, iridescent concretion of calcium carbonate produced by certain marine and freshwater bivalve MOLLUSCS. It is composed almost entirely of nacre, or MOTHER-OF-PEARL which forms the inner layer of mollusc shells. A pearl, the only gem of animal origin, results from an abnormal growth of nacre around minute particles of foreign matter, such as a grain of sand. See also pp.23, 260, 261.

Pearl, The, 14th-century mystical allegorical poem in MIDDLE ENGLISH, and regarded as one of the best poems of its time. A work of great structural complexity, it is possibly by the same author as *Sir Gawain and the Green Knight*.

Pearlfish, any of several species of small, elongated marine fish that live in the bodies of pearl OYSTERS, STARFISH, SEA CUCUMBERS and other invertebrates. Found mainly in shallow tropical waters, they are scaleless and often transparent. Length: to 15cm (6in). Family Carapidae.

Pearl-Fishers, The (Les Pêcheurs de Perles) (1863), three-act opera by Georges BIZET with libretto by Cormon and Carré. It was first produced in Paris. The setting is ancient Ceylon.

Pearl Harbor, virtually landlocked inlet on the island of Oahu, Hawaii; site of a US naval base. On 7 Dec. 1941 much of the US Pacific Fleet was destroyed by the Japanese attack on Pearl Harbor. More than 2,000 soldiers, sailors and civilians were killed, signalling the outbreak of war between the two countries. See also pp.1710–1711.

Pears, Sir Peter (1910–), British tenor. He studied at the Royal College of Music, London, and later with Elena Gerhardt. From 1939 he toured England, performing with Benjamin BRITTEN and Kathleen FERRIER in many concerts. A lifelong friend of Britten, he created many roles in his operas, including the title roles of *Peter Grimes* (1945) and *Albert Herring* (1949),

Robert Peary reached the North Pole with 4 eskimos and a servant, Matthew Henson.

Peccaries have poor sight and hearing but can scent out food which is buried.

Gregory Peck starred in *On the Beach* (1959), a film about atomic war.

Sir Robert Peel, a man of new ideas, did much to improve 19th-century England.

and the Male Chorus in *The Rape of Lucretia* (1946).

Pearse, Patrick Henry (1879–1916), Irish author and political figure. He headed the revival of interest in Gaelic culture, writing poems, short stories and plays. He led the insurgents in the EASTER RISING in 1916, and was court-martialled and executed. See also p.1643.

Pearson, Sir Cyril Arthur (1866–1921), British publisher and newspaper owner. After forming his own company in 1890, he founded many periodicals, including *Pearson's Weekly*. In 1900 he launched the *Daily Express*, and after acquiring the *Evening Standard* and the *St James Gazette* in 1904, became a pioneer of the new journalism. After becoming blind in 1912, he devoted his energy to the welfare of the blind, founding a home in 1915 and publishing *Victory over Blindness* (1919).

Pearson, Lester Bowles, (1897–1972), Prime Minister of Canada from 1963 to 1968. He was US ambassador (1945–46), chairman of NATO (1951–52) and president of the UN General Assembly (1952–53). A Liberal MP and Secretary of State from 1948, he assumed party leadership in 1958. He was awarded the 1957 Nobel Peace Prize for his work in the Middle East. An energetic leader, he held the office of Prime Minister without a majority, and retired in 1968.

Peary, Robert Edwin, (1856–1920), US Arctic explorer. He made the first of several explorations of Greenland in 1886. Accompanied by his wife in 1891, he found evidence that Greenland was an island. In 1898 he set out on an expedition to the North Pole, and finally reached his goal by sled in 1909 after travelling more than 650km (400 miles) over ice.

Peasant, old name (which has since become somewhat pejorative) for a tenant-farmer or labourer who worked a small plot of land. Under the FEUDAL SYSTEM it was a collective term for villeins and serfs whose rent for the land was paid in labour, produce or money.

Peasants' Revolt, uprisings in England in 1381, especially in the counties of Kent and Essex. The immediate cause of the rebellion was an unpopular poll tax and the uprising took on something of the character of a revolt against the rich. It was led by Wat TYLER and John BALL. Tyler's men beheaded the Archbishop of Canterbury and for a few days held London, until RICHARD II met them and promised them a free pardon and the redress of grievances, in particular the abolition of villein status. Tyler himself was killed soon after entering the city.

Peasants' War (1524–25), rebellion of German peasants their overlords, the greatest mass uprising in German history. The peasants had long grumbled over ever-increasing dues demanded by the princes and in 1524 there was widespread pillaging in the countryside of s Germany. The peasants hoped for and needed the support of Martin LUTHER but he rejected their charter of liberties. They ignored Luther's call to lay down arms and their rebellion was savagely suppressed in May 1525. See also p.1402.

Peasant Wedding (c.1567), painting by Pieter BRUEGEL the Elder, now housed in Vienna. It depicts a feast following a wedding in Flanders, and is painted with realistic detail. The composition is based on the diagonal trestle tables at which the guests are being served. See also p.1395.

Peat, dark brown, decayed organic material with a high carbon content, built up in bogs and used as fuel. It is the first stage in the development of COAL. Sphagnum mosses form most peat in the Northern Hemisphere.

Pecan, valuable North American nut tree. Its nut, resembling a small, smooth-shelled WALNUT, is 70% fat. It is used in the USA in pecan pie and ice cream. Family Juglandaceae; species *Carya illinoensis*. See also p.711.

Peccary, omnivorous pig-like mammal native to the sw USA and Central and South America. It has coarse, bristly hair, and scent glands on its back. Collared peccaries, or javelinas (*Tayassu tajacu*), have

dark grey hair with a whitish collar. White-lipped peccaries (*Tayassu pecari*) have brown hair. Weight: 23–30kg (50–66lb). Family Tayassuidae.

Pechora, river in the Russian SFSR, USSR, that rises in the Middle Ural Mountains. It flows N, W and N again to Pechora Bay on the Barents Sea, forming a delta at Naryan-Mar. It receives the Ilych, Shchugor, Usa, Kozhva, Izhma and Tsilma rivers and supports fisheries, farming and livestock raising along its lower reaches. Both the main river and its tributaries are navigable for most of their courses. Length: 1,790km (1,112 miles).

Pechstein, Max (1881–1955), German EXPRESSIONIST painter. He became a member of Die BRÜCKE in Dresden in 1906 and a teacher at the Berlin Academy in 1923. His works include *Green House*, *The Red Turban* and *Sunrise*.

Peck, (Eldred) Gregory (1916–), US film star, famous for his portrayals of grave and honourable heroes. He began his lengthy film career in *Days of Glory* (1943) and his many appearances include leading roles in *Keys of the Kingdom* (1944), *Spellbound* (1945), *The Gunfighter* (1950), *The Guns of Navarone* (1961), *To Kill a Mockingbird* (1963), *McKenna's Gold* (1968), *The Omen* (1976) and *MacArthur* (1977).

Pecking order, hierarchical system of social organization based on dominance. The leader has power over the entire community, the second-in-command has power over everyone but the leader, and so on. The term derived from the behaviour of hens, which express their dominance by pecking their inferiors, but is now applied to other animals, including human beings. See also pp.106, 1834.

Peckinpah, David Samuel ("Sam") (1926–), US director who worked in television, directing *Gunsmoke* and *The Westerner* series before turning to films. The deeper implications of his work are often overlooked because, since *The Wild Bunch* (1969), he has been associated with violent action films. His other films include *Straw Dogs* (1971), *The Getaway* (1973) and *Bring Me the Head of Alfredo Garcia* (1975).

Peece, Reginald (c.1395–c.1460), Welsh theologian who became Bishop of St Asaph in 1444 and Bishop of Chester in 1450. Writing in the vernacular, he was an important influence in the development of English vocabularies. He was the author of *Repressor of Overmuch Blaming of the Clergy* (c.1455) against the LOLLARDS. He was accused of heresy and died in confinement.

Pécs, city in s Hungary. Originally the Roman colony of Sopianae, it came under Turkish rule in the 16th century. Today Pécs is an important industrial centre for the country's chief coal mining region. Its industries include the manufacture of agricultural machinery, leather goods and pottery. Pop. (1980 est.) 170,000.

Pectin, water-soluble SUGAR found in the cell walls and intercellular tissue of certain ripe fruits or vegetables. It is the removal of this substance that causes fruits and vegetables to soften when cooked. It also yields a gel that is the basis of jellies and jams.

Pectoral, relating to the chest or BREAST, as the pectoral muscles, which cover the front of the chest, or the pectoral girdle, the bones of which make up the shoulder.

Pedersen, Christiern (c.1480–1554), Danish humanist scholar and translator, leading figure in Denmark at the time of the Reformation. He compiled a Danish-Latin dictionary and translated the New Testament (1521) and the Psalms (1531).

Pediatrics, branch of medicine that studies the growth and development of children. It is also concerned with the diagnosis and treatment of the diseases and disorders of children.

Pediculosis, skin disorder, especially in the scalp and groin, caused by blood-sucking lice. Small red spots marking bites are extremely itchy and may become infected. See also LOUSE.

Pedology, scientific study of SOILS. These are divided by pedologists into horizons of

various types, according to their physical and chemical composition, including the presence of organic matter and the extent of drainage. Soil types are classified by such names as podzol and CHERNOZEM, reflecting the work done by early Russian pedologists.

Pedometer, surveying instrument used for measuring distance. It consists of a wheel connected to a meter which registers the distance rolled by the wheel.

Pedro, name of five kings of Portugal. Pedro I (1320–67) was a harsh ruler (r.1357–67). Pedro II (1648–1706; r.1683–1706) consolidated royal absolutism and his kingdom prospered from revenue from Brazilian goldfields. Pedro III reigned (1777–92) jointly with his wife Maria I (r.1777–1816). Pedro V (1837–61; r.1853–61) abolished slavery in the Portuguese colonies (1857).

Pedro, name of two emperors of Brazil. Pedro I (1798–1834) became Regent of Brazil in 1821 when his father, John VI, returned to Portugal. Although Pedro was recalled by the Portuguese parliament in 1822, he declared Brazil independent and himself emperor. He was forced to abdicate (1831) in favour of his five-year-old son and withdrew to Portugal where, on the death of his father in 1826, he had become titular king as Pedro IV. His son Pedro (1825–91) was under regency until 1840 when he was crowned Pedro II (r.1831–89). He abolished slavery in 1888 and was forced to abdicate by the former slave owners in 1889 when Brazil became a republic. See also p.1562.

Peebles, market town in Borders Region, s Scotland, at the confluence of Eddleston Water and the River Tweed; county town of the former county of PEEBLES(SHIRE). Parts of the ancient city walls still remain. Industries: tourism, woollens (particularly tweeds). Pop. (1971) 5,881.

Peebles(shire), former county in SE Scotland; since 1975 it has been part of Borders Region. It is a mostly mountainous region, drained by the River Tweed. Beef cattle and sheep are reared. The former county town was Peebles. Industries: tourism, woollen mills, slate and limestone quarrying. Area: 899sq km (347sq miles).

Peel, Sir Robert (1788–1850), British politician. He was an MP from 1809 to 1850 and Chief Secretary (1822–27; 1828–30) in the Tory governments of Lord LIVERPOOL and the Duke of WELLINGTON. He was twice Prime Minister (1834–35; 1841–46). As leader of the Tory party in the House of Commons he played a major part in the reversal of Tory policy and the passing of CATHOLIC EMANCIPATION in 1829. As the first CONSERVATIVE Prime Minister he established the Ecclesiastical Commission (1835) and split his party permanently by the repeal of the CORN LAWS (1846). Those Conservatives who followed him into free trade became known as the PEELITES. See also p.1590.

Peele, George (1556–96), English playwright who experimented in a variety of forms including the pageant, comedy and melodrama. One of his best-known works is *The Old Wives Tale* (1595), which may have influenced John MILTON's *Comus*.

Peelites, section of the CONSERVATIVE PARTY, about one-third, who took the side of Robert PEEL when the party split over the repeal of the CORN LAWS (1846). They behaved as a separate party for several years but by 1859 their leaders, of whom the most important was GLADSTONE, had found their way into the LIBERAL PARTY.

Peenemünde, village in East Germany, located on an island at the mouth of the River Peene. It was an important testing site for rockets and missiles during WWII.

Peep-show, miniature theatre contained in an enclosed box and viewed, and usually magnified, through a small hole situated at one end of the box. Peep-shows were invented in the 15th century.

Peerage, British temporal nobility – barons, viscounts, earls, marquesses and dukes. The titles were formerly all hereditary but since 1876 the Lords of Appeal in Ordinary have been included and since 1958 provision has been made for the

creation of life peers as a reward for distinction. Peers constitute the Lords Temporal section of the House of Lords, having the right to sit in the House and vote.

Peer group, term used in SOCIOLOGY to mean a group whose members share certain characteristics. A peer group may be defined on the basis of income, mental ability, education, social status, occupation, age or any other such category.

Peer Gynt (1867), five-act poetic drama by Henrik IBSEN, based on Norwegian legend. Peer Gynt, a degenerate but lovable outlaw, leaves the good Solveig and goes travelling. The plot consists of episodes which display Peer Gynt's selfishness and worldliness. He encounters trolls and experiences the death of his mother before returning to be redeemed by the love of Solveig. EDVARD GRIEG composed 22 pieces to accompany the drama which he later arranged into the two *Peer Gynt Suites* for orchestra in 1876.

Pegasus, in Greek mythology, winged horse. Born out of the blood of MEDUSA, it carried the thunderbolt of ZEUS. It was tamed by BELLEROPHON and helped him in his battles.

Pegasus, or the Winged Horse, northern constellation between Andromeda and Cygnus. Three of its bright stars form the Giant Square in Pegasus with Alpha Andromedae; the brightest is Epsilon, with a magnitude of 2.30. See also pp.1012, 1013, 1019, 1019.

Pegmatite, in geology, any very coarse-grained rock, generally light in colour, and often of granitic composition. Pegmatites are the chief sources of gemstones, mica, and FELSPAR. See also p.260.

Péguy, Charles (1873–1914), French poet and writer. In 1900 he founded the periodical *Cahiers de la quinzaine*, in which most of his work appeared. He is among the foremost of Catholic writers and his works include *Notre Jeunesse* (1910) and the poem *Le Mystère de la Charité de Jeanne d'Arc* (1910).

Peipus (Cudskoje Ozero), third-largest lake in Europe, situated between Estonia (Estonian SSR), USSR and the Russian SFSR, USSR. Its outlet, the River Narva, flows N to the Gulf of Finland, receives the River Velikaya (S) and the River Ema (W) and is connected by a 24km (15 mile) strait to Lake Pskov. Area: 3,600sq km (1,390sq miles).

Peirce, Charles Sanders (1839–1914), US philosopher and logician, a leader of the pragmatists. He explained PRAGMATISM in a series of six papers published between 1877 and 1878. He also helped to develop semiotics, the study of the use of signs and symbols. Although he was a prolific writer, much of his work was published posthumously in eight volumes as *The Peirce Papers: Collected Papers*.

Peking (Bie-jing), capital of The People's Republic of CHINA, on a vast plain between the Pei and Hun Rivers in NE China. There has been a settlement there since c.1000 BC. The city served as China's capital from 1421 to 1911; after the establishment of the Chinese Republic (1911–12) Peking remained the political centre of the country. The seat of government was transferred to Nanking in 1928 and Peking (meaning "northern peace"), was known as Pei-p'ing. Occupied by the Japanese in 1937, it was restored to China in 1945 and came under Communist control in 1949. Its name was restored and it was made the capital of the People's Republic.

The city comprises two walled sections: the Inner or Tatar City, which houses the Forbidden City, and the Outer or Chinese city. Peking is the political, cultural, educational, financial and transport centre of China. Heavy industry has been introduced to the area since 1949 and textiles, iron and steel are now produced there. Pop. (1980 est.) 8,700,000.

Pekingese, toy dog bred in China from the 8th century. Its soft coat, of any colour, forms ruffs around the collar, legs and tail. The dogs were guarded by the Chinese court, but some were taken to Europe by British soldiers who stole them during the attack on the Summer Palace (1860). Weight: 2.5–6.5kg (6–14lb); height: 15–23cm (6–9in).

Peking Man, *Sinanthropus*, an extinct Pleistocene man known from remains first discovered in 1927 at Choukoutien, China. A hunter and user of stone tools and fire, *Sinanthropus* was more advanced than the related JAVA MAN. See also pp.112, 113.

Pelagianism, Christian heresy associated with the name of the British theologian Pelagius who taught in Rome in the late 4th and early 5th centuries. In opposition to St AUGUSTINE's belief that man could attain salvation only through God's grace, the Pelagians saw man as a creature of inherent spiritual grace and strong will. They, who were free to choose between good and evil, denied original sin and the need of the Church for salvation.

Pelagic, word to describe organisms that live in the sea (but not on the sea-bed) and the area that they inhabit. The organisms are divided into NEKTON (large fish and whales) and PLANKTON (small plants and animals) on which the nekton feed.

Pelagius, name of two popes. Pelagius I (d.561) was pope from 556 to 561. He took a prominent part in the Nestorian controversy and established the temporal power of the papacy in Rome. Pelagius II (d.590) was pope from 579 to 590. During his reign the Franks were asked to intervene in Italy to help the papacy for the first time.

Pelagius (c.354–c.418), British monk and theologian who preached the heresy of PELAGIANISM. In c.380 he went to Rome and became the spiritual director of many clergy and laymen. His rigorous asceticism – based on the belief that man, through his deeds, is master of his own spiritual salvation – served as a reproach to the spiritual sloth of many Roman Christians. After 410 he preached in Africa and Palestine.

Pelargonium, perennial GERANIUM native to South Africa. The circular or lobed leaves alternate on the stalk and are often aromatic. The five-petalled flowers are red, pink, purple or white. Family Geraniaceae; genus *Pelargonium*.

Pelé (1941–), born Edson Arantes do Nascimento, Brazilian soccer player, often said to be the finest player of all time. He made his first international appearance at the age of 17, led Brazil to three victories in the World Cup (1958, 1962, 1970), and was thought to be one of the highest paid athletes in the world. He made his last international appearance in 1971, and apart from 1975–77, when he played for New York Cosmos, all his club games were played for Santos. During his career he scored more than 1,200 goals.

Pelecaniformes, order of birds which includes the TROPIC BIRDS, FRIGATE BIRDS, and the sub-order Pelecani, of which PELICANS, GANNETS, CORMORANTS and DARTERS are members. See also p.73.

Pelée Mount, volcanic peak in N Martinique, in the Windward Islands, West Indies. It has erupted many times, most notably in 1902, when it engulfed the town of Saint Pierre killing approx. 30,000 people. It is the highest peak on the island: 1,397m (4,583ft).

Peleus, in Greek mythology, son of Aeacus, King of Phthia in Thessaly. During the expedition by the ARGONAUTS, Peleus, with the help of CHIRON, won the sea nymph Thetis. Their son was ACHILLES, hero of the TROJAN WAR. Peleus also took part in the Calydonian boar hunt, during which he accidentally killed his uncle, King Eurypion.

Pelham, Henry (1696–1754), British politician who was Secretary for War from 1724 to 1730 and Prime Minister from 1743 to 1754. During his administration the War of the AUSTRIAN SUCCESSION ended in 1748 and the national debt was reorganized and reduced.

Pelican, any of several species of stout-bodied inland water birds, with a characteristic distensible pouch under its bill for scooping up fish from shallow water. It is generally white or brown and has a long hooked bill, long wings, short thick legs and webbed feet. Length: to 1.8m (6ft). Family Pelecanidae; genus *Pelecanus*. See also p.333.

Pellagra, disease caused by a deficiency of nicotinic acid, a constituent of the B group

of vitamins. Its symptoms are lesions of the skin and mucous membranes, diarrhoea and mental debility.

Pellan, Alfred (1906–), Canadian painter. He worked in Paris from 1926 to 1940 and was influenced by SURREALISM. After his return to Montreal in 1940 he was a guiding force for young Canadian artists and painted complex abstract works, including *Floraion* (c.1945).

Pelléas and Mélisande (1902), opera in five acts by Claude DEBUSSY based on a play by Maurice MAETERLINCK. It was first performed at the Opéra Comique, Paris, where it was reviled as subversive because of its innovative tonal harmonies, but today it is considered to be a landmark in the history of opera and a masterpiece of musical IMPRESSIONISM.

Pellegrini, Giovanni Antonio (1675–1741), Venetian painter and pupil of Sebastiano RICCI. He travelled widely in Europe and was the first Venetian artist to visit England (1708). His decorative work for buildings such as Kimbolton Castle and Castle Howard influenced the style of English Rococo.

Pelletier, Pierre-Joseph (1788–1842), French chemist, founder of the chemistry of ALKALOIDS. He isolated CHLOROPHYLL in 1817 and then extracted EMETINE. With J. R. Caventou he discovered other alkaloids, such as brucine, cinchonine, quinine and strychnine.

Pellico, Silvio (1789–1854), Italian dramatic poet. His chief work is the play *Francesca da Rimini* (1815). Arrested for joining the CARBONARI, he was imprisoned in 1820. He wrote an account of his eight years in prison in *Le Mie Prigione* (1832).

Peloponneses (Pelopónnisos) or Peloponnesos, peninsula in S Greece, separated from central Greece by the Gulf of Corinth. The region included the ancient cities of Sparta, Corinth, Argos and Megalopolis. The entire peninsula was involved in the Persian Wars (500–449 BC), and it was the site of many battles between Sparta and Athens during the Peloponnesian War (431–404 BC). The region fell to the Romans in 146 BC, who reduced it to a provincial state. Held by the Venetians from 1699 to 1718, then the Ottoman Turks, the peninsula passed to Greece after independence. Products: silk, fish, manganese, chromium, fruits, tobacco, wheat. Tourism is a major industry. Area: 21,756sq km (8,400sq miles). Pop. (1971) 986,912.

Peloponnesian War, History of the, THUCYDIDES's masterly account of the war between Athens and Sparta and their allies (431–404 BC). The work, written between c.423 BC and c.403 BC, provides a detailed and penetrating analysis of the war's causes, and in its balance of detailed scholarship and moral judgement has been influential on all historians since.

Pelops, mythological Greek founder of the Pelopid dynasty of Mycenae. He was the grandson of ZEUS. He was believed to have a shoulder of ivory, a replacement after his father TANTALUS had served him at a banquet for the gods.

Pelorus, one of the Sparti ("sown men") who sprang from the dragon's teeth which Cadmus planted after he had killed the dragon terrorizing Thebes in Greece. Pelorus was a giant. The Theban aristocracy claimed descent from him.

Pelota, generic name given to a variety of games in which a small, hard ball is hit with gloved or bare hand or with a basket-type racket known as a *cesta*. They are played mostly in the Basque regions of Spain and France and in South America. Pelota games can be played across a net or against a wall in a two- or three-sided court known as a *frontón*. *Jai-alai*, the fastest of all pelota games, is played by professionals.

Peltier effect, phenomenon in which heat is either given off or absorbed at a junction where an electric current passes from one kind of metal to another. With a current through a THERMOCOUPLE, the temperature at one junction increases while that at the other decreases, so heat is transferred from one to the other.

Pelvis, bowl-shaped bone structure that supports the soft internal organs of the

Pelargonium: the large group of plants includes the ornamental geranium.

Pelé: his game has thrilled football fans and inspired players world-wide.

Pelicans occasionally fish collectively, driving fish into shallow water.

Peloponneses: timber and straw huts are typical of rural southern Greece.

Pemba

Pembroke's castle is in a good state of repair, despite its turbulent history.

Pendulums swing backwards and forwards at a constant rate through any small arc.

Penguin: king penguins are amongst the most popular attractions at the zoo.

Arthur Penn's film *Bonnie and Clyde* starred Faye Dunaway and Warren Beatty.

lower abdomen. The pelvis is formed by the hip bone on each side, joined at the sacro-iliac joint, with the sacrum in the back, and with the pubic bones in front. The pelvis is broader in females than in males and this facilitates childbirth. See also p.147.

Pemba, coral island in the w Indian Ocean, 64km (40 miles) e of mainland Tanzania; the capital is Wete. Formerly a centre of the slave trade, it is now a major producer of cloves. Area: (including islets) 982sq km (379sq miles). Pop. (1967) 164,321.

Pembroke, Mary Herbert, Countess of (1561–1621), sister of the poet Sir Philip Sidney. She was the patron of many poets, including SPENSER, and founded the Pembroke circle, a literary circle devoted to her brother's poetic ideals.

Pembroke, William Marshal, 1st Earl of (c.1146–1219), English nobleman. He was in the service of Prince Henry in 1170 and of both HENRY II and RICHARD I. He upheld John's claim to the throne in 1199 and supported him against the barons. As regent for HENRY III (1216), he concluded the Treaty of Lambeth (1217).

Pembroke, market town in Dyfed, sw Wales, on Milford Haven inlet. The town has an 11th-century priory and castle. HENRY VII was born there in 1457. Industries: tourism, engineering. Pop. (1971) 14,092.

Pembrokeshire, former county in sw Wales; since 1974 it has been part of Dyfed. The area has rolling hills and fertile valleys, and the coastline is deeply indented. The principal rivers are the East and West Cleddau. The economy is overwhelmingly agricultural. Potatoes, wheat and oats are the chief crops, and poultry and dairy cattle are raised. Milford Haven is an important oil-terminal with refineries. The region attracts many tourists. Area: 1,590sq km (614sq miles). Pop. (1971) 97,295.

Pemmican, food of North American Indians, made by drying and pummeling lean meat, then mixing it to a paste with fat and berries. Because it is slow to deteriorate it was a staple of hunters away for long periods in Arctic regions.

P.E.N., abbreviation of the International Association of Poets, Playwrights, Editors, Essayists and Novelists, an international literary organization founded in 1921 by Mrs C.A. Dawson Scott to promote respect for literature and friendship between professional writers. Its presidents have included John GALSWORTHY, H.G. WELLS, Heinrich BÖLL and Maurice MAETERLINCK. Bernard SHAW and Thomas MANN were both active members. Its current membership in 58 countries is more than 8,000. International congresses are held annually in different capitals: London in 1976 and Sidney in 1977.

Penal reform. See PRISON REFORM.

Penal settlements, colonies to which convicted criminals were transported for imprisonment and/or hard labour. Areas chosen for such settlements were usually in wilderness or desert and deliberately isolated; occasionally further settlements of freed prisoners grew up nearby. British convicts were sent to North America until the War of AMERICAN INDEPENDENCE, and to Australia until the mid-19th century; the French sent their convicts to their colonies in Africa, to New Caledonia and to French Guiana; and in much the same fashion, some prisoners of the USSR are transported to Siberia.

Penance, the carrying out of a specified act as a mark of sincere regret for sin previously committed. The most common penance, prescribed by a priest after ABSOLUTION, is to say a prayer at a special time, or to repeat it. The term penance is also used to describe the threefold sacrament of CONFESSION, absolution and penance.

Penang, island of Malaysia, off the w coast of the Malay Peninsula; it comprises a state of Malaysia together with Province Wellesley on the Malay Peninsula. Penang, the island's capital, is the principal port of the country. The island was Britain's first possession in Malaya (1786), bought by the British East India

Company from the Sultan of Kedah; it was made a Crown colony with Singapore and Malacca. Penang joined the Federation of Malaya in 1957 and became a state of Malaysia in 1963. Its products include rice, rubber and tin. Area (state): 1,040sq km (400sq miles). Pop. (1970) 776,770.

Penates, in Roman mythology, spirits of the household, worshipped privately with images and offerings of food and also regarded as public gods whose protection encompassed Rome itself.

Pen-chi, or Penki, city of s Liaoning province in China, founded in 1915. Its major industries are the mining of iron ore and coal, and it is served by the railway which runs from Shen-yang to North Korea. Pop. (1970 est.) 750,000.

Penda (d.654), Anglo-Saxon King of MERCA. He was a pagan and killed the Christian Northumbrian kings EDWIN (in c.633) and Oswald (in 642). By defeating Cenwalh of Wessex in 645 he temporarily ruled England. He was slain by Oswiu of Northumbria.

Pendentive, one of the means by which a circular dome is supported above a square or polygonal base or compartment. The pendentive, an inverted concave triangle, springs from a corner of the square or polygonal base, curving upwards and out to meet other pendentives. Their bottom points form a square and the tops form a circle, thus allowing a dome to be placed on a circle from a square base. It was first used on a grand scale by the Byzantines (HAGIA SOPHIA) and is a feature of Romanesque, Renaissance and later architecture. See also p.1277.

Penderecki, Krzysztof (1933–), Polish composer. His works, which employ a variety of modern compositional techniques, are original both in style and notation but sometimes retain traditional forms. His reputation was established in 1960 with his *Threnody for the Victims of Hiroshima* for string orchestra. Other pieces include a *Passion According to St Luke* (1963–65), one opera, *The Devils of Loudon* (1968) and *First Symphony* (1973).

Pendlebury, John Devitt Stringfellow (1904–41), British archaeologist who specialized in Minoan civilization. He was curator at Knossos from 1928 to 1934 and excavated Tell el Armarna.

Pendulum, any swinging body supported at a point. A simple pendulum consists of a small heavy mass attached to a string or light rigid rod, and its frequency (rate of swing) is independent of the mass. Small oscillations of such a pendulum have a frequency of $\frac{1}{2\pi}\sqrt{g/L}$, where L is the length and g is the acceleration due to gravity. A compound pendulum has a supporting rod whose mass is not negligible, and its motion cannot be described as a simple relation. See also p.828.

Penelope, in Greek mythology, wife of ODYSSEUS. She is depicted as a woman of great beauty, fine character and righteous conduct. As described in HOMER'S *Odyssey*, she had been married for only a year when her husband left for ten years of war and ten of wandering. She remained faithful, putting off her many suitors with the promise that she would choose one when her weaving was done. By day she wove and by night she undid her work.

Peneplain, in geomorphology, area of land worn down by EROSION almost to a level plain. The sides of a river valley may be eroded by the river, wind, rain and ice, until it becomes a wide, flat plain drained by slow meandering streams. See pp.215, 222.

Penfield, Wilder Graves (1891–1976), Canadian neurosurgeon, b.USA. In treating epileptic patients, he helped to map the sensory and motor areas of the cortex of the brain by stimulating various areas with tiny electrical probes. His works include *Epilepsy and Functional Anatomy of the Human Brain* (1954) and *Speech and Brain Mechanisms* (1960). See also p.132.

Penguin, flightless bird that lives in the Southern Hemisphere and ranges from the Antarctic northwards to the Galápagos Islands. The wings of penguins have been adapted to flippers and their

webbed feet help to propel their sleek bodies through the water. As a result, although they are awkward on land, they are fast and powerful swimmers, easily able to catch the fish and squid that they feed on. The largest of them are the king and emperor penguins. Height: to 1.22m (4ft). Family Spheniscidae. See pp.72, 76, 79, 80, 81, 187, 323, 339.

Penguin Books, British PAPERBACK publishing company. Founded in 1935 by Sir Allen LANE, a director of The Bodley Head, it was the first British firm to publish paperbacks. The original company has diversified into several imprints, which include Pelican, Puffin and Peregrine.

Penicillin, ANTIBIOTIC agent, one of the greatest discoveries of 20th-century medical science. Discovered by Sir Alexander FLEMING in 1928 and later developed in a soluble form, it is derived from moulds and can now be produced synthetically. It is effective in combating many bacterial disorders. It can produce allergic reactions, ranging from itching to, rarely, fatal shock. See also pp.1091, 1093.

Penillion, Welsh form of folk-singing in which the singer extemporizes a melody in "counterpoint" to a tune and variations played on the harp. The first written examples date back to the 17th century, although penillion singing is of much older bardic origin.

Peninsular War (1808–14), phase of the NAPOLEONIC WARS, fought between France (under NAPOLEON) and Britain in the Iberian peninsula. In Aug. 1808 British troops under Arthur Wellesley (later Duke of WELLINGTON) landed in Portugal to aid Spanish resistance to French invasion. In Jan. 1809 these troops, then under Sir John MOORE, were re-embarked at La Corunna, but Wellesley returned with another small army in April 1809, and this formed the nucleus of the force which drove the French out of Spain in 1813 (at the Battle of Vitoria) and finally defeated a French army at Toulouse in 1814, just before news of Napoleon's abdication ended hostilities. See also pp.1554–1555.

Penis, male copulatory organ. It contains the URETHRA, and three columns of erectile tissue which, when congested with blood, cause the penis to become erect. See also pp.164–165, 164–165, 1078–1079.

Penitence, deep remorse for sin committed, often allied with a desire to do PENANCE and avoid further sin. It is not to be confused with repentance.

Penn, Arthur (1922–), US stage and film director. A recurrent theme in his work is that of the individual misplaced in society. His films include *Bonnie and Clyde* (1967), *Alice's Restaurant* (1969), *Little Big Man* (1970) and *Missouri Breaks* (1976).

Penn, Sir William (1621–70), English admiral, father of William PENN. He fought for the PARLIAMENTARIANS in the Civil War and in the First Anglo-Dutch War (1652–54) and captured Jamaica in 1655. Secretly negotiating with the Royalists, he was made Commissioner of the Navy in 1660 and fought in the Second Anglo-Dutch War (1665–67). See also pp.1424, 1427.

Penn, William (1644–1718), founder of the US state of Pennsylvania, b. England. He was the son of Admiral William PENN and a leader of the English QUAKERS. Because of his religious views, he was imprisoned four times and wrote *No Cross – No Crown* (1669), explaining Quaker-Puritan morality, while he was in the Tower of London. He persuaded KING CHARLES II to honour an unpaid debt by granting him wilderness land in America to be settled by the Quakers and others seeking religious refuge. In organizing a government for the colony, Penn drew up a frame of government, the first constitution with an amendment clause. See also pp.1538–1539, 1539.

Penney, William George, Baron (1909–), British atomic physicist who helped to develop the first British atomic bomb. During WWII he was engaged in nuclear research for the British government; in 1944 he went to the Los Alamos Scientific Laboratory and in 1945 was

official observer of the atomic bombing of Nagasaki. In 1964 he became chairman of the UK Atomic Energy Authority.

Pennines, range of hills in N England, also known as the Pennine Chain, extending from the Tyne Gap and Eden Valley on the border with Scotland to the valley of the River Trent; commonly referred to as the backbone of England. The hills are a series of highland blocks dissected by rivers such as the Tees, Aire and Ribbles. The rearing of sheep is the chief occupation. Tourism and limestone quarrying are also important. The highest peak is Cross Fell, rising to 893m (2,930ft). Length: approx. 260km (160 miles).

Pennsylvania, state in E USA; one of the Middle Atlantic states. Apart from small low-lying areas in the NW and SE, it is composed of a series of mountain ridges and rolling hills with narrow valleys. Farming is concentrated in the SE; the principal crops are cereals, tobacco, potatoes and fruit, and dairy products are important. Pennsylvania has rich deposits of coal and iron ore. The state has long been a leading producer of steel which today accounts for about a quarter of the nation's output. There is much heavy industry, including chemicals, machinery and metal goods. The chief cities are Harrisburg (the state capital), Philadelphia, Pittsburgh, Scranton, Bethlehem, Wilkes-Barre and Erie.

Swedish and Dutch settlements were made along the Delaware River in the mid-1600s. By 1664 the area was controlled by the English, and William Penn received a charter from Charles II in 1681. Philadelphia was capital of the colonies during the War of American Independence. The Declaration of Independence was signed and the US constitution was ratified in the city. Philadelphia was the national capital from 1790 to 1800. The Union victory at Gettysburg in July 1863 was a turning point in the American Civil War. During both world wars, Pennsylvania was a major source of war materials. Area: 117,412sq km (45,333sq miles). Pop. (1980) 11,866,728. See also p.2161.

Penny, coin dating back to Anglo-Saxon times. Originally 240 pennies were cut from one pound weight of silver. Pennies were cast in copper after 1797, and in bronze from 1860. The penny's former symbol (d) stems from its equation with the Roman coin the *denarius*. When the British currency was decimalized in 1971, the penny was replaced by the "new penny" (p), worth one-hundredth of a pound sterling.

Penny-farthing, bicycle with a large front wheel and a much smaller rear one. It was invented by James Starley, and first appeared in England in the early 1870s. See also p.489.

Pennyroyal, common name for a number of plants, including the European *Mentha pulegium*, a sweet herb of the mint family. It has purple flowers and the leaves are said to discourage mosquitoes.

Penology, branch of criminology that studies and evaluates the programmes, institutions and organizations that treat criminal offenders.

Penry, John (1559-93), Welsh Puritan pamphleteer. He was accused of being the author of anti-episcopal pamphlets, published in 1588-89 under the pseudonym of Martin Marprelate. In 1590 Penry was forced to flee to Scotland as searches for his secret press intensified. He returned in 1592 and was arrested, tried and hanged on the charge of writing with intent to incite rebellion.

Pensées, collection of notes on spirituality by the French scientist and Jansenist, Blaise Pascal, first published in 1670. It rejects Cartesian Rationalism and argues that God can be discovered only mystically and through Christ. Faith depends, not on rational proof, but on a wager.

Pentagon, the office building of the US Department of Defense in Washington, DC. The complex is made up of five concentric buildings and covers 14 hectares (34 acres). It was completed in 1943. The name Pentagon has come to signify the US military establishment.

Pentameter, verse line of five metrical

feet, introduced into English literature by CHAUCER. IAMBIC pentameter, with metrical feet of unaccented followed by accented syllables, is the most durable form of English poetry, of which outstanding examples are William SHAKESPEARE'S *Sonnets*, Edmund SPENSER'S *The Faerie Queene* and John MILTON'S *Paradise Lost*. **Pentateuch**, first five books of the Bible, traditionally attributed to MOSES and in Judaism collectively called the Torah. They comprise GENESIS, EXODUS, LEVITICUS, NUMBERS and DEUTERONOMY, the last of which, being also the latest, was written no earlier than 700 BC.

Pentathlon, athletic competition which originated in ancient Greece. It consisted of five events - foot racing, leaping, wrestling, discus-throwing and javelin throwing - all taking place on the same day. It was made an Olympic Games event in 1912. See also MODERN PENTATHLON.

Pentatonic scale, in music, scale containing five notes, the octave being reached on the sixth note. Some of the notes are therefore more than a tone apart. It represents an early stage in musical development and is found in primitive and oriental music and some early Gregorian chants. The most common form is without semitones: c-d-f-g-a-c. Some 20th-century composers, including DEBUSSY, have exploited the form for special effects.

Pentecost, in the Jewish calendar, the festival seven weeks after the second day of the PASSOVER, commemorating the giving of the Law to MOSES. It is also a celebrated harvest festival, the Day of the First Fruits. In the Christian calendar it is known as Whitsunday (seven weeks after Easter) and considered to be the Church's birthday since, according to the ACTS OF THE APOSTLES, it was on this day that Jesus's disciples were in one place together when the HOLY GHOST came down on them like tongues of fire.

Pentecostal Churches, fellowship of Christian believers who stress that its members should seek the Baptism with the Holy Spirit which may be accompanied by a supernatural gift such as the ability to "speak in tongues". The Pentecostal movement, which sought to model itself on instances and practices recorded in the ACTS OF THE APOSTLES, began in the USA at the beginning of the 20th century and spread rapidly to Britain and other parts of the world. See also ELIM FOURSQUARE GOSPEL ALLIANCE.

Penthesileia, in Greek mythology, queen of the AMAZONS. After the death of HECTOR she came to the aid of the Trojans against the Greeks. She was slain by ACHILLES, who mourned her death because of her beauty and courage.

Pentheus, in Greek mythology, king of THEBES. When DIONYSUS came to Thebes, Pentheus refused to allow his people to worship him. They refused to obey. Pentheus went out to spy on the worshippers, was detected, and torn to pieces by women led by his mother Agave. The tragedy is related in *Bacchae*, by EURIPIDES.

Pentimento, in painting, term for a mistake which the artist has painted out, often with an opaque pigment. The original may later become visible through the superimposed layers of paint.

Pentland Firth, channel separating the Orkney Islands from the N Scottish mainland, connecting the Atlantic Ocean to the North Sea. Length 23km (14 miles).

Pentothal, trade name of thiopental, a short-acting BARBITURATE used as an intravenous anaesthetic and for abreaction. Side effects include restlessness, excitement and delirium.

Pentstemon, or beardtongue, genus of North American perennial plants and shrubs. They have terminal clusters of tubular, white or purple flowers with five stamens, one of which is sterile and bearded. Family Scrophulariaceae. See also FIGWORT.

Penza, city in the central Russian SSR, USSR, the administrative centre of the Penza region, on the River Sura, 560km (350 miles) SE of Moscow. Founded in 1666 as a fortress, Penza developed in the 18th century as an agricultural centre. Today its industries include machinery,

timber, paper and watchmaking. Pop. (1980) 490,000.

Penzance, town in Cornwall, SW England, on Mount's Bay. It is a fishing port and has a sea and air service to the Scilly Isles. The town was sacked by the Spanish in 1595. Industries: tourism, vegetables and flowers. Pop. (1971) 19,352.

Peonage, system of servitude based on the indebtedness of the labourer (peon) to his creditor, prevalent in Spanish America, especially Mexico and Peru. In Mexico a decree against peonage was issued in 1915. The practice persisted but from that date began to go into decline.

Peony, perennial plant native to Eurasia and North America. It has glossy, divided leaves and large white, pink or red flowers, and is frequently cultivated in gardens. Height: to 0.9m (3ft). Tree peonies grow only in hot, dry areas and have brilliant blossoms of many colours. Height: to 1.8m (6ft). Family Ranunculaceae; genus *Paeonia*.

Peoria, city and port of entry in central Illinois, USA, on the Illinois River. Fort Creve Coeur was built on the site in 1680 by Robert La Salle. Abraham LINCOLN condemned slavery in an address there in 1854. It is an agricultural trade centre and shipping point for grain and livestock. Industries: brewing, distilling, farm machinery, bricks, tiles. Pop. (1980) 123,571.

Peperomia, genus of house plants, many of which are SUCCULENTS, native to tropical America with waxy, ridged or smooth, oval or rounded leaves of green, green and white or copper-black. Peperomias grow best in bright indirect light, in soil of equal parts loam, peat moss and sand. They should be kept dry between waterings. Propagation is by stem cuttings. Height: to 25cm (10in). Family Piperaceae.

Pepin, name of two kings of AQUITAINE. Pepin I (c.803-838) was the son of Emperor LOUIS I, who made him King of Aquitaine in 817. He led two revolts against his father (830, 833), but later helped him to reassert his authority. Pepin II (d.c.870), his son, became king after defeating Charles the Bald in 844. In 852, however, Pepin was captured by Charles. He escaped two years later but was again defeated by Charles after attacking Toulouse in alliance with the Vikings.

Pepin III, the Short (d.768), son of CHARLES MARTEL, mayor of Neustria, Burgundy and Provence and King of the Franks (r.747-768), the first king of the Carolingian dynasty. He deposed Childeric III in 750, the last MEROVINGIAN ruler, and was anointed by Pope Boniface in 751. A firm supporter of the Roman Church, he was again anointed in 754 by Pope Stephen II and defeated the Lombards on the pope's behalf (754, 756). The new papal lands (the exarchate of Ravenna) thus acquired were known as the Donation of Pepin. This event created the PAPAL STATES, making the papacy a temporal power for the first time. Pepin was the father of CHARLEMAGNE. See also p.1286.

Pepper, or capsicum, perennial woody shrub native to tropical America, sometimes cultivated as an ornamental plant. The fruit is a many-seeded, pungent berry whose size depends on the species. Included are bell, red, CAYENNE and CHILI peppers. They all belong to the NIGHTSHADE family, Solanaceae; genus *Capsicum*. See also pp.706, 707.

Pepper, sweet, shrubby perennial plant of the NIGHTSHADE family, sometimes cultivated as an annual, and native to the Americas. The fruits, green or red, are cooked or used raw in salads. An extract of the plant is used in ointments as a heat producer and counter-irritant for rheumatic pains. Height: 91-120cm (3-4ft). Family Solanaceae; species *Capsicum frutescens*.

Peppercorn, dried berry of the black pepper plant, *Piper nigrum*, which is marketed as a spice and is also available ground as black pepper powder. The inner part of the berry yields white pepper.

Peppercorn rent, in law, nominal rent that does not reflect the true rental value of a property or chattel. Its payment does not

Pennsylvania's Golden Triangle, where the Allegheny and Monongahela rivers meet.

"SALVO" SAFETY.

STARLEY BROS. LTD.
ST. JOHN'S WORKS COVENTRY

Penny-farthing: this 1885 model has the refinement of a separate chain-wheel.

Penzance: sea-urchins for sale on the harbour wall of this Cornish town.

Peony: the common peony blooms in the late spring or early summertime.

Peppermint

Samuel Pepys' diary is a document of great humour and human insight.

Perch are predatory fish which lie in wait behind the stems of water plants.

Père David's deer are named after the French missionary and naturalist.

Giovanni Pergolesi; portrait by Vaccaro of the Italian composer.

normally exempt the tenant or hirer from having to pay the true rental value should it be claimed. The term comes from the early 17th-century usage of the word peppercorn, meaning something small or insignificant.

Peppermint, common name for *Mentha piperita*, a perennial herb of the MINT family cultivated for its essential oil, which is distilled and used in medicine and as a flavouring. See also p.371.

Pepper tree, or Peruvian mastic tree, evergreen tree native to tropical America. Grown as an ornamental, it has feathery-like leaves, yellow flowers and reddish berries. Height: to 15m (50ft). Family Anacardiaceae; species *Schinus molle*.

Pepsin, digestive ENZYME secreted by glands of the stomach as part of the gastric juice. In the presence of hydrochloric acid it catalyzes the splitting of PROTEINS in food into smaller PEPTIDE fractions. See also p.160.

Peptide, compound consisting of two or more AMINO ACIDS linked by bonds between the amino group ($-NH_2$) of one and the carboxyl group ($-COOH$) of the next. This type of linkage is called a peptide bond, and peptides containing three or more amino acids are called polypeptides. PROTEINS consist of polypeptide chains containing up to several hundred amino acids, cross-linked to each other in various ways. See also pp.908-911.

Pepusch, Johann Christoph (1667-1752), British composer and musical theorist; b. Germany. He was a prolific composer of instrumental music and music for the theatre and is remembered for the arrangement of the tunes and the composition of overtures for John GAY's *The Beggar's Opera* (1728).

Pepys, Samuel (1633-1703), English diarist and naval administrator who became Secretary of the Admiralty (1673-89). His *Diary* (1660-69) frankly describes his private life and English society of his time. It includes a vivid account of the RESTORATION, the coronation ceremony in 1661, the PLAGUE in 1663 and the Great Fire of London in 1666. Pepys' *Diary* was written in cipher (a system of shorthand) and a deciphered version was not published until 1826, by the Rev. John Smith. See also pp.1428-1429.

Pequot, tribe of Algonquian-speaking North American Indians who once lived in the Thames River valley region of Connecticut. They were almost entirely wiped out in the Pequot War (1637). In the mid-1970s there were only about 200 people of Pequot ancestry.

Perak, state in Malaysia, on the w coast of the Malay Peninsula, bounded on the w by the Strait of Malacca; IPOH is the capital. It was made a British protectorate in 1875, became a member of the Federated Malay States in 1895 and was made a state of Malaysia in 1963. Its products include rubber, coconuts and rice. Area: 20,798sq km (8,030sq miles). Pop. (1970) 1,569,139.

Percentage, quantity expressed as the number of parts in 100 (considered to be a whole). Thus $\frac{3}{4}$ as a percentage is obtained by multiplying $\frac{3}{4}$ by 100, ie 75%.

Perception, function by which the nervous system transforms energy into an impression of the world. The energy may be external (light, sound waves) or internal (stimulation of muscles and tendons). The end-product of the process is sometimes described as experience and sometimes as behaviour. Perception can be called information processing. In this view, the central nervous system is analogous to a computer with the energy as input and perception as the output of the process. See also p.136.

Perceval, Spencer (1762-1812), British statesman, son of the 2nd Earl of Egmont. A lawyer, he entered Parliament in 1796 and supported William PITT. He rose from Solicitor General in 1801 to Prime Minister in 1809. He was assassinated by a bankrupt broker.

Perch, freshwater food fish found in lakes, ponds and slow-moving streams of Europe and the USA E of the Rocky Mts. The North American yellow perch (*Pesca*

flavescens) is gold-coloured with six to nine black side-bars. The European perch (*P. fluviatilis*) is found throughout most of Europe and is commonly fished. Eggs are laid in long, sticky ribbons. Weight: 1.0-2.7kg (2.2-6lb). Family Percidae. See also p.62.

Percheron, black or grey draught horse bred in the La Perche region of NW France from Flemish and Arabian stock. Introduced to the USA around 1840, it was the most popular draught breed, particularly for farm work. Height: to 170cm (67in) at shoulder. Weight: to 950kg (2,100lb).

Percussion, term for any of several musical instruments which produce their sound when struck with a beater or the hand. They are divided into two groups: ideophones, in which the whole object struck vibrates (such as CYMBALS, GONGS and XYLOPHONES), and membranophones, in which a stretched skin or membrane vibrates a column of air (this group includes all DRUMS). Percussion instruments of either group can be of definite or indefinite pitch. The expressive range of such instruments has long been appreciated by Indian, Japanese and African musical cultures, and in the West began to be exploited during the 20th century. See also pp.834, 1581.

Percussion cap, device for detonating the charge in a firearm. The principle on which it works was discovered by Alexander J. FORSYTH in 1805, but the actual cap was probably invented in 1815 by Joshua Shaw in Philadelphia, USA. Shaw's cap was a truncated cone of metal containing fulminate of mercury, which ignited when struck by the hammer of the gun.

Percy, Sir Henry (Hotspur). See HOTSPUR.

Percy, Thomas (1729-1811), British antiquary, poet and churchman. He is remembered for his collection of traditional ballads published in 1765 as *Reliques of Ancient English Poetry* (also known as Percy's "Reliques"). He was chaplain to the Earl of Northumberland and in 1782 was appointed Bishop of Dromore. See also p.1548.

Percy family, English noble family of Northumberland. Henry, 1st Earl of Northumberland (1342-1408), fought in France in the HUNDRED YEARS WAR and was Warden of the Scottish Marches. He was created an Earl in 1377. His son, Henry (1364-1403), is generally known as HOTSPUR. Henry, the 4th Earl (1446-89), was a supporter of RICHARD II, but went over to HENRY VII at Bosworth. He was killed by Yorkshire rebels. Thomas, the 7th Earl (1528-72), was Warden of the Scottish marches under MARY I. He took part in the Northern Rebellion against ELIZABETH I and was executed for treason in 1572.

Père David's deer, animal now extinct in its native Chinese marshlands but still surviving in zoological parks throughout the world. The male has long antlers. Height: 1.2m (45in) at shoulder. Family Cervidae; species *Elaphurus davidianus*.

Peregrine falcon, crow-sized, grey, black and white bird of prey. It inhabits craggy open country or rocky coastlines and marshes or estuaries. The largest breeding falcon in Britain, it flies swiftly with prolonged glides. Length: to 48cm (19in). Family Falconidae; species *Falco peregrinus*.

Peregrinus, Petrus (fl 13th century), French scientist. He described the properties of MAGNETISM and hypothesized that it could be converted to KINETIC ENERGY. He also distinguished between and named the MAGNETIC POLES, and developed the existing rudimentary magnetic compass into a reliable instrument for navigation. See also p.773.

Pereira, city in w central Colombia; capital of Risaralda department. The city was founded in 1863. It is a market centre for a region producing coffee and cattle, and gold and silver are mined nearby. There is an important textile industry. Pop. (1972 est.) 221,200.

Perennial, plant with a life-cycle of more than two years. It is a common term for flowering herbaceous and woody plants. Perennials are easily cultivated garden plants. They include the LILY, CHRYSAN-

THEMUM, PEONY, DAISY, IRIS, and DELPHINIUM. See also ANNUAL; BIENNIAL.

Peretz, Isaac Lieb (1852-1915), Jewish poet, novelist and dramatist. He opposed political ZIONISM and was often accused of radicalism. His early works were in Polish and his later works in YIDDISH. They include Hasidic sketches such as *Stories and Pictures* (1900-01) and the play *The Golden Chain* (1909).

Perez, Rodríguez Carlos Andres (1922-), President of Venezuela (1974-79). A member of the Democratic Action Party, he advocated the nationalization of the country's iron, steel and petroleum industries.

Pérez Galdós, Benito (1843-1920), Spanish novelist and dramatist. He wrote a cycle of 46 historical novels, *Episodios nacionales* (1873-1912), describing events in Spain from 1805 to the end of the century. In 1881 he began another cycle of 21 novels examining contemporary society. His work has been described by many as the greatest Spanish literature since Cervantes.

Perfect Fool, The (1923), one-act comic opera by Gustav HOLST with libretto by the composer. It was first produced at Covent Garden, London, and parodies operatic conventions and the works of other composers, particularly Richard WAGNER and Giuseppe VERDI. The title refers to the glib hero.

Perfume, manufactured substance that produces a pleasing fragrance. The scents of such plants as rose, citrus, lavender and sandalwood are obtained from their essential oils. These are blended and combined with a fixative of animal origin, such as MUSK, ambergris or civet. Fixatives add pungency and prevent the more volatile oils from evaporating too quickly. Liquid perfumes are usually alcoholic solutions containing 10-25% of the perfume concentrate; colognes and toilet waters contain about 2-6% of the concentrate. See also pp.586-587.

Perga, ancient town of Pamphylia, Asia Minor, 16km (10 miles) NE of modern Antalya, Turkey. ALEXANDER THE GREAT began his invasion of inner Asia Minor from this point in 334 BC, and it was an important town in Roman times. Its ruins include a theatre and a stadium.

Pergamon, ancient city of NW Asia Minor in Mysia (Turkey). It became the capital of an important kingdom under the Attalid dynasty in the 3rd century BC and flourished as a centre of Hellenistic civilization. An agricultural and mining centre, it was also known for its arts and cultural development. It was bequeathed to Rome by Attalus III in 133 BC.

Pergolesi, Giovanni Battista (1710-1736), Italian composer who, despite his early death, produced the intermezzo *La Serva Padrona* (1733), which became a model for Italian comic operas. His *Stabat Mater* (1730) is one of the finest examples of religious music of the BAROQUE period. See also p.1485.

Peri, Jacopo (1561-1633), Italian composer. His musical drama *Dafne* was written in collaboration with Jacopo Corsi, with libretto by Ottavio Rinuccini and is generally regarded as the first opera. It received its first private performance in Florence in 1597. Most of this music is now lost, and his next opera *Euridice* (1600), remains the earliest opera which has been preserved in its entirety.

Peri, or Pari, in Persian mythology, fairy or other supernatural being. Peris were considered evil and were held responsible for droughts, crop failures and other natural disasters.

Pericarditis, inflammation of the PERICARDIUM, the membranous sac enclosing the heart. It usually develops during RHEUMATIC FEVER but may also be associated with other disorders. Treatment is directed towards the underlying infection and in acute cases involves surgery.

Pericardium, double membrane that surrounds the HEART, separating it from the rest of the chest cavity and protecting it from mechanical injury. In man, its lower margin is anchored to the DIAPHRAGM, its upper part to the inner surface of the breastbone. The outer tough fibrous

pericardial layer is separated from the inner membrane by lubricating pericardial fluid. *See also* p.152.

Pericarp, in seed plants, the wall of a ripened carpel, ovary or fruit. The tissues may be fibrous, stony or fleshy.

Perichondrium, in a developing EMBRYO, membrane surrounding the CARTILAGES that eventually become bones. It is well supplied with blood vessels and is the source of the osteoblasts (bone-building cells) that invade the embryonic cartilage and lay down the hard bone matrix. *See also* p.146.

Pericles (c.490–429 BC), Athenian statesman who was elected to high office every year from 443 to his death. He strengthened Athens' leadership of the Delian League, made a 30-year truce with SPARTA in 445, and attempted to make Athens a great cultural centre. He was responsible for constructing the PARTHENON (447–438 BC) and other notable buildings. His character, oratory (which inspired Athens to war against Sparta in 431) and his rebuilding of the ACROPOLIS caused historians to christen his entire period the "Age of Pericles". *See also* pp.1204, 1207, 1212, 1212.

Pericles, Prince of Tyre (c.1608), five-act drama, attributed to William SHAKESPEARE, but his authorship is generally regarded as doubtful. Many scholars believe that Shakespeare wrote only Acts III, IV and V.

Peridot, gem variety of transparent green OLIVINE, a silicate mineral. Large crystals are found on St John's Island in the Red Sea and in Burma.

Peridotite, term derived from PERIDOT, the French word for OLIVINE. It is a heavy IGNEOUS ROCK of coarse texture composed of olivine and pyroxene with small flecks of mica or hornblende. It alters readily into SERPENTINE. Rocks that consist mainly of olivine are called dunites. *See also* p.260.

Perigee, point in the orbit about the Earth of the Moon or an artificial satellite at which the body is nearest to the Earth. *See also* p.976.

Perihelion, point in the orbit of a planet, asteroid, comet or other body (such as a spacecraft) moving around the Sun at which the body is nearest the Sun.

Perimeter, distance around the boundary of a plane closed figure. The perimeter of a circle is its circumference; that of a polygon is the sum of the lengths of its sides.

Period, in astronomy, time taken by one celestial body (such as planet or satellite) to complete one revolution around another. It can be measured in several ways, such as the SIDEREAL PERIOD and the SYNODIC PERIOD.

Periodic law, in chemistry, law first stated by MENDELEYEV in 1869 asserting that the properties of the elements are a periodic function of their ATOMIC WEIGHTS. The groupings of the elements based on this law formed the forerunner of the PERIODIC TABLE. From gaps in these groupings Mendeleev was able to predict the existence and properties of undiscovered elements. But his table contained anomalies, which were not resolved until H.G.J. Moseley (1887–1915) discovered that periodicity was related to ATOMIC NUMBER (rather than atomic weight) and the later discovery of ISOTOPES. *See also* p.888.

Periodic table, arrangement of the chemical elements in order of their ATOMIC NUMBERS in accordance with the PERIODIC LAW stated by MENDELEYEV and later modified by H.G.J. Moseley. In the modern form of the table, the elements are arranged into 18 vertical columns and seven horizontal periods. The vertical columns are numbered 0 to VIII. Columns I to VII are divided into two subgroups, the A subgroup forming the main group and the B subgroup containing the TRANSITION ELEMENTS; group VIII contains the iron group of transition elements, and the NOBLE GASES are collected into a ninth group, group O. The elements in each group have the same number of VALENCY electrons and accordingly have similar chemical properties. Elements in the same horizontal period have the same number of electron shells. The elements are

arranged in the periods in order of increasing atomic number from left to right. *See also* pp.888, 888.

Periodontics, field of dentistry that deals with the prevention, control and treatment of disorders of the tissues that surround and support teeth, especially the GUMS. PYORRHOEA is the most common gum disorder treated. *See also* p.1100.

Periodontitis. *See* PYORRHOEA.

Peripatus, genus including any of 65 living species of the subphylum Onychophora, intermediate in structure between ANE-LIDS and ARTHROPODS. It is confined to humid habitats in tropical and subtropical regions. The worm-like body has about 20 pairs of legs ending in tiny claws. Length: 15cm (6in). *See also* pp.28–29.

Peripheral nervous system, 12 pairs of cranial nerves, enclosed in the skull, which control activities in the head and neck, including sight, smell, hearing and taste.

Periscope, optical instrument consisting of a series of mirrors or prisms that reflect or displace the normal direction of the observer's line of sight so that it is possible to see over or around obstacles. *See also* p.852.

Perissodactyl, a member of an order of mammals characterized by hoofs with an odd number of toes. The only living members of the order are HORSES, TAPIRS and RHINOCEROSES; there are more than 200 extinct forms known from fossils. *See also* pp. 87, 94–95.

Peristalsis, series of involuntary muscular contractions that move food along the digestive tract. The route is from the pharynx along the oesophagus to the stomach, then from the stomach through the small and large intestines. In what is known as mass peristalsis (occurring about three or four times every 24 hours), the faeces eventually reach the rectum where nervous impulses lead to defecation. Antiperistalsis (the reverse process) in the oesophagus causes food to be regurgitated. *See also* p.160.

Peritoneum, strong membrane of CONNECTIVE TISSUE that lines the body's abdominal wall and surrounds the abdominal organs. The greater omentum, a fold in the peritoneum, forms an apron over the intestines. Inflammation of the peritoneum is known as PERITONITIS.

Peritonitis, inflammation of the PERITONEUM, a membrane that lines the abdominal cavity and the organs within it. It may be general or local and is caused by infection, which causes an accumulation of pus in the abdominal cavity. The principal symptom is severe abdominal pain with vomiting. Treatment is directed at the underlying cause, although in severe cases surgery may be necessary.

Periwinkle, or **winkle**, any of several marine snails, gastropod molluscs that live in clusters along marine shores. A herbivore, it nestles in cracks among rocks, rather than clinging as does the LIMPET. Many are edible. Length: to 2.5cm (1in). Family Littorinidae; genus *Littorina*.

Periwinkle, any of several species of trailing or erect evergreen plants that are cultivated as ground cover and for hanging baskets. The common creeping periwinkle of w Europe, *Vinca minor*, has small blue, white or pink flowers. Family Apocynaceae.

Perjury, act of bearing false witness under oath. In English law it is an indictable offence, punishable by imprisonment.

Perkin, Sir William Henry (1838–1907), British chemist who, in 1856, accidentally discovered the first artificial dye, aniline purple or mauve, while trying to synthesize quinine. He patented his invention and, a year later, set up a factory for its production, so creating the aniline dye industry.

Perlis, smallest state in Malaysia, bordered by Thailand (N and E), Kedah (SE) and the Andaman Sea (SW). It was made a separate state by the Siamese in 1841, became a British protectorate in 1909, a member of the Federation of Malaya in 1957 and in 1963 a state of Malaysia. Area: 803sq km (310sq miles). Pop. (1970) 121,062.

Perlon, synthetic POLYMER fibre, similar to NYLON, obtained by the POLYMERIZATION

of Caprolactam. Commercially important, it is used for fishing lines, hosiery, tow ropes and in the manufacture of tyres.

Perm, city of the Russian SFSR, USSR, w of the Ural Mountains on the Kama River; capital of Perm oblast. Founded in 1781, it grew rapidly during the 19th century as industry developed. It was known as Molotov from 1942 to 1958. Industries: timber, leather, agricultural machinery, metalurgy, oil extraction. Pop. (1980) 1,008,000.

Permeability, in geology, ability of rock to transmit water; it is not directly related to porosity. Limestone is a permeable but non-porous rock; water percolates only through the joints and fissures. *See also* pp.216–217.

Permeability, in physics, ratio of the magnetic flux density in a body to the external magnetic field inducing it. The permeability of free space is called the magnetic constant and has the value $4\pi \times 10^{-7}$ henry per metre. The relative permeability of a substance is the ratio of its permeability to the magnetic constant.

Permeke, Constant (1886–1952), Belgian painter and sculptor who was the leading Flemish exponent of realistic EXPRESSIONISM with his monumental depictions of workers in everyday activities.

Permian, geological period and a division of the PALAEOZOIC Era lasting from 280 to 225 million years ago. It was of widespread geologic uplift and mostly cool, dry climates with periods of glaciation in the southern continents. Many groups of marine invertebrate animals became extinct during the period; there was a gradual evolution towards modern types and reptiles diversified. Near the end of the Upper Permian period earth disturbances threw up the Appalachian Mts. *See also* pp.265, 268–269.

Permittivity, in physics, dielectric property of a material. It is the ratio of the CAPACITANCE of a capacitor (condenser) in which the material is the DIELECTRIC to its capacitance with a vacuum between the capacitor's plates.

Pernicious anaemia, severe ANAEMIA involving progressive decrease in the number of red blood cells, which grow larger in size. It is caused by a deficiency of VITAMIN B₁₂. Treatment is the administration of B₁₂ by injection.

Perón, Eva Duarte de (1919–52), Argentine political leader known as "Evita", first wife of President Juan PERÓN. She administered the country's social welfare agencies and was Argentina's chief labour mediator. Her popularity contributed to the longevity of the Peronist regime, and her authority was eclipsed only by that of her husband.

Perón, Juan Domingo (1895–1974), President of Argentina (1946–55, 1973–74), one of the most important political figures of Latin America. Through working-class and union support, and the popularity of his first wife Eva, Perón was elected President in 1946 and again in 1951. The Peronist programme of economic nationalism and social justice gave way to monetary inflation and political violence; Perón was ousted by a military coup in 1955. He returned from exile in Spain and was re-elected president in 1973, but died the following year. *See also* p.1740.

Perón, María Estela (1931–), second wife of Juan PERÓN and first woman chief of state in the Americas, who became President of Argentina when her husband died in office in 1974. She was overthrown on 24 March 1976 in a coup led by the commanders of the armed forces.

Peroxide, chemical compound containing two oxygen atoms united to each other (such as barium peroxide, BaO₂) and yielding a solution of HYDROGEN PEROXIDE (H₂O₂) when treated with an acid. Peroxides are powerful oxidizing agents.

Perpendicular style, in architecture, last period of English Gothic, from the late 14th to the mid-16th centuries. Named after the strong vertical lines of its window tracery and panelling, it is characterized by intricate fan vaulting and flattened arches. Well-known examples of the Perpendicular style include Henry VII's chapel, Westminster Abbey, King's Col-

lege Chapel, Cambridge, Sherborne Abbey and Bath Abbey. *See also* p.1353.

Perpetual motion, concept of a machine that, once started, would do work continuously without the need for any further input of energy. There are two types of such motion: in the first kind, a machine violates the first law of thermodynamics (conservation of energy); in the second kind, the first law is obeyed but the second law, concerning ENTROPY, is violated. The failure of all the many designs for perpetual motion machines has provided the best verification of the laws of THERMODYNAMICS. *See also* pp.845, 845.

Perrignan, city in s France, 155km (96 miles) SE of Toulouse on the River Têt. It was the capital of the Spanish kingdom of Roussillon, passing to France in 1659. It is the site of a 14th-century Gothic cathedral. Today it is a market centre, exporting fruit, vegetables and wine; tourism is also a valuable source of income. Pop. (1975) 107,971.

Perrault, Charles (1628–1703), French critic and poet. He was a member of the Académie Française (1671) and is mainly remembered for his fairy tales. *Tales of Past Time by Mother Goose* was published in 1697. *See also* p.1450.

Perréal, Jean (c.1460–1530), French painter. He designed funerary monuments and painted portraits, among them *Charles VIII and Anne of Brittany*, both executed c.1495, as illuminations.

Perrers, Alice (d.1400), mistress of EDWARD III of England. Because of her power and influence (her activities included taking part in lawsuits and sitting on the judges' bench), Parliament passed an act forbidding women to engage in the practice of law. She was banished in 1376, but parliament revoked her banishment three years later.

Perret, Auguste (1874–1954), French architect, a pioneer of REINFORCED CONCRETE as a building material. His apartment house in the Rue Franklin, Paris (1903) was highly influential, as were his garage on the Rue Ponthieu (1905) and Théâtre des Champs Élysées (1910–13), also in Paris. All were built on a reinforced concrete frame, using TRABEATE construction and Neo-Classical features. His Church of Notre Dame at Le Raincy (1922–23) is an early masterpiece in the new material. Perret designed numerous villas and a variety of elegantly monumental industrial buildings. After WWII he contributed designs for the partial rebuilding of Marseilles, Le Havre and Amiens. His research into the standardization and industrialization of building components was influential, notably on his pupil LE CORBUSIER. *See also* pp.1658–1659.

Perrin, Jean-Baptiste (1870–1942), French physicist and chemist known for his work on the structure of matter and for his investigation of CATHODE RAYS and BROWNIAN MOVEMENT of particles. Perrin was awarded the 1926 Nobel Prize in physics and wrote several books, including *The Elements of Physics* (1930).

Perronet, Jean Rodolphe (1708–94), French civil engineer. In 1747 he was appointed director of L'Ecole des Ponts et Chaussées (School of Bridges and Roads), the first engineering school in history. He is famous for his stone-arch bridges, such as the Pont de Neuilly and the Pont de la Concorde, in Paris, notable for their flat elliptical arches and narrow piers. *See also* p.533.

Perrot, Jules (1810–92), French dancer and choreographer. He trained and partnered Carlotta GRISI, whom he later married. Her title role in *Giselle* (1841) is now generally considered to have been choreographed by him. His other works include *Ondine* (1843), and *Esmeralda* (1844). From 1848 to 1859 he was the leading dancer with the Imperial Theatre, St Petersburg, Russia.

Perry, Fred (1909–), British table tennis and tennis player. World table tennis champion in 1929, he was the first man in the 20th century to win three successive Wimbledon tennis singles titles (1934–36). He also won the US, French and Australian titles and helped Britain to win

Perry, Matthew Calbraith

four Davis Cup challenge rounds (1933-36).

Perry, Matthew Calbraith (1794-1858), US naval officer who established the US Navy's apprentice system in 1837 and organized the first naval engineer corps. From 1833 to 1844 he supervised the application of steam power to warships and in 1837 commanded the first steam vessel in the US Navy, the *Fulton*. He was also responsible for opening-up Japan to the West (1853-54) and negotiating a treaty that secured US trading rights there. See also pp.1503, 1503, 1624, 1634.

Perry, alcoholic drink, similar to cider, made from fermented pear juice. The name comes from the Old French *peré*.

Perse, Saint-John. See LÉGER, ALEXIS ST.-LÉGER.

Perseid meteors, meteor shower visible between 25 July and 18 August, associated with the comet 1862 III and radiating from the constellation of PERSEUS. On a clear night, approx. 70 Perseid meteors can be seen per hour. See also pp.970-971.

Persephone, in Greek mythology, goddess of spring. She was the daughter of ZEUS and the earth goddess DEMETER. When she was abducted by HADES, king of the underworld, to be his wife, Demeter was grief-stricken. No crops grew and famine spread over the earth. To prevent catastrophe, Zeus commanded Hades to release her. He did so, and thus, each year, spring returns to the earth. Persephone was known as Proserpine to the Romans. **Persepolis**, ancient ruined city in Persia, approx. 48km (30 miles) NE of Shiraz, SW central Iran. It served as the capital of the ACHAEMENID Empire 539-330 BC and was the site of the palaces of DARIUS I and XERXES. Nearby are the ruins of Istakhr which served as the capital of the SASSANIDS c.AD 200. Excavations at another nearby site have revealed remains of a village dating from about 4000 BC. See also pp.1192-1193.

Perseus, in Greek mythology, son of DANAE and ZEUS, who came to her disguised as a shower of gold. Perseus was among the greatest heroes. He beheaded the snake-haired Gorgon MEDUSA, turned ATLAS to stone and rescued the princess ANDROMEDA from being sacrificed to a sea monster.

Perseus, northern constellation between Taurus and Cassiopeia. It contains several notable stellar objects including the eclipsing binary Algol (Beta Perseus) and the Sword Handle, which is made up of two open clusters (h and k). The brightest star is Alpha Perseus, or Mirphak, of magnitude 1.8. See also pp.989, 1006-1007, 1012, 1012.

Persia, former name of Iran, in SW Asia. The term was taken from the region of Persis in S Iran and used by the ancient Greeks c.540 BC to describe the inhabitants of the whole country. The earliest Persian kingdom was that of the Elamites c.2700-600 BC. CYRUS THE GREAT in c.550 BC conquered most of Asia Minor but his descendant, Darius, was defeated by the Greeks at MARATHON in 490 BC. They in turn were defeated by the PARTHIANS c.250 BC who were conquered by the SASSANIDS in AD 200. ISLAM was introduced to Persia by the Arabs who took Asia Minor c.640. Much of the country was destroyed by the MONGOLS in the 13th century. Persia was ruled by the QAJAR DYNASTY from 1780 to 1925, when AHMAD SHAH was deposed and REZA SHAH was elected Shah by the majlis, or parliament. The name of the kingdom was changed to Iran in 1935.

Persian, the principal language of IRAN and one of the two official languages of AFGHANISTAN. It is spoken by about 15 million of Iran's 32 million people, and by about 5 million people in Afghanistan. An Iranian language and thus part of the Indo-European family, it is one of the world's oldest.

Persian cat, long-haired breed of domestic cat that first appeared in Europe in the 16th century. It has a wide head with small, well-covered ears, wide-set blue or copper eyes and a short nose. The compact massive body is set on short, thick legs and the tail is short and full. The

colour of the fine-textured, fluffy coat indicates the variety; it may be black, blue, red tabby, cream, smoke or white.

Persian Empire, empire founded by CYRUS THE GREAT in 549 BC by uniting the kingdom of Persia with the Median empire to the north. It was also called the ACHAEMENID empire, after an ancestor of Cyrus. Its expansion was swift. In 546 BC the LYDIAN empire was annexed, in 538 BC the Chaldean, in 525 BC the EGYPTIAN and over the next 50 years further lands to the N and E. The last of the Persian emperors, DARIUS III, was defeated by ALEXANDER THE GREAT at the Battle of Arbela in 331 BC. Thereafter the Persian empire was absorbed into the empire of Alexander. See also pp.1192-1193.

Persian Gulf, part of the Arabian Sea, between Arabia and Iran; it is called the Arabian Gulf by the Arabs. In ancient times the gulf was a valuable trade and communication route but it declined in importance after the fall of Mesopotamia. Control of the region was disputed by several Eastern powers but Britain became the major power in the area in 1835. After British withdrawal in the 1960s both the USA and the USSR established bases on the gulf. Since the discovery and development of oil reserves further disputes among neighbouring states have arisen, and it has resumed its international strategic importance.

Persian lamb. See KARAKUL.

Persian Wars, series of wars fought between the Persian Empire and the Greek city-states from 499 BC to 449 BC. In 449 BC the Ionian city-states of Asia Minor rebelled against the rule of the Persian emperor DARIUS I. Their revolts were suppressed by 494. They had been aided by Athens and Eretria, and in reprisal Darius decided to add Greece to his empire. He conquered Thrace and Macedon in 492, but was defeated by the Athenians at MARATHON in 490. In 480 Darius's successor, XERXES I, captured Athens. His fleet was destroyed by the Athenians at SALAMIS (480) and his army destroyed by the Spartans at PLATAEA (479). The later years of the war saw a growth of Athenian power as the Athenian fleet led the assault on the Persians in Asia Minor. See also pp.1203-1204.

Persimmon, tropical Asian tree of the genus *Diospyros* which produces reddish-orange fruit which is sour and astringent until completely ripe. Commercially sold persimmons come from the Japanese persimmon (*D.kaki*). Family Ebenaceae.

Personality, the emotional, attitudinal and intellectual characteristics of an individual. Psychologists use the term to refer to the more enduring, long-term characteristics of a person rather than short-lived traits or momentary emotional states. Personality traits are assessed in psychology by means of a variety of devices, including personality tests and projective techniques. Among the most influential theories of personality in psychology have been the Freudian approach (PSYCHOANALYSIS) and theories of BEHAVIOURISM. See also pp.1122-1123.

Personality disorder, category of mental illness, differentiated from a NEUROSIS in that the sufferer experiences little or no anxiety. There are several kinds of personality disorders: personality pattern disturbances, including schizoid (shy and seclusive), cyclothymic (alternations of depression and elation) and paranoid (delusions of persecution) behaviour; personality trait disturbances, with a single dominant characteristic such as compulsivity; and sociopathic personality disturbances, marked by asocial or antisocial behaviour, without feelings of guilt. Drug and alcohol ADDICTION are also considered to be sociopathic personality disorders. See also pp.1112-1113.

Perspective, in art, way of showing three-dimensional objects and spatial relationships in a two-dimensional image. The linear perspective system is based on the idea of parallel lines and planes converging at a vanishing point as they recede into the distance. Using this principle, an artist can give a sense of perceptual space

and volume in drawings and paintings. Instead of using central perspective, with a single vanishing point, an artist can also use angular, or oblique, perspective, with two vanishing points. Another kind of parallel perspective, with the viewpoint from above, is common in Chinese painting. Linear perspective was not used in painting until the late 15th century in Italy, when the architects BRUNELLESCHI and ALBERTI developed mathematical rules for perspective that involved a horizon line or viewer's eye level and a vanishing point. DÜRER used these principles in his woodcuts. The use of linear perspective dominated European painting until the end of the 19th century, when CÉZANNE intentionally "flattened" his canvases and other artists used colour and shading to create depth. See also p.777.

Perspex, trade-name for polymethyl methacrylate, colourless transparent solid plastic. It is made by POLYMERIZATION of methyl methacrylate, and is widely used as a substitute for glass. See also pp.402, 588.

Perspiration, clear liquid secreted by the SWEAT GLANDS of mammalian skin as a way of regulating body temperature. The rate of perspiration increases in warm weather, after exercise and for emotional reasons. See also pp.150, 150.

Persuasion (1818), novel by Jane AUSTEN written in 1815-16. It describes the constancy of affection between Anne Elliot and Captain Wentworth, in spite of her having rejected him some years earlier. The tone is softer and the satire less cruel than in some of Austen's other novels.

Perth, city in SW Australia, on the Swan River; capital of Western Australia state. Founded in 1829, the city grew rapidly after the discovery of gold at Coolgardie in the 1890s, the development of the port at Fremantle and the construction of railways to the E in the early 20th century. The University of Western Australia was founded in Perth in 1911. Industries: cement, food processing, motor vehicles. Pop. (1979 est.) 883,600.

Perth, city in Tayside Region, central Scotland, on the River Tay. Perth, known as St Johnstoun until the 17th century, used to be an important fortress, being strategically placed between the Highlands and the Lowlands. It was the Scottish capital from the 12th century until the mid-15th century. Today Perth is an important cattle market, and has dye works and textile industries. Pop. (1971) 43,051.

Perthshire, former county in central Scotland; since 1975 it has been part of Tayside and Central regions. The land is mountainous and drained by the Tay and Forth rivers, and the region has lochs Tay, Earn and Rannoch. Its fine scenery attracts many tourists. Wheat, sugar-beet, potatoes and fruits, in particular raspberries, are grown on the fertile lowlands. Sheep and cattle are grazed on the hills. Industries include fishing, timber, textiles and whisky distilling. Area: 6,457sq km (2,493sq miles).

Pertinax Publius, Helvius (126-93), Roman emperor (r. Jan.-March 193). The praetorian prefect Laetus, only three months after arranging the murder of Commodus to make Pertinax emperor, had Pertinax assassinated because of his attempts to curb the power of the PRAETORIAN Guard.

Perturbation, disturbance of the motion of a celestial body produced by the gravitational influence of one or more other bodies.

Pertussis. See WHOOPING COUGH.

Peru, republic of NW South America, the third-largest nation on the continent, and once the home of the Incas. The Peruvian economy depends upon the country's rich mineral deposits, which include lead, copper, zinc, iron, tin, gold and oil. The principal crops are cotton, rice, coffee and sugar, all of which are exported. The capital is LIMA. Area: 1,285,216sq km (496,222sq miles). Pop. (1979) 17,293,000. See p.2120.

Peru current. See HUMBOLDT CURRENT.

Perugia, city of central Italy; capital of Perugia province and Umbria region. A

major Etruscan city, Perugia passed to Rome in 310 BC. It came under papal rule in 1540. Perugia was the centre of the Umbrian school of painting in the 15th century. Interesting features include the 13th-century city walls and the Maggiore fountain. Industries: food processing, textiles, machinery. Pop. (1975) 135,011.

Perugino, Pietro Vannucci (c.1445-1523), Italian painter of the School of FLORENCE whose works show a fine sense of PERSPECTIVE. In 1481 he was commissioned to paint the frescoes in the SISTINE CHAPEL, Rome. Of these, *Christ Delivering the Keys to St Peter* is famous.

Perutz, Max Ferdinand (1914-), British biochemist, b. Austria, who studied the X-ray DIFFRACTION of proteins. In 1953, he discovered that adding a heavy atom, such as gold or mercury, to each molecule of HAEMOGLOBIN produces a slightly different diffraction pattern. By this means he demonstrated the structure of haemoglobin, for which he shared the 1962 Nobel Prize in chemistry with John C. KENDREW, who, by a similar method, discovered the structure of MYOGLOBIN.

Pescadores (P'eng-hu Lieh-tao), group of several small islands controlled by Taiwan, in the Formosa Strait, between Taiwan and the Chinese mainland. The main islands are P'eng-hu, Yüweng and Paisha. Products include sweet potatoes, peanuts and coral. Area: 127sq km (49sq miles).

Pescara, seaport city in central Italy, on the Adriatic coast 153km (95 miles) ENE of Rome. It was badly damaged by bombing in WWII. A seaside resort and tourist centre, it also has local industries which include ship building and textile weaving. Pop. (1975) 132,458.

Peshawar, city in NW Pakistan, 16km (9 miles) E of the Khyber Pass. The city has always had great strategic importance. It was repeatedly attacked from the 1st century onwards by Afghan, Persian and Mongol invaders. It was held by the Sikhs 1834-49, when it was annexed by Britain, becoming an important military outpost. The modern city is famous for handicrafts, carpets and leather goods. Its industries include the manufacture of textiles, chemicals and paper. Pop. (1972) 268,366.

Pest, any plant, insect or animal regarded by man as a threat or annoyance to himself, to his interests or to his environment. Many pests, such as FLIES, MOTHS, BUTTERFLIES and BEETLES and their LARVAE, as well as APHIDS, have to be controlled systematically using PESTICIDES. Vertebrate pests including RODENTS, foxes, rabbits and birds are difficult to control. See also pp.666-667, 754, 758, 759-761.

Pestalozzi, Johann Heinrich (1746-1827), Swiss educational reformer whose theories formed the basis of modern elementary education. He wrote many books about new teaching methods, including *How Gertrude Teaches Her Children* (1801). He opposed the then prevailing system of learning by memorizing and believed that education should be based on concrete experience.

Pestalozzi villages, series of villages set up in Europe after WWII to provide homes for refugee children, named after the Swiss educationist JOHANN PESTALOZZI. The first village was built in 1946 in Switzerland under the direction of Robert Conti.

Pesticides, agents used to protect man or crops from the depredations of harmful plants or animals. An agent which kills weeds is known as a HERBICIDE, one which kills insects, an INSECTICIDE. Pesticides are most often chemicals and an important criterion in their manufacture is that they should decompose after they have performed their function.

Petah Tigwa, city in W central Israel, 11km (7 miles) ENE of Tel Aviv-Jaffa. It was founded in 1878 as the first modern Jewish agricultural settlement in Palestine. It is now a commercial centre and produces textiles, chemicals, building stone and rubber products. Pop. (1974) 103,000.

Pétain, Henri Philippe (1856-1951), French soldier and chief of state. In WWII he distinguished himself by holding VERDUN against the Germans, was appointed Commander-in-Chief in 1917

and made a marshal in 1918. Between the wars he was the most influential military figure in France and served on the Higher Council of War (1920–30). In 1940, after France had surrendered to Germany at the beginning of WWII, Pétain was recalled from Spain (where he was ambassador) and made head of state of the defeated nation; he led the VICHY GOVERNMENT which collaborated with the Germans. As a great war hero forced to concede German demands, he symbolized the situation of many Frenchmen during WWII. In 1945 he was condemned to death, a sentence which Charles DE GAULLE commuted to life imprisonment.

Petal, one of the four basic parts of a flower (the others are SEPAL, STAMEN and PISTIL). The petals of a flower are together known as the corolla. Surrounded by the sepals, flower petals are usually brightly coloured and often secrete nectar and perfume to attract the insects and birds necessary for CROSS-POLLINATION. Once fertilization occurs, the petals usually drop off. See also p.383.

Peter, Saint (died c.64), APOSTLE of Jesus Christ, always named first in any list of apostles in the gospels and for much of the time leader or spokesman for the others. As Simon son of Zebedee, he was with his brother ANDREW called by Jesus and renamed Cephas (Greek for "rock", translated into Latin as Petrus); Jesus said "On this Rock I will build my Church" (Matthew 16:18). After Jesus's ascension and the descent of the Holy Ghost at PENTECOST, Peter was the first publicly to preach Christianity. It was JAMES, however, who was placed in charge of the community in Jerusalem, and it may be inferred that Peter was either imprisoned or travelling about as a missionary. There is no evidence earlier than the mid-2nd century that Peter ever went to Rome, although according to Roman Catholic theology the POPE is considered Peter's successor.

Peter, name of two kings of MONTENEGRO. Peter I (1747–1830), the Great Vladika (prince-bishop) of Montenegro from 1782, forced the Turkish Sultan Selim III to recognize Montenegro's independence by a treaty in 1799. Peter II (1813–51) became prince-bishop in 1830. While guarding his lands from the constant threat of Turkish invasion, he instituted many far-reaching reforms including the installation of the first printing press.

Peter, name of five kings of Portugal. Peter I (1320–67; r.1357–67) succeeded ALFONSO IV after rebelling against him in 1355 because Alfonso had Peter's lover, Ines de Castro, murdered. On his accession, Peter had her murderers executed. Peter II (1648–1706; r.1683–1706) became king after acting as regent for his brother Alfonso VI since 1668. He promoted Portugal's prosperity, but was drawn into the War of the SPANISH SUCCESSION. Peter III (1717–86; r.1777–86) ruling jointly with his wife and niece, Maria I. (For Peter IV, See PEDRO I, emperor of Brazil). Peter V (1837–61; r.1853–61) succeeded his mother Maria II; his father was regent until 1855. He made many reforms, improving Portugal's transport systems by building railways, and introducing higher education.

Peter, name of three tsars of Russia. Peter I (1672–1725), known as Peter the Great, reigned from 1682 to 1725. He ruled jointly with his half-brother Ivan until 1689. He conquered Azov in 1695, travelled in Europe (1696–97) and took back to Russia many Western ideas and technicians. He began a series of domestic reforms in 1700: he encouraged industry, reorganized the administration, developed a new civil service class, weakened the Church and introduced western fashions. He built ST PETERSBURG as his new capital, and made Russia a European power for the first time. He fought Sweden in the NORTHERN WAR (1700–21) and, although losing Azov in 1711, extended Russia towards Siberia. Peter II (1715–30) became tsar in 1727. Peter III (1728–62) succeeded to the throne in 1762. He withdrew Russia from the SEVEN YEARS WAR, introduced liberal

reforms and ended conscription for the gentry. He was forced to abdicate and was then killed after a conspiracy in which his wife, who succeeded him as CATHERINE II, took a prominent part. See also pp.1456–1457.

Peter I (1844–1921; r.1903–21), King of Serbia. Brought up in exile and educated in France while the OBRENOVICH DYNASTY ruled Serbia, he came to the throne when King Alexander was assassinated. He was a staunch advocate of constitutional government and in 1918 became the first King of the new kingdom of Serbs, Croats and Slovenes (later known as Yugoslavia).

Peter II (1923–70), last king of Yugoslavia. He nominally ascended the throne in 1934 at the age of 11, but the actual ruler was his uncle, Prince Paul, who was deposed in 1941 by a military coup. Peter ruled for a month until the invasion of the AXIS POWERS, when he fled to London. After the monarchy was abolished in 1945 he settled in the USA.

Peter, the Epistles of St, two New Testament letters traditionally ascribed to St PETER. Both content and style, however, make it practically certain that they were not written by him, that they date from 50 to 90 years after his death, and that they were both probably by different authors. The first letter, written c.117 is addressed to communities of Greek Christians apparently experiencing persecution; the second, written c.150, encourages faith in the Second Coming of Christ.

Peter, Laurence Johnston (1919–), Canadian-born educator and writer who is well-known for *The Peter Principle: Why Things Always Go Wrong* (1969). This states that in a hierarchical system an employee tends to rise to his level of incompetence. The actual work is done by those employees who have yet to reach their level of incompetence.

Peter and the Wolf (1936), by Serge PROKOFIEV, musical tale for children, first performed by speaker and orchestra in Moscow. Various instruments are used to represent characters in the narrated story – the flute portrays a bird, the clarinet a duck.

Peterborough, Charles Mordaunt, 3rd Earl of (1658–1735), English political figure and military commander. He became First Lord of the Treasury in 1689 after JAMES II was deposed, but was imprisoned in 1697 on suspicion of plotting to assassinate WILLIAM III. Commanding the British fleet in Spain in the War of the SPANISH SUCCESSION, he captured and raised the siege of Barcelona in 1706.

Peterborough, county district in N CAMBRIDGE (SHIRE), England; created in 1974 under the Local Government Act (1972). The city of Peterborough, an important industrial and agricultural centre, is built round St Peter's Cathedral, a renowned example of Romanesque architecture. Area: 346sq km (136sq miles). Pop. (1979 est.) 129,300.

Peter Grimes (1945), three-act opera by Benjamin BRITTEN with libretto by Montagu Slater, based on George CRABBE's poem *The Borough*. It was first produced at Sadler's Wells Theatre, London, and the title role was created by Peter PEARLS. See also p.1599.

Peter Lombard (c.1100–60), Italian religious writer. After teaching in Paris from 1136 he wrote his most famous work, *Libri quatuor sententiarum* (1148–51). This deals with the Trinity, Creation and Sin, the Incarnation and the Virtues, and the Sacraments. It was only superseded by the Summa Universae Theologiae of Thomas AQUINAS.

Peterloo Massacre (1819), dispersal of a radical meeting in St Peter's Fields, Manchester. A crowd of some 60,000 had assembled to demonstrate for the repeal of the CORN LAWS and for parliamentary reform. The magistrates ordered the speakers to be arrested by untrained yeomanry who also attacked the crowd. A cavalry charge in aid of the yeomanry resulted in 11 deaths and an estimated 500 injured. The government's endorsement of the magistrates' action caused widespread resentment and intensified the general demand for parliamentary

reform. See also pp.1570, 1570.

Peter Pan (1904), five-act play by J. M. BARRIE, published in 1928. Peter Pan is a boy who never grows up. He flies in through a nursery window, teaches Wendy and her two brothers to fly, and takes them to Never-Never Land. They encounter Indians, Captain Hook and his pirates, and a crocodile with a ticking clock in its stomach.

Peter principle. See PETER, LAURENCE JOHNSTON.

Peterson, Oscar (1925–), Canadian jazz pianist. Gifted with a formidable technique, he led his own trios from the early 1950s, and was much in demand to accompany other musicians and singers such as Ella FITZGERALD.

Peter's Pence, annual payment by the English Crown to the Pope, beginning as a national payment in the reign of ALFRED in the late 9th century. Originally a hearth tax (based on the number of hearths in the country) it was fixed at £201.9s. a year. It was abolished by Parliament in 1534.

Peter the Cruel (1334–69), Spanish King of Castile and León from 1350 to 1369. Constantly at war with his illegitimate brother, Henry of Trastámara (later HENRY II), Peter allied himself with England and EDWARD THE BLACK PRINCE while Henry had the backing of ARAGÓN. Henry defeated Peter in 1366 and had himself crowned. The next year, however, Peter and Edward defeated Henry. In 1369 Henry won the decisive battle of Montiel and killed Peter.

Peter the Great. See PETER I (Tsar).

Peter the Hermit (c.1050–1115), French priest who helped to start the First CRUSADE. After Pope URBAN II proclaimed the Crusade in 1095, Peter began preaching in central France in support of the war. In 1096, having made his way to Cologne, he set out to Constantinople with a motley army. Most were killed by the Turks, but Peter escaped and succeeded in reaching Jerusalem; he returned to Europe in 1100, becoming prior of a monastery in Belgium.

Petesuchos, the sacred crocodile of ancient Egypt. He was worshipped as the incarnation of Sebek, and a live specimen, representing the god, was decorated with gold jewellery and fed delicacies by priests and visitors.

Pethidine, synthetic ANALGESIC drug. It is a strong NARCOTIC and ADDICTION may result from its repeated use.

Petipa, Marius (1819–1910), Russian dancer and choreographer. He rose to fame in 1847 as premier danseur at the Imperial Theatre, ST PETERSBURG, and was choreographer of the Imperial Russian Ballet (1862–1903). His *Don Quixote* (1869), *Sleeping Beauty* (1890) and *Raymonda* (1898) laid the foundations of classical ballet. See also p.1758.

Petition of Right (1628), statement of civil liberties sent by the English Parliament to CHARLES I. The petition was based on earlier statutes and charters and asserted four principles: no taxes may be levied without the consent of Parliament; no subject may be imprisoned without cause shown; no soldiers may be quartered upon the citizenry; and martial law may not be employed in time of peace. The king accepted these rights and in return received subsidies from Parliament, although he continued to collect TONNAGE and POUNDAGE duties without Parliament's authorization. The petition is of great importance as a safeguard of civil liberties. See also p.1420.

Petit mal, type of EPILEPSY in which brief episodes of unconsciousness, usually lasting less than 15 seconds, occur several times a day. It is found mainly in children. See also p.1073.

PETN, pentaerythritol tetranitrate, percussion explosive. Its empirical formula is C₅H₈N₂O₁₂ and its configuration tetragonal with four CH₂ONO₂ groups about a central carbon atom. More sensitive to shock than TNT, PETN is used to make detonating fuses such as Primacord, which is a waterproof textile with a core of powdered PETN. It is also used in treatment of heart conditions.

Petőfi, Sándor (1823–49), Hungarian

poet and revolutionary, whose poems reflected his radical views. His writings include *Versek* (1844) and a novel *A Höher Kötele* (1845). His poetry was an inspiration to the patriots of the Hungarian revolution of 1848 during which he was killed.

Petra, ruined ancient city in SW Jordan. It was held by the Nabataeans from the 4th century BC until the Roman occupation of AD 106. It was an early centre of Christianity, captured by the Muslims in the 7th century and recaptured by the Crusaders in the 12th century. Petra was also an important city on the caravan trade routes. The ruins were discovered in 1812 by Johann Burckhardt; they include temples, palaces and a theatre carved from local pink limestone.

Petrarch, Francesco Petrarca (1304–74), Italian lyric poet and scholar, one of the best known poets of the late Middle Ages. His work influenced Geoffrey CHAUCER and was taken as a model by the poets of the English RENAISSANCE, besides exerting an important influence on his Italian successors. Most of his poems have as their subject "Laura", a woman idealized by Petrarch in the style of earlier Italian lyric poets but seen in a more realistic and human light. See also p.1380.

Petrassi, Goffredo (1904–), Italian composer. His early work was neo-tonal and neo-classical in the manner of STRAVINSKY. After WWII he turned to TWELVE-TONE music and, later, to SERIALISM.

Petrel, any of several small oceanic birds related to the ALBATROSS. They are known by a variety of names including FULMAR, gannet, petrel and storm petrel. Most of them nest in colonies and fly over open water, unaffected by the most violent weather, feeding on squids and small fish. They have webbed feet and tubular nostrils. Length: to 42cm (16in). Order Procellariiformes. See also p.339.

Petrie, Sir William Matthew Flinders (1853–1942), British archaeologist and Egyptologist. He helped to develop important excavation methods and techniques, founding the Egypt Research Account in 1894, later known as the British School of Archaeology in Egypt. His most important work was at Memphis but he also excavated Greek trading colonies and in Palestine.

Petrification, fossilizing process in which organic material (eg wood) changes into stone. This is caused by mineral-rich water seeping into the empty spaces of dead, buried trees or animals, which eventually become stone. Although petrified remains can be up to 300 million years old, the stone often reproduces the original living material so clearly that the cell structure is identifiable. The Petrified Forest National Park in eastern Arizona, USA, has many examples of petrified wood.

Petrochemicals, chemical substances derived from PETROLEUM or NATURAL GAS. The refining of petroleum is undertaken on a large scale not only for the fuels obtained (petrol, KEROSENE, fuel oil and natural gas) but also for the wide range of chemicals that can be derived from it. These chemicals include the common alkanes (paraffins) and alkenes (olefins), cyclohexane, BENZENE, TOLUENE and NAPHTHALENE. AMMONIA is sometimes regarded as a petrochemical because the hydrogen used in its manufacture is often derived from petroleum. See also pp.438–441.

Petrograd. See LENINGRAD.

Petrol, also called gasoline, a major HYDROCARBON fuel, a mixture consisting mainly of hexane, octane and heptane. One of the products of oil refining, petrol is extracted from crude oil, which is formed over geological time from the fossilized remnants of early life forms. Frequently other fuels and substances are added to petrol to alter its properties. Most modern cars have high-compression engines, and the mixture of air and petrol vapour supplied to it can explode too quickly, pushing against a rising instead of a descending piston. This effect is known as "knock", and to eliminate it many petrol manufacturers add TETRAETHYL LEAD (an anti-knock agent) to slow the

Petrol engine

Petroleum; petrochemical plants refine commercial products from crude oil.

Petrushka; Stravinsky (left) and Nijinsky were key figures in Diaghilev's ballet.

Petunias, which thrive in the sun, have large funnel-shaped flowers.

Peugeot; a 1913 racing car made by the famous international motor company.

rate of combustion. But this additive has been found to be implicated in atmospheric pollution, and so some manufacturers omit the additive and instead improve the octane rating of the petrol – a measure of its anti-knock properties – by altering the mixture of hydrocarbons in it. *See also* OIL REFINERY; PETROLEUM; pp.399, 416–417, 441.

Petrol engine, commonest type of ENGINE; it uses the expansion of hot gases produced when a mixture of petrol (a light, highly inflammable HYDROCARBON) and air are burnt, to drive a reciprocating (to-and-fro) piston, or rotating cylinder. Unlike the diesel engine, the petrol engine requires an electrical system to ignite the petrol vapour produced in a CARBURATOR before combustion. *See also* pp.420–421.

Petroleum, fossil fuel that is chemically a complex mixture of HYDROCARBONS. It accumulates in underground deposits and is generally a mixture of gaseous, liquid and solid materials. Some deposits consist mainly of gas (NATURAL GAS) whereas others are predominantly liquid (crude oil). The chemical composition of petroleum strongly suggests it originated from the bodies of long-dead organisms, particularly marine plankton. After death these sank to the ocean floor, to be broken down by bacteria into simpler organic materials, including hydrocarbons. Most petroleum is extracted via OIL WELLS from reservoirs in the Earth's crust sealed by upfolds of impermeable rock or by salt domes. *See also* PETROL; PETROLEUM REFINING; pp.416–417, 438–439.

Petroleum refining, process by which crude oil is converted into usable substances. These include PETROL, PETROCHEMICALS and oils for fuel and lubrication. Crude oil is a mixture of many HYDROCARBONS, as well as compounds of sulphur, oxygen, nitrogen and various ASPHALTS. The heavier hydrocarbons, which usually have higher boiling points than lighter ones, are distilled (separated from the original crude substance) as the first stage of refining. The next stage is CRACKING, to break the heavy hydrocarbons down into more economically useful products, eg petrol, KEROSENE. Purification of the various products to remove impurities, such as sulphur and nitrogen compounds, completes the refining process. The most versatile end products are ETHYLENE and PROPYLENE which are widely used in the plastics and chemical industries. *See also* pp.440–441.

Petrology, study of rocks, including their origin, chemical composition and occurrence. Formation of the three classes of rocks – IGNEOUS, of volcanic origin; SEDIMENTARY, deposited by water, and METAMORPHIC, which is either of the other two changed by temperature and pressure – are studied. *See also* pp.208–211.

Petronius (d.c.ad 66) Roman satirist, nicknamed Patronius Arbitrator because, according to TACITUS, he was the arbiter of elegance at NERO's court. He committed suicide after he was arrested on a charge of plotting Nero's death. His *Satyricon* (c.ad 60), a romance in both prose and verse, survives only in fragments.

Petropavlovsk, city in N Kazakhstan (Kazachskaya SSR), USSR, on the River Isim 274km (170 miles) W of Omsk. Founded in 1752 as a Russian fortress, it was also a caravan trading centre for silk, skins and carpets. Today its products include clothing, canned goods, bricks and machinery. Pop. (1975) 193,000.

Petropolis, city in SE Brazil 43km (27 miles) N of Rio de Janeiro. It was settled by German immigrants under the guardianship of Emperor Dom Pedro II, in whose honour the city was named. It is known as the "summer capital" of Brazil, and its main industry is tourism. Pop. (1970) 116,080.

Petrović, George. *See* KARAGEORGE.

Petrozavodsk, capital of the Karelian autonomous republic which lies within the Russian Republic (Rossiskaya SFSR), USSR; a port on the W coast of Lake Onega. Its industries include shipbuilding, timber and engineering. Pop. (1975) 210,000.

Petrushka (1911), ballet in four scenes,

choreographed by Michael FOKINE with music by Igor STRAVINSKY. First produced by DIAGHILEV'S BALLETS RUSSES in Paris, it is considered one of Fokine's greatest works and is in the repertoire of most US and European ballet companies. *See also* pp.1754, 1759.

Petty Sessions, local criminal and civil courts in Britain presided over by two or more JUSTICES OF THE PEACE or a metropolitan or stipendiary magistrate. Developed during Tudor times to deal summarily with minor charges, over the centuries their scope has been enlarged to include many minor criminal and civil matters.

Petunia, genus of flowering plants of the nightshade family that originated in Argentina, and the common name for any of the crossbred varieties that are popular as garden bedding plants. Most varieties derive from the white flowered *P. axillaris* and the red *P. violacea*; they may be erect, shrubby or pendant. The bell-shaped flowers have five petals and may be almost any colour. Family Solanaceae.

Peugeot, international manufacturer of cars, bicycles, tools and steel. Based in France, in the mid-1970s it employed about 97,000 persons. *See also* p.492.

Pevensey, village in East Sussex, SE England, once on the English Channel, but now a mile inland. It was the landing place of WILLIAM the Conqueror, in 1066. The modern town is a tourist resort. Pop. 2,151.

Pevsner, Antoine (1886–1962), French sculptor, b. Russia, who was initially influenced by CUBISM. Later he became a leading CONSTRUCTIVIST sculptor, creating works in bronze and other materials. In the 1930s he concentrated on non-figurative structures such as *Projections in Space*. A later work is *Monument Symbolizing the Liberation of the Spirit* (1956). **Pevsner, Sir Nikolaus** (1902–), British architectural historian, b. Germany. He is famous for his monumental survey of the buildings of England and for his work in justifying 20th-century architecture to the English mind.

Pewter, any of several alloys that consist mainly of tin and lead. The most common has four parts of tin and one of lead, combined with small amounts of antimony and copper. Owing to the poisonous properties of lead and antimony, pewter has been replaced by other alloys in the making of domestic utensils.

Peyote, or mescal, either of two species of cactus of the genus *Lophophora* that grow in the USA. The soft-stemmed *L. williamsii* has pink or white flowers in summer and a blue-green stem. *L. diffusa* has white or yellow flowers. Peyote contains many ALKALOIDS, the principal one being MESCALINE, well-known as a hallucinogenic drug. Its use is now prohibited by law in some places. *See also* p.1081.

Pfeffer, Wilhelm Friedrich Philipp (1845–1920), German biologist. He developed a method for measuring OSMOTIC PRESSURE and showed that such pressure is caused by the accumulation of molecules on one side of a semi-permeable membrane because they are too large to pass through it.

pH, logarithmic measure of the acidity of a solution. It measures the concentration of hydrogen ions in gramme molecules per litre; the symbol for this concentration is $[H^+]$. Pure water at ordinary temperatures dissociates slightly into equal numbers of hydrogen ions and hydroxyl ions: $H_2O \rightleftharpoons H^+ + OH^-$. The concentration of each type of ion is defined as being 10^{-7} gramme molecules per litre. The pH of water is: $pH = \log_{10} 1/10^{-7} = 7$. The concentration of hydroxyl ions is similar: $pOH = \log_{10} 1/10^{-7} = 7$. Thus for water $pH + pOH = 7 + 7 = 14$. If acid is added to water the number of hydrogen ions will increase and the hydroxyl ions decrease such that the sum $pOH + pH = 14$. Thus if pH is 2, pOH is 12, that is $[H^+] = 10^{-2}$ and $[OH^-] = 10^{-12}$. If the pH is less than seven the solution is acidic, if greater than seven it is alkaline.

Phaedrus, Latin fabulist (c.15 BC–c.ad 50). He was born in Thrace and taken to Rome as a slave in the household of the Emperor AUGUSTUS, who granted him his

freedom. Phaedrus was the first Roman to treat the fable as a serious exercise in composition, and his animal fables are based largely on those of AESOP.

Phaestos, ancient city situated on the fertile plain of Mesara in s Crete where early tablets of LINEAR SCRIPT have been found. Excavations have revealed substantial buildings dating from 2000 BC. These appear to have been destroyed c.1700 BC, rebuilt and again destroyed c.1450 BC. Phaestos remained in ruins until colonized by MYCENEANS from mainland Greece c.1200 BC. *See also* pp.1170–1171, 1172–1173.

Phaëton, in Greek mythology, son of HELIOS, the sun god. He drove his father's sun chariot across the sky but lost control of the horses, causing the earth to burn. To save the world Zeus struck him from the reins with a thunderbolt and Phaëton fell to earth at the mouth of the River Eridanus. His sisters, the Heliads, mourned beside his tomb and were transformed into trees; their tears were turned into amber.

Phaeton, light, open, four-wheeled carriage, usually drawn by a pair of horses. It was especially high-perched and the rear wheels were larger than the front. It was a favourite carriage of the fashionable set in Regency England.

Phagocytes, any cells able to engulf other cells, such as bacteria. Two of the LEUCOCYTES, or white blood cells, are phagocytes. These digest what they engulf in the defence of the body against infection. They also act as scavengers by clearing the bloodstream of the remains of the cells that die as part of the body's natural processes. *See also* p.159.

Phalanger, any of about 45 species of mainly nocturnal arboreal marsupials of Australasia; they are commonly called possums. It has opposable digits for grasping branches and the tail is long and prehensile. It is mainly a herbivorous, but it also eats insects and small animals. Family Phalangeridae. *See also* pp.91, 308.

Phalanges, bones in the toes and fingers. In human beings there are 14 phalanges in each hand and foot, 2 in each thumb and big toe and 3 in the remaining digits. They are connected to the METACARPALS in the hand and to the METATARSALS in the foot.

Phalanx, tactical formation of ancient Greek armies, consisting of eight or more files of infantrymen armed with long pikes, often 4m (13ft) long. The use of the phalanx reached its height in the Macedonian army of ALEXANDER THE GREAT (r.356–323 BC); thereafter it became obsolete. *See also* pp.1202, 1205, 1214.

Phalarope, any of three species of small, long-necked, web-footed shorebirds; they are wading birds that regularly swim. The female, larger and more brightly coloured than the male, fights for nesting spaces and initiates the courting procedure. Males undertake the nesting duties. Species may be grey, or grey and white, with red. Length: to 25cm (10in). Family Phalaropodidae; genus *Phalaropus*.

Phanerogam, obsolete term for flowering plants now called SPERMATOPHYTES.

Phan-thiet, port in s South Vietnam, on the South China Sea, 180km (112 miles) NE of Saigon; capital of Bin Thuan province. It is now the principal fishing port of South Vietnam and the headquarters of the Vietnamese fishing co-operatives. Industries: fish processing, bricks, tiles. Pop. (1971) 76,652.

Phantom pregnancy. *See* FALSE PREGNANCY.

Pharaoh, title given to the rulers of ancient Egypt after the Eighteenth Dynasty, 1570–1320 BC. The Pharaoh was considered to be the son of the sun god RA and the incarnation of the god HORUS. *See also* pp.1166–1167, 1180–1181.

Pharisees, Jewish religious group, prominent in Israel in the 1st century AD, before the destruction of the second temple in 70. The name of the sect means "separated", indicating their emphasis on purity and freedom from sin. They are seen as the ancestors of the RABBIS of today. Contrary to popular belief, the New Testament condemnation of the

Pharisees as "hypocrites" was not directed against the entire group, but only against a minority.

Pharmaceutical chemistry, study of the methods of preparation and properties of the inorganic and organic compounds used in medical prophylaxis and therapeutics. Pharmaceutical chemistry, which includes aspects of medicine, biochemistry and preparative organic chemistry, is largely concerned with the synthesis of new types of drug and with testing these for safety and clinical effectiveness.

Pharmaceutical industry, section of industry which manufactures the various remedies prescribed by doctors. These include ANTIBIOTICS, synthetic and natural analgesics, TRANQUILLIZERS, anti-depressants, sleeping pills and contraceptive devices.

Pharmacology, study of medicines, drugs and other substances and their effects on the body. It includes a group of related sciences, such as therapeutics, which looks at the way drugs are used to treat disorders; toxicology, the study of poisons; and pharmacy, the preparation of drugs.

Pharos, island off the coast of N Egypt, in the Mediterranean, connected to the mainland by a stone structure built by ALEXANDER THE GREAT. A lighthouse was completed by Ptolemy II in 280 BC and was considered one of the SEVEN WONDERS OF THE WORLD. It was destroyed by an earthquake in 1346. Pharos is now part of the city of Alexandria.

Pharyngitis, inflammation of the throat (pharynx) usually caused by viral or bacterial infections. The mucous membrane becomes swollen, causing soreness of the throat. Fever, headache and enlargement of the LYMPH nodes are also common symptoms. These persist for about five days; treatment is usually with antibiotics. See also p.1064.

Pharynx, region at the back of the mouth that is the common passageway for food and air. It extends from the nasal cavities (from which it is separated by a flap of tissue called the uvula in the back of the mouth) to the glottis, the opening into the TRACHEA (or windpipe), which is closed off by the epiglottis. The pharynx is continuous with the OESOPHAGUS, which leads to the stomach. See also pp.158-161.

Phase diagram, graph showing the conditions under which different equilibrium phases of substances exist. For example, a curve of melting point against pressure of a pure solid divides the graph into two regions. Points in one represent temperatures and pressures at which the substance is solid; points in the other represent the liquid conditions. Graphs of composition against temperature are used to indicate such features as solubilities and the ranges of stability of alloy phases. See also p.837.

Phases, in astronomy, apparent changes in the shape of the Moon as seen from Earth, related to the extent to which the surface of the Moon is illuminated by the Sun, at different positions in the lunar orbit. The phases range from new, when the Moon lies between the Earth and the Sun and is totally invisible, to full, when the Moon reaches opposition and the whole surface is illuminated. Similar phases of the inferior planets, Mercury and Venus, can be seen from Earth. See also pp.928, 928, 938, 938, 940.

Phasmida, order of insects, including LEAF INSECTS and STICK INSECTS; some species are wingless or may have tegmina (leathery forewings) shorter than wings, or modified and enlarged hindwings. All have legs developed for walking, and mouthparts for chewing.

Phasant, game bird of the genus *Phasianus* originally native to Asia, introduced into Europe and naturalized in North America. PEACOCKS and GUINEA FOWL belong to the same family. Males are resplendent with brownish green, red and yellow feathers; females are smaller and brownish. The shooting season in Britain lasts from October to January. Length: up to 89cm (35in). Family Phasianidae; species: *Phasianus colchicus*. See also pp.736, 737.

Phèdre (1677), tragedy by Jean RACINE, based on *Hippolytus*, by EURIPIDES.

Phèdre, the wife of Thésée, declares her love for her stepson, Hippolyte, who is horrified. Oenone, Phèdre's old nurse and confidante, goes to Thésée and accuses Hippolyte of dishonourable advances to her mistress. Hippolyte dies and Phèdre, who has taken poison, dies confessing Hippolyte's innocence and her own guilt. See also p.1451.

Phelps, Samuel (1804-78), British actor and theatre manager who became known for his Shakespearean productions. In 1844 he helped to establish the SADLER'S WELLS Theatre in London as a centre for Shakespearean drama.

Phenacetin, or acetophenetidin, white crystalline compound ($C_{10}H_{13}NO_2$) derived from coal tar. It is a mild, non-addictive drug used for reduction of fever and relief of pain. The prolonged use of phenacetin may result in dizziness, kidney damage and haemoglobin changes.

Phenacite, orthosilicate mineral, beryllium silicate (Be_2SiO_4), found in PEGMATITES and high-temperature veins. It has hexagonal system rhombohedral crystals and is either colourless or glassy white, yellow, red or brown in colour. Hardness 7.5-8; s.g. 3. It is sometimes used as a gem.

Phenelzine, anti-depressant DRUG also known as Nardil, Estinerval or Nardelzine. It is a MONOAMINE OXIDASE inhibitor and as such is antagonistic to many foods, especially cheese and dairy products which should therefore not be eaten by people taking the drug. The side-effects of Phenelzine include drowsiness, dizziness and liver damage.

Phenobarbital, barbiturate (whose trade names include Gardenal and Luminal) that acts as a central nervous system depressant frequently used to treat epilepsy and convulsions. Its side-effects include sedation and when its use is discontinued, symptoms of withdrawal may occur.

Phenobarbitone, drug prescribed as a mild sedative in the relief of nervous tension, insomnia and anxiety. As a BARBITURATE it is addictive and highly poisonous if taken with alcohol. It is widely used as an anticonvulsant in the control of epileptic seizures.

Phenol, any of a family of organic compounds that are known by the attachment of a minimum of one hydroxyl group to a carbon atom forming part of the BENZENE ring. Phenol (carbolic acid) is the specific name for monohydroxybenzene (C_6H_5OH) and the generic name for compounds containing one or more hydroxyl groups attached to an aromatic ring. Phenols are colourless liquids or white solids at room temperature with higher melting and boiling points than the parent hydrocarbons from which they are derived. Phenol is used by the chemical and pharmaceutical industries for conversion to such products as aspirin, dyes, fungicides, and bactericides, in addition to its application as a starting material for nylon and epoxy resins.

Phenolphthalein, organic compound ($C_{20}H_{14}O_4$), prepared by a reaction between phenol and phthalic anhydride in the presence of sulphuric acid. It is used as a chemical indicator (colourless in acid solutions, red-pink in alkalis), in laxatives and in dyes.

Phenomenalism, philosophical proposition that human knowledge is restricted to what appears either as physical objects or as the content of mental impressions. Phenomenalists either postulate an intrinsic reality behind experience or affirm that appearances alone are sufficient for understanding reality. Both KANT and HUME held to a form of phenomenalism.

Phenomenological movement, school of philosophy at the turn of the century that arose with the work of Edmund HUSSERL. Phenomenology is the study of appearance; Husserl moved away from causal explanations of experience towards direct description of experienced phenomena, to understand their essential structures and relationships.

Phenomenon of Man, The, (1959), translation of *Le Phénomène Humain* (1938-40), by the French palaeontologist and

Catholic priest, Pierre TEILHARD DE CHARDIN. In this book he attempted to reconcile the theory of evolution with theological ideas about the origin of man. These ideas caused great controversy in his Church when the book was first published.

Phenothiazine, widely used worming agent effective against a broad range of animal parasites. It is highly toxic to human beings but its derivatives are used as TRANQUILLIZERS and as anti-hallucinogenic drugs in the treatment of schizophrenia.

Phenotype, physical characteristic of an organism - anatomical and physiological - resulting from heredity and environment. See also GENOTYPE.

Phenylamine, class of compounds which includes ADRENALINE (epinephrine) and ephedrine. Adrenaline is an important hormone secreted in the body at times of stress and ephedrine is an AMPHETAMINE once used as an antidepressant and for treating allergies such as hay fever.

Phenylalanine, crystalline soluble AMINO ACID found in PROTEINS. It is essential to human nutrition.

Phenylketonuria, or PKU, hereditary condition in which the amino acid phenylalanine cannot be metabolized normally because the ENZYME phenylalanine hydroxylase is absent or inactive. Infants with PKU excrete phenylalanine in the urine. Special diets are used to treat the condition.

Pheromone, substance secreted externally by certain animals that influences the behaviour of members of the same species. Common in mammals, insects and fish, these substances are often sexual attractants and may be a component of body products such as urine, or they may be secreted by specific glands. See also pp.6-9.

Phidias (fl.490-430 BC), Greek sculptor whose greatest achievements were the statue *Athena Parthenos* for the Acropolis and *Zeus* for the temple at OLYMPIA. The *Athena* was the chief treasure of Athens and the *Zeus*, in gold and ivory, one of the SEVEN WONDERS OF THE WORLD. Although his works are lost he is traditionally credited with the design of several sculptures on the PARTHENON. See also p.1212.

Philadelphia, city and port in SE Pennsylvania, USA, at the confluence of the Delaware and Schuylkill rivers: fourth largest city in the USA. The city was founded by William PENN in 1681. By 1774 it was a major commercial, cultural and industrial centre of the American colonies. Philadelphia played an important part in the colonies' fight for independence. The CONTINENTAL CONGRESSES were held in the city and the Declaration of Independence was signed there in 1776. The Constitutional Convention met in Philadelphia and adopted the US Constitution in 1787. Philadelphia served as capital of the USA from 1790 to 1800. Benjamin FRANKLIN founded the University of Pennsylvania in 1749. Landmarks include the Liberty Bell and Edgar Allan Poe's house. Industries: shipbuilding, textiles, chemicals, clothing, electrical equipment, metal products, publishing and printing, oil refining, food processing. Pop. (1980) 1,680,235.

Philadelphus, or mock orange, or sweet syringa, well-known ornamental deciduous shrub native to the Western Hemisphere and Asia. It has solitary, white or yellowish, fragrant flowers. Family Hydrangeaceae; species: *Philadelphus coronarius*.

Philaë, former island of SE Egypt, in the River Nile above the Aswan High Dam, now covered by Lake Nasser. It was the site of many temples built from 300 BC - 600 AD, most of which were removed prior to the submerging of the island.

Philemon (c.365-265 BC), poet of ancient Greece. Most of his 97 plays were written in the style of the NEW COMEDY, which used stereotyped characters and dealt with uncontroversial subjects; only fragments of these plays survived. Philemon was considered second only to MENANDER.

Philemon, Christian to whom the apostle PAUL addressed his New Testament epistle on behalf of Onesimus, a slave who had

Pharmaceutical industry: new products proliferate in this competitive business.

Pheasants feed and nest on the ground, moving into trees only to roost.

Samuel Phelps, whose 20 years with Sadlers Wells established its prestige.

Philadelphia's town hall with the statue of William Penn on top of the tower.

Philip, Saint

Philip II of Spain: a detail of Rubens' portrait of him, in the Prado Museum, Madrid.

Philippines: a bamboo and cogon grass hut, typical of the island dwellings.

Eden Phillpotts, seen here at the age of 89, wrote more than 100 novels.

Philodendrons have thick leaves which vary in shape from plant to plant.

fled from Philemon and been converted to Christianity. In this letter Paul teaches that freedom for all, slave or master, is attained through Jesus Christ.

Philip, Saint, one of the twelve APOSTLES of Jesus Christ. According to the Gospel of St John, Philip was from "Bethsaida, the city of Andrew and Peter" (John 1:44). Philip's name appears in all the lists of Christ's disciples in the gospels and the Acts of the Apostles.

Philip, name of six kings of France. Philip I (1052-1108) reigned from 1060. He supported Robert II of Normandy in order to prevent an Anglo-Norman union. He slightly enlarged the French realm, but the monarchy remained weak. Philip II or Philip Augustus (1165-1223) reigned from 1179. He enlarged France at the expense of Flanders and England. His victory over the Holy Roman Empire at Bouvines (1214) established France as a European power. He also greatly strengthened the monarchy by the creation of a salaried class of royal administrators, the bailiffs. He built the first Louvre. Philip III, the Bold (1245-85), reigned from 1270. He added Poitou, Toulouse, Navarre and Champagne to the French realm. Philip IV, the Fair (1268-1314), ruled from 1285. His taxation of the clergy led to a prolonged quarrel with the papacy and led eventually to the BABYLONIAN CAPTIVITY. He imposed French rule on the Flemish. He convened the first ESTATES-GENERAL in French history (1302). Philip V (c.1294-1322) reigned from 1316. Brother of Louis X, he became king in the absence of a male heir, thereby helping to establish the SALIC LAW in France. Philip VI (1293-1350) reigned from 1328. His reign was dominated by the early years of the HUNDRED YEARS WAR.

Philip, name of kings of Macedon, of whom Philip II (382-336 BC) and Philip V (238-179 BC) are of historical importance. Philip II ruled from 359 to 336 BC. He was appointed regent to Amyntas, but took power for himself. He defeated Athens and Thebes in 338 and established Macedonian control over Greece. He established a federation of Greek states and built the army of his son, ALEXANDER THE GREAT. Philip V ruled from 221 to 179 BC. He extended Macedonian influence in the Balkans and fought the First and Second Macedonian Wars against Rome (215-205 and 200 BC), in the second of which he was defeated.

Philip, name of five kings of Spain. Philip I (1478-1506) became King of Castile in the year of his death. Philip II (1527-98) reigned from 1556. He was also King of Portugal from 1580. In 1554 he married Queen MARY I of England. He supported the INQUISITION and centralized the absolute Spanish monarchy. The second half of his reign was dominated by the revolt of the NETHERLANDS. The southern part (present-day Belgium) was retained by Spain. He sent the ARMADA against The Netherlands' ally, England, in 1588. He founded colonies in America and annexed the Philippines, named after him. Philip III (1578-1621) became king on the death of his father, Philip II. Under him Spain was ruled by his favourite, the Duke of Lerma. Philip IV (1606-65) reigned from 1621, succeeding Philip III. Weak like his father, he left the government in the hands of the Count of Olivares. In 1640 Portugal revolted against the union with the Spanish crown and chose JOHN IV as king. Philip V (1683-1746) reigned as the first Bourbon king of Spain from 1700. He was placed on the throne by his grandfather, LOUIS XIV of France, who thereby precipitated the War of the SPANISH SUCCESSION.

Philip, name of two dukes of Burgundy. Philip the Bold (1342-1404) effectively became Duke of Burgundy in 1364. He married Margaret, heiress of Flanders, and was a regent for his nephew Charles VI during his minority, a position he used to further his own dynastic ambition. Philip the Good (1396-1467), Duke of Burgundy from 1419, maintained a long alliance with HENRY V of England and gave asylum to the dauphin (later LOUIS XI of France). He was a colourful patron of the

arts, and his court was the most splendid in Western Europe. See also p.1384.

Philip, Prince, Duke of Edinburgh (1921-), husband of Queen ELIZABETH II of Britain and Prince Consort. He was born in Corfu, the son of Prince Andrew of Greece; he is a grandson of GEORGE I of Greece and a great-great-grandson of Queen VICTORIA. He was brought up and educated in Britain. He became a naturalized British citizen and took the surname Mountbatten. In 1947 he married Elizabeth after becoming the Duke of Edinburgh. He was created a prince in 1957. In 1968 he was awarded the Order of Merit. In 1956 he founded the Duke of Edinburgh awards for creative achievement by young persons.

Philip, Duke of Parma (1720-65; r. 1748-65), son of the Bourbon King Philip V of Spain and Elizabeth Parneise (Isabella of Parma) and brother of Charles III, King of Naples and Sicily and of Spain. Although Philip initially brought Spanish culture to the court of Parma, the French influence of his wife Louise Elizabeth, daughter of LOUIS XV of France, soon predominated.

Philip, Arthur (1738-1814), first governor of New South Wales, Australia. He was born in London and in 1786, as a navy captain, led a fleet of convict ships to Botany Bay. In 1788 he founded a settlement at Sydney, the first permanent European colony in Australia. Although successful there was always friction between the settlers and native ABORIGINES. See also pp.1604, 1604.

Philippe, Gérard (1922-59), French stage and screen actor who worked with most of the leading French film directors, appearing in *La Ronde* (1950), *Le Rouge et le Noir* (1954) and *Les Liaisons Dangereuses* (1959).

Philippine (1504-67), called the Magnanimous, a German nobleman. He introduced the REFORMATION in Hesse and formed the SCHMALKALDIC LEAGUE against the Catholic Holy Roman Emperor CHARLES V. He was imprisoned by Charles from 1547 to 1552.

Philippi, ancient city of E Macedonia, renamed by Philip II (c. 358 BC). It was the site of two battles in which the armies of CASSIUS and BRUTUS were defeated by MARK ANTONY and Octavian (AUGUSTUS) (42 BC). It was the first European city to be visited by a Christian missionary - St Paul twice visited Philippi and founded a church there.

Philippians, New Testament epistle written by the apostle PAUL during his first imprisonment in Rome. In this letter to the Church he had established at Philippi in Macedonia, he stresses his joy in serving Christ, even when threatened with death.

Philippics, orations (351-321 BC) by DEMOSTHENES against King PHILIP II of Macedonia designed to arouse the Athenians against his imperial aspirations. The word is now used to describe any discourse full of invective; CICERO's 14 orations against MARK ANTONY in 44 BC are often described as philippics.

Philippicus (r.711-13), Byzantine emperor. He was exiled by the Emperor TIBERIUS III but in 711 joined the service of Justinian II. Turning against his protector, Philippicus seized the throne and put Justinian to death. He was an advocate of MONOTHELETISM, which led the pope to refuse to recognize his imperial title. Following failures in foreign policy, he was overthrown and blinded.

Philippine Sea, part of the w Pacific Ocean lying E of the Philippines, S of Japan, SW of the Mariana Islands and NW of New Guinea. It contains the Philippine Trench, which follows the line of the E coast of the archipelago. Depth: (max.) 10,539m (34,578ft).

Philippines, island republic in SE Asia, in the SW Pacific Ocean; made up of more than 7,000 islands, the largest of which is Luzon, which includes the capital Quezon City. Much of the land is mountainous and forested; timber is the chief export. Rice and coconuts are the principal crops. There are rich mineral deposits, many of which remain unexploited. Area: 300,000sq km (115,830sq miles). Pop.

(1976 est.) 43,751,000. See p.2121.

Philips' Gloeilampenfabrieken, international industrial corporation with headquarters in Eindhoven, The Netherlands. It makes electrical and electronic goods. In the mid-1970s its total number of employees was about 400,000, about 70% of whom were employed in Europe.

Philistia, ancient coastal region of SW Palestine. Its five chief city-states formed a confederacy against the frequent invasions by foreign enemies, particularly the Hebrews. King David finally succeeded in conquering it but, after the division of the Kingdom of Israel, Philistia regained its independence.

Philistine, member of a non-Semitic people who lived on the S coast of modern Palestine known as PHILISTIA, from c.1200 BC. They clashed frequently with the Hebrews and are often mentioned in the Bible, particularly in the book of Judges. Today the term philistine may be applied to a person with a material outlook or to one indifferent to culture.

Phillips, Capt. Mark Anthony Peter, CVO (1948-), married HRH Princess Anne in 1973. Their children Peter (1977-) and Zara (1981-), are fifth and sixth in line of succession to the British throne. Capt. Phillips, a distinguished equestrian, was a member of the team which won a gold medal in the 1972 Munich Olympics. He is personal ADC to Queen Elizabeth.

Phillipsite, white or reddish ZEOLITE mineral with a composition $KCa(Al_2Si_5O_{16})_6H_2O$. It occurs in vein formations as monoclinic crystals, hardness 4.5-5, s.g. 2.2.

Phillipotts, Eden (1862-1960), British novelist and dramatist who wrote more than 100 novels. Most are set in Devon and centred around Dartmoor. The rural atmosphere and rich dialect is vividly conveyed. He is best known, however, for two plays, *The Farmer's Wife* (1916) and *Yellow Sands* (1926) in which his daughter Adelaide Eden Phillipotts collaborated.

Philoctetes, in Greek mythology, son of Poeas, archer on the expedition to TROY. He received a snake-bite and was left behind on the uninhabited island of LEMNOS. ODYSSEUS and Diomedes returned for him, however, after discovering that Troy could not be taken without the bow and arrow of HERCULES possessed by Philoctetes. There is a tragedy by SOPHOCLES entitled *Philoctetes*.

Philodendron, genus of house plants native to tropical America. They have shiny, heart-shaped leaves, which are sometimes split; large-leaved, climbing types need support. Philodendrons grow best in bright, indirect light and well-watered soil (equal parts of loam, peat moss and sand). Propagation is by stem cuttings. Height: 10cm-1.8m (4in-6ft). Family Araceae.

Philo Judaeus, or Philo of Alexandria, (b. c. 12 BC), Jewish philosopher, b. Egypt. He belonged to a school of thinkers who tried to blend the theology of the Jewish scriptures with Greek philosophy.

Philology, the study of both language and literature. Besides phonetics, grammar and the structure of language, philology includes textual criticism, ETYMOLOGY, art, archaeology, religion and any system related to ancient or classical languages. Comparative philology, which compares the history, forms and relationships of languages, began in the late 18th century when Sir William Jones, an English orientalist, noticed that SANSKRIT resembled Latin and Greek.

Philosophes, group of 18th-century French philosophers, influenced by DESCARTES and the ideals of the ENLIGHTENMENT. Their ideals included rationalism, toleration, secularization and the practical improvement of the conditions of life. VOLTAIRE, ROUSSEAU and DIDEROT were eminent *philosophes*. See also pp.1458-1459, 1466-1467.

Philosophiae Naturis Principia Mathematica. See PRINCIPIA MATHEMATICA.

Philosophy, study of the nature of reality, knowledge, ethics and existence by means of rational enquiry. The term derives from the ancient Greek word meaning "love of knowledge or wisdom". Western philoso-

phy began as a systematic subject among the Greeks in the 6th century BC, and was a general study of all phenomena. Philosophy was a branch of theology in the Middle Ages, but has become narrowed in scope in modern times as science has become more based on observation than on speculation. Today philosophers are mainly concerned with aspects of the questions "How can we know something?" and "What is the real nature of the objects that we perceive?". Questions of the purpose of life and of ethics are only rarely the concern of modern academic philosophers. See also pp.1880-1889.

Philoxenus (fl. late 4th or early 3rd century BC), Greek painter. According to Pliny he painted a battle scene in which Alexander and Darius are shown and it is assumed that the famous Alexander Mosaic from Pompeii is a copy of this.

Phiz (1815-82), pseudonym of Hablot Knight Browne, British illustrator and cartoonist, best known for his illustrations for Charles Dickens' novels. He was chosen by Dickens to illustrate *Pickwick Papers* (1836) and subsequently worked with him on several novels.

Phlebitis, inflammation of the wall of a vein. It may be caused by infection, trauma, underlying disease, or by the presence of VARICOSE VEINS. Symptoms include localized swelling and redness. Phlebitis may be long-lasting and complicated with blood clots. Treatment includes rest and anticoagulant therapy. See also p.1066.

Phlebotomus fever, also called pappataci fever, acute infectious tropical disease of human beings. It is transmitted by the female sandfly, *Phlebotomus papatasi*, when it sucks blood. Symptoms include lassitude, dizziness, severe headache and pains in the joints and abdomen. After a few days of treatment, the symptoms usually subside; convalescence may take several weeks. See also DENGUE; LEISHMANIASIS; p.1082.

Phlebotomy, letting of blood in treatment of a disorder. See also p.1059.

Phloem, vascular tissue for distributing food materials in plants. It consists mainly of elongated sieve-tube cells, companion cells and parenchyma cells. In non-woody species it functions throughout the life of the plant; in woody plants, vascular CAMBIUM is formed. See also XYLEM.

Phlogiston, odourless, colourless and weightless material believed by early scientists to be the source of all heat and fire. Combustion was believed to involve the loss of phlogiston. See also pp.1476, 774-775.

Phlogopite, also called brown mica, white or brown mica mineral with a composition $\text{KMg}_3\text{Fe}_2(\text{AlSi}_3)\text{O}_{10}(\text{OH})_2$. It is found in limestones as monoclinic crystals, hardness 2.5-3, specific gravity 2.8.

Phlox, genus of mostly perennial plants native to North America. The flowers are of various colours and are often cultivated as garden plants. Height: to 1.5m (5ft). Family Polemoniaceae.

Phnom-Penh (Phnum Pénh), capital of Cambodia, in s Cambodia at the confluence of the Mekong and Tonle Sap rivers. Founded in the 14th century, the city was the capital of the Khmers after 1434. It was extensively damaged during the Cambodian civil war before the Communists took over in 1975. At the beginning of the war in 1970 the population was initially swelled by refugees but was subsequently greatly reduced as the new regime evacuated inhabitants. In January 1979 the city was captured by the Vietnamese. It is a port and transportation centre. Industries: rice-milling, brewing, distilling, fish processing, textiles. Of a former estimated population of nearly 1/2 million, it is suspected that only about 50,000 remain.

Phobia, irrational and uncontrollable fear that persists despite reassurance or contradictory evidence. Psychoanalytic theory suggests that phobias such as fear of high places, closed spaces or infection are actually symbolic subconscious fears and impulses. See also pp.1113-1114, 1116, 1118.

Phobos, larger of Mars' two satellites, discovered in 1877 by Asaph Hall. Phobos

lies at a mean distance of 9,350km (5,800 miles) from Mars. Its longest diameter is 28km (17 miles) and the shortest is 20km (12 miles). The sidereal period is 0.32 days. See also pp.926, 952-953, 952-953.

Phoebe, outermost of the ten satellites of the planet Saturn. It is extremely small, with a diameter of 200km (124 miles), and its retrograde motion suggests that it is a captured ASTEROID. Phoebe lies at a distance of almost 13 million km (8 million miles) from Saturn and has a mean sidereal period of 550.3 days. See also pp.955, 964-965, 965.

Phoenicia, ancient region of w Asia, along the E Mediterranean Sea coast; its great city-states included Tyre, Sidon, Tripoli and Byblos. It was founded c.1600 BC. The Phoenicians were traders and colonizers controlling the Mediterranean Sea trade, by the 12th century BC. During the 6th century BC Persia began to absorb Phoenicia, completing the process by Roman times, although the Phoenicians fought Alexander the Great to maintain their autonomy. They originated an alphabet that was later developed by the Greeks and they were famous for their purple Tyrian dye. See also pp.1186-1187.

Phoenicid meteors, meteor shower visible between 4 and 5 December, and radiating from the constellation of Phoenix. See also p.971.

Phoenix, state capital in sw central Arizona, USA, on the Salt River; the largest city of Arizona. Founded in 1870, the city grew after agriculture in the area had been made possible by using the water of the Salt for irrigation. Industries: data processing, tourism, aircraft, fabricated metals, machinery, textiles, clothing, food products. Pop. (1980) 781,443.

Phoenix, fabulous mythological eagle-like bird linked with sun-worship, especially in ancient Egypt. Of gold and scarlet plumage, only one phoenix could exist at a time, usually with a life-span of about 500 years. When death approached, the phoenix built a nest of aromatic plant material, and was then consumed by fire. From the ashes of the pyre rose a new phoenix.

Phoenix, southern constellation just s of the bright star ACHERNAR in the constellation of Eridanus; one of the four constellations known as the Southern Birds. The only bright star is Alpha (Ankaa) of second magnitude. Beta is a DOUBLE STAR, both components of which are of magnitude 4. Zeta Phoenixis is an ECLIPSING VARIABLE star with a magnitude range of 3.6 to 4.1. See also pp.1016, 1017.

Phoenix Islands, small group of coral islands in the central Pacific Ocean, E of the Gilbert Islands and NW of American Samoa. The islands are associated with the former Gilbert and Ellice Islands since 1979 the independent Republic of Kiribati. They are an important stopping point on air routes from Hawaii to the islands of the w Pacific. Area: 28sq km (11sq miles). Pop. 130.

Phoenix Park murders, assassination in Dublin of Lord Frederick CAVENTISH, Secretary for Ireland in the British government, and Thomas Burke, Under-Secretary, on 6 May 1882. Five assassins, connected with the FABIANS, were hanged; three were imprisoned.

Pholidota, small order of mammals, containing only one genus, *Manis*, in the family Manidae; its members are called pangolins. Some species are entirely toothless and feed almost exclusively on ants and termites. See also pp.87, 87.

Phoneme, minimum unit of significant sound; a speech sound distinguishing meaning. The phoneme "p" distinguishes "tap" from "tab". A phoneme may have two letters such as "th", as long as it is perceived aurally as one sound.

Phonetics, science of speech sounds and the symbols by which they are written down. It is based on a study of the shape of the mouth and position of the tongue when making a particular sound. See also p.1877.

Phonograph. See GRAMOPHONE.

Phoronida, phylum of invertebrate marine animals, of which there are only about 15 species. They have worm-like,

non-segmented bodies. Adults are sedentary and live in membranous tubes, sometimes covered with sand or shell particles, into which they retreat when disturbed. Length: 0.5 to 25cm (0.25-10in). See also p.33.

Phosgene, colourless, toxic gas, chemical name carbonyl chloride (COCl_2). It was used as a poison gas in WWI, but is now used in the manufacture of various dyestuffs and resins. Properties: b.p. 8.2°C (46.8°F), m.p. -118°C (-180.5°F).

Phosphates, numerous chemical compounds derived from orthophosphoric acid (H_3PO_4). One group is composed of salts with the phosphate ion (PO_4^{3-}), the hydrogen phosphate ion (HPO_4^{2-}), the dihydrogen phosphate ion (H_2PO_4^-) and the appropriate positively charged ion or ions. For example, sodium forms three phosphates: Na_3PO_4 , Na_2HPO_4 and NaH_2PO_4 . Another group is composed of esters in which organic combining groups replace one or more of the hydrogen atoms of phosphoric acid.

Phospholipid, type of LIPID which contains a phosphoric acid group or groups and an alcohol base. Phospholipids are found in egg yolk and brain tissue. See also p.906.

Phosphor, substance capable of luminescence (storing energy and later releasing it as light). There are two main types: the zinc sulphide phosphors, as used on cathode-ray tubes; and the oxygen type, as used on fluorescent light tubes. Zinc sulphide is often mixed with cadmium sulphide and a small quantity of metallic phosphates, silicates or fluorides. See also pp.640, 640.

Phosphorescence, form of luminescence in which a substance emits light of one wavelength. Unlike fluorescence, it may persist for some time after the initial excitation. In biology, phosphorescence is the production of light by an organism without associated heat.

Phosphoric acid, group of ACIDS, the chief forms of which are orthophosphoric acid (H_3PO_4), metaphosphoric acid (HPO_3) and pyrophosphoric acid ($\text{H}_2\text{P}_2\text{O}_7$). Orthophosphoric acid is a colourless liquid obtained by the action of sulphuric acid on phosphate rock (calcium phosphate) and used in fertilizers, soaps and detergents. Metaphosphoric acid is obtained by heating orthophosphoric acid and is used as a dehydrating agent. Pyrophosphoric acid is formed by moderately heating orthophosphoric acid or by reacting phosphorus pentoxide (P_2O_5) with water and is used as a catalyst and in metallurgy.

Phosphoros, in Greek mythology, the light-bearer. The name is synonymous with Lucifer and the morning star, VENUS. Generally portrayed as a man bearing a torch, he was the herald and harbinger of the dawn. The name of the element PHOSPHORUS is of the same derivation.

Phosphorus, common nonmetallic element (symbol P) of group V of the periodic table, discovered by Hennig Brand in 1669. It occurs, as PHOSPHATES, in many minerals; APATITE is the chief source. The element is used in making PHOSPHORIC ACID for detergents and fertilizers (phosphorus is an essential element for plant growth). Small amounts are used in insecticides and in matches. Phosphorus has several ALLOTROPES, including the highly reactive white phosphorus, which ignites spontaneously on exposure to air, and the more stable form, red phosphorus. Properties: at.no. 15; at.wt. 30.9738; s.g. 1.82 (white), 2.34 (red); m.p. 44.1°C (111.38°F) (white); b.p. 280°C (536°F) (white); most common isotope P^{31} (100%).

Photius (c.820-91), Patriarch of Constantinople. Elected in 858 to succeed ST IGNATIUS OF CONSTANTINOPLE, he quarrelled with the Pope over the autonomy of the Eastern Church and was deposed in 867. He became Patriarch again from 877 to 886, when he may have been forced to resign by the Byzantine Emperor LEO VI. See also p.1280.

Photocell. See PHOTOELECTRIC CELL.

Photochromic glass, form of glass, used in spectacle lenses and electronic devices, which darkens on exposure to ultraviolet

Philosophy; detail of Raphael's painting of Plato and Aristotle, in the Vatican.

Phnom-Penh; rioter attacking a foodstall during the anti-Chinese riots of 1975.

Phoenix; the metropolitan area houses over half the population of Arizona.

Phosphorus is obtained industrially from natural deposits of phosphates.

Photocopying

Photoelectric cell in a photographer's light meter shows illumination levels.

Photogrammetry uses aerial photography for making accurate maps.

Photography; acidity of an emulsion being measured during manufacture.

Physical chemistry includes a study of osmosis and semi-permeable membranes.

or bright visible light. It fades to its original clear state when the light is removed. Silver chloride or silver bromide crystals throughout the glass interact with light to cause this change.

Photocopying, reproduction of the written word, drawings or photographs by duplicating machines which utilize light, heat, chemicals or electrostatic charge. See also pp.616-617.

Photoelectric cell (or photocell), type of electric cell whose operation depends upon the extent to which it is exposed to light. Formerly consisting of an electron tube with a photosensitive cathode, nearly all modern photocells are made using light-sensitive semiconductors. They are used as switches (electric eyes), devices to measure light intensity (light meters) or as power sources (solar cells). See also p.860.

Photoelectric effect, liberation of ELECTRONS from matter by light, ultraviolet radiation, X-rays or gamma rays falling on its surface. The effect can be explained only by the QUANTUM THEORY. Photons in the incident radiation are absorbed by atoms in the substance and enable electrons to escape by transferring the requisite amount of energy to them. A stream of such electrons flowing in a circuit constitute an electric current. See also p.860.

Photoelectric emission, production of electrons from the surface of a substance (such as silicon) as a result of light falling on it. The mechanism of this PHOTOELECTRIC EFFECT was first described by Albert EINSTEIN using QUANTUM THEORY. See also PHOTOELECTRIC CELL.

Photo engraving, process of preparing illustrations for letterpress printing in which the image is transferred by photography upon metal or plastic. It involves two steps: the preparation of a photographic negative copy of the material to be reproduced, and the making of a positive printing plate. The negatives are made on sensitized films with a 303 process camera which can produce an image of any size desired. Plates are made of zinc, copper or magnesium, coated with a photosensitive solution. The light passing through clear sections of the negative affects the coating and makes it insoluble in water. After exposure the plates are washed, leaving an image formed by the insoluble portions. The nonprinting surface is then etched with an acid. See also pp.614, 616.

Photogrammetry, science of taking measurements from aerial photographs in order to make surface maps. The technique became important during WWI, when it was used by intelligence corps. Since then its use has been extended to civil purposes, eg for mapping otherwise inaccessible areas.

Photographic memory, rare ability to retain and recall information very easily. Although this phenomenon is not fully understood, it appears to involve eidetic images, exceptionally vivid visual pictures. A person with a photographic memory seems to be able to visualize an object at will, such as a page of a book, and "read off" information from this image.

Photography, process of obtaining a permanent image of an object, either in black and white or in colour, on treated paper or film. In black and white photography a CAMERA is used to expose a film to an image of the object to be photographed for a set time. The film is covered on one side with an emulsion containing silver bromide or silver chloride. The effect of the exposure is to make the silver compound easily reduced to metallic silver when treated with a DEVELOPER. The action of the developer is to produce a black deposit of metallic silver particles on those parts of the film that were exposed to light, thus providing a "negative" image. After fixing (in "hypo") and washing, the negative can be printed by placing it over a piece of sensitized paper and exposing it to light so that the silver salts in the paper are affected in the same way as those in the original film. The dark portions of the negative let through the least light and the image on the paper is thus reversed back to a positive. Colour photo-

graphy works on a similar, but more complex process. See also pp.628-633.

Photometer, instrument used to measure the luminous intensity of a light source by comparing it with a source of known intensity. This is achieved by comparing the positions of the sources when they produce equal illumination on a reference surface.

Photomultiplier, electronic device that converts a light signal or light beam into an equivalent amplified electrical signal, (electric current). ELECTRONS, produced by PHOTOELECTRIC EMISSION from an illuminated CATHODE, are reflected from a series of other electrodes and are increased in number at each bombardment. An amplified signal is obtained from the final ANODE. See also p.861.

Photon, quantum of electromagnetic radiation, such as light, which can be considered as streams of photons. The energy of a photon equals the frequency of the radiation multiplied by PLANCK'S CONSTANT. Absorption of photons by atoms and molecules can cause excitation or ionization. A photon may be classified as a stable elementary particle of zero rest mass, zero charge and spin 1, travelling at the velocity of light. It is its own antiparticle. Virtual photons are thought to be continuously exchanged between charged particles and thus to be the carriers of the electromagnetic force. See also LIGHT; pp.860-862.

Photosetting, composition of text to be printed by photographic means, developed in the 1950s as a speedier and more flexible alternative to setting type in metal. The size of type to be set is obtained from a master negative font by photographic reduction or enlargement. This book has been set in Times Roman type on a photosetting machine, and condensed, expanded or italic variants of the face can be achieved with great facility. Computer units allied to most photosetters enable the text to be set as fast as the operator can key it in. Once programmed these units automatically control line width, column length, spacing, justification and hyphenation. See also LINOTYPE; MONO-TYPE; TYPESETTING; TYPOMETAL; pp.469, 615, 615.

Photosphere, surface of the SUN, which radiates the light and heat produced in the solar interior. It has a general temperature of 6,000K and has a granular appearance, which is often disturbed by SUNSPOTS, faculae and associated transient phenomena. See also pp.974, 974.

Photosynthesis, chemical process occurring in green plants by which minerals, water and carbon dioxide are converted into food and oxygen using energy absorbed from sunlight. The reactions take place almost instantaneously in the CHLOROPLASTS, chlorophyll-containing bodies in the leaf cells. During the first part of the process, light is absorbed by chlorophyll and splits water into hydrogen and oxygen. The hydrogen attaches to a carrier molecule and the oxygen is set free. The hydrogen and light energy build a supply of cellular chemical energy, ADENOSINE TRIPHOSPHATE (ATP). Hydrogen and ATP convert the carbon dioxide into sugars, including glucose, and starch. Photosynthesis is possibly the most important biological process occurring on the Earth. See also pp.292, 247, 356, 357, 360-361, 374-375, 763.

Phototropism, also called heliotropism, growth of a plant in response to the stimulus of light, which increases cell growth on the shaded side of the plant. Leaves and stems respond positively to light and roots respond negatively or not at all. Indoor plants lean towards windows; leaves usually grow at right-angles to light and are positioned to ensure that overlapping occurs as little as possible.

Phra Nakhon Si Ayutthaya, city and province in central Thailand. The city is a commercial centre for a region producing rice, maize, tobacco and sesame. Founded c.1350, the city flourished as the political seat of one of the most powerful states in SE Asia. Tourism is a major industry. Area (province): 2,480sq km (958sq miles). Pop. (province) 421,000; (city) 39,291.

Phrenology, theory that an individual's personality and character traits can be determined by examining the shape and configuration of the skull. It was elaborated in the early 19th century by two Germans, Franz Josef Gall (1758-1828) and Johann Spurzheim (1776-1832). The theory has been discredited in the 20th century. See also pp.1108, 1109.

Phrygia, ancient region in Asia Minor, corresponding roughly to modern central Turkey. It was originally settled by Balkan peoples (PHRYGIANS) c.13th century BC; it was ruled by Lydia in the 7th century BC and by Persia in the 6th century BC. The Greeks used it as a source of slaves, and it was associated in their legends with the names of MIDAS and Gordius. It came under Roman rule c.133 BC.

Phrygians, people who settled in Asia Minor c.1400 BC. They dominated W central Anatolia, PHRYGIA, after the end of the HITTITE empire (c.1300 BC). Their last king, MIDAS, was overthrown by the Cimmerians c.700 BC, and they became a subject people. The Greeks thought highly of them as slaves.

Phthalocyanine dyes, highly stable organic dyes. Most are bright green or blue in colour and they are mainly used in enamels, inks and paints. They are porphyrin complexes like HAEMOGLOBIN and the CHLOROPHYLLS. See also pp. 585, 585.

Phthalsulphathiazole, sulphonamide drug used as an intestinal antimicrobial agent. Other names under which it is sold include Enteramida, Taleudron and Thalazole.

Phthiraptera, order of wingless insects divided into the Mallophaga, which are parasitic chewing or biting lice, and the Anoplura, the sucking lice. Mallophaga are parasitic on mammals and birds, whereas Anoplura are parasitic only on mammals. The bites of these insects may transmit disease. See also pp.36-37, 36.

Phylloxera, or grape phylloxera, small yellowish insect of the order Homoptera that is a pest on grape plants in Europe and W USA. It attaches itself to the leaves and roots and sucks the plant's fluids, resulting in the eventual rotting of the plant. The complex life cycle includes parthenogenetic wingless stages. Family Phylloxeridae; species: *Phylloxera vitifoliae*.

Phylum, in the systematic categorization of living organisms, a major group within the animal kingdom. It is comprised of a diverse group of organisms with a common fundamental characteristic. In plant classification the analogous category is sometimes called division. See also CLASSIFICATION; pp.2-3.

Physical chemistry, study of the physical changes associated with chemical reactions and the relationship between physical properties and chemical composition. The main branches are THERMODYNAMICS, concerned with the changes of energy in physical systems; chemical kinetics, concerned with rates of reaction; and molecular and atomic structure. Other topics included are electrochemistry, thermochemistry and some aspects of nuclear physics, radiation physics and combustion chemistry.

Physics, study of matter and energy. Both matter and energy appear in many forms and physics seeks to see beyond these forms and to connect them in their manifestations. Modern physics recognizes four basic forces in nature and these are categorized according to the interactions they induce. The first of these is gravitational force, which was first adequately described by Isaac NEWTON. The second is the weak force, which is responsible for the decay of some sub-atomic particles. The third is the electromagnetic force, which was codified in Maxwell's Equations in the 19th century. The strong force is that which binds together atomic nuclei. This force is some 10^{12} times stronger than the weak force and is the least well understood in physics. Einstein's theory of RELATIVITY showed the basic relation between energy and matter, such that mass in particle physics is expressed in terms of energy. Physics may

be divided into six fundamental theories: Newtonian mechanics, thermodynamics, electromagnetism, statistical mechanics, quantum mechanics and relativity.

Physics, atomic. See NUCLEAR PHYSICS.

Physiocrats, school of 18th-century French economists. Led by François Quesnay, they argued that agriculture, rather than industry or commerce, was the basis of all wealth. They had some influence in France under Louis XV and in Austria under Joseph II; in Britain, Adam Smith was also strongly influenced by the physiocrats.

Physiognomy, the study of a person's outward appearance to judge the inner character, especially when considering the face as an indicator of individual character. Once a popular theory of human personality, physiognomy has been largely discredited by modern psychology. See also p.1891.

Physiology, branch of biology concerned with physical and chemical activities and functions of a living organism; these may be necessary to maintain life. Vast in scope, it includes the study of single cells as well as multicellular organisms.

Physiotherapy, also known as physical therapy, use of various techniques to treat disorders of the musculo-skeletal system. It attempts to relieve pain and restore the use of the affected parts. Its techniques include massage, exercise, heat and water treatment, the use of ultrasonics and diathermy. See also pp.1064, 1066.

Phytoplankton, free-floating oceanic plant life as opposed to zooplankton, the free-floating animal life. Most of the organisms are microscopic, such as diatoms. See also ALGAE; pp.235, 338, 482.

Pi (π), symbol used for the ratio of the circumference of a circle to its diameter. It is an irrational number and an approximation to five decimal places is 3.14159. The ratio 22/7 is often used as a rougher approximation. See also pp.780, 780, 794-795.

Piaf, Edith (1915-63), French cabaret singer, real name Edith Giovanna Gassion. Piaf (Parisian argot for sparrow) began singing at the age of 17 in the cafés and streets of Paris. Her recording career spanned nearly 30 years, and the emotional impact of her voice in songs such as *Non, je ne regrette rien* won her an international reputation.

Piaget, Jean (1896-1980), Swiss psychologist who developed a comprehensive theory of the intellectual growth of children. His books describe their thought processes from early infancy to adulthood. He became director of the Institut Jean-Jacques Rousseau in Geneva and director of The International Centre of Genetic Epistemology in 1955. With associates he has published more than 30 books on child psychology, the major ones being *The Origin of Intelligence in Children* (1954) and *The Early Growth of Logic in the Child* (1964). See also p.1124.

Piano (pianoforte), musical instrument whose sound is made by strings struck by hammers which are moved from a keyboard. Its invention (c. 1709) is attributed to Bartolomeo Cristofori, who combined the hammer-striking action of the clavichord and the dampers of the harpsichord in one instrument. Its name, from the Italian *piano* (soft) and *forte* (strong), was adopted because its range of volume (as of tonal quality) far exceeded that of earlier instruments. The modern grand piano, much larger, louder and more resonant than the 18th-century piano, was developed in the early 19th century.

Pianola, instrument for reproducing piano music mechanically, patented by an American, E. S. Votey, in 1897, but derived from earlier inventions. A roll of perforated paper passes over a "tracker-bar", which activates the piano's keys and hammers. It is generally powered by a foot pedal.

Piatigorsky, Gregor (1903-76), US cellist and teacher, b. Russia. He studied at the Imperial Conservatory, Moscow, and was first cellist of the Berlin Philharmonic from 1924 to 1928. In 1929 he moved to the US and appeared as a soloist in recitals and with major orchestras. He also played

in ensembles with Horowitz, Rachmaninov, Schnabel and Heifetz, and concertos were written for him by several composers including Prokofiev.

Piazzetta, Giovanni Battista (1683-1754), Italian painter. He studied in Bologna, but spent most of his life in Venice, where he was influential in the change of style from Baroque to Rococo. He is noted for his chiaroscuro effects, especially in paintings such as *Fortune Teller* (1740).

Piazzi, Giuseppe (1746-1826), Italian astronomer who discovered the first known asteroid, Ceres in 1801. He also founded the observatory of Palermo and produced a catalogue of 7,646 stars. See also p.954.

Pica, abnormal craving for unnatural foods, such as chalk or ashes. It occurs both in humans and animals and is usually a sign of nutritional deficiency. The word is also used for the one-em measure in printing.

Picabia, Francis (1879-1953), French painter of Cuban Spanish descent who worked in an Impressionist style from 1903 until 1909. He was then influenced by Cubism and was one of the first exponents of Dada both in Europe and the USA. He was also associated for a time with the Paris Surrealists.

Picardy, region and former province of N France, on the English Channel; includes Somme, and parts of Pas-de-Calais, Oise and Aisne départements. It was a French province from 1477 until the French Revolution, when it was replaced by a smaller département. Picardy was the scene of heavy fighting during WWI. The area is made up of the plateau to the N of Paris where wheat and sugar-beet are grown; the valley of the Somme where industrial centres such as Amiens are located; and the coast where fishing is important. Calais and Boulogne-sur-Mer are cross-Channel ferry ports.

Picaresque (from Spanish *pícaro*, "rogue" or "knave"), term first applied to an early genre of prose fiction in which a roguish hero has a series of adventures, providing the author with a means for satirical comment. Examples include Mendoza's *Lazarillo de Tormes* (1554) and Le Sage's *Gil Blas* (1715-35). The latter influenced early English novels such as Fielding's *Tom Jones* (1749). In a general sense, the term is often used to refer to fiction which is episodic in structure, rather than with its original "roguish" implication. In this wider sense Cervantes' *Don Quixote de la Mancha* is often described as a picaresque novel.

Picasso, Pablo (1881-1973), Spanish painter and sculptor who lived in France. His first canvases, those of the "blue period" (1901-04), showed scenes from poverty in predominantly sombre blue tints. There followed in the "rose period" (1905-08) lighter paintings, often of circus life. In 1907 his *Les Femmes d'Alger* appeared, often regarded by critics as analytical cubism; or the manifestation of the first stage of cubism. Thereafter he developed into an artist of great power and variety, producing a steady stream of paintings, sculptures, ceramics, drawings, graphic illustrations and stage designs. See also pp.1656, 1657, 1685.

Piccard, name of a Swiss family of scientists. Auguste (1884-1962) became professor of physics at Brussels University in 1922. During 1931-32 he made experimental balloon flights into the stratosphere, reaching heights of 15,787m and 16,916m (51,793ft and 55,000ft). He later turned to deep-sea exploration, in bathyscaphes of his own design, and reached a depth of 3,150m (10,330ft) in the Mediterranean Sea (1953). His son and collaborator Jacques (1922-) dived to 10,912m (35,800ft) in the Marianas Trench in the Pacific Ocean (1960).

Piccini, Niccolò (1728-1800), Italian composer of operas. He became a well-known figure in the late 18th century when the opponents to the opera reforms of Gluck made Piccinni their unwilling champion. Although he wrote more than 120 operas they are only rarely performed today, but his *La Cecchina*, ossia *La*

buona figliuola (1760), based on Samuel Richardson's *Pamela*, was probably the most popular opera buffa of its time.

Piccolo, woodwind musical instrument of the flute family. About half the size of the flute and pitched one octave higher, it is played in the same way - by blowing across the mouth hole and fingering the keys. It has a bright, penetrating tone and is used in symphony orchestras. See also pp.1580-1581, 1580.

Pic du Midi de Bigorre, observatory in the Pyrenees Mountains, France. Its altitude of approx. 2,877m (9,440ft) means that conditions for observation are excellent. The 24in refracting telescope was used extensively by the French astronomer Audouin Dollfus in his planetary studies. See also pp.964-965.

Pichergu, Charles (1761-1804), French general in the French Revolutionary Wars. He was successful against the Austrians on the River Rhine in 1793, and in the following year invaded The Netherlands. In 1795 he captured the Dutch fleet, ice-bound at Amsterdam. His intrigues with the Austrian royalists led to his being recalled to France, where he was arrested. He escaped to England but returned to France in 1803 and was again arrested. He was later found strangled in his cell before he could be brought to trial.

Piciformes, order of birds characterized by having their first and fourth toes pointing backwards. It includes woodpeckers, toucans, barbets, honey-guides and their relatives; most species nest in holes in trees and eat insects and fruit. Length: to 61cm (24.5in). See also p.73.

Pickering, Edward Charles (1846-1919), US physicist and astronomer. He was the first to employ the meridian photometer for measuring the magnitude of stars, and in 1884 published *Harvard Photometry*, the first photometric catalogue. See also p.978.

Pickering, William Henry (1858-1938), US astronomer who discovered Phoebe, the 9th satellite of Saturn in 1899. With his brother Edward C. Pickering, he established the Arequipa Observatory in Peru in 1891. He erected the Lowell Observatory in Flagstaff, Arizona, in 1894 for the noted astronomer Percival Lowell. See also p.965.

Picketing, the patrolling outside a place of employment by members of its labour force who have stopped their normal work because of a dispute with the employers. The aim of the patrol is to persuade those of their colleagues who are still working also to stop, to dissuade drivers of supply vehicles from making their deliveries, and to gain publicity for their cause. There is no special law for or against pickets; verbal persuasion is naturally allowed, although conduct liable to lead to a breach of the peace may lead to arrest.

Pickford, Mary (originally Gladys Mary Smith) (1893-1979), US film actress famous for her portrayal of innocent heroines in silent films. These include *Poor Little Rich Girl* (1917), *Pollyanna* (1919) and *Little Lord Fauntleroy* (1921). In 1919 she established the United Artists Corporation with Charles Chaplin, Douglas Fairbanks, whom she married in 1920, and D.W. Griffith. See also pp.1682, 1752.

Pick's disease, circumscribed atrophy of the frontal lobes of the brain. It progressively impairs judgement and intellect and may be accompanied by psychotic features. See also ALZHEIMER'S DISEASE; p.1111.

Pickwick Papers, The (1836-37), first humorous, anecdotal novel by Charles Dickens. It recounts the adventures of Samuel Pickwick, a benevolent gentleman, as he and his friends travel throughout England. It contains some of Dickens' greatest comic characters and immediately established him as a popular author.

Pico della Mirandola, Giovanni, Conte (1463-94), Italian philosopher, scholar, and exponent of Renaissance Platonism. He came from a wealthy family, received a humanist education and studied canon law and Aristotelian philosophy. He wrote *The oration on the Dignity of Man* in

Pianola rolls were often transcribed directly from virtuoso piano performances.

Piccolo, the smallest of the woodwinds, has a timbre like the military fife.

Picketing occurred during the Grunwick dispute in London in 1977.

Mary Pickford, star of the 20s, was dubbed 'the world's sweetheart'.

Picric acid

1486, but was arrested in 1488 when some of the 900 theses he had written were denounced as heretical.

Picric acid, yellow crystalline solid, chemical name 2,4,6-trinitrophenol, $C_6H_3O_7(NO_2)_3$. It was widely used as an explosive before and during WWI, but is now used in the manufacture of dyes and pigments.

Pictogram, or pictograph, symbolic method of visually expressing an object (as opposed to an idea) and used to convey messages before alphabets evolved. Today, pictograms play an important role in the graphic presentation of information. See also p.608.

Pictorial Treaty of. See YAM ZAPOLSKY, PEACE OF.

Picts, ancient inhabitants of E and N Scotland, first named ("Pict") means "painted") by the Roman writer Eumenius in AD 297 as northern invaders of Roman Britain. By the 8th century they had a united kingdom extending from Caithness to Fife, and had adopted Celtic Christianity. To the w and s of the Picts, invaders from Ireland had established the kingdom of DALRIADA; in 843 its king, KENNETH I, became king also of the Picts, uniting the two kingdoms into what later became the kingdom of Scotland. See also pp.1234, 1235, 1316.

Picture of Dorian Gray, The (1891), novel by OSCAR WILDE. A fantastic, allegorical work, it describes the degenerate life of a handsome young man who until the end remains youthful while his portrait grows old and corrupt.

Picturesque, the term used by art historians to describe those elements - ruggedness, random nature, ruins - which lent a "Gothic" aspect to late 18th-century landscapes, especially in England. The picturesque was thus a harbinger of ROMANTICISM.

Picture stage, in theatres, deep acting area with little forestage, which in the 17th century became framed by the PROSCENIUM arch and in which all the illusions of the THEATRE were completely maintained. This concept of a set as an entirely naturalistic entity without a fourth wall was widely employed during the 19th century, but reactions to its inevitable artificiality grew and many new theatres were designed to incorporate the more flexible OPEN STAGE. See also STAGE.

Picture tube, type of cathode ray tube used to produce the picture in a television set or the display in a radar set. The picture is "drawn" on the inside face of the tube by a beam or beams of ELECTRONS that scan the tube and stimulate PHOSPHORS to emit light. See also pp.640, 640, 646, 646.

Piculet, any of several species of small WOODPECKERS. They are insectivorous, stubby-tailed birds, most species of which occur in Central and South America, Asia or Africa. Their colouring is generally mottled grey-green to brown above and white below. They dig their nest holes in soft wood. Length: 8-13cm (5-8in). Family Picidae.

Piddock, bivalve distinguished by its ability to bore into rock. This it does by moving its serrated shell back and forth wearing a hole that enlarges to a comma-shape as the animal grows. Species *Pholas dactylus*. See also pp.22, 263.

Pidgeon, Walter (1897-), Canadian film actor who enjoyed a long Hollywood career. He made his debut in *Mannequin* (1925) and worked steadily throughout the 1930s and 1940s, starring in films such as *How Green Was My Valley* (1941) and *Madame Curie* (1943). Later films included *Funny Girl* (1968) and *Sky-jacked* (1972).

Pidgin English, form of language developed by English traders, missionaries and officials abroad for communication with foreign peoples. It has a simplified grammar and a small vocabulary, a mixture of English words with Chinese, Malay and Portuguese. The word supposedly derives from the Cantonese corruption of the word "business".

Pieck, Wilhelm (1876-1960), German political leader. He was founder of the German Communist Party in 1918, and

was in exile from 1933 to 1945. Pieck was President of East Germany (1949-60).

Piedmont (Piemonte), region of NW Italy, made up of the provinces of Alessandria, Asti, Cuneo, Novara, Torino, and Verelli; bounded to the N, W and S by mountains, and to the E by the Po Valley which has some excellent farmland. The Po River and its tributaries supply water for agriculture, and hydroelectric schemes provide energy for industry, transportation and domestic use. Products: grain, vegetables, fruit, dairy. Industries: wine-making, motor vehicles, textiles, glass, chemicals. Area: 25,400sq km (9,807sq miles). Pop. (1980 est.) 4,531,141.

Pied Piper of Hamelin, in German folklore, a magician. According to the legend, in 1284 a piper rid the town of Hamelin of rats by playing his pipe and leading the rats to the River Weser, where they drowned. Although he was promised money by the townspeople for his deed, they refused to pay. In retaliation the piper mesmerized the children of the town with his playing and led them away to a door in the hills where they vanished. The legend is the basis of works by Robert BROWNING and the brothers GRIMM. The source of the legend may be the emigration of young Germans in the 13th century to colonize the east, or perhaps the ill-fated departure of the German children on the CHILDREN'S CRUSADE of 1212.

Pierce, Franklin (1804-69), 14th US president (1853-57) who served during the turbulent years before the AMERICAN CIVIL WAR. He was known for his pro-slavery views and supported the highly controversial Compromise of 1850 (which attempted to solve the slavery question) and the Kansas-Nebraska Act (1854). The Gadsden Purchase (1853) added land from Mexico. See also p.1628.

Pierre, Henri Constant Gabriel (1863-1937), French conductor and composer who studied under MASSENET. He wrote the cantata *La Croisade des Enfants* (1902), several operas and ballets, orchestral works and many songs.

Piero della Francesca, (Piero dei Franceschi), Italian painter. Influenced by many Florentine artists including DONATELLO and DOMENICO VENEZIANO, he combined broad masses of soft colour with subtle light effects. His altarpiece for S. Bernardino, Urbino, is a fine example of his sensitive handling of perspective. Famous among his works are the frescoes of the *Legend of the Holy Cross* (c.1465).

Piero di Cosimo (c.1462-1521), Italian painter who adopted the name of his master, Cosimo Rosselli. As well as conventional religious works which show the influence of LEONARDO DA VINCI, he painted many pictures showing the life of primitive man. These include the *Hunting Scene* and *The Discovery of Honey*. Other well-known works by Piero are the *Death of Procris* and the portrait *Simonetta Vespucci*.

Pierrot, in Britain, pantomime figure and member of a seaside entertainment troupe who traditionally wore a loose white silk shirt and a dunce's cap and had a whitened face. He derived originally from the COMEDIA DELL'ARTE character Pedrolino and owed his vogue in Britain up to WWII to the London success of the mime play *L'Enfant prodigue* (1891) in which Pierrot, as developed by Deburau, featured.

Piers Plowman (c.1362-92), poem in Middle English attributed to William LANGLAND. There are three extant versions which differ from each other considerably. The basic framework of the story is that of an allegorical vision on the subject of the vices of the times. See also pp.1329, 1349.

Pietà (Italian for "pity"), in art, painting or sculpture showing the suffering Virgin bearing the dead Christ across her knee. The idea developed in 14th-century Germany and emphasizes the emotional rather than the symbolic aspects of Christ's suffering. Famous pietàs include one from the School of Avignon (c.1460, Louvre), and the marble sculpture (1498-1500) by Michelangelo in St Peter's, Rome.

Pietermaritzburg, city in the Republic of South Africa, 64km (40 miles) N of Durban, on the River Umsunduzi. It became the capital of NATAL in 1856. Today it is an industrial and administrative centre, its products including furniture, footwear, motor vehicles and diesel engines. Pop. (1970) 158,921.

Pietism, Christian movement founded in the late 17th century by Philipp Spener, a German, to revitalize evangelical Christianity in opposition to the severe and intellectualized formality of 17th-century Protestantism. In *Pia Desideria* (1675), Spener emphasized the personal nature of faith and salvation. His influence spread throughout Europe.

Pietra dura, work inlaid with hard, semi-precious stones such as agate, quartz or jasper. It was produced mainly in Florence during the 16th and 17th centuries and was used for decorating furniture, particularly cabinets and table-tops. The stones were cut to fit into a geometric or floral pattern and then polished.

Piezoelectric effect, creation of positive electric charge on one side of a nonconducting crystal and a negative charge on the other when the crystal is subjected to mechanical pressure. The pressure polarizes the crystal by separating the centre of the positive charge from that of the negative in a crystal in which there is no centre of structural symmetry. This charge separation results in an electric field that can be detected as voltage between the opposite crystal faces. The effect is used in gramophone pickups, crystal microphones and cigarette lighters. See also pp.453, 599, 870.

Piezoelectricity. See PIEZOELECTRIC EFFECT.

Pig, any of numerous species and varieties of domestic and wild swine of the family Suidae. The male is generally called a boar; the female, a sow. A castrated boar is usually known as a hog. It is generally a massive, short-legged omnivore with a thick skin bearing short bristles. Wild pigs include the warthog, wild boar, bush pig and babirusa. See also pp.94, 722, 728-729, 731-733.

Pigeon, also often called dove, any of a large family of wild and domestic birds found throughout temperate and tropical parts of the world, but concentrated in S Asia and the Australian region. Many have long been domesticated, used for food, for racing and some for carrying messages. Pigeons have small heads, short necks, plump bodies and scaly legs and feet. Plumage is loose but thick and may be brown, grey, white, blue, green, yellow or orange. Length: to 46cm (18in). Family Columbidae; typical genus, *Columba*. See also pp.73, 77, 83-85, 309, 315.

Pigeon racing, sport in which homing pigeons are taken to a common starting point from which they fly back to their own lofts. There the pigeon's race rubber is removed and the time of arrival stamped on by the owner's pigeon clock. Flying speed is calculated in yards or metres per minute, and the fastest bird wins.

Piggott, Lester (1935-), British jockey. Champion apprentice with 52 wins in 1950, Piggott went on to become one of racing's most successful jockeys, winning 17 classics between 1954 and 1970. In 1974 he rode his 3,000th winner in Britain. He is generally regarded as a master tactician, combining determination with judgement.

Pigment, coloured, insoluble substance used to impart colour to an object and incorporated for this purpose into paints, inks and plastics. Unlike DYES, pigments are insoluble in the coating medium. They generally function by absorbing and reflecting light, although some modern luminescent pigments emit coloured light. See also p.584.

Pigmentation, in biology, the coloration of tissues by pigments. In human beings, the pigmented areas are skin, hair and the iris of the eye. The pigments MELANIN and CAROTENE, combined with the body's HÆMOGLOBIN, give the colour.

Pignon, Edouard (1905-), French painter. He began painting in 1934, encouraged by PICASSO, and in a style which shows the influence of both Picasso

and MATISSE in his use of space and colour. A miner before he took up painting, his realistic choice of subject matter is seen in such works as *The Dead Miner* (1952).

Pig-nut, also called earth-nut or hog-nut, slender, perennial European plant of the carrot family (Umbelliferae); its name derives from its edible tuber. It has small white flowers and complex divided leaves. Height: to 1m (39in). Species *Conopodium majus*. See also p.687.

Pigou, Arthur Cecil (1877-1959), British economist who held that the pursuit of self-interest by individuals did not benefit society as a whole which was responsible for and should bear the costs of unemployment, health and housing. He was professor of political economy at Cambridge (1908-43). His works include *The Economics of Welfare* (1920), *The Theory of Unemployment* (1933), *Socialism versus Capitalism* (1937) and *Income: an Introduction to Economics* (1946). See also p.1863.

Pigs, Bay of. See CUBAN MISSILE CRISIS.

Pika, any of 12 species of short-haired relatives of the RABBIT. They live in cold regions of Europe, Asia and western USA. Length: to 20cm (8in). Genus *Ochotona*.

Pike, predatory freshwater fish found in N America and parts of Europe and Asia. A popular fish with anglers, it has a shovel-shaped mouth and a mottled, elongated body. Length: to 137.2cm (54in); weight: 20.9kg (46lb). Family Esocidae; genus *Esox*. See also p.329.

Pilate, Pontius, Roman governor of JUDAEA when Jesus Christ was crucified. Pilate was made procurator of Judaea in AD 26 and earned a reputation for arrogance and cruelty. He died after AD 36. The New Testament gospels tell of Pilate's role in condemning Jesus. See also p.1245.

Pilâtre de Rozier, Jean François (1756-85), French pioneer of ballooning. In Nov. 1783 he and the Marquis d'Arlandes were the first to fly in an untethered balloon. During a flight lasting about 25 minutes, they covered a distance of 8km (5 miles). In 1785, Pilâtre de Rozier was killed while attempting to cross the English Channel by balloon. See also pp.512-513.

Pilchard, marine, food fish resembling a herring, found in shoals along most coasts except those of Asia. They are caught in millions, and support a huge canning industry. The young are sometimes called SARDINES. Length: less than 45.7cm (18in). Family Clupeidae; species *Sardina pilchardus*. See also p.745.

Pile-driver, machine for driving post-like foundation members (piles) into the ground. It usually consists of a high frame with attachments that raise and drop a pile-hammer on to the pile, thus forcing it into the ground with repeated blows. See also p.551.

Piles. See HÆMORRHOIDS.

Pilgrimage, journey to a shrine or other holy place for religious motives, eg to gain spiritual help or for thanksgiving. Pilgrimages are common to many religions, particularly in the East. A Muslim should make the pilgrimage to MECCA, where devotions last two weeks, at least once in his life. Since the second century, Christians have travelled to Palestine, to the tomb of the Apostles Peter and Paul in Rome, and of James in Santiago de Compostela in Spain. See also pp.1306-1307, 1320-1321.

Pilgrimage of Grace (1536), uprising of Roman Catholics in N England in protest against ENCLOSURES and the DISSOLUTION OF THE MONASTERIES following the abolition of papal supremacy in England. After a small rising in Lincolnshire had failed, Robert Aske and his followers occupied York and then marched to Doncaster with about 30,000 armed men. The Duke of NORFOLK, Henry VIII's emissary, promised Aske a pardon from the king and Aske dispersed his men. Further minor outbreaks were suppressed and Aske and more than 200 others were executed in 1537. The repression in N England after the Pilgrimage of Grace put an end to substantial opposition to the government's religious policy. See also p.1401.

Pilgrim Fathers, English Puritans who left

from Plymouth on the *Mayflower* in 1620 and founded a colony in North America at Plymouth, New England. They had originally sought refuge from persecution in England by fleeing to Leiden in 1608, where they decided to found a new religious society in America.

Pilgrim's Progress, *The* (1678–84), famous narrative by John BUNYAN, in the form of a dream ALLEGORY of the life of Christian from his conversion to his death. The second part deals with Christiana, who follows the same road as Christian, who has gone before. The whole work is remarkable for its simple style and has greatly influenced English prose.

Pilgrims' Way, popular name for an ancient English track running from Hampshire to Kent. It was used in the Middle Ages by pilgrims travelling from the SW to St Thomas à BECKET's shrine at Canterbury.

Pilgrim Trust, charitable concern founded in 1930 by a US philanthropist and railway magnate, Edward Stephen Harkness (1874–1940). Harkness provided £2,000,000 with which the Trust was to promote cultural relationships between Britain and the USA, preserve historical buildings and monuments and provide educational and welfare grants.

Pill, the popular name for hormonal preparations used as oral contraceptives. They work by preventing ovulation at its usual time at the middle of the MENSTRUAL CYCLE. Two types of hormones, OESTROGENS and PROGESTERONES, are generally used, although the former alone are effective in preventing ovulation; the latter help to regulate the menstrual cycle. From the time of their introduction in the 1950s such contraceptives have been controversial. Controversy has centred around possible side-effects, notably amenorrhoea, headaches, nausea and weight gain, and around the increased liability of deep-vein thrombosis which is associated with their use. On the other hand their convenience and efficacy make them the most reliable form of BIRTH CONTROL available. See also pp. 1102–1103.

Pillars of Hercules, in Greek mythology, two promontories in the Mediterranean, on each side of the Strait of Gibraltar. They were called Calpe and Abyla in ancient times. They are usually identified as Gibraltar in Europe and Mt Acha (Mt Hacho) in Africa. According to some legends they were joined together until HERCULES tore them apart in order to reach Cadiz.

Pillbox, military term for a dug-in machine-gun emplacement. It is sometimes reinforced with concrete, steel, logs or filled sandbags and often has overhead protection.

Pilon, Germain (c. 1535–90), French sculptor hailed as the successor to GOUJON. His work was different in style, however, and is representative of the transition from MANNERISM towards the BAROQUE. The marble figures of Henry II and Catherine de Medici on their tomb (1563–70) are relaxed flowing forms. Other notable works include the bronze *René de Birague* (1583–85), which shows the influence of MICHELANGELO. See also pp. 1397, 1397.

Pillory, form of punishment in which offenders had their hands or head locked through the holes of a wooden framework. They were then mocked by passers-by, who often bombarded them with food and debris. (A device for holding the feet of the offender was called the stocks).

Pillow lava, LAVA extruded under water that commonly takes the form of a distorted globular mass, resembling the shape of a pillow. It apparently results from the rapid chilling of the outer skin, thus making a more or less spherical "balloon" that grows and flattens under its own weight. See also p. 238.

Pilocarpine, ALKALOID drug (C₁₁H₁₆N₂O₂) obtained from the joborandi plant as an oily syrup that crystallizes when pure. Pilocarpine is used chiefly in the form of its hydrochloride or nitrate to treat GLAUCOMA or in counteracting mydriasis caused by ATROPINE poisoning.

Pilot fish, marine fish that lives in warm

seas, often found swimming close to sharks, ships and other large objects. A blue fish with five to seven dark bar markings on the sides and a white tail, it feeds on smaller fish. Length: to 61cm (2ft). Family Carangidae; species *Naucrates ductor*.

Pilot whale, or blackfish, gregarious small, black, toothed WHALE found in all seas except those around the poles. Specimens have been trained to perform in captivity. Length: to 8.5m (28ft). Genus *Globicephala*. See also DOLPHIN; p. 100.

Pilsen, or Plzen, city in w Czechoslovakia. Before 1918 it was part of the Austro-Hungarian Empire. It is a centre for heavy industry (machine tools, motor cars, armaments), and is famous for its internationally exported beer. Pop. (1979) 167,000.

Pilsudski, Joseph (1867–1935), Polish general and statesman who established the independence of Poland. As a youth he was exiled to Siberia for five years for an alleged attempt to murder Tsar Alexander III. Thereafter he was dedicated to raising a private army. In WWI he fought against the Russians but was interned by the Germans when he refused to fight further because of their interference. He was Minister of Defence and the de facto ruler of Poland from 1926 until his death.

Pitdown man, name given to a skull found in Sussex, England, in 1912–13, which appeared to be the "missing link" in the evolution of man from the apes. In 1953 it was proved to be a fake, perpetrated by Charles Dawson. See also p. 110.

Pimenov, Yuri Ivanovich (1903–), Soviet painter and designer. His painting, mainly in water-colour, concentrated on portraying scenes in towns near Moscow. His early work was influenced by IMPRESSIONISM but he later painted in a more conventional style. He also designed many theatre sets, and became professor at the National Film Institute at Moscow in 1945.

Pimento. See ALLSPICE.

Pinemell, small, trailing annual plant native to Britain and the USA. The single, small, five petalled flowers are scarlet, white or blue. Family Primulaceae; genus *Anagallis*.

Pinafore, HMS. See HMS PINAFORE.

Pinchbeck, alloy of COPPER and ZINC, but with much less zinc than is contained in BRASS. Invented by the London watchmaker Christopher Pinchbeck (c. 1670–1732), it is used to simulate gold. Hence, as an adjective "pinchbeck" is used to mean sham, or in false taste.

Pincus, Gregory Goodwin (1903–67), US biologist who helped to develop the contraceptive PILL using synthetic HORMONES. These hormones simulate the physiological state of women when pregnant, thus preventing fertilization. Pincus wrote several articles on hormones and a book, *The Eggs of Mammals* (1936). See also p. 1102.

Pin cushion cactus, CACTUS native to W USA, Mexico and Cuba. It has round or oval globular stems, large brilliantly coloured flowers and bright edible berries. Diameter: 1–61cm (0.5in–2ft). Family Cactaceae; genus *Coryphantha*.

Pindar (c. 522–c. 440), Greek poet known for his choric lyrics and triumphal odes. Of his complete works 44 odes written to celebrate victories in athletic games survive. Each was to be sung in procession for the winner on his return home. See also p. 1208.

Pindling, Lynden Oscar (1930–), chief of state of the Bahamas. A barrister, educated in Britain, he became leader of the Progressive Liberal Party in 1956 and served as Premier from 1957 until the Bahamas achieved independence in 1973.

Pine, any of various evergreen cone-bearing trees, most of which are native to cooler temperate regions of the world. They have scale-like deciduous leaves or evergreen needle-like clusters. The flowers may be catkin-like stalks or pine cones. Many species are valued for soft wood, wood pulp, oils and resins. Family Pinaceae; genus *Pinus*. See also pp. 304–305, 368–369, 711, 713–714, 715, 718–719.

Pineal body, small organ attached to the lower surface of the brain, the function of which is unknown. In human beings, it becomes calcified by the age of about 60 years. In some lizards it forms a "third eye" and is thought to influence sexual cycles. Evidence suggests that the pineal may be an ENDOCRINE GLAND.

Pineapple, tropical herbaceous perennial plant that is cultivated in the USA, South America, Asia, Africa and Australia, and the fruit of the plant. The fruit is formed from the flowers and bracts of the plant and grows on top of a short stout stem bearing stiff fleshy leaves. The fruit is popularly eaten fresh, tinned or made into juice. Hawaii is the major producer of pineapples. Height: to 1.2m (4ft). Family Bromeliaceae; species *Ananas comosus*.

Pineapple Poll (1951), one-act ballet choreographed by John CRANKO to music by Arthur SULLIVAN (arranged by Charles Mackerras) with libretto derived from W. S. GILBERT's *Bab Ballad*, *The Bumboat Woman's Story*. With sets designed by Osbert Lancaster, the ballet was first produced at Sadler's Wells and starred Elaine Fifield, David Blair and David Poole. Its plot bears strong affinities to that of Gilbert and Sullivan's *HMS Pinafore*.

Pinel, Philippe (1745–1826), French physician, a pioneer in the humane treatment of the mentally disturbed. He released patients from imprisonment, developed case histories and attempted to talk and reason with patients. His theories were published in *Traité médico-philosophique sur l'aliénation mentale ou la manie* (1809).

Pine nut, edible seed obtained from any of several species of low-growing PINES called piñon pines (eg. *Pinus cembroides*) of SW North America. The nuts were collected by American Indians for food and they are now used in confectionery.

Pinero, Sir Arthur Wing (1855–1934), British dramatist who wrote carefully constructed plays in realistic style. *The Second Mrs Tanqueray* (1893) raised a protest because of its sympathetic portrayal of a woman with a questionable past. He also wrote farces, such as *The Magistrate* (1885), and sentimental comedies, such as *Sweet Lavender* (1888).

Pinesap, one of a number of saprophytic plants, including the Indian pipe, of Britain and N America. The plants are whitish or reddish and live on dead vegetable matter or other plant roots. Family Monotropaceae; genus *Monotropa*.

Pingo, large conical mound of soil-covered ice that is raised through the permafrost of the arctic regions by water pressure from below. Pingos may be up to 90m (330ft) high and 800m (2,600ft) across.

Pink, common name for the several genera of the pink family, especially the genus *Dianthus* of more than 300 species, most of which are native to the Mediterranean region. Primarily short herbaceous perennials, many are hardy evergreens with showy flowers. The stems are often woody at the base, leaves are simple and usually opposite, and the radially symmetrical flowers are usually bisexual. Family Caryophyllaceae. See also CARNATION; p. 321.

Pinkerton, Allan (1819–84), US detective, b. Scotland. He moved to the USA in 1842, became a detective on the Chicago police force, resigning in 1850 to establish his own agency, Pinkerton's National Detective Agency. He organized and headed a federal intelligence service (1861).

Pink-eye. See CONJUNCTIVITIS.

Pinkie, Battle of (1547), invasion of Scotland by Protector SOMERSET. It failed to weaken French influence in Scotland or to secure the marriage of EDWARD VI and MARY QUEEN OF SCOTS. The Scots were routed at Pinkie, east of Edinburgh, but the English did not follow up and were forced to leave Scotland by the Treaty of Boulogne (1550).

Pinna, flap of skin and cartilage which, with the auditory canal, makes up the outer ear in mammals.

Pinnipedia, suborder of meat-eating aquatic mammals formerly classified as carnivores. The order is made up of eared

Pike are fierce predatory fish which can devour prey of almost their own size.

Pilâtre de Rozier flew for 25 minutes over Paris in a hot air balloon in 1783.

Pillbox: these concrete gun emplacements can still be seen in southern England.

Pillory: early 17th-century stocks in the village of Great Tew, Oxfordshire.

Pinocchio

Pinesap; this plant is one of those that feed on decaying organic matter.

Pintails breed in the Northern Hemisphere and migrate south for the winter.

Harold Pinter received two Screen Writers Guild awards in 1964.

Ezio Pinza sang with the Metropolitan Opera Company for over 20 years.

seals (Family Otariidae) including fur seals and SEALIONS; earless, true, or hair seals (Family Phocidae); and the WALRUS (Family Odobenidae). They have fin-like limbs and their digits are united by a membrane. See also pp.87, 99.

Pinocchio (1881), children's story by Carlo Collodi. It recounts the adventures of Pinocchio, a wooden puppet who comes to life. The story was made into a cartoon film by Walt Disney in 1939.

Pinochet Ugarte, Augusto (1915-), became President of Chile in 1973, when he led the revolt of the armed forces that overthrew Salvador ALLENDE. As head of a four-man military junta, Pinochet brought in strict policies to eradicate Marxism in Chile and to improve an economy damaged by inflation.

Pinochle, card game for two to four players using a 48-card pack made up of two each of the ace to nine in each suit, the cards ranking ace, ten, king, queen, jack and nine. The most popular form of the game is auction pinochle for three players, each of whom receives 15 cards, the remaining three being turned face down on the table. The players "bid" for the three cards and the winner adds them to his hand, discarding three cards to restore his hand to 15. Points are awarded for combinations of cards displayed by each player and tricks are then collected, the winner of the auction aiming at least to reach the amount of his bid through the points he originally declared and those he wins in play.

Pinocytosis, intake and transport of fluid by living cells. Rather than entering and passing through the cell membrane as individual molecules, a droplet becomes bound or absorbed to the membrane which forms a pocket and pinches off to form a vesicle in the CYTOPLASM. The vesicle may then pass across to the far side of the cell where reverse pinocytosis occurs.

Pinon pine, also called Mexican stone pine, evergreen tree that grows in Mexico and SW USA. It has large, edible seeds which are commonly called PINE NUTS. Height: to 7.6m (25ft). Family Pinaceae; species *Pinus cembroides*.

Pins and needles, term for the numbing sensation caused by the irritation of a nerve. It is experienced when one of the limbs "goes to sleep", from being in an awkward position where its circulation is temporarily restricted.

Pinscher. See DOBERMAN PINSCHER.

Pint, unit of liquid capacity; 1/8 of a gallon, 1/4 of a quart, 0.833 US pint, or 0.6 litre. Although the United Kingdom has begun to convert to the metric system, the pint will be retained, at least until the 1980s, because of its importance as a traditional measure for beer and milk.

Pintail, surface-feeding duck. It has webbed feet, a longish neck, short legs, and a flat, blunt beak. The female is a paler brown than the male. Length: 56cm (22in) plus a 10cm (4in) "pin" tail on the male. Family Anatidae; species *Anas acuta*.

Pinter, Harold (1930-), British playwright who began his career as an actor with provincial companies. His first play, *The Room* (1957), was followed by others such as *The Birthday Party* (1958), *The Caretaker* (1960), *The Homecoming* (1965), *Old Times* (1971) and *No Man's Land* (1975). Most of his plays are so-called "comedies of menace". Ordinary characters and settings are found in an atmosphere of fear, horror and mystery.

Pinto, also called paint, breed of light saddle horse, usually with irregular white markings spreading up from the belly, or down from the back. The name originally implied "a spotted horse"; it may be piebald, skewbald or any other colour, with white markings. Height: to 157cm (62in) at shoulder; weight: to 454kg (1,000lb).

Pinturicchio, or **Pintoricchio** (c.1454-1513), Italian painter, real name Bernardino di Betto. He decorated the Borgia apartments in the Vatican and the cathedral library at Siena.

Pinza, Ezio (1892-1957), Italian bass who studied in Italy and made his debut in Rome in 1921. He became the principal

bass of the METROPOLITAN OPERA in New York, achieving great success in a series of leading roles from 1926 to 1948. In 1949 he starred on BROADWAY in *South Pacific*.

Pinzón, Martín Alonso (c.1441-1493), Spanish navigator and explorer. He was one of three brothers to take part in Columbus's first voyage to America (1492). As commander of the *Pinta*, he deserted Columbus to look for the legendary land of gold. He again parted from Columbus on their return to Spain in 1493. See also p.1368.

Pinzón, Vicente Yáñez (c.1460-c.1523), Spanish explorer and navigator who commanded the *Niña* during Columbus's first voyage to America (1492). When Columbus's own ship, the *Santa María*, was wrecked he completed the journey in the *Niña*. Pinzón later led expeditions to explore the coasts of South and Central America and discovered the mouth of the Amazon. He was made governor of Brazil, which he discovered in 1500.

Pion, elementary particle (symbol π) that is a MESON. There are the three types, forming a nuclear MULTIPLET (triplet). The charged pions, π^+ and π^- , have equal mass, about 280 times the electron mass, and are antiparticles of each other; the neutral π^0 , of slightly lower mass, is its own antiparticle. All have zero SPIN. Charged pions decay into MUONS and MUON NEUTRINOS; the π^0 decays into PHOTONS. Virtual pions are thought to be exchanged between nucleons bound together by strong interaction. See also pp.818-819.

Pioneer Space Mission, series of unmanned interplanetary probes launched by the USA. In 1960 Pioneer 5 measured distances within the SOLAR SYSTEM and studied magnetism and the SOLAR WIND. Pioneer 10, launched in March 1972, reached Jupiter in December 1973. It investigated the planet's atmosphere and magnetic field and sent back more than 300 pictures of the planet. Pioneer 11, launched in April 1973, reached Jupiter in December 1974 and is due to pass out of the Solar System in 1986. pp.958-959, 963, 1027, 1027, 1052, 1054, 1055.

Piotrkow Trybunalski, city in central Poland. Of considerable importance from early medieval times until the late 18th century, it was for more than 200 years the seat of the national assembly (1347-1578). Industries: textiles, heavy machinery, bricks. Pop. (1970) 59,700.

Pipefish, any of numerous species of marine fish found in the shallow warm and temperate waters of the Atlantic and Pacific oceans. Closely related to the seahorse, it has a pencil-like body covered with bony rings. Its mouth is at the end of a long snout. Length: to 58.4cm (23in). Family Syngnathidae. See also p.62.

Pipelines, continuous lines of piping, usually sited underground, used for carrying liquids or gases. Pumping stations built at intervals along the length of a pipeline help to maintain the flow of oil, water or gas, and valves inserted at various points help to control the rate of flow. The longest pipeline is in the Soviet Union; it runs 4,444km (2,760 miles). See also p.439.

Piper, John (1903-), British water-colour painter and art critic who studied at the SLADE SCHOOL (1926-30). Although his early paintings were abstract, his style after the late 1930s became naturalistic, a favourite subject being that of buildings in ruins. Since 1950, he has also worked on stage designs for Covent Garden and Glyndebourne and he also designed stained glass for the cathedrals at Coventry and Llandaff. See also p.1765.

Piper, David (1918-), British art historian, critic and novelist. His publications include *The English Face* (1957) and *Enjoying Paintings* (1964); among his novels (written under the pen-name Peter Towry) is *It's Warm Inside* (1953). He became director of the Ashmolean Museum, Oxford, in 1973.

Pipe Rolls, records of the English EXCHEQUER, kept in rolls in the shape of a pipe. They begin in 1131 and end in 1834 and contain principally the annual accounts of each county sheriff with the

Exchequer. They are deposited in the PUBLIC RECORD OFFICE in London.

Pipit, also called fieldlark, or titlark, any of more than 50 small, brown inconspicuous birds that resemble LARKS in habits and appearance. They are found throughout the world. The winter and summer plumage of both sexes is a similar streaked brown or greyish colour, with a long, white-edged "wag" tail. Length: 15cm (6in). Family Motacillidae; genus *Anthus*.

Piquet, card game for two players using a 32-card pack, 7 (low) to ace (high) in each suit. Each player receives 12 cards and the remaining eight are left on the table face down. The non-dealer must discard at least one card and can choose to discard up to five, picking up an equal number from the table, while the dealer may exchange any or all of the remaining cards, although this is not obligatory. The players then compare their hands and receive points according to the most cards in a suit, the longest sequence and the highest set of three or four of a kind. Play of cards from the hands follows with points scored for tricks won, the winner being the player with most points after six deals.

Piracy, robbery by force of arms on the high seas. Pirates usually attacked ships of all nations indiscriminately and were therefore distinguished from the crews of PRIVATEERS, who were in the service of a country and held a commission authorizing them to attack the shipping of certain belligerent powers. Piracy has been practised since the earliest times and was prevalent until the 19th century.

Piraeus (Piraiévs), port in E central Greece, on the Saronic Gulf; capital of Piraeus department and the chief port of ATHENS. Piraeus was the naval and maritime headquarters of ancient Athens. It was planned c.490 BC by Themistocles, and built c.450 BC by Hippodamus of Miletus; the Long Walls connected it to Athens. The modern development of Piraeus began after Greece achieved independence in the 19th century. Industries: shipbuilding, chemicals, textiles. Pop. (1971) 187,362. See also pp.2052-2053.

Piran, Saint (fl. 5th or 6th century), British holy man, sometimes mistakenly identified as St Kieran. A hermit in Cornwall for much of his life, he is titular of the church of the canons regular in Truro. He is patron saint of miners. Feast: 5 March.

Pirandello, Luigi (1867-1936); Italian novelist, dramatist and short-story writer. His work expresses his desire to distinguish between reality and illusion and was widely translated. Among his plays are *Six Characters in Search of an Author* (1921), *Henry IV* (1922) and *As You Desire Me* (1930). His novels include *The Late Mattia Pascal* (1923). He won the 1934 Nobel Prize in literature.

Piranesi, Giovanni Battista (1720-78), Italian engraver and architect. He lived in Rome where he became famous for his *Vedute*, 137 etchings of the ancient and modern city (1745). His architectural plates are notable for their accuracy and grandeur. The one existing building that he designed is the Church of Sta Maria del Priorato in Rome (1764-65).

Piranha, also called piraya, tropical freshwater bony fish that lives in rivers in South America. It is a notoriously voracious predator, with formidable teeth and an aggressive temperament. It usually travels and attacks in schools and can pose a serious threat to creatures very much larger than itself. Length: to 61cm (24in). Family Characidae; genus *Serrasalmus*. See also pp.60, 61.

Pirates of Penzance, The (1879), satirical operetta by Arthur SULLIVAN with libretto by W. S. GILBERT. First produced in Paignton, England, it is a parody of Italian opera and one of the most successful of the many works by Gilbert and Sullivan.

Pire, Dominique Georges (1910-69), Belgian Dominican priest who was awarded the 1958 Nobel Peace Prize for his work in helping refugees from WWII. After being ordained in 1934, he taught philosophy at the Dominican monastery of La Sarte in Belgium and during this period organized various charities to help

the poor. In 1949 he founded the Aide aux Personnes Déplacées to help refugees, and from 1950 to 1962 set up homes for them throughout Europe. In 1960 he established the Mahatma Gandhi International Peace Centre at Huy, Belgium, a university of peace. He also wrote *Bâtir la Paix* (Building Peace, 1966).

Pirenne, Henri (1862–1935), Belgian historian. Although he wrote the first major history of his country, *History of Belgium* (1900–32), he was better known as a medieval historian. In his *Medieval Cities* (1925) he contradicted accepted views in attributing the revival of cities in the late Middle Ages to the recovery of trade. His *History of Europe* (1936) was written in remarkable circumstances – while interned in Germany during WWI, during which time he had no access to a library.

Pirosmanishvili, Niko (1863–1919), Russian painter, trained as a signwriter. His paintings, in a primitive style similar to that of Douanier Rousseau, depict scenes from the life of the peasantry.

Pisa, city in Tuscany, central Italy, on the River Arno; capital of Pisa province. The city prospered as a Roman colony from c. 180 BC. From the 10th to the 11th centuries, it was a powerful maritime republic that rivalled Genoa and Venice. It was defeated by Genoa in 1284 and by Florence in 1406. GALILEO, who was born in Pisa (1564), studied and taught at the university which was a centre of Renaissance learning. Landmarks include the Leaning Tower. Industries: textiles, glass, tourism, machine tools. Pop. (1975) 103,412. See also p. 827.

Pisanello (c. 1395–c. 1455), real name Antonio Pisano, Italian painter and medalist whose works are in the INTERNATIONAL GOTHIC style and include notable drawings and frescoes. He is best known for his medals of important people of his time, which are of great historic value.

Pisano, name of a family of sculptors, the first of whom was Nicola (c. 1225–c. 1284), who founded a new school of Italian sculpture. His first great work was the marble pulpit for the Baptistery in Pisa (1260). Nicola's emphasis on the human figure betrays his use of models from classical antiquity. In his work on the pulpit for the cathedral at Siena (1265–68) he was aided by his son, Giovanni (c. 1250–c. 1320), whose taste in elaborate decoration was influenced by the French Gothic style. Giovanni executed two other pulpits – for S Andrea, Pistoia (1298–1301), and for the cathedral at Pisa (1302–10). Giovanni also designed the façade for the cathedral at Siena. See also p. 1351.

Piscator, Ervin Friedrich Max (1893–1966), German stage director whose EXPRESSIONIST productions used new optical and mechanical resources, such as documentary material, film and slide projections and undisguised stage machinery, to strengthen a play's emotional impact. He developed the concept of EPIC THEATRE which BRECHT incorporated into the work of the Berliner Ensemble and Piscator's work has remained a strong influence on Young German directors, notably Peter Stein.

Pisces, or the Fishes, inconspicuous equatorial constellation situated on the ecliptic between Aquarius and Aries; it is the 12th sign of the Zodiac. No stars are brighter than the fourth magnitude. It contains a distant spiral galaxy, M74 (NGC 628). See also pp. 1006, 1012, 1013, 1894–1895.

Piscis Austrinus, or the Southern Fish, southern constellation between Capricornus and Scorpion. The brightest star is Alpha, or Fomalhaut, of the first magnitude. See also pp. 1016, 1016.

Pisemsky, Alexey Feofilovich (1820–81), Russian novelist and playwright who sympathetically portrayed peasants in his realistic description of the countryside. His works include the novel *A Thousand Souls* (1858) and the play *A Bitter Lot* (1859).

Pissarro, Camille (1830–1903), French IMPRESSIONIST painter. He was influenced by Jean Baptiste COROT but later joined the Impressionists and was represented in

all eight of their exhibitions from 1874 to 1886. In the 1880s he experimented with the POINTILLIST theories of Georges SEURAT but abandoned them in the 1890s for a freer interpretation of nature. His works include *Louvre from Port Neuf* (1902).

Pissarro, Lucien (1863–1944), French Impressionist painter and engraver and the eldest son of Camille PISSARRO. He commonly employed the POINTILLIST technique. In England he was a member of the CAMDEN TOWN GROUP and, later, the LONDON GROUP.

Pistachio, deciduous tree native to the Mediterranean region and E Asia. It is grown commercially for the edible greenish seed (the pistachio nut) of its wrinkled red fruit. Height: to 6m (20ft). Family ANACARDIACEAE; species *Pistacia vera*. See also p. 711.

Pistil, female organ located in the centre of a flower. It consists of a slender style, the OVARY and the STIGMA, which receives POLLEN.

Pistol, firearm held and fired in one hand. The first were MATCHLOCKS, in which a glowing fuse ignited the charge; by the end of the 16th century WHEEL-LOCKS and the cheaper FLINTLOCKS were also in use. Of these, only expensive and cumbersome wheel-locks were reliable. The invention of the PERCUSSION CAP in 1815 enabled pistol technology to advance rapidly, and Samuel COLT's REVOLVER of 1835 was the first reliable repeating firearm. Since then pistols have become capable of automatic fire and some, with detachable butts, are practically indistinguishable from SUBMACHINE GUNS. See also pp. 556–559.

Pistol shooting. See SHOOTING.

Piston, Walter (1894–1976), US composer. He is known principally for his orchestral music, which includes the popular ballet *The Incredible Flutist* (1938), several concertos and a number of symphonies. He has contributed to the development of 20th-century Neo-Classicism in the USA.

Piston engine. See ENGINE.

Pit, in theatre, the ground floor of the auditorium, commonly below ground-level. Although most modern theatres have no pit, theatres were constructed in this way from Elizabethan times until the 19th century.

Pit and the Pendulum, The (1843), suspense story by Edgar Allan POE. One of Poe's most famous tales, it is a condemnation of the tortures and horrors of the INQUISITION.

Pitcairn Island, volcanic island in the central S Pacific Ocean; British possession administered by New Zealand. Pitcairn is inhabited by the descendants of the mutineers from the British ship HMS *Bounty* who landed on the island in 1790. The principal economic activity is the growing and exporting of fruit. Area: 6.5 sq km (2.5 sq miles). Pop. (1980) 63. See also p. 75.

Pitch, quality of sound that determines its position in a musical scale. It is measured in terms of the frequency of sound waves – the higher the frequency, the higher is the pitch. It also depends to some extent on loudness and timbre: increasing the intensity decreases the pitch of a low note but increases the pitch of a high one. See also p. 834.

Pitch, in aerodynamics, angular displacement of the longitudinal axis of an aircraft relative to the horizon. The elevators control pitch by lowering (or raising) the tail relative to the nose to increase (or decrease) the angle of attack (angle at which air strikes the wing). See also pp. 518, 834.

Pitchblende, or uraninite, mineral, the chief ore of uranium which occurs in it in the form of uranium dioxide, UO₂ (with some UO₃). It is found in several parts of the world as a constituent of igneous rocks. It forms cubic crystals, of hardness 5.5, s.g. 7.5–9.7.

Pitcher plant, any of several species of carnivorous bog plant of the tropics and sub-tropics. The vase-shaped leaves, veined with red and green, are lined with bristles. Trapped insects decompose and are absorbed as nutrients by plant cells. The flower is usually red. Height: 20–61 cm (8–24 in). Family SARRACENIACEAE;

genera *Sarracenia* and *Nepenthes*. See also INSECTIVOROUS PLANTS; pp. 313, 371.

Pithecanthropus erectus, name (meaning erect ape-man) originally given to the first specimen of *Homo erectus* when it was discovered in Java in 1891. Pithecanthropines lived about 500,000 years ago, walked erect, made and used crude stone tools and were possibly capable of speech. Their brain capacity was about half way between those of apes and modern man. See also p. 112.

Pitman, Sir Isaac (1813–97), schoolmaster who invented the Pitman SHORT-HAND system. After teaching for many years he opened his own private school in Bath, England. Influenced by Samuel Taylor's system of shorthand, he worked on a system based on sound. In 1837 he published *Stenographic Sound Hand*. He also set up a phonetic institute and brought out his *Phonetic Journal* in 1842 and moved to London in 1845.

Pitot tube, device for determining pressure in a moving fluid, either liquid or gas, invented by Henri Pitot (1695–1771). For liquids, it is generally a MANOMETER with one open end facing upstream and the other open end out of the stream. The different pressures at the two ends cause a liquid to shift position within the two arms of the tube. For gases, a Pitot tube is generally L-shaped, with one end open and pointing towards the flow of gas and the other end connected to a pressure-measuring device. This type of Pitot tube is commonly used as an air-speed indicator in aircraft.

Pitris, in Hindu mythology, the revered semi-divine ancestral spirits of the departed. They reside in a paradise where they feast with the gods. Their condition, however, is directly related to the rites and sacrifices celebrated by their living descendants.

Pitt, William (The Elder). See CHATHAM, WILLIAM PITT, 1ST EARL OF.

Pitt, William (1759–1806), British politician, second son of William Pitt, Earl of CHATHAM. He is known as the younger Pitt. He entered Parliament in 1781, became Chancellor of the Exchequer in 1782 and, at the age of 24, Prime Minister in 1783. He was Prime Minister until 1801, when he resigned in the face of GEORGE III's refusal to consider CATHOLIC EMANCIPATION, and then again from 1804 until his death. His reputation rests on his reorganization of the national finances and his resolute prosecution of the war against France and NAPOLEON. During his administrations were passed the India Act (1784), the Constitutional Act (1791), dividing Canada into French and English provinces, and the Act of UNION with Ireland (1800). He considered himself, if anything, a WHIG and did not attempt to build a party. Yet he is rightly considered as the founder of the second TORY party and, by implication, of the modern CONSERVATIVE PARTY. See also pp. 1544–1545.

Pitta, bright, colourful bird that lives deep in the jungles of Africa, S Asia, Malaysia, the Philippines, New Guinea and N Australia. It is a plump bird, with a large head, short rounded wings, a short square tail and long legs. Some of the birds are migratory. Most feed on termites, other insects and worms, and build large, globular nests in the fork of a bush or low tree. Length: 15–28 cm (6–11 in). Family PITTIIDAE; genus *Pitta*.

Pitt-Rivers, Augustus Henry Lane-Fox (1827–1900), soldier and archaeologist. The scientific method of excavation developed by him emphasized sociology rather than art history. His large archaeological and ethnological collection formed the basis of the Pitt-Rivers Museum, Oxford.

Pittsburgh, city and port in SW Pennsylvania, USA, at the confluence of the Allegheny and Monongahela rivers; second-largest city in Pennsylvania and a major steel-producing centre. Fort Duquesne was founded on the site by the French c. 1750. It was captured by the British in 1758 and renamed Fort Pitt. Pittsburgh grew rapidly as a steel manufacturing centre during the 19th century. The University of Pittsburgh dates from 1787. Other industries include glass, machinery,

petroleum products, electrical equipment, printing and publishing, railway maintenance, coal mining, and oil and natural gas extraction. Pop. (1980) 423,962.

Pituitary gland, or hypophysis, endocrine gland, in human beings about the size of a small cherry, connected to the lower surface of the brain by a stalk (infundibulum). It is composed of an anterior lobe, and a posterior lobe, each of which has its own functions.

Pit viper, any of 100 species of poisonous SNAKES, including the BUSHMASTER, copperhead, lancehead, moccasin and RATTLESNAKE, found chiefly in the New World, Europe and Asia. Pit vipers get their name from a heat-sensitive pit located on each side of the head, which enables them to detect warm-blooded prey in the dark. Family CROTALIDAE. See also VIPER; pp. 70, 312.

Pityriasis rosea, skin disease of unknown origin characterized by the formation of pimples on the shoulders and abdomen. These gradually spread over the body causing itching; the symptoms last for about six weeks.

Piura, city in NW Peru, on the Piura River, capital of Piura department. Founded in 1523 by PIZARRO, Piura is the oldest Spanish city in Peru. The city is a commercial centre for an area of the Peruvian coastal desert, where rice, corn, cotton and sugar cane are produced by means of irrigation. The city has a technical university founded in 1961. Pop. (1972) 126,010.

Pius, name of 12 popes. Pius I, Saint, was pope c. 140–155. Pius II (1405–64, r. 1458–64) was born Aeneas Silvius Piccolomini. He was a Humanist scholar, and as pope tried to organize a crusade against the Turks. Pius III (c. 1440–1503) was pope briefly in 1503. Pius IV (1499–1565; r. 1559–65) was born Giovanni Angelo de' Medici. He furthered the COUNTER-REFORMATION, reconvening the Council of TRENT for its third and last session (1562–63). He also drafted the Index of Forbidden Books. Pius V (1504–72; r. 1566–72), born Antonio Ghislieri, was an energetic reformer of the Church and enemy of Protestantism, excommunicating ELIZABETH I of England in 1570 and serving as commissary general of the INQUISITION before being elected pope. Pius VI (1717–99; r. 1775–99), was born Giannangelo Braschi. He opposed the attempts of the HOLY ROMAN EMPIRE and France to restrict papal authority in their respective lands. Pius VII (1742–1823; r. 1800–23) was born Barnaba Gregorio Chiaramonti. He secured the Concordat of 1801 with NAPOLEON, and was present at Napoleon's coronation in Paris (1804). After Napoleon took Rome in 1808 Pius excommunicated him and was imprisoned, remaining in exile until 1814. On his restoration he encouraged the reform of religious orders and education. Pius VIII (1761–1830; r. 1829–30) was a disciple of Pius VII. Pius IX (1792–1878; r. 1846–78) was born as Giovanni Maria Mastai-Ferretti. His pontificate was the longest in history. He was driven from Rome (1848–50), but restored by Napoleon III. The PAPAL STATES were seized by the Italian nationalists in 1860, and Rome itself incorporated into the kingdom of Italy, which in 1870 Pius refused to accept. He also defended Catholics in Germany from persecution by BISMARCK, and in 1869 called the first VATICAN COUNCIL, which proclaimed PAPAL INFALLIBILITY. Pius X, Saint (1835–1914; r. 1903–14), was born Giuseppe Melchiorre Sarto. He opposed religious MODERNISM, placing several modernist books on the index in 1907, condemned the separation of Church and state in France, and recodified CANON LAW (published 1917). Pius XI (1857–1939; r. 1922–39) was born Ambrogio Damiano Achille Ratti. He signed the LATERAN TREATY with MUSSOLINI in 1929, but later condemned FASCISM, and denounced COMMUNISM in 1937. He called for unity between the Eastern and Western Churches, and supported scientific research. Pius XII (1876–1958; r. 1939–58) was born Eugenio Pacelli. He tried to remain neutral in WWII, his conduct during which had given

Max Planck's ideas about radiant energy led to the modern quantum theory.

rise to controversy. In 1946 he denounced Catholic collaboration with Communists. See also pp.1588, 1661, 1790.

Pixii, Hippolyte (1808-35), French physicist and instrument maker who devised the first practical electric generator. Pixii's original machine generated alternating current electricity, but with the introduction of the COMMUTATOR it was able to generate direct current electricity. See also p.872.

Pizarro, name of four Spanish brothers, all adventurers and explorers. Francisco (c.1471-1541) led the conquest of Peru. Together with his partner and rival, Diego de ALMAGRO, he took control of Peru in 1533 but was later assassinated by Almagro's son. Hernando (c.1475-1578), Francisco's half-brother, helped his brothers in the conquest of Peru, and in 1538 defeated Almagro and had him executed. For this he served 20 years imprisonment in Spain. Juan (c.1500-36) served as a lieutenant to his brother Hernando and died in battle during the reconquest of Cuzco. Gonzalo (c.1506-48), the youngest of the brothers and the most famous after Francisco, was ruthless and tyrannical. After the Peruvian conquest, he explored much of NW South America in search of gold. In defiance of Spain, he set himself up as governor and captain-general of Peru and was eventually beheaded for treason. See also pp.1370, 1370.

Pizzetti, Ildebrando (1880-1968), Italian composer. His most important works are operas, among them *Fedra* (1905), *Fra Gherardo* (1927) and *Vanna Lupa* (1949).

Pizzicato, note or passage that is played on a bowed stringed instrument by plucking or pinching the string with the finger, rather than by bowing it. Examples of this technique are in all musical periods from the 18th century, eg in HANDEL's *Agrippina* (1709) and the second movement of the string quartet (1903) by RAVEL.

Place, Francis (1771-1854), British tailor and political radical. He campaigned for trade unionism (1814-24) and the passing of the Reform Bill (1832). He helped to draft the People's Charter (1838), the demands of the CHARTISTS. See also p.1570.

Placebo, harmless, unmedicated drug substitute given to satisfy a patient's insistence for medicine. It is also used as a control in medical experiments. See also HYPOCHONDRIA.

Placenta, organ in mammals (except monotremes and marsupials) that connects the FETUS to the uterus of the mother and serves as an organ of nutrition, respiration and excretion for the fetus. Part of the placenta contains tiny blood vessel branches through which oxygen and food are carried from the mother to the embryo via the umbilical cord and wastes are carried from the embryo to the mother's bloodstream to be excreted. It secretes hormones that maintain pregnancy and is discharged from the mother's body as the afterbirth, immediately after birth of the baby. See also pp.166-167.

Placental mammals, mammals whose young develop to an advanced stage attached to the placenta - a life-support organ inside the mother's uterus. All mammals except the MONOTREMES and most MARSUPIALS are placentals.

Placer deposits, concentrations of heavy minerals by the action of gravity, usually found in streams. Minerals that occur as placer deposits include gold, copper, rutile, cassiterite and magnetite.

Placoderm, group of primitive jawed fishes that existed in the Devonian period, characterized by armoured plates on the front part of the body. Most were quite small, but some grew to 9m (30ft). See also pp.276, 276.

Placoid fish, fish, including SHARKS, RAYS, and SAWFISH, with plate-like scales that are actually dermal teeth. The tip of the scale is dentine layered with enamel and the lower part is bone anchored to the skin. Dermal teeth are modified into large spines in rays and into teeth on the snout of the sawfish.

Plagioclase, type of FELSPAR (the most

abundant group of minerals on Earth). Plagioclases show an oblique cleavage, as opposed to ORTHOCLASE or MICROCLINE, and are composed of varying proportions of the silicates of sodium and calcium with aluminium.

Plague, acute infectious disease of man and rodents caused by the bacillus *Pasteurella pestis*. In man it occurs in three forms: bubonic plague, most common and characterized by swellings called buboes; pneumonic plague, in which the lungs are infected; and septicaemic plague, in which the bloodstream is invaded. Treatment is the administration of vaccines, bed rest, antibiotics and sulpha drugs. See also BLACK DEATH.

Plague, The Great (1665-66), last great visitation of the bubonic PLAGUE upon England. It raged in London from April 1665 to the autumn of 1666. The court and parliament moved out of London, but the Lord Mayor remained. It is estimated that between 75,000 and 100,000 people died. It was the subject of Daniel Defoe's *Journal of the Plague Year* (1722).

Plaice, or European flounder, marine flatfish found along the W European coast. An important food fish, it is brown or grey with orange spots, and has its eyes displaced towards its upper side. Length: to 90cm (3ft); weight: to 11.8kg (26lb). Family Pleuronectidae; species *Pleuronectes platessa*.

Plaid Cymru (Party of Wales), Welsh nationalist political party, founded in 1925 as Plaid Genedlaethol Cymru. It fought its first general election in 1931. Its first MP was elected in May 1966 when its president, Gwynfor Evans, was returned at the Carmarthenshire by-election. In the General Election of 1979 it returned two MPs.

Plainsong, or plainchant, liturgical music of the Western Church, beginning early in the Christian era. It is unadorned by accompaniment or HARMONY. Its RHYTHM is free so that the natural rhythm of the words may be followed as if they were spoken. In GREGORIAN CHANT its range is not more than five notes. It uses, for its notation, a four-line STAVE. See also MODES.

Plaintiff, party in civil law proceedings that instigates the legal action.

Planché, James Robinson (1796-1880), British dramatist, popular for his PANTOMIMES and BURLESQUES. He introduced historically accurate costumes and accessories in theatre productions, and was the author of *History of British Costume* (1834). He also wrote the libretto for Carl Weber's last opera, *Oberon*.

Planchon, Roger (1931-), French director, actor and playwright. His productions used all the resources and concepts of Brechtian EPIC THEATRE to bring classics such as Shakespeare's *Henry IV* and Brecht's *The Good Woman of Setzuan* to new regional and working-class audiences. He became internationally recognized with an adaptation of Dumas's *The Three Musketeers* (1957-58), in which he played d'Artagnan.

Planck, Max Karl Ernst Ludwig (1858-1947), German theoretical physicist, professor at Kiel and later in Berlin, where he studied the characteristics of the radiation emitted by black bodies. In 1900 he came to the conclusion that the frequency distribution of the radiation could be accounted for only if the radiation was emitted in separate "packets" called quanta, rather than continuously. An explanation of radiant heat energy distribution given off from a heated surface was proved by Planck's radiation law (1900). PLANCK'S CONSTANT (1900) indicates wave and particle behaviour on the atomic scale. His equation, relating the energy of a quantum to its frequency, is the basis of QUANTUM THEORY. He was awarded the 1918 Nobel Prize in physics for his work. See also pp.813, 813, 860-861.

Planck's constant, universal constant (symbol h) of value 6.626×10^{-34} joule second, equal to the energy of a quantum of ELECTROMAGNETIC RADIATION (a photon) divided by the radiation frequency. It appears in formulas describing physical

quantities that can assume only certain discrete values. See also QUANTUM THEORY.

Plane, in mathematics, flat surface such that a straight line joining any two points on it lies entirely within the surface. Its general equation in three-dimensional CARTESIAN CO-ORDINATES is $ax + by + cz + d = 0$ where a, b, c and d are constants. In wood working, a plane is a tool used to smooth wood by cutting away thin strips as it passes over the surface. Any flat shape or surface such as a wing or craft can also be called a plane, hence aeroplane and HYDROPLANE.

Plane geometry, form of GEOMETRY in which the angles of a triangle add up to 180° ; all lines, angles and figures are represented in two-dimensional (PLANE) form. In plane geometry EUCLID's axioms are usually applied. THEOREMS are deduced and proved from axioms. See also pp.794-795.

Planet, celestial body that revolves in an orbit around the Sun or some other star. The nine planets revolving around the Sun are Mercury, Venus, Earth, Mars (the terrestrial planets), and Jupiter, Saturn, Uranus, Neptune (the giant planets), and Pluto. See also pp.926-927.

Planetarium, domed building in which an instrument is used to project an artificial sky in order to demonstrate the positions and motions of the sun, moon, planets, and stars relative to the Earth. The projector was invented in 1913 by Walter Bauersfeld of the Zeiss Optical Company.

Planetary nebula, type of celestial object consisting of a shell or ring of highly ionized (charged) gas surrounding a hot central star. Such objects appear to be stars departing from the red giant stage, which have thrown off their atmospheres (thus producing the gaseous rings) and are evolving into WHITE DWARFSTARS. See also pp.984-985.

Planetary probe, spacecraft sent to fly past, orbit or land on a planet. The era of probes began in 1962 when Mariner 2, the US probe, passed Venus and sent back information that its surface is hot. See also MARINER SPACE MISSIONS; SPACE PROBE.

Planetismal hypothesis, theory to explain the solar system's origin, developed by T. C. Chamberlin and F. R. Moulton early in the 20th century. It states that a star that once passed the Sun exerted enough force to tear off bits of matter from it. These cooled and went into orbit round the Sun. Those planetisms were eventually drawn into larger bits of matter, which became planets.

Plane tree, deciduous tree indigenous to most of the Northern Hemisphere. The English plane is a cross of the US sycamore and the Oriental plane. Its use is chiefly ornamental. Family Platanaceae; genus *Platanus*.

Planimeter, instrument invented by J. H. Hermann in 1814 for measuring the area of a plane surface. It consists of a hinged arm which is made to trace the perimeter of the area being measured and turn a graduated wheel which indicates the measured area.

Plankton, all the floating or drifting life of the ocean, especially that near the surface. The organisms are very small or microscopic and move with the currents. There are two main kinds: phytoplankton, floating plants such as DIATOMS and dinoflagellates; and zooplankton, floating animals such as radiolarians, plus larvae and eggs. See also pp.338-339.

Planography, in printing, method of obtaining prints from a smooth surface, most commonly used in LITHOGRAPHY. The most recent of the major graphic techniques, it was discovered in 1798.

Plant, living organism diverse in size, form, activity and habitat, and generally able to manufacture its own food. More than 500,000 plants have been classified. They vary from the short-lived, single-celled bacteria to the slow-growing oaks and redwoods. Sizes vary from a few millimetres to 100m or, higher, forest trees. The fundamental differences between plants and animals are mode of nutrition, scheme of growth, cell wall composition and locomotion. Plants depend on inor-

Plane may be a machine tool for the high-speed smoothing of wood.

Plankton, mass of tiny plant and animal life which provides food for fish.

Plantain are broad leaved plant with terminal spikes of small flowers.

ganic food materials from soil, water and air to manufacture their own food, particularly by PHOTOSYNTHESIS for which the green pigment CHLOROPHYLL is essential. Some non-green plants, such as fungi, are parasites, existing on other organisms.

Botanists have named 11 divisions of plants and include nine small primitive groups under THALLOPHYTES, the fungi, bacteria, algae and lichens. BRYOPHYTES have a more highly developed reproductive system and include mosses and liverworts. TRACHEOPHYTES, or vascular plants, have strong roots, a water-conducting system and green tissue. They include the club mosses, horsetails, ferns, conifers and flowering plants. See also pp. 6, 183, 272-273, 330, 346-348, 350-351, 356-357, 370-379, 382-383.

Plantagenet dynasty, English royal line that ran from HENRY II (r.1154-89) to RICHARD III (r.1483-85); the name has been commonly used since the 17th century. The line descends from Geoffrey, Count of Anjou, and Matilda, daughter of HENRY I, and is properly called ANGEVIN down to the deposition of RICHARD II (1399), and thereafter Lancastrian and Yorkist. The name probably derives from the sprig of broom (*planta genista*) which Geoffrey of Anjou wore in his cap. It was first used as a nickname, then taken as a surname by Richard Duke of York, the father of EDWARD IV.

Plantain, plant with a rosette of basal leaves and spikes of tiny, greenish white flowers; it grows in temperate regions and was used for medicinal purposes. Family Plantaginaceae; genus *Plantago*. The name plantain is also given to a tropical banana plant believed to be native to SE Asia and now cultivated throughout the tropics. It has fleshy stems, bright green leaves and green fruit that is larger and starchier than a banana and is eaten cooked. Height: to 10m (33ft). Family Musaceae; species *Musa paradisiaca*.

Plantain lily. See HOSTA.

Plantation of Ireland, English policy of permanently settling and subduing Ireland by introducing Protestant settlers to farm areas confiscated from the Irish. The first plantations were set up in Offaly and Leix in 1556 (which were renamed King's and Queen's counties), and plantation continued until the late 17th century. Official plantations were found in most of w and central Ireland; unofficial Scottish plantations were most common in ULSTER. Plantations were a major grievance in the Irish rebellion of 1641. See also pp.1468-1469, 1468.

Plant classification, system devised to group plants according to certain relationships among them. Plants are known by common names which often vary from area to area, but have only one correct scientific name, which is usually composed of a binomial derived from Latin. The system of classification is made up of seven groups which are, from the largest to the smallest, kingdom, phylum or division, class, order, family, genus and species. All plants belong to the plant kingdom, Plantae. The species is the basic unit; members of a species have common characteristics and identifiable differences from all other species. The present method of classification took many years to develop, but is based on the work of the Swedish naturalist Carolus LINNAEUS.

Plant fibres, thread-like tissues derived from plants. They consist mainly of cellulose (long chains of glucose molecules), and many types are processed by man for spinning and weaving. These include seed fibres (COTTON and KAPOK), leaf fibres (SISAL) and stem fibres (LINEN). See also p.712.

Plant food. See FERTILIZER.

Plant hormone, or phytohormone, organic chemical produced in plant cells and functioning at various sites to effect plant growth, leaf and fruit drop, healing, cambial growth and possibly flowering. Hormones are transported away from the stem tip. They include abscisic acid (leaf fall), AUXINS (growth), cytokinins (leaf and bud growth and development) and gibberellins (growth).

Plantin, Christophe (1514-89), printer

and typographer, b.France. He began working as a bookbinder in Antwerp in 1549. In 1555 he established a production and publishing company and attained high standards of accuracy and appearance in his books; the Polyglot Bible (1568-73) is his most famous publication. A typeface in frequent use today bears his name.

Plant louse. See APHIS.

Plant pigment, organic compound present in plant cells and tissues that colours the plant. The most common of these is green chlorophyll, which exists in all higher plants. CAROTENOIDS colour plants yellow to tomato red. Located in CHLOROPLASTS and chromoplasts, there are more than 150 varieties of these durable pigments. Many are essential to PHOTOSYNTHESIS and are a source of vitamin A. Anthocyanins, responsible for pink, red, blue and purple, are found in the cell sap. The shorter days and lower temperatures of autumn cause these pigments to combine with other substances and produce the brilliant foliage colours of DECIDUOUS trees.

Plaque, film of saliva and bacteria that accumulates on teeth. It causes colouration and serves as a breeding place for potentially harmful bacteria. It is usually removed as part of preventive dentistry because it is believed to cause PYORRHOEA. See also pp.1106-1107.

Plasma, in biology, liquid portion of the BLOOD. It contains an immense number of ions, inorganic and organic molecules such as immunoglobulins, and hormones and their carriers but not cells. It clots upon standing. See also pp.152-153.

Plasma, in physics, highly ionized state of matter in which substances consist almost entirely of ELECTRONS (negatively charged) and atomic nuclei or IONS (positively charged). This state, often described as the fourth state of matter, occurs at enormous temperatures, eg in the interiors of stars and in fusion reactors.

Plasmodium, genus of parasitic PROTOZOA that causes MALARIA. It infects the red blood cells of mammals, birds and reptiles throughout the world, being transmitted by the bite of a female *Anopheles* mosquito. Four species cause human malaria, passing from mosquito to man as sporozoites in the mosquito's saliva. Once in the red blood cells, they divide, forming up to 24 daughter parasites, then destroy the red blood cells. Entering the PLASMA, they infect new cells. See also pp.10, 1082.

Plassey, Battle of (1757), decisive defeat of the Nawab of Bengal, Siraj-ud-Dawlah, by the British under Robert CLIVE. This battle made possible the British acquisition of Bengal.

Plaster, mixture, originally of slaked lime (calcium hydroxide), sand and water, often with hair or fibres added as a binder, that is applied wet to interior walls and ceilings to form a smooth hard surface for papering or painting when dry. Most modern plasters are made from gypsum (calcium carbonate). See also PLASTER OF PARIS.

Plaster of Paris, or gypsum cement, powdered form of calcium sulphate hemihydrate, (CaSO₄)₂H₂O, obtained by heating GYPSUM to around 150°C (300°F). After the addition of water it sets and hardens and is used as a PLASTER for a wide range of purposes, including the setting of broken limbs and the making of moulds.

Plastics, synthetic materials composed of organic molecules, often in long chains called POLYMERS. The weight and structure of the molecules determine the physical and chemical properties of a given compound. Plastics are synthesized from common materials such as cellulose from cotton or wood pulp; organic acids from coal tar; CASEIN from skimmed milk; and from chemicals derived from petroleum, potatoes, peanuts and soya beans. The plastics industry began in 1869 with the development of celluloid by John Wesley HYATT. See also pp.588-589.

Plastics fabrication, methods of manufacturing plastic products. There are three basic processes: calendering, casting and extrusion. Calendering is used to make composite material from a THERMOSETTING RESIN such as phenol-formaldehyde

(Bakelite) and materials like paper and cloth. Casting uses the thermosetting plastics such as EPOXY, POLYESTER, phenolic or urea RESINS and enables plastic to be cast around metal parts, as in making screwdrivers. Extrusion forces the softened plastic through a die which shapes it into the desired form, such as a tube, rod or sheet. This is employed with THERMOPLASTIC RESINS such as POLYETHYLENE, POLYSTYRENE and NYLON. See also p.588.

Plastic surgery, branch of surgery that involves the rebuilding of deformed, damaged or disfigured parts of the body. Tissue can be moulded in the shape of a missing part, such as an ear or nose. Skin grafts are usually taken from one part of the body and attached to another until blood is supplied adequately to the new site. Cosmetic surgery is performed solely to improve appearance. A typical example is face-lifting, which involves stretching the skin until it is taut, and then removing the excess. See also pp.1097, 1097, 1147.

Plata, Río de la, anglicized to River Plate, estuary in SE South America formed by the junction of the Paraná and Uruguay rivers. It is 270km (170 miles) long and 190km (120 miles) wide at its mouth.

Plataea, Battle of (479 BC), decisive victory of Greek forces under Pausanias over the Persians under XERXES, which assured Grecian independence. There is a modern village named Plataiai on the site of ancient Plataea. See also p.1204.

Plate, Battle of the River, wwn naval engagement that took place in the Río de la PLATA estuary off Montevideo harbour, in Dec. 1939. The British cruisers *Exeter*, *Ajax* and *Achilles* engaged the German pocket battleship *Admiral Graf Spee*, eventually forcing it to be scuttled.

Plate, crustal, any of six major crustal plates plus many smaller ones that cover the Earth. Their motions are complex and any two plates may be either separating, converging or sliding past each other. See also PLATE TECTONICS; pp.198, 214.

Plate camera, camera in which the image is exposed on a chemically prepared plate as opposed to a portion of roll film. Before 1888 when GEORGE EASTMAN marketed his celluloid roll film, photographers made exposures known as daguerreotypes on polished and silvered copper plates or on heavy glass plates, both of which required coating with complicated chemical solutions until gelatin dry plates came onto the market in the early 1870s. Plate cameras are still used by professional photographers for studio work with technical and stationary subjects. The relatively large image size gives a high degree of overall sharpness. See also pp.628-629, 628, 629.

Plate glass, optically flat glass generally made by rolling, grinding and polishing, so that its surfaces are plane and parallel. It was first made in France in the 17th century. See also pp.546-547.

Platelet, colourless, usually round structure found in all mammalian BLOOD. Chemical compounds in platelets, known as factors and cofactors, are essential to the mechanism of clotting. The normal platelet count is about 300,000 per cubic millimetre of blood. See also pp.152-153.

Plate tectonics, theory proposed in 1962 by H.H. Hess to explain the mechanism of continental drift. Using the evidence of the mid-ocean ridges and deep trenches, he suggested that magma rises by convection from the deep Earth and spreads along the ocean-floor and cools. At the same time a heavier layer under the continental crust, the lithosphere, is also being spread apart by the rising magma. The plates of lithosphere push against each other at a rate of between 1-15cm (0.5-6in) per year and one plate is forced to bend down into the deep mantle where it becomes liquid magma again. When one edge of the top crust pushes against another, it wrinkles, forming new mountain ranges like the Andes. See also pp.198, 214.

Plath, Sylvia (1932-63), US poet, wife of Ted HUGHES. Her intensely personal verse includes *The Colossus* (1960) and *Ariel* (1965). The latter was written in the last months of her life and was published post-

humously, as were *Crossing the Water* (1971) and *Winter Trees* (1972). She wrote one novel, *The Bell Jar* (1962). See also p.1773.

Plating. See ELECTROPLATING.

Platinum, precious metallic TRANSITION ELEMENT (symbol Pt), discovered in 1735. Its chief source is certain ores of nickel. It is used in jewellery and in electrical resistance wire, THERMOCOUPLES, electrodes and other laboratory apparatus. It is chemically unreactive; it does not react with oxygen at normal temperatures nor with common acids, ie it resists CORROSION. Properties: at. no. 78; at. wt. 195.09; s. g. 21.45; m. p. 1,769°C (3,217°F); b. p. 3,800°C (6,800°F); most common isotope Pt¹⁹⁵ (33.8%). See also pp.888-889.

Plato (c.427-347 BC), Greek philosopher. He studied (407-399 BC) under SOCRATES, who appears as a central figure in many of his writings. Plato lived in Athens and set up an Academy there in c.387 BC, where he taught. He visited Syracuse three times in about 388, 367 and 361-36 BC in the hope of setting up an ideal political system there. All of the 36 works of Plato survive, many of which form lasting works of literature and deal with aspects of the relationship between the individual and the state. These dialogues include *Gorgias*, the *Republic* (in which Plato outlined his view of the ideal state), *Phaedo* and the *Symposium* (both aesthetic and mystical works). Plato's work has been continually studied, from the time of his pupil ARISTOTLE to the 20th century. See also pp.1209, 1216, 1850, 1880-1881, 1886-1887, 1888.

Platonist, one who derives the basis of his thought from PLATO's ideas. Platonists believe in the absolute values of an unchanging reality, distinct from the changing experiences of the senses.

Platyhelminth. See FLATWORMS.

Platypus, MONOTREME mammal of Australia and Tasmania. It is amphibious, lays eggs and has webbed feet, a broad tail and a soft duck-like bill. The male has a poison spur on the hind foot. It is 60cm (24in) long and eats small invertebrates. Family Ornithorhynchidae; species *Ornithorhynchus anatinus*. See also pp.90, 90.

Platyrhini, group of monkeys of the Americas (the New World monkeys), as opposed to those from Africa and Asia. The distinction is made because of their broad nostrils, and the group includes the SPIDER MONKEY and MARMOSETS. Many have prehensile tails. See also pp.102-103.

Plautus, Titus Maccius (c.225-184 BC), Roman comic playwright whose works such as *Miles Gloriosus* (*The Braggart Soldier*, c.211 BC) were modelled on Greek originals and combine complicated and farcical plots with amusing, low-life characters and dialogue spiced with puns, topical allusions and repartee. The best-known play based on a Plautus work is Shakespeare's *The Comedy of Errors* (1593) which derives from *Menaechmi* (*The Two Menaechmuses*). The musical *A Funny Thing Happened on the Way to the Forum* (1962) is based on several of Plautus' plots. See also HC1 p.112.

Playbill, poster advertising a play or other theatrical production. It originated in a basic form in the 17th century and gradually grew in size to accommodate as much pertinent information as possible about the production being advertised. It was the direct precursor of the modern theatre programme, which largely superseded it in the mid-19th century.

Playboy of the Western World, *The* (1907), three-act play by J.M. SYNGE. It was first produced at the ABBEY THEATRE in Dublin where it caused riots among the audience for its portrayal of the Irish peasantry. The central figure is Christy Mahon. See also p.1767. He has killed his **Player, Gary** (1935-), South African golfer. He has won the Masters Tournament three times (1961, 1974, 1978), the US Open Championship (1965), two PGA Championships (1962, 1972) and three British Opens (1959, 1968, 1974). He won more than 60 major tournaments, and was renowned for his dedication to improving his game and to maintaining physical fitness.

Playhouse

Samuel Plimsoll fought to outlaw shipowners who put their crews in danger.

Maya Plisetskaya became the prima ballerina of the Bolshoi Ballet in 1945.

Plovers often use the "broken wing" decoy display to protect their nests.

Plums are eaten fresh, in jams, or dried out to make prunes.

(1959, 1968, 1974). He won more than 60 major tournaments, and was renowned for his dedication to improving his game and to maintaining physical fitness.

Playhouse, permanent theatre where dramatic performances of the spoken word, as opposed to opera, are staged. Playhouses in England derived from the tiered courtyards of Elizabethan inns, and playhouse seating developed as unpartitioned seats on several levels grouped around the picture stage which with its proscenium arch was adopted in the 17th century. Restoration playhouses contrasted with the majority of European public theatres, whose higher tiers tended to have boxed accommodation for richer patrons and whose primary acoustic requirements were for opera. See also STAGE.

Playing cards, pack of usually 52 cards, used in playing games of chance or skill. They are divided into four categories called suits: diamonds and hearts (which are red) and clubs and spades (which are black). Each suit has 13 ranks from one (ace, theoretically the lowest but paradoxically the highest card in most games) to 10 plus jack (or knave), queen and king. In gambling games such as POKER an extra one or two cards, called jokers are often used to represent whatever is advantageous to the holder. Playing cards probably originated in China between AD 600 and 900 and took their present form in England in about the 15th century.

Playing Fields Association, National, British registered charity whose aims are to encourage and provide recreational and sporting facilities, especially for children and young people in inner-city areas.

Pleasance, Donald (1919-), British actor whose recent work has been in films and television, often cast as a villain. His many films include *Cul de Sac* (1966), *The Greatest Story Ever Told* (1965), *Soldier Blue* (1970) and *The Last Tycoon* (1976).

Pleasure principle, in psychoanalytic theory, need of the ID to be satisfied by bodily pleasures such as food and sex. An individual has to weigh his response to the pleasure principle with the demands of the "reality principle", the need of the EGO to cope with the problems of the everyday world. An imbalance between the two can be a sign of mental disorder.

Plebeians, or Plebs, general body of Roman citizens as distinct from the PATRICIANS, or privileged class. They were originally forbidden to hold any public office except that of military tribune and were prohibited from marrying Patricians. The gulf between Plebs and Patricians gradually closed until 287 BC, when a plebeian dictator was appointed who obtained political equality.

Plebiscite (from the Latin *plebis citum*), a law enacted by the plebs or common people by a direct vote of an entire district or nation. Plebiscites are usually concerned with matters of a national importance such as the election of a leader or choice of government.

Plecoptera. See STONEFLY.

Plectrum, small, shaped piece of wood, ivory, horn, tortoiseshell, metal or plastic used to pluck the strings of musical instruments such as the harpsichord, guitar, banjo and zither.

Pléiade, La, group of seven 16th-century French poets. They were Pierre de RONSARD, the leader, Joachim du Bellay, Jean-Antoine de Baif, Rémy Belleau, Estienne Jodelle, Pontus de Tyard and Jean DORAT. They advocated writing in French instead of Latin and Greek.

Pleiades (M45), stellar cluster in the northern constellation of Taurus. It is a genuine OPEN CLUSTER of approx. 500 stars, of which at least seven are visible to the naked eye. The brightest stars are hot and white. The cluster is surrounded by a large reflection NEBULA. See also pp.983, 994, 994, 1012, 1019, 1019.

Plein air (French for "open-air"), term used of pictures painted out of doors. It tends to be used most frequently of the works by artists of the BARBIZON SCHOOL and by the IMPRESSIONISTS.

Pleistocene, geological epoch that began about 2 million years ago, during which

man and most forms of familiar mammalian life evolved. Episodes of climatic cooling in this epoch led to widespread glaciation in the Northern Hemisphere and the Pleistocene is the best known glacial period or Ice Age in the Earth's history. The present HOLOCENE EPOCH succeeded the Pleistocene around 10,000 BC.

Plekhanov, Georgy Valentinovich (1857-1918), Russian Marxist and revolutionary leader. Originally a populist, he went into exile in 1880 and became an adherent of Marxism. A major theoretician and organizer of the Russian Social Democratic Workers Party, founded in 1898, he greatly influenced V.I. LENIN, with whom he worked until he joined the Mensheviks in 1903. He returned to Russia in 1917 and formed an anti-Bolshevik party, but died shortly after the October revolution. See also p.1648.

Plesiosaur, any of several extinct marine reptiles of JURASSIC to CRETACEOUS times. It had a stout body propelled by powerful paddle-like limbs. Most plesiosaurs were long-necked with small heads (plesiosaurs were short-necked with elongated heads). Length: 4.5-12m (15-40ft). See also pp.184, 281, 282.

Pleura, double membrane that lines the space between the lungs and the walls of the chest. It is serous (thin and moist with serum, the fluid containing natural antibodies of the body's immune system). Dry PLEURISY results from inflammation of the pleura, and pleurisy with effusion results from the accumulation of excess serum in the pleural cavity. See also p.1065.

Pleurisy, painful inflammation of the pleura, the membrane lining of the chest cavity, caused by infection in the lung.

Pleydenwurff, Hans (c.1420-72), German painter. He became a citizen of Nuremberg in 1457, and was a highly skilled exponent of Netherlandish art in Germany. Famous among his altarpieces is that for the Church of St Elizabeth, Breslau (1462).

Plimsoll, Samuel (1824-98), British reformer who was particularly interested in the dangers faced by merchant seamen. A member of parliament, he secured the passage of the 1875 Merchant Shipping Act. This required every owner to mark his ship with a circular disc with a horizontal line drawn through its centre (the "Plimsoll line"), indicating the maximum depth to which the vessel might be loaded.

Plinlimmon, or Plynlimon, mountain in W Wales, the source of the rivers Wye and Severn. It has three peaks. Height: 752m (2,468ft).

Pliny the Elder (c.AD 23-79), Roman naturalist whose full name was Gaius Plinius Secundus. His one surviving work is *Historia Naturalis*, a compilation of all the Greek science then known. He died while investigating the eruption of Vesuvius. See also pp.1213, 1250.

Pliny the Younger, (c.62-114), Roman author and administrator, whose full name was Gaius Plinius Caecilius Secundus Pliny. He began practising law when he was 18 years old, and later became senator, praetor and consul. His literary fame rests on the collection of letters, written probably for publication. See also pp.1570, 1591.

Pliocene, last era of the Tertiary period that lasted from 7 to 2 million years ago and preceded the Pleistocene Ice Age. Animal and plant life was not unlike that of today. See also pp.184, 287.

Pliopithecus, genus of extinct gibbon-like apes from the MIOCENE period of Czechoslovakia. Although a true ape it possessed many features of the PLATYRRHINI. It walked on all fours but the skeleton indicates that it could also swing by its arms.

Plisetskaya, Maya Michailovna (1925-), Soviet ballet dancer who joined the BOLSHOI BALLET, MOSCOW, as a soloist in 1943 and became its PRIMA BALLERINA in 1945. Her most famous role is Odette-Odile in *Swan Lake*; she has also appeared as an actress in several films, such as *Anna Karenina* (1968).

PLO (Palestine Liberation Organization), agency of guerrilla forces devoted to reclaiming from Israel for Palestine Arabs the W bank of the River Jordan. Founded

in 1964, it is officially pledged to the dissolution of Israel. In 1974 the UN recognized the PLO as a government-in-exile. See also pp.1783, 1783, 1785.

Ploiești, city in SE central Romania, 56km (35 miles) N of Bucharest. It prospered as the largest oil-producing centre in SE Europe in the 19th century. As a result of Romania's cooperation with the AXIS POWERS in 1940, supplying Germany with oil, the city was heavily bombed by the Allied powers in WWII. Its present industries include oil refining and the manufacture of petrochemicals. Pop. (1974) 175,527.

Plombières, Pact of, (July 1858), secret agreement between Napoleon III of France and Count Cavour, Prime Minister of Piedmont-Sardinia. Napoleon promised to help to expel Austria from Italy in return for the cession of Nice and Savoy to France. See also p.1588.

Plomer, William Charles Franklyn (1903-73), British writer. He was born in South Africa, educated at Rugby and returned to South Africa after WWI to become a farmer and trader. He later settled in Britain. His best-known novels are *Turbott Wolfe* (1925) and *At Home* (1958). His poems include *Collected Poems* (1960) and among his short stories are *I speak of Africa* (1927) and *Paper Houses* (1929).

Plotinus (205-270), Roman philosopher, founder of NEO-PLATONISM. Greatly influenced by his teacher, Ammonius Saccas, he opened a school in Rome. His theories were basically Platonic with elements of other Greek philosophies. Although he opposed Christianity, his teachings have affected Christian thought. His pupil, PORPHYRY, compiled the *Enneads* of Plotinus.

Plough, agricultural implement used to cut furrows in soil for aeration and in preparation for sowing or planting. The first ploughs appeared in the NEOLITHIC period and in the BRONZE AGE became metal-tipped wooden wedges fastened to a single handle and a beam, pulled by men or oxen. This form remained virtually unchanged until the 19th century when the mould-board was introduced in the USA. This was a curved board that turned over the slice of earth cut by the plough's blade or share. See also pp.652, 658, 1465, 1635.

Plough. See GREAT BEAR.

Plough and the Stars, The (1926), four-act tragedy by Sean O'CASEY. The play presents a picture of the conflict between the ideals and the actuality of the situation of the Irish during the EASTER RISING of 1916. The title is taken from the plough and stars on the flag of the so-called Irish Citizen Army.

Plovdiv, city in central Bulgaria, on the River Maritsa. Seized by the Turks in 1364, it remained under Turkish rule for 500 years, becoming part of Bulgaria in 1885. Today it is a major transport centre that manufactures lead, zinc, textiles and shoes. Pop. (1978) 332,899.

Plover, any of several species of wading shorebirds, many of which migrate long distances over open seas from Arctic breeding grounds to Southern Hemisphere wintering areas. It has a large head, a plump grey, brown or golden speckled body and short legs. Length: to 28cm (11in). Family Charadriidae; genera include *Charadrius* and *Pluvialis*.

Plowright, Joan Anne (1929-), British actress whose reputation was established in the 1950s and whose versatile talents were displayed in both classical and contemporary works. The former were mainly at Chichester and The National Theatre with her husband Laurence OLIVIER; the latter included the first performances of John OSBORNE's *The Entertainer* (1957), Arnold WESKER's *Roots* (1959) and the English adaptations by Keith Waterhouse and Willis Hall of Eduardo de FILIPPO's *Il figlio di Pulcinella* (1959) (*Saturday*, *Sunday*, *Monday*, 1973) and *Filumena Marturano* (1946) (*Filumena*, 1977).

Plum, fruit tree, mostly native to Asia and naturalized in Europe and North America. The Japanese plum (*Prunus salicina*) is crossed with European varieties to give several cultivated strains. Plum

trees have alternate simple leaves, white flowers and edible, smooth-skinned, oval fruits of a purple, red, blue or green colour, according to the variety. Plums are dried to make prunes. Height: to 9m (30ft). Family Rosaceae. See also pp.688, 689.

Plumbago. See GRAPHITE.

Plunket, St. Oliver (1629-81), Irish Roman Catholic prelate. Appointed Archbishop of Armagh and Primate of Ireland in 1669, he was forced into hiding after the TEST ACT (1673). Accused of conspiring in the POPISH PLOT (1678), he was executed, the last man to be martyred for the Roman Catholic faith in England. He was beatified in 1920 and canonized in 1975.

Plunket, William Conyngham, 1st Baron Plunket (1764-1854), Irish lawyer and politician. He was the WHIG leader in the Irish Parliament before its abolition in 1800. He was the leader of the movement for CATHOLIC EMANCIPATION in the House of Commons in the 1820s, and Lord Chancellor of Ireland from 1830 to 1841.

Plunket Shield, until 1975 the premier cricket trophy in New Zealand. Presented in 1906 by Lord Plunket, it was contested annually in a series of first-class matches between the four major provinces and two district sides. It is now the trophy for matches between North and South Islands.

Plunkett, Sir Horace Curzon (1854-1932), Irish political figure and agricultural reformer. He worked as a cattle rancher in the USA (1879-89). Returning to Ireland, he founded the Irish Agricultural Organization Society (1894), a co-operative. As a Member of Parliament (1892-1900), he campaigned for agricultural reform. He was a senator of the Irish Free State (1922-23).

Pluralism, in politics, theory that power in the state is wielded by a number of groups with conflicting interests, none of which is able to establish absolute authority. In philosophy, pluralism is the name given to the theory that there are many ultimate substances, rather than one, as in MONISM. LEIBNIZ and Bertrand RUSSELL are considered philosophical pluralists. Pluralism can also mean the holding of more than one office at the same time, especially within the Church. See also p.1853.

Plutarch (c.46-120 AD), Greek biographer and essayist. His best-known work is *The Parallel Lives*, biographies of soldiers and statesmen. They are arranged in pairs, first a Greek, then a comparable Roman. The style is pleasant, although the facts are not always accurate. Less known but of great interest are Plutarch's *Moralia*. They consist of essays and dialogues on ethical, literary and historical subjects.

Pluteus, free-swimming larval stage of an echinoderm such as the SEA URCHIN, STARFISH, SEA CUCUMBER and SEA LILY, commonly found in PLANKTON. Most species bear hair-like cilia, sometimes on "arms", to waft food into the gut and to provide a means of larval dispersal. See also p.51.

Pluto, Latin name for the Greek god HADES, sovereign of the lower world and god of the dead. He was brother of ZEUS and husband of PERSEPHONE, and a hard and inexorable character who dwelt beneath the secret places of the earth in a gloomy palace in the barren fields. Pluto was considered also to be the giver of wealth in that he possessed all that sprang from the earth.

Pluto, ninth planet from the Sun, discovered in 1930 by C.W. TOMBAUGH. Mean distance from the Sun, 5,890,000,000km (3,658,000,000 miles); estimated mass, 0.9 times that of the Earth; estimated diameter, approx. 5,998km (3,725 miles); rotation period, 6.4 Earth-days; period of sidereal revolution, 247.7 years; estimated surface temperature, -230°C (-382°F). See also pp.926, 967.

Plutonium, radioactive metallic element (symbol Pu) of the ACTINIDE group, first made in 1940 by deuteron (heavy hydrogen) bombardment of uranium. It is found in small amounts in uranium ores. Pu²³⁹ (half-life 24,360yr) is made in large quantities in BREEDER REACTORS. It is a fis-

sionable material used in reactors and nuclear weapons. The element is a strong ALPHA PARTICLE emitter and is absorbed by bone, making it a dangerous radiological hazard. Properties: at. no. 94; density 19.84 (25°C); m.p. 641°C (1,186°F); b.p. 3,327°C (6,021°F); most stable isotope Pu²⁴⁴ (half-life 8 × 10⁷yr).

Plymouth, major port and county district in Devon, SW England, on the Tamar estuary; England's most important naval base (Devonport) after Portsmouth. In the 16th century the adventurers Francis DRAKE, John HAWKINS and Walter RALEIGH sailed from Plymouth, and the Mayflower sailed for America from there in 1620. Granite, kaolin and manufactured goods are exported. Area: (county district) 79sq km (30sq miles). Pop. (county district, 1974 est.) 251,200; (city, 1971) 239,314.

Plymouth Brethren, strictly Puritan sect of evangelical Christians, founded in Ireland in the late 1820s by J. N. Darby, an ordained Anglican. They are also sometimes known as Darbyites. Their more usual name comes from their having established their first English centre at Plymouth in 1831. In 1849 they split into two groups, the "Open Brethren" and the "Exclusive Brethren", and have since split further.

Plymouth Colony, settlement on the coast of Massachusetts in 1620. About 100 pilgrims and other colonists from the MAYFLOWER landed near Cape Cod in December 1620 after poor weather diverted the ship from Virginia. Government by majority vote was established by the Mayflower Compact, because no royal charter existed. The hardships of the first winter killed nearly half the settlers but, under the leadership of William BRADFORD and with the aid of nearby friendly Indians, the colony survived and in October of the following year the settlers celebrated the first THANKSGIVING DAY. See also pp.1538, 1538.

Plinlimon, Plinlimmon. See PLINLIMMON.

Plywood, sheet made of three or more layers of wood glued together with the grain of successive layers at right-angles to the preceding layer. It is usually much stronger and cheaper than most woods of equal thickness.

Pizen. See PILSEN.

Pneumatic tool, device powered by compressed air in a rotary or a reciprocating (back and forth) motion to speed up operations such as sawing, grinding, digging, hammering and riveting. The pneumatic drill used in roadworks has a reciprocating, pounding motion at speeds of between 80-500 revs per minute.

Pneumatic tyre. See TYRE.

Pneumoconiosis, occupational disease of miners working in confined and dusty conditions; it affects the lungs. Caused by inhaling irritants, often only as minute specks, the disease inflames and can finally destroy lung tissue.

Pneumonia, inflammation of the LUNG tissue, usually caused by bacterial infection. Mycoplasmal pneumonia affects mainly children and young adults; it is caused by the micro-organism *Mycoplasma pneumoniae*, which grows on the mucous membrane lining of the lungs. Pneumococcal pneumonia is more severe and is caused by *Diplococcus pneumoniae*. Both forms produce symptoms including high fever, chest pain, coughing and bloody sputum; treatment for either form is with ANTIBIOTICS. See also pp.1064-1065.

Pneumothorax, air in the space between the membranes covering the lungs and those lining the chest cavity, most commonly caused by injury and more rarely by disease. It causes the lung to collapse for a short time; it is sometimes deliberately induced to allow a lung to heal, as in a treatment for TUBERCULOSIS.

Pnom-Penh. See PHNOM-PENH.

Po, longest river in Italy. It rises in the Cottian Alps in NW Italy, and flows E through the Piedmont to empty into the Adriatic Sea. The Po valley is an important industrial and agricultural region, and water from the river is used extensively in irrigation schemes. It is navigable upstream from the mouth to as far as Pavia. Length: 650km (405 miles).

Pocahontas (1595-1617), daughter of American Indian chief Powhatan and heroine of a romantic colonial story which tells how she saved the life of Capt. John Smith, leader of the Jamestown settlement, who was about to be clubbed to death by her father. See also p.1539.

Pochard, freshwater diving duck of SE England and Europe. It inhabits dense vegetation close to fresh water or coastal lagoons. The drakes have a bright chestnut head, a black neck and breast, and grey underparts. Length: 46cm (18in). Family Anatidae; species *Aythya ferina*. See also p.76.

Po-Chu-i (772-846), Chinese poet who held several high government posts and was Governor of Chung-chou (818) and Mayor of Lo-yang (829). He wrote more than 3,000 short poems in simple, clear language. His most famous is *The Everlasting Wrong* (806).

Pocket battleship, CRUISER armed with large guns. These were built by Germany in the 1930s when, under the terms of the Treaty of Versailles, it was prevented from constructing any battleship of more than 10,000 tonnes. The treaty was violated by the launching of the *Graf Spee* (12,500 tonnes) in 1934. See also GRAF SPEE pp.568-569.

Pocket Borough. See ROTTEN BOROUGH.

Podgorniy, Nikolai Viktorovich (1903-), Soviet chief of state from 1965 to 1977. A member of the Communist Party from 1930 and of the Central Committee from 1960, he became Soviet President in 1965. His elevation to the presidency marked his removal from effective power in the confusion following the fall of KHRUSHCHEV. In 1977 he was replaced by Leonid BREZHNEV.

Podicipediformes. See GREBE.

Podocarpus, genus of evergreen shrubs and trees native to warm and tropical regions of the Southern Hemisphere. They have narrow, pointed, flat leaves. Family Podocarpaceae. See also p.308.

Podolia, region in the Ukraine (Ukrainskaja SSR), USSR, in the valley of the southern Bug River. The E part of Podolia passed to Russia in 1793; the W part to Austria in 1772, to Poland from 1918 to 1939 and was annexed by the USSR after WWII. Products: sugar beet, tobacco, wheat, sunflowers and dairy produce. Food processing is the principal industry. Kamenev-Podolskij is the main city.

Podolsk, city in the Russian SFSR, USSR 40km (25 miles) S of Moscow, at the junction of the Moscow-Warsaw and the Moscow-Crimea roads. Industries include machinery plants, oil-refining equipment and the manufacture of cables. Pop. (1975) 187,000.

Poe, Edgar Allan (1809-49), US poet and short story writer, regarded by many as the creator of the modern detective story. Poe's life was brief and tragic. An orphan at three, he had a wealthy godfather with whom he quarrelled while at university. He married his young cousin of 13 who died a few years later of tuberculosis. Much of his finest poetry, such as *The Raven* (1845), deals with fear and horror in the GOTHIC tradition. Other works include the poem *Annabel Lee* (1849) and the stories *The Fall of the House of Usher* (1839), *The Murders in the Rue Morgue* (1841) and *The Pit and the Pendulum* (1843).

Poelzig, Hans (1869-1936), German architect who had an enormous influence on the development of modern architecture in Germany. His office building at Breslau (1911) anticipated the favourite motif of the 1920s - horizontal strip windows. Poelzig designed some highly original industrial architecture, eg the water tower at Posen (1911), a forerunner of his EXPRESSIONIST phase. The apogee of this was the Grosses Schauspielhaus, Berlin (1919). From the late 1920s he began designing buildings of a monumental simplicity, eg the Farber administrative block, Frankfurt (1928-31).

Poetics (335 BC), ARISTOTLE's work of literary criticism which deals with the origins and forms of poetry. In it he argues that poetry is an "imitation" (*mimesis*) of

Pluto became ruler of the underworld by casting lots for his brothers' kingdoms.

Pochards are poor walkers because their legs are adapted for making swift dives.

Pocket battleships complied with the limit imposed on the German navy's size.

Edgar Allan Poe used horror purely as an expression of an inner reality.

Poet Laureate

events and is either EPIC (narrative) or dramatic. He defines TRAGEDY as depicting nobler characters than comedy, and inspiring pity and terror. The second book, on comedy, is lost.

Poet Laureate, title conferred by the British monarch on a distinguished contemporary poet whose duty is then to write commemorative verse on important royal or public occasions. The appointment is a development of the medieval custom of having minstrels in the king's retinue. Ben Jonson is generally regarded as the first poet laureate, although John Dryden was the first to receive the official title. The appointment has been held by, among others, Robert Southey (1813–1843), William Wordsworth (1843–1850), Alfred, Lord Tennyson (1850–1892), John Masefield (1930–1967) and Sir John Betjeman (1972–).

Poetry, art form in which words are used for their allusions; their sound, rhythm and meaning are all equally important, in contrast to prose, where the meaning usually predominates. Until modern times poetry was usually written in regular lines with carefully structured metres, often with rhymes, and in earlier times with alliteration within the line.

Pogonophora, phylum of 80 known species of sedentary, worm-like, marine invertebrates that inhabit chitinous tubes on the ocean-bed. Its body is divided into three regions: the protosome, bearing tentacles; a short mesosome and a long trunk or metosome. Length: to 50cm (20in). See also p.53.

Pogrom, Russian term meaning "riot", later applied to series of mob attacks on Jews in Russia in the 19th and 20th centuries.

Pohl, Frederik (1919–), US science fiction writer and historian, the author or co-author of some 40 science fiction books.

Pohutukawa, flowering tree native to New Zealand. Its red flowers are used by the Maoris for decoration. Species *Metrosideros tomentosa*.

Poi, stuffed flaxen ball swung rhythmically from a cord by Maori women during traditional war songs. Also, a Polynesian food made from TARO roots.

Poincaré, Jules-Henri (1854–1912), French mathematician. Appointed professor at the University of Paris he worked on CELESTIAL MECHANICS, winning an award from the king of Sweden for his contribution to the theory of orbits. In 1906, independently of Albert Einstein, he obtained some of the results of the special theory of RELATIVITY. He developed many new mathematical techniques and attempted to make mathematics accessible to the general public in such works as *The Value of Science* (1905) and *Science and Method* (1908).

Poincaré, Raymond Nicholas Landry (1860–1934), French statesman, premier three times and President of France from 1913 to 1920. He was an ardent nationalist and after WWI, when Germany defaulted on reparation payments to France, he ordered troops into the Ruhr to force the payment. During the 1926–28 financial crisis he stabilized the French economy and was called "saviour of the franc". See also p.1673.

Poinciana, genus of evergreen trees and shrubs native to E Africa and Madagascar. They have long pinnate leaves and red, orange or yellow flowers. Royal poinciana (*Poinciana regia*) has orchid-like yellow-striped, scarlet flowers. Height: to 12m (40ft). Family Leguminosae.

Poinsettia, showy house plant native to Mexico. It has tapering leaves and tiny yellow flowers centred in leaf-like red, white or pink bracts. It is a favourite Christmas plant and grows best in bright light and soil of equal parts loam, peat moss and sand. Propagation is by tip cuttings. In its natural environment the tree grows to about 5m (16ft). Height: to 60cm (2ft) when potted. Family Euphorbiaceae; species *Euphorbia pulcherrima*.

Point Counter Point (1928), novel by Aldous Huxley. Containing portraits of Oswald Mosley, D.H. Lawrence and Middleton Murry, it debates politics, science,

religion and morality in a complex novel of ideas. The title derives from its structure, which imitates that of a fugue.

Pointer, smooth-coated sporting and gun dog that was developed, probably in Britain, in the 17th century for hunting. It can be trained to indicate the direction in which game lies by standing motionless, aligning its muzzle, body and tail. Height: to 63cm (25in); weight: to 27kg (60lb).

Pointillism, also called divisionism, technique of oil painting developed by the NEO-IMPRESSIONIST French painter, Georges Seurat. The method of building up canvases by the application of small dots of pure colour was probably suggested to Seurat by his reading of Charles Blanc. The name comes from the French *pointiller* (to dot, stipple). *Sunday Afternoon on la Grande Jatte*, exhibited in 1886, was taken as a manifesto of the new technique.

Poiseuille's equation, in fluid mechanics, states that the relation between the rate of flow, R , of an incompressible fluid of viscosity η , in a tube of radius a and length l is $R = \pi p a^4 / 8 \eta l$, where p is the difference in pressure between the two ends of the tube.

Poisson gas. See GAS WARFARE.

Poison ivy, North American shrub that causes a severe, itchy rash on contact with human skin. It has greenish flowers and white berries. Species *Toxicodendron radicans*. Poison sumac (*Rhus vernix*) is a shrub native to the E USA. It has long, feathery leaves and whitish fruit and grows to 6m (20ft). Family Anacardiaceae.

Poisson, Siméon-Denis (1781–1840), French scientist who applied mathematics to many areas of physics, including ELECTROMAGNETISM and MECHANICS, and wrote *Treatise on Mechanics* (1811), a standard text for many years. He extended the work of Joseph-Louis Lagrange in CELESTIAL MECHANICS and worked on definite INTEGRALS and FOURIER SERIES. In 1837 he published *Researches on the Probability of Opinions*, in which he presented the Poisson distribution, which gives the probability of the occurrence of a specific event among a large number of events. Poisson's ratio, which relates lateral contraction to longitudinal extension in stressed materials, is also named after him.

Poitier, Sidney (1924–), US actor who began his career at the American Negro Theater. His first film was *No Way Out* (1950) and he was outstanding in *A Man in Ten Feet Tall* (1956). He won an Oscar for *Lilies of the Field* (1963). His later films include *Guess Who's Coming to Dinner*, *In the Heat of the Night* (1967) and *For Love of Ivy* (1968).

Poitiers, town in w central France, site of two battles. At the first Battle of Poitiers of AD 732, also called the Battle of Tours, the Franks led by Charles Martel defeated the Arabs, who were thereby confined to Spain. The Second Battle of Poitiers (1356) was an important encounter in the HUNDRED YEARS WAR. The French King John II was captured by the English under Edward the Black Prince, and was later ransomed. See also pp.1286, 1337.

Poitou, region in w France, extending from the Atlantic coast to beyond the River Vienne. It includes the départements of Vienne, Deux-Sèvres, and Vendée; the capital is Poitiers. Part of the duchy of Aquitaine, the region was held by England from 1152 to 1204 and from 1356 to 1369. It became part of the French Crown lands in 1416.

Poker, card game, believed to have originated in Europe in the 16th century. Basically a gambling game, the object is to win the pot (all the bets that are made after each card is dealt) by holding the best combination of cards or by bluffing the other players into withdrawing. The two main variations of the game are draw poker and stud poker, in both of which a standard pack of 52 PLAYING CARDS is used.

Polack, Hans (d.1519), German painter who worked in Bavaria and produced many Gothic frescoes and altarpieces. Among his best work is the high altar of

the Church of St Peter in Munich.

Poland, country in central Europe; a member of the Communist Bloc. Throughout history it has been strategically placed in European wars and boundary disputes, and during WWI it suffered great devastation. Poland is one of Europe's leading producers of coal; other mineral deposits include copper, lead and zinc. Agricultural output is high and the principal crops are potatoes and rye. Most industries are state-owned, the chief ones being steel, engineering and chemicals. Severe economic difficulties and disenchantment with the authorities were the background to the formation of the independent trade union Solidarity in 1980. Ten million of the country's 17.3 million workforce became members. Strikes and unrest made the government act to curb its power by internment of its leaders, including Lech Walesa, and imposing martial law in 1981. Soviet intervention, though averted, remained a threat. The capital is Warsaw. Area 312,674sq km (120,724sq miles). Pop. (1980) 35,382,000. See p.2121.

Polanski, Roman (1933–), Polish actor and director, who established his reputation as a director with the short film *Two Men and a Wardrobe* (1958). His first full length film, *Knife in the Water* (1962), was followed by *Repulsion* (1965) and *Cul-de-Sac* (1966), both made in Britain. Polanski's later films include *Rosemary's Baby* (1968), *Macbeth* (1971), *Chinatown* (1974) and *The Tenant* (1976).

Polanyi, Michael (1891–1976), British scientist and philosopher. He was a leading exponent of the view that scientific discoveries owe much to intuition and chance, in contrast to the established opinion that scientific advances proceed logically. His books include *Personal Knowledge* (1958) and *Knowing and Being* (1969).

Polar bear, large white bear that lives on Arctic coasts and ice floes. It spends most of its time at sea on drifting ice floes, often swimming for many miles. It preys chiefly on seals and is hunted for fur and meat. Length: 2.3m (7.5ft); weight: to 405kg (900lb). Species *Thalarctos maritimus*. See also pp.322, 323, 343.

Polarimetry. See POLARIZED LIGHT.

Polaris. See POLE STAR.

Polaris submarine, nuclear-powered submarine operated by the US and British navies, armed with long-range Polaris missiles. These missiles to be replaced in the 1980s and 1990s by the more effective Trident System, carry nuclear warheads. They can be fired in rapid succession if necessary, while the craft remains submerged. Such submarines can travel thousands of kilometres without surfacing or refuelling, and so attempt to conceal their location until their missiles are launched. See also pp.569, 574.

Polarized light, light waves whose electric and magnetic components vibrate in a predictable fashion so that the wave-form is no longer symmetrical about the direction in which the wave is travelling. Scientists distinguish between three types: plane-polarized light, circularly-polarized light and elliptical-polarized light, each depending on the net direction of the vibrations, seen in cross-section to the wave. See also pp.854–855.

Polarography, method of chemical analysis which can measure minute concentrations of ions in solution. TWO ELECTRODES are inserted into the solution: one, the reference electrode, is kept at a constant voltage; the other has a variable voltage and consists of a glass capillary tube containing a head of mercury, with tiny drops of mercury on its end becoming the face of the electrode. As these drops form, a current grows to a peak between the two electrodes and then suddenly falls as the drop leaves the capillary tip. By gradually increasing the voltage a polarogram – a graph of the current versus the voltage, which looks like a series of steps – is produced. From these the reduction potentials of the ions may be deduced and, as these are known for each metal ion, the ions can be identified.

Polaroid camera. See LAND, EDWIN.

Pole, generally either of the two points of

intersection of the surface of a sphere and its axis of rotation. The Earth has four poles: the north and south geographic poles, where the Earth's imaginary axis meets its surface; and the north and south magnetic poles, where the Earth's magnetic field is most concentrated. A bar magnet has a north pole, where the magnetic flux leaves the magnet, and a south pole, where it enters. A pole is also one of the terminals (positive or negative) of a battery, electric machine, generator or circuit. See also pp.825, 870–871.

Pole, de la, English noble family descended from Sir William de la Pole (d.1366), a rich Hull merchant and baron of the exchequer (1339). His son Michael (c.1330–89), created 1st Earl of Suffolk (1385), was chancellor to Richard II but died in exile. Michael's grandson William (1396–1450), earl from 1415, was created Duke of Suffolk (1448), but was banished after serving Henry VI and was beheaded on his way to France. William's son John (1442–91) married Elizabeth, sister to Edward IV, and their sons John (c.1464–87), Edmund (c.1472–1513) and Richard (d.1525) unsuccessfully claimed the English throne.

Pole, Reginald (1500–58), English Roman Catholic prelate. His father and Henry VII were cousins, but Pole would not support Henry VIII against Pope Clement VII when Henry sought a divorce. He went to Italy in 1532, became a cardinal in 1536 and then presided at the Council of Trent. As Papal legate in England (1553–57) and Archbishop of Canterbury (1556–58) under Mary I, he was extremely influential in the government of the country.

Polecat, any of several species of small, carnivorous, nocturnal mammals that live in wooded areas of Eurasia and N Africa; especially *Mustela putorius*, the common polecat. It has a slender body, long bushy tail, anal scent glands and brown to black fur known as fitch. It eats small animals, birds and eggs. Length: 45.7cm (18in). Family Mustelidae. See also p.296.

Pole Star, also called Polaris or North Star, important navigational star, nearest to the N celestial star and less than 1° from it. It is in the constellation Ursa Minor and always marks due N.

Pole vault, standard event in field athletics in which contestants use a pole to lift themselves over a horizontal bar. The bar is raised in a fixed progression and vaulters failing to clear each height within three attempts are eliminated. Pole vaulting has been included in the Olympic Games since 1896.

Poliakoff, Serge (1906–69), French painter who worked in London at the SLADE SCHOOL (1935–37). Inspired by Wassily Kandinsky and Robert Delaunay in the late 1930s, he turned to abstract painting and was later influenced by the more mathematical style of Kasimir Malevich.

Police forces, legal bodies of people within a state concerned with maintaining civil order and investigating breaches of the law. Their members represent public authority and are pledged to act in the interests of society as a whole. The first police force acting independently of the judiciary was established in Paris in 1667, becoming a uniformed force in 1829. Britain's first effective regular professional force was the Marine Police Establishment in 1800, later absorbed into the Metropolitan Police as the Thames Division. The Metropolitan Police was created by Sir Robert Peel (hence the nickname "bobbies") in Sept. 1829. The ordinary police forces of today are supplemented by special forces which manage government establishments, and rail, sea and air transport complexes. Private security organizations are also growing rapidly.

Polidoro da Caravaggio (1490–1543), Italian painter. He worked in Raphael's studio until 1520, and in 1521 painted two scenes in the Vatican, *Meeting of Solomon and Sheba* and *Building of the Temple*. His masterpiece is the *Ascent to Calvary*, probably painted before 1534.

Polignac, Auguste-Jules-Armand-Marie, Prince de (1780–1847), French states-

man. A firm advocate of royal and papal authority, he was made a prince by the Holy See (1820), and appointed Prime Minister (1829) by Charles X. His autocratic regime brought about the July Revolution (1830) and he was imprisoned and later exiled.

Poliomyelitis, acute VIRUS infection, usually afflicting children (it is also called infantile paralysis), but sometimes adults. It is divided into three types, each immunologically separate. The disease is almost always fatal if it attacks the nerve cells in the brain (bulbar poliomyelitis). Only about 25% of patients whose central nervous system is attacked suffer permanent severe paralysis. It is endemic or epidemic throughout the world, but rare in the West since SALK vaccine was introduced in 1955. See also pp.125, 1073, 1073, 1082, 1087-1088, 1115.

Polish, national language of Poland, spoken by virtually all of the country's 34 million people. It is a Slavonic language and a member of the INDO-EUROPEAN family. Polish is written in the Roman (Latin) alphabet, but with a large number of diacritical marks to represent the various Slavonic vowels and consonants. Documents written in Polish date from the 12th century AD.

Polish Corridor, narrow belt of land along the River Vistula established in 1919 by the Treaty of VERSAILLES to give Poland access to the Baltic Sea. The city of Gdansk (Danzig) was designated a free city, linked to Poland. This settlement was the source of much dispute with Germany and was one of the reasons given for Germany's invasion of Poland in 1939.

Polish Succession, War of the (1733-38), war to settle the Polish throne after the death of Augustus II the Strong in 1733 between the claims of Stanislaw Leszczynski and the Elector Frederick Augustus of Saxony. Russia and the Empire supported Augustus; France, Spain and Sardinia-Savoy supported Leszczynski. It was fought mainly in Italy, but also on the Rhine. It placed Augustus III on the throne, he ruled until 1763.

Politburo (political bureau), administrative and policy-making body of the Soviet Communist Party. Formerly called the Presidium, it consists of 11-12 full members and 6-9 candidate members chosen by the party's central committee. In theory, the government and party structures are separate entities. In practice, they are so interrelated because of overlapping membership that the Politburo virtually runs the country. See also p.1679.

Politician. See POLIZIANO, ANGELO.

Political party, group organized for the purpose of electing candidates to office and for promoting a particular set of political principles. In Britain, political parties originated in the split between the WHIGS and TORIES in the late 17th century, but the two-party parliamentary system did not emerge until the 18th century. See also articles on individual parties.

Political science, study of governments at state, local, national and international levels. Political science also looks at the relationship of citizens, with a government and examines how various types of government solve similar problems. See also pp.1852-1853.

Politics, sphere of action in human society in which power is sought in order to regulate the ways in which people shall live together. For a society to engage in politics, it must conceive of society as being in a state of perpetual change. A static society regulates its social action only by judicial methods, by resolving disputes in accordance with prescriptive rules. A political society accepts the need for perpetually changing the rules in order to make them accord with altered circumstances. See also pp.1850-1859.

Politics, philosophical tract, of which eight parts remain, by the Greek philosopher ARISTOTLE. It deals with the problems of human activity in communal life, starting from the premise that man is naturally politically inclined.

Poliziano, Angelo (1454-94), also called Ambrogini or Politian, Italian Renais-

sance poet and scholar who taught Greek and Latin at the University in Florence. His Latin poetry rivalled that of Giovanni PONTANO. His great work, in the Tuscan vernacular, included the unfinished poem *Stanzas for a Joust* (1475-78) which celebrates the jousting skill of Giuliano de' Medici, the brother of his patron, Lorenzo the Magnificent. See also p.1380.

Polk, James Knox (1795-1849), 11th US president (1845-49) during whose administration the entire Southwest was secured as a result of the American victory in the Mexican War (1846-48). In his productive term he reduced the tariff (Tariff Act, 1846), restored the independent treasury, settled the Oregon boundary dispute with Britain and acquired California. Polk's poor health prevented his seeking a second term. See also p.1627.

Polka, lively Bohemian folk dance in 2/4 time. It became fashionable in Paris in about 1830, and thereafter in Europe and the Americas. It is often danced as a ballroom dance, the basic step being three quick steps and a hop.

Pollack, or pollock, marine food fish of the cod family found in large shoals on both sides of the North Atlantic. Coloured green with yellow or grey, it has a jutting lower jaw. Other names for the fish are coalfish and saithe. Length: to 106.7cm (3.5ft); weight: to 15.9kg (35lb). Family Gadidae; species include *Pollachius pollachius* and *Pollachius virens*. See also pp.738, 744.

Pollaiuolo, Antonio (c.1432-98), Italian sculptor and goldsmith who became head of one of the chief Florentine workshops. He was a great draughtsman and probably the first artist to study anatomy by dissection. He collaborated with his brother Piero (c.1441-c.1496) in paintings which include the *Martyrdom of St Sebastian* (1475). Antonio's major public works were the tombs for Pope Sixtus IV (1493) and Innocent VIII (c.1495).

Pollard, Albert Frederick (1869-1948), British historian. He was assistant editor of *The Dictionary of National Biography* from 1893 to 1901, professor of constitutional history at London University from 1903 to 1931, and founder and director of the Institute of Historical Research from 1920 to 1931, then becoming honorary director until 1939. His most outstanding works were in the field of Tudor history. **Pollen**, yellow, powder-like male sex cells in flowering plants. Pollen grains are produced in the anther chambers on the STAMEN, and have thick resistant walls with a pattern of spines, plates or ridges, according to species. These markings are the basis of pollen analysis (PALYNOLOGY) used to identify fossil plants and sediments. See also POLLINATION; pp.382-383.

Pollination, transfer of POLLEN from the STAMEN to the STIGMA of a flower. Self-pollination occurs on one flower and cross-pollination between two flowers. Cross-pollination is more common and results in a great variety of genetic combinations. Pollination occurs mainly by wind (anemophily) and insects (entomophily). Wind-pollinated flowers are usually small and clustered and produce a large quantity of small, light, dry pollen grains. Insect-pollinated flowers are brightly coloured, strongly scented, contain nectar, and produce heavy, sticky pollen. See also pp.382-383.

Pollock, Jackson (1912-56), US painter. Influenced by SURREALISM and PICASSO he moved towards a highly ABSTRACT ART and abandoned the use of brushes in 1947, pouring paint straight on to the canvas. He became one of the chief exponents of ACTION PAINTING and his works include *The Blue Unconscious* (1946) and *Lavender Mist* (1950). See also pp.1687, 1687.

Pollock, Robert Graeme (1944-), South African cricketer. A forceful left-handed batsman from Eastern Province, he holds the record for the highest score (274) made by a South African in a Test Match. He has only 23 Test caps (1963-70), but this merely reflects his country's isolation from Test cricket.

Poll tax, tax levied on every person in the

community, on either a fixed or a sliding scale. The poll tax in Britain became regular during the HUNDRED YEARS WAR in the 14th century; its harshness was a major factor in the PEASANTS' REVOLT. Poll taxes were collected in England until 1698. See also p.1349.

Pollution, the spoiling of the natural environment, generally by industrialized society. Pollution is usually a result of an accumulation of waste products, although an excess of noise and heat which has adverse effects on the surrounding ecology is also included in the term. See also pp.756-763.

Pollux, in Greek mythology, son of ZEUS and LEDA, brother of HELEN and twin brother of Castor, whose father was Tyn-dareus, King of Sparta. The twins were inseparable adventurers. They fought the boar on the Calydonian hunt and rescued Helen from her kidnapper, Theseus. When Castor was slain in a battle over possession of a herd of oxen, the inconsolable Pollux offered his life instead. Zeus rewarded him by permitting each of the twins alternate days on earth and in the underworld.

Polo, Marco (1254-1324), first European traveller to cross the length of Asia. As a boy he went with his father, Niccolo, and uncle, Maffeo, on a trading mission (1275) that took them to the court of Kublai Khan, the MONGOL ruler of China. Returning to Venice from the Chinese coast in 1295, Marco Polo became involved in a war with Genoa and was taken prisoner, during which time he compiled an account of his travels which remained an important Western source of information on Asia for nearly 600 years. He was soon released and returned to Venice, where he spent the remainder of his life. See also pp.1356, 1357, 1359.

Polo, field game played on horseback. Two teams of four players on a field up to 182m (600ft) by 273m (900ft) each try to hit a small ball, about 8.3cm (3.25in) in diameter, into a goal, 7.3m (24ft) wide by 3m (10ft) high, using flexible mallets, 122-132cm (48-52in) long. A game consists of four, six or eight chukkas (periods), each 7.5 minutes long; additional chukkas may be played to decide a game if the scores are tied. Each player may use several ponies during a game. Players are handicapped on a scale of from -2 to 10 goals; this is a device for measuring their worth to their team. Polo originated in Persia in ancient times, and spread throughout Asia. It was revived in India in the 19th century, and was taken up by British army officers there. It was first played in Britain in 1868, and is also played in the USA.

Polonaise, stately graceful dance in 3/4 time. In 1573, it was adapted as a formal march for the coronation of Henry of Anjou as King of Poland, and is now the national dance of that country.

Polonium, rare radioactive metallic element (symbol Po) of group VIA of the periodic table, discovered in 1898 by Marie CURIE. It is found in trace amounts in uranium ores and may also be synthesized. Properties: at. no. 84; density 9.40; m.p. 254°C (489°F); b.p. 962°C (1,764°F); most stable isotope ^{209}Po (half-life 103 yrs).

Poltava, city in the Ukraine (Ukrainskaja SSR), USSR, on the River Vorskla 290km (180 miles) ESE of Kiev. The site has been settled since the 9th century. It was ceded by Lithuania to the Tartars in 1430 and it was a Cossack stronghold in the 17th century. It was the birthplace of Nikolai GOOGOL. Today Poltava is an important industrial centre; its products include sugar, cereals, machinery, leather goods and textiles. Pop. (1970) 220,000.

Poltergeist, noisy spirit or ghost, supposedly responsible for rappings, movement of furniture and other unexplained sounds and activity. Such noises often occur during seances, and allegedly attest to the presence of supernatural beings.

Polyamide, man-made POLYMER with the generic name of nylon, formed from the reaction between a dibasic acid (such as adipic acid) and a diamine (such as hexamethylenediamine). Nylon consists

of long-chain synthetic polyamides in which the diamine and acid molecules are joined by amide linkages. See also pp.896-897, 910-911.

Polyandry, marriage in which the woman has several husbands. In Nepal, Tibet and neighbouring countries where polyandry is practised the men are brothers.

Polyanthus, any of a group of spring-flowering, perennial, garden primroses of the genus *Primula*. They occur in many habitats, mainly in the N temperate zone, and may be almost any colour. They have basal leaves and disc-shaped flowers, branching from a common stalk to form a ball-like cluster. Polyanthus hybrids are probably derived from a cross between a PRIMROSE and a COWSLIP. Height: to 15cm (6in). Family Primulaceae.

Polybius (c.200-c.120 BC), Greek historian and politician. A leader in the Achaean Confederation, he was deported to Rome in 168 where he obtained the patronage of Scipio, probably accompanying him to Spain and Africa. He was ambassador to Achaia in 146. He wrote his *Universal Histories* (40 vols, of which only the first five are wholly extant) describing the rise of Rome in the Mediterranean world from 220 to 146 BC. See also p.1209.

Polycarp, Saint (c.69-c.155), Greek bishop of SMYRNA who, according to tradition, was taught by the APOSTLES. He vigorously opposed contemporary heresies and upheld Christianity in Asia Minor. He went to Rome to discuss the dating of EASTER but on his return was burned to death on the orders of the Roman proconsul.

Polychaete, any of a species of marine ANNELID worms characterized by distinctive segmentation of the body; it includes RAGWORMS and bristleworms. It has a distinct head with sensory projections and most segments have outgrowths or bristles. See also pp.18-19.

Polyclitus (Polycletus) (c.480-c.420 BC), Greek sculptor who chiefly worked in bronze and did a number of statues of athletes. His most famous embodied his ideal of physical perfection and is known to us through a Roman copy, the *Doryphoros* or *Spear-bearer*. No recognized originals by Polycletus exist.

Polythaemia, abnormal increase of red blood cells. It may cause clot formation in the circulatory system. Its symptoms are headache, dizziness, enlargement of the spleen and reddening of the face.

Polyester, class of organic substances composed of large molecules arranged in either a chain or a network and formed from many smaller molecules through the establishment of ester linkages. They are usually prepared from equal amounts of glycols and dibasic acids. Polyester fibres are resistant to chemicals and may be washed in alkaline solutions or dry-cleaned and are made into woven and knitted fabrics. See also pp.588-591.

Polyethylene, POLYMER of ETHYLENE, a partially crystalline lightweight thermoplastic resin, with high resistance to chemicals, low moisture absorption and good insulating properties. See also pp.588-589, 589.

Polygamy, conjugal union where more than one spouse is permitted. More often it is used to denote polygyny (several wives) than POLYANDRY (several husbands).

Polygnotus (c.500-c.440 BC), Greek painter whose most famous works depicted the *Sack of Troy* and *Odysseus in the Underworld* in the hall of the Cnidians at Delphi. Although none of his paintings have survived, they are known from descriptions left by the Greek traveller Pausanias (fl.143-176 AD).

Polygon, plane geometric figure having three or more sides intersecting at three or more points (vertices). They are named according to the number of sides or vertices: triangle (three-sided), quadrilateral (four-sided), hexagon (six-sided). A regular polygon is equilateral (has sides equal in length) and equiangular (has equal angles).

Polyhedron, in geometry, three dimensional figure (called a solid) whose surface

Polymer

is made up of polygons. These are called the faces of the polyhedron, and the points at which they meet are the vertices. See also p.798.

Polymer, substance formed by the union of from two to several thousand simple molecules (monomers) to form a large molecular structure. Some polymers, such as cellulose, occur in nature; others form the basis of the PLASTICS and synthetic resin industry. See also pp.588-589.

Polymerization, chemical combination of several molecules to form straight-chain molecules, cross-linked giant molecules or a combination of both, all called POLYMERS. It is the major industrial process in the manufacture of PLASTICS. In nature, large biochemical compounds (such as PROTEINS and NUCLEIC ACIDS) are also formed by polymerization. See also pp.176-177, 896-897, 910-911.

Polymorphism, variation among members of a biological species. Difference in structure or function may be genetically determined or due to differing environments. The most common variations are in colour, physical proportions, behaviour and chemical factors, eg blood group. Polymorphism is common in many plant and animal species and is frequently found to be of adaptive advantage.

Polynesia, one of the three divisions of OCEANIA and the general term for the islands of the central Pacific Ocean. MICRONESIA and MELANESIA lie to the W. The principal islands in Polynesia are the Hawaiian Islands, Phoenix Islands, Tokelau Islands, the Samoa group, Easter Island, Cook Islands, French Polynesia and the two larger islands of New Zealand. The islands are mostly coral or volcanic in origin.

Polynesian, the peoples of POLYNESIA. The inhabitants share common linguistic, racial and cultural roots – the reason for the grouping of the islands under one name. Before European contact in the 18th century the Polynesians, of Pacific stock, were a maritime fishing people whose technology relied on wood, stone, shell and bone, and whose diet consisted of fish, yams, sweet potatoes and coconuts. The major languages are Samoan, Maori, Tahitian and Hawaiian.

Polynomial, sum of terms that are powers of a variable: eg, $5x^3 - 3x^2 + 2x + 5$ is a polynomial of the fourth degree (the highest power of four). In general a polynomial has the form $a_0x^n + a_1x^{n-1} + a_2x^{n-2} + \dots + a_{n-1}x + a_n$, although certain powers of x and the constant term a_n may be missing. The values a_0, a_1, a_2, \dots are the coefficients of the polynomial.

Polyp, body type of various species of animals within the phylum Cnidaria. It has a mouth surrounded by extensible tentacles and a lower end which is adapted for attachment to a surface. It is distinct from the free-swimming MEDUSA. It may be solitary, as in the SEA ANEMONE, or more often, an individual of a colonial organism such as CORAL. See also pp.12-13.

Polyp, in medicine, swollen mass projecting from the wall of a cavity lined with mucous membrane, such as the nose. Although usually benign growths, some can be cancerous.

Polyphemus, in Greek mythology, the CYCLOPS, a giant one-eyed son of POSEIDON. He is described as a shepherd who tended his flocks on the shore of Sicily. Before his eye was put out by ODYSSEUS, he was an unrequited suitor of the NEREID Galatea.

Polyphony, vocal or instrumental part music in which the compositional interest centres on the "horizontal" aspect of each moving part rather than on the "vertical" structure of chords, as in formal harmony. The golden age of polyphonic music was the 16th century, and masters of that time included Giovanni PALESTRINA and William BYRD.

Polyptych, carving or painting that consists of more than three panels hinged together; a similar work with three panels is called a triptych. The polyptych was used in Europe in the Middle Ages, often for altar pieces.

Polysaccharides, POLYMERS (repeating units) of such sugars as GLUCOSE and FRUCTOSE. Many naturally-occurring CARBO-

HYDRATES, including CELLULOSE, GLYCOGEN and STARCH, are polysaccharides.

Polystyrene, synthetic organic POLYMER, composed of long chains of the AROMATIC COMPOUND, styrene. It is a strong THERMOPLASTIC RESIN, acid and alkaline-resistant, non-absorbent and an excellent electrical insulator. See also pp.588-590.

Polytechnics (from Greek, "many arts"), British term for tertiary education institutions at which many academic and technical subjects are taught. The first polytechnics were founded in the late 19th century and had a technical bias, in contrast to the mainly academic universities. Today, polytechnics have university status.

Polytheism, belief in or worship of many gods and goddesses. Such deities usually have specific attributes or functions. For example, NEPTUNE is the Roman god of the sea; LAKSHMI is the Hindu goddess of good fortune and prosperity. See also ANCESTOR WORSHIP; ANIMISM; MONOTHEISM.

Polythene. See POLYETHYLENE.

Polyurethane, POLYMER used chiefly in making flexible foams (eg, for upholstery and mattresses), rigid foams (eg, for cores of aeroplane wings), ELASTOMERS and RESINS (for adhesives and coatings). See also pp.588-589.

Pombal, Sebastião José de Carvalho e Mello, Marquês de (1699-1782), Portuguese statesman. He was Minister for Foreign Affairs (1750-56) and was virtual ruler of the country until the death of King Joseph in 1777. He increased royal power at the expense of the old nobility, the INQUISITION and the JESUITS, whom he expelled in 1759. Influenced by the principles of enlightened despotism, he also reformed the administration, economy, education and the army, and encouraged trade with Brazil. See also pp.1459.

Pome, fleshy fruit formed from the flower receptacle or base. It is not developed from the carpel and is a false fruit. Familiar examples are the APPLE, PEAR and QUINCE.

Pomegranate, deciduous shrub or small tree native to W Asia. It has shiny, oval leaves and showy, orange-red flowers. The round fruit has a red, leathery rind and numerous seeds coated with edible pulp. Family Punicaceae; species *Punica granatum*.

Pomerania (Pomorze), region in N Europe, extending along the Baltic Sea from W of Stralsund, in East Germany, to the River Vistula in Poland. Part of the North German plain, the region is low-lying and fertile. Cereals, sugar-beet and potatoes are the principal crops; stock raising and forestry are also important. Shipbuilding, metallurgy, food processing and paper are the main industries. From 1919 to 1939 the region was divided between Germany (Prussia), Poland and the free city of Danzig. After the POTSDAM CONFERENCE, the part of Prussian Pomerania W of the River Oder was included in Soviet-occupied Mecklenburg, now in East Germany, while the rest of Pomerania came under Polish administration.

Pomeranian, breed of toy dog. Its coat is long and straight, full round the neck, and one of a variety of colours, including white, brown, black and reddish brown. It has been bred down in size from a large sheepdog. Height: 14-18cm (5.5-7in) at the shoulder; weight: 1.5-3kg (3.3-6.6lb).

Pomona, in Roman mythology, the youthful and beautiful goddess of fruit trees. She was accorded a sacred area 19km (12 miles) from Rome. Her male counterpart, VERTUMNUS, overcame her reluctance to marry after courting her in various guises, finally in the shape of a gentle old woman.

Pompador, Jeanne-Antoinette Poisson le Normant d'Etioles, Marquise de (1721-64), influential mistress and confidante of LOUIS XV after 1745. She rose to prominence in Parisian society and was a great patron of the arts, befriending DIDEROT. Louis had champagne glasses, of the design common today, modelled on the shape of her breasts.

Pomp and Circumstance Marches (1901-30), set of five (planned as six) orchestral military pieces by Edward

Elgar. The first four were composed between 1901 and 1907 and their content and title, a quotation from OTHELLO's "Pride, pomp and circumstance of glorious war", reflect the nature of pre-WWI British Jingoism. A.C. Benson added the words "Land of Hope and Glory" to the title of *March No. 1*, which was used as Edward VII's Coronation Ode in 1902 and was swiftly adopted as an unofficial national anthem. After WWI Elgar bitterly regretted its nationalist associations.

Pompano, marine food fish found throughout the world in tropical and temperate waters. It has a blunt head and a deep body. Length: to 46cm (18in); weight: to 9kg (2lb). Family Carangidae; species include the common, or Florida, pompano *Trachinotus carolinus* and the African pompano *Alectis ciliaris*.

Pompeii, ancient city in SE Italy, at the foot of Mt Vesuvius, 23km (14 miles) SE of Naples. A prosperous port, it came under Roman rule in the 1st century BC but was completely buried by an eruption of Vesuvius in AD 79. Excavations have revealed ruins of the city which show in great detail footpaths, shops, villas and murals. See also pp.1228-1229, 1241.

Pompey, Gnaeus, also called Pompeius Magnus (106-48 BC), Roman general. He fought for SULLA in 83 BC and campaigned in Sicily, Africa and Spain. He was named consul with CRASSUS in 70, crushed the pirates in the Mediterranean and fought brilliantly against Mithradates VI of Pontus in 66 BC. In Rome in 59 he formed the first triumvirate with CRASSUS and CAESAR, his fierce rival and father-in-law. He was defeated by Caesar at Pharsalus in 48 in the course of a civil war. After fleeing to Egypt he was stabbed to death by one of his soldiers. See also pp.1230-1231.

Pompidou, Georges Jean Raymond (1911-74), French Premier (1962-68), and President (1969-74). He was a school teacher until 1944, when he served in the postwar government of Charles DE GAULLE as an adviser. In 1946 he was appointed to the Council of State but he resigned in 1957 to join the Rothschild banking firm and became its director-general in 1959. When De Gaulle became President, he appointed Pompidou Prime Minister. He dealt with the May riots and strikes which shook France in 1968. Upon De Gaulle's resignation he was elected President and, by reversing government policy, made it possible for Britain to enter the EEC.

Ponce, Manuel (1882-1948), Mexican composer who studied in Italy and Germany. His works include a piano concerto (1912) and a violin concerto (1942), in which his famous song *Estrellita* is the theme for the second movement. He also composed *Concierto del Sur* (1940) for guitar and orchestra for Andrés SEGOVIA, the Spanish guitarist.

Ponce, port in S Puerto Rico, 225km (140 miles) SW of the capital San Juan; Puerto Rico's principal port. Founded in 1692, it is one of the oldest cities in the Americas. It has the Catholic University of Puerto Rico (1948) and an 18th-century fort. Sugar is exported, and other industries include cement, oil refining, paper products, rum distilling and tourism. Pop. (1980) 188,219.

Ponce de León, Juan (c.1460-1521), Spanish explorer who discovered the Florida peninsula in 1513 while searching for the legendary fountain of youth. He returned in 1521 with a colonizing expedition and was fatally wounded when local Indians attacked his men.

Ponce de León, Luis (1527-91), Spanish monk, author and lyric poet who entered the AUGUSTINIANS and became professor of theology at Salamanca, Spain, in 1561. He was imprisoned by the INQUISITION from 1572 to 1576 for, among other things, his translation into Spanish of the *Song of Solomon*. His prose works include *The Perfect Housewife* (1583) and *Christ's Names* (1583-85).

Ponchielli, Amilcare (1834-86), Italian composer, chiefly of opera, of which he wrote nine. The first, *IPromessi Sposi*, was produced at Cremona in 1856. The most famous, and the only one still performed, is *La Gioconda*, first produced at Milan in

1876. He also wrote two ballets, *Le Due Gemelle* and *Clarina* (both 1873).

Pondicherry, seaport city in SE India; the capital of Pondicherry Union Territory and former French India. Its products include textiles, sugar and steel. Pop. (1971) 90,637.

Pondoland, 19th-century name for E part of CAPE PROVINCE between the Kei River and the Natal border, now part of the TRANSKEI. The Xhosa, Tembu and Pondo tribes who lived there were disrupted during the 19th century by the effects of the tribal regrouping, the *mfecane* (The Time of Troubles), and then by the encroachment of white settlers. In 1894 the British government claimed all Pondoland. See also pp.1607, 1621.

Pondweed, any of numerous species of a large family of aquatic perennial seed plants, found mostly in temperate zone regions in freshwater lakes and ponds, but also in brackish and salt water. Most pondweeds have spike-like flowers that stick out of the water and submerged or floating leaves arranged alternately along the stem. Family Potamogetonaceae. See also p.329.

Pons, Lily (1904-76), French-born US coloratura soprano who studied at the Paris Conservatoire and made her début in 1928. She first sang at the METROPOLITAN OPERA in New York in 1931 and was principal soprano there until 1959. She appeared in three films, and in 1938 married André Kastelanetz.

Pons, upper segment of the human brainstem, which contains the nerve fibres connecting the two halves of the CEREBELLUM. The brain-stem is the lower part of the BRAIN and structurally continuous with the SPINAL CORD. Below the pons is the medulla oblongata, which transmits ascending and descending nerve fibres between the spinal cord and the brain. See also pp.130-131.

Ponta Delgada, seaport city in the AZORES (an island group belonging to Portugal), situated on the SW shore of Sao Miguel island. It contains the best harbour and is the leading commercial centre of the islands. It is also a popular winter resort. Products include sugar, alcoholic drinks, tea and soap. Ponta Delgada exports dairy products and citrus fruits. Pop. (1970) 69,930.

Pontano, Giovanni (1426-1503), also called Jovianus Pontanus, Italian Renaissance poet, historian and statesman. He was head of the Neapolitan humanist academy (1471). From 1447 to 1495 he was military secretary and adviser to the kings of Naples and as Chancellor (1486-95), virtually ruled the kingdom.

Pont Aven School, name associated with a group of painters who were influenced by SYNTHETISM, which GAUGUIN and Émile BERNARD evolved (between 1888 and 1894) in the village of Pont Aven, Brittany. Those influenced included Laval, Sérusier and Seguin. The life, landscape and religion of Brittany inspired Gauguin and his followers. Gauguin's *Jacob Wrestling with the Angel* (1888) was the first masterpiece of Synthetism, which later influenced the Nabis.

Pont du Gard, Roman-built aqueduct across the River Gard at Nîmes, in S France. Its construction is generally attributed to Agrippa in the Augustan period. Built to supply water to Nîmes, it has three tiers, the lowest of which now serves as a bridge. It owes its elegance to the variations in the size of the arches and piers.

Ponti, Giovanni (1891-1961), Italian theatrical and film designer, architect and draughtsman. He was the founder and editor (1928-49) of the magazine *Domus* which influenced styles of interior decoration in Italy during that time. He was also influential in the development of modern architecture. Among his famous buildings is the Pirelli Building, Milan (1955-59), an hexagonal skyscraper with sloping sides which he designed in collaboration with Nervi. See also p.1689.

Pontiac (c.1720-69), North American Indian chief who united many tribes south of the Great Lakes against the British. In the early years of the FRENCH AND INDIAN WAR (1754-63) Pontiac kept his confede-

Porifera, or pore-bearers

racy of Ottawa, Potawatomi and Ojibwa neutral, but in 1762 he organized many tribes into a union against the British. From 1763 to 1764 this union, known by the British as Pontiac's Conspiracy, fought a bitter struggle until Pontiac concluded peace.

Pontianak, capital of w Kalimantan Barat province in w Borneo, Indonesia, on the Kapuas-Ketyl River. It is w Borneo's principal city and major port. Exports include rubber, sugar and palm oil, and shipbuilding and food processing are the most important industries. Pop. 150,220.

Pontianus, Saint (d.c.236), pope who reigned from 230 to 235. His papacy coincided with the inauguration of the persecution of the Christians by the Emperor Maximinus. Exiled to the mines of Sardinia, Pontianus abdicated to St Antherus and died soon after. Feast: 19 Nov.

Pontifex (Latin, pontiff), Roman priest, a member of the highest college of priests in Rome whose leader, pontifex maximus (supreme pontiff), was the high priest of the Roman religion. Since the 5th century the title pontifex maximus has been in use to designate the pope.

Pontius Pilate. See PILATE, PONTIUS.

Pontoon, gambling card game the object of which is to collect a value-total of as near 21 as possible, but not over. (The name itself is a corruption of the French *vingt-et-un*, 21.) Court cards count as 10, aces as 1 or 11 (whichever is required) and all other cards have their face values. The player chosen as banker deals one card to each player, including himself, who places a bet before receiving a second card. In turn, each player may then, as many times as required, "twist" (receive another card face up), "buy a card" (receive another card face down but add to his stake), or "stick" (decline any further cards - sometimes also called "sitting"). If a player's hand exceeds 21, he is out for the hand and his stake is given to the banker at once. Finally, the banker himself turns to his two cards; having similarly reached as near 21 as he can, but not over, he collects the stakes of all players with hands equal to or less than his own, but pays out to the people with hands better than his own an amount equal to their stakes. If the banker's hand exceeds 21, all players still in the hand receive an amount equivalent to their stakes. "Pontoon" itself, an ace with a court card comprising the first two cards received, is unbeatable unless the banker also draws it; at each pontoon the cards are shuffled, and the pontoon-holder becomes the banker. There are various other scoring combinations.

Pontoon bridge, floating bridge, used mainly for military purposes. Persian engineers built a bridge of boats for King Xerxes' army in 480 bc across the Hellespont. Modern armies use rubber pontoons pressurized by air compressors. See also pp.532.

Pontoppidan, Henrik (1857-1943), Danish novelist. He studied contemporary Denmark in his novel cycles *The Promised Land* (1891-95), *Lucky Peter* (1898-1904) and *The Kingdom of the Dead* (1912-16). His early tales include the volume of short stories *The Apothecary's Daughters* (1886). He shared with Karl Gjellerup the 1917 Nobel Prize in literature.

Pontorno, Jacopo Carucci (1494-1557), Italian painter who was an early exponent of MANNERISM. In his youth he worked under Andrea del Sarto. In 1518 he painted *The Madonna*, one of the first mannerist pictures. His subjects and themes were usually religious, and his works include *The Visitation* (1516) and *Deposition* (c.1527). A major commission was the decoration of the choir of S. Lorenzo, Florence (1545-57).

Pontus, in Greek mythology, the personification of the primeval sea. GAIA, the earth, created him when she made the mountains and the sky. Pontus has no identity other than his name - his character was never developed in the mythology. See also OCEANUS.

Pony, any of several breeds of small horses, usually solid and stocky. It is com-

monly used as a children's saddle horse, for show and for draught. Types include the hardy Shetland pony (the smallest natural breed) of the Shetland Islands, where the climate is harsh and food scarce; the Dartmoor and Exmoor ponies of Cornwall, Somerset and Devon, where they have lived wild for many centuries; the grey Highland pony, a popular saddle animal; the Welsh pony and the Welsh Cob, which is known for its high-stepping gait. Height: from 115 to 145cm (45-57in) at the shoulder.

Pony Express, in US history, relay mail service between St Joseph, Mo. and Sacramento, Calif., that operated only briefly (1860-61). Riders changed horses at least every 16km (10 miles) and took some ten days to carry the 9kg (20lb) mail bags the 2,827km (1,800 miles) between the two cities, a saving of about two weeks over the time taken by a stagecoach. The express was gradually discontinued after the completion of the transcontinental telegraph system in 1861.

Pony trekking, leisure activity in which sure-footed ponies carry their riders over moorlands, mountain sides, forests and glens. A relatively inexpensive way of enjoying riding and the countryside, it is popular as a form of holiday-making.

Poodle, breed of dog believed to have originated in Germany. Bred originally to retrieve from water, its intelligence has made it a popular pet. It has a rounded skull and long straight body, small feet and high-set, docked tail carried up. The thick coat, woolly underneath with a wiry top coat, is a solid colour and is commonly clipped into an ornate style. Three main sizes are bred, standard, miniature and toy. Height: (standard) over 38cm (15in) at shoulder.

Pool, billiards game of American origin but popular today in many countries. It is played with eight single-colour balls and seven striped balls numbered 1 to 15, plus a white cue ball, on a rectangular table with four corner pockets and two side pockets. Rules vary locally. Players must nominate the ball and pocket they are attempting before cueing the ball.

Poole, county district in E Dorset, SW England; created in 1974 under the Local Government Act (1972). Area: 64sq km (24sq miles). Pop. (1979 est.) 115,500.

Poona, city in Maharashtra State, w India, 129km (80 miles) ESE of Bombay. It served as the capital of the MAHARATTA confederacy in the 18th century until 1818, when it came under British control. It was then used as a British military station and has several palaces and temples dating from this period. Today it is a flourishing commercial centre; products include metal goods, chemicals, textiles and paper. Pop. (1971) 1,135,034.

Poor laws, English legislation designed to alleviate poverty and prevent begging and vagrancy. Introduced in the mid-16th century and consolidated in the Poor Law of 1601, they required individual parishes to provide for the local poor. Because there was everywhere local reluctance to support the poor from other areas, settlement laws were introduced in 1662 to limit migration. From c.1700 workhouses were established where the poor were expected to support themselves by work. Poor-law amendments of 1834 sought to provide uniform assistance by placing it under national supervision, but since poverty was assumed to be the consequence of unwillingness to work, relief was maintained at a level lower than that of the poorest labourer. In 1929 the Local Government Act abolished the poor law boards, making relief to the poor the responsibility of local bodies. The Poor Law Act of 1930 placed poor law under the Minister of Health. The poor law was gradually superseded by the introduction of old age pensions (1908) and unemployment and health insurance (1911), which was followed in the 1940s by social security. Workhouses were finally abolished in 1948. See also pp.1409, 1409.

Poor Richard's Almanac, almanac first issued in 1732, and annually until 1757, by Benjamin FRANKLIN under the pseudonym Richard Saunders. Containing

much statistical data, the almanac was also a vehicle for Franklin's famous adages. Its title was adapted from that of the English almanac *Poor Robin* (c.1661).

Pop art, movement in art which used popular images and materials in its constructions. The first pieces were produced in Britain in the 1950s. Robert RAUSCHENBERG, an early exponent, used given material - surplus tins of paint, X-ray photographs and newspaper images - in works. Andy WARHOL's painting of a can of Campbell's soup proved to be the image by which pop art was best known. Another series of images were provided by the work of Roy LICHTENSTEIN, who took pictures from popular comics and transferred them to large scale works, such as *Blonde Waiting* (1964). See also p.1763.

Pope. See PAPACY.

Pope, Alexander (1688-1744), British poet. Self-taught, he was a master of the classical form of poetry. He showed early metrical skills in *Pastorals* (1705), wrote lyric and elegiac poetry and published fine translations of HOMER (1720 and 1726) and *Imitations of Horace* (1733). He is well known also for his own satires, which include *The Rape of the Lock* (1714), *The Dunciad* (1728) and *An Epistle to Dr Arbuthnot* (1735). See also p.1466.

Popham, Sir Home Riggs (1762-1820), British admiral. He was naval commander at the capture of the Cape of Good Hope in 1806 and in the same year took Buenos Aires with William Carr BERESFORD, following which he was recalled to England. He served in Jamaica from 1817 to 1820.

Popish Plot, intrigue invented by Titus OATES and Israel Tonge in 1678. The two conspirators claimed that there was a plan to assassinate CHARLES II and replace him with the Catholic James, duke of York. Although there was no evidence to support the claim, many people were killed in a wave of anti-Catholic murders. Oates was later imprisoned. See also pp.1426, 1427.

Poplar, any of a number of deciduous, softwood trees native to cool to temperate regions. The oval leaves grow on stalks, and flowers take the form of catkins. Some species are called cottonwoods because of the cotton-like fluff on their seeds. Height: to 60m (197ft). Family Salicaceae; genus *Populus*.

Poplin, fabric made from silk and wool. It has a corded surface and is used for making shirts and dresses. Some kinds are made by substituting other materials eg. cotton or rayon. See also pp.590-591.

Pop music, songs and tunes which are intended to reach a large audience. Short for popular music, the term was coined in the early 1950s. Pop resulted from the development of radio and gramophones and is a manifestation of MASS CULTURE. See also pp.1756-1757.

Popocatepetl, snowcapped active volcano in central Mexico, on the Puebla-Mexico state border. The crater contains sulphur deposits but these remain unexploited. Height: 5,452m (17,887ft).

Popova, Liubov (1889-1924), Russian painter. She studied in Paris in 1912, and returning to Russia in 1915 worked in a CUBIST style before producing abstract suprematist works from 1916. After 1917 she abandoned painting and made several constructivist sculptures.

Popper, Sir Karl Raimund (1902-), British philosopher of natural and social sciences, b. Austria. Although not a LOGICAL POSITIVIST he was in close contact with the VIENNA CIRCLE and had considerable influence on Rudolf CARNAP. His writings include *The Open Society and its Enemies* (1944) and *The Poverty of Historicism* (5th ed. 1966). See also p.1883.

Poppy, common name for plants of the poppy family, especially of the genus *Papaver*. This is made up of about 100 species of annual and perennial erect herbs, most of which are native to central and s Europe but also found in the Far East, North America and Iceland. The plants contain a milky juice and have showy blooms. The seeds are used in cooking. The opium poppy of Greece, Turkey and the Far East is grown for medical purposes and for the manufacture

of illicit drugs. Family Papaveraceae. See also OPIUM; pp.371, 706, 707.

Popular front, combination of left wing political parties formed to meet the threat of fascism during the 1930s. The basis of most popular fronts was an alliance of Communist parties with less extreme social democrat groups, a union made possible by the Soviet government's decision of 1934 that fascism had to be halted even at the cost of allying with liberal political groups. Popular fronts were formed in many countries but came to power only in France (where Leon BLUM led a ministry in 1936-37) and in Spain, where the election of a popular front government in Feb. 1936 led to the fascist insurrection of June 1936, which began the SPANISH CIVIL WAR. In the 1960s and 1970s various revolutionary groups in Africa and Asia had the words "popular front" as part of their names.

Population, estimated world total (1978), 4,100 million. In 1977 the rate of population growth was about 1.7%, a marked fall from the rate of nearly 2% in 1970. That change makes predictions of future population totals hazardous. Predictions of population in the year 2000 range from 4,500 million to 7,600 million.

Population I and II, in astronomy, classification of regions within a GALAXY according to their stellar nature, devised by Walter BAADÉ. Population I areas contain much interstellar material; the brightest stars are hot and white. Such regions are found in the spiral arms of galaxies. In Population II areas much of the interstellar material has been used up in star formation; the brightest stars are red giants. Such regions are relatively old and are in the nuclei of galaxies. See also pp.982, 983, 995-996, 995, 999-1000.

Poquelin, Jean-Baptiste. See MOLIERE.

Porcelain, white, vitreous, non-porous, translucent ceramic. It was first developed by the Chinese (7th or 8th century) and made of kaolin (white china clay) and petuntse (powdered felspar). This true, or hard paste, ceramic ware is fired at 1,400°C. MEISSEN ware (early 18th century) was the first successful European attempt to imitate this hard paste porcelain, referred to as "china". Other kinds are English soft paste, which is composed of clay and powdered glass, fired at a comparatively low temperature, lead glazed and refired; and English bone china, a soft paste modified by the addition of calcined bone. See also pp.546-547.

Porcupine, short-legged, mostly nocturnal herbivorous rodent with erectile, defensive quills in its back. Old World porcupines of the family Hystricidae are heavy, have brown to black fur with white-banded quills and are terrestrial. New World porcupines of the family Erethizontidae are smaller with yellow to white quills and are arboreal. The largest European and African rodent, the African crested porcupine (*Hystrix cristata*), attains a length of about 80cm (31in).

Porcupine fish, any of several species of tropical marine fish found throughout the world. White and brown, it has sharp spines and can gulp water to inflate its body. Length: to 91.4cm (3ft). Family Diodontidae; genus *Diodon*.

Pordenone (1483-1539), Italian painter, named Giovanni Antonio de Sacchis. His frescoes, such as those for Cremona Cathedral (1521), show him to have had an excellent sense of colour.

Porgy and Bess (1935), three-act Negro folk-opera by George GERSHWIN. The LIBRETTO by Ira Gershwin and Du Bose Heyward is based on Dorothy and Du Bose Heyward's play *Porgy*. The premiere of this tragedy was held in Boston, Massachusetts. The work is set in a Carolina coastal town.

Pori (Björneborg), city in sw Finland near the mouth of the Kokemäki River. Founded in 1365, Pori was initially overshadowed by the ports in the HANSEATIC LEAGUE, but by 1840 the city had the largest commercial fleet in the country. Industries: textiles, paper, machinery. Pop. (1975) 80,129.

Porifera, or pore-bearers, also called Parazoa, animal phylum made up of the

Pornography

SPONGES. The Porifera are many-celled, stationary animals representing an evolutionary dead end. See also p.2.

Pornography, visual or aural material that is sexually titillating. The boundary between what is and what is not pornographic is impossible to define, because the response of individuals varies according to age and experience. Consequently, although pornography is subject to legal controls in most countries, interpretation of the law is itself entirely dependent on the subjective judgement of those presiding. In Britain, material is pornographic (obscene) if it is deemed to deprave or corrupt those who see or hear it.

Porosity, in geology, degree to which rock is capable of holding groundwater. This depends on the numbers of aquifers, cracks, fissures and holes present. Porosity is measured and expressed as a percentage of the rock's total volume. See also HYDROLOGY; PERMEABILITY.

Porphyria, disease, often genetic, of man and some animals (most commonly cattle) characterized by abnormalities of PORPHYRIN metabolism and subsequent excretion of porphyrins in the urine as well as extreme sensitivity to light. There is no specific treatment, but therapy can alleviate the symptoms.

Porphyrin, class of red-pigmented organic compounds consisting of four pyrrole residues (a ring compound, formula C_4H_4NH) bonded together. The porphyrins form part of the active nucleus of HAEMOGLOBIN, a and b CHLOROPHYLLS and the enzymes catalase and peroxidase. See also p.909.

Porphyry (c.234–305), Greek Neo-Platonic philosopher who studied under PLOTINUS. He lectured on the philosophy of Plotinus and was the teacher of Iamblichus. He wrote biographies of PYTHAGORAS and Plotinus but his chief work was *Isagoge*, an introduction to the logic of ARISTOTLE.

Porpoise, small, toothed whale with a blunt beakless snout, that lives in most oceans. The best-known is the common porpoise of the Northern Hemisphere. Its body is black above and white below. Length: to 1.5m (5ft). Family Delphinidae; species *Phocaena phocaena*. See also pp.87, 100.

Porritt, Baron (Life peer) (1900–), British surgeon, b. New Zealand; consultant surgeon to the British royal family between 1936 and 1967. He was Governor-General of New Zealand (1967–72) and made a life peer in 1973.

Porsche, Ferdinand (1875–1951), German car manufacturer who designed the Volkswagen "Beetle" (1934–38) for Hitler as the "people's car". He also designed the sports car which bears his name.

Port, fortified wine produced in N Portugal in the Douro Valley, E of Oporto after which the wine is named. It may be white or red, and contains 17–20% alcohol; a vintage port is aged for 15–20 years. Port has been popular in Britain since the 18th century.

Port of Hungerford, Charles Frederick Algernon, 1st Viscount (1893–1971), British Air Chief Marshal. He was Director of Organization in the Air Ministry (1937–38), and Chief of Air Staff (1940–45).

Portal vein, large vein that carries blood from the stomach and surrounding organs to the liver.

Port Arthur, former name of Lushun, city in SW LIAONING province, NE China, on the Liaotung Peninsula. At the entrance to the Gulf of Po Hai, Port Arthur is strategically placed and is a naval base and a terminus of the South Manchurian railway. The city was held by the Russians from 1898 to 1905, and by the Japanese until 1945, when it came under joint Sino-Soviet control. Soviet forces withdrew in 1955.

Port-au-Prince, capital city of Haiti, on the SE shore of the Gulf of Gonave. It was founded in 1749 and became the capital in 1770. The city manufactures tobacco, textiles and cement, and exports coffee and sugar. Pop. (1975) 458,675.

Port Darwin. See DARWIN.

Port Elizabeth, port in Cape Province in s Republic of South Africa, on Algoa Bay in the Indian Ocean. Founded in 1799 by the British, the city grew after the completion of the railway line to Kimberley in 1873. The University of Port Elizabeth was founded in 1964. Exports include diamonds, fruit and wool. Industries: motor vehicles, chemicals, glass, electrical engineering. Pop. (1970) 468,577.

Porteous Riots (1736), incidents that occurred after the Edinburgh city guard fired into a mob gathered at the execution of the smuggler Andrew Wilson, killing several people. John Porteous, captain of the guard, was tried and sentenced to death, but was reprieved. An indignant mob then took him from prison and hanged him. No reprisals were taken against those involved in the hanging.

Porter, Cole (1892–1964), US composer and lyricist, who studied music at Harvard. Most of his many MUSICALS for stage and film were vastly successful. They include *Gay Divorcee* (1932), *Anything Goes* (1934), *Kiss me Kate* (1948) and *High Society* (1956). Among his most popular songs are *Night and Day*, *Let's Do It*, *Begin the Beguine* and *In the Still of the Night*.

Porter, Edwin (1870–1941), US inventor who collaborated with Thomas EDISON in the development of the motion picture camera. In 1903 he made for Edison *The Life of an American Fireman*, the first US documentary film using close-ups and cross-cutting; he also filmed *The Great Train Robbery* (1903) and *The Eternal City* (1915).

Porter, Sir George (1920–), British chemist and director of the Royal Institution of Great Britain since 1966. He shared the 1967 Nobel Prize in chemistry with R. G. W. NORRISH and M. EIGEN for their work on very fast chemical reactions. Porter and Norrish disturbed the equilibrium between atoms and molecules in chlorine gas by irradiating it with very short pulses of energy, and observed it as it returned to equilibrium within as little as 10^{-9} sec.

Porter, Katherine Anne (1890–1980), US short-story writer and poet. His first stories were published in 1943, his first poems, *The Hexagon*, in 1956. His autobiographical *The Watcher on the East-Iron Balcony* (1956) is much admired.

Porter, Hugh (1940–), British track cyclist whose strength was the individual pursuit. He won a Commonwealth Games gold medal in 1966, and in professional cycling was the first man to win four world pursuit titles (1968, 1970, 1972, 1973).

Porter, Katherine Anne (1890–), US writer noted for the technical accomplishment of her short stories and novellas. She won acclaim with *Flowering Judas* (1930). Subsequent works include *Pale Horse*, *Pale Rider* (1939) and *The Leaning Tower* (1944). Her long novel *Ship of Fools* (1962) was highly acclaimed.

Porter, Rodney Robert Gerald (1917–), British biochemist. He shared with M. EDELMAN the 1972 Nobel Prize in physiology and medicine for their work on the chemical structure of the GAMMA GLOBULIN molecule.

Port Harcourt, city in s Nigeria, on the River Bonny in the Niger delta system approx. 435km (270 miles) ESE of Lagos. It is a shipping centre and terminus for the railway from the interior. Its exports include coal, tin, palm products and groundnuts. Pop. (1975) 242,000.

Port Hedland, port on the NW coast of Australia, in Western Australia about 1,320km (820 miles) NNE of Perth. It is the largest port in Australia defined in terms of the tonnage of iron handled. Pop. (1971) 7,200.

Port Jackson, in New South Wales, SE Australia, inlet of the Pacific Ocean comprising Sydney Harbour, North Harbour and Middle Harbour. The port is an excellent deep-water anchorage and its ship-repair facilities include one of the world's largest dry docks. Garden Island on the s shore is a base for the Royal Australian Navy. Area: 57sq km (22sq miles).

Port Jackson shark, species of SHARK living in the coastal waters of Australia; it is a

member of the family Heterodontidae, the most primitive of the shark groups. It has two dorsal fins and five pairs of gill slits. Length: to 1.5m (5ft). Species *Heterodontus philippi*.

Port Lairge. See WATERFORD.

Portland, William Bentinck (1649–1709), Anglo-Dutch diplomat. As personal adviser to WILLIAM III he arranged his marriage to MARY II and settled in England in 1688 where he was made Earl of Portland. He fought at the Battle of the BOYNE in 1690 and negotiated the Treaty of RYSWICK in 1697.

Portland, William Henry Cavendish Bentinck (1738–1809), British politician who was the nominal head of the coalition government of Lord NORTH and Charles FOX in 1783. His second ministry from 1807 to 1809 was dominated by Robert CASTLEBAGH and George CANNING.

Portland, port of entry in NW Oregon, USA, on the Willamette River; largest city in Oregon. Settled in 1845, it developed as a major port for exporting timber and grain after 1850. It was a supply station for the California goldfields and the Alaska gold rush (1897–1900). Educational establishments include Clark College (1867), the University of Portland (1901) and Reed College (1904). Industries: shipbuilding, timber, wood products, textiles, metals, machinery. Pop. (1980) 364,246.

Portland, Isle of, peninsula in s Dorset, SW England. It is noted for Portland stone, the quarrying of which is a major industry.

Portland Bill, tip of the Isle of Portland, a limestone peninsula in Dorsetshire, connected to the mainland by a stretch of shingle about 200m (660ft) wide.

Portland cement. See CEMENT.

Portland vase, funerary urn discovered in an ancient tomb near Rome in the 17th century. It was made of blue-violet glass overlaid with cameo relief, and probably dates from the 1st century AD. It was acquired by the Duke of Portland in the late 18th century and by the British Museum in 1845.

Port Louis, capital and seaport city in NW Mauritius in the Indian Ocean. It was founded by the French in 1735. The main export is sugar; other industries include the manufacture of cigarettes and food products. Pop. (1979) 146,101.

Port Mahon. See MAHON.

Portman, Eric (1903–69), British stage and film actor. He began his acting career in 1924, joining the Old Vic in 1927 and appearing in *Major Barbara* (1929). His films include *The Murder in the Red Barn* (1935), *The Deep Blue Sea* (1955) and *Deadfall* (1968).

Port Moresby, capital of PAPUA NEW GUINEA, on the SE coast of New Guinea. It was discovered in 1873 and occupied by the British ten years later. Its sheltered harbour was the site of an important Allied base in WWII. Port Moresby's exports include gold, copper and rubber. Pop. (1970 est.) 56,200.

Porto. See OPORTO.

Porto Alegre, city in SE Brazil on the River Guaiba. It was founded by colonists from the Azores in 1742 and later settled by German and Italian immigrants. It is the country's most important river port. Industries include meat-packing, shipbuilding and ore smelting. Pop. (1979 est.) 1,183,500.

Porto Bello, Battle of, British naval victory over the Spanish at Porto Bello, in Darien, on 22 November 1739. It was a battle in the War of JENKINS' EAR. The British fleet, commanded by Admiral Vernon, captured the town and destroyed its fortifications.

Port of Spain, capital of TRINIDAD AND TOBAGO, on the Gulf of Paria. The city was formerly the interim capital of the Federation of the West Indies (1958–62). It is a major Caribbean shipping centre, and exports agricultural produce and asphalt. The city has attractive gardens and is a popular tourist resort. Pop. (1970) 62,680.

Porto-Novo, capital of BENIN, W Africa. Settled by 16th-century Portuguese traders it later became a shipping point for slaves to America. Today it is a port and market for the surrounding agricultural

region; its exports include palm oil, cotton and kapok. Pop. (1975 est.) 104,000.

Portoviejo, town in Ecuador, 145km (90 miles) NW of Guayaquil. Founded in 1534, it was moved to its present site in the 17th century. Its products include baskets, hats and hammocks. Pop. (1970 est.) 49,700.

Portrait, in visual art, the likeness of a person or persons; examples exist in most media. The likeness may be primarily physical, as in portraits by GAINSBOROUGH, or it may be a psychological study, such as the portraits and self-portraits of REMBRANDT and VAN GOGH, or the photographs of Diane Arbus. The subject may be realistically or ideally represented. Examples of portraits include coins, sculpture and miniatures.

Portrait of a Lady, The (1881) novel by Henry JAMES. Set in England and Italy in the late 19th century, it is a brilliant study of the marriage of an unscrupulous English dilettante to a rich but innocent American woman, and is generally regarded as one of James' finest works.

Portrait of the Artist as a Young Dog (1940), series of semi-autobiographical prose sketches by Dylan THOMAS. Concerned with growing up in rural Wales, the lively style, detailed sense of place and vivid characters, such as Grandpa, anticipated his better-known *Under Milk Wood*.

Portrait of the Artist As A Young Man, A (1916), autobiographical novel by James JOYCE. It was Joyce's first experiment in the technique of STREAM OF CONSCIOUSNESS, and is a tirade against his bigoted and poverty-stricken family background, the Roman Catholic religion and Ireland itself. See also pp.1767, 1774.

Port-Royal-des-Champs, former Cistercian convent 11km (7 miles) s of Versailles, founded in 1204. The nuns moved to Paris in 1626 and the abbey at Port-Royal-des-Champs became a centre of Jansenist teaching and a retreat for men. The buildings were destroyed in 1710 by order of Louis XIV.

Port Said, city in NE Egypt, at the entrance to the Suez Canal, on a narrow peninsula between Lake Manzala and the Mediterranean Sea. Although its harbour was closed to shipping (1967–74), it remained a fuelling station for ships using the canal and also the location of canal maintenance workshops. Fishing is an important source of income. Pop. (1976 est.) 263,000.

Portsmouth, Louise de Kéroualle, Duchess of (1649–1734), French mistress of CHARLES II of England from 1670 until his death in 1685, and mother of the Duke of Richmond.

Portsmouth, port and county district in Hampshire, s England, on the Spithead; the city has been Britain's principal naval base (Portsea) since the reign of HENRY VIII. Nelson's flagship HMS *Victory*, stands there in dry dock. Landmarks include Southsea Castle and Charles DICKENS' birthplace, which is now a museum. Industries include aircraft engineering. Area (county district) 37sq km (14sq miles). Pop. (county district, 1979 est.) 191,000. (city, 1981 est.) 188,700.

Portsmouth, city in SE Virginia, USA, on the Elizabeth River opposite Norfolk, to which it is connected by bridge and tunnel; part of one of the largest naval dockyards and shipyards in the USA. Industries: shipbuilding, chemicals, fertilizers, railway equipment, plastics. Pop. (1980) 104,068.

Portsmouth, Treaty of (1905), agreement ending the RUSSO-JAPANESE WAR, signed at Portsmouth, England. Russia recognized the independence of Korea and Japan's political and economic paramountcy there, returned Manchuria to Chinese sovereignty and ceded to Japan the railway lines which it had built in Manchuria.

Port Sudan, city in NE Sudan, on the Red Sea. It was founded as a harbour during the construction of a railway linking the River Nile with the Red Sea. It is now the chief port of entry for the Sudan; exports include hides, resin and cotton. Pop. (1971) 101,091.

Port Sunlight, town in the outskirts of Birkenhead, Merseyside, N England. It was founded by Lord LEVERHULME in 1888 around the Lever soap factory to provide

homes for the factory workers. It includes an art gallery, opened in 1922 in memory of Lady Lever.

Port Talbot, town in West Glamorgan, s Wales, at the mouth of the River Avon on Swansea Bay. Coal is exported and large quantities of iron ore imported. The manufacture of steel is the principal industry; iron and tinplate are also made. Pop. (1971) 50,658.

Portugal, republic in sw Europe on the Iberian Peninsula. Once the centre of a great colonial empire, it is now one of Europe's poorest countries. The economy is largely agricultural, the principal being wheat, maize, oats, rye and barley. Mineral deposits include copper and tungsten. The chief industry is food processing. Lisbon is the capital. Area: (including Madeira and the Azores) 91,640sq km (35,382sq miles). Pop. (1979 est.) 9,862,700. See p.2123.

Portuguese Guinea. See GUINEAU-BISSAU. **Portuguese man-of-war**, colonial COELENTERATE animal found in marine subtropical and tropical waters, recognized by its bright blue gas float and long, trailing tentacles with strongly poisonous stinging cells. It is not a true jellyfish. The tentacles are actually a cluster of several kinds of modified MEDUSAE and POLYPS. Length: to 18m (60ft). Class Hydrozoa; phylum Coelenterata; genus *Physalia*. See also pp.15, 340.

Portuguese Timor, former Portuguese colony in the E part of Timor island in the Lesser Sunda Islands of the Malay Archipelago; in 1975 it became part of INDONESIA. The most important product is coffee, accounting for 80% of exports. Others include hides, tea, rubber and copra. Dili is the chief town. Area: 14,925sq km (5,763sq miles). Pop. (1970) 610,541. See also p.2067.

Poseidon, in Greek mythology, god of all waters, earth-shaker and brother of ZEUS and HADES, identified with the Roman god NEPTUNE. Poseidon controlled the monsters of the deep, reputedly created the horse (he was the father of PEGASUS) and sired Orion and POLYPHEMUS. Zeus called upon him to bring the Flood when he was displeased with men.

Positivism, in philosophy, doctrine that asserts that "positive" knowledge can be attained through direct experience. The application of the methods of inductive logic, based on empirical observation, would permit the growth of an ever-increasing corpus of known fact. Positivism was first proposed by Auguste COMTE, and was a dominant system of 19th-century philosophy. LOGICAL POSITIVISM developed in the 20th century, attempting to base "positive knowledge" on the strict application of logic.

Positron, particle (symbol e^+) that is identical to the ELECTRON, except it is positively charged, ie it is the antiparticle of the electron. It was postulated as the first antiparticle by P. DIRAC in 1928 and observed in 1932 in COSMIC RAYS; it is also emitted from certain radioactive nuclei. It can exist only for a brief period before ANNIHILATION by combination with an electron. Electron-positron pairs can be produced when GAMMA RAYS interact with matter. See also ELEMENTARY PARTICLES; pp.808-819.

Positronium, unstable, bound state of an ELECTRON and a POSITRON (the electron's antiparticle) held together by electromagnetic attraction, first observed in 1951. It has a half-life of either 1.39×10^{-7} sec or 1.25×10^{-10} sec depending on whether the spin axes of the two particles are parallel or antiparallel.

Possessed, The (1873), novel by Feodor Mikhailovich DOSTOEVSKY. It attacks the nihilism of the younger generation and is a violent denunciation of the leftists and revolutionaries he previously admired.

Possum, popular name for any of the PHALANGERS of Australasia. Family Phalangeridae. The term is also a misnomer for the opossum of the USA. See also pp.91, 308, 383.

Post, Emily (c.1872-1960), us authority on etiquette, who began her career as a novelist. Her best-known book is *Etiquette: The Blue Book of Social Usage*

(1922), which soon became the basic practical guide to proper social behaviour.

Poster, printed art form in multiple copies for public notice. Originally a striking advertisement, posters developed after the invention of LITHOGRAPHY, and brilliantly coloured posters could be cheaply produced after 1870. TOULOUSE-LAUTREC's posters of the 1890s showed a bravura of execution matched by Alphonse MUCHA's involuted ART NOUVEAU designs. With WWI and the Russian revolution, posters entered the political process as effective and vivid propaganda. POP ART and gramophone record covers in the 1960s continued the development of the poster as an art form.

Postgate, Raymond William (1896-1971), British historian and novelist, imprisoned for being a conscientious objector in 1916. He worked on the *Daily Herald* and the *Encyclopaedia Britannica*, and founded the *Good Food Guide* in 1951. His political works include *The Bolshevik Theory* (1920) and *History of the British Workers* (1926). Among his novels are *Verdict of Twelve* (1940) and *The Ledger is Kept* (1953). He also wrote, with G. D. H. Cole, *The Common People: 1746-1946* (1946).

Post-Impressionism, term invented by English critic Roger FRY to denote works by artists who exhibited at the Grafton Gallery, London, in 1910. They included MANET, GAUGUIN, VAN GOGH, CÉZANNE, SEURAT, MATISSE and PICASSO. The term does not refer to one particular style of painting, although all these artists reacted against IMPRESSIONISM and NEO-IMPRESSIONISM preoccupation with visual appearances.

Post-mortem, or autopsy, examination of a body to determine the cause of death. When suspicious, sudden or unexplained human death occurs, a post-mortem is usually performed. Often it entails the dissection of organs for microscopic study and the chemical analysis of certain body liquids and tissues. Such analyses form part of PATHOLOGY.

Post-natal depression, psychotic disorder manifested by expressions of intense sadness which may occur within a day or two of childbirth. It may be engendered by chemical changes in the body, the stresses of giving birth or feelings of inadequacy, but authorities do not agree on the causes.

Post Office (PO), British public corporation formed in 1969 from the General Post Office (GPO). Mail delivery, its sole function until the 19th century, is still a Post Office monopoly and derives from the Crown's early needs to maintain reliable royal communications. Private post, at rates related to distance, was first delivered in 1635; HILL's penny post of 1840 standardized the rate. The GPO set up a savings bank (1861), a telegraph service (1870) and nationalized existing private telephone companies in 1912. In 1981, telecommunications and data processing were split from the PO to form a separate corporation named British Telecom.

Postulate, statement or proposition that is to be assumed to be true without proof and that forms a framework for the derivation of THEOREMS. The term as now used is synonymous with "axiom".

Potash, potassium carbonate (K_2CO_3). The term is also used loosely to describe any potassium salt, ore or a mineral with a fairly large proportion of potassium, such as potash alum or potash mica. Potash is mined for use as a fertilizer. See also pp.411, 664, 665.

Potassium, common metallic element (symbol K) first isolated in 1807 by Sir Humphry DAVY. Its chief ores are sylvite (a chloride), carnallite and polyhalite. The metal is used as a heat-transfer medium in nuclear reactors, but has few other commercial uses. Chemically it resembles sodium, being rather more reactive. The natural element contains a radioisotope K^{40} (half-life 1.3×10^9 yr), which is used in the radioactive dating of rocks. Properties: at. no. 19; at. wt. 39.102; density 0.86; m.p. $63.65^\circ C$ ($146.6^\circ F$); b.p. $774^\circ C$ ($1,425^\circ F$); most common isotope K^{39} (93.1%). See also ALKALI ELEMENTS.

Potassium carbonate, white solid (K_2CO_3), known as POTASH and usually produced commercially by electrolysis of potassium chloride, followed by treatment of the resulting potassium hydroxide with carbon dioxide. It is used as a fertilizer, to make glass and textile dyes, and in cleaning and ELECTROPLATING metals.

Potassium chloride, colourless or white potassium salt (KCl) extracted from lake brines and from minerals such as sylvite, kainite and carnallite. It is used as a fertilizer and as a raw material in the production of potassium hydroxide and potassium carbonate.

Potassium hydroxide, caustic potash, commercially produced white solid (KOH) prepared by ELECTROLYSIS of potassium chloride. It is a strongly alkaline substance used for making soaps and detergents. See also ALKALI.

Potassium nitrate, transparent solid (KNO_3), a naturally occurring mineral called saltpetre or nitre, which is used as a fertilizer for its nitrogen content. It is also used in the manufacture of explosives and as a food preservative.

Potato, plant native to Central and South America and introduced into Europe by the Spaniards in the 16th century. Best grown in a moist, cool climate, it has oval leaves and violet, pink or white flowers. The potato itself is a tuber (an underground modified stem). The leaves and green potatoes contain the alkaloid solanine and are poisonous if eaten raw. Family Solanaceae; species *Solanum tuberosum*. See also pp.652, 674, 682, 683, 682-683.

Potato beetle. See COLORADO BEETLE.

Potchefstroom, city in NE Republic of South Africa, in s Transvaal province on the Vaal River. It was the scene of the Transvaal revolt of 1880-81, during which the British garrison was besieged for three months, and finally defeated. The city's growth dates from 1933, when gold was discovered. It is now the centre of one of the world's richest gold-mining regions. Industries: timber, metal goods, malt. Pop. (1970) 60,000.

Potemkin, Grigori Aleksandrovich, Prince (1739-91), Russian statesman. Involved in the coup that brought CATHERINE II to power in 1762, he became her lover for a time and remained until his death the most powerful man in Russia. He played an important part in the annexation of the Crimea in 1783, for which he was created a prince, and was an able administrator of the new province.

Potemkin, The Battleship. See BATTLESHIP POTEMKIN.

Potential difference. See ELECTROMOTIVE FORCE (emf).

Potential energy, energy that an object possesses due to its vertical position in the Earth's gravitational field; also the energy stored in a system such as a spring, or an oscillating system (eg a pendulum) at the point of greatest amplitude. An object on a shelf, for example, has potential energy given by mgh , where m is its mass, g the acceleration due to gravity, and h the height of the shelf. If the object falls to the ground its potential energy is converted into KINETIC ENERGY. See also pp.826-829, 826-829.

Potentilla, genus of perennial herbaceous plants of the family Rosaceae; species are commonly called CINQUEFOIL, referring to the five leaflets usually found on the compound leaf. The flowers are solitary and five-petaled. See also p.370.

Potentiometer, instrument used to measure an unknown voltage or potential difference by comparing it with a known one, eg that of a standard cell. It consists of a length of resistance wire fixed taut on a wooden base, and connected across a battery. Both the known and the unknown voltages are in turn used to balance, through a GALVANOMETER and sliding contact, the voltages in a portion of the wire, the ratio of whose lengths equals the ratio of the voltages.

Pothole, in geology, term used for various formations that are pot-shaped. Most commonly it denotes a circular, bowl-shaped hollow formed in a rocky stream-bed by the grinding action of sand

Port Said has for long been a busy seaport and a major Egyptian naval base.

Portsmouth, known to sailors as "Pompey", has had a naval dockyard since 1496.

Portuguese man-of-war: their stings are dangerous even when dry on a beach.

Emily Post told Americans that they should not eat off their knives.

Potholing

The Potteries: photograph of the unloading of clay from barges at Hanley.

and stones whirled around by eddies or the force of the stream. Such potholes are usually found in rapids or at the foot of a waterfall. It is also used to describe the vertical pits worn in limestone rocks by the action of water, which often provide the entrances to cave systems. See also **POTHOLES**; pp.218-220, 218-220.

Potholing, sport devoted to the exploration of underground systems, such as potholes and caves; it is also called caving and can be hazardous.

Potidaea, ancient city in NE Greece, at the narrowest point of the Pallene Peninsula (now Kassandra). A Corinthian colony founded in 609 BC, it joined the Delian League but revolted against Athens and was recaptured 429 BC. It was taken and destroyed by Philip II of Macedon in 356 BC, and rebuilt after 316 BC by Cassander and named Kassandreia.

Potomac, river in E USA. It rises in West Virginia at the confluence of the North Branch and South Branch rivers, and flows E and SE to Chesapeake Bay, forming the boundaries of Maryland-West Virginia and Virginia-Maryland. The river is navigable for large ships as far as Washington, DC. Its chief tributary is the Shenandoah. Length: 462km (287 miles).

Potomac Charter, one of a series of grants awarded to the Potomac Company (organized in 1785 with George Washington as its first president) by the state of Maryland and the US Government for the construction of a canal from the Potomac River to the Ohio Valley. A canal connecting the Potomac with Harpers Ferry was completed in 1808, but the project was unprofitable and was finally administered by receivers.

Potosi, city in S Bolivia, approx. 80km (50 miles) S of Sucre. Located at an altitude of 4,200m (13,700ft), Potosi is one of the highest cities in the world. Furniture and electrical appliances are manufactured there. Pop. (1969 est.) 63,600.

Potsdam, city in central East Germany, on the River Havel 27km (17 miles) SW of West Berlin; (17 miles) SW of West Berlin: capital of Potsdam district. It was the scene of the Peace of Potsdam (1805), which strengthened the alliance between Russia and Prussia against France, and the **POTSDAM CONFERENCE**. It is the centre of the East German film industry; other industries include food processing, textiles, pharmaceuticals and electrical equipment. Pop. (1979) 126,933.

Potsdam Conference (1945), meeting of leaders of principal Allies of WWII to clarify and implement agreements reached at the Yalta Conference. The participants included President TRUMAN of the USA, Premier STALIN of the USSR, the Prime Minister, CHURCHILL, of Great Britain and, after the latter's defeat in the British elections, ATTLEE. The so-called Potsdam agreement established the Council of Foreign Ministers to prepare draft treaties and to make proposals for settling territorial issues. It also transferred the chief authority in Germany to the US, British, French and Soviet commanders in their respective zones of occupation. German industry was decentralized and an ultimatum calling for unconditional surrender was issued to Japan.

Potsherd, pottery fragment, one of the archaeologist's chief aids in dating historic sites and tracing cultural contacts after the invention of pottery in NEOLITHIC times. Sir Flinders PETRIE developed the system of using pottery for dating during the 1880s.

Potter, Beatrix (1866-1943), British author who created the characters of Peter Rabbit, Jemima Puddleduck, Squirrel Nutkin and others in her animal stories. In the 1890s she sent illustrated animal stories to a sick child and, inspired by their success, published *Peter Rabbit* in 1900 and *The Tailor of Gloucester* in 1902. More than 23 books, enhanced by her delicate drawings, followed. They are now considered classics.

Potter, Paulus (1625-54), Dutch painter, famous for his landscapes with animals. He worked mainly in Amsterdam and the Hague. His works, which are noted for

their realism, include the life-size *Young Bull* (1647) and *Early Morning* (1651).

Potter, Stephen (1900-69), British critic and humorist. After writing several critical works including *D. H. Lawrence: A First Study* (1930) and *The Muse in Chains* (1937), he turned to satires on the ethics of the English middle classes. These include *The Theory and Practice of Gamesmanship* (1947), *Some Works on Lifemanship* (1950) and *One-Upmanship* (1952).

Potteries, The, district in Staffordshire, W central England, that extends for 14km (9 miles) NW to SE in the upper Trent Valley. The area has been famous since the 16th century for its china and earthenware; it was the home of Josiah WEDGWOOD, Josiah SPODE and Thomas MINTON. Clay for pottery was once mined locally, but is now taken there from SW England. The area includes Burslem, Fenton, Hanley, Longton, Tunstall and Stoke-on-Trent.

Potter's wheel, device used in POTTERY to fashion clay objects. It consists of a horizontal disc revolving on a vertical spindle, powered by a motor or a foot-operated crank. Clay is centred on the rapidly turning disc and is manipulated by the potter into the desired form.

Pottery, in its widest sense, includes all objects shaped of clay and hardened by fire or dried in the sun. The term is derived from the French *poterie*, related to the Latin *potare* (to drink). Pottery is dependent on two properties of clay, its plasticity and its durability after firing. Pottery can be divided into three categories according to the degree of hardness and special constitution: **EARTHENWARE**, the ordinary pottery dating from primitive times, baked at 700°C (1,292°F) or lower; **STONEWARE**, fired at up to 1,150°C (2,102°F), more vitrified or close-grained and non-porous and until modern times produced more commonly in the Far East than in Europe; and **PORCELAIN**, fired at 1,400°C (2,552°F), a Chinese invention and the most refined ceramic material, known as hard paste because of its homogeneous composition. To "throw a pot" the potter uses a special wheel which is rotated by foot or by power, leaving the potter free use of his hands for manipulating the moist clay. After the pot is formed and dried, it is fired in a kiln; GLAZE is then applied, and the pot is refired. Glazes include alkaline, lead, felspathic and salt. See also pp.546-547.

Potto, slow-moving, squirrel-sized, primitive African primate with large eyes and a pointed face; it is nocturnal and arboreal. The common potto has sturdy limbs, a short tail and small spines formed by the neck vertebrae. Its woolly fur is grey-red. Length: 37cm (15in), excluding the tail. Species *Perodicticus potto*.

Poulenc, Francis (1899-1963), French composer and a member of Les Six. His music shows the formative influence of Erik SATIE. Spontaneity and simple melodies, delicate yet free from sentimentality, characterize his works, which include ballets - notably *Les Biches* (1923) - orchestral works, chamber music, piano music and songs. He also composed two operas, *Les Mamelles de Tirésias* (1944) and *Dialogue des Carmélites* (1957). See also pp.1754, 1754.

Poultry, collective term for domestic fowl reared as a source of meat and eggs. They include chickens, ducks, geese, guinea-fowl and turkeys. See pp.656-657, 722, 734-736, 737.

Pound, Ezra (1885-1972), US poet and critic, a dominant influence on 20th century Anglo-American literature. He spent much of his life in Europe where his earliest works, *Exultations* (1909) and *Personae* (1909), attracted critical acclaim for their dazzling originality and erudition. He encouraged the work of others such as T. S. ELIOT and James JOYCE, and was involved with the IMAGISTS. From 1924 he made his home in Italy and at the outbreak of war between the USA and Italy he supported the Italians, making scurrilous broadcasts on Italian radio about the Jews and disparaging the Allied war effort. He was later arrested for treason, but was judged unfit to stand trial and was

confined to a mental hospital (1946-58). His major works include the poem *Homage to Sextus Propertius* (1917), *Hugh Selwyn Mauberley* (1920) and *Cantos*. See also p.1773.

Pound, imperial unit of weight equal to 0.453kg. It became a unit of currency when a pound (lb) weight of silver was divided into 240 PENNY units. The pound sterling has been the main unit of English currency since the Middle Ages. The first coin of one pound (£) value was coined in 1489; it was, however, known as a SOVEREIGN, and its value was not fixed at 20 SHILLINGS until 1604.

Poundage. See **TONNAGE**.

Pound force. See **WEIGHTS AND MEASURES**.

Pourbus, family of Flemish painters of the 16th and 17th centuries. Pieter (1510-84) worked in Bruges and painted portraits and religious subjects in a naturalistic style. His son Frans the Elder (1545-81) painted similar subjects. His grandson Frans the Younger (1569-1622) was court painter at Mantua (1600-09) and painter to Marie de Médicis in Paris (1609-22).

Pousseur, Henri (1929-), Belgian composer. He studied under BOULEZ and worked with STOCKHAUSEN and BERIO. He is the foremost Belgian exponent of ELECTRONIC MUSIC, as in his *Seismogrammes* (1953) for magnetic tape.

Poussin, Gaspard (1615-75), French painter, born Gaspard Dughet but who changed his name to that of his teacher and brother-in-law Nicolas **POUSSIN**. His successful paintings were landscapes which blended the Classic and Romantic qualities of Poussin and CLAUDE LORRAINE; they were much admired in 18th-century England. See also pp.1442-1443.

Poussin, Nicolas (c.1594-1665), French painter of religious and mythological scenes and Classical landscapes. His mature works evoked the spirit of the French Classic ideal as did no other paintings of that period, and after 1650 he enjoyed international prestige. His early works include *The Martyrdom of St Erasmus* (1628) in the BAROQUE style and the Classical *Inspiration of the Poet* (1628-29), which used Venetian colouring. His later works include *The Eucharist* (1644-48), and *The Seven Sacraments* (1648). See also pp.1442-1443, 1442.

Poverty and Progress (1941), sociological study of working-class urban life by B. S. ROWNTREE. It derived from a survey undertaken in 1936 and updated his *Poverty: A Study of Town Life* (1901).

Powdered milk, form of dried whole milk which contains 26.5% of fat and at least 95% of milk solids and is soluble in water. This type is produced mainly for use in the making of foods, but it is also available as a consumer product. Dried skim milk is non-fat dried milk, and usually contains more than 50% lactose.

Powderhall handicap, colloquial name given to the professional handicap sprint race for men over 120yd (110m) as part of the Powderhall New Year Handicaps, held annually at Powderhall, Edinburgh. It was first raced in 1870 over 130yd at the Powderhall stadium, the distance being reduced to 120yd in 1958. The metric equivalent was adopted in 1970, when the meeting moved to the Meadowbank stadium, also in Edinburgh.

Powder metallurgy, manufacture of metal powders and their use in producing metal parts. Powder particles are compressed to the desired shape and then sintered. The use of powders is more economical than molten metal in making such items as small gears. Melting may also prove impractical, eg when high melting-point metals are used, or when an alloy of unfusible materials is involved. Powder metallurgy is also used to make porous metal parts.

Powell, Anthony Dymoke (1905-), British novelist specializing in social comedies; he was also a scriptwriter and journalist. His work includes *A Dance to the Music of Time*, a series of novels which portray the snobbish, insular world of the English upper classes after WWI, beginning with *A Question of Upbringing* (1951) and including *At Lady Molly's*

Ezra Pound was famous for his obscure and beautiful poetry.

Nicolas Poussin: detail from the *Gathering of the Ashes of Phocion* (1648).

Enoch Powell's controversial opinions have earned him the mistrust of both parties.

(1957), *Temporary Kings* (1973) and *Hearing Secret Harmonies* (1975).

Powell, Cecil Frank (1903–69), British physicist who was awarded the 1950 Nobel Prize in physics for developing a photographic method for studying nuclear processes and for the resultant discovery of the pi meson (pion). During the 1930s he developed the technique whereby ELEMENTARY PARTICLES were recorded directly onto film, rather than being seen as tracks in a cloud chamber. In 1947 he used this method at high altitude to investigate cosmic rays and discovered a new particle – the pion. This discovery lent support to the theory of nuclear structure proposed by Hideki YUKAWA, who had predicted the existence of such a particle in 1935. Powell subsequently discovered the antiparticle of pion and, in 1949, the decay process of K mesons (KAONS). See also p.818.

Powell, John Enoch (1912–), British politician. He became a Conservative MP in 1950, and was Minister of Health (1960–63). He was known for his campaign in 1968 against coloured immigration into the UK and for his opposition to Britain's entry into the Common Market. Powell was elected MP for the United Ulster Unionist Coalition in 1974 after breaking with the Conservative Party. From 1937–9 he was Professor of Greek at Sydney University.

Powell, Sir Philip (1921–), British architect who, in partnership with John MOYA, established himself by winning the competition for the design of the Churchill Gardens flats, Pimlico, London (1948–62). The clarity and precision of the partners' style has won them many prestigious contracts, such as the additions to St John's College, Cambridge (1967), and the Museum of London (1976).

Power, in physics, the rate of doing work, ie a measure of the output of an engine or other power source. James WATT was the first to measure power; he used the unit called HORSE-POWER. The modern unit of power is the watt.

Power, electric. See POWER SOURCES, ELECTRIC.

Powerboat racing, sport in which boats powered by outboard or inboard motors race on offshore or inland waters. Powerboats race mainly at speeds of up to 100mph (160km/h), unlike HYDROPLANES, in which power and speed are almost unlimited. The sport was inaugurated internationally in 1903 when Sir Alfred Harmsworth (later Lord Northcliffe) offered the first powerboat racing trophy.

Powers and roots, in mathematics, number of times a number is multiplied or divided by itself. If 2 is raised to the power 3 (written 2^3), called 2 cubed, or 2 to the 3rd power) it is $2 \times 2 \times 2$, or 8. A negative power indicates a fraction: eg 2^{-3} is $1/2^3$, or $1/8$. A fractional power indicates a root – the power $\frac{1}{2}$ is a square root, and the power $\frac{1}{3}$ is a cube root: eg 8 to the power $\frac{1}{3}$ (written $8^{\frac{1}{3}}$) means a number (the cube root) which, when multiplied by itself three times, yields 8; the root is 2. Any number to the power 0 equals 1.

Power sources, electric, primary means by which modern civilization obtains electricity. The chief source in Britain relies on the burning of fossil fuels such as coal or oil. In countries such as Sweden and New Zealand, fast-flowing rivers are harnessed to drive hydro-electric plants. Nuclear power relies on the controlled decay of radio-active nuclei and is being increasingly employed. Experiments in the use of tides to power turbines have been made in Brittany, and the use of geothermal power has been tried in Iceland, New Zealand and the USA. At present electricity is distributed by means of a centralized reticulation of power (the NATIONAL GRID). In 1977 the JET project was set up in England to try to develop nuclear fusion which, because its fuel is easily available and its wastes are harmless, would be the ideal power source. See also pp.428–435, 444–445.

Powles, Sir Guy (1905–), New Zealand diplomat, High Commissioner for Western Samoa (1949–60), ambassador to Nepal (1960–62). He was New

Zealand's first ombudsman (1962).

Powys, John Cowper (1872–1963), British writer. He wrote essays and criticism, the best known of which are *The Meaning of Culture* (1929) and *A Philosophy of Solitude* (1933). His novels include *Wolf Solent* (1929), *A Glastonbury Romance* (1932), and *Owen Glendower* (1940).

Powys, county in E central Wales, formed in 1974 from the former counties of MONTGOMERY (SHIRE), RADNOR (SHIRE) and most of BRECKNOCK (SHIRE). The administrative centre is Llandrindod Wells. Area: 5,077sq km (1,960sq miles). Pop. (1979 est.) 107,100.

Poyning, Sir Edward (1459–1521), Lord Deputy of Ireland from 1494 to 1495. He gave his name to Poyning's Laws (1494–95), passed by the parliament which he summoned at Drogheda. It subordinated the Irish legislature to the English. It was repealed in 1782.

Poznań, city in W Poland on the Warta River. It is one of the oldest Polish cities, became the seat of the first Polish bishopric in 968 and was the centre of Polish power in the 15th–17th centuries. In 1793 it passed to Prussia. The Grand Duchy of Poznań was created in 1815, as part of Prussia, but the area reverted to Poland in 1919. Industries include metallurgy, chemicals, textiles and food processing. Pop. (1979 est.) 544,000.

Pozzo, Andrea (1642–1709), Italian painter, one of the leading artists of the BAROQUE style. He worked for the Jesuits and painted church ceilings, for example in S. Ignazio, Rome (1691–94), which was a masterpiece of PERSPECTIVE.

Prado, in Madrid, the Spanish National Museum of Fine Art. Founded in 1818, it is an example of Spanish NEOCLASSICAL architecture. The major part of its collection derives from the royal collection of the Hapsburg and Bourbon kings of Spain. Numerous important works by VELÁZQUEZ and a full representation of EL GRECO and GOYA are contained there. Bosch, Titian, Tintoretto, Veronese, Rubens, van Dyck and Bruegel are also well represented.

Praesepe, or The Beehive, open cluster containing several hundred stars in the constellation of Cancer. It is visible to the naked eye as a small bright hazy patch. It is 525 light-years from Earth and was first observed by Galileo. See also pp.994, 994.

Praetor, powerful Roman magistrate. From 242 BC two praetors were appointed, the urban praetor (*praetor urbanus*), who decided cases involving citizens, and the peregrine praetor (*praetor peregrinus*), who decided cases between foreigners. By the 1st century BC there were eight praetors. See also pp.1226, 1226.

Praetorians, bodyguard of the Roman emperors from AUGUSTUS to CONSTANTINE I. They were first selected by Augustus in 2 BC from the *cohortes praetoriae*, which had guarded the commanding general in Rome. The number of cohorts (from 500 to 1,000 men each) forming the guard varied from 9 to 16. They had special privileges and, during the period of the emperor's decline, held great authority. Constantine I disbanded them in 312. See also p.1246.

Praetorius, Michael (1571–1621), German composer and musicologist. He wrote a vast amount of choral music, including more than 1,220 works in the nine-volume *Musae Sioniae* (1605–10). His *Syntagma musicum* (1615–19) included a detailed exposition of the musical instruments and practices of his day.

Pragmatic sanction, term of Byzantine origin meaning a public decree, used later by European monarchs for state documents such as those defining their powers or settling the royal succession. Unless qualified, it usually refers to the pragmatic sanction of 1713 by which Charles VI of Austria settled the succession to his throne upon his daughter MARIA THERESA.

Pragmatism, philosophical school that proclaims that the truth of a proposition has no absolute standing but depends on its practical value or use. Knowledge and thought are products of the existing social

situation, and their results relate only to the specific problems that gave rise to them. Pragmatism, primarily supported by its philosophers, was first proposed by C. S. PEIRCE, and was adopted by William JAMES and John DEWEY.

Prague (Praha), capital of CZECHOSLOVAKIA, on the River Vltava 258km (160 miles) NW of Vienna, Austria. Founded in 722, it grew rapidly after Wenceslaus I established a German settlement there in 1232. It remained a great religious and cultural centre, becoming the capital of the new Czechoslovak republic in 1918. It was occupied throughout WWII by the Germans and liberated by Soviet troops in 1945. Prague was the centre of Czech resistance to the Soviet invasion of the country in 1968. It is an important commercial centre, having good communication and transport links and a variety of industries, including engineering, iron and steel, chemicals and printing. Pop. (1979) 1,189,000.

Prague, School of, group of painters who were active in Bohemia during the second half of the 14th century. Painters of the Prague School, such as the Masters of Hohenfurth and Wittingau, are little known as individuals, but they were influenced by contemporary humanism, and in their search for realism used Giotto's techniques of perspective.

Praia, on the S shore of São Tiago Island, in the Cape Verde group; capital of the Cape Verde Islands. It is the site of a meteorological station, and is a key centre in the Atlantic telegraph cable network. A trading centre for the Islands, Praia exports castor oil, sugarcane, oranges and coffee. Industries include fishing and the manufacture of straw hats. Pop. (1970) 21,494.

Prairie, region of treeless plain. The prairies of North America extend from Ohio through Indiana, Illinois and Iowa to the Great Plains, and N into Canada. The PAMPAS of S South America, the LLANOS of N South America and the STEPPES of central Europe and Asia correspond to the prairies of North America.

Prairie chicken, chicken-sized, pale brown grouse of western USA. It has brown and black, stiffly pointed tail feathers and white neck feathers. During courtship displays the neck feathers of the male stand up when he inflates his orange neck air sacs. Groups of males shuffle about with necks stiff and heads bobbing as part of their displays, which precede mating. Species *Tympanuchus cupido*.

Prairie dog, squirrel-like rodent of North America, named after its barking cry. It has a short tail and its fur is grizzled brown to buff. Active by day, it feeds on plants and insects and lives in communal burrows that are interconnected to form colonies. Length: 30cm (12in). Genus *Cynomys*. See also GROUND SQUIRREL.

Praise of Folly, The (*Encomium moriae*) (1509), satire by Desiderius ERASMUS, written in part in the home of Sir Thomas MORE. The narrative, told by Folly herself, shows how all classes of men and women are subject to foolishness. It ridiculed corruption among church dignitaries (and the rest of the world), rather than striking at the church as an institution.

Prajapati, in Vedic mythology, name applied to several gods, such as INDRA, Hiranyaarabha, SAVITRI and SOMA. Prajapati was later identified with BRAHMA as the lord of creation, the chief deity and father of the gods. As the creator, Prajapati spoke the words which brought into being the earth and the sky.

Prakrit, group of languages used in India c.5th century BC to c.12th century AD, after SANSKRIT and before the modern Indic languages (although they overlap). The word Prakrit means "natural" or "vulgar", as opposed to Sanskrit which means "refined" or "cultivated". The finest literature is in PALI and in the canonical and narrative writing of JAINISM.

Prampolini, Enrico (1894–1956), Italian painter and sculptor. He was associated with many aspects of the European avant-garde, being influenced early on by CUBISM, and then keeping in close touch with (among others) the DADA school, VIL-

LON, MONDRIAN and the NEO-PLASTICISTS. In 1932 he joined the Paris Abstraction-Création group. His most important commitment was to FUTURISM, and his *Manifesto on Aeropainting* (1929) was an expression of futurist ideas.

Prandtauer, Jakob (1660–1726), Austrian architect who worked primarily on monastic commissions. His most famous buildings are the impressive BAROQUE monastery and church at Melk (1702–38) on a spectacular site overlooking the Danube, and the monastery of St Florian at Linz, on which he worked from 1708.

Prasad, Rajendra (1884–1963), Indian politician and lawyer who renounced his legal practice in 1920 to follow GHANDI. He was a member of the All-India Congress in 1912 and its president four times between 1934 and 1948. Prasad was the first President of the Republic of India from 1950 until 1962. His autobiography, *Arma Katha*, was published in 1958, other works include *India Divided* and *At the Feet of Mahatma Gandhi* (both 1958).

Praseodymium, metallic element (symbol Pr) of the LANTHANIDE SERIES, first isolated in 1885. Its chief ores are monazite (phosphate) and bastnasite (fluorocarbonate). Praseodymium is used in carbon-arc lamps and its salts are used in coloured glasses. Properties: at.no.59; at.wt. 140.9077; s.g. 6.77 (α), 6.64 (β); for the α form m.p. 931°C (1,708°F); b.p. 3,212°C (5,814°F); most common isotope Pr^{141} (100%).

Prassinos, Mario (1916–), French artist and graphic designer, b.Turkey. Strongly influenced by SURREALISM in the 1930s, he worked in many media; most excitingly in book illustration.

Prat, Jean (1924–), French rugby union player. A goal-kicking wing-forward from the Lourdes club, he played 38 times for France against International Board countries (1947–55). France's captain, he later became a selector and coach.

Pratincole, any of about half a dozen species of Old World birds. All are brown with white rumps, forked tails and long, pointed wings. They feed on insects near rivers, and nest in colonies on the ground. The black-winged pratincole (*Glareola pratincola*) is sometimes called the locust bird in its winter home in Africa. Length: to 22cm (9in). Family Glareolidae.

Prato, city in central Italy, 17km (11 miles) NW of Florence. Prato has been famous for its woollen goods since the 13th century; these are still produced. Pop. (1971) 142,913.

Pratt, Edwin John (1883–1964), Canadian poet who broke away from the old romantic tradition to write imaginative narratives of epic events. His works include *Titans* (1926), *Dunkirk* (1941), *Behind the Log* (1947) and *Towards the Last Spike* (1952).

Pratt, John Jeffreys, 2nd Earl and 1st Marquess Camden (1759–1840), British politician. As Lord Lieutenant of Ireland (1795–98) his repressive policies resulted in the Irish rebellion of 1798 and English military intervention in Ireland under Lord CORNWALLIS. See also p.1469.

Prawn, any of numerous species of crustaceans in the order Decapoda; it is generally larger than a SHRIMP but smaller than a LOBSTER. Typical genera include *Penaeus*, *Pandalus*, *Crangon* and *Nephrops*, which includes the DUBLIN BAY PRAWN or Norway lobster. Many species are regarded as delicacies. See also pp.30–31, 740–741.

Praxiteles (fl.370–330 BC), Greek sculptor whose graceful style epitomized the 4th-century Greek ideal. One of the most widely imitated of Greek sculptors, he created *Hermes Carrying the Infant Dionysus* (350 BC), found in Olympia. His most famous work is *Aphrodite from Cnidus* (350 BC), a sensual work that created a new ideal female. See also p.1213.

Prayer, act of thanking, adoring, conferring with or petitioning God and the form of words used for this purpose. Many religions have set forms for praying. Muslims recite prayers while facing Mecca; Judaism has prayers for most occasions of life; and Christians say the LORD'S PRAYER

Pre-Columbian architecture: temple design of the classical Mayan period.

Giovanni Ambrogio Preda may have painted this portrait of Lucrezia Crivelli.

Pregnancy lasts nine months and transforms a single cell to a human being.

Prehistoric art often featured animals such as this bison from Altamira, Spain.

as taught by Jesus. Prayer often means a form of public worship. The service book of the Anglican Communion is called *The Book of Common Prayer*. Prayer can also mean the private act of an individual using his or her own words to praise God or petition God for guidance or strength or the fulfillment of his or her special requests. **Prayer Book.** See *COMMON PRAYER, BOOK OF*.

Prayer plant, also called banded arrowroot, tropical plant with leaves that fold up in darkness. Often grown as an ornamental, its leaves are marked with narrow white or red streaks. Family Marantaceae; species *Maranta leuconeura*.

Praying mantis. See *MANTIS*.

Precambrian, oldest and longest major division of Earth's history, lasting from the beginning of the Earth more than 4,000 million years ago to the beginning of a good fossil record 570 million years ago. Precambrian fossils are extremely rare because the earliest life forms are presumed not to have had hard parts suitable for preservation. Also, Precambrian rocks have been greatly changed and deformed. Nonetheless, primitive bacteria and blue-green algae have been identified in deposits more than 3,000 million years old. See also pp.268-269, 269.

Precedent, in law, a judgement or decision of a court which is binding on a lower court and provides a guide to future judgements. Most of the rules of equity and common law are unwritten and are contained in precedents established by the courts over the years.

Precession, wobble of the axis of a spinning object. If an object like a coin is set spinning about an axis, the axis itself starts slowly to rotate in ever-increasing circles. This effect occurs as a result of the torque on the spin axis, which increases as the angle of precession increases. The Earth precesses about a line through its centre and perpendicular to the plane of the ecliptic extremely slowly (a complete revolution taking 25,800 years) at an angle of 23.5°. Its effects make the equinoxes precess backwards through the zodiac, and the positions of the stars change by a small amount each year. The motion of a gyroscope is another consequence of precession, because the entire ring containing the spinning wheel and its axle precesses around the support pivot.

Precious Bane (1924), novel by Mary Webb which won the Prix Fémina for the best English novel of the year. Set in Shropshire, it is written in a rustic and melodramatic mode which has been compared to Thomas Hardy's, although lacking his subtlety. Its great popular success has been attributed to the fact that it was praised by Stanley Baldwin.

Precipitation, in meteorology, all forms of water particles, whether liquid or solid, that fall from the atmosphere to the ground. Distinguished from cloud, fog, dew and frost, in that it must fall and reach the ground, precipitation includes rain, drizzle, snow (ice pellets and crystals) and hail. Measured by rain and snow gauges, the amount of precipitation is expressed in millimetres or inches of liquid water depth. Precipitation occurs with the condensation of water vapour in clouds into water droplets that coalesce into drops as large as 7mm (0.25in) in diameter or form from melting ice crystals in the clouds. Drizzle consists of fine droplets, and snow of masses of many-sided ice crystals. Sleet is produced by freezing of raindrops into small ice pellets, and hail by the freezing of concentric layers of ice in cumulo-nimbus clouds, with lumps measuring from 0.5 to 10cm (0.2-4in) in diameter. See also p.250.

Precognition, the ability to foretell future events by extra-sensory means rather than through any known process of rational inference. See also *CLAIRVOYANCE*; *ESP*; *PARAPSYCHOLOGY*; pp.1892, 1893.

Pre-Columbian art and architecture, the arts of Mexico, Central America and the Andean region of South America before the arrival of Europeans. The architecture achieved great artistic complexity in its many phases. In the MAYA Classical period, beginning c. 200 AD, many cities or

ceremonial centres were built in Central America. Their pyramid temples are sculptured monuments paralleled by the TEOTIHUACAN, ZAPOTEC and MIXTEC cultures, and were succeeded by TOLTEC and AZTEC civilizations in the post-classical period (900-1300 AD). Monumental building was achieved without wheels or the use of the arch; surfaces were often decorated with dazzling patterns. In the Andean region the early Chavin sculptures were succeeded by the Mochica, the Tiahuanaco and finally, in the 14th century, by the rich temple architecture and sophisticated engineering of the INCAS. Gold-working, weaving and sculpture were other important Pre-Columbian arts. See also pp.1178-1179, 1178-1179, 1364-1367.

Preda, Giovanni Ambrogio or Ambrogio da Predis (c.1455-c.1517), Italian painter, miniaturist and illuminator. He was court painter to the Sforza family of Milan from 1482 and much influenced by LEONARDO DA VINCI. He may have painted the side panels of Leonardo's *The Virgin of the Rocks* (1483), but the only work which can positively be identified as being by Preda is his signed portrait of Maximilian I (1502).

Predator. See *PREY*.

Predestination, the fore-ordaining of a person's spiritual salvation or condemnation by God. According to this doctrine, a person is at birth predestined to the events of life and the fate at death. The question of how this leaves room for the will and spirituality of the individual is at the heart of a controversy that has raged since early Christian times. As possible solutions to the doctrine, which is based mostly on Romans 8:29-30, three propositions have been put forward at different times: to refute the doctrine of predestination altogether (Pelagianism), to state that God never intended to save everybody (Predestinarianism), or to qualify the premise by seeing God's prevision as conditional and subject to possible revision depending on the will and spirituality of the individual, which is the solution to which most Christians adhere. The concept of predestination is also found in ISLAM. See also pp.1403, 1909.

Predis, Ambrogio da. See *PREDAR, GIOVANNI AMBROGIO*.

Prefect, name of the general administrator and representative of the national government in each département in France. A prefect is the chief executor for the *conseil général*, the elected departmental government. He is also the head of the local police and supervisor of the *communes*, the units of local government within the département. The post was established by Napoleon in 1800.

Pregl, Fritz (1869-1930), Austrian chemist who taught at the university of GRAZ. He was awarded the 1923 Nobel Prize in chemistry for developing techniques in microanalysis of organic compounds. He also worked out a method of making reliable measurements of carbon, hydrogen, nitrogen and sulphur, using only 7-13 milligrammes of material.

Pregnancy, period of time from conception until birth. In humans it is generally divided into three 3-month periods called trimesters. In the first trimester, the fetus grows from a small ball of cells to about 7.6cm (3in) in length, during which time the skeleton, brain and such vital organs as the heart and lungs develop. At the beginning of the second trimester movements are first felt and the fetus grows to approx. 36cm (14in). In the third trimester the fetus attains its full body weight. See also pp.166-167.

Pregnancy testing, methods of determining whether or not a developing embryo or fetus is present in the uterus. There are several different methods of testing. In the Friedman test a rabbit is injected with urine from the woman suspected to be pregnant; if this causes the animal to ovulate, pregnancy is confirmed. Most modern tests rely on the detection of human chorionic gonadotrophin (CG, or HCG) in the urine. Tests for HCG have a high reliability (about 97%), but are effective only when a woman's period is at least 14

days overdue. Radioactive tracer tests for HCG in the urine are now being developed, however, and these make it possible to detect pregnancy on the first day after a missed period. See also p.166.

Prehistoric art, earliest known aesthetic expression of modern man dating from the Upper PALAEOLITHIC period (35,000-10,000 years ago). Artefacts are divided into two categories: the mobiliary, objects that can be moved, such as female statuettes called Venuses; and the parietal, such as paintings, sculptures and engravings on cave walls. ALTAMIRA, LASCAUX, Font de Gaume and Les Combarelles are among the most famous caves with depictions of bison, horses, deer, other animals and men. The Abbé Henri BREUIL demonstrated the antiquity of prehistoric art. Scandinavian rock engravings, Siberian amber carvings and Saharan rock paintings also attest to man's creativity. See also pp.1156-1157, 1156-1157.

Prehistoric Man. See *MAN, PREHISTORIC*.

Prelate, religious term restricted in the 20th century to Bishops in the Church of England, and in the ROMAN CATHOLIC CHURCH to officers of the Roman Curia. Originally, a prelate was anyone of either church of high rank. "Prelacy", now usually a derogatory term, signifies a system of government by bishops.

Prelog, Vladimir (1906-), Swiss chemist, b. Yugoslavia, who shared the 1975 Nobel Prize in chemistry with John W. Cornforth for their work on stereochemistry, the branch of chemistry which deals with the arrangement of atoms in a molecule. Prelog devised a procedure for determining whether a molecule is right- or left-handed. See also p.794.

Prelude, in music, a complete and separate preliminary movement which serves to introduce a work of which it may or may not formally be a part. An unrestricted musical form, it was often used as the first movement of a SUITE. The popularity of the Chopin *Preludes* led to its association with a short piece of an imaginative nature.

Prelude, The, long autobiographical poem by William WORDSWORTH. Begun in 1759 and continually revised, it showed the growth of a poet's mind by tracing Wordsworth's own life from childhood on. A short version was published after his death in 1805, but the full text did not appear until 1926.

Prem Chand. See *CHAND, PREM*.

Premier, title used by the chief executive in a parliamentary system of government, in contrast with the head of state, who may be a constitutional monarch or an elected official. See also *PRIME MINISTER*.

Preminger, Otto Ludwig (1906-), US film director, b. Austria, whose predominant interest has been in the evolution and analysis of character. *Laura* (1944) marked the beginning of his career and *The Moon is Blue* (1953) was his first independent production. In 1960 he made the epic *Exodus*, using the wide screen for the first time. His later films include *Hurry Sundown* (1967) and *Skidoo* (1968).

Premium Bonds, properly called Premium Savings Bonds, type of LOTTERY run by the British Post Office. Differing from a true lottery in that stake money may be reclaimed at any time, its prizes range from £26 to £250,000, some prizes being presented weekly, others monthly, and all tax-free. Premium Bonds were first issued in 1956; the present minimum purchasable unit is a £5 Bond. Winning numbers are chosen at random by an electronic machine known as ERNIE.

Premolar, in the dentition of adult human beings and other mammals, the two crushing or cutting TEETH between the CANINES and MOLARS on both sides of the upper and lower jaws; there are usually eight in all.

Premonstratensians, or White Canons, religious order founded by St Norbert in 1119 in the valley of Premontre, France. It is a teaching and preaching order that wears the Benedictine habit and follows a modified Benedictine rule.

Premph, name of two kings of ASHANTI, part of the former British colony of the GOLD COAST. Premph II (d. 1931), the last king (1888-1896) of Ashanti, was

deposed and exiled to the Seychelles. He was permitted to return in 1924 and two years later was given chief's rank.

Prendergast, Maurice Brazil (1859–1924), US painter noted for his fine water-colours. A European visit in 1898 fired his admiration for POST-IMPRESSIONISM and he exhibited with the EIGHT in their famous show of 1908. His works, which have the quality of a bright tapestry, include *Umbrellas in the Rain* (1899) and *Central Park* (1901). After 1904 he painted increasingly in oils with a rich IMPASTO technique.

Prendergast, Paddy (1910–), Irish horse-racing trainer who was leading trainer in Britain from 1963 to 1965. He has saddled winners in four of the English Classics, only the Derby eluding him. His successes in the Irish Classics include all but the Oaks.

Pre-Raphaelite Brotherhood (PRB), group of British painters formed in 1848, which included Dante Gabriel ROSSETTI, John Everett MILLAIS, and William Holman HUNT. In reaction to the inflated forms and sentiments that they found in the followers of RAPHAEL, they preferred the sincerity they saw in the Florentine and Sienese who predated him. The group was known simply as PRB until 1850, and by 1853 it had disbanded.

Prerogative, royal, rights, privileges and powers pertaining to the British Crown. The three chief prerogative powers – to appoint and dismiss ministers, to initiate policy and to dissolve Parliament – had all been taken from the Crown by the mid-19th century. The royal VETO on legislation was last used by Queen ANNE. Prerogative courts, which exercised prerogative law through the Privy Council, were widely used by the Tudors, especially the COURT OF STAR CHAMBER and of High Commission. It administered the COMMON LAW mixed with EQUITY and aroused the opposition of common law lawyers, and was finally abolished by the LONG PARLIAMENT in 1641.

Presbyter, historical form of the word "priest" re-introduced by the followers of John CALVIN (1509–64) to mean a non-ordained minister of the Reformed Church. In its original pre-Christian Greek, however, the term denoted an elder of the Jewish synagogue. In the early Christian Church it came to signify an adviser on ecclesiastical matters.

Presbyterianism, major form of Protestant Christianity that became the state Church of Scotland in 1690. One of the Reformed Churches, it was based first on the beliefs of John CALVIN (1509–64) in Switzerland, and brought to Britain by John KNOX (c.1513–72). Its particular form of Church government embodied the desire to return to the organization described in the New Testament. Ministers, occasionally called pastors, are elected by their congregations and affirmed in their office by the Presbytery, the ministers of the area who are responsible for ordaining and installing (and removing) ministers. The minister is assisted by deacons (sometimes known as elders) and trustees. Annually each presbytery sends delegates to a synod (a meeting to discuss Church order) and to a General Assembly (with much wider scope); of both, the chairman is called the Moderator. In 1972 the Presbyterian Church of England united with the CONGREGATIONAL Church of England and Wales. There are Presbyterian Churches all over the world, particularly in North America. See also pp.1432–1433, 1790.

Prescott, Alan (1927–), British rugby league player for Halifax, St Helens and Great Britain who captained the latter two from the front row. He played the last of his 28 matches for Britain (1951–58) with a broken arm, guiding his team to victory over Australia in what is known as "Prescott's Match".

Prescott, Samuel (1751–c.1777), US colonial patriot. Along with William DAWES and Paul REVERE he helped to warn the Concord colonists of the impending arrival of British troops (1775). He was captured while fighting at Fort Ticonderoga (1776) and died in prison in Nova Scotia,

probably in 1777.

Prescott, William Hickling (1796–1859), US historian who, despite partial blindness completed authoritative historical surveys. His first book *The History of the Reign of Ferdinand and Isabella the Catholic* (1838) achieved immediate success. He also wrote the *History of the Conquest of Mexico* (1843) and the *History of the Conquest of Peru* (1847), which are considered to be his masterpieces. As history his work is now out of date because of subsequent research but it is still highly regarded as literature.

Prescription, list of drugs or other medication giving correct dosage and means of administration. It is usually given by a doctor to a patient, who takes it to a pharmacist who prepares or dispenses the drugs for the patient. Prescriptions eliminate the need for doctors to dispense drugs and allows the government a measure of control of the dispensing process.

President, the elected head of a republic. In the USA the president is elected by voters through the ELECTORAL COLLEGE for a term of four years and not exceeding two terms. The president is supreme military commander, appoints Supreme Court justices, ambassadors and other high officials, has the authority to make treaties with foreign countries (with the advice and consent of two-thirds of the Senate), grant pardons and veto legislation. Presidential power is limited by the system of checks and balances. See also p.1854.

Presidium, in Soviet government, an influential standing committee. From 1952 to 1966, it replaced the POLITBURO as the chief administrative organ. The chairman of the legislative Presidium of the Supreme Soviet is a member of the Politburo.

Presley, Elvis (1935–77), US pop singer whose first recordings in 1953 led him to dominate rock and roll until 1963. He used the three idioms of blues, country and western music and folk, but it was his pelvic gyrations and sexy delivery that made him a superstar. *Jailhouse Rock*, *Hound Dog*, *Heart-break Hotel* and *Love Me Tender* are among his most successful songs. His films, such as *Love Me Tender* (1956) and *Follow That Dream* (1962), failed to make his appeal more solid, but in *Flaming Star* (1960) he turned in a bravura performance as a half-breed Indian. He was the subject of a biography published in the U.K. in 1981. See also p.1757.

Press, name of two Soviet sportswomen, sisters who dominated their events in field athletics. Tamara (1937–) won the shot and was second in the discus in the 1960 Olympic Games and won both events at the 1964 Olympics. Irina (1939–) won the 80m hurdles at the 1960 Olympic Games and the pentathlon in 1964. Both held world records in their events.

Press. See NEWSPAPERS.

Pressburg, Treaty of (1805), peace treaty between Emperor FRANCIS II and NAPOLEON I. In a swift campaign (1805), Napoleon defeated the Austrians at ULM and the Russians and Austrians at AUSTERLITZ. By the Treaty of Pressburg, Austria ceded Venetia, Istria and Dalmatia to Italy; the Tyrol, Vorarlberg and Augsburg to Bavaria; and certain Hapsburg lands to Württemberg and Baden. Austria was allowed to annex Salzburg but was obliged to recognize Napoleon as king of Italy. France gained Piedmont, Parma and Piacenza. See also p.1552.

Press gang, men who went about the streets and taverns of Britain from the 13th century, but especially in the 18th, impressing men into the ROYAL NAVY. They also raided ships of the MERCHANT NAVY. The method ceased to be important after 1815, when improved conditions and higher pay induced sufficient voluntary enlistment. See also p.1554.

Pressure, in physics, force exerted on an object divided by the area over which the force is acting. In SI units, pressure is measured in Newtons/sq m, called pascals (pounds/sq inch in the British system). Atmospheric pressure is measured in millimetres of mercury, one standard atmo-

sphere of pressure being 760mm. In meteorology, the unit is the millibar, one standard atmosphere being 1013.25mb.

Pressure gauge, instrument used to measure fluid pressure. Liquid-column gauges, such as MANOMETERS, use the shifts of liquid in U-shaped tubes to measure pressure; PITOT TUBES measure gas pressures between two points. Mechanical gauges, such as Bourdon tubes or bellows-element gauges, utilize the elasticity of metals to measure pressure. See also pp.848, 848.

Pressurization, reducing the volume of a substance by forcing it into an increasingly smaller space (eg compressing a gas), or restricting expansion of a heated substance (eg in PRESSURE-COOKING). Pressurization is accompanied by increased temperature, but pressure-reduction is accompanied by cooling; this is the principle of the refrigerator. See also pp.836–837, 846–847.

Prester John, or John the Elder, legendary Christian king, said to live in either Asia or Africa. Belief in the legend originated in Europe in the 12th century, and during the Crusades he was supposed to have inflicted a serious defeat on the Muslims. He may have been identified with several historical characters including GENGHIS KHAN. Several explorers set out in search of him in both Mongolia and Ethiopia. The 15th-century Portuguese who found the route around Africa hoped they would join forces with him against the OTTOMAN Turks.

Preston, county district in central LANCA-SHIRE, NW England; created in 1974 under the Local Government Act (1972). Area: 142sq km (54sq miles). Pop. (1979 est.) 126,200.

Preston, Battle of (1648), decisive battle of the second ENGLISH CIVIL WAR, in which CROMWELL defeated the Scots led by the Duke of Hamilton. The battle ended CHARLES I's hopes of retaining the throne. See also p.1422.

Prestonpans, Battle of (1745), battle in E central Scotland in which the Jacobite forces led by the Young Pretender, Charles Edward Stewart, defeated the English under General Cope. See also pp.1472, 1472.

Prestressed concrete, concrete that is compressed along its length. The wet concrete is poured over lightly stretched steel reinforcing bars which extend the length of the particular piece. When the concrete is sufficiently dry the steel bars are cut. This releases their tension into the length of concrete, compressing it longitudinally. Thus a piece of prestressed concrete may carry a large direct or bending tension without itself going into tension. This method of multiplying the amount of stress a beam could withstand was greatly used during WWII. After reinforced concrete, prestressed concrete has revolutionized civil engineering and has led to the construction of long bridge spans and large roofed structures. See also p.551.

Pretender, Young. See STUART, CHARLES EDWARD.

Pretender, Old. See STUART, JAMES FRANCIS EDWARD.

Pretoria, capital of Transvaal Province and of SOUTH AFRICA. It was founded in 1855 by Marthinus PRETORIUS, the son of Andries Pretorius, the Boer leader after whom the city was named. It became the capital of the Transvaal in 1860, and of the Union of South Africa in 1910. The Peace of VEREENIGING (1902), which ended the Boer War, was signed there. Pretoria is an important communications centre, laid out on a spacious scale. Industries include steel production and diamond mining. Pop. (1970) 561,703. See also pp.1607, 2139.

Pretorius, Marthinus Wessel (1819–1901), Boer political leader. He helped to establish the TRANSVAAL and was president both of the Transvaal and the ORANGE FREE STATE (1859–63), which he tried to unite. He assisted Paul KRUGER in his opposition to British rule in the Transvaal after 1877.

Preventive medicine. See IMMUNIZATION; PUBLIC HEALTH; pp.1088–1089.

Prévert, Jacques (1900–77), French film scriptwriter best known for his work with

Maurice Prendergast painted many scenes of crowded public places.

Elvis Presley, the "king" of rock and roll, in a scene from *Girl Happy* (1955).

Press gangs recruited men for service under a law which still applies today.

Pretoria; a monument to the Voortrekkers who were killed in the Boer War.

Previn, André George

André Previn, a notable classical conductor, is also a popular jazz pianist.

director Marcel CARNÉ. His films include *Le Jour se Lève* (1939), *Les Visiteurs du Soir* (1942) and *Les Enfants du Paradis* (1945).

Previn, André George (1929–), US conductor, pianist and composer, b. Germany. He studied composition (with Mario CASTELNUOVO-TEDESCO) and conducting (with Pierre MONTEUX) before pursuing a career as a jazz pianist and musical director of Hollywood film scores, for which he won an OSCAR on four occasions. He was appointed principal conductor of the London Symphony Orchestra in 1968. His orchestral compositions include a cello concerto (1968) and a guitar concerto (1970).

Previtali, Andrea (c.1470–1528), Italian painter who was influenced by his Venetian teacher Giovanni BELLINI. His fine colouring and sense of composition can be seen in his *St Catherine* (1504) and *Madonna* (1506).

Prevost, L'abbé (1697–1763), French journalist and novelist who lived an unpredictable life as, alternately, a Jesuit novice, soldier and forger. His most famous work *Manon Lescaut* (1731) is the seventh novel of a series *Mémoires et aventures d'un homme de qualité*.

Prevost, Constant (1787–1856), French geologist who explained mountain formation as a process of gradual retraction of the Earth's crust. He also opposed the theory of successive catastrophes as an explanation of prehistoric fossils.

Priam, in Greek mythology, the King of Troy at the time of the war with Greece. He had been installed as king in his youth by HERCULES, but by the time of the ten years' war had become an old man. He lived to see his sons HECTOR and PARIS killed by the enemy; he himself was killed by Neoptolemus, the son of ACHILLES.

Priapulid, cylindrical marine WORM with a retractable proboscis. Length: to 8cm (3in). See also p.52.

Priapus, in Greek religion, a god of animal and vegetable fertility. The son of Dionysus and APHRODITE, he was represented in a caricature of the human form, with a grotesquely enlarged phallus. The ass was sacrificed in his honour because it symbolized lechery and was associated with the god's potency.

Pribilof Islands, group of four volcanic islands in the St Bering Sea, Alaska, 403km (250 miles) NW of the Aleutian Islands. Discovered in 1786 by the Russian navigator Gerasim Pribilof, they were bought by the USA from Russia as part of the Alaska purchase in 1867. St Paul and St George, the larger islands, are breeding places for blue and white foxes and Alaska fur seals. Pop. (1970) 613.

Price, Richard (1723–91), British philosopher who is chiefly known for his *Review of the Principal Questions and Difficulties in Morals* (1758) which assesses the power of reason in making moral judgements. His writings on governmental finance were also well known.

Price, Vincent (1911–), US actor. His career in films began with *Service Deluxe* (1938) but it was not until *House of Wax* (1953) that he first took the macabre roles for which he was best known. His partnership with Roger Corman produced several excellent horror films, including *The Raven* (1963) and *Masque of the Red Death* (1964). Other films included *The Abominable Dr Phibes* (1971) and *Theatre of Blood* (1974).

Price index, measurement of the average price of goods and services at any given time. The RETAIL PRICE INDEX and wholesale price index are most commonly quoted.

Prices and Incomes Board, organization established in Britain in 1965 by the Department of Economic Affairs to administer the government's policy on wages and prices. In 1971 it was replaced by the Pay Board and Prices Commission.

Prichard, Katherine Susannah (1884–1969), Australian writer whose best works are tragedies of social protest in Australia. Her most famous novel is *The Pioneers* (1915). She also published *Brumby Innes* (1927), a play, and *Earth Lover* (1930), a book of poetry.

Prickly heat, itchy skin irritation caused by malfunctioning of the sweat glands in hot, humid weather. It occurs most often in infants and in overweight people. The irritation disappears as the body cools. See also p.1074.

Prickly pear, cactus with flat or cylindrical joints; it grows in the USA and South America and has been introduced into Europe, Africa and Australia. The jointed pads have tufts of bristles and the edible fruit is red and pulpy. Its showy yellow blossoms and interesting shape make it a popular garden plant. Family Cactaceae; genus *Opuntia*. See also p.316.

Pride, Thomas (d.1658), military commander on the Parliamentary side in the English Civil War. He commanded regiments at the battles of NASEBY (1645), DUNBAR (1650) and WORCESTER (1651). He also conducted the expulsion of the Presbyterians from the Long Parliament, an event known as PRIDE'S PURGE (1648).

Pride and Prejudice (1813), novel by Jane AUSTEN written in 1796–97. The most widely read of her books, it contains some of her greatest minor creations, such as the toady Mr Collins and the proud Lady Catherine de Bourgh. See also p.1574.

Pride's Purge (1648), illegal expulsion of about 140 Presbyterian members from the English House of Commons. It was carried out by Colonel Thomas Pride's regiment, on the orders of the republican army council, who feared that the relatively moderate Presbyterians were royalist sympathizers because they opposed the trial of the king. The remaining RUMP parliament, completely under army control, then arranged the trial and execution of CHARLES I. See also p.1422.

Priestley, John Boynton (1894–), British author, a prolific writer in a variety of genres. He started literary criticism as a student and later wrote *The English Novel* (1927) and *Literature and Western Man* (1960). His novels include *The Good Companions* (1929), *Angel Pavement* (1930) and *Bright Day* (1946). Among his plays are *An Inspector Calls* (1946) and *The Glass Cage* (1957). He also wrote many mystery stories.

Priestley, Joseph (1733–1804), British chemist. He studied the properties of carbon dioxide (then called "fixed air") and invented carbonated drinks. Although an advocate of the PHLOGISTON theory, he discovered oxygen (which he called "dephlogisticated air") in 1774 and a number of other gases, including ammonia and the oxides of nitrogen. He emigrated to the USA in 1794, where he renewed a friendship with John ADAMS. He also wrote about history and political theory. See also p.1476.

Priest's hole, hidden room or secret hiding place for priests in time of persecution. They were constructed in larger houses in England in the 16th and 17th centuries at the time when the Catholic priesthood was being suppressed.

Prima ballerina, principal female dancer of a ballet company, who is generally one of the best ballerinas of her time. Notable examples from this century include Anna PAVLOVA, Alicia MARKOVA and Margot FONTEYN.

Primal therapy, treatment for neurosis first outlined by Arthur JANOV in *The Primal Scream* (1968). It seeks to take the patient in a group setting to the point of trauma, hoping for a cure by means of "primal" emotional upheaval. See also p.1121.

Primate, in the Church, regional head of an episcopally structured hierarchy. In the Church of England the term refers to the Archbishop of York, who is "Primate of England", and to the Archbishop of Canterbury, "Primate of all England".

Primates, order of mammals that includes MONKEYS, APES, and human beings. Primates, native to most tropical and subtropical regions, are mostly herbivorous, day-active, tree-dwelling animals. Their hands and feet, usually with flat nails instead of claws, are adapted for grasping. Most species have opposable thumbs, and all but man have opposable big toes. They have a poor sense of smell, good hearing and acute binocular vision. The outstand-

ing feature of primates, especially man, is the large complex brain and high intelligence. Primate characteristics are least pronounced in the relatively primitive prosimians (including tree shrews, LEMURS, BUSHBABIES, LORISES and TARSIEURS) and are most pronounced in the more numerous and advanced anthropoids (monkeys, apes and human beings). See also pp.102–103, 106–107, 285.

Primaticcio, Francesco (1504–c.1570), Italian painter. After assisting Giulio Romano in projects for the Duke of Mantua until 1532, he spent the rest of his life in France at Fontainebleau and Paris as court painter. He is the creator of the FONTAINEBLEAU school of French MANNERISM. At Fontainebleau, his decorative stucco work, a combination of painting and high relief, is partially preserved. See also p.1397.

Primavera, or Allegory of Spring (c.1478), tempera painting by BOTTICELLI now in the Uffizi gallery, Florence. The greatness of the work lies in Botticelli's ability to define an ideal style of beauty and to set it in a composition of great restraint; yet he also manages to suggest a wealth of emotional activity between his stylized figures.

Prime meridian, meridian adopted as the zero of longitude on a planet. The prime meridian on Earth passes through Greenwich, England.

Prime Minister, chief executive and head of government in a country with a parliamentary system. He is usually the leader of the largest political party in parliament. The office evolved in Britain in the 18th century along with the CABINET system and the shift of power away from the Crown towards the House of Commons. Some historians consider Robert WALPOLE to be the first Prime Minister; others reserve the title for the younger PITT. Since the time of Pitt, the Prime Minister (the title has no official recognition) has always been the First Lord of the Treasury.

Prime number. See NUMBER, PRIME.

Prime of Miss Jean Brodie, The (1961), novel by Muriel Spark. It describes the political and moral dilemmas of a "progressive" Scottish school teacher.

Primitive, in art, a term with three different meanings. (1) It is applied to the art of eg. the Eskimos, the inhabitants of Oceania and of Black Africa – peoples whose culture evolved outside the direct influence of the great Oriental and Western centres of civilization. In the early 20th century primitive art from Africa and Oceania profoundly influenced Western art through the work of PICASSO and others. (2) In Western art the term has been used to describe early phases in the development of painting and sculpture, eg. it has been applied to pre-renaissance art because it pre-dated the scientific use of PERSPECTIVE and anatomy. (3) The name "primitive" is also given to certain self-taught artists whose work is neither traditional, academic nor avant-garde and whose approach and vision is usually naive and often immensely poetic and powerful. Examples of such primitives are Henri ROUSSEAU, Grandma MOSES and Alfred WALLIS.

Primitivism, Russian form of EXPRESSIONISM. It developed c.1905–1920 and was influenced by Russian folk art, FAUVISM and CUBISM. It was characterized by simplified forms and powerful colour, used principally to depict scenes from working-class life. MALEVICH worked in the style early in his career; typical exponents were Larionov and Gontcharova.

Primo de Rivera, José Antonio. See RIVERA, MIGUEL PRIMO DE.

Primogeniture, in a FEUDAL SYSTEM, rule of inheritance whereby land descended to the oldest son. In most parts of France and Germany *parage*, involving the partition of properties held in FIEF, was more common, but in England primogeniture became the prevailing custom by the 12th century, so that the father's land was kept intact for the support of the son, who rendered the required military service. When feudalism declined and the payment of a tax replaced military service, the need for

Joseph Priestley's experiments on the respiration of plants and animals.

Primates: the group of mainly tree-dwelling mammals which includes man.

Prime Minister: Robert Walpole may have been the first to use the title.

primogeniture disappeared. In England, however, the practice is not uncommon to this day.

Primrose, Archibald Philip, Lord Rosebery. See ROSEBERY, ARCHIBALD PHILIP PRIMROSE, 5TH EARL OF.

Primrose, William (1904–), us viola player, b. Scotland. One of the world's leading soloists, he toured the USA as a viola player with the London String Quartet (1930–35) and formed his own quartet in 1938.

Primrose, any of numerous species of herbaceous, generally perennial plants that grow in the cooler climates of Europe, Asia, Ethiopia, Java and North America. It has a tuft of leaves rising from the root-stock and clustered flowers of pale yellow to deep crimson. Family Primulaceae; genus *Primula*. See also pp.307, 383.

Primrose League, unofficial organization or club of the CONSERVATIVE PARTY, formed in 1883 by the small coterie of Conservative MPs, led by Lord Randolph Churchill and other members of what was known as the Fourth Party. Its object was to uphold the CHURCH OF ENGLAND, the monarchy, the aristocracy and Britain's imperial strength. It took its name from the belief that DISRAELI's favourite flower was the primrose. In 1910 the League had two million members, but such popularity did not last.

Primula, genus of flowers of the family Primulaceae. Species include the common PRIMROSE (*Primula vulgaris*), oxlip (*P. elatior*) and cowslip (*P. veris*). In common usage the term refers to a cultivated variety of the group. See also p.381.

Prince, Harold (1928–), us theatrical producer. In the 1950s he co-produced several successful musicals, including *Pajama Game* (1954–56), *Damn Yankees* (1955–57) and *West Side Story* (1957). He won an award in 1962 for *A Funny Thing Happened on the Way to the Forum*. His other productions include *Fiddler on the Roof* (1964) and *Cabaret* (1966), which he also directed.

Prince, royal title first used after the break-up of the CAROLINGIAN Empire in the 9th century. From the Latin *princeps* ("chief person"), the heir to the English throne has customarily received the title PRINCE OF WALES since 1301. Other members of the British ROYAL FAMILY have been designated "Prince" by the monarch at various times.

Prince Edward Island, island province in E Canada in the Gulf of St Lawrence off the coast of New Brunswick and Nova Scotia. Most of the island is part of the Prince Edward Island National Park and is a popular resort area. Fishing is the most important industry; food processing is the chief manufacturing industry. Charlottetown, the capital, and Summerside are the chief cities. The island was discovered by Jacques CARTIER in 1534. Area: 5,657 sq km (2,184 sq miles). Pop. (1976 est.) 118,229. See also p.1997.

Prince Igor (1890), opera in prologue and four acts by Alexander BORODIN, with libretto by the composer based on a sketch by Vladimir Stassov. Unfinished at the time of Borodin's death, the work was completed by Nicolai RIMSKY-KORSAKOV and Alexander GLAZUNOV, and was first produced in St Petersburg (Leningrad).

Prince of Wales, royal title in Britain. It was originally a native Welsh title, but it was taken over by the English monarchy in 1301 when EDWARD I, having crushed Welsh independence, bestowed the title on his son EDWARD II. The first and last Welsh prince to be recognized by the English was LLYWELYN AP GRUFFYDD, slain at Builth in 1282. Since 1343 the title has been given regularly to the eldest son of the English monarch.

Princes in the Tower, EDWARD V and Richard, Duke of York, the sons of EDWARD IV. On their father's death EDWARD V, then 12 years old, became king with his uncle, Richard, Duke of Gloucester as Protector of the Realm. The princes were housed in the Tower of London following factional disputes between the Woodville group of nobles, the Queen's party, and the Duke of Gloucester. Gloucester summoned the

lords and commons, who proclaimed the children illegitimate and Gloucester king. The princes disappeared; it has been supposed that they were murdered by Gloucester's agents, but the evidence is inconclusive.

Princess Royal, title sometimes bestowed on the eldest daughter of the sovereign. Princess Mary (1897–1965), daughter of GEORGE V, received the title in 1952. She married Viscount Lascelles, later 6th Earl of Harewood, in 1922 and they had two sons.

Princip, Gavril (1893–1918), Serbian nationalist. His assassination of the Archduke FRANZ FERDINAND and his wife at Sarajevo in 1914 precipitated WWI. He was sentenced to 20 years imprisonment but died of tuberculosis in 1918. Princip is regarded as a national hero in Yugoslavia. See also pp.1667, 1668.

Principia Ethica (1903), early work by the philosopher G.E. MOORE which marks a movement from his belief in the reducibility of all definitions of universals to the belief, shared with Bishop Butler whom he quotes, that "Everything is what it is and not another thing". Moore concludes that the concept of Good cannot be analysed.

Principia Mathematica (1910–13), three-volume work resulting from a collaboration between A. N. WHITEHEAD and Bertrand RUSSELL. It propounded that mathematics can be deduced from formal logical premises, and notably influenced 20th-century philosophy.

Principle of moments, in mechanics, states that the moments of two bodies balanced about a central pivot or fulcrum are equal. (The moment of a body is the product of its weight and its distance from the pivot.) This principle may be observed in balances and see-saws.

Principles of Political Economy. See MAL-THUS, THOMAS ROBERT.

Principles of Political Economy. See MILL, JOHN STUART.

Pringsheim, Nathanael (1823–94), German botanist who investigated the reproductive systems of lower plants. He discovered the occurrence of sexuality in ALGAE and, after further studies, concluded that natural selection plays only a minor part in evolution; he believed that variations are spontaneous and tend towards greater complexity. Pringsheim was the first to demonstrate apospory, the production of a sexual from an asexual generation without spores.

Printed circuits, network of electrical conductors chemically etched from a layer of copper foil on insulating plastic, used to interconnect components (eg capacitors, resistors and transistors). The printed circuit board represents one stage in the miniaturization of electronic circuits (MICROELECTRONICS); it has not been replaced by the newly developed INTEGRATED CIRCUIT, but serves to reduce the maze of connecting wires and to compact even more circuitry (eg a complete calculating component on a single board or module. See also p.605).

Printing, reproduction of graphic material by multiple impressions. Although GUTENBURG, CAXTON and others established the use of LETTERPRESS, and TYPE-FOUNDING and TYPESETTING progressed steadily, real production improvements came only with the INDUSTRIAL REVOLUTION. Then, printing expanded rapidly with the introduction of STEREOS, PHOTOLITHOGRAPHY, ROTARY PRESSES, HALFTONES and mechanical typesetters. Progress in the 20th century has stressed speed with the application of PHOTOGRAPHY, WEB-OFFSET, PHOTOCOPYING and computer-aided production. See also pp.612–615, 612–615, 1376, 1380–1381, 1380–1381, 1574.

Printmaking, in graphics, process of making printed impressions from wood blocks, metal plates, flat stones or silk. There are four main groups of graphic techniques. The first is the relief method, in which the parts of a wood block or metal plate that are to be printed are left in relief, and the remainder is cut or etched away. Ink is rolled over and adheres to the raised portions, and a print may be made by hand or

on a printing press. Some examples are WOODCUTS, WOOD ENGRAVINGS, linocuts and metal cuts. The second is the intaglio method, in which the surface of the block or plate does not print. Instead ink is held in the engraved or etched furrows, damp paper is pressed by a copper plate press into these cuts and the ink is picked up from them. Examples are line ENGRAVINGS, DRYPOINTS, ETCHINGS and AQUATINTS. The third method is the surface or PLANOGRAPHIC method, in which greased areas on a slab of limestone or a metal plate reject printing ink. The ink adheres to the ungreased areas and is transferred to paper. In the stencil method, colour is brushed through holes in a protecting sheet onto the surface below; examples are SILKSCREEN PRINTS, or serigraphs. See also pp.612–615.

Prior, Matthew (1664–1721), English poet and diplomat who as special envoy, helped to conclude the Peace of UTRECHT in 1713. He was imprisoned by the WHIGs for two years on Queen Anne's death (1714). As a poet he is best remembered for his light verse which includes *Alma*, or *the Progress of the Mind*.

Prior, in the Christian Church, head or deputy head of a monastery. The term had a vague usage until the 13th century, being applied to various monastic officials and (in Italy) to magistrates. But in the Benedictine order it came to refer to the monk ranking next below the ABBOT, and to the head of a priory of monks or a house of canons regular or friars.

Prism, in mathematics, a solid geometrical figure whose ends are similar polygons (most commonly triangles) with the other faces parallelograms or, in a right prism, rectangles. In physics, a prism (usually triangular) is a piece of transparent material, such as glass, plastic or quartz, in which a light beam is refracted and split into its component colours by dispersion or undergoes internal reflection. See also p.852.

Prison, place in which people are kept either for safe custody while awaiting trial or as a punishment after conviction for a crime. Prisons developed as penal institutions in England in about the 18th century as an alternative to execution, corporal punishment or transportation, although there were instances of the use of institutional prisons much earlier. The first modern prison was probably Walnut Street Jail in Philadelphia (1790). As a result of pressure to improve conditions inside prisons in Britain, the Prison Act (1839) was passed and in 1877 prisons were made the responsibility of the Home Office rather than local bodies, and the prison system was centralized under the Prison Commission. In the early 1980s there was a revival of criticism of the UK prison system, particularly for its overcrowding.

Prisoner of Zenda, *The* (1894), novel by Anthony HOPE. A popular romance of impersonation and intrigue, it has given to English language the words "Ruritania" and "Ruritania", which pertain to the book to a fictional kingdom.

Prisoners of war, in international law, military personnel captured by the enemy in an armed conflict between nations. Their treatment is generally expected to be humane. The terms of the first international convention on prisoners of war, signed at the HAGUE PEACE CONFERENCE of 1899, were widened by the 1907 Hague Convention and by the subsequent GENEVA CONVENTION of 1949.

Prison reform, movement aimed at improving conditions inside prisons and exploring alternative systems of rehabilitation. It developed in Britain at the beginning of the 19th century, when the efforts of early prison reformers such as John Howard and Elizabeth FRY led to the setting up of a parliamentary committee to investigate prison conditions. The Prison Act (1839) was the first major legislative attempt to improve conditions. The establishment of government-controlled prisons in 1877 paved the way for major advances, and today prison reform includes such factors as study facilities, home leave and outside work.

Primroses are attractive flowers that thrive well in gardens and greenhouses.

Prince Igor: the score frontispiece of Borodin's opera, unfinished when he died.

Matthew Prior's personal charm and shrewdness made him an excellent negotiator.

Prison Reform: Elizabeth Fry reading to female prisoners in Newgate Prison.

Pritchett, Sir Victor Sawdon

Privet is a member of the olive family and is commonly used for hedges.

Prix de l'Arc de Triomphe, official 1977 photo; Lester Piggott wins on *Alleged*.

Proboscis monkey: its large nose is less developed in the infants and females.

Probus was murdered by troops angered at having to carry out menial public works.

Pritchett, Sir Victor Sawdon (1900–), British journalist, critic and novelist. His works include a novel *Clare Drummond* (1929), many critical works and two volumes of autobiography, *A Cab at the Door* (1968) and *Midnight Oil* (1971).

Private enterprise, economic organization based upon the investment and initiatives of an individual or an independent commercial body as distinct from the state. See also pp.1864–1865.

Privateer, armed, privately-owned vessel under commission of a belligerent government to capture enemy shipping. Letters of **MARQUE** (commission) distinguished it from a pirate craft. Crews were not paid but were allowed to keep most or all of their booty and often acquired great wealth. Privateering was most in evidence from the late 16th to the early 19th century. It was outlawed by the Declaration of Paris (1856) and finally abolished by the Hague Conference of 1907.

Private Lives (1930), sophisticated social comedy by Noël COWARD. It revolves around the chance meeting of a man and his ex-wife, both on honeymoon with their new partners.

Private Member's Bill, **BILL** introduced in the British parliament by an individual MP without the official support of the government. Only 10 days' time each session is reserved for such bills, and their order of precedence is determined by ballot. Only a few of them reach the statute book.

Private schools, in Britain, independent educational institutions usually run for profit. A few are either Church-run schools or "progressive" schools, as some people feel that the national educational system does not meet adequately the needs of Christians or those interested in unorthodox educational methods. A minority of private schools teach those who fail to get into independent public schools, and these are generally run on traditional lines. All are inspected by and registered with the Ministry of Education. In the USA, the term private school applies to institutions that would be known as public schools in Britain.

Privet, deciduous shrub native to Australia, Asia, Europe and N Africa, frequently planted to form a hedge. It has smooth, lance-shaped leaves and loose clusters of tiny white flowers that appear in summer; it bears small black berries. Species include the common, or European, privet (*Ligustrum vulgare*) and the hardier California privet (*L. ovalifolium*), which is native to Japan. Height: to 4.6m (15ft). Family Oleaceae.

Privilege, parliamentary, certain rights enjoyed by members of both Houses of the British Parliament. They include the right of **FREE SPEECH** and immunity from civil arrest, the right to regulate their own proceedings, the right to punish an MP for **CONTEMPT OF PARLIAMENT**, and the Commons' right to determine its own membership.

Privy Council, group of leading advisers to the British monarch. It developed in the Middle Ages out of the King's Council (*Curia Regis*). As the **CABINET** system of government developed, the Privy Council became increasingly restricted in its powers. Its Judicial Committee, established by legislation in 1833, is the final appeal court for most Commonwealth countries. The Privy Council also maintains non-political committees on medical and industrial research.

Privy Purse, Keeper of, British royal officer in charge of the monarch's domestic accounts. The office is derived from that of the medieval lord **CHAMBERLAIN**. Since the 19th century he has been responsible for the administration of the **CIVIL LIST**.

Privy Seal, Lord, royal officer in Britain, keeper of the privy seal. The seal is inferior to the **GREAT SEAL** and is used as proof of royal assent to a document, especially an act of parliament. The office dates from medieval **HOUSEHOLD**; it now usually carries a **CABINET** post without portfolio.

Prix de l'Arc de Triomphe, French horse race run over 2.4km (1.5 miles) at Longchamp on the first Sunday in October. A

weight-for-age event for three-year-olds and over, it is the richest horse race in Europe. It was first run in 1920.

Prix Goncourt, French literary prize set up in 1903 by the Académie Goncourt, endowed by Edmond de GONCOURT. Awarded annually to the best prose work published in the year, it carries great prestige in the literary world. Usually awarded for novels, it has in the past been won by such authors as Marcel PROUST, André MALRAUX and Simone de BEAUVOIR.

Probability, number representing the likelihood of a given occurrence. The probability of a specified event is the number of ways that event may occur divided by the total possible number of outcomes. For instance, in one throw of a six-sided die there are six possible outcomes, and three of these result in an even number: the probability of throwing an even number is thus $\frac{3}{6} = \frac{1}{2}$. This assumes that each possibility is equally likely. A less circular idea of probability utilizes the concept of a limit. If the die were thrown a large number of times the number of even numbers resulting divided by the total number of throws would tend to the value $\frac{1}{2}$. Probability theory is concerned with the analysis of random events of this type. See also pp.806–809.

Probate, legal term for the certification by a court of law that a document purporting to be the will of a person who has died is valid. The term also applies to the official copy of a will, with the certificate of its having been proved valid.

Probation, in Britain, sentence of a court of law on a person aged 17 or over which allows the offender to remain at liberty subject to certain conditions, such as good behaviour, and under the supervision of a probation officer. It is not regarded as a conviction. The sentence may last from one to three years, and breach of probation is an offence that invites reconsideration of the original probation order and may lead to a fine or to the issuance of a community service order.

Proboscidea, order of mammals that has lived on Earth from the Eocene to the present day, but now represented only by ELEPHANTS (genera *Elephas* and *Loxodonta*). They are characterized by their primitive limbs, but have specialized jaws and teeth. Family Elephantidae. See also pp.86, 87.

Proboscis monkey, large monkey, primarily of swamp regions in Borneo, with a protruding nose that is upturned in young monkeys and long and pendulous in older males. These monkeys are gregarious, day-active herbivores that appear to swim and dive freely. Family Cercopithecidae; species *Nasalis larvatus*. See also pp.313, 333, 333.

Probus, Marcus Aurelius (d. 282), Roman emperor (276–82). A distinguished soldier, he became emperor after a long period of political instability, and was notable for allowing BARBARIANS to settle within the empire. He reformed the administration, and tried to impose strict discipline on the army. His troops mutinied and he was killed. See also p.1246.

Procaccini, Ercole the Elder (1515–95), Italian painter who was born and worked in Bologna. Various Bolognese churches contain paintings by him, notably *Descent from the Cross* in the church of San Stefano. He later moved to Milan, where he founded an academy which enjoyed a high reputation in contemporary Italy.

Procellariiformes, order of birds that includes the ALBATROSS, SHEARWATER, STORM PETREL and diving petrel. See also p.72.

Process engraving. See PHOTO ENGRAVING.
Proclamation of 1763, British document designed to restrain encroachment on Indian lands by settlers following the FRENCH AND INDIAN WAR. Drawn up by Lord SHELBURNE, President of the Board of Trade, and modified by his successor Lord Hillsborough, it formulated a policy that would placate the Indians. The provisions forbade American settlement west of the line formed by the Appalachians and ordered all settlers to vacate the area, which was to be reserved for the Indians.

Four new provinces for the settlers were established – Quebec, East and West Florida, and Grenada.

Proclamations, commands issued in Britain under the royal prerogative. They were first used by the Tudors in place of medieval ordinances to supplement statutes, and their use was approved by the Statute of Proclamations (1539); they were enforced by the Court of STAR CHAMBER. In 1610 the judges ruled, on a Commons' petition, that proclamations could not be used to make new laws or to override the common law. A proclamation is now used chiefly to announce a public holiday or the dissolution of Parliament.

Proclus (c.410–85), Greek Neo-platonic philosopher and disciple of the PLATONIST Syrianus. He synthesized Neo-platonic doctrines and gave them their most systematic form. He also wrote commentaries on many of PLATO's dialogues. He opposed Christianity and stressed the Neo-platonic view that material things are appearances, whereas thought constitutes reality.

Proconsul, in ancient Rome, title originally used for a **CONSUL** whose term of office had been extended beyond the usual 12 months. This extension became increasingly common, especially in Roman territories, and in later Roman times the term came to denote the almost dictatorial governors of Roman provinces. The term has sometimes been applied in modern times to a British colonial governor with far-reaching powers.

Procrustes, in Greek mythology, a brigand in Attica. He tortured travellers whom he captured by placing them on a bed and stretching them to fit if they were too short, or cutting off their limbs if they were too long. THESEUS had him killed by his own methods. He is also known as Damastes.

Procter, Mike (1946–), South African cricketer. A spectacular all-rounder, he played in only seven Test matches (1967–70) before South Africa's exclusion from Test cricket. In England he proved himself an inspirational captain of Gloucestershire; in South Africa he played for Natal, Western Province and Rhodesia.

Proctology, branch of medicine that deals with the diagnosis and treatment of diseases of the RECTUM and lower intestine.
Procurator-fiscal, officer appointed to the sheriff's court in Scotland who acts as public prosecutor and also conducts inquiries into suspected offences. Some of his duties correspond roughly with those of a CORONER in England.

Procyon, or **Alpha Canis Minoris**, the brightest star in the constellation of Canis Minor and one of the stars nearest to the Sun. The star, known as Procyon A, has a faint white dwarf companion, Procyon B. Characteristics: apparent mag. 0.34 (A), 10.8 (B); absolute mag. 2.6 (A), 13.1 (B); spectral type F5 (A), wF (B); distance 11.4 light-years. See also pp.996, 1011, 1011.

Producer gas, mixture of gases, the inflammable carbon monoxide and hydrogen and the nonflammable nitrogen and carbon dioxide. It is made by the partial combustion of coal or coke in air and steam. It has a lower heating value than other fuels, but can be manufactured with simple equipment. Producer gas is often used as a fuel in large industrial furnaces.

Progesterone, steroid HORMONE secreted mainly by the corpus luteum of the mammalian OVARY, and by the PLACENTA in pregnancy. Its principal function is to prepare and maintain the uterus for pregnancy. Synthetic progesterone is one of the main components of the contraceptive PILL, in which its action is to simulate pregnancy artificially, thus preventing conception.

Prognosis, prediction relating to the expected final outcome in a patient with a particular disorder. The prognosis is based on a doctor's knowledge of the disorder and the probable effects of treatment.

Programmed learning, method of instruction in which a student proceeds through a

course of highly structured material at his own pace. The course is designed both to instruct and test the student and to provide an immediate assessment of his progress. See also p.469.

Programme music. See ILLUSTRATIVE MUSIC.

Programming, preparation of a COMPUTER so that it can provide the answers to questions put to it. Before being given data, a computer must be given a set of instructions, or a program, telling it how to deal with the data. Each instruction is a single step and all information must be in the form of binary numbers. For computer programmers, languages have been developed, such as FORTRAN for mathematics and science and PL/1 for general use. See also pp.466-468, 468.

Progression. See ARITHMETICAL PROGRESSION; GEOMETRIC PROGRESSION.

Prohibition (1919-33), period in US history in which the manufacture, transport, sale and consumption of alcoholic beverages was illegal, enacted through the 18th Amendment to the Constitution. Enforcement of the ban proved extremely difficult. Smuggling could not be prevented and the illegal manufacture of liquor sprang up with such rapidity that the authorities were unable to suppress it. Illegal drinking of inferior and often dangerous alcoholic beverages became commonplace, while corruption of government officials and local police, paralysis of the courts and the growth of organized crime financed by immense BOOTLEGGING profits all followed. In 1933 the US government had no alternative but to repeal the law under the 21st amendment. See also p.1690.

Proinsulin, precursor of the hormone INSULIN, a polypeptide formed in the PANCREAS by the beta cells of the ISLETS of Langerhans. Its long-chain molecule splits to form the insulin molecule.

Projection, map, method of representing geographical features of a curved surface, such as those of the Earth, on a flat surface. Map projections can be cylindrical, conic or azimuthal, depending on the purpose of the map. They all produce some distortions of the features. See also pp.242-243, 804-805.

Projector, instrument with a lens system, used to cast images onto a screen from an illuminated flat object. An episcopes is a projector for opaque objects such as a printed page; it uses light that is reflected from the object. A diascopes is a projector for transparent objects such as photographic slides and films; it uses light transmitted through the object. An epidiascopes can project images from both transparent and opaque objects. A cine projector produces moving images from the many frames (pictures) on cine film. See also pp.633, 633.

Prokhorov, Alexander Mikhaylovich (1916-), Soviet physicist who shared the 1964 Nobel Prize in physics with Nikolai G. BASOV and Charles H. TOWNES for research in QUANTUM electronics that resulted in the development of the MASER and LASER. In 1955 Prokhorov and Basov proposed the maser principle, although it was Townes who built the first maser.

Prokofiev, Sergei (1891-1953), Soviet Neo-Classical pianist and composer, whose musical style is characterized by melody, biting dissonances, rich harmony and brilliant orchestration. His most popular works include the ballets *Romeo and Juliet* (1935) and *Cinderella* (1944); the *Classical* (first) *Symphony* (1918); *Peter and the Wolf* (1936), an orchestral suite with narrator for children; and the opera *The Love of Three Oranges* (1921). He also composed piano music, six other operas, six other symphonies, five piano concertos, chamber music and film music, including scores for *Lieutenant Kizhe* (1934), *Alexander Nevsky* (1938) and *Ivan the Terrible* (1942-45).

Prolactin, HORMONE secreted by the pituitary gland in women which stimulates the production of milk after childbirth. The secretions are inhibited by OESTROGEN and PROGESTERONE during pregnancy, but the inhibition ceases with the loss of the placenta at childbirth.

Prolapse, displacement of an internal part of the body, such as the uterus, bladder or rectum, especially after childbirth. It is also the displacement of one of these organs or a structural part, such as an intervertebral disc.

Proletariat, Marxist term for the working class in an industrial society, which has no source of income other than wages. The term derived from the Latin *proletarius*, which described the landless freeman who was a member of the poorer class of ancient Rome. According to Marx, the proletariat is the true creator of the objects produced by industry, and therefore would become an irresistible force when the internal contradictions of CAPITALISM weaken the authority of the factory-owning middle class.

Puget, Pierre (1620-94), French BAROQUE sculptor, painter and architect. In 1667 he began work on the doorway of the City Hall at Toulon. His sculpture, which was influenced by BERNINI, includes *Milo of Crotona* (1683).

Promenade concerts, series of annual summer concerts organized by the BBC in the Royal Albert Hall, London, where cheap standing room is available in the gallery and the stalls. Such concerts originated in Paris in 1833, conducted by Musard, and from 1838 promenade concerts were given at Drury Lane, Covent Garden and elsewhere where the opportunity for strolling to strictly instrumental music was then possible. "Proms" in their modern series began at the Queen's Hall, London in 1895, under the baton of Sir Henry Wood who established the practice of including new British music in a wide-ranging repertoire. After Wood's death in 1944, a succession of principal conductors took his place, the most popular being Sir Malcolm SARGENT.

Prometheus, in Greek mythology, the fire-giver; his name means "forethought". He created man, provided him with reason, and stole fire from the gods. For this theft, ZEUS had him chained to a rock in the Caucasus where an eagle consumed his liver for eternity. In some myths he was rescued by HERCULES. Prometheus is the subject of many literary works.

Prometheus Bound (c.459 BC), tragedy by the Greek dramatist AESCHYLUS. In this, the first part of a trilogy, Prometheus incurs the wrath of ZEUS by giving man the gift of fire. The second and third parts of the trilogy, *Prometheus Unbound* and *Prometheus the Fire-bearer*, are lost.

Prometheus Unbound (1820), allegorical verse drama by Percy Bysshe SHELLEY based on Greek myth. It expounds the triumph of human love.

Promethium, radioactive metallic element (symbol Pm) of the lanthanide group, made in 1941 by particle bombardment of neodymium and praseodymium. The element does not occur naturally on Earth. Properties: at. no. 61; m. p. 1,080°C (1,980°F); b. p. 2,460°C (4,460°F); most stable isotope Pm¹⁴⁵ (half-life 17.7yr).

Prominence, solar, gaseous jet or cloud of hydrogen or helium gas in the CHROMOSPHERE of the Sun. Prominences have been observed extending more than 50,000km (31,200 miles) above the Sun's surface. They are of two types: eruptive, which are in violent motion, and quiescent, which are much more stable. Prominences are often associated with SUNSPOTS. See also pp.974, 974-975.

Promissory note, unconditional promise made in writing to pay the bearer of the note a sum of money either on demand or at a fixed time. It differs from a bill of exchange or a bank CHEQUE in having only two, not three, parties to the contract.

Promoter, in chemistry, a substance used in small quantities in conjunction with a CATALYST to increase its activity. For example, in the Haber-Bosch process an iron catalyst is used to speed up the combination of hydrogen and nitrogen under pressure to form ammonia; this catalyst is usually promoted with small amounts of potassium oxide.

Prompt, in the theatre, to supply an actor with forgotten words. The prompter is stationed within earshot of the players but

out of sight of the audience in the prompt box, usually to the left of the stage.

Pronghorn, only extant member of the family Antilocapridae, related to the ANTELOPE. It is a horned, hoofed herbivorous animal of W USA and N Mexico. The swiftest North American mammal, it is said to be capable of a speed of 80km/h (50mph) over short distances. Height: 3ft (90cm); weight: 45kg (100lb).

Prontosil, trade name for sulphamido-chrysoidine, an azo dye which was the first synthetic antimicrobial drug to be widely used. The active part of the molecule was found to be sulphanilamide, and this discovery led to the development of the sulpha drugs.

Propaganda, systematic manipulation of public opinion by use of oratory, publications and photography. Although allusions to propaganda are found in ancient writings, the organized use of propaganda developed only after the Industrial Revolution when modern methods of communication enabled propagandists to reach mass audiences. Modern propaganda differs from other forms of communication in that it is deliberately used to control group attitudes.

Propagation, plant, means of producing several individual plants from one original. This may be in the form of sexual reproduction in which the plant is pollinated and the seed produced in the normal way, or vegetative propagation, in which new plants are grown from parts of the parent, e.g. leaves, shoots, bulbs or runners. Man has taken all these processes and developed them for commercial use. See also pp.674-675.

Propane, colourless inflammable gas (formula C₃H₈), the third member of the alkane series of hydrocarbons. It occurs in natural gas, from which it is obtained; it is also obtained during petroleum refining. It is used (as bottled gas) as a fuel, as a solvent and in the preparation of many chemicals. Properties: m.p. -187.7°C (-305.9°F); b.p. -42.5°C (-44.5°F). See also p.438.

Propellant, material that undergoes chemical, nuclear or thermoelectric reactions to propel a rocket. Liquid propellants consist of a fuel such as KEROSENE or HYDRAZINE (N₂H₄), which reacts with an oxidizer such as liquid oxygen. Solid propellants contain both fuel and oxidizer in powder form. Nuclear propellants include URANIUM and PLUTONIUM. Ion propellants include metallic CAESIUM, which boils off ions into an electric field that accelerates them to high exhaust velocities. See also pp.1026.

Propeller, device for producing thrust, usually mounted on a rotating shaft. The cross-section of an aircraft propeller reveals an aerofoil shape. This allows it to function as a rotating wing; it generates forward thrust by producing aerodynamic lift. A ship's propeller, or screw, "screws" the ship through the water.

Proper motion, in astronomy, transverse movement of a star against the background of more distant stars. The real movement of a star in space is a combination of its proper and radial motions. The largest annual proper motion for a star is approx. 10 seconds of arc (Barnard's Star). See also p.915.

Properties, in the theatre, loose items required during the action of a play which do not count as furniture, costumes or scenery. Properties (usually called merely props) include such items as letters, cigarettes, food, drink, crockery and telephones. Hand props are those that are handled by the actors.

Propertius, Sextus Aurelius (c.54-c.16 BC), Roman elegiac poet. Although starting as a student of Law, he began writing at an early age, and his first book of poetry, concerned with his mistress Cynthia, was published in 29 BC. His verse is significant for its sensitivity and passion and its frequent abrupt change of mood.

Prophets, in all the major religions, people who believe they have a message from God to deliver or are able to foretell events. For Jews in Old Testament times the prophets were those whose writings had the authority of YAHWEH. They pri-

Prohibition; a US government agent closes down an illegal bar.

Promenade concerts; Sir Malcolm Sargent conducting the BBC Symphony Orchestra.

Prometheus was sentenced to eternal torture for stealing fire from the gods.

Propaganda; William Joyce broadcast as Lord Haw Haw for Nazi Germany.

Proportion

marily interpreted God's will to contemporaries rather than foretold the future. The term was also applied to the persons of MOSES, DAVID and others. For Christians, from the time of the early Church onwards, the term signified the writers of the Old Testament (such as ISAIAH) whose sometimes obscure and esoteric passages can be interpreted as predicting the events and significance of the prophet Christ's life. The New Testament also refers to prophets in the early Church such as JOHN THE BAPTIST. Among Muslims, the term is applied exclusively to MOHAMMED, although various individuals proclaimed themselves as his successors. In both Buddhist and Hindu literature, predictions occur and many prophetic reformers have occurred in HINDUISM.

Proportion, mathematical relation of equality between two ratios, having the form $a/b = c/d$. A continued proportion is a group of three or more quantities, each bearing the same ratio to its successor, as in 1:3:9:27:81. See also p.778.

Proportional representation (PR), system of electoral representation in which the allocation of seats reflects the percentage of the vote commanded by each party. There are many different systems of proportional representation, but most incorporate a transferable vote principle, by which first-choice votes cast for the least popular candidates (or for the most popular above a certain quota) are transferred to the voter's second choice candidate. Proportional representation is used in many European countries and for elections to the European parliament of the EEC. See also pp.1144, 1144.

Proprioception, perception of internal nervous stimuli through which an animal is aware of its own movement, posture and internal condition.

Propyl alcohol, also called propanol, colourless alcohol used as a solvent and in the manufacture of various chemicals. It exists as two isomers. Normal propanol, $\text{CH}_3\text{CH}_2\text{CH}_2\text{OH}$, is a by-product of the synthesis of methyl alcohol (methanol). Isopropyl alcohol, $(\text{CH}_3)_2\text{CHOH}$, is a secondary alcohol which is easily oxidized into acetone.

Propylene (propene), colourless, aliphatic hydrocarbon, C_3H_6 , manufactured by the thermal "cracking" of ETHYLENE. It is used in the manufacture of a wide range of chemicals, including vinyl and acrylic resins. Properties: b.p. -48°C (-54.4°F); m.p. -185°C (-301°F).

Proscenium, in the THEATRE, the front part of the stage, especially the arch, first used in the 17th century Italian theatre to create a picture-frame effect.

Prose, in literature, a relatively unstructured form of language. The term derives meaning from the contrast with the metrical discipline of POETRY. The patterning of artistic prose is not prescribed but emerges from the structure of the writer's thoughts.

Proserpine, wife of Pluto and queen of the underworld, the Roman equivalent to PERSEPHONE. She was unable to escape permanently from Pluto because she had eaten a seed of a pomegranate, the fruit of the dead; consequently each year she had to spend six months above ground and six months below.

Prosimians, small to medium-sized nocturnal PRIMATES of the suborder Prosimii. All except the INDRI have long tails. Included are the AYE-AYE, GALAGO, LORIS, LEMUR, POTTO and TARSIER. See also pp.102-103.

Prospecting, search for exploitable mineral deposits. The earlier methods of chance and diving have been replaced by means based on geology and mineralogy. These involve extensive sampling - the analysis and examination of materials taken from holes drilled at regular intervals - the analysis of the velocity of waves resulting from underground explosions, measurement of variations in the Earth's magnetic field, the detection of gravity anomalies and, for radioactive minerals, the use of Geiger counters. Aerial photography has also proved to be another versatile prospecting method. See also pp.410-413.

Prostaglandins, series of related fatty acids, with hormone-like action, present in semen, liver, brain and other tissues. Their biological effects include the lowering of blood pressure and the stimulation of contraction in a variety of smooth-muscle tissues, such as the uterus.

Prostate gland, gland in the male reproductive tract surrounding the URETHRA. It secretes specific chemicals that mix with sperm cells and secretions of other accessory glands to make up the sperm-containing fluid, SEMEN, that is released at ejaculation. In many men there is a slow enlargement of the prostate with age. This causes it to press on the neck of the bladder, interfering with urination. The urine builds up in the bladder, gradually weakening it. Prostate enlargement in men past middle age is generally treated by surgical removal of the gland.

Prostatitis, inflammation of the PROSTATE GLAND, caused by bacteria or their toxins. Chronic prostatitis may occur in men over 50, following acute inflammation of the prostate. See also pp.1078, 1078.

Prosthesis, man-made substitute for a missing organ or part of the body. Until the 17th century artificial limbs were either wooden or solid metal, but innovations in metallurgy and engineering design have enabled lighter, jointed limbs to be made. Methods of attachment, too, have greatly improved. More recent prosthetic devices include artificial heart valves made of silicone materials. See also pp.1097, 1097.

Prostitution, provision of sexual services for reward, usually money. Most prostitutes are women. In Britain prostitution is not strictly illegal, but soliciting, living off the earnings of prostitution and brothel-keeping are all criminal offences. Prostitution has existed in many societies, and has been subject to official regulation.

Protactinium, rare radioactive metallic element (symbol Pa) of the actinide group, first identified in 1913. Its chief source is PITCHBLEND. Properties: at.no. 91; at.wt. 231.0359; s.g. 15.4; m.p. $1,200^\circ\text{C}$ ($2,192^\circ\text{F}$); b.p. $4,000^\circ\text{C}$ ($7,232^\circ\text{F}$); most stable isotope Pa^{231} (half-life 3.25×10^4 yr).

Protagoras (c.485-410 BC), leader of the Greek SOPHISTS. An AGNOSTIC, his belief that we know only our perceptions, not the actual things perceived, led to his observation that "man is the measure of all things".

Protective coloration, natural camouflage or warning colours of organisms that serve to blend it in with the surrounding environment or to ward off predators. TIGERS and some moths have permanent protective colouring. CHAMELEONS and some FLATFISH can change colour to match the background. Warning colours of an animal usually mean it is poisonous, aggressive or distasteful to most predators. Predators learn to recognize and avoid these colorations, which may be mimicked by harmless species. See also MIMICRY.

Protectorate (1653-59), in English history, period of absolute rule by CROMWELL, his authority resting on the power of the army. Following the execution of CHARLES I, England was declared a COMMONWEALTH under the rule of the RUMP PARLIAMENT. In 1653, however, Cromwell replaced the Rump with the nominated BAREBONE'S PARLIAMENT, the majority of which was submissive to his will. In December of that year, Cromwell assumed the title of Lord Protector of England, Scotland and Ireland. A virtual dictator, Cromwell divided the country into 11 districts, each under the administration of a major-general. At his death (1658) he was succeeded by his son, Richard CROMWELL, who proved inept. After a period of chaos, the Rump Parliament was recalled and in 1660 General George MONCK brought about the RESTORATION of CHARLES II. See also pp.1424-1425, 1424-1425.

Protein, organic compound containing many AMINO ACIDS linked together. Living cells use about 20 amino acids, but as proteins have thousands of amino acids in each molecule the number of possible proteins is very large. The order of amino

acids in proteins is controlled by the genes in the cell's DNA. The most important proteins are the ENZYMES, which determine all the chemical reactions in the cell, and ANTIBODIES, which combat infection. See also pp.160-163, 174-175, 180, 181, 896, 1078, 1083.

Protestant Episcopal Church, US Church formally organized in Philadelphia in 1789, and once part of the ANGLICAN COMMUNION. It is self-governing, with the laity having a large role in administrative duties. A presiding bishop is elected by the House of Bishops of the General Convention. The Apostles' Creed and the Nicene Creed are accepted. Membership in the mid-1970s was more than 3,200,000.

Protestantism, branch of Christianity formed in protest against the practices and doctrines of the old Catholic Church. Protestants sought a vernacular Bible to replace the Latin VULGATE, and to express individual elements of nationalism, as in N Germany and England in the mid-16th century. The movement is generally considered to have started when Martin LUTHER nailed his 95 theses to Wittenberg church door. His co-protesters included John WYCLIFFE and Jan HUS, and later Huldrych ZWINGLI and particularly John CALVIN, whose interpretation of the Bible and concept of PREDESTINATION had great influence. The Protestants held the EUCHARIST to be a symbolic celebration as opposed to the Roman Catholic dogma of TRANSUBSTANTIATION, and claimed that there was no medium between man and God. This led to an emphasis on individual contemplation of the scriptures. See also ANGLICANISM.

Proteus, in Greek mythology, a sea god, son of OCEANUS and Tethys. He is depicted as a little old man of the sea. Proteus possessed the gift of prophecy and the ability to alter his form at will - in an instant he could become fire, flood or a wild beast.

Proteus, generic name given to both the cystitis-producing bacterium (*Proteus mirabilis*) and the amphibian the OLM (*Proteus anguinus*). Such duplication in scientific nomenclature is usually resolved by giving the disputed name to the first organism described, but here the matter has not yet been settled. See also pp.64, 190-191, 190-191.

Prothrombin, precursor of the blood enzyme thrombin, which is converted into thrombin by thromboplastin. It plays an essential role in the formation of blood clots, which help to stop bleeding and aid in the healing of wounds.

Protista, proposed classification of certain unicellular and simple multicellular organisms, including PROTOZOA, ALGAE, BACTERIA and FUNGI. The term was introduced to overcome the difficulty of distinguishing such organisms from the true plant and animal kingdoms (Plantae and Animalia). This kingdom may include organisms with many nuclei within one cell wall (coenocytes). See also p.2.

Protoactinium. See PROACTININUM.

Protoceratops, horned ornithischian DINOSAUR of Cretaceous times that lived in central Asia. It had a frill of bone on the back of its skull but, unlike later forms, its nose was hornless. Length: 1.8m (6ft).

Protochordate, group of prehistoric animals that have certain features in common with the modern CHORDATE group of animals. The protochordates are divided into three subphyla: HEMICHORDATA, UROCHORDATA and CEPHALOCHORDATA.

Protocol, universal code of diplomatic or military behaviour, based on precedence and deference to rank. The term also refers to the record of a diplomatic conference or to a diplomatic document itself, less formal than a treaty.

Protocols of the Learned Elders of Zion, fraudulent document used for the purposes of ANTI-SEMITISM. It reported alleged meetings of Jews in Europe in the late 19th century at which plans were made to overthrow Christianity and control the world. Published in a Russian newspaper in 1903, it was believed by semi-official circles and the public generally, greatly contributing to the anti-semitism of the time.

Proton, stable elementary particle (sym-

bol p) with a positive charge equal in magnitude to that of the ELECTRON. It forms the nucleus of the lightest isotope of hydrogen, and with the NEUTRON is a constituent of the nuclei of all other elements. The number of protons in the nucleus of an element is equal to its ATOMIC NUMBER. Protons also occur in primary cosmic rays. It is a BARYON with spin $\frac{1}{2}$ and a mass 1836.12 times that of the electron. Beams of high-velocity protons, produced by particle accelerators, are used to study nuclear reactions. See also p.812.

Protoplasm, semi-fluid, essential living matter within all plant and animal CELLS. In modern science, it is considered not as the living material, but as the basic substance of the CYTOPLASM.

Protopopov, name of two Soviet ice figure skaters, Oleg (1932-) and his wife Ludmila (1935-) (née Belousova). With their smooth, ballet-style skating incorporating the breathtaking "death spiral", they won the pairs title at the 1964 and 1968 Winter Olympic Games and were world and European champions 1965-68.

Prototheria, subclass of Mammalia that is represented in living fauna only by the egg-laying ECHIDNA and PLATYPUS.

Protozoa, phylum of one-celled organisms found throughout the world in marine or fresh water, free living and as parasites. First seen in 1674 by Anton van LEEUWENHOEK, these microscopic animals have the ability to move (by cilia or pseudopodia) and have a nucleus, cytoplasm and cell wall; some contain CHLOROPHYLL. They are transparent, green, iridescent, blue, rose or yellow. Reproduction is by fission or encystment. Length: 0.3mm (0.1in). The 30,000 species are divided into four classes - Flagellata, Cnidospora, Ciliophora and Sporozoa. See also pp.2, 10-11, 10-11.

Protura, order of about 150 species of primitive, pale, wingless and blind insects. It includes the most primitive hexapods and is represented throughout the world. Most species live in damp soil, feeding on decaying organic matter. Length: to 2mm (0.07in). See also pp.36-37.

Proudhon, Pierre-Joseph (1809-65), French anarchist whose theories of liberty, equality and justice conflicted with those of Karl MARX. In his first book, *Qu'est-ce que la propriété?* (1840), he argued that "property is theft"; his greatest work was *Système des contradictions économiques* (1846). He was exiled to Belgium in 1848 for criticizing NAPOLEON III, but was pardoned in 1862. See also p.1694.

Proust, Joseph-Louis (1754-1826), French chemist who specialized in analysis, with little interest in theory. As a result of his researches, however, he concluded that compounds were of constant and determinate composition, which was important in the establishment of the atomic theory of chemical composition.

Proust, Marcel (1871-1922), French novelist whose *A la recherche du temps perdu* (*Remembrance of Things Past*; 16 vols, 1913-27) is regarded as one of the great works of literature. Proust was a frequenter of the aristocratic salons of Paris at the turn of the century, and he was actively involved in the DREYFUS AFFAIR (1897-99). He suffered from asthma and his growing ill-health caused him in 1907 to withdraw from society and devote himself to writing. *Remembrance of Things Past* is written in long cascading sentences. It is founded on the effects of involuntary memory, the moments when a chance impression obliterates the present and propels one into a past moment.

Provençal, ROMANCE LANGUAGE spoken in France, in the region of PROVENCE. Most of its users are fluent in French and it has no official status in the country, but it does not appear to be dying out.

Provence, region and former province of SE France, encompassing the present départements of Var, Vaucluse and Bouches du Rhône, and parts of the Basses-Alpes and Aix-en-Provence. The coastal area was settled c.600 BC by the Greeks, and the Romans established colonies there in the 2nd century BC. It passed to Louis XI of France in 1481 and was a

province of France until the FRENCH REVOLUTION, when France was redivided into départements. Fruit and vegetables are grown on the Riviera and along the Rhône Valley; there is also some stock raising in the Camargue. Tourism is the major industry.

Proverb, short, pithy saying expressing a familiar truth or moral lesson. Proverbs originated in primitive folklore and often exist in similar form in different countries. *The Book of Proverbs*, a section of the OLD TESTAMENT, consists of proverbs written by several authors, formerly thought to include Solomon.

Proverbs (of Solomon and others), book of the Old Testament, probably the oldest existing example of Hebrew "wisdom" literature, in which much practical counsel, most of it secular, is given.

Providence, port of entry in NE Rhode Island, USA, on Providence Bay; state capital and largest city of Rhode Island. The city was founded in 1636 by Roger Williams as a refuge for religious dissenters from Massachusetts. Brown University (1764) and Bryant College (1863) are in the city. Industries: jewellery, electrical equipment, silverware, machine tools, rubber goods. Pop. (1973) 169,931.

Proxima Centauri, closest star to the Sun, in the southern constellation of Centaurus. Proxima is a red dwarf star and is part of a triple star system with Alfa and Beta Centauri. Characteristics: apparent mag. 10.7; absolute mag. 15.1; spectral type M5; distance 4.3 light-years. See also pp.979, 988, 994, 1015, 1052, 1054.

Prudentius, Aurelius Clemens (348–after 405), Latin Christian poet who, although he held a high place in the Roman court, eventually devoted himself to religious writing. His works include *Apotheosis* (On the Nature of God), and *Psychomachia* (The Battle for the Soul) – his best-known work, which was especially popular in the Middle Ages.

Prudhoe Bay, inlet on the north Alaskan coast 320km (200 miles) east SE of Point Barrow. Oil discovered on Alaska's North Slope in 1968 made it a focus for investigations to determine whether or not it was to become a significant source of crude oil.

Prud'hon, Pierre Paul (1758–1823), French painter who, in the Neo-Classical age of Jacques-Louis David, painted Romantic, gently modelled portraits. The most delightful of these include portraits of the Empress Josephine and of his pupil Mlle Constance Mayer. He also painted some large decorative pictures, such as *Justice and Divine Vengeance pursuing Crime*, and designed Neo-Classical decorations and furniture for the empress.

Prufrock, The Lovesong of J. Alfred, poem by T. S. ELIOT, originally published in *Prufrock and other Observations* (1917), his first published work. The poem differed radically from contemporary war poetry, depicting the fantasy in the empty life of an ageing man bound by convention.

Prune, any sweet variety of plum that has been dried and cured to a wrinkled, dark-brown appearance. *Prunus domestica* is the variety most suitable for drying, which is achieved with hot air. Prunes may be eaten raw or cooked; they have a laxative effect.

Pruning, removal of branches, stems or buds from a tree or shrub. It is usually carried out to improve the appearance and flowering of ornamental trees and shrubs and the productivity of fruit trees and berry bushes. Fruit trees are usually pruned in the winter or early spring, as is the HYDRANGEA, ROSE and other flowering shrubs that bloom on new wood. LILAC, FORSYTHIA and other spring-blooming shrubs (all of which bloom on old wood) are usually pruned after flowering to avoid removing flower buds. See also p.675.

Prunus, large genus containing about 200 species of flowering trees and shrubs. It includes the APRICOT, PLUM, CHERRY, ALMOND, NECTARINE and PEACH. Many species are cultivated and are highly important as fruit crops. Family Rosaceae.

Prus, Bolesław (1845–1912), pen-name of Aleksander Głowacki, a Polish author

whose career began in journalism. From 1875 he wrote weekly newspaper articles of witty, detailed social commentary. He published several novels and collections of short stories, and his best work is thought to be *Lalka* (The Doll, 1890).

Prussia, former German state which occupied most of N Germany (1918–1945). Ducal Prussia passed to the electors of BRANDENBURG in 1618 who took the title of "King of Prussia" in 1701; previously Royal Prussia had applied only to the region acquired by Poland in the 15th century and later known as West Prussia. Prussia became a strong military power under FREDERICK WILLIAM I and FREDERICK THE GREAT in the 18th century, absorbing Silesia (1740) and parts of Poland, including West Prussia (1772–92). Prussia was defeated by the French in 1795, and took no part in the wars against NAPOLEON until 1806, when it was defeated again at JENA and AUERSTADT. Prussian power was restored and its territory increased by the Congress of Vienna, and in 1834 Prussia encouraged the other German states to unite in the ZOLLVEREIN. Under BISMARCK, chancellor from 1862, Prussia assumed leadership of the movement for German unity, and its authority was confirmed in the constitution of the second German Reich. In 1918 what was left of the kingdom of Prussia became a state of the Weimar Republic, but Prussian aristocratic and militaristic traditions greatly influenced German policy in the rise of Nazism. See also pp.1558, 1588, 1660.

Prussic acid. See HYDROCYANIC ACID.

Pryde, James (1866–1941), Scottish painter who, with William NICHOLSON, created the posters for the "Beggartaff Brothers" (their pseudonym). His paintings were often architectural compositions, which he clothed in an atmosphere of mystery.

Prynne, William (1600–69), English politician and Puritan pamphleteer. His criticism of the theatre in his book *Histrio Mastix* (1632) was interpreted as an attack on CHARLES I. His ears were cut off and he was imprisoned from 1634 to 1640. After his release he upheld the parliamentary cause in his writing during the ENGLISH CIVIL WAR. He supported the restoration of CHARLES II in 1660, and was made archivist of the Tower of London.

Przewalski's horse, also called Mongolian wild horse, only surviving species of original wild horse. Once common on Eurasian plains, it is now found only in Mongolia and Sinkiang. It is small and stocky with an erect black mane and no forelock. Its red-brown coat is marked with a darker line on the back and shoulders and leg stripes. Height: to 1.5m (4.8ft) at the shoulder. Family Equidae; species *Equus caballus przewalskii*.

Psalm, originally a musical hymn or poem sung to the accompaniment of a stringed instrument called the PSALTERY. The most famous are in the Book of Psalms, in the Old Testament; some are traditionally attributed to David, King of Judah. They are a prescribed part of both Matins and Evensong in the CHURCH OF ENGLAND, and are chanted or sung.

Psalter, the biblical PSALMS in the version found either in the Book of COMMON PRAYER or the Roman Catholic Breviary, often pointed (marked up) for singing by choirs.

Psaltery, medieval stringed musical instrument similar to the ZITHER. Several strings on a frame with a shallow sounding board are plucked with fingers or with a plectrum. It is of Middle Eastern origin and is referred to in the Old Testament. It was depicted in classic art as a variant of the CITTERN or LYRE.

Psephology, statistical and sociological analysis of the results of elections, voting patterns and electoral behaviour. See also pp.1853, 1856.

Pseudepigrapha, Jewish writings of between 200 BC and AD 200, falsely attributed to a biblical author; they follow the style and content of authentic Old Testament works. The term refers more widely to almost all ancient Jewish texts that have not been accepted as canonical by the Christian Church.

Pseudomorphism, in mineralogy, chemical or structural alteration of a mineral without change in shape. If substitution has occurred, the original substance has been removed and replaced by another. This is exemplified by petrified wood.

Pseudoscorpion, any of numerous species of small ARACHNIDS found throughout the world. It has pedipalps (paired, pincer-like appendages) and resembles a true scorpion, but lacks a tail. Length: to 7.5mm (0.04in). Order Chelonethida; family Arachnida. See also p.34.

Psi, broad term covering the phenomena of PARAPSYCHOLOGY; it generally pertains to any of the four main branches: PSYCHOKINESIS, TELEPATHY, ESP (extra-sensory perception) and CLAIRVOYANCE. See also pp.1892–1893.

Psittaciformes, order of strong-flying birds. It contains only one family, Psittacidae, which includes the COCKATOO, LOVEBIRD, BUDGERIGAR, MACAW, PARAKEET and PARROT. It has been represented since the Miocene epoch. Many species are brightly coloured, with stout hooked bills. They eat seeds, fruit or nectar. Length: to 9cm (3.5in). See also p.73.

Psittacosis, or parrot fever, disorder usually affecting the respiratory system of birds. Probably caused by bacteria, it can be transmitted to man through the handling of infected birds, in bites from them or from the dust of their feathers. In birds, there is diarrhoea and difficulty in breathing. In man, headache, cough and fever are symptoms. Treatment is generally the administration of ANTIBIOTICS.

Pskov, city in the NW Russian SFSR, USSR, on the River Velikaya near the SE shore of Lake Pskov, 250km (155 miles) SW of Leningrad. Its industries include flax processing, linen, rope, footwear and the manufacture of agricultural machinery. Pop. (1975) 151,000.

Psoriasis, chronic disorder of the skin in which there are patches, plaques or papules. The red or brown lesions are slightly elevated and usually covered with white scales. They frequently appear on the chest, knees, elbows and scalp. The cause is unknown and there is no specific treatment, although sunlight sometimes helps.

Psyche, in Greek mythology, beautiful mortal loved by EROS (CUPID). Psyche is the Greek word for the mind and the soul. Apuleius, a writer of the 2nd century AD, tells how the Pythian oracle at Delphi warned her that she would love no mortal, how she wed Cupid, lost him, and how they were reunited. The allegory suggests the freeing of the soul after purification through suffering.

Psychedelic art (1960s) style of painting and poster art. Subjects included the human nude, fantasy and calligraphy, rendered in "day-glo" or neon-bright colours and swirling line; sometimes reminiscent of the sensuality and caricature of ART-NOUVEAU.

Psychedelic drugs. See LSD.

Psychiatry and psychotherapy, branches of medicine specializing in the analysis, diagnosis and treatment of mental illnesses and behavioural disorders. Psychiatry includes treatment carried out by means of physiological assistance such as drugs and surgery; psychotherapy on the other hand seeks to restore the patient's mental health by exploring his fundamental emotional difficulties. In its most basic (and often brutal) forms psychiatry has existed since earliest times, but it only became curative in the 20th century. Psychotherapy originated in the late 19th century, and was made popular by Sigmund FREUD and Carl JUNG in the 1900s. The term psychiatrist is often used to describe practitioners of both disciplines. See also pp.1116–1117, 1120, 1121.

Psychical research, or parapsychology, investigation into extrasensory perception (ESP) or the paranormal. There are three areas of study, including telepathy, by means of which one can transmit thoughts to another over a distance. The second area is precognition, whereby one has foreknowledge of an event, and the third is déjà vu, when one feels in a new place that somehow one has been there before.

Protozoa are divided into classes according to their means of locomotion.

Marcel Proust compared his major novel to the structure of a cathedral.

Pierre Paul Prud'hon's painting *Jeune zéphyr se balançant au dessus de l'eau*.

Pruning enhances the appearance and improves the growth of trees and shrubs.

Psycho

Psychical research is also carried out into **PSYCHOKINESIS**, by which physical objects may be moved by psychic power. See also pp.1892-1893.

Psycho (1960), classic film thriller directed with typical panache by Alfred Hitchcock, in which he skilfully manipulated audiences by a series of elaborate cinematic diversions. The film starred Anthony Perkins and Janet Leigh, was based on a novel by Robert Bloch and concerned grisly murders at a lonely country motel. In a shrewd publicity exercise, its exhibitors by contract refused admission to see the film once it had begun.

Psychoanalysis, method of therapy devised by FREUD and BREUER in the 1890s for treating behaviour disorders, particularly neurosis. It is characterized by its emphasis on unconscious mental processes and on the treatment of mental disorder by the use of FREE ASSOCIATION.

Psychodrama, in group psychotherapy, a form of treatment where a patient acts out, or watches others act out, a personal problem. Patients serve as actors and audience with the help of a therapist who guides the dialogue and discussion. See also pp.514-515, 515.

Psychokinesis (PK), in PARAPSYCHOLOGY, change in an object or physical system that is supposedly directly caused by the mind or will rather than by any known physical agency. An example might be influencing the fall of dice by the will alone. See also TELEKINESIS; pp.1892-1893.

Psychological warfare, use of psychological techniques calculated to destroy a military enemy's will to fight. It often takes the form of propaganda designed to undermine faith in leaders or causes, or to induce schism within the ranks.

Psychology, study of mental activity and behaviour. It includes the study of perception, thought, problem solving, personality, emotion, mental disorders and the adaptation of the individual to society. It overlaps with many other disciplines, including physiology, philosophy and social anthropology. Probably the first known psychological work is Aristotle's *De anima*, but it was not until the work of JOHN LOCKE and THOMAS HOBBES in the 17th century on perception that psychology became a serious study. In the 19th it became a scientific discipline with the work of WILLIAM JAMES, HERMANN EBBINGHAUS, SIR CHARLES SHERRINGTON, SIGMUND FREUD and others. In the 20th century psychologists, anxious to give their work a scientific status equal to that of physics, have sought to establish verifiable principles in carefully controlled experiments on human beings and animals, but relatively little indisputable knowledge has been amassed. Perhaps more fruitful have been the developments of clinical PSYCHIATRY, founded on a variety of different conceptual bases, and of anti-psychiatry, which stresses the humanistic side of the discipline and denies the validity of overall theorizing. Applied psychology aims to use the discipline's insights into human behaviour in practical fields such as education and increasingly, in industry. See also pp.1106-1123.

Psychometrics, area of PSYCHOLOGY concerned with the measurement of abilities, capacities and normal behaviour.

Psychopath, person characterized by a personality disorder that leads to antisocial and amoral behaviour. Such people are regarded as impulsive, insensitive to others and unable to think ahead. There is little anxiety, guilt or neurosis in a psychopath and psychoanalytic theory regards his behaviour as stemming from an incompletely developed SUPEREGO. See also p.1112.

Psychosis, inability to adjust realistically to one's environment, more severe than NEUROSIS. It is often exhibited in extreme swings of mood between depression and mania, by delusions and distortions of judgement, and by an inappropriateness of response. The organic psychoses may spring from brain damage, advanced SYPHILIS, senile dementia and late stages of advanced EPILEPSY. The functional psychoses, for which there is no organic explanation, include PARANOIA, SCHIZO-

PHRENIA and manic-depressive psychosis. See also pp.1110-1111.

Psychosomatic disorder, physiological complaint thought to be caused, at least in part, by unresolved emotional disturbance. Extending the PSYCHIATRIC concept of mind and body (psyche and soma) unity, it follows that emotional conflict can manifest itself in physical symptoms. Organs affected are usually under the control of the INVOLUNTARY or autonomic NERVOUS SYSTEM. Complaints include bronchial asthma, stomach and intestinal ulcers and even circulatory and heart disease.

Ptah, in Egyptian mythology, creator of the universe and patron of craftsmen, depicted as a man standing, often wrapped in a winding sheet. The original centre of his worship was at Memphis.

Ptarmigan, any of three species of northern or alpine grouse, all of which have feathered legs; especially the Eurasian ptarmigan, *Lagopus mutus*. Its plumage changes colour seasonally. The wings and breast are white in colder months, but in the spring it becomes a mottled grey-brown. It inhabits high barren regions, feeding on leaves and lichens. Length: to 36cm (14in). Family Tetraonidae.

Pteranodon, any of several species of extinct flying reptiles of the Cretaceous period. It had long toothless jaws and an elongated crest on the back of its head; the crest may have served as a counterbalance for the jaws. It is believed to have been a glider, since it lacked the muscle development and breast keel on its turkey-sized body to flap the wings, the span of which may have been as much as 7.5m (25ft). See also PTEROSAUR; PTERODACTYL; p.283.

Pteridophyte, commonly used name for any of a group of spore-bearing plants. At one time pteridophytes were taken to include CLUB MOSS, HORSETAILS, FERNS and several fossil groups. These plants have similar life cycles but in other respects are quite distinct and are now often classified separately. See also TRACHEOPHYTE; pp.272, 364-365.

Pterididiformes. See SAND GROUSE; p.73.

Pterodactyl, any of several species of small PTEROSAURS. Almost tail-less, it had a large toothed beak and flimsy membranous wings. Fossil remains show a lack of muscular development and the absence of a breast keel. It is therefore believed that pterodactyls were gliders, incapable of sustained flapping flight. See also pp.281, 282, 283.

Pterosaur, extinct flying reptile with wing membranes supported by a single, elongated finger on each side. Distributed throughout the world during Jurassic and Cretaceous times, early forms had teeth and tails; later forms were tailless and had toothless beaks. See also p.281.

Pterygota, subclass of INSECTS, defined as winged in contrast to the Apterygota, or wingless insects. See also p.36.

PTFE, polytetrafluoroethylene, a chemically inert solid plastic, known also by the trade name Teflon. It is used as a heat-resistant material for heat-shields on spacecraft (it is stable up to about 300°C; 572°F), and is used as an insulator, lubricant and "non-stick" coating, eg on cooking pans. See also p.460.

PTH, parathyroid hormone, HORMONE secreted by the PARATHYROID GLANDS. It is important in stabilizing the level of calcium in the blood, too little calcium leading to muscular spasms and convulsions. See also pp.154, 154.

Ptolemy, name of a 15-member Greek dynasty that ruled Egypt for 300 years (323-30 BC). Ptolemy I Soter, troop commander of ALEXANDER THE GREAT, took over Egypt upon the latter's death in 323 BC. He assumed the title of king in 305 and established the Sarapis cult at Memphis. His son Ptolemy II Philadelphus succeeded him, and during his reign (285-246) he made Alexandria a cultural and commercial centre. Under Ptolemy III Euergetes (fl.246-221), Egyptian fleets gained control of the eastern Mediterranean. Ptolemy IV Philopator's reign (221-205) was a decadent one and soon after his death in 205 the Seleucid king

and the King of Macedonia seized all Egypt's provinces. The ministers of the infant King Ptolemy V Epiphanes appealed to Rome for help and from about 200 BC the power of the dynasty was superseded by the influence of Rome.

Ptolemy, or Claudius Ptolemaeus (c.90-168), Egyptian-born Greek astronomer and geographer. He charted many new stars and his remarkable *Almagest* (c.150) influenced astronomy for the next 1,400 years. His *Geography*, which included Africa and Asia, also had great subsequent influence. He devised new mathematical theorems and proofs and wrote *Optica*, a treatise on optics. See also pp.1217, 1217, 1322, 1838, 1895, 1895.

Potomaine, any of several basic organic chemical compounds, some of which are poisonous to human beings. They are derived from the decomposition or putrefaction of animal or vegetable PROTEINS and bear a resemblance to ALKALOIDS. Potomaine poisoning is a form of food poisoning caused by bacteria or toxins.

Puberty, time in human development when the sex glands first become active and the secondary sexual characteristics start to become evident. In females these include a slight deepening of the voice, the growth of pubic hair, the beginning of menstruation and the development of breasts. In males they entail the enlargement of the testes, a deepening of the voice and the growth of pubic hair. Sexual maturity is attained at about the age of 14 for most males and 12 for most females. The process of puberty is begun by the production of HORMONES by the PITUITARY GLAND. See also ADOLESCENCE; pp.1134-1137.

Puberty rites, ceremonies or rituals celebrating the attainment of maturity by an adolescent. With boys they usually occur between the ages of nine and 20; with girls they accompany the MENARCHE. The rites initiate young people into the society of adults and often involve, in the case of boys, an ordeal (such as scarification among the NUER) and, with girls, purification. See also RITES OF PASSAGE.

Pubis, in the pelvic girdle, either of a pair of small bones at the base of the abdomen. They are almost U-shaped and meet at the pubic symphysis, which is closed by a pad of cartilage. The symphytic pad spreads during childbirth in mammals. Each pubis joins an ILLIUM and an ISCHIUM at a triangular suture in the hip socket.

Public Bill, any bill introduced in the British Parliament of general public concern (as opposed to the private interest of a corporation, company or individual). It may be introduced by the government or it may be a PRIVATE MEMBER'S BILL.

Public health, branch of medicine that attempts to protect and improve the health of people in a community. It is involved with disease control, (such as mass vaccination programmes and screening for TB) and with the establishment and maintenance of health standards for housing, food, water, waste disposal and air quality. See also p.1086.

Public Health Act (1848), act of the British parliament empowering, but not requiring, town corporations to establish local health boards to improve sanitation. By 1854 only 182 boards had been established and only 13 of them had installed waterworks and sewage schemes.

Public opinion polls, unofficial means of assessing and predicting popular responses to events and issues of national importance, especially elections. Established as reliable in the 1930s with the scientific sampling pioneered by GALLUP, the many organizations retained in Britain to conduct such polls include Opinion Research Centre (ORC) and National Opinion Polls (NOP). See also MARKET RESEARCH.

Public Record Office, national depository for legal and government records in Britain, established in 1838. Medieval records are kept in Chancery Lane, London; since 1977 modern and departmental records have been kept at Kew.

Public school, in Britain, private fee-paying, usually residential, school

independent of state finance. Neither the number of public schools nor their defining traits may be exactly stated. The term came into use in the 18th century, when the best known included Eton, Rugby, Harrow, Winchester and Westminster. They taught a chiefly classical curriculum. In the USA the term applies specifically to non-private schools.

Public trustee, public official who acts as a trustee or executor, in pursuance of the Public Trustee Act (1906), by which his powers and duties are prescribed and restricted. His duties may include the selling of property, investing money or granting of leases.

Publishing, production of multiple copies of printed matter, including books, NEWSPAPERS, magazines, posters and pamphlets. The copying and circulation of manuscripts flourished in the ancient world, but the first printed book to be published in Europe was the Bible, printed by Johann GUTENBERG in 1455 in an edition of fifty copies. The first newspaper was probably *Nieuwe Tijdinghen*, published in Antwerp from 1605. Publishing is complemented by PRINTING and involves the selection and editing of the matter to be printed, and its distribution and marketing. See also pp.618-623.

Puccini, Giacomo (1858-1924), Italian composer of operas. The combination of dramatic libretti and magnificent music have ensured Puccini operas a permanent place in the repertoire of the world's opera houses. Among his best known works are: *La Bohème* (1896), *Tosca* (1900), *Madame Butterfly* (1904), *The Girl of the Golden West* (1910) and his last work, incomplete at his death, *Turandot* (1926).

Puck, also called Robin Goodfellow or Hobgoblin in English folklore of the Middle Ages, mischievous FAIRY or minor demon. He was one of the key characters in William Shakespeare's *A Midsummer Night's Dream*, portrayed as the messenger of Oberon, king of the fairies.

Pudding process, conversion of pig iron into wrought iron. It involves subjecting the pig iron to heat and frequent stirring in a furnace which can be agitated. Present in the process are oxidizers which free the wrought iron of its carbon and other impurities.

Pudney, John Leigh (1909-77), British writer. His war poems, influenced by his RAF service and first published in *Ten Summers* (1945) established his reputation for literary versatility.

Pudovkin, Vsevolod Illarionovich (1893-1953), Soviet film director. His first film was *Mechanics of the Brain* (1925-26), a film about Pavlov's theories. In 1927 he was commissioned to make *The End of St Petersburg* for the celebrations of the 10th anniversary of the Russian Revolution. He also published the books *Film Technique* (1933) and *Film Acting* (1935). See also p.1683.

Pudu, genus of South American deer that is almost tailless and has short, spike-like antlers. It measures only 38cm (15in) at the shoulder. Adults are a rich brown to grey in colour. Family Cervidae.

Puebla (Puebla de Zaragoza), city in central Mexico, in the foothills of the Sierra Madre Oriental; capital of Puebla state. Founded by the Spanish in 1532 as Puebla de los Angeles, the city has always been of strategic importance, being on the route from Mexico City to the port of Veracruz. US forces occupied the city during the MEXICAN WAR, and the French held the city from 1862 until 1867. There is a university and a 16th-century cathedral in the city. Puebla is an agricultural trade centre and is noted for its onyx working, ceramics and textiles. Pop. (1977 est.) 516,197.

Pueblo Indians, generic name for the several North American Indian tribes inhabiting the MESA and RIO GRANDE regions of Arizona and New Mexico. They belong to several language families including Keresan, Tewa, Hopi and Zuni. Their mud and stone architecture is famous throughout the South-West, and the many-storeyed buildings of the Zuni gave rise to the legendary "Seven Cities of Cibola" eagerly sought by the Spaniards. See also p.1832.

Puerperal fever, infection that can occur in women after childbirth. It is caused by bacteria (streptococci) entering the body because of the lack of aseptic techniques. With modern hospital methods, the disorder has become a rarity.

Puerperium, period of about four weeks after childbirth, during which the uterus returns to normal size. After birth there is a discharge from the uterus known as lochia, lasting up to two weeks. The recovery of skin tone and the loss of stretch marks is aided by exercises both before and after childbirth. See also p.168.

Puerto Armuelles, port in w Panama, on the Pacific coast near the border with Costa Rica. Port facilities were improved in the 1930s to handle the produce from the nearby banana plantations. Pop. (1970) 12,022.

Puerto Plata, city in the N Dominican Republic, formerly San Felipe de Puerto Plata. It is an important seaport; exports include tobacco, sugar, hardwoods, coffee and hides. Pop. (1970) 74,480.

Puerto Rico, official name the Commonwealth of Puerto Rico, a self-governing island in union with the USA, in the West Indies approx. 1,600km (1,000 miles) SE of Florida. Many Puerto Ricans have emigrated to the USA because there is great unemployment on the island. The principal crops are sugar, tobacco, coffee, pineapples and maize. Industries include cement, tourism and food processing. The capital is San Juan. Area: 8,870sq km (3,425sq miles). Pop. (1980) 187,566. See also p.2124.

Pufendorf, Samuel (1623-94), German political theorist, author of *On the Laws of Nature and Peoples* (1672), an important contribution to natural law theory. He defined the state as the sum of constituent individual wills. According to his theory state power exceeded that of the Church. **Puff adder**, widely distributed African viper. Its skin pattern varies, but it usually has yellow, crescentic markings on brown. It hunts large rodents and its poisonous bite is often fatal to man. Up to 80 young are born at one time. Length: to 1.2m (4ft). Family Viperidae; species *Bitis arietans*. See also HOG-NOSED SNAKE: p.298.

Puffball, any of a large family of MUSHROOMS (Lycoperdaceae) whose spore masses become powdery at maturity and are expelled in "puffs" when the case is pressed. Puffballs are stemless and some species - but not all - are edible. See also p.355.

Puffer fish, also called blowfish, or swellfish, marine fish found in warm and temperate seas. When threatened, it inflates itself to nearly twice its body size by a special adaptation of its gullet. Its colours vary widely. Smaller, sharp-nosed varieties are often kept in home aquariums. Length: to 91.4cm (36in). Family Tetraodontidae; there are about 100 species. See also pp.60, 63.

Puffin, small, parrot-like diving-bird of the AUK family (Alcidae), found in large colonies in the Northern Hemisphere. The Atlantic puffin (*Fratercula arctica*) has a short neck, triangular bill with red, yellow and blue stripes, and reddish legs and feet; length: about 30cm (12in). The puffin lays a single white, sometimes spotted, egg in a burrow about 1-2m (3.3-6.6ft) deep on a cliff. See also p.81.

Puffing Billy, simple steam locomotive built by William Hedley of England in 1813. Previous locomotives had used cogs and rack-rails but the Puffing Billy was an adhesion locomotive, relying on the friction between wheels and rails. It was employed in hauling coal wagons.

Pug, small dog that probably originated in China and was taken West by Dutch traders. It has a large, round head, a blunt, square muzzle and deep facial wrinkles. The wide-chested, short body is set on strong, straight legs and the tail is tightly curled over the hip. The short coat may be grey, light brown or black with a characteristic black face. Height: to 28cm (11in) at the shoulder; weight: to 8kg (18lb).

Pugachev, Emelyan Ivanovich (c. 1726-75), Russian Cossack leader. He

led a massive popular revolt against CATHERINE II and in 1773 proclaimed himself Peter III, promising freedom from serfdom, taxes and military service, and the elimination of landlords and other officials. Defeated in late 1774, he was taken to Moscow for trial and executed.

Puget, Pierre (1620-94), French BAROQUE sculptor, painter and architect. In 1667 he began work on the doorway of the City Hall at Toulon. His sculpture includes *Milo of Crotona* (1683).

Pugin, Augustus Welby Northmore (1812-52), British architect who helped to design the Houses of Parliament with Sir Charles Barry. He also designed many churches, including St Giles, Cheadle, Staffordshire (1841-46), and St Augustine, Ramsgate (1846). By his works and writings, especially *True Principles of Pointed or Christian Architecture* (1841), he was a leading promoter of the GOTHIC REVIVAL.

Puglia. See APULIA.

Pulcinella (1920), one-act ballet with music by STRAVINSKY, adapted from PERGOLESI. It was performed by the BALLET Russes in Paris with libretto and choreography by MASSINE and décor by PICASSO. Written in NEO-CLASSICAL style, the story involves COMEDIA DELL'ARTE characters. See also PUNCH AND JUDY.

Puli, Hungarian shepherd dog, a breed that is at least 1,000 years old. It has a slightly domed head with a medium-long muzzle and V-shaped hanging ears. The straight-backed body is set on strong legs and the tail is curved over the back. The unusual long, double coat mats into felt-like cords and may be almost any solid colour. Height: to 48cm (19in); weight: to 13.5kg (30lb).

Pulitzer, Joseph (1847-1911), Hungarian-born US newspaper publisher who founded the PULITZER PRIZES. The pioneer of sensational journalism, he made the *New York World* the USA's largest circulation daily newspaper by crusading powerfully for oppressed workers and against alleged big business and government corruption, using the "yellow-press" techniques that William Randolph Hearst copied successfully.

Pulitzer Prizes, annual American awards presented for outstanding achievement in journalism, letters and music. The cost of the prizes is met by the income from a trust fund left by publisher Joseph PULITZER to the trustees of Columbia University. The first prize was awarded in 1917. Categories include best cartoon, best news photograph and outstanding editorial writing. There are prizes for fiction, drama, US history, biography, poetry and musical composition. Journalism awards are \$1,000 each and the letters and music awards are \$500 each.

Pulley, simple machine used to multiply force or to change the direction of its application. A simple pulley consists of a wheel, often with a groove, attached to a fixed structure. Compound pulleys consist of two or more such wheels, some movable, that allow a person to raise objects much heavier than he could lift unaided. See also pp.448, 448, 456, 456.

Pullin, John (1941-), British rugby union player who captained England to victories over South Africa in 1972 and New Zealand in 1973. A hooker from the Bristol club, he became England's most-capped player (42 caps, 1966-76) and toured South Africa (1968) and New Zealand (1971) with the British Lions.

Pullman, George Mortimer (1831-97), US industrialist and inventor of the railway sleeping car. A cabinet maker in his youth, he began converting old railway coaches in 1859 to make long-distance travelling more comfortable and built the first modern sleeping car, known as the Pullman Car, some six years later.

Pulmonary embolism, chronic and sometimes fatal obstruction of a pulmonary blood vessel by a massive travelling clot. It generally leads to symptoms of shock, acute high blood pressure in the pulmonary arteries and eventual failure of the right ventricle of the heart.

Pulsar, rapidly rotating star of extreme density that, although only between about

1.4-3 times as massive as the Sun, has been compressed by gravitational collapse to only a few hundred miles across. Pulsars regularly emit radio pulses and in some cases X-ray and visible pulses; they were first detected in 1967. The magnetic field and gravity are also extreme by terrestrial standards. Pulsars are now identified with neutron stars, postulated in 1939 as dying stars that would be too massive to become stable white dwarfs and which would collapse further with tremendous release of energy. See also pp.984-987.

Pulse, regular wave of raised pressure in arteries that results from the flow of blood injected into the arterial system at each beat of the HEART. The pulse is usually taken at the wrist, over the radial artery, although it may be observed at any point where an artery is near the surface.

Puma, also called mountain lion or cougar, large New World cat found in mountains, forests, swamps and jungles of the Americas. It has a small round head, erect ears and a heavy tail. The coat is tawny or pale brown with dark brown on the ears, nose and tail; the underparts are white. It preys mainly on deer and small animals, but has been known to take livestock. Length: to 2.3m (7.5ft), including the tail; height: to 75cm (30in) at the shoulder. Family Felidae; species *Felis concolor*. See also p.315.

Pumice, rhyolitic LAVA blown when it is molten to a low density rock froth by the sudden discharge of gases during a volcanic action. When ground to a powder and pressed into cakes it is used as a light abrasive.

Pump, device for raising, compressing, propelling or transferring fluids (liquids or gases). The lift pump, for raising water from a well, and the bicycle pump, for compressing air into pneumatic tyres, are examples of reciprocating (to-and-fro) pumps. Most modern high efficiency pumps have rotating impellers (blades) which create suction at their input points and force fluid out at their exit points. The centrifugal pump, a type of rotary pump, has an impeller which creates a pressure difference due to centrifugal force. See also pp.429, 830, 831.

Pumpkin, orange hard-rind garden fruit of a trailing annual vine found in warm regions of the Old World and the USA; a variety of *Cucurbita pepo*. In the USA the pumpkin is also called a squash, especially the winter pumpkin (or squash) *Cucurbita maxima* and *C. moschata*. In Britain, the SQUASH is a member of the GOURD family (Cucurbitaceae). See also pp.373, 684, 685.

Punch and Judy, British glove-puppet show. Performed in a tall booth, often out of doors, the show features a comic, grotesque and sadistic protagonist, Mr Punch, and his long-suffering wife, Judy, together with a host of glib characters ranging from a hangman to a crocodile. The origins of this form of entertainment date from the PULCINELLA of the COMEDIA DELL'ARTE and it was as an Italian MARIONETTE show that it made its first appearance in London in the 1660s.

Punched card, medium for storing and entering data into computers and accounting machines. The information is typed on the key-board of a machine which encodes it into a pattern of holes on a paper card, which the machine can interpret. See also pp.466-469.

Punched tape, medium on which information (eg, data or programs) is converted into machine codes and fed into a computer. The information is typed on the keyboard of a machine which converts it into a pattern of holes on a paper tape. Each letter and digit corresponds to a unique combination of hole positions on the tape. See also pp.466-467, 467.

Punic Wars (265-241, 218-201 and 149-146 BC), three conflicts between Rome and Carthage, during which Rome became the predominant Mediterranean power. The first war arose over a dispute about control of the Straits of Messina. Although the Romans built their first fleet and gained command of the sea, they could not at first take Carthaginian strongholds in Sicily, nor defeat Carthage

in N Africa. Eventually a naval victory off the Aegates in 241 led Carthage to sue for peace, and Sicily was surrendered. The second war arose out of Carthage's conquest of Spain (237-219 BC). HANNIBAL marched into Italy from Spain in 218 via the Alps, but failed to take Rome. Roman victories in Spain and N Africa led to Hannibal's recall, and his defeat at ZAMA in 202 BC. Carthage surrendered the next year, and became a Roman vassal. The third war arose out of Roman determination to destroy Carthage and, after a long blockade of the city, the Romans (led by SCIPIO AFRICANUS MINOR) razed Carthage to the ground. See also p.1225.

Punjab, state in N India; the capital is Chandigarh. It was formed in 1956 by the merging of East Punjab state, the union territory of Patiala and the East Punjab States Union and further reorganized in 1966 into two states, HARYANA and the Punjab. Apart from the capital, other important cities are Amritsar and Ludhiana. The Punjab is a largely irrigated agricultural area. Products include textiles, woollens, cereals, cotton and sugar. Area: 50,376sq km (19,450sq miles). Pop. (1971) 13,551,060.

Punjab, province in NE Pakistan. It was formed during the partition of India in 1947 when the original Punjab province of British India was divided into E Punjab (mainly Hindu) which went to India and W Punjab (mainly Muslim) which became the Pakistani province of the Punjab. The area is mainly agricultural with wheat and cotton the major crops. Industries include textiles, machinery and electrical appliances. The capital is Lahore. Area: 206,432sq km (79,703sq miles); pop. (1972) 37,374,000.

Punjabi, INDO-ARYAN language spoken by more than 17 million people in the Punjab in India and Pakistan. Punjabi is divided into two linguistic groups: eastern Punjabi is spoken around Lahore and Amritsar and has a flourishing literature; western Punjabi has no literary tradition. See also p.1878.

Punting, sport and recreational pursuit in which a narrow, flat-bottomed boat is propelled by pushing a long pole against the riverbed. As a sport it features in regattas in singles, doubles and mixed doubles forms.

Pupa, quiescent, non-feeding developmental stage of insects that undergo complete metamorphosis, such as the BUTTERFLY and BEETLE. The pupa, often called a chrysalis in butterflies, generally occurs in a four-stage life cycle from the egg, through larva and pupa, to adult. See also pp.42, 42.

Pupil, in the structure of the EYE, the circular aperture through which light passes to the lens; it is located in the centre of the iris. Its diameter changes by reflex action of the iris, from about 3 to 8mm (0.12-0.32in), to control the entry of the light. See also pp.136-137.

Pupin, Michael Idvorsky (1858-1935), US physicist and inventor, b. Yugoslavia. He devised a means of extending the range of long-distance telephone communications by placing loading coils at intervals along the transmitting wire, and invented a method of taking short-exposure X-ray photographs. His autobiography *From Immigrant to Inventor* (1923) won the Pulitzer Prize.

Puppet theatre, miniature stage for shows of glove puppets, MARIONETTES, rod puppets and flat and shadow figures. Such theatres existed in ancient Egypt and in Greece in the 5th century BC, in China, Java, and elsewhere in Asia, and reached their peak of popularity in 18th-century Europe. They also flourished in the Puritan period in England when the live theatres were closed. The use of dummies by ventriloquists has been developed in the 20th century, and in recent years many puppet shows have been presented on television.

Puppis, or the Poop, southern constellation that with Carina (the Keel) and Vela (the Sails) made up the old constellation of the Ship (Argo). The brightest star is of the second magnitude. See also pp.1014, 1014, 1020, 1020.

Purcell, Edward Mills

Purcell, Edward Mills (1912–), US scientist who shared with Felix Bloch the 1952 Nobel Prize in physics. Purcell's discovery of the nuclear magnetic resonance (NMR) in liquids and solids is instrumental in the measurement of the magnetic moments of nuclei and molecules. See also p.905.

Purcell, Henry (1659–95), English composer and organist of the BAROQUE period. In 1677 he was appointed composer for the king's band and in 1679 became organist at Westminster Abbey. It is his church music for which he is most famous; much of it is still frequently performed. His only opera *Dido and Aeneas* (1689) is regarded as an early masterpiece of the form, and his many other stage works include *The Fairy Queen* (1692). He also excelled at writing music for special occasions, such as his coronation anthem for James II, *My Heart is Inditing* (1685). See also pp.1452, 1452–1453.

Purdy, Alfred Wellington (1918–), Canadian poet. His experiences while travelling in Canada and abroad form the basis for much of his poetry. His volumes of verse include *The Enchanted Echo* (1944), *The Crafts So Long to Learn* (1951), *North of Summer* (1967) and *Storm Warning* (1971).

Purgatorio (c.1321), second part of DANTE's *Divine Comedy*. Describing the penance for, and purification of, the seven deadly sins, the work marks the middle stage of the poet's allegorical journey from the study of error and ignorance to the contemplation of perfection. In preparation for his ascent into paradise Dante's guide, hitherto the pagan VIRGIL, becomes, appropriately, the embodiment of human perfection, Beatrice, at the end of this section of the work.

Purgatory, place between heaven and hell where a soul that has died in a state of grace is purged of its sins before entering heaven. In the teachings of the Roman Catholic Church souls which die with unforgiven venial and forgiven mortal sins go to purgatory. The suffering there differs from that in hell, in that the soul in purgatory knows its punishment is only temporary.

Purim, ancient Jewish celebration of thanksgiving, which usually takes place in March, commemorating the deliverance of the Jews of Persia from Haman's plot to destroy them. The story, which appears in the Book of ESTHER in the Old Testament, is read on this festival in all synagogue services. The gift of alms to the poor is obligatory on this occasion, and the festival is associated with an atmosphere of carnival.

Purine, white crystalline organic compound, $C_4H_4N_4$, related to uric acid. ADENINE and GUANINE are both purines and two of the four bases which comprise DNA. Another derivative of purine is ADENOSINE TRIPHOSPHATE (ATP), a nucleotide essential to the transfer of energy within living cells.

Puritans, English Protestant fundamentalists who were particularly influential during the 16th and 17th centuries. They originated in the reign of Elizabeth I; their chief aim was to make a truly Protestant Church out of the CHURCH OF ENGLAND, which was (and still is) technically not one. Following the ideas of Jean CALVIN, their opposition to Anglicanism was initially directed against liturgical vestments, elaborate ritual and other elements of "popish" practice, but they subsequently also demanded the abolition of church government by bishops and the setting up of a policy of PRESBYTERIANISM. According to Calvin's concept of PREDESTINATION, they thought of mankind as divided into the Elect – those destined inevitably for Heaven – and the Reprobate. The Puritans' zenith was reached when Oliver CROMWELL, an Independent (Congregationalist), assumed power and disestablished the Church of England; the Church was re-established in 1660, although Presbyterianism became the state Church in Scotland in 1690.

Purkinje, Jan Evangelista (1787–1869), Czech physiologist who discovered the Purkinje effect, in which red objects are perceived to fade faster than equally

bright blue objects as the light intensity decreases. In 1825 he discovered the nucleus of the unripe ovum, which was named after him; he also discovered sweat glands in the skin (1833) and that pancreatic extracts can digest proteins (1836). He is probably best known for the discovery in 1837 of Purkinje cells; large neurons with many branching extensions in the cortex of the CEREBELLUM.

Purple Heart, Order of the, US military decoration. It was first instituted by George WASHINGTON in 1782 during the War of AMERICAN INDEPENDENCE but only three of these original awards were made. The present award, a rectangular mauve ribbon with white at both ends, was recreated in 1932 as an award for US servicemen wounded in battle.

Purpura, leakage of blood from the blood vessels which causes purple spots under the skin. Vitamin deficiencies, some allergies and certain drugs are some of the factors that can cause it. Treatment depends on the underlying cause.

Purse seining, common means of commercial fishing from a boat, in which a vertical net is used to surround a shoal of fish. A rope running around the base of the net is drawn tight, trapping the fish. See also p.739.

Purslane, any of several species of small annual plants with red stems, oval leaves and small red, brown, white or yellow flowers. Common European purslane, *Portulaca oleracea*, is typical in that it grows well in dry soil and can still bloom and produce seeds if uprooted. Family Portulacaceae.

Purvey, John (c.1353–c.1421), English religious reformer. He was secretary to the LOLLARD leader, John WYCLIFFE, and helped to finish (c.1382) Wycliffe's translation of the Bible, the first in English. A more careful and scholarly translation of the Bible (c.1396) has been ascribed to him. He was arrested as a heretic in the 1390s; he recanted and was released in 1401. He resumed his Lollard activities in 1403 and was arrested again in 1421, after which nothing more is known of him. See also p.1329.

Pus, thick, yellow fluid produced by the body as a defence against bacterial infection. It comprises blood serum, dead PHAGOCYTES (types of white blood cells) and BACTERIA, and damaged tissue. It may contain live bacteria and is therefore a possible source of further infection.

Pusan, port in SE South Korea, 320km (200 miles) SSE of Seoul; capital of S Kyongsang province. The city was held by the Japanese from 1910 to 1945. During the Korean War, Pusan was the only port through which the UN army could be supplied. Industries: shipbuilding, textiles, metallurgy. Pop. (1975), 2,450,125.

Pusey, Edward Bouverie (1800–82), British theologian and leader of the OXFORD MOVEMENT. Appointed Professor of Hebrew at Oxford University in 1828, he opposed theological RATIONALISM and with John KEBLE and the future Cardinal NEWMAN wrote *Tracts for the Times* (1834) on the difference between Anglican and Roman Catholic doctrine and practice. His other writings include *The Doctrine of the Real Presence* (1855–57) and the three books *Eirenicon* (1865–70).

Pushkin, Alexander Sergeievich (1799–1837), Russian poet and novelist. He was exiled in 1820 for his political views and in the same year his first major poem *Ruslan and Lyudmila* was published. *The Prisoner of Caucasus* (1822) and *Boris Godunov* (1831) show his response to the beauty of the CRIMEA and CAUCASUS, and reveal the influence of Lord BYRON. Later, under the protection of tsar NICHOLAS I, he completed his masterpiece *Eugene Onegin* (1833). He also wrote *The Queen of Spades* (1834) and *The Captain's Daughter* (1836). See also pp.1576, 1576.

Pushtu. See PASHTO.

Puskas, Ferenc (1926–), Hungarian footballer who, having won 84 caps for his country (1945–56), became an exile after the 1956 Uprising. He joined the Spanish club Real Madrid in 1958, for which his dynamic left-foot shooting brought many honours. One of football's great players,

he won three caps for Spain (1961–62) and later became a successful manager in Greece.

Putnik, Radomir (1847–1917), Serbian general. He commanded the Serbian army from the beginning of WWI until the occupation of Serbia by the CENTRAL POWERS in 1916.

Putrefaction, decomposition of organic matter, especially PROTEINS, by FUNGI, BACTERIA and OXIDATION. It results in foul-smelling products. Putrefaction of meat, for example, yields hydrogen sulphide, amines and mercaptans.

Putting the weight. See SHOT PUT.

Putto (Italian, "little boy"), in art, word to describe the chubby, naked, often winged babe found in many pictures and sculptures. As representations of the god Eros or Cupid, putti have been a common motif in decorative art since classical times.

Putumayo (Icá), river in NW South America. It rises in the SW part of Colombia, on the slope of the Andes; runs SE forming a large part of the Colombia-Peru border; flows into Brazil, where it is known as the Icá, and then into the River Amazon. Length: 1,578km (980 miles).

Puvé de Chavannes, Pierre (1824–98), French mural painter. He gained recognition with his *Return from Hunting* (1859). His huge murals adorned many public buildings and include those for the Hôtel de Ville (1893) and the Panthéon, Paris (begun 1876).

Puy-de-Dôme, département in the Auvergne and part of Bourbonnais, central France. Situated in the MASSIF CENTRAL, it includes an extinct volcano (of the same name), height 1,465m (4,806ft), which has an observatory, built in 1876, on its level summit. Pop. (département) (1972 est.) 573,200.

Pu Yi, Henry (1906–67), Chinese emperor. As Hsuan Tung, he ruled from 1908–12. He became President of Manchukuo, a Japanese puppet state, in 1932 and styled himself Emperor (1934). Captured by Soviet forces (1945), he was delivered to Mao Tse-tung and imprisoned (1949–59). He later served in the Chinese parliament from 1964.

Puzo, Mario (1920–), US novelist. His first novel, *The Fortunate Pilgrim*, was published in 1964. He achieved prominence, however, with the publication of *The Godfather* (1969), a sensational best-seller about a New York Mafia family. Selling over 500,000 copies in hardback and over 10 million copies in paperback, the book was the basis of two equally successful films. See also p.620.

PVC, polyvinyl chloride, a synthetic THERMOPLASTIC resin made by the POLYMERIZATION of vinyl chloride ($CH_2=CHCl$), obtained from natural gas or from crude oil. It is water-repellent and has good insulating properties. Among its many everyday applications are plastic plumbing, guttering, floor covering, waterproof clothing and insulation for electrical cables. See also p.897.

Pyelitis, inflammation of the pelvis of the KIDNEY, where urine collects to drain along the URETER and into the BLADDER. It sometimes occurs in pregnant women. The symptoms include pain in the lower back, chills, fever and frequency of urination. The urine may be bloody, or cloudy with pus. It is usually treated with SULPHA DRUGS or ANTIBIOTICS.

Pyelonephritis, worsening of PYELITIS, in which the initial bacterial infection has spread throughout the KIDNEY. It may persist for many years with concurrent damage.

Pygmalion (1913), five-act comedy by George Bernard SHAW. A modern adaptation of the Pygmalion-Galatea legend, it tells how Henry Higgins, a professor of phonetics, transforms a Cockney flower girl, Eliza Doolittle, into a perfect lady. Shaw added new scenes and speeches for the 1938 film version, and the play was later made into the successful musical *My Fair Lady* (1956).

Pygmy, member of a group of people whose men average less than 1.5m (4.6ft) in height. African Pygmies inhabit parts of central Africa and Zaire; Asian Pygmies, or Negritos, are found mainly in the Phil-

ippines and Malaysia. Most pygmies are hunters and gatherers, with few crafts. Their numbers are declining rapidly and they seem likely to become extinct fairly soon. See also p.121.

Pym, John (1584–1643), English politician. He was a leader of the opposition to the Duke of BUCKINGHAM in the 1620s, and helped to pass the Petition of Right in 1629. He was the leading member of the parliamentary opposition to CHARLES I in 1640–43, attacking STRAFFORD and LAUD. Charles tried but failed to arrest him in Parliament in 1642, and Pym organized the alliance between Parliament and the Scottish COVENANTERS.

Pynas, Jan (c.1583–1631), Dutch painter of religious and historical subjects. His paintings include *The Raising of Lazarus* (1615) and *The Entombment* (1607).

Pynchon, Thomas (1937–), US novelist whose works are noted for their off-beat humour and inventiveness. He has shunned all publicity, so little is known about his life. His works include the science fiction novels *V.* (1963) and *The Crying of Lot 49* (1966), and *Gravity's Rainbow* (1973).

P'yongyang, city in W North Korea, on the Taedong River; capital of North Korea with provincial status. An ancient city, it served as the capital of the Chosor (12th-century BC – 108 BC), Koguryo (c.37 BC – AD 668) and Koryo (10th–12th centuries) kingdoms. It became the capital of North Korea in 1948. During the Korean War, P'yongyang was held by UN forces but fell to the Communists in 1950. It suffered considerable damage by US air raids during the Korean War and since 1953 has been substantially rebuilt. Parts of the ancient city walls remain and there is a university (1946) in the city. Industries: cement, iron and steel, chemicals, rubber, textiles. Pop. (1966) 1,364,000.

Pyorrhoea, disease of the gums and associated tissues. It starts with bleeding followed by receding of the gums and loosening of the teeth as their roots are exposed. Its causes include malnutrition, poor dental hygiene and dental tartar.

Pyraecantha, or fire thorn, genus of thorny evergreen shrubs found from SE Europe to China. They have toothed, leathery leaves, white flowers, and red, orange or yellow berries. Easily grown in subtropical and temperate regions, they are popular garden shrubs. Family Rosaceae.

Pyramid, large monument on a square base with sloping sides rising to a point. Pyramids are found mostly in Egypt and served as burial chambers for the pharaohs. Similar structures, but with stepped sides, called ziggurats, were built in Mesopotamia and Central America. The earliest pyramid was built c.2700 BC for Zoser; pyramid building reached its peak in the 4th, 5th and 6th Dynasties of ancient Egypt. The largest pyramid was built for KHUFU (Cheops) c.2500 BC; it was 146m (480ft) high and 231m (758ft) long at the base. The largest New World pyramid was built in TEOTIHUACAN, Mexico, in the 1st century AD; it was 66m (216ft) high with a surface area of 50,600sq m (547,200sq ft). See also pp.1167, 1179.

Pyramid, in geometry, a solid figure having a polygon as one of its faces (the base), the other faces being triangles with a common vertex. Its volume is one-third of the base area times the vertical height. **Pyramids, Battle of** (the July 1798), during the French Revolutionary Wars, a battle fought between French troops under NAPOLEON and the Egyptian MAMELUKES. Napoleon's victory gave the French control over Egypt, but was soon nullified by NELSON's destruction of the French fleet at the Battle of the Nile (1798).

Pyrenean mountain dog, large dog that was originally used in the Pyrenees to guard sheep from wolves and bears. It has a large domed head with a solid muzzle and pendulous ears. The deep-chested, stocky body is set on stout muscular legs and the tail is long. The long, silky, irregular coat may be white or off-white with grey or tan markings. Shoulder height: to 81cm (32in); weight: to 57kg (125lb).

Pyrenees, range of mountains in S France

and N Spain, extending in an almost straight line E to W from the Mediterranean Sea (Cape Creuse) to the Bay of Biscay (Cape Higer). There are few passes through the mountains, which were formed in the Tertiary era. The Pyrenees contain deposits of marble, gypsum and oil, and there are extensive forests. Sheep and goat grazing is the chief farming activity. The highest point is Pico de Aneto, 3,406km (11,168ft). Length: 435km (270 miles).

Pyrethrum, popular name for the painted daisy (*Chrysanthemum coccineum*) and for several other species of the genus *CHRYSANTHEMUM*. It is also the name for the insecticide made from the dried flower heads of the Dalmatian chrysanthemum (*C. cinerariaefolium*).

Pyridine, compound (C_5H_5N) of the heterocyclic series characterized by a six-membered ring structure composed of five carbon atoms and one nitrogen atom. It occurs in bone oil and coal tar and is synthetically produced from acetaldehyde and ammonia. Pyridine is used as a solvent and converted to sulphapyridine (a drug used to combat bacterial and viral infection), pyribenzamine and pyrilamine (ANTIHISTAMINES).

Pyridoxine, VITAMIN of the B complex (B_6) involved in the metabolism of AMINO ACIDS in the body.

Pyrimidine, colourless liquid ($C_4H_4N_2$) of the heterocyclic series characterized by a ring structure composed of four carbon atoms and two nitrogen atoms. It may be prepared from uracil, a dihydroxy pyrimidine compound, by chemical reactions that remove two oxygen atoms. It is used in the manufacture of various SULPHA DRUGS and BARBITURATES.

Pyrites, most common and widespread sulphide minerals, iron sulphide (FeS_2), occurring in all types of rocks and veins. Often called "fool's gold" because of its deceptive colour, it is used chiefly to produce sulphuric acid. It crystallizes as cubes, pyritohedra and octahedra, often twinned, and also as granules and globular masses. It is opaque, metallic and brittle, with a hardness of 6.5 and s.g. 5.01.

Pyromania, symptom of a mental disorder characterized by a compulsion to start fires. The pyromaniac enjoys watching fires burn and often lights them following a set, ritualistic pattern.

Pyrometer, thermometer for use at extremely high temperatures, well above the ranges of ordinary thermometers. An optical pyrometer consists essentially of a small telescope, a RHEOSTAT and a filament. When the telescope is aimed at a furnace or other hot object, the filament appears dark against the background. As the electric current flaring through the filament is increased slowly using the rheostat, it grows brighter until it matches the intensity of the furnace. The amount of current is a measure of the temperature. See also p.843.

Pyrope, magnesium aluminium GARNET, and the most common form of garnet; its composition is $Mg_3Al_2(SiO_4)_3$. It may be purplish or brownish red and is found mainly in South Africa and the USA. Often used in jewellery, it has been given such misleading names as ruby and Bohemian garnet.

Pyrotechnics. See FIREWORKS.

Pyroxene, any of a large group of single-chain SILICATES, which include many important rock-forming minerals. Enstatite, augite, jadeite and wollastonite are well-known pyroxenes. Their colours range from white and yellow to brown. Hardness 2.3-4; s.g. 5.5-6. See also pp.209, 258.

Pyrrho (c.360-270 BC), Greek philosopher, considered the founder of SKEPTICISM. He went with Alexander the Great's expedition to the East, after which he enjoyed distinction in Athens. His doctrine was that nothing can be known because every statement can be plausibly contradicted; therefore wisdom is in reserved judgement.

Pyrrhonism, sceptical philosophy named after the Greek philosopher PYRRHO.

Pyrrhus (319-272 BC), King of Epirus (r.307-302, 295-272 BC). He greatly

expanded his kingdom into Illyria, Macedonia and Thessaly. While aiding Tarentum he defeated the Romans at Heraclea in 280 and Asculum in 279, but sustained grievous losses (hence the term "Pyrrhic victory"). He was killed by a street mob in Argos.

Pyrrrole, organic chemical compound consisting of a five-membered ring with four carbon atoms and one nitrogen atom (C_4H_5N). It is a colourless liquid that smells like chloroform, obtained from coal tar and bone oil. It forms part of the molecules of various natural pigments, such as CHLOROPHYLL and HAEMOGLOBIN.

Pyrus, genus of plants, including several species of PEAR, especially *P. communis*, one of the most important fruit trees of the world. Family Rosaceae. See also p.688.

Pyruvic acid, colourless liquid that can be formed by the distillation of TARTARIC ACID; it has a vinegary odour. A derivative, phenylpyruvic acid, occurs in the urine of patients suffering from PHENYLKETONURIA.

Pythagoras, (c.580-500 BC) Greek philosopher and founder of the Pythagorean school. Little is known of his life except that he was born on Samos and lived in Crotona. The Pythagoreans believed in reincarnation and that numbers constitute the true nature of things. They treated the sexes as equal, were humane to slaves and respected animals; they saw all relations as numerical, made important contributions to geometry, medicine and philosophy, and were probably the first to teach that the Earth is a sphere revolving about the Sun. See also pp.1216-1217.

Pythian Games, in ancient Greece, games held every four years at DELPHI in honour of APOLLO. They took their name from the Pythia, the medium of the oracle, and included musical and athletic contests.

Pythias, (or, correctly, Phintias), Pythagorean friend of Damon, the subject of a story by CICERO to illustrate true friendship. Condemned to death by Dionysius of Syracuse in the 4th century BC, Pythias asked leave to arrange his affairs and Damon pledged his life against Pythias' failure to return. Such loyalty so impressed Dionysius that he spared the life of Pythias.

Python, name of more than 20 species of non-poisonous snakes of the BOA family (Boidae), found in tropical regions. Like boas, pythons are constrictors which kill their prey (birds and mammals) by squeezing them in their coils. Unlike boas, pythons lay eggs. The reticulated python (*Python reticulatus*) of SE Asia and the Philippines vies with the anaconda as the world's largest snake, reaching up to about 9m (30ft). Subfamily Pythoninae.

Pyx, vessel used to contain consecrated bread; in the Roman Catholic Mass. It may be ornately shaped or a simple cylindrical box with a conical lid. As the liturgy changed, the pyx came to be placed on a stand; this probably led to the use of the MONSTRANCE, in which the host is exposed to view.

Q, 17th letter of the alphabet, derived from the Semitic letter qoph (meaning the eye of a needle), which became qoppa in the Greek alphabet. It was superseded by kappa and retained its k sound when incorporated into the Latin alphabet, which gave it the following u that accompanied it into all the subsequent Romance languages, and thence into English. Thus the qu combination retains a kw or k pronunciation in such English words as queen or opaque. In a few words (mostly proper names) of Arabic origin, the q has no accompanying u and is pronounced as a k, as in Iraq. See also pp.608-609.

Qaddafi, Muammar al- (1942-), Libyan political leader and army officer who in 1969 led a coup against the monar-

chy of Idris I, naming himself Libya's commander-in-chief and Chairman of the Revolutionary Command Council. A militant Arab nationalist, he helped to support the Palestinian guerrillas in their actions against Israel and sought to unite Libya with other Arab nations. See also pp.1782-1783.

Qajar dynasty, ruling house of Persia (Iran) from 1794 to 1925. It was established by Agha Muhammad, a Turkoman eunuch, who gained control of the north, defeated the last Zand ruler in 1794 and was crowned Shah in 1796. He made Teheran his capital. The last Qajar ruler, AHMAD SHAH, was exiled by REZA KHAN in 1923 and deposed in 1925. See also p.2069.

Qandahar. See KANDAHAR.

Qantas, international airline of Australia, originally the internal Queensland and Northern Territory Aerial Service. It came under government control in 1947.

Qaraim. See KARAIM; KARAITES.

Qatar, independent Arab nation occupying a peninsula extending N into the Persian Gulf from the Arabian mainland. Most of the people live along the coast because the land which rises sharply behind it is a barren plateau. The economy is based on the production of oil and natural gas; the capital is Doha. Area: 11,000sq km (4,247sq miles). Pop. (1978 est.) 200,000. See p.2124.

Qingdao. See TSINGTAO.

Quadragesima, the 40 days of LENT, before Easter. The first Sunday in Lent is Quadragesima Sunday.

Quadrant, in plane geometry, a quarter of a circle, bounded by radii at right-angles to each other and the arc of the circle. In analytic geometry it is one of the four sections of a plane divided by an x-axis and a y-axis. A quadrant is also a device for measuring angles, based on a 90° scale.

Quadratic equation, algebraic equation in which the highest exponent of the variable is 2; an equation of the second degree. A quadratic equation has the general form $ax^2 + bx + c = 0$, where a , b and c are constants. It has two solutions (roots), given by the formula $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$.

Quadrille, group ballroom dance popular in Europe in the late 18th and 19th centuries. It consisted of four or five short dances, each with prescribed combinations of figures. It is also a North American square dance based on the same form, but often with the different patterns of the shorter dances combined.

Quadruple Alliance, name given to several alliances between European countries. That of 1718 was formed by England, France, The Netherlands and the Holy Roman Emperor against Philip V of Spain. That of 1814 was made by Britain, Austria, Prussia and Russia against Napoleon I. That of 1834 was formed by Britain, France, Spain and Portugal to support the Spanish throne against the CARLISTS.

Quaestor, or questor, magistrate of ancient Rome, with financial rather than judicial authority.

Quagga, extinct ZEBRA once numerous in southern Africa. Excessive hunting, particularly for its skin, led to its extermination by 1883. Its brown coat was marked with black and cream stripes on the head, neck and shoulders only. The legs were pale-coloured and unstriped. A few photographs and preserved museum specimens survive. Family Equidae; species *Equus quagga*.

Quail, any of a group of Old World chicken-like game BIRDS. The European quail (*Coturnix coturnix*), a small short-tailed bird with white throat and mottled brownish plumage, is found throughout Europe, Asia and Africa. The Australian quail, a variety which is known as little quail (*Turnix velox*), is a stocky, sedentary, brownish bird. Mainly ground-living birds, they scrape for fruits and seeds and nest on the ground. See also p.303.

Quakers, nickname for the Society of Friends, a Christian sect which arose in England in the 1650s, founded by George Fox. The name derived from the injunction given by early Quaker leaders that their followers tremble in the sight of the

Lord. Quakers rejected the episcopal organization of the Church of England, believing in the priesthood of all believers and the direct relationship between a man and the spiritual light of God. Quakers originally worshipped God in silence unless someone was moved by the Holy Spirit to speak or offer up a prayer but have introduced hymns and readings into their meetings since the mid-19th century. The largest Quaker Church is in the USA, where it began with the founding of a settlement by William PENN in 1681.

Qualitative analysis, identification of the chemical elements or ions in a substance of mixture. See pp.904-905.

Quant, Mary (1934-). British fashion designer whose off-the-peg, youth-oriented clothing - especially the mini-skirt - helped to focus attention on London as a world fashion centre in the 1960s.

Quantitative analysis, identification of the amount of chemical constituents in a substance or mixture. Two methods are employed, chemical and physical. Chemical methods use reactions such as precipitation, neutralization and oxidation, and measure volume or weight (volumetric or gravimetric analysis). Physical methods measure qualities such as density and refractive index. See pp.904-905.

Quantum. See QUANTUM THEORY.

Quantum mechanics, in physics, use of QUANTUM THEORY to explain the behaviour of ELEMENTARY PARTICLES, such as electrons. In essence quantum mechanics makes energy (waves) and particles (matter) interchangeable concepts. In 1924 Louis de BROGLIE suggested that particles have wave properties, the converse having been postulated by MAX PLANCK in 1900. In 1926 Erwin SCHRÖDINGER used this hypothesis to predict particle behaviour on the basis of wave properties, and a year earlier WERNER HEISENBERG had produced a mathematical equivalent to Schrödinger's theory, without using wave concepts. In 1928, Paul DIRAC unified these approaches while incorporating RELATIVITY into quantum mechanics.

Quantum numbers, in physics, a set of numbers that correspond to the discrete values of a quantized physical property. They are either integers (1, 2, 3, etc) or half integers (1/2, 3/2, 5/2, etc). For example, an electron in a hydrogen atom can have energies E_n/n^2 , where n (the principal quantum number) can take values of 1, 2, 3, etc, and E_0 is the lowest energy level (corresponding to $n = 1$). Similarly the charge of any other subatomic particle can be thought of as quantized in units of electron charge, so a proton has a charge of +1. An ELEMENTARY PARTICLE is defined uniquely by its mass and its quantum numbers. See also QUANTUM THEORY; pp.813, 813, 806-807.

Quantum theory, together with the theory of RELATIVITY, the foundation of 20th-century physics. It is concerned with the relationship between matter and energy at the elementary or sub-atomic level and with the behaviour of ELEMENTARY PARTICLES. According to the theory, all radiant energy is emitted and absorbed in multiples of tiny "packets" or quanta. This breaks down the traditional distinction between energy (as a wave motion) and matter (as occupying a fixed space), because quanta have properties of both. Waves and particles therefore become dual aspects of the same phenomenon, and any instance of either aspect can be quantized - explained in terms of a definite number of quanta. The idea that energy is radiated (and absorbed) in quanta was proposed by MAX PLANCK in 1900. He calculated that the energy E of a quantum is related to the frequency ν of radiation according to the formula $E = h\nu$, where h (Planck's constant) is a constant with the value of 6.63×10^{-34} joule-second, and n (the principal QUANTUM NUMBER) equals 1, 2, 3, 4... Using this formula Einstein quantized light radiation and explained the PHOTOELECTRIC EFFECT in 1905. In 1913 Niels BOHR used quantum theory to explain atomic structure and the relationship between the energy levels of an atom's electrons and the frequencies of radiation emitted or absorbed by the

Quarantine

Quebec: the Citadel and the Chateau Frontenac overlook the city.

SS Queen Elizabeth: she caught fire while at anchor in Hong Kong harbour.

Queensberry Rules are still followed in modern professional boxing.

Queensland is Australia's warmest state; sugar cane is an important crop.

atom. See also QUANTUM MECHANICS; pp.813, 813, 860-861.

Quarantine, originally a 40-day waiting period during which ships were forbidden to discharge passengers or freight to prevent transmission of plague or other diseases. Today the term refers to any period of isolation legally imposed on people, animals, plants or goods in order to prevent the spread of disease.

Quark, in physics, any one of three particles and their anti-particles (anti-quarks) that have been postulated as a constituent of the HADRON group of ELEMENTARY PARTICLES. In 1964 Murray GELL-MANN and G. ZWIG proposed independently that all fundamental particles are composed of quarks and "gluons", which hold the quarks together. Originally three kinds of quarks were proposed: two with a fractional charge of $+\frac{1}{3}$ and one with a charge of $+\frac{2}{3}$, and all with a spin of $\frac{1}{2}$. BARYONS consist of three quarks; MESONS consist of a quark and an anti-quark tightly bound together. Physicists have yet to discover free quarks. See also pp.801, 819.

Quarrying, method of obtaining stone or other types of non-metallic rock from open-pit mines. Dimension (cut) stones for building (such as sandstone, granite and marble) are obtained by separating large blocks from the parent mass using various power-driven drilling or cutting tools and then carving them to size. Ballast (rough, small stones) for road building is obtained by drilling and blasting. It may then be further crushed, screened and sized. See also pp.582, 752.

Quarter Sessions, criminal courts once held in Britain four times a year by justices of the peace in the district to which they were appointed by the Lord Chancellor. They began in 1368 after the heavy expenses involved had ended the king's travelling around the country to hear cases. They were abolished in 1971.

Quartet. See CHAMBER MUSIC.

Quartz, rock-forming mineral (silicon dioxide). It may be opaque, translucent or transparent, coloured or uncoloured. It is formed of hexagonal crystals and is classified as crystalline or cryptocrystalline. The most common crystalline varieties are colourless quartz (known as rock crystal), rose, yellow, milky and smoky. The most common cryptocrystalline varieties, whose crystals can be seen only under a microscope, are CHALCEDONY and FLINT. See also pp.258-259.

Quasar, also called quasi-stellar object, in astronomy an object that appears to be a massive, highly compressed, extremely powerful source of radio and light waves, characterized by a large red shift. If such red shifts are due to the DOPPLER EFFECT, it can be deduced that quasars are more remote than any other objects previously identified; many are receding at velocities greater than half the speed of light. Their energy may result from the gravitational collapse of a GALAXY or from many SUPERNOVAS exploding in quick succession, although there seems to be no reason why such events should be occurring. See also pp.922, 987, 1002-1003.

Quasimodo, Salvatore (1901-68), Italian poet. He published five volumes of verse in the 1930s, the first of which, *Acque e Terra* (1930), established him as the leading Italian symbolist. He was imprisoned for anti-fascist conduct in WWII. He was awarded the 1959 Nobel Prize in literature.

Quaternary Period, in the history of the Earth, the most recent period of the Cenozoic era, beginning about 2 million years ago and extending to the present. It marks the age of man. It is divided into the PLEISTOCENE, the glacial epoch, characterized by a periodic succession of four great ice ages, and the HOLOCENE, which started some 10,000 years ago. See also pp.286-287.

Quaternions, type of higher COMPLEX NUMBER, useful in MECHANICS. An ordinary complex number has the form $a + bi$ (where a and b are real numbers, i an imaginary number, the square root of -1). A quaternion has the form $a + bi + cj + dk$ (in which i, j and k are imaginary,

defined by the equations $i^2 = j^2 = k^2 = ijk = -1$).

Quathlambra. See DRAKENBERG RANGE.

Quattara, desert basin in N Egypt in the Libyan Desert. Impassable by armies and vehicles, it was the scene of British defence at El-Alamein in 1942 and the point at which Rommel's invasion was halted. It contains the lowest point in Africa, 134m (440ft) below sea-level. Area: approx. 19,425sq km (7,500sq miles).

Quatre Bras and Ligny, twin battles fought on 16 June 1815 during the last campaign of the NAPOLEONIC WARS. Hoping to prevent the concentration of two allied armies, NAPOLEON attacked the Prussians under BLÜCHER at Ligny while Marshal NEY led forces against the British army under WELLINGTON at Quatre Bras. Both allied armies were driven back, but they recombined to defeat Napoleon at WATERLOO on 18 June. See also p.1555.

Quattrocento (Italian, "fifteenth century", ie 1400s), in art history, term applied to the 15th-century period of the Italian RENAISSANCE. Venice was its cultural centre and leading figures included the painters FRA ANGELICO, FRA FILIPPO LIPPI, MASACCIO and UCCELLO; the architects BRUNELLESCHI and ALBERTI; and the sculptors DONATELLO and GHIRBERTI. See also pp.1382-1383, 1382-1383.

Quebec (Québec) province in E Canada; largest province in area and second-largest in population. Most of the state is on the CANADIAN SHIELD and is relatively uninhabited. The lowlands by the St Lawrence River are the centre of industry and agriculture, the area's small farms yield vegetables, tobacco and dairy produce. Major industries are food processing, brewing, transportation equipment, chemicals, and metal and paper products. The province yields vast quantities of hydro-electric power and timber, and copper, iron, zinc, asbestos and gold are mined. The largest city is Montreal and the capital is the city of Quebec.

Jacques CARTIER found the E coast of Canada in 1534 and later sailed up the St Lawrence River. The port of Quebec was the first settlement to be established (1608) and from there the French pushed wounding trading and military posts. The entire area was ceded to Britain by treaty in 1763 and became a British colony. With the establishment of the DOMINION OF CANADA in 1867, Quebec became a province under that name. In the mid-20th century French inhabitants of the province have intensified their demands for recognition of their cultural heritage, including independence of Quebec. Area: 1,540,687sq km (594,860sq miles). Pop. (1974 est.) 6,212,000. See also p.1997.

Quebec, port in s Quebec province, Canada, on the St Lawrence River; capital of Quebec province. Samuel de CHAMPLAIN established a French trading-post on the site of Quebec (Québec) in 1608. Captured by the British in 1629, the city was returned to France and became the capital of New France from 1663 to 1763. The British defeated the French in 1759 and Québec became a British colony. The city served as the capital of LOWER CANADA (1791-1841) and the United Provinces of Canada (1851-55, 1859-65). The city has become a focal-point for Canada's French-speaking separatists. Quebec is a cultural and tourist centre, and its industries include shipbuilding, paper, leather, textiles, machinery, canned food, tobacco and chemicals. Pop. (1976) 177,082. See also p.1997.

Quechua, most widely spoken of all South American Indian languages, with about 5 million speakers in Peru, 1.5 million in Bolivia and 500,000 in Ecuador. Originally the language of the great Inca empire, it is related to AYMARA, the two forming the Quechumaran family.

Queen, Ellery, pen-name of Frederic Dannay (1905-), US detective fiction writer. He has written more than 60 crime and mystery novels, of which 34 have Ellery Queen as the detective hero. He has also written four novels under the pen-name Barnaby Ross.

Queen Anne Style, in art history, term applied to style of decorative arts (espe-

cially furniture) which flourished in England during the reign (1702-14) of Queen Anne - although it developed before and continued after that time. The style is characterized by elegance and simplicity. Curved cabriole legs are a distinctive feature, as are inlay, veneering and lacquerwork.

Queen Charlotte Islands, archipelago off W British Columbia, Canada, separated from the mainland by Hecate Strait. The chief islands are Graham, Moresby, Louise and Lyell and the inhabitants are mostly Haida Indians. Industries: mining, timber, fishing. Area: 9,596sq km (3,705sq miles). Pop. (1966) 2,222.

Queen Elizabeth, SS, British passenger liner. Launched in 1938, the ship was designed as a sister ship for the QUEEN MARY on the weekly service between Southampton and New York. Sailing throughout WWII as a troop-ship, she sailed commercially for the first time in 1946. She was destroyed by fire in 1972 in Hong Kong.

Queen Mary, SS, British passenger liner. Launched in 1934, she served as a troop-ship during WWII. She was withdrawn from service in 1967 and is now a museum and conference centre at Long Beach, California.

Queen Mother. See ELIZABETH, QUEEN MOTHER.

Queen of Spades, The (1834), short story by Alexander PUSHKIN, in which the ambitious and ruthless hero Hermann risks and loses his money and his sanity in a game of cards. The story was used as the basis for an opera by Peter TCHAIKOWSKY (1890).

Queens, largest borough of New York City on the W end of Long Island; connected to the mainland by bridge and tunnel. A residential and industrial area, its manufacturing industries produce consumer goods for New York City. It was the site of New York's World Fairs (1939-40, 1964-65) and has La Guardia and John F. Kennedy International Airports, and St John's University (1870). Area: 280sq km (108sq miles). Pop. (1970) 1,986,473.

Queen's Award to Industry, British scheme, devised in 1965 by a committee chaired by Prince PHILIP, which provides for awards to be made to industry by Queen ELIZABETH in recognition of achievements in exports or technological innovation. Various other aspects of industrial efficiency are also rewarded. Companies receiving an award may display a special emblem for five years. Between 1966 and 1970 nearly 500 awards were made to more than 4,000 applicants.

Queen's (or King's) Bench, highest court of English COMMON LAW. Its name derives from its medieval origin, when the monarch travelled about the country with his court to hear criminal cases. Since 1873 it has been a division of the High Court of Justice. It consists of the Lord Chief Justice and a number of puisne (or minor) judges.

Queensberry, John Sholto Douglas, Marquess of (1844-1900), British nobleman who sponsored the QUEENSBERRY RULES - the basis of modern boxing rules. In 1895 Queensberry publicly insulted Oscar WILDE because of the latter's association with Queensberry's son, Lord Alfred Douglas. Wilde unsuccessfully sued Queensberry for libel, and was convicted for homosexuality.

Queensberry Rules, the basis of modern boxing rules, published under the sponsorship of the Marquess of QUEENSBERRY in 1866. Drafted mainly by John G. Chambers of the British Amateur Athletic Club, they were standardized in 1889 and first used in a championship in the world heavyweight bout of 1892.

Queen's Counsel (QC), member of the Bar, appointed letters patent to be Her Majesty's counsel, in England on the recommendation of the Lord Chancellor, in Scotland of the Lord Justice General. He wears a silk robe and is colloquially called a "silk".

Queensland, state in NE Australia. Approx. half the state lies north of the Tropic of Capricorn and there are rain forests in the N. The GREAT DIVIDING RANGE separates the fertile coastal strip from the

extensive interior plains. Predominantly a primary producing state, the chief crops are sugar-cane, wheat, cotton and tropical fruits; the main industries are beef cattle and mining. There are valuable mineral deposits, including copper, coal, lead, zinc, bauxite, oil and natural gas. The capital is Brisbane. Queensland was originally part of New South Wales and served as a penal colony from 1824 to 1843; it was separated and became a British colony in 1859. The area became a state of the Commonwealth of Australia in 1901. Area: 1,727,530sq km (667,000sq miles). Pop. (1979 est.) 2,197,400.

Queen's Medal, short name of two British awards; the Queen's Police Medal and the Queen's Fire Services Medal. Created in 1954 to replace the King's Police and Fire Services Medal, they are awarded, posthumously, for gallantry.

Queen's Men, The, theatrical company which received a royal patent in 1574. After entertaining Elizabeth I at Kenilworth in 1575, the company (under James Burbage), acted in a theatre provided by John Braynes until 1583, when another company, the new Queen's Men, was formed. This company was directly in the Queen's service until 1593.

Queen's Prize, British award for service-calibre rifle shooting. Founded by Queen Victoria in 1860, it is the most prized award in British and Commonwealth target shooting. It involves a three-stage contest, usually entered by about 1,000 people, 300 of whom qualify for the second stage. The final stage is contested by 100 marksmen.

Queen's Proctor, name for the solicitor who represents the Crown in the Family Division of the High Court of Justice in England. His duties are assigned to him in the Matrimonial Causes Act of 1973.

Queenston Heights, Battle of (Oct. 1812), decisive battle of the war of 1812. The advance guard of the US army, 1,600 strong, seeking to conquer Canada, was annihilated by the British army, composed chiefly of Canadian volunteers. The British commander, General Brock, was killed.

Queenstown, mountain town in New Zealand's South Island, on Lake Wakatipu, about 282km (175 miles) from DUNEDIN. Formerly a gold-digging town, it is now a leading tourist resort, famed for its scenic beauty.

Quellin (Quellinus), name of two Flemish sculptors, the cousins Artus I (1609-68) and Artus II (1625-1700). The elder did the allegorical figures which decorate the royal palace at Amsterdam, the younger the baroque figure of God in the rood screen of Bruges Cathedral.

Quemoy (Chimmen Tao), island group off SE China, on the Formosa Strait, 242km (150 miles) W of Taiwan. It is comprised of Quemoy and Little Quemoy islands and 12 islets. Quemoy Island has been garrisoned by Taiwan since the Communist take-over in 1949. The main occupation is farming, and crops include sweet potatoes, groundnuts and cereals. Pop. 61,305.

Queneau, Raymond (1903-), French poet and novelist, much influenced by his early association with the SURREALISTS. His poems include *Les ziaux* (1943) and *Exercices de style* (1948), a PARODY of literary forms. Among his novels are *Le chiendent* (1953) and *Zazie dans le métro* (1959). He became director of the *Encyclopédie de la Pléiade* in 1955.

Quental, Antero de (1842-91), Portuguese poet and socialist. He was an enemy of the monarchy and of ROMANTICISM, in both its literary and political expressions. He helped to form the Portuguese Socialist Party. His best volumes of verse are the *Odes Modernas* (1865) and the *Sonetos* (1881).

Quercia, Jacopo della (c.1374-1438), Italian sculptor whose work linked GOTHIC and RENAISSANCE styles. One of his earliest works was the marble tomb of Ilaria del Caretto (c.1406) in the Cathedral of S Martino at Lucca, and his is known for his imposing figures on the Gaia fountain in Siena. His stone reliefs outside S Petranio, Bologna, were admired by MICHELANGELO.

Quesnay, François (1694-1774), leader of the 18th-century French PHYSIOCRATS, who devised an economic table for France in 1758 (*tableau économique*), which demonstrated the circular flow of economic activity throughout the society. See also p.1467.

Quetzal, rare perching forest bird of Central America. The male is bright green above and crimson below with shimmering, iridescent green tail plumes forming a 60cm (2ft) train. The Aztecs and Mayas regarded the quetzal as sacred and wore the tail plumes ceremonially. The duller female nests in a hole, often in a tree, and lays two pale, nearly spherical eggs which are incubated by both parent birds. Family Trogonidae; species *Pharomachrus mocinno*.

Quetzalcóatl, god of wind and fertility, worshipped by the Toltecs and later by the Aztecs of central Mexico and represented as a feathered serpent. Legend also referred to a priest-king named Quetzalcóatl who was banished from his homeland and sailed east into the Gulf of Mexico. The Aztecs believed that Cortés was the returning Quetzalcóatl, and put up little resistance, so aiding the Spanish conquest of their empire.

Quezon City, capital and second-largest city of the Republic of the Philippines, on Luzon island, adjacent to Manila. It was named after Manuel Luis Quezon (1878-1944), the Philippines' first President, and became the capital of the country in 1948. It is mainly a residential area but has a thriving textile industry. Pop. (1980) 1,165,990.

Quiberon Bay, Battle of (1759), British naval defeat of the French in the SEVEN YEARS WAR (1756-63). During a storm Admiral Edward Hawke's fleet destroyed nine of the 21 opposing French ships, thereby ending French hopes of invading Britain.

Quicksand, sand that is water saturated, so losing its supporting ability. Natural quicksand can trap people and animals. If the victims lie flat on their backs, they cannot drown, because their density is less than the combined density of the sand and water.

Quicksilver. See MERCURY.

Quidde, Ludwig (1858-1941), German politician and pacifist. He was at various times a member of the Bavarian diet, the Weimar Assembly and the Reichstag. He was imprisoned for his attack on WILLIAM II in the pamphlet *Caligula: a Study in Roman Caesarean Madness* (1894). In 1927 he shared the Nobel Peace Prize with Ferdinand Buisson.

Quietism, mystical Christian movement, begun by the Spanish priest Miguel de Molinos in the 17th century. It achieved great influence in 17th-century France and in the Wesleyan movement of 18th-century Britain. Its adherents believed that only in a state of absolute surrender to God was the mind able to receive the saving infusion of GRACE. Worldly ambition was therefore forewarned.

Quiller-Couch, Sir Arthur Thomas (1863-1944), British writer and critic who published his prose and poetry under the pen-name "Q". A Cornishman, he wrote lively, colourful novels of Cornwall and the sea, including *Dead Man's Rock* (1887) and *The Ship of Stars* (1899). He compiled *The Oxford Book of English Verse* (1900) and *The Oxford Book of Ballads* (1910).

Quillwort, spore-bearing plant native to cool swamps of Eurasia and North America. Most quillworts grow in water but a few are terrestrial. Their grassy, quill-like, hollow leaves are spirally arranged and a large spore capsule is embedded in each leaf base. There are 60 species. Height: 15-50cm (6-20in). Genus *Isoetes*. See also p.365.

Quilmes, city in E Argentina, 14km (9 miles) SE of Buenos Aires. Founded in 1668, it was the scene (1806) of a British invasion of Buenos Aires. Its modern industries include brewing, oil refining and tourism. Pop. (1970) 355,265.

Quilter, Roger (1877-1953), British composer, a member of the Frankfurt Group. He chiefly wrote songs, many of which

were settings of English poetry, especially of SHAKESPEARE. He also wrote three light operas, *Julia, Love at the Inn* and *Love and the Countess*.

Quince, shrub or small tree native to the Middle East and central Asia. Its greenish-yellow, hard, pear-shaped fruit is used in preserves. Height: to 6.1m (20ft). Family Rosaceae; species *Cydonia oblonga*. See also p.688.

Quincey, de. See DE QUINCEY, THOMAS.

Quinine, white crystalline ALKALOID, isolated in 1820 from the bark of the cinchona tree. It was formerly used in the treatment of MALARIA.

Quinn, Anthony Rudolph Oaxaca (1916-), US actor. He won the Venice Film Festival award for *La Strada* (1954) and Academy awards for best supporting actor in *Viva Zapata* (1952) and *Lust for Life* (1956).

Quinone, group of aromatic organic compounds containing a benzene ring in which two hydrogen atoms have been replaced by oxygen atoms. Paraquinone (1,4-benzoquinone, O=C₆H₄=O) is a yellow crystalline solid obtained by the oxidation of aniline with chromic acid; it is used in the manufacture of hydroquinone for photographic developers.

Quinquagesima (from the Latin for "fiftieth"), the Sunday before Ash Wednesday, the beginning of LENT, roughly 50 days before Easter.

Quinsy, suppurative inflammation of the tonsils, caused by an abscess, often a complication of TONSILLITIS. It is generally treated with ANTIBIOTICS.

Quintana, Manuel José (1772-1857), Spanish poet, and tutor to Queen ISABELLA II. The last exponent of 18th-century CLASSICISM in Spanish poetry, he was famous for his patriotic odes, such as *A la batalla de Trafalgar* (1805).

Quintero, name of two brothers, Serafin Alvarez (1871-1938) and Joaquin Alvarez (1873-1944), Spanish playwrights who worked together. Their plays include *El Patio* (1900), *Malvaloca* (1912) and *La Calumniada* (1919).

Quintilian (c. AD 35-c. 96), Roman scholar from Spain. He is best known for his *Institutes of Oratory*, in 12 books, which covers the range of moral, literary and rhetorical education.

Quirigua, ancient Mayan city in E Guatemala, in the Motagua Valley. It is the site of temple ruins and carved monoliths. See also pp.1178-1179, 1179.

Quirinus, in Roman mythology, major god ranking below JUPITER and MARS, later identified with ROMULUS, one of the founders of ROME. His cult centred on the Quirinal, the traditional settlement site of the SABINES. The Quirinalia festival was celebrated on 17 Feb.

Quisling, Vidkun (1887-1945), Norwegian Fascist leader whose name became synonymous with "traitor" during WWII. He was Minister of Defence (1931-33), but left the Agrarian Party to found the Fascist National Union Party. In 1940 he collaborated with Germany in the invasion of Norway. He was made Premier of the puppet government in 1942 and stayed in power until Norway's liberation, when he was arrested, convicted of high treason and shot. See also p.1710.

Quito, capital of ECUADOR, in the N central part of the country 182km (114 miles) from the Pacific Coast; it lies almost on the Equator and 2,850m (9,260ft) above sea-level. The site was originally settled by Quito Indians and captured by the INCAS in 1487. It was taken by Spain in 1534, and liberated in 1822 by Antonio José de Sucre. A cultural and political centre, it is the site of Central University of Ecuador (1877). Products include textiles and handicrafts. Pop. (1974) 559,828.

Quit rent, feudal payment in medieval England made by a COPYHOLDER or FREEHOLDER to the lord of the manor. It was paid in acquittal of all other dues. It is now only a nominal rent, such as that paid annually by the City of London to the monarch.

Quixote, Don. See DON QUIXOTE DE LA MANCHA.

Qumrán, ancient village of NW Jordan, on the NW shore of the Dead Sea. In 1947 the

DEAD SEA SCROLLS (writings of a Jewish sect that settled in Qumrán c.100 BC-AD 68) were found in nearby caves. The land was taken by the Israelis in 1967. See also p.610.

Quoite, François. See SAGAN, FRANÇOISE. **Quoits, or coits**, old British country game. The object is to toss an iron ring (the quoit) on to a pin in the ground, or to get closer to it than one's opponent - thus scoring one point. A version called deck quoits is played with rope rings on passenger and cruise ships.

Quorum, minimum number of members of a legislative or deliberative body that must be present so that business can be carried out.

Quo Vadis? (1896), novel by Henryk SIENKIEWICZ. The work deals with the conflict between paganism and Christianity against the colourful background of Nero's Rome. It was filmed (1951) by Mervyn Le Roy, starring Robert Taylor and Deborah Kerr.

Quo warranto proceedings (1274), national inquiry conducted by EDWARD I of England to determine by what authority (*quo warranto*) lords of manors held LIBERTIES, and whether they were exceeding their rights. It was thus a grand survey of landholding and the legal system, the first "census" since DOMESDAY BOOK. The results were published in 1274, but quo warranto proceedings continued until the reign of EDWARD III.

Qurán. See KORAN.

R

R, 18th letter of the alphabet, derived from the Semitic letter *resh*, the symbol for head. It passed almost unchanged into the Greek alphabet as *rho* (which resembled more the English *p*) and thence to the Romans, who gave it its present form. In English an initial *r* is nearly always pronounced in a similar way, as in *rug*. See also pp.608-609.

Ra. See RE.

Rabat, capital of Morocco, in N of the country on the Atlantic coast, approx. 92km (57 miles) NE of Casablanca. Settlement there dates from Phoenician times, but the fortified city was founded in the 12th century, by Abd al-Mumin. It has the 12th-century Hassanine 12th-century Hassanine Tower (55m; 180ft tall) and the University of Rabat (1957). Industries: hand-woven rugs, textiles, food processing. Pop. (1971) 367,620.

Rabaul, port on the N end of New Britain Island, Papua New Guinea, in the SW Pacific Ocean. Formerly the capital of the Territory of New Guinea, Rabaul was a major Japanese naval and air base during WWII. Copra is the chief export. Pop. (1971) 24,778.

Rabbi, meaning "my master", from c. 100 AD an individual responsible for religious education, guidance and services in a SYNAGOGUE. His position is based on his learning and carries no special privileges. His duties include interpreting Jewish Law and guiding the spiritual lives of his congregation.

Rabbit, long-eared, herbivorous, prolific mammal of the family Leporidae, including the European common rabbit and the American COTTON-TAIL. Although usage of the term varies, most so-called rabbits typically are smaller than HARES (*Lepus*), have shorter ears, and run without leaping. The common rabbit is *Oryctolagus cuniculus* and has thick, soft, greyish-brown fur. The wide variety of domesticated rabbits are also of this species. Length: 35-45cm (14-18in); weight: 1.4-2.3kg (3-5lb). See also pp.5, 92, 287, 736, 737.

Rabbit fish. See CHIMAERA.

Rabelais, François (c.1494-c.1553), French humanist and satirist. He left a Franciscan monastery in 1530 to become a physician in Lyons. He wrote *Pantagruel* (1532), *Gargantua* (1534), *Tiers Livre*

Rabi, Isidor Isaac

Rack railway enables sightseers to admire the view from Mt Snowdon, Wales.

Raccoons can eat almost anything and some live as scavengers in urban areas.

RADA students listen to criticism after a performance of *The Venetian* by Clifford Bax.

Radar is used in radio astronomy for tracking satellites and calculating distances.

(1546) and *Quart Livre* (1548, 1552). His own views on the education, politics and philosophy of his day underline the broad and ribald humour of his writing. Although condemned as obscene by theologians and the Sorbonne, his books became widely popular and gained him the protection of influential patrons. See also *GARGANTUA AND PANTAGRUEL*; pp.1450-1451, 1450.

Rabi, Isidor Isaac (1898–), US physicist, known for his work on **MAGNETISM**, molecular beams and **QUANTUM MECHANICS**. He was awarded the 1944 Nobel Prize in physics for his discovery and measurement of the radio-frequency spectra of atomic nuclei whose magnetic spin has been disturbed. He also worked on the development of **MICROWAVE** radar.

Rabies, (hydrophobia), fatal contagious viral infection of the central nervous system. It can occur in all warm-blooded animals and is especially dangerous in domestic dogs as it is transmissible to man through the bite of an infected animal. Its symptoms are severe thirst (but attempting to drink causes painful spasms of the larynx, hence the name hydrophobia – fear of water), foaming at the mouth and wild behaviour. Once the symptoms have appeared, death usually occurs within about four days. See also pp.1073, 1087.

Rabinowitz, Solomon. See **ALICHEM, SOLOMON**.

Race, in biology, classification of the human species according to hereditary (genetic) differences. The term "geographical race" denotes large groupings of man that contain many "local races", varying in number from a few hundred to many million. Different racial characteristics arise through genetic mutation and adaptation to a particular environment through many generations. See also pp.120-121, 120-121, 122-123, 122-123.

Race Relations Acts (1965, 1968, 1970, 1976), legislation in Britain which made racial discrimination illegal in housing, employment and the provision of services. The 1976 Act set up the Commission for Racial Equality to enforce the Acts.

Racer, any of 20 species of slender, fast-moving snakes that live in the Americas, ranging from s Canada to Guatemala. They are broad-headed, large-eyed and varied in colour. Length: to 1.8m (6ft). Family Colubridae; species include *Coluber constrictor*.

Racerunner, active long-tailed LIZARD that is found throughout the Americas. There are 12 species in the USA. They are generally dark, with light, longitudinal stripes. Length: to 40cm (16in). Family Teiidae; genus *Cnemidophorus*.

Rachel, in the biblical Book of Genesis, second daughter of LABAN. Having spent seven years working for Laban in order to marry Rachel, JACOB was tricked into marrying her elder sister, Leah. He then had to serve his father-in-law a further seven years to obtain Rachel's hand. She was the mother of JOSEPH and of BENJAMIN, and died giving birth to the latter.

Rachmanism, charging extortionate rents for inferior premises and using violence against tenants. The term is derived from Peter Rachman (1920-62), a London landlord of the 1950s and early 1960s, who grew rich by this means, and whose dealings were exposed in 1963.

Rachmaninov, Sergei (1873-1943), Russian composer and pianist. As a composer he was greatly influenced by TCHAIKOVSKY, and was one of the greatest pianists of the 20th century. His *Piano Concerto No.2* (1901), *Rhapsody on a Theme of Paganini* (1934) and *Symphony No.2* (1907) are among his most popular works. He composed songs, preludes and études for piano, four piano concertos and various other works. See also p.1582.

Racine, Jean Baptiste (1639-99), French classical dramatist whose early plays such as *La Thébaïde* (1664) and *Alexandre le Grand* (1665) were influenced by contemporaries such as CORNEILLE, whom he later surpassed as France's leading tragic dramatist. MOLIÈRE, who had staged his first two plays, broke with him when Racine removed *Alexandre*, giving the script to a competing company. His other plays

include *Britannicus* (1669), *Mithridate* (1673) and *Phèdre* (1677), after which Racine retired from the theatre. See also p.1451, 1451.

Racing car, MOTOR CAR designed for high performance on specially constructed tracks. Ordinary road cars were used for the first motor races, in the 1890s, but by the 1920s cars built only for racing were in use. Competition took place within different categories, each of which was closely defined; Grand Prix cars (since 1950 called "Formula One") were the most powerful. There are now more than 15 classes of racing car.

Racism, doctrine advocating the superiority of one human race over some or all others. From time to time it has been the avowed policy of certain countries which, as a result, sanctioned slavery and discriminatory practices – eg the USA before the abolition of slavery, Nazi Germany during the 1930s and 1940s, and South Africa today. Racism was defined by UNESCO in 1967 as "anti-social beliefs and acts which are based on a fallacy that discriminatory inter-group relations are justifiable on biological grounds". See also pp.1846-1847, 1846-1847.

Rack, instrument of torture on which the victim was laid flat and stretched by levers and pulleys. It was used mainly to extract confession in cases of suspected treason, and became particularly notorious in 16th century England.

Rack, in engineering, a straight rod on which grooves are cut to mesh with a cylindrical gear (pinion). Rotary motion of the pinion is converted into reciprocating (to-and-fro) motion at the rack. It is used extensively for steering systems in motor vehicles. See also p.497.

Rackham, Arthur (1867-1937), British illustrator and watercolourist, well known for his imaginative pen drawings for children's books. Among these are Charles LAMB's *Tales from Shakespeare* (1899), *Grimm's Fairy Tales* (1900), and *The Arthur Rackham Fairy Book* (1933).

Rack railway, form of mountain transport in which the locomotive powers a cog-wheel that engages a cogged rail (rack) set between the track. The first rack railway in Britain came into use in 1812 between Middleton colliery and Leeds in the N of England, a distance of 5.5km (3.5 miles). A rack railway is still used on Mt Snowdon in Wales.

Rack rent, in law, the amount of payment that can reasonably be charged for the lease of property on the open market; it has come to mean an excessive rent. The term was used particularly in the 19th century by tenant farmers in southern Ireland, who complained of the high rents charged by English landlords.

Racoon, stout-bodied, omnivorous, mostly nocturnal mammal of North and Central American wooded areas near water, related to the PANDA and COATI. Raccoons have a black, mask-like marking across their eyes and a long, black-banded tail. They have agile and sensitive front paws and typically dip for food and other objects in water. The seven species include the North American *Procyon lotor*. Length: 40-61cm (16-24in); weight: 10-22kg (22-48lb). Family Procyonidae.

Racquets, game played by two or four people in an enclosed court. The court is 18.3 by 9.1m (60 x 30ft) and is surrounded by three walls 9.1m (30ft) high and a back wall 4.6m (15ft) high. Each player uses a gut-strung racket approx. 68cm (27in) long that has a circular head 17.8 to 20.3cm (7-8in) in diameter and that weighs approx. 255g (9oz). The ball, with a diameter of 2.5cm (1in), is tightly-wound cloth and twine with an adhesive tape cover. A service line is painted on the front wall at a height of 2.9m (9.6ft) and a fixed wooden board (*tellale*), also on the front wall, extends 68.6cm (27in) up from the floor. These are the markers that determine when a ball is in play. The serve must be put in play above the service line and must then land behind a short line, marked 7.3m (24ft) from the back wall. Games are played to 15 points.

Racquetball, game developed in the USA in

the mid-1960s and played by two or four people on a standard four-wall handball court. All the walls, ceiling and floor are in play. Gut-strung tennis-like rackets are used and the ball is of rubber. Points are won (only by the serving side) when the ball hits the floor twice before being returned. A game is won by the side that is the first to score 21 points; the first side to win two games wins the match.

RADA, the Royal Academy of Dramatic Art, leading British school for actors, founded in London by Sir Herbert Beer-bohm Tree in 1904 at His Majesty's Theatre. It moved to its present premises in Gower Street, Bloomsbury, in the following year and was granted a royal charter in 1920.

Radar, short for Radio Detecting and Ranging, electronic system for determining the direction and distance of objects. First developed by the British and Germans during WWII, it works by the transmission of pulses of radio-frequency ELECTROMAGNETIC WAVES to an object from the radar transmitting equipment. The object reflects the pulses, which return to the radar station. By measuring the time it takes for the reflected waves to return, the object's distance may be calculated, and its direction ascertained from the alignment of the receiving radar aerial. See p.646.

Radar astronomy, branch of astronomy in which radar pulses reflected back to Earth from celestial bodies inside the solar system are studied for information concerning the distance from Earth of the bodies, their orbital motion, and large surface features. See also pp.922-923.

Radar telescope. See **TELESCOPE**.

Radcliffe-Brown, Alfred Reginald (1881-1955), British anthropologist who did field work in the Andaman Islands and Australia. He fostered the development of social anthropology as a science and contributed to the study of social organization. His works include *The Social Organisation of Australian Tribes* (1931). See also p.1750.

Radek, Karl (1885-1939), Russian revolutionary who joined the COMMUNIST PARTY after the BOLSHIEVIK revolution. In 1918 and 1919 he helped to organize the German Communist movement and on his return to the USSR became a leading member of the COMMUNIST INTERNATIONAL. In the 1930s he was accused of treason and confessed during his trial in 1937. See also pp.1676-1679.

Radetzky, Count Joseph (1766-1858), Austrian soldier. He fought against Napoleon, became a field-marshal in 1836 and helped to suppress the Italian revolts against Austrian rule in 1848-49. He was Governor-General of Lombardy-Venetia (1850-57).

Radhakrishnan, Sir Sarvepalli (1888-1975), Indian politician and scholar. He had a distinguished academic career, was elected Vice-President of India in 1952 and served as President from 1962 to 1967. His written works include *Indian Philosophy* (2 vols, 1923-27) and *An Idealist View of Life* (1932).

Radial motion, in astronomy, movement of a celestial body towards or away from an observer on Earth. A star that is receding is said to have positive radial motion; a star that is approaching is said to have negative radial motion. The actual motion of a star through space includes both radial motion and PROPER MOTION. See also p.915.

Radian, angle formed by the intersection of two radii at the centre of a circle, when the length of the arc cut off by the radii is equal to one radius in length. Thus, the radian is a unit of angle equal to approx. 57.295°, and there are 2π radians in 360°.

Radiant heat, form of energy transfer through the atmosphere or space. The Sun's energy reaches the Earth as radiant heat or infra-red radiation, as well as from the visible spectrum. Domestic electric fires emit radiant heat, which circulates by convection.

Radiation, propagation of energy by subatomic particles and ELECTROMAGNETIC WAVES. All electromagnetic radiation can propagate without a medium, which dis-

tinguishes it from such effects as conduction and convection and the transmission of sound, all of which require media. In a vacuum, electromagnetic waves travel at the speed of light (3×10^8 m/s; 186,000 miles per second), but this velocity is slightly decreased as the waves pass through a medium, an effect which explains REFRACTION. In addition this type of radiation betrays some of the properties of a stream of particles, which are known as PHOTONS. These particles are said to have no mass but, paradoxically, they may be affected by a gravitational field, (as are massive particles). Similarly streams of particles such as electrons betray properties like those of waves, which allows for electron DIFFRACTION as in an electron MICROSCOPE. See also pp.853-854, 854.

Radiation, heat, energy radiated from all solids, liquids or gases as a result of their temperature, however low. The energy derives from the vibrations of atoms in a body and is emitted as ELECTROMAGNETIC WAVES, usually in the form of INFRARED RAYS, although in bodies with temperatures of 800°C (1500°F) or more (red hot) visible light is also present. See also pp.842-843, 842.

Radiation, cosmic, also called cosmic rays, streams of subatomic particles from space that constantly bombard the Earth at velocities approaching the speed of light. Primary cosmic rays are high-energy RADIATION that comes from the Sun and other, mostly unidentified, sources in outer space. They consist mainly of atomic nuclei (particularly those of hydrogen) and PROTONS. When primary cosmic rays strike gas molecules in the upper atmosphere they yield showers or cascades of secondary cosmic rays (some of which reach the Earth's surface) consisting of energetic protons, NEUTRONS and PIONS. Further collisions yield MUONS, ALPHA RAYS, POSITRONS, ELECTRONS, GAMMA RADIATION and PHOTONS. Secondary rays are harmless near ground level, but pilots flying at high altitudes have "seen" flashes of light, attributed to cosmic rays destroying one or more of their retinal or brain cells.

Radiation cytology, study of the effects of radiation on living tissue including non-ionizing radiation such as heat and light and ionizing radiation from radioactive elements, X-ray machines and other high-energy sources. The most frequently seen effects of radioactivity on cells include CHROMOSOME damage which, if it does not kill the cells may give rise to genetic defects in succeeding generations. For example, transformation into cancerous cells can occur.

Radiation, nuclear, particles of ELECTROMAGNETIC WAVES emitted spontaneously and at high energies from atomic nuclei. It can result from RADIOACTIVE DECAY, which yields alpha particles (helium nuclei), beta particles (ELECTRONS), GAMMA-RADIATION and, more rarely, POSITRONS (anti-electrons). It can also result from spontaneous fission of a nucleus, with the ejection of NEUTRONS or gamma-rays. See also RADIOACTIVITY.

Radiation therapy, use of X-RAYS and gamma-ray RADIATION to treat disease; often used alone or in combination with surgery to eradicate cancer. See also pp.1094-1095, 1094-1095.

Radiator, space heater in a CENTRAL HEATING system. Commonly it is a slim fluted steel or iron container through which hot water or steam is circulated. Electrically-powered appliances, such as convector heaters and storage heaters, can also function as radiators. In cars, lorries and other vehicles powered by an internal combustion engine, a radiator is a heat exchanger, which dissipates the heat in circulating water (to the surrounding air) to keep the engine cool.

Radical, expression used to indicate the root of a number. It consists of the number of which the root is to be taken (the radicand), the symbol $\sqrt{\quad}$ known as the radical sign and the indicated root (the index). Thus the cube root of nine in radical form is $\sqrt[3]{9}$.

Radical, in politics, someone who desires or advocates fundamental solutions to

social, economic and political problems. See also RADICALISM.

Radicalism, in political theory, doctrines that advocate going to the root (Latin *radix*) of a problem. Historically radicalism has advocated extreme solutions to political problems and is generally associated with the LEFT WING. But it has occasionally been used to describe reformist politics, such as the French Radical Socialist parties of the 1930s and the Radical Republicans who brought about the abolition of slavery in the USA.

Radio, method of communication between people who are "connected" only by means of a transmitter and a receiver of invisible ELECTROMAGNETIC WAVES (radio waves). The term is, however, most commonly applied only to the apparatus for receiving and reproducing a sound broadcast (the receiver). At the transmitter a radio wave of fixed FREQUENCY - the carrier - is continuously generated (the carrier is the "signature" by which different radio stations are distinguishable; the station is selected by tuning to its frequency). The sound to be broadcast is converted by a MICROPHONE into a varying electrical signal which is combined with the carrier by means of MODULATION. The modulated carrier is passed to an AERIAL from which it is transmitted into the atmosphere. At the receiver, another aerial intercepts the signal which is subjected to the reverse of modulation (detection), which retrieves the sound signal from the carrier. The sound signal is amplified so that it can activate a loudspeaker which reproduces the original transmitted sound. See also pp.638-639.

Radioactive decay, processes by which radioactive ISOTOPES (radioisotopes) progressively and spontaneously change, or transmute, into other isotopes due to disintegration of the nuclei of their atoms. Many chemical elements have radioisotopes. The most stable atomic nuclei are those approximating in size to that of the iron atom, which has the atomic number 26 (ie its nucleus contains 26 protons), but lighter or heavier nuclei may be unstable. A decaying isotope releases one or all of the three natural radioactivities: ALPHA RAYS, BETA RAYS and GAMMA RADIATION. See also RADIOACTIVE SERIES; pp.269, 269, 814-819.

Radioactive elements, chemical elements having ISOTOPES which give off RADIATION, ie undergo RADIOACTIVE DECAY. Radioactive isotopes occur in nature along with the stable isotopes of an element, but they can also be made artificially by bombarding other isotopes with high energy subatomic particles in a NUCLEAR REACTOR or a particle ACCELERATOR. Radioactive isotopes are formed naturally in the atmosphere as the result of collisions between atoms in the air and COSMIC RAYS from outer space. Among the elements with radioactive isotopes of economic importance are URANIUM, PLUTONIUM, RADIUM, COBALT, STRONTIUM and HYDROGEN. See also pp.814-815.

Radioactive series, chain of ISOTOPES, each being a product of the RADIOACTIVE DECAY of its predecessor, starting with a radioactive isotope and ending at one of the stable isotopes of lead. The three naturally occurring series are headed by uranium-238, thorium-232 and uranium-235. The neptunium-237 series does not occur in nature because the parent isotope has a HALF-LIFE (about 2 million years) which is much less than the age of the Earth, and has long decayed; this series is artificially produced. Each step in a radioactive series is called a transmutation. See also pp.814-815.

Radioactivity, disintegration of the nuclei of radioactive ISOTOPES (radioisotopes), such as uranium-238, usually with the emission of ALPHA RAYS (helium nuclei) or BETA RAYS (ELECTRONS), often accompanied by GAMMA RADIATION. These two processes of RADIOACTIVE DECAY and alpha decay or beta decay cause the radioisotope to be transformed into a chemically different atom. Alpha decay results in the nucleus losing two PROTONS and two NEUTRONS; beta decay occurs when a neutron changes into a proton, an electron

(beta particle) being emitted in the process. Thus the ATOMIC NUMBER (number of protons in the nucleus) changes in both types of decay and an isotope of another element is produced, which might also be radioactive. The stability of different isotopes varies widely. It is impossible to predict when a nucleus will disintegrate but in a large collection of atoms there is a characteristic time (the HALF-LIFE) after which one-half of the total number of nuclei would have decayed. This time varies from about ten thousand million years to a ten-millionth of a second, depending on the isotope concerned. The activity of any radioactive sample decreases exponentially with time. See also CARBON DATING; pp.814-815.

Radioastronomy, detection, measurement and study of radio waves received on Earth from space. Radio signals are known to be emitted by the planets, the Sun, many other stars and interstellar material, galaxies, and particularly by QUASARS. Radioastronomers were the first to determine the shape of our GALAXY by studying the radio frequency of hydrogen gas (21cm). Among the radio sources investigated, the most remarkable are the PULSARS, or neutron stars, which emit regular pulses of radio waves as they rotate rapidly. Radioastronomy has also been used to determine the distances, speeds of rotation, temperatures and surface features of the planets.

Radio telescopes are essentially giant antennae, or radio aerials, usually dish-shaped. Often several dishes are used in conjunction to collect radio waves. The telescopes are moveable, either on tracks, or by rotation of the dish, or both. The 76m (250ft) telescope at JODRELL BANK in Cheshire, England, was for a long time the largest steerable radio telescope in the world. See also pp.811, 922, 923, 958, 974-977, 986, 996, 1002-1003, 1055.

Radio beacon, strategically located radio transmitter which emits a regular, non-directional and easily recognizable signal by which mobile receivers can obtain a bearing. Such beacons are used particularly by marine and air navigators who collate the information from two or more such beacons to fix their positions. Directional beacons are used at airports to aid landing aircraft. See also p.527.

Radio carbon dating. See CARBON DATING.

Radio control, remote control of any mechanism by radio signals. A familiar example is the hobby of flying miniature aircraft, the ailerons of which are moved by a SERVOMECHANISM in response to radio signals from a hand-held transmitter. Similar systems are used by the armed forces to fly target aircraft and to guide certain missiles. Other guided missiles have their own radio control systems built in and seek and collate their own guidance information. An expanding field of radio control has been created by space research.

Radio frequencies and wavelengths, radio waves categorized into FREQUENCY ranges, called bands, for radio wave communications. In 1959 an international conference decided on the bands, and agreed that they are reserved for specified uses such as television, radio, amateur, scientific and navigational broadcasts. See also pp.638-639.

Radio galaxy, galaxy that emits strong ELECTROMAGNETIC RADIATION of radio frequency. These emissions seem to be produced by the high-speed motion (probably caused by explosions occurring in the nuclei of the galaxies concerned) of ELEMENTARY PARTICLES in strong magnetic fields. Some radio galaxies correspond to visual sources, such as Cygnus A, which is a distant double galaxy. Radio galaxies are frequently double and many are of immense dimensions. One, 3C-236, appears to be the largest galaxy known, being 18,000,000 light-years across. See also pp.922, 1002-1003.

Radiography, recording as photographs the interiors of opaque bodies using X-RAYS. Industrial X-ray photographs can show assembly faults and defects in the crystal structure of metals; in medicine and dentistry they are invaluable for diag-

Radiator water is cooled by the flow of air through the filaments.

Radical political criticisms of society have been expressed by Germaine Greer.

Radio, transistor: Japanese radios are known for their quality and compactness.

Radioactivity: waste disposal has caused controversy at Windscale, Cumbria.

Radio isotopes

nosing bone damage, tooth decay and internal disease. The images show bones predominantly, as well as some tissue structure and air spaces. Using sensitive modern techniques, cross-sectional outlines of the body can be obtained showing organs, blood vessels and diseased parts. See also pp.1094-1095.

Radio isotopes. See ISOTOPES.

Radiolaria, subclass of unicellular animals found in the topmost layers of the oceans. The silicious skeleton forms a lattice-like structure and is so resistant to decay that great areas of the ocean floor are covered by oozes made of nothing else. Reproduction is asexual by budding or fission. See also pp.53, 239, 482.

Radiology, science and technology of using X-RAYS and other penetrating rays of RADIATION, particularly in medicine, for treating various pathological conditions such as cancer. See also RADIOGRAPHY; RADIOLOGY; pp.1089, 1094-1095.

Radiometer, instrument for detecting and measuring radiant energy. Crooke's radiometer consists of pivoted vanes, painted black on one side, which rotate in a partial vacuum when exposed to light or heat, because of their differential absorption of radiant energy. More sophisticated radiometers can measure radiation in any part of the electromagnetic spectrum. See also GEIGER COUNTER; pp.861, 891.

Radiosonde, instrument package carried by a meteorological balloon which transmits to the ground data on weather conditions in the upper atmosphere. It is recovered when possible for re-use.

Radio-telephone, instrument of communication used on aircraft, ships and in other locations which lack a telephone cable linkage. Transmission and reception are similar to those in other radio devices.

Radio-telescope. See RADIOASTRONOMY; TELESCOPE.

Radiation therapy, in medicine, use of RADIATION to diagnose and to treat tumours or other pathological structures in the body. It may be done either by implanting a pellet of a radioactive source in the part to be treated, dosing the patient with a radioactive isotope (eg radioactive iodine for the thyroid gland) or by exposing the patient to precisely focused beams of radiation from a machine such as an X-RAY machine, particle accelerator or machine containing cobalt-60 which delivers GAMMA-RADIATION and other penetrating radiation. See also pp.1094-1095.

Radio waves. See ELECTROMAGNETIC SPECTRUM.

Radish, annual garden vegetable developed from a wild plant native to the cooler regions of Asia. Its leaves are long and deeply lobed; the fleshy root, which may be red, white or black, is eaten raw. Red radishes are small and globular; white radishes are long and cylindrical. Family Brassicaceae; species *Raphanus sativus*. See also pp.684, 685-686, 687.

Radisson, Pierre Esprit (c.1636-c.1710), French-born Canadian fur trader and explorer. He was instrumental in convincing GEORGE III to charter the HUDSON'S BAY COMPANY but soon fell out with its administrators and led a French expedition against the English forts on Hudson Bay. Rejoining the Company in 1684, he became a British subject in 1688.

Radium, radioactive metallic element (symbol Ra) of the ALKALINE-EARTH ELEMENTS, first isolated as radium salts in 1898 by Pierre and Marie CURIE; the metal was isolated by Mme Curie in 1911. It is present in uranium ores such as pitchblende. The metal is used in research, luminous paints and medical RADIOTHERAPY. It has 13 isotopes, which emit alpha, beta, and gamma radiation; the gas RADON is a decay product. Properties: at.no. 88; at.wt. 226.0254; density 5; m.p. 700°C (1,292°F); b.p. 1,140°C (2,084°F); most stable isotope Ra²²⁶ (half-life 1,600yr). See also pp.814, 814, 888-889, 891, 1094-1095.

Radius, in anatomy, one of the two forearm bones, extending from the elbow to the wrist. The radius rotates around the ulna, the other forearm bone, permitting the hand to rotate and be flexible. A projection just above the thumb side of

the wrist marks the end of the radius. See also p.147.

Radius, in geometry, the distance or a line from the centre of a circle or sphere to any point on the circumference of the circle or surface of the sphere. See also p.785.

Radnor, former county in E Wales; since 1974 it has been part of Powys. It is a region of moorland, hills and forest, and is sparsely populated. Sheep and cattle rearing is the principal occupation. Presteigne was the county town. Area: 1,220sq km (471sq miles).

Radon, radioactive non-metallic gaseous element (symbol Rn) of the NOBLE GAS group, first discovered in 1900. Rn²²² (half-life 3.8 days) is a decay product of RADIUM. Thorium decays to Rn²²⁰ (half-life 54.5sec) and actinium gives Rn²¹⁹ (half-life 3.92 sec). The isotopes, which are ALPHA RAY emitters, are present in the Earth's atmosphere in trace amounts. Chemically the element is known to form fluorides. Properties: at.no. 86; density 9.73g dm⁻³; m.p. -71°C (-95.8°F); b.p. -61.8°C (-79.24°F); most stable isotope Rn²²². See also pp.888-889.

Raeburn, Sir Henry (1756-1823), British portrait painter who worked exclusively in Scotland. Well known among his many portraits are *The MacNab* (c.1803-13) and *Lord Newton* (1806-11); Sir Walter Scott and James Boswell were also among his numerous subjects.

Raedwald (d.625), King of the East Angles, who was converted to Christianity under the influence of ETHELBERT of Kent. In 617 he defeated and slew Ethelfrid, King of Northumbria, in a battle near the River Idle (Nottinghamshire), thus enabling EDWIN to regain the Northumbrian throne. He may have been the king royally interred in the SUTTON HOO ship burial. See also pp.1272.

Ra expeditions, two voyages (1969, 1970) undertaken by Thor HEYERDAHL. He was trying to prove the papyrus boats, as used by the ancient Egyptians, could have crossed the Atlantic. On the second expedition he set out from Morocco and reached Barbados.

RAF. See ROYAL AIR FORCE.

Rafah, town on the GAZA STRIP; Egyptian town which since 1967 has been in Israeli-occupied territory. The town is 3km (2 miles) from the Mediterranean coast. It was the scene of the defeat of Antiochus the Great by Ptolemy IV in 217 BC. Pop. (1968 est.) 49,800.

Raffia, African palm tree with large pinnate leaves which yield a useful fibre commonly used for matting and baskets. Species *Raphia ruffia*.

Raffles, Sir Thomas Stamford (1781-1826), British colonial administrator. He served as Lieutenant Governor of Java (1811-16) and then of Bengkulu, Sumatra (1818-23), introducing administrative reforms and new crops. In 1819 he established the port of Singapore for the British EAST INDIA COMPANY. See also p.1611.

Rafflesia, also known as monster flower, parasitic plant native to Sumatra and Java. It grows on the roots of a jungle vine and has no stem or leaves. The foul-smelling, reddish-brown flowers are 1m (3.25ft) in diameter, and are the world's largest flowers. Family Rafflesiaceae; species *Rafflesia Arnoldii*. See also p.313.

Raft of the "Medusa", The. See GERICAULT.

Raga (Sanskrit for "colour"), in Indian music, a sequence of five to seven notes that is used exclusively for the duration of a performance, usually for about half an hour; its basic structure can be written in the form of a scale. Mood or atmosphere are created by emphasizing certain parts of the scale. There are hundreds of ragas in use, although a far greater number are possible in theory.

Ragged robin, common name for a flowering plant found in Europe, Asia, Canada and NE USA. It has pink petals divided into four narrow and unequal lobes. Family Caryophyllaceae; species *Lychnis flos-cuculi*.

"Ragged Schools" Union, organization founded in England in 1844 to bring together various voluntary charity schools

for the education of the children of the poor. Ragged schools were begun in about 1818 by John Pounds, a Portsmouth shoemaker. Their chief promoter and benefactor was Lord SHAFTESBURY. The Union provided elementary education, industrial training and Sunday schools. It died out after the introduction of state primary education in 1870.

Raglan, Fitzroy James Henry Somerset, Lord (1788-1855), British military commander who succeeded the Duke of WELLINGTON in 1852 and led the British forces in the CRIMEAN WAR. Promoted to Field-Marshal after the battle of Inkerman he was subsequently criticized for slow progress and failure to capture Sebastopol, where he died.

Ragnarök, in Scandinavian mythology, the doom of the Gods. Heralded by bitter cold and moral decline, it signalled the end of the world, the defeat of the gods and heroes of VALHALLA by the forces of fiery destruction - giants, demons and an all-devouring wolf.

Ragtime, name given to an early style of jazz, particularly associated with piano-playing. Its essential ingredient is the constant syncopation, or "ragging", of a straightforward tune. There was little true jazz improvisation; rags were, rather, a theme and a set of written variations. Scott JOPLIN was the most famous ragtime composer.

Ragworm, any of several species of segmented, polychaete, marine invertebrates, worms of the phylum Annelida. Predominantly marine, it has bristle-covered "paddles" called parapodia on its body. It lives in a burrow in mud or sand on the sea shore and feeds on small marine animals, planktonic organisms and detritus from the mud. Many sea anglers use ragworms as bait. See also pp.2, 18-19, 19.

Ragwort, any of several ragged-leaved plants, including golden ragwort or golden groundsel (*Senecio aureus*), a biennial or perennial that bears flat-topped clusters of yellow flower heads. Height: to 1.3m (4ft). Family Compositae. See also p.373.

Rahab, in the Old Testament, prostitute who aided JOSHUA during the siege of Jericho. She sheltered Joshua's spies and in return was spared when Joshua destroyed the city.

Rahere (d.1144), English churchman of Frankish descent. He founded St Bartholomew's Church and St Bartholomew's Hospital at Smithfield, London, in 1123.

Rahman Putra, Tunku Abdul (1903-), Malaysian politician. He became leader of the United Malays' National Organization in 1952-55. He was the first Prime Minister of Malaya after independence (1957) and became Prime Minister of Malaysia when it was established in 1963. He resigned in 1970, after race riots between Malays and Chinese.

Rahu, in HINDU mythology and religion, the mischievous four-armed deity who causes eclipses and the fall of meteors, and who presages trouble and sickness. Rahu is especially worshipped by the Dosadhs and Dhangar of India, who show their devotion by walking on a path of hot coals. See also p.1906.

Raikes, Robert (1736-1811), British publisher and Sunday-school founder. He became proprietor of the *Gloucester Journal* in 1757 and founded the first Sunday school in about 1780.

Rail, slender, long-legged, drab-coloured marsh bird that is well camouflaged in its dense swampland home. Rails are shy, generally nocturnal and often emit melodious calls. They lay 8-15 marked white or buff-coloured eggs in a reed-and-grass ground nest. Length: 10-45cm (4-18in). Family Rallidae. Typical genus *Rallus*.

Railways, system of transport in which carriages are guided by flanged wheels along rails. Railways began in the 17th century, when trucks used in mining and other industries were drawn along rail tracks. Rail transport of freight properly began in 1823 with the construction of the Stockton and Darlington Railway, on which George STEPHENSON's steam locomotive *Locomotion* pulled the world's first

Radiolaria are ocean-dwelling protozoa with complex silica skeletons.

Sir Henry Raeburn's *Boy with Rabbit* is typical of his romantic portraits.

Ragged robin, which grows up to 45cm (18in) tall is a common perennial in Britain.

Lord Raglan used his diplomatic training in dealings with Britain's allies in the Crimea.

Rambert, Dame Marie

Rain gauges are calibrated containers with a funnel 10 times the tube's area.

passenger train in 1825. Thereafter an explosion of railway-building swept the world, and by the 1870s railways were a principal means of transport in Europe, North America, India, Russia and Australia, and were starting up in such countries as Japan, South Africa and New Zealand. Railway tracks are laid by placing sleepers (load-bearing rectangular beams) on firm well-prepared ground, then laying lengths of steel rails on tie plates which distribute their load on the sleepers. Lengths of rail are joined together by joint bars or fishplates, but more often nowadays are welded into continuous lengths. On these rails run passenger coaches and freight wagons drawn by diesel, electric, or diesel-electric locomotives (except in the large Indian system, where steam still reigns supreme). Freight wagons are sorted into trains at marshalling yards, generally large computer-controlled complexes; rail traffic direction and control is now commonly by computer. Modern developments include high speed trains travelling at more than 240km/h (150mph), yet railways are in financial difficulties wherever they are asked to pay their way without large subsidies from the state. See also pp.471, 506-511.

Raimondi, Marcantonio (c.1480-c.1534), Italian engraver. Chosen by RAPHAEL in 1510 to copy his designs and paintings, Raimondi became the first eminent engraver of reproductions. His works include *Pyramus and Thisbe* (1505) and *Massacre of the Innocents* (c.1512).

Rain, water drops that fall from the Earth's atmosphere to its surface, as opposed to fog or dew which drift as suspensions, and snow or hail which fall in the form of ice particles. Clouds are aggregates of minute droplets of moisture and raindrops are formed when these enlarge by further condensation and by the coalescence with other drops as they fall. Warm air passing over the sea absorbs water vapour and rises in thermal currents, or on reaching a mountain range. The water vapour condenses and forms clouds, which account for the usually heavier annual rainfall on windward, compared to leeward, mountain slopes. Rainfall is measured by a RAIN GAUGE. See also p.250.

Rain, artificial, means of modifying the climate in a limited area by inducing rain to fall. It has been attempted only since the late 1940s and so far with only limited success. The method is used to "seed" a cloud with tiny particles to provide nuclei around which water may condense to form raindrops. Dry ice and silver iodide crystals are the usual substances employed when the cloud is supercooled (at a temperature of below 0°C), but in warmer clouds sodium chloride or a water spray is used. These substances are introduced into the cloud from aeroplanes or by artillery shells or rockets.

Rainaldi, Carlo (1611-91), Italian Baroque architect who worked chiefly on ecclesiastical commissions. Roman churches with which he was associated include Sta Agnese (begun 1652) in the Piazza Navona, Sta Maria in Campitelli (begun 1662) and the twin churches of Sta Maria de Monte Santo and Sta Maria de Miracoli (1662-67), completed by BERNINI and FONTANA 1671-79) which were designed to give an illusion of visual symmetry in the Piazza del Popolo.

Rainbow, bright multicoloured band, usually seen as a circular arc formed opposite to the sun or other light source. The primary bow is the one usually seen; in it the colours are arranged from red at the top to blue beneath. A secondary bow, in which the order of the colours is reversed, is sometimes seen beyond the primary bow. The colours are caused by reflection of light within the spherical drops of falling rain, which causes the white light (eg, of the sun) to be dispersed into its constituent wavelengths. The colours usually seen are those of the visible SPECTRUM: red, orange, yellow, green, blue, indigo and violet. See also pp.850-851.

Rain dance, ritualistic and ceremonial dance performed to beg or coerce a deity

to send rain. The dance is often performed in imitation of rain and was once widely practised, notably among American Indians of the SW USA.

Raine, Kathleen (1908-), British poet. Her volumes of poetry, including *Stone and Flower* (1940), *Living in Time* (1946), *Hollow Hill* (1965) and *Defending Ancient Springs* (1967), examine the visionary role of the poet. Influenced by William BLAKE, she has written several studies of his work.

Rainey, Gertrude ("Ma") (1886-1939), US BLUES singer known as the Mother of the Blues. She was the star of the Rabbit Foot Minstrels, with whom she met Bessie SMITH, who became greatly influenced by her. See also pp.1756, 1757.

Rain gauge, instrument for measuring the amount of rain that falls at a given location. It is usually a cylinder from which rain is funneled into a tube, where its depth is measured. See also p.252.

Rainier III, Prince (1923-), ruler of Monaco, who succeeded his grandfather Louis II in 1949. He married the American actress Grace KELLY in 1956. They had three children, ensuring the survival of the royal family and hence Monaco's independence from France.

Rainier, Priaux (1903-), South African composer. She has lived in England since 1920. She was professor of counterpoint and harmony at the Royal Academy of Music (1942-59). Her compositions are chiefly for small chamber groups and the piano.

Rain, Steam and Speed - the Great Western Railway (1844), late work by J. M. W. TURNER. It not only celebrated the coming of the railway age but also, in the firm control of atmosphere and colour and the absence of strong outlines, to some extent anticipated later artistic developments.

Rain tree, or saman, tree native to the West Indies and Central America. It gets its popular name from the fact that cicadas regularly eject juice on it, thus giving the impression under its branches that it is always raining. Height: to 32m (100ft). Family Leguminosae; species *Samanea saman*.

Rainwater, Leo James (1917-), US physicist who in 1950, following the discovery that atomic nuclei are not spherical, proposed a new theory of atomic structure. He postulated that most nuclear particles form an inner NUCLEUS while the remaining particles form an outer nucleus, the shape of each set of particles affecting the other set. He further postulated that if some of the outer particles moved in similar orbits, sufficient energy could be created from their interaction to permanently deform an otherwise symmetrical nucleus. By 1953 Ben R. MOTTELSON and Aage N. BOHR had provided experimental evidence to support this theory. For this research, which made nuclear fusion a practical possibility, Rainwater, Mottelson and Bohr shared the 1975 Nobel Prize in physics. See also NUCLEAR ENERGY.

Rais (Retz), Gilles de (1404-40), French lord. He retired after serving at Orléans with JOAN OF ARC, and was later tried in an ecclesiastical court after rumours of vicious doings in his castle. He confessed to kidnapping and murdering over 100 children and was executed.

Raisin, dried, sweet, seedless GRAPE. Special varieties are grown, particularly in Australia and W USA, and are dried either in the sun or artificially. The product may be eaten on its own or used in cooking.

Rajasthan, state in NW India, on the border with Pakistan; Jaipur is the capital. The state was formed in 1947 from several former principalities of Rajputana. The Thar Desert in the W is inhabited by pastoral nomads. The E is part of the Deccan plateau and wheat, millet and cotton are grown with the aid of irrigation. Coal, marble, mica and gypsum are mined. The state is a stronghold of the conservative Hindu Jan Sangh and Swatantra political parties. Industries: handicrafts, cotton milling. Area: 342,266sq km (132,149sq miles). Pop. (1971) 25,724,142.

Rajput states, historic region of NW India,

chiefly corresponding to RAJASTHAN. The Rajputs, a warrior class, first became politically powerful in the 9th century AD, and after the Muslim conquests in the 12th century retained their independence in Rajasthan and much of central India. They submitted to the MOGULS in the 16th century, and to the Maratha chiefs in the 18th century. Many of the Rajput states kept their Rajput rulers under British suzerainty.

Rake's Progress, The (c.1732-35), sequence of eight anecdotal paintings by William HOGARTH. These illustrations of the decline and fall of a dissolute man exemplify the artist's strong sense of composition and control of contrast and the works were later issued as a set of engravings. See also pp.1546, 1547.

Raleigh, Sir Walter (c.1552-1618), English soldier, explorer, courtier and man of letters. A favourite of ELIZABETH I, he organized expeditions to North America and is credited with introducing the potato plant and tobacco to England. After the accession of JAMES I in 1603 he was found guilty of conspiring against the king and imprisoned in the Tower of London, where he wrote his *History of the World* (1614). In 1617 he led an unsuccessful expedition to the Orinoco, Guyana, in search of gold, was arrested on his return and executed under the terms of his original sentence. See also pp.1411-1413, 1538.

Rallycross. See MOTOR SPORT.

Rallying. See MOTOR SPORT.

Ralph Roister Doister (c.1553), five-act comedy by Nicholas UDALL. Regarded as the first complete English comedy, the influence of PLAUTUS is obvious but the play is distinguished by its native English humour.

Rama, in the RAMAYANA; Hindu mythology, the perfect Hindu. A devoted and chivalrous husband, obedient to sacred law, courageous, patient and possessed of a great sense of duty, he was considered in the folk legends to be an incarnation of the god VISHNU and his name became synonymous with God.

Ramadan, ninth month of the MUSLIM year, set aside for fasting. The month begins and ends with the sighting of the new moon and for its duration the faithful abstain from food, drink and sexual intercourse between sunrise and sunset.

Ramadhan, Sonny (1930-), West Indian cricketer who played for the West Indies, Trinidad and Lancashire. A slow bowler with a deceptive delivery, he took 26 wickets against England in his first Test series and in 43 Test Matches (1950-61) took 158 wickets at an average of 28.96.

Ramakrishna (1836-86), Indian spiritual teacher and Hindu saint. He became a Brahman monk at the Temple of Kali at Dakshineswar, near Calcutta. He taught that all religions were basically united in a common goal of union with God. His chief disciple, Swami Vivekananda, founded the Ramakrishna Mission in India in 1897.

Raman, Sir Chandrasekhara Venkata (1888-1970), Indian physicist who greatly influenced and contributed to the growth of science and research facilities in his country. He was professor of physics at Calcutta University from 1917 to 1933. In Bangalore he directed the Indian Institute of Science and, from 1946, the Raman Institute. He received the 1930 Nobel Prize in physics for his research on the diffusion of light and his discovery of the RAMAN EFFECT.

Raman effect, slight change in the frequency of monochromatic (single-wavelength) light that has been scattered. The effect, discovered by C.V. RAMAN, is seen as secondary spectral lines on either side of the primary spectral line. See also SCATTERING.

Ramayana, the romance of Rama, a great epic poem of ancient India, written c.300 BC and ranking with the MAHABHARATA. It is ascribed to the poet VALMIKI and comprises 24,000 couplets in seven books. It concerns the adventures of Rama, his wife Sita, his brother Lakshman and others amid royal intrigues and warfare.

Rambert, Dame Marie (1888-), British

Rain, Steam and Speed, by Joseph Turner, shows a train on a bridge at Maidenhead.

Sir Walter Raleigh, a favourite of Elizabeth I, was executed by James I.

Sir Chandrasekhara Raman received the 1930 Nobel Prize for his work on spectra.

Rameau, Jean Philippe

Jean Philippe Rameau did important work on the modern theories of harmony.

Ramjets have few moving parts and are little more than tube-like containers.

Allan Ramsay, painter to George III, painted this portrait of Mrs Bruce of Arncliffe.

Ramsey, as Archbishop of Canterbury, advocated unity among Christian Churches.

ballet dancer, teacher and choreographer b. Poland as Cyvia Rabbam, later changing her name to Miriam Rambert. She was a member of DIAGHILEV'S BALLETS RUSSES (1912-13), was special advisor to NINISKY in the first performance of Stravinsky's *The Rite of Spring* (1913) and founded her own school in 1920 which became known as the Ballet Rambert in 1935. Her influence on British ballet, particularly her fostering of new talent, was immense. Her autobiography, *Quicksilver*, appeared in 1972.

Rameau, Jean Philippe (1683-1764), French composer and musical theorist. His most famous opera is *Castor et Pollux* (1737), and among his other stage-works is the dramatic ballet *Les Indes Galantes* (1735).

Ramesses, or Rameses, the name of eleven Egyptian kings of the 19th and 20th Dynasties. Ramesses I (r.c. 1320-1318 BC) founded the 19th Dynasty when he succeeded HOREMHEB and re-established the Egyptian Empire in the Near East. His grandson, Ramesses II, (r. 1304-1237 BC) brought Egypt a period of unprecedented prosperity and power. His efforts to confirm Egypt's dominant position in Palestine and to regain her possessions and influence, in Syria led to a major clash with the HITTITES at Kadesh in 1299 BC. The war with the Hittites continued until a truce was agreed in 1283, and Ramesses later married a Hittite princess. He built many luxurious monuments, including the temple at ABUSIMBEL, and is believed to be the Pharaoh at the time of the Hebrew Exodus mentioned in the Old Testament. Ramesses III (r.c. 1198-1166 BC), the last important Ramesses, was the second king of the 20th Dynasty and the husband of TIY. He defended Egypt from attacks by Libya and the Sea Peoples, but the expenses of defensive wars and ambitious building programmes together with administrative inefficiency led to the dynasty's decline. Egypt then withdrew into political and cultural isolation. The priesthood became the centre of power, and the dynasty ended with the reign of Ramesses XI (r. 1113-1085 BC). See also pp. 1180, 1181, 1184.

Ramgoolam, Sir Seewoosagur (1900-), Mauritian politician. He became Mayor of Port Louis in 1958, and served as Mauritian Minister of Finance from 1960 to 1972. He was appointed Premier in 1965 and Prime Minister in 1968. He served as President of the Organization of African Unity (OAU) in 1976-77.

Ramie, or ramee, coarse, perennial plant that grows in warm climates. The strong bast fibre of its rod-like stems is used to make fine cloth. Family Urticaceae; species *Boehmeria nivea*.

Ramillies, Battle of (1706), engagement fought near the villages of Ramillies and Offus, Belgium, during the War of the SPANISH SUCCESSION. In one of his most brilliant victories, MARLBOROUGH, commanding British, Dutch and Danish troops, defeated the French under the Duc de Villeroi. The victory enabled the Allies to capture Antwerp, Ghent and Bruges and overrun the Spanish Netherlands. The Allies suffered 6,000 casualties, the French 17,000.

Ramjet engine, aircraft engine, a reaction motor that relies on the speed of the aircraft to ram air (for combustion of a HYDROCARBON fuel) into the intake, thereby compressing it. The only moving part is the variable diameter intake, or diffuser, which varies the volume, and therefore the pressure of the incoming air. The remainder of the engine is an elongated tube which forms the combustion chamber. The engine operates best at speeds above that of sound; it must be first accelerated by other means (such as solid-fuel rockets) until sufficient pressure builds up.

Ramón y Cajal, Santiago (1852-1934), Spanish histologist. He was a professor at Valencia University (1884-87) and was professor of histology at the universities of Barcelona (1887-92) and Madrid (1892-1922). He shared the 1906 Nobel Prize in medicine and physiology with the Italian Camillo GOLGI for his work in

establishing the terminal branching of nerve cells and for research into the structure of the nervous system.

Ramos, Graciliano (1892-1953), Brazilian novelist. Sometimes called the "Brazilian Dostoevsky", in such novels as *São Bernardo* (1934) and *Barren Lives* (1938), he shows keen psychological insight into the hard, bitter lives of the people of NE Brazil. His most famous novel is *Anguish* (1936).

Ramsay, Allan (1713-84), Scottish portrait painter, the son of the poet of the same name. The Scottish counterpart of GAINSBOROUGH and REYNOLDS, he trained both at home and in Italy before settling in London where, during 1760, he was appointed painter to George III in preference to his rival Reynolds. His style, graceful and Italianate, lent itself especially well to female portraiture, eg *The Artist's Wife* (1755).

Ramsay, Sir William (1852-1916), British chemist. Working with JOHN RAYLEIGH he discovered ARGON in air. Later he discovered HELIUM, NEON and KRYPTON. He was knighted in 1902 and awarded the 1904 Nobel Prize in chemistry. Ramsay was also interested in RADIOACTIVITY and showed that helium is produced by RADIOACTIVE DECAY.

Ramsden, Jesse (1735-1800), British maker of astronomical instruments. He made significant improvements to the THEODOLITE, BAROMETER, MICROMETER and SEXTANT.

Ramsey, Sir Alfred ("Alf") (1920-), British footballer and manager of England (1963-74), who created and guided the national side that won the 1966 WORLD CUP. He began his managerial career with Ipswich Town, taking them to the Football League Championship in 1962. He was a fullback for Southampton and Tottenham Hotspur, and played for England 32 times (1948-53).

Ramsey of Canterbury, Baron (Life peer) (1904-) British churchman, Archbishop of CANTERBURY (1961-1974). A distinguished Anglican theologian, he held the chairs of divinity at the Universities of Durham (1940-1950) and Cambridge (1950-1952) before becoming Bishop of Durham (1952-1956) and Archbishop of York (1956-1961). As Archbishop of Canterbury he did much to further the ECUMENICAL MOVEMENT. Notable events of his primacy included his historic visit to Pope PAUL VI in 1966 and to the patriarchs of the Eastern Orthodox Churches; his support of the scheme of Anglican-Methodist reunion in England; and the inauguration of synodical government in the Church of England.

Rance, river in Brittany, NW France. The Rance estuary is famous for its tidal barrage, which has the world's first operational tidal power station. The Rance was chosen because of its very large tidal range, which at St Malo is approx. 10m (30ft). See also p. 445.

Rand, Mary, née Bignal (1940-), British athlete who at the 1964 Olympic Games won a gold medal in the long jump (setting a world record), a silver in the pentathlon and a bronze in the relay. She also won the 1966 Commonwealth Games long jump. In 1969 she married 1968 Olympic decathlon champion Bill Toomey, her second husband.

Rand, The (Witwatersrand), region of s Transvaal, NE South Africa, extending approx. 100km (62 miles) E and W of Johannesburg. The region is one of the world's richest gold-mining areas. Gold was first discovered in 1884 and mining began two years later. Many of the older mines are now almost exhausted but the Rand still produces about a third of the total world output of gold. Silver is recovered by the Wohlwill process as a by-product of gold refining. Coal and manganese are also mined and there are many ancillary industries in the region.

Ranfurly Shield, the premier rugby union trophy in New Zealand, presented in 1901 by the Earl of Ranfurly for the winner of a competition between provincial teams and first awarded to Auckland (in 1902). Since then it has been played on a challenge basis, the holders retaining the "log

of wood" until beaten in an official challenge match.

Range-finder, optical attachment to guns and cameras, used for measuring distances. Optical range-finders split the light from the subject into two paths in such a way that the angle between them is proportional to the range of the subject. This angle is measured by the range-finder.

Ranger, series of unmanned US spacecraft, launched in 1964-65 and aimed to hit the Moon. Ranger 7 (July 1964) obtained close-up television pictures of the Moon's surface, the first ever taken, before it crashed. See also pp. 930, 936.

Rangoon, capital and largest city of Burma, on the Rangoon River approx. 34km (21 miles) N of the Andaman Sea. It is one of SE Asia's largest seaports. The site of an ancient Buddhist shrine, the town grew in the 18th century when its port facilities were developed. It came under British rule in 1852. The city suffered heavy damage in an earthquake in 1930 and was repeatedly bombed in WWII. Its industries include oil refining and ship-building. Pop. (1973), 2,055,365.

Ranji Trophy, silver cup awarded annually to the national cricket champions of India. Contested by associations affiliated to the Indian Board of Control, it was played on a knockout basis until 1956, when zonal leagues, leading to knockout final rounds, were introduced. It was instituted in 1934 in memory of the Indian cricketer KUMAR RANJITSINHJI.

Ranjitsinhji, Kumar Shri (1872-1933), Indian cricketer who played for England, Cambridge University and Sussex. Known as "Ranji", he thrilled crowds with his majestic batting, twice scoring more than 3,000 runs in a season. He played in 15 Test Matches between 1896 and 1902 (scoring 989 runs, average 44.95).

Rank, Joseph Arthur (1888-1972), British industrialist and film magnate, chairman of many film companies, including GAUMONT BRITISH and Cinema-Television. He promoted the British film industry when HOLLYWOOD and the US film companies had a virtual monopoly.

Rankine, William John Macquorn (1820-72), Scottish engineer and physicist. He became professor of engineering at Glasgow University in 1855, where he made valuable contributions to civil and mechanical engineering and THERMODYNAMICS. He wrote manuals on these subjects and also devised the absolute temperature scale based on the degree Fahrenheit, known as the Rankine scale.

Rank Organization, British film production and distribution company founded in 1946 by J. Arthur RANK. He had previously established General Film Distributors and gained control of the GAUMONT BRITISH and Odeon cinema circuits. Film output declined in the 1950s, but the company expanded into hotels and leisure services.

Ranks Hovis McDougall, international food processing company based in Britain. Its products include flour, bread, cakes and groceries. In the mid-1970s it employed about 58,000 people.

Rank Xerox, international manufacturing company based in Britain, partly owned by the RANK ORGANIZATION. Its products include office copying and duplicating machines, electronic typewriting systems and facsimile transmission equipment. In the mid-1970s its international workforce numbered more than 30,000.

Ransome, Arthur Mitchell (1884-1967), British writer. As a journalist he covered the Russian Revolution of 1917 and its aftermath. Later, he wrote very successful children's novels set in the English Lake District and the Norfolk Broads. These included *Swallows and Amazons* (1930) and *Peter Duck* (1932). His autobiography was published in 1976.

Ransom, money demanded in return for the release of a hostage. In medieval times, the demanding of ransoms was legally sanctioned and the right to have a ransom paid by his tenants was one of the feudal rights of a lord captured in battle, the amount payable varying according to the rank and status of the captive. Heavy taxes had to be levied in England to pay

the 150,000 marks ransom demanded by the Emperor HENRY VI in 1193 for the release of RICHARD I. Today, ransom demands are associated with HIJACKING and kidnapping and are a criminal offence. See also p.1347.

Ranunculaceae, family of flowering plants, containing about 2,000 species including the BUTTERCUP, ANEMONE and COLUMBINE. See also pp.370, 382.

Raoult's law, statement that the changes in certain properties of a liquid that occur when a substance is dissolved in it are proportional to the number of molecules of solute (dissolved substance) present for a given quantity of solvent molecules. Discovered by François-Marie Raoult in 1886, it has been fundamental to many theories of solution.

Rapacki Plan (1957), proposal put to the United Nations by the Polish Foreign Minister, Adam Rapacki, that a nuclear-free zone be created in East and West Germany, Czechoslovakia and Poland. It was rejected by the Western powers, who were fearful of the USSR's superiority in conventional land forces.

Rape, unlawful sexual intercourse with a female against her will by force, fear or fraud. Legal definitions of rape have often tended to put victims at a disadvantage in trying to prove the crime. In Britain, a husband cannot be accused of raping his wife unless she is legally separated from him. A man cannot be convicted of rape if he had reason to believe that the victim consented. There was controversy in Britain in 1981 when a man was fined, rather than imprisoned for rape.

Rape, plant grown for animal fodder and for its small black seeds, which yield rape oil, used industrially as a lubricant and in the manufacture of various products. It has curly, blue-green leaves, small yellow flowers and slender seed pods. Family Brassicaceae. See also pp.713, 713.

Rape of Lucrece, The (1594), narrative poem by William SHAKESPEARE, written in Rhyme Royal. It is based on the story of LUCRETIA and was dedicated to Henry Wriothesley, Earl of Southampton.

Rape of Lucretia, The (1946), two-act chamber opera by Benjamin BRITTEN with libretto by Ronald Duncan based on Livy, Shakespeare and *Le Viol de Lucrece* (1931) by André OBRY.

Rape of the Lock, The (1714), famous poetic satire by Alexander POPE, published in five cantos. It is based on a true incident in which a nobleman cut off a lock of a lady's hair, so causing a bitter feud between the two families.

Rape of the Sabine (1582), marble sculpture by Giambologna, situated in the Loggia dei Lanzi, Florence. The sculpture is a masterpiece of MANNERISM, and demonstrated the sculptor's ability to work equally in large-scale marble as well in small-scale bronze modelling. See also p.1399.

Raper, Johnny (1939-), Australian rugby league player. One of the game's greatest loose-forwards, he was a key member of the dominant Australian sides of the 1960s, captaining them to victory in the 1968 World Cup. At club level he played mostly for St George of Sydney.

Raphael, biblical archangel who, with MICHAEL, GABRIEL and URIEL, serves as a messenger of God, relieving suffering and healing the sick. Since the 16th century he has been portrayed as the patron of travellers, probably because of his identification in the biblical book of Tobit.

Raphael, or **Raffaello Sanzio** (1483-1520), Italian painter, one of the finest artists of the High RENAISSANCE. Born in Urbino, he went to Perugia and studied under PERUGINO. He moved to Florence in 1504, and there learned his draughtsmanship. In Florence he painted many Madonnas, famous for their delicate portraiture based on the example of LEONARDO DA VINCI. In 1508 he moved to Rome at the request of Pope Julius II, and painted the frescoes of *The School of Athens* and the *Disputa* (1511) in the Stanza della Segnatura in the Vatican. See also pp.1388-1389, 1388-1389.

Raphael, Frederic Michael (1931-), British writer. His work includes the

novels *Richard's Things* (1973) and *California Time* (1975), and a film screenplay, *Darling* (1965) which won an OSCAR. A television sequence, *The Glittering Prizes* (1976) won wide acclaim.

Rapid eye movement (REM), phenomenon observed in sleeping people. REM has been calculated to take up to 20% of a normal night's SLEEP and has been associated with the time spent dreaming. The sleeper cycles in and out of REM sleep and, although if necessary he can do with very little sleep, suffers if deprived of REM sleep. See also pp.131, 1107, 1892.

Rare earths. See LANTHANIDE SERIES.

Rare gases, or inert gases, also called noble gases, chemical elements, constituting group 0 of the Periodic Table, ie HELIUM, ARGON (which are not particularly rare), NEON, KRYPTON, XENON and RADON. All these gases are unreactive because the outermost shell of electrons in their atoms is filled (they have the stable eight electron configuration). Radon is a radioactive element. See also pp.889, 890-891.

Rarotonga, principal island of the Southern (or Lower) COOK ISLANDS, in the Pacific Ocean, and site of Avarua, capital of the Cook Islands. The island was discovered in 1823 by the British missionary John Williams. Products: tropical fruits, copra. Area: 67sq km (26sq miles). Pop. (1971) 11,437.

Ras al-Khaimah, sheikhdom of E Arabia and, since 1972, a member state of the UNITED ARAB EMIRATES on the Persian Gulf. It was part of the Sharjah sheikhdom until 1921, when it became independent. It is an important oil producing area. Area: 1,684sq km (650sq miles). Pop. (1968) 31,480.

Rasbora, genus of freshwater fish found in SE Asia. Popular with pet fish keepers, they have distinctive black markings that vary according to species. Length: to 5cm (2in). Species include the harlequin (*Rasbora heteromorphia*) and pigmy rasbora (*R. maculata*). Family Cyprinidae.

Rash, pimples, hives or weals on the skin. It may be associated with fever or diseases such as MEASLES and SCARLET FEVER. It also occurs as a reaction to some drugs and other substances that give rise to an ALLERGY. The symptoms of heat rashes and hives are caused by the body's production of Histamine. See also MS p.98.

Raspberry, bramble fruit grown in polar and temperate regions of Europe, North America and Asia. The black, purple or red fruit is eaten fresh or preserved. Canes, rising from perennial roots, bear fruit the second year. Family Rosaceae; genus *Rubus*. See also pp.674, 710.

Rasputin, Grigori Yefimovich (c.1872-1916), Russian peasant mystic. He exercised great influence at the court of NICHOLAS II because of his apparent ability to cure the crown prince Alexis' haemophilia. He was influential in Russia during WWI but was assassinated in 1916. See also p.1649.

Rat, any of numerous kinds of small RODENTS found throughout the world in almost all habitats. Most species are herbivorous and inoffensive to man. The best-known are the black rat (*Rattus rattus*) and brown rat (*R. norvegicus*), both of the family Muridae. They are prolific, aggressive, and eat almost anything. They also carry diseases and destroy or contaminate property and food. Both live everywhere that man lives. Brown rats are slightly heavier and longer, with shorter tails and smaller ears. Most white rats used in laboratory experiments are albino strains of the brown rat. See also pp.87, 92.

Ratchet, mechanism that permits leverage in one direction only. It consists of a wheel or bar with teeth sloping in one direction, which is engaged by a pawl so that the wheel or bar is unable to rotate backwards. Ratchets are commonly parts of machine tools in which non-slip movement is essential. The rear sprocket of a free-wheelable bicycle incorporates one.

Ratel, or honey badger, solitary, aggressive burrowing mammal of the WEASEL family, native to Africa and S Asia. It has a heavy body with a light back and dark underparts. It is omnivorous, but is parti-

cularly fond of honey. Length: to 76cm (30in). Species *Mellivora capensis*.

Rates, taxes assessed on the owners of property. In Britain the rateable value is determined by the Department of Inland Revenue on the basis of rent that could be charged for a particular property. Rates are assessed by local councils as a percentage in the £ of the rateable value of the property. The collection of rates originated in Elizabethan times. Today rates make up more than a quarter of local government income, the remainder coming from grants from the central government and charges.

Ratfish. See CHIMAERA.

Rathlin, island in North Channel off the NE coast of Northern Ireland; part of county Antrim. There are ruins of a castle in which Robert the Bruce was supposed to have taken refuge in 1306. Farming and fishing are the chief occupations. Area: 13sq km (5sq miles). Pop. (1971) 109.

Ratio, quotient of two numbers or of two quantities of the same kind, such as two prices or of two lengths, that indicates their relative magnitude. Ratios, as of the numbers 3 and 4, can be written as a fraction ($\frac{3}{4}$ or $\frac{3}{4}$) or with a colon (3:4). See also p.778.

Rationalism, philosophical theory that holds that reason alone, unaided by experience, can arrive at basic truths about the world. Associated with this theory is the doctrine of innate ideas and the method of deducing truths about the world logically from self-evident premises. Eminent rationalists include DESCARTES, LEIBNIZ and SPINOZA. See also pp.1885, 1885, 1887.

Rational number. See NUMBER, RATIONAL.

Rationing, allocation of goods and services in an economic system. Some form of rationing occurs in most societies because supplies of goods are limited. During wartime governments attempt to ration goods of which there are shortages (particularly food), by issuing ration coupons which must be used in addition to money to make purchases. See also pp.1674, 1714-1715, 1718, 1718.

Ratitae, group of large, usually FLIGHTLESS BIRDS with flat breastbones instead of the keel-like prominences found in most flying birds. Ratitae include the OSTRICH, RHEA, CASSOWARY, EMU, KIWI and the unusual flying TINAMOU.

Ratsiraka, Didier (1936-), Malagasy naval officer and politician. Educated in France he became Minister of Foreign Affairs in 1972, Prime Minister in 1975 and President in 1976.

Rat snake, any of about 50 species of terrestrial and arboreal SNAKES, distributed widely in North America and Europe. Common in North America are the black and yellow rat snakes, fox snakes and corn snakes. The four-lined and Aesculapian snakes are European. Length: to 1.8m (6ft). Family Colubridae.

Rattan, climbing PALM native to the East Indies and Africa. Its stems grow to 152m (500ft) by climbing over trees and other plants. They are used for making ropes, furniture and mats. Family Palmae; genus *Calamus*.

Rattigan, Sir Terence Mervyn (1911-77), British dramatist. His well-written, carefully constructed plays enjoyed popular, if not critical, success. His works include *French Without Tears* (1936), *The Winslow Boy* (1946), *Separate Tables* (1954), *In Praise of Love* (1973) and *Cause Célèbre* (1977). He wrote many notable film scripts, including *Goodbye Mr Chips* (1968).

Rattlesnake, any of about 30 species of venomous New World PIT VIPERS characterized by a tail rattle of loosely connected, horny segments of unshed skin. It ranges from Canada to South America, usually in arid regions. Most are blotched with dark diamonds, hexagons or spots on a lighter background. They feed mostly on rodents, and bear their young live. Length: 30cm-2.5m (1-8ft). Family Viperidae. See also SNAKE; pp.68, 70, 297.

Rattlesnake fern, conspicuous grape FERN, widely distributed in the Northern Hemisphere. Its clustered sporangia resemble a

Ranunculaceae; bachelor's button is a member of this large family of plants.

Rape of the Lock; an illustration from an 1828 edition of Pope's famous satire.

Raphael; *The Madonna of the Stool*, one of the many madonnas by this Italian master.

Ratels reverse the usual colours of most animals, with light fur uppermost.

Rauch, Christian Daniel

Ravel's most popular work is his *Bolero*, which drives on to a frenzied climax.

Lord Rayleigh's researches spanned much of physics and chemistry.

Rayon, patented in 1884 by Hilaire Chardonnet, was originally called artificial silk.

Razorbills, more than any other birds, have suffered from oil pollution at sea.

rattlesnake's tail. It has triangular leaves. Height: to 60cm (24in). Family Ophioglossaceae; species *Botrychium virginianum*.

Rauch, Christian Daniel (1777–1857), German sculptor. He is famous for his colossal bronze equestrian monument to Frederick the Great (1839–52) in Berlin.

Rauschenberg, Robert (1925–), US painter and graphic artist, who gained recognition in the 1950s with his collages and assemblages. His works combined various techniques, including dripped paint and collage, as in *The Bed* (1955). From 1955 he composed works that juxtaposed SURREALIST images, eg stuffed animals, with ABSTRACT EXPRESSIONIST painting, as in *Monogram* (1959). Rauschenberg's work is considered a link between Abstract Expressionism and POP ART. See also p.1685.

Rauwolfia, drug derived from a genus of shrub of the same name native to India. It is used to treat hypertension, anxiety and psychoses. See also RESERPINE; MS p.118.

Ravana, in Hindu mythology, one of the Rakshasas, evil spirits in the grip of fate. In the RAMAYANA, Ravana appears as a giant with 10 heads and 20 arms. He was killed by RAMA and a host of monkeys after kidnapping Rama's wife, SITA.

Ravel, Joseph Maurice (1875–1937), French composer. A student of Gabriel FAURÉ, he was a leading exponent of IMPRESSIONISM. Ravel wrote original music within the outlines of classical forms and his piano compositions include *Jeux d'eau* (1901), *Gaspard de la nuit* (1908) and *Le Tombeau de Couperin* (1917), which he also scored for orchestra, and two piano concertos. Among his orchestral works is *Bolero* (1927).

Raven, Simon Arthur Noel (1927–), British novelist. His first novel was *The Feathers of Death* (1959). Since then he has published almost yearly, including *The Rich Pay Late* (1964) and *The Judas Boy* (1968).

Raven, large bird of the crow family found in deserts, forests and mountainous areas of the Northern Hemisphere. It has a long, conical bill, shaggy throat feathers, a wedge-shaped tail and black plumage with a purple sheen. It eats carrion or any other animal food. Length: to 68cm (27in). Family Corvidae.

Ravenna, city in N Italy 72km (45 miles) ESE of Bologna; capital of Ravenna province. It was a Roman naval base in the 1st century BC, and the capital of the Western Roman Empire in the 5th century AD. Under papal rule from the 16th–19th centuries, it became part of the Kingdom of Italy in 1860. The city is noted for its outstanding Roman and Byzantine remains, particularly the mosaics in the churches of the 5th and 6th centuries AD. Industries: petroleum, furniture, cement, fertilizers, sugar refining. Pop. (1979) 139,392.

Ravensbrück, CONCENTRATION CAMP, situated 81km (50 miles) N of Berlin, built by the Nazis in 1938. Its inmates were mainly women, the majority Russians and Poles. It is estimated that 50,000 people were killed there.

Ravenscroft, George (1618–81), English glassmaker who developed a type of glass stronger and more durable than VENETIAN GLASS. He was commissioned to produce a glass that could be manufactured from English materials; the resulting "flint glass" was granted a patent in 1674.

Rāwalpindi, city in NE Pakistan, approx. 258km (160 miles) NNW of Lahore. It became an important military base after Britain occupied the Punjab in 1849. Today it is an industrial centre with an iron foundry, textile mills, an oil refinery and chemical plants. Pop. (1972) 615,392.

Rawlinson, Sir Henry Creswicke (1810–95), British diplomat, soldier and Assyriologist. He entered the EAST INDIA COMPANY's army in 1827 and helped to reorganize (1833–39) the Persian army. During this time he studied CUNEIFORM inscriptions and deciphered DARIUS's Bisitun inscription. His works include the *Outline of the History of Assyria* (1852).

Rawthorne, Alan (1905–71), British composer who devoted himself to full-time composition in 1934. He soon established a reputation with *Theme and Varia-*

tions for two violins (1938) and *Symphonic Studies* (1938). Other pieces include three symphonies and the fantasy overture *Corièges* (1945).

Ray, John (1627–1705), English naturalist whose work on plant and animal classification later influenced Carl LINNAEUS and Cuvier. He was the first to distinguish the two main types of flowering plants as MONOCOTYLEDONS and DICOTYLEDONS. See also p.186.

Ray, Man (1890–1976), US photographer and painter, the founder of the New York DADA movement with Marcel DUCHAMP and Francis PICABIA. In the 1920s he began making his "Rayographs" in which he placed objects on light-sensitive paper and exposed and developed them.

Ray, Satyajit (1921–), Indian film director with a worldwide following. His trilogy of films about life in modern India, *Pather Panchali* (1954), *The Unvanquished* (1956) and *The World of Apu* (1959), is regarded as a classic. His other films include *Kanchenjunga* (1962).

Ray, any of several species of cartilaginous, mostly marine fish related to the SKATE, SHARK and CHIMAERA; it is primitive, having cartilage not bone as its skeletal material. Like a skate, the ray is flattened dorso-ventrally; its body extends sideways into large, wing-like pectoral fins which are "flapped" while swimming, often near the ocean floor. The tail is narrow and may be whip-like or bear poisonous spines. The giant manta ray grows to a span of 6m (20ft), but it is a harmless plankton feeder. See also pp.56, 58.

Ray. See ELECTROMAGNETIC RADIATION.

Rayleigh, John William Strutt, Lord (1842–1919), British physicist. His work was chiefly concerned with various forms of wave motion. For his discovery (with William RAMSAY) of the rare gas ARGON he was awarded the 1904 Nobel Prize in physics.

Raymond, name of seven counts of Toulouse, of whom the most important are Raymond IV (c.1038–1105), the leader of the First Crusade; Raymond VI (1156–1222), repeatedly excommunicated for his toleration of the ALBIGENSIANS, and Raymond VII (1197–1247), who surrendered much of S France to LOUIS IX and persecuted the Albigensians.

Raynaud's disease, arterial disorder in which the fingertips or other extremities become pale and then blue, especially when exposed to cold. It is believed to be a result of spasms in certain arterioles, preventing adequate circulation of blood.

Rayon, fine, smooth, man-made textile fibre produced from solutions of the modified CELLULOSE of soft wood pulp or cotton linters. Viscose rayon, the most common, is spun-dried and has a strength approaching that of NYLON. The more costly cuprammonium rayon, known as Bemberg, resembles silk. See also p.590.

Rayonnism, in art, transitory movement that developed in Russia c.1911 in response to a CUBISM. The painter Mikhail Larionov (1881–1964) propounded that art should exist in a fourth dimension by projecting rays of contrasting colour from objects into space.

Razin, Stenka (d.1671), Cossack leader of the peasant revolt in Russia in 1670. As commander he proclaimed freedom from landlords and officials, but was defeated at Simbirsk (Ulyanovsk) and executed.

Razor-billed auk, or razorbill, chunky penguin-like seabird that lives along coast-lines in the cold parts of the Northern Hemisphere. It is black and white with a white-ringed, narrow bill, and dives for its food. Length: 41cm (16in). Species *Alca torda*.

Razor blades, double- or single-edged shaving blades. The forerunner of the modern safety razor was made in England in 1828. The first double-edged, disposable blade was patented by King Camp Gillette in 1901 and first produced commercially in 1903.

Razor shell, bivalve MOLLUSC related to the CLAM, MUSSEL and SCALLOP. Its long, hinged shells, each shaped like the blade of a cut-throat razor, are common on British beaches. See also pp.22, 23.

RCA, US electronics and communications company, founded in 1919 as the Radio Corporation of America. In the mid-1970s it employed approximately 113,000 people.

R Coronae, in astronomy, type of irregular star whose brightness remains normally at maximum, but suffers sudden, unpredictable drops to minimum. Fewer than 50 stars of this class are known. See also pp.992–993, 1010.

Re, or Ra, in Egyptian mythology, sun god and lord of the dead. In some traditions he is identified with OSIRIS or sometimes as the creator of man. In the myths, Re sailed his sun boat across the sky by day and through the underworld by night. He is depicted as a falcon-headed man with a solar disc on his head.

Reaction, chemical. See CHEMICAL REACTION.

Reaction propulsion, propulsion utilizing NEWTON's third law of motion: for every action there is an equal and opposite reaction. Both ROCKETS and JET ENGINES build up internal pressure from gases or PLASMAS that are allowed to escape in one direction, creating a propulsive force in the opposite direction. See also pp.1022, 1026.

Reaction rate, in chemistry, the speed at which chemical reactions move to completion or to equilibrium. The rate is accelerated by one or more of the following: the presence of a CATALYST or a promoter, heat, pressure, or reduction of the concentration of the reaction products.

Reaction time, interval between the onset of a stimulus and the conscious execution of a response.

Reactor, fast breeder, NUCLEAR REACTOR that produces ("breeds") more fissionable material than it consumes. Excess neutrons from the fission of a fuel such as uranium-235, instead of being absorbed in control rods, are used to bombard atoms of relatively inactive uranium-238 which transmutes to (or "breeds") the active isotope plutonium-239. When the original fuel is spent, the plutonium can be used as a nuclear fuel in other reactors or nuclear weapons. See also pp.434–435, 574–575, 814–815.

Read, Sir Herbert (1893–1968), British critic and poet who helped to revive an interest in English ROMANTIC poetry and who strongly defended movements in modern art against fierce criticism. His publications include *The Meaning of Art* (1931), *Form in Modern Poetry* (1932), *Art and Society* (1936) and *A Concise History of Modern Painting* (1959).

Read, Phil (1939–), British motorcyclist. He won five world lightweight titles (125cc 1968; 250cc 1964, 1965, 1968, 1971) riding Yamahas and two 500cc titles (1973, 1974) with mv Augusta. Making a comeback at the 1977 Isle of Man TT, he won the Formula 1 world championship, on a Honda.

Reading, county town of Berkshire, s central England, at the confluence of the Thames and Kennet rivers. It has the ruins of a Benedictine abbey, founded in 1121 by Henry I (who was buried there), and the University of Reading (1926). Industries: ironware, engineering, brewing. Pop. (1979 est.) 138,000.

Reading, assimilation and comprehension of visual symbols representing language. Opinions differ over the precise physical nature of this process, as they do also over whether the language involved – phonetic non-phonetic or ideographic – is influential in the speed of learning and the retention of vocabulary. Visual familiarity with the symbols of any kind of language, however, together with a fair vocabulary, results in the ability to read faster than the words can be spoken. Reading then becomes purely a thought process. It is estimated that just less than 60% of adults in the world can read; the long-term literacy campaign of UNESCO is slowly increasing in this figure. See also pp.132, 132.

Reagan, Ronald (1911–), President of the United States since 1981. Former sports commentator, TV host and actor; Governor of California, 1967–74.

Realism, in the arts, a style that attempts to describe life with objective honesty and

eschews romanticism and idealization. Classic realist painters include Jean-Baptiste CHARDIN, Gustave COURBET, and REMBRANDT. As a literary school, realism was important in the 19th century. Major realist writers include Gustave FLAUBERT, Honoré de BALZAC, George ELIOT, Henry JAMES and Mark TWAIN. Naturalism is an outgrowth of realism.

Real earnings, earnings calculated by dividing money wages by the RETAIL PRICES INDEX. If prices have risen faster than money wages, then real earnings have decreased.

Realism, medieval doctrine that universal concepts and tangibles exist outside the mind, ie independently of human perception. Some philosophers rejected this view for what may be termed moderate realism, which held that UNIVERSALS exist only in the mind of God. See also IDEALISM; pp.1881, 1880-1881.

Realism, socialist, policy of Communist governments that the arts and literature should realistically portray themes of concern to the proletariat, thus furthering the aims of communism.

Reality, perceived and acknowledged concreteness of actuality. PLATO believed that what is common to things described by the same name (eg any common noun) is their Form or Idea. These Forms comprise reality and their various manifestations are but copies.

Reality principle. See PLEASURE PRINCIPLE.

Real number, NUMBER which can be expressed by a single series of digits, such as 241.037... Such numbers include INTEGERS and rational and IRRATIONAL NUMBERS. They are distinguished from complex numbers which are of the form $x + iy$ (where $i = \sqrt{-1}$) and require two series of digits, x and y , to be defined.

Realpolitik, state policy which places national interests above fraternal ones and material considerations above moral ones. It is associated especially with European politics of the second half of the 19th century, above all with the statecraft of BISMARCK.

Real Presence, theological term that describes various doctrines which assert that the body and blood of Christ are actually, not merely symbolically, present in the bread and wine of the EUCHARIST.

Real tennis, racket and ball game played on an indoor court according to rules perhaps more complicated than those for any other ball game. The word "real" is from the old French for "royal". In France, where the game began, it is still called *jeu de paume* (palm-game), from the times when the ball was hit with the hand rather than a racket. In Australia it is called royal tennis; in the USA court tennis. The asymmetric four-walled court, which is surrounded on three sides by structures with sloping roofs, is similar to the monastic cloisters in which the game was first played in the 12th or 13th centuries. See also LAWN TENNIS.

Reaumur, René-Antoine Ferchault de (1683-1757), French scientist best remembered for his thermometer scale which designates zero as the freezing point of water and 80 degrees as its boiling point. He wrote widely in natural history and did research into mining, metallurgy, fossils and insects.

Reaper, machine that cuts cereal crops. Early reapers cut the crop and dropped it on the field. COMBINE HARVESTERS incorporate cutting, threshing and grain containment in one operation. See also pp.658, 658.

Rearmament, generally the rebuilding of a nation's depleted stock of arms, but more especially the rearmament question in Western European politics in the 1930s. When it became known that HITLER was (in contravention of the Treaty of VERSAILLES) rearming Germany, a section of the Conservative Party in Britain, notably Winston CHURCHILL, strove to persuade the government to rearm. The Prime Minister, Stanley BALDWIN, would not make it an issue at the 1935 elections, but British rearmament began in 1936.

Reasoning, formation of logical conclusions. The two main processes of reasoning are INDUCTIVE LOGIC and DEDUCTIVE

LOGIC. Induction involves putting together observed facts to form a general principle. Deduction is the opposite - a specific fact is reasoned from a general principle. Probably first to systematize reasoning was ARISTOTLE, who emphasized the importance of categories or factors which may be common to all of the things involved in a logical process. See also pp.1880-1883.

Rebab, Moorish form of REBEC.

Rebec, early stringed instrument, played with a bow. It is one of the ancestors of the VIOLIN and closely related to the LYRE. It was made in several sizes to produce notes in the various ranges of the human voice.

Rebecca (Rebekah), in Genesis, of Bethuel, sister of Laban, wife of ISAAC and mother of the twins Esau and JACOB. Jacob was her favourite and she helped him win Isaac's blessing that was rightfully Esau's.

Rebecca Riots (1839, 1842-43), destructive campaign by Welsh tenant farmers, against rates, rents, tithes and particularly turnpike tolls. The rioters took their name from Genesis 24:60 and were suppressed by the military.

Rebel Without a Cause (1955), US film starring James DEAN as a teenager. The anger and frustration he feels with his world lead him to tragedy.

Recall of information, process of retrieving data. The efficiency of this process depends largely on the systems by which the information is classified. Two such systems used in libraries are the Dewey decimal system and the Library of Congress system, but these and others still contain disadvantages. The main problem is the defining of categories. See also pp.132-133.

Récamier, Jeanne-Françoise-Julie-Adélaïde ("Juliette") (1777-1849), society figure who kept a fashionable intellectual salon in Paris during the 1830s. She gathered around her many important political and literary figures of the times including CHATEAUBRIAND, SAINTE-BEUVE, Madame de STAEL and Benjamin Constant. Jacques-Louis DAVID painted her portrait in 1800.

Recapitulation, biological theory which says that the embryonic development of a human being repeats the evolutionary development of the species. It was called the biogenetic law by HAECKEL.

Receptor, any of several kinds of NEURONS specialized to transform physical energy into the electrochemical impulses of the nervous system. For example, the RODS and CONES of the RETINA of the eye are receptors that transform light energy into the nerve impulses sent to the brain.

Recession, in economics, phase of the business cycle associated with a declining economy. Its manifestations are rising unemployment, contracting business activity and decreasing purchasing power of consumers. A recession is generally associated with pessimism in industrial and business circles, and a reluctance to invest in factories and machinery for further production. Government policy, such as cuts in government spending or taxes, may be used to stimulate and expand the economy during a recession.

Recessive, in genetics, describes a GENE which does not express itself in the PHENOTYPE (physical characteristics) of an organism when paired with a dominant gene. Recessive genes were discovered by Gregor MENDEL, who found that a cross between pure bred red and white flowering garden peas always produced red flowers in the offspring. The gene for red coloration was dominant; the gene for white was recessive. In humans the genes for blue eyes are recessive to those of brown eyes; genes for HAEMOPHILIA are also recessive. See also pp.178-179.

Recife, Atlantic port and city in NE Brazil; the capital of Pernambuco state. First settled by Portuguese fishermen and sailors in the 1530s, it is located partly on an island and connected to the mainland by numerous bridges. It is now an excellent port and shipping centre, exporting sugar, cotton and coffee. Pop. (1970) 1,046,454.

Reciprocal, number or quantity equal to the number 1 (unity) divided by a specified number. For example, the reciprocal of 2 is $\frac{1}{2}$ and the reciprocal of $\frac{1}{2}$ is $1 \div \frac{1}{2} = 2$.

Reciprocating engine, any engine in which a piston moves to and fro, such as a steam ENGINE or an INTERNAL COMBUSTION ENGINE, commonly used to power motor vehicles and aircraft. There are two basic designs of reciprocating internal combustion engine. An in-line engine has a row of cylinders or two rows in a V arrangement or horizontally opposed. A radial engine, used only for aircraft, has cylinders arranged in a circle. See also p.1124.

Recitative, in music, declamatory passages in opera and oratorio, in contrast to the lyrical sections. Recitativo secco, the earliest form of recitative, allows the singer the freedom of normal speech rhythms and its accompaniment, often only a harpsichord or piano, is kept to a minimum. In recitativo accompagnato, the accompaniment is fuller and more rhythmical.

Reclamation of land. See LAND RECLAMATION.

Reconstruction, in US history, the rebuilding of the US South after the AMERICAN CIVIL WAR. President Andrew JOHNSON attempted to preserve in power the former slave-owning rulers of southern society, but the Radical Republicans won enough seats at the 1866 elections to thwart him. The 14th amendment, guaranteeing Blacks political equality, was passed in 1866 and ratified by the states in 1868.

Reconstruction, Ministry of, British government department established in 1917 and lasting until 1919. It was formed out of the committees of reconstruction appointed in 1916 and 1917. Its purpose was to supervise the return to peace-time industrial activity after the dislocation of WWI. It was particularly concerned with finding employment for ex-servicemen. A similar ministry was created in 1944-45.

Record, gramophone, disc physically coded to reproduce sound. The sound to be recorded on a disc is first recorded on tape. The tape, when played back, controls a stylus which cuts a spiral groove in a lacquer-coated aluminium disc. The stylus vibrates horizontally for monophonic sound, vertically and horizontally for stereophonic sound. This master disc is then used to prepare a metal stamp to reproduce the groove on pressings, which may be sold as records. See also pp.642, 642.

Recorder, simple woodwind musical instrument, popular in Europe from the 15th to the 18th centuries, and now commonly played by children. It has a whistle-shaped mouthpiece and an end-blown straight tube with eight finger holes. Modern recorders include soprano, descant, tenor and bass instruments.

Recorder, in current English law, part-time judge of a crown or county court. A recorder must be a barrister or solicitor of at least ten years' standing and must take the judicial oath (swearing to uphold legal principles and to be impartial) before commencing office. Before 1972 a recorder was appointed to replace JUSTICES OF THE PEACE as a sole judge of a court of QUARTER SESSIONS.

Recording, storing of signals that represent sound or images, on a medium such as a plastic disc or magnetic tape. In disc recording, the sounds or images being recorded are electronically modified and converted into movements of a stylus which cuts an original lacquer disc, which is then electroplated to make a master negative for pressing out plastic copies. In magnetic recording, sound is recorded on tape with a TAPE RECORDER; a VIDEO RECORDING machine records sound and vision. Optical recording of sound is used for the sound track of motion pictures. The sounds cause variations in thickness or brightness of a strip of film running alongside the motion picture photographs. By a reverse process this is converted back into sound when the picture is run. See also pp.463, 642-646.

Record player, machine for reproducing sound from gramophone records. It originated with the phonograph invented by Thomas A. EDISON in 1877. In modern record players the stylus of a pick-up head follows the variations in depth or width of grooves on a rotating disc. The variations

are converted into electrical signals and amplified before being converted into sound by one or more loudspeakers. See also pp.642-643.

Rectifier, electronic component that converts an alternating current (AC) into a direct current (DC). It consists of a set of plates, a diode valve or semiconductor that presents a high resistance to a current flowing in one direction and a low resistance to current flowing in the opposite direction. See also pp.869, 877, 882.

Rector, church official. In the Church of England a rector of a parish is distinguished from the VICAR in that the rector may dispose of the living's property. The heads of Exeter and Lincoln Colleges at Oxford University are termed rectors, and the title is also used in Europe for university heads. JESUITS use the term for heads of their religious and educational institutions.

Rectum, in human beings and many other vertebrates, the terminal part of the large INTESTINE, where the faeces form and collect before being expelled as waste through the anus. Length: approx. 15cm (6in) in human beings.

Recusants, term applied to those (especially Roman Catholics) in England who refused to attend services of the Church of England. The word derives from the Latin *recusantes*, "those refusing". In 1559 the fine for non-attendance was put at 1s per Sunday; it was raised to £20 per month in 1581. Fines were irregularly imposed, and all restrictions were finally removed by the passing of the Catholic Emancipation Act in 1829.

Recycling, natural and man-made processes by which substances are broken down and reconstituted. In nature, elemental cycles include the CARBON CYCLE, NITROGEN CYCLE and HYDROLOGIC CYCLE. Natural cyclic chemical processes include the metabolic cycles, eg the CITRIC ACID CYCLE, in the bodies of living organisms. Man-made recycling includes using bacteria to break down excreta and many kitchen and factory organic wastes to harmless, or even beneficial, substances. Large quantities of inorganic waste such as metal scrap, glass bottles and building spoil, are recycled. Polymer wastes are often not recycled but burned, with consequent atmospheric POLLUTION and loss of material resources. See also pp.542-545, 552-553, 581, 909.

Red admiral, distinctive European butterfly with red bars on the wings and black wing-tips spotted with white. It flies from May to August. The caterpillar, which feeds on nettles, is dark with light side-strips and branching spikes. Family Nymphalidae; species *Vanessa atalanta*.

Red algae, group of typically reddish mostly marine ALGAE (division Rhodophyta), especially numerous in tropical and subtropical seas. Some, including DULSE and IRISH MOSS, are common on N coasts. Most are many-celled plants growing as strands that form shrub-like masses. See also pp.358-359, 359.

Red Army, army of the USSR. It is characterized by a high degree of political control, institutionalized at all levels with a system of commissars, whose functions are political rather than military. TROTSKY organized it as an army to defeat the Whites and the interventionist powers after the revolution of Oct. 1917. The high command of the Red Army was decimated during the purges of the 1930s. During WWI the Red Army grew to more than 20 million men. It was concentrated in E Europe from 1945, but since the early 1960s it has also been aligned along the Russian border with China.

Red blood cell. See ERYTHROCYTE.

Red Brigade, terrorist group operating in Western Europe during the 1970s.

Red bug. See CHIGGER.

Red Crescent, the name by which the International RED CROSS is known in Muslim countries. In these countries the red cross on the international flag of the organization is replaced by the red crescent. Iran is an exception to this, however; there a red lion and sun are substituted for the red cross.

Red Cross, founded 1863, international

Redcurrant

organization that seeks to ameliorate human suffering, particularly through disaster relief, aid to war victims of all nations and services to members of the armed forces. The Red Cross was created at the prompting of Jean Henri DUNANT, a Swiss citizen who had been shocked by the suffering of the wounded after the battle of SOLFERINO in 1859. Today it is composed of more than 100 independent national societies in most countries, with central headquarters in Geneva, Switzerland, and staffed largely by volunteers. The name Red Cross comes from its symbol, a red cross on a white field, which reverses the colours of the Swiss flag. The International Red Cross was awarded the Nobel Peace Prize in 1917 and 1944.

Redcurrant, widely cultivated fruit-bearing shrub and its small, round, red, edible fruit; it is closely related to the BLACKCURRANT. The fruit may be eaten raw, cooked, or as a jelly with meat. Species *Ribes rubrum*. Family Saxifragaceae.

Red deer, largest of the British deer, with a body length of up to 2.2m (7ft) and a height of up to 1.5 (5ft) at the shoulder. It has a reddish-brown coat in the summer but a thicker darker winter coat. Its preferred habitat is a large deciduous wood. Species *Cervus elaphus*. See also pp.305, 751.

Redemption, in Christian theology, the redeeming or reclaiming of mankind from the powers and the effects of sin, by JESUS CHRIST. Christ's death on behalf of humanity was the price of redemption; the RESURRECTION was the sign that His sacrifice of Himself had brought the chance of salvation for all.

Red fescue. See FESCUE.

Red Flag, international symbol of SOCIALISM. It was first used by the French government after the storming of the BASTILLE (1789), when its being flown signified that Paris was under martial law. After troops fired on a mob in the *Champ de Mars* in 1791, the flag was adopted by revolutionaries, who inscribed on it the words "Martial law of the people against the Revolt or the Court".

Red Flag, The, British socialist song written by James Connell, secretary of the Workmen's Legal Friendly Society, in 1889. It was originally sung to the tune of *The White Cockade*, now replaced by the tune of *Der Tannenbaum*.

Redford, Robert (1937–), leading US film actor who came into prominence in the late 1960s. His films include *The Chase* (1966), *Barefoot in the Park* (1967), *Butch Cassidy and the Sundance Kid* (1969), *The Candidate* (1972), *The Sting* (1973), *The Great Gatsby* (1974) and *All the President's Men* (1976).

Redgrave, name of a family of British actors and actresses. Sir Michael (1908–), also a director and writer, made major stage appearances in Shakespeare's *Hamlet*, *Macbeth* and *As You Like It*. He also appeared in many films, including *The Way to the Stars* (1945) and *The Browning Version* (1951). He married the actress Rachel Kempson in 1935 and their children are all actors. Vanessa (1937–) frequently appeared on the London stage and in films such as *Isadora* (1968) and *Julia* (1977). Corin (1939–) has acted on stage and television, and Lynn (1943–) received an Oscar for *Georgy Girl* (1966).

Red Guards, paramilitary groups of Chinese students and young people formed at the suggestion of Chairman MAO TSE-TUNG to further the Chinese CULTURAL REVOLUTION. Named after the red army units of the late 1920s, the Red Guards marched into Peking from outlying China in eight giant units in late 1966. Their greatest influence was during the period 1966–67 as part of the cultural revolution.

Red hake. See LING.

Red-hot poker, cultivated garden perennial plant that originated in South Africa. It has an underground rhizome and narrow tubular red or yellow flowers. Height: 1m (3.3ft). Family Liliaceae; species *Kniphofia uvaria*.

Redi, Francesco (1626–97), Italian scientist, physician and poet. Through controlled experiments he showed that

certain living organisms, notably maggots in rotting meat, did not arise, as had been alleged, from spontaneous generation. His chief poetic work was *Bacchus in Tuscany* (1685).

Red Indians. See AMERICAN INDIANS.

Redon, Odilon (1840–1916), French painter and graphic artist. He created two different types of picture: glowing, semi-Impressionistic landscapes and flower paintings, and highly mysterious fantasies based on his personal inner vision. From the late 1860s he was a stout opponent of naturalism in art, was hailed as the leading SYMBOLIST and acted as a direct stimulus for GAUGUIN. He was admired by the AVANT-GARDE of the era, including MATISSE, the NABIS and BONNARD.

Redouté, Pierre Joseph (1759–1840), Belgian painter and engraver, born near Liège, who studied botany in KEW GARDENS and with Sir Joseph BANKS. Patronized by MARIE ANTOINETTE, JOSÉPHINE Bonaparte and her Bourbon successors, he executed over 6,000 delicate floral watercolours and, apart from his illustrations, is also remembered for his botanical studies such as *Les Roses* (1817–21).

Redpoll, seed-eating bird related to the FINCHES, found in colder parts of the Northern Hemisphere. It has a conical bill, a short forked tail and brownish plumage with a red patch on the crown. Length: 12.5cm (5in). Genus *Acanthis*.

Red River Settlement, colony established in territory granted by the HUDSON'S BAY COMPANY in British North America in 1811–12 to the Earl of Selkirk. In 1815 and 1816 the colony, officially known as Assiniboia, was subject to two attacks by the rival North West Company. It was purchased by the Hudson's Bay Company in 1836. It became part of Manitoba in 1870.

Red Sea, narrow arm of the Indian Ocean between NE Africa and the Arabian Peninsula, connected with the Mediterranean Sea by the Gulf of Suez and the Suez Canal. Known in biblical times as the passageway for the Israelite exodus from Egypt, it was an ancient trade route whose importance declined with the discovery of an all-water route around Africa in 1498. Its importance greatly increased in 1869 with the building of the Suez Canal. But with the closing of the Canal (1967–75) during Arab-Israeli conflicts, the building of vessels too large for the canal and the development of pipelines, the Red Sea's importance as a trade route once again diminished. Area: 438,000sq km (169,000sq miles).

Redshank, Eurasian wading bird of the SANDPIPER family. It has a long slender bill for probing soft sand and mud to find food. It has mottled grey, brown and white plumage and characteristic slender red legs. Length: to 28cm (11in). Family Scolopacidae species *Tringa totanus*. See also pp.333, 335.

Red shift, shift in the spectral lines of a star, galaxy or other celestial object towards the red end of the visible spectrum, relative to the positions of equivalent lines in a spectrum produced on Earth. Although sometimes a gravitational effect, it is usually due to the DOPPLER EFFECT and results from an object moving rapidly away from the Earth (an approaching star has a blue shift). The red shift of galaxies is evidence for the expansion of the universe. See also QUASAR; pp.1000–1001, 1001, 1004.

Red spider, or spider mite, red vegetarian MITE found throughout the world. A serious plant pest, it may develop resistance to pesticides, making control difficult. Length: 0.3–0.8mm (0.01–0.03in). Family Tetranychidae.

Redstart, name of two unrelated robin-like birds of the THRUSH family. The male European redstart (*Phoenicurus phoenicurus*) is greyish with rust-red breast and tail. Length: 14cm (5.5in). The American flycatching redstart (*Setophaga ruticilla*), a wood warbler, is slightly smaller.

Red tide, red discoloration of ocean water caused by an unusually large "bloom" of single-celled dinoflagellate organisms. The dinoflagellates release a poison into

the water and make swimming unsafe. The lack of oxygen in red tide waters may also cause the death of fish in the locality.

Reduction. See OXIDATION REDUCTION.

Redwing, also called red-winged BLACKBIRD, small well-known bird of the USA. It has striking red and yellow wing markings, feeds primarily on insects, and inhabits marshy areas. Length: to 20cm (8in). Family Icteridae; species *Agelaius phoeniceus*. A small European thrush, *Turdus iliacus*, which has reddish feathers under its wings, is also called a redwing.

Redwood. See SEQUOIA.

Reed, Sir Carol (1906–77), British film director whose long career began in the 1930s. He won an Oscar in 1968 for *Oliver*. His other films include *Penny Paradise* (1938), *The Fallen Idol* (1948), *The Third Man* (1949), *Trapeze* (1956), and *The Agony and Ecstasy* (1956).

Reed, Oliver (1938–), British film actor. He has appeared in many films, usually cast in tough roles, including *Beat Girl* (1959), *Women in Love* (1969), *Sitting Target* (1971), *The Three Musketeers* (1974) and *The Sellout* (1976).

Reed, aquatic GRASS native to wetlands throughout the world. The common reed (*Phragmites communis*) has broad leaves, feathery flower clusters and stiff smooth stems. Dry reed stems are used for thatching, construction and musical pipes. Height: to 3m (10ft). Family Gramineae. See also pp.380–381.

Reedbuck, light, graceful ANTELOPE native to Africa s of the Sahara, usually near water. Its body is brown to grey, and when disturbed it raises its bushy tail erect. The male has short horns, curved forwards at the tips. Length: to 1.4m (4.5ft). Family Bovidae; genus *Redunca*.

Reed instruments, musical instruments that produce sound when an air current vibrates a fibre or metal tongue. The HARMONIUM, in which wind flows in both directions, uses a free reed. In a CLARINET or reed organ pipe, in which air passes in only one direction, a beating reed vibrates against a hole at the end of the tube. The OBOE and BASSOON have double-reed mouthpieces, the two tongues vibrating against each other when blown. See also p.1581.

Reed International Ltd, British manufacturer of paper, printing and packaging, employing in the mid-1970s about 86,000 people throughout the world. The company began as a newsprint manufacturer in 1894. It is now also involved in publishing and do-it-yourself materials.

Reedling, also called bearded reedling or reed pheasant, small bird with orange brown plumage, a characteristic tufted beard and a long tail. It lives and nests in areas in Eurasian wetlands, and feeds primarily on seeds and insects. Length: to 15cm (6in). Family Panuridae; species *Panurus biarmicus*.

Reed mace. See BULRUSH.

Reef, rocky outcrop lying in shallow water, especially one built up by CORALS or other organisms. See also p.231.

Re-entry, in aerospace technology, the process of returning to Earth's atmosphere from space. Re-entry involves speeds of up to 24,000km/h (15,000mph) and extremely high temperatures due to atmospheric friction.

Reese, Terence (1913–), British master BRIDGE player, writer and teacher. He has won almost every honour in the game, including the World Championship and the European Championship four times. During the 1965 World Championship he was accused by the Americans of cheating but was eventually exonerated by an independent inquiry.

Reeve, any of several kinds of English medieval officers. Each lord of a MANOR had a local representative to look after the daily work on his farms. He was called a reeve and was usually a VILLEIN, elected by his fellows. There were also shire-reeves in the shires and port-reeves in the towns.

Reeves, Jim (1924–64), US popular singer. After periods as a baseball player and a radio station manager, he began making records in 1949, and had his first success with *Mexican Joe* (1952). He soon moved away from the pure COUNTRY AND

WESTERN MUSIC, and his greatest successes *Four Walls*, *He'll have to go* and *Distant Drums* are pop ballads. He died in a plane crash and his records were subsequently very successful.

Reeves, William Pember (1857–1932), New Zealand politician. He was Minister of Labour in New Zealand's first Liberal government in 1891. He introduced the world's first legislation providing for conciliation and arbitration in industrial disputes (The Industrial Conciliation and Arbitration Act of 1894).

Reference frame. See FRAME OF REFERENCE.

Referendum, political process in which legislation or constitutional proposals are put before all voters for approval or rejection. This direct form of voting was known in Greece and other early democracies and is widely used today in certain countries, most notably Switzerland. In Great Britain a referendum was used for the first time in 1975, when the British people voted to remain in the EEC. See also PLEBISCITE.

Refinery, any industrial plant based on processes such as DISTILLATION and ELECTROLYSIS. Spirit drinks such as whisky, foods such as SUGAR, and materials such as ores, metals or PETROLEUM are produced, purified or separated into their components in refineries. See also pp.387, 396, 400, 440–441.

Reflation, economic recovery from a depression before full employment and rising prices are arrived at. It is characterized by the easing of credit restrictions to encourage expansion and other measures designed to increase the amount of money in circulation. This in turn creates a demand for goods and services which contributes to full employment.

Reflecting microscope. See MICROSCOPE.

Reflection, change in direction of part of a wave motion when a wave, such as light, encounters a surface separating two different media, such as air and metal, and is "bounced" back into the original medium. The remaining part passes into the second medium. The incident wave, reflected wave, and the line perpendicular to the surface at the point of incidence (the normal) all lie in the same plane; the incident and reflected waves make equal angles with the normal. See also pp.852–853.

Reflex action, simple type of unlearned and involuntary behaviour, for example, the "knee-jerk" reflex that occurs when a part of the bent knee is struck. At least two NEURONS (receptor and effector) must be involved in the reflex arc, although one or more intervening neurons (interneurons) are often present. Additional nerve impulses travel from the arc to the brain via the CENTRAL NERVOUS SYSTEM. See also pp.126–127, 126–127.

Reflex camera, camera which allows the user to view and focus through the lens of the camera. A plane mirror and prism reflects the scene from through the lens on to a ground glass screen. A single-lens reflex (SLR) camera eliminates PARALLAX, which is a problem with viewfinder cameras. When the shutter is pressed the mirror, which is hinged, moves away and light through the lens is able to reach the film. A twin-lens reflex (TLR) camera has two sets of lenses. One set, for viewfinding, involves a mirror and the other, focused in parallel, passes light directly on to the film. See also p.628, 628.

Reflex, conditioned, learned pairing of a response to an artificial stimulus. The connection between a stimulus, such as meat to a dog, and response on the part of the dog, salivation, is known as a stimulus-response (SR) arc. By associating some other stimulus, such as a bell's ringing, with the original stimulus, a conditioned reflex may be established, where the dog will salivate at the presentation of the new stimulus, the sound of the bell. This leads to a new SR arc and this and such-like experiments were made by the originator of classical conditioning, Ivan Petrovich PAVLOV. See also p.1118.

Reformation, The, 16th-century reform of the universal Catholic Church which resulted in the formation of the Anglican

and Protestant Churches. More than merely a revolt against the authority, ecclesiastical and doctrinal, of the Church, it also represented a protest by many theologians and scholars against the many questionable activities of the contemporary clergy. The influence of Martin Luther from the 1520s was significant, and the effect of the Reformation was felt first in Germany then in Scotland and England, Scandinavia and Switzerland, and finally some of France, but hardly touched Italy or the Iberian peninsula. It took two main forms: Lutheran (emphasizing justification, or salvation, by faith alone) and Calvinist (after John Calvin, who emphasized predestination); Lutheranism predominated, except in Calvinist Scotland and Switzerland, and in Anglican England. All the REFORMED CHURCHES established Church organizations independent of the pope. See also pp.1402-1407.

Reform bills, name given to three British measures that liberalized representation in Parliament in the 19th century. The Reform Bill of 1832, enacted under the Whig administration of Lord GREY, redistributed seats in the interest of larger cities, such as Manchester, that had hitherto been unrepresented; it also extended the franchise in the boroughs to those who occupied premises of an annual value of £10 and simplified registration and voting procedure (see also pp.1640, 1640, 1644). Benjamin DISRAELI's bill of 1867 by lowering property qualifications enfranchised the urban working class thereby almost doubling the electorate. (see also pp.1640, 1640, 1641, 1644). In 1884 William GLADSTONE's bill added 2,500,000 new voters to the list by enfranchising most agricultural workers (see also pp.1591, 1641, 1644). The franchise was not extended to women until the REPRESENTATION OF THE PEOPLE ACT (1918) granted suffrage to women over 30. Universal suffrage was not granted until the Representation of the People (Equal Franchise) Act of 1928.

Reformed Church, any Christian denomination that came into being during the REFORMATION by separating, as a congregation, from the old universal Catholic Church. These denominations are generally called PROTESTANT Churches, although the CHURCH OF ENGLAND, the Anglican Church, while certainly Reformed, should not technically be included within that term. More specifically, Reformed Churches are those Churches which adopted the CALVINIST faith and organization in preference to the LUTHERAN. When the Congregational Church of England and Wales and the Presbyterian Church of England combined in 1972 they took the name of the United Reform Church.

Reform Judaism, one of the three divisions in modern JUDAISM. It is also called Progressive or Liberal Judaism, and originated in 19th-century Germany. Israel Jacobson, one of the founders, made changes in rituals and used the vernacular for some prayers. Its main tenet stresses the progressive nature of revelation.

Refraction, change in the direction of a wave, such as a light wave when it crosses the boundary between two transparent media, such as air and glass, and undergoes a change in velocity. The incident wave, refracted wave, and the line perpendicular to the surface at the point of incidence (the normal) all lie in the same plane. The incident and refracted waves make an angle of incidence, i , and an angle of refraction, r , with the normal. The new direction of motion is given by Snell's Law, which states that the ratio of the sines of these angles, $\sin i : \sin r$, always has the same value for two particular media. This constant value is the refractive index for the two media. See also p.852.

Refractive index, measure of the ability of a transparent medium, such as glass, to refract (bend) light. It is the ratio of the speed of light in a vacuum to its speed in the medium and is calculated by dividing the size of the angle of refraction into the size of the angle of incidence of the incoming light.

Refractometer, instrument for measuring the REFRACTIVE INDEX of transparent materials, i.e. the degree to which they bend light that passes through them. Since the refractive index of a chemical solution changes according to its composition, refractometers are frequently employed in chemical analysis.

Refractory material, substance that withstands repeated heating to high temperatures without melting, vaporizing or crumbling. Refractories include FIREBRICK and SILICA cement, used to make industrial FURNACES, and QUARTZ (a natural form of silica), from which smaller crucibles and laboratory furnace linings are often made.

Refrigeration, process by which the temperature in a refrigerator is lowered. In a domestic refrigerator a refrigerant gas such as AMMONIA or FREON is alternately compressed and expanded. The gas is first compressed by a pump and cooled in a condenser where it liquefies. It is then passed into an evaporator where it expands and boils, absorbing heat from its surroundings and thus cooling the refrigerator. It is then passed through the pump again to be compressed.

Refrigerators, insulated containers, maintained at a constant cool temperature, used for storing and preserving perishable foods. Modern REFRIGERATION is powered by electricity or gas; refrigerators were invented by Ferdinand Carré in 1859 and used to ship meat from Australia to Europe. The domestic refrigerator was first built in 1913 in the USA and marketed in Britain in the early 1920s. See also p.603.

Refugee, one who leaves his native land because of expulsion or to avoid persecution and seeks asylum in another country. Before the 20th century there was little systematic attempt to help refugees, but in 1921 the LEAGUE OF NATIONS appointed Fridtjof NANSEN as High Commissioner for refugee work, a task that was later taken on by the NANSEN INTERNATIONAL OFFICE FOR REFUGEES and later by the UNITED NATIONS High Commission for Refugees. Recent history has provided many refugee problems for such organizations, including the flight of Jews from Germany during Hitler's rule, the flight of refugees from persecution in Russia and Eastern Europe and the problems of Palestinian refugees in Jordan and Lebanon.

Refuse disposal, collection and disposal of domestic waste and other rubbish. Special vehicles collect household refuse from rubbish bins and carry it to the disposal site. There it may be sorted to reclaim recyclable materials such as glass, metal and paper. The remaining refuse is disposed of either by controlled tipping (sanitary landfill), in which it is finally buried under a layer of soil, or it is burned in special incinerators.

Réfusés, Salon des, art exhibition in Paris, France, in 1863, of artists whose works had been rejected by the conservative jury of the Salon (the exhibition of the French Academy). The exhibitors included CÉZANNE, PISSARRO, WHISTLER and MANET.

Regalia. See CROWN JEWELS.

Regency style, British style of art and architecture used from 1811 to 1820, when George IV was Prince Regent, and extended to 1830, the end of his reign. Furniture style and decoration were marked by refined elegance and the attenuation of Classical forms.

Regeneration, biological term for the ability of an organism to replace one of its parts if it is lost. See also p.31.

Regent, person appointed to rule in place of a monarch, either because the monarch is deemed too young to govern or because he is incapacitated.

Reger, Max (1873-1916), German composer who became a church organist at the age of 13 and was professor of composition at the Leipzig Conservatory from 1907 to 1916. His music is characterized by the complexity of its harmonies and its idiosyncratic modulations, and includes *Serenade for Orchestra and Fantasie and Fugue in D Minor* for organ.

Raggae, form of West Indian popular music. It can be traced back to CALYPSO

and even New Orleans RHYTHM AND BLUES, but did not come into prominence until the mid-1960s, growing out of rock-steady and ska. It is characterized by a hypnotically repetitive beat.

Regina, capital and largest city in Saskatchewan province, Canada, 575km (375 miles) w of Winnipeg. The city was founded in 1882, and was the capital of Northwest Territories from 1882 to 1905, when the province of Saskatchewan was formed. Regina is the N headquarters of the Royal Canadian Mounted Police and the site of the University of Regina. An important transport centre and a distribution centre for the surrounding wheat-growing region, Regina has food-processing, oil refining, motor vehicle and printing industries. Pop. (1976) 149,593.

Registrar-General, British government officer, first appointed under the Registration Act (1836) to keep records of baptisms, marriages and deaths of citizens of every religious denomination. He is also responsible for the national census.

Reich, Wilhelm (1897-1957), Austrian psychoanalyst and clinical assistant to Sigmund FREUD (1922-28) He broke with Freud and went on to introduce the concept of "character armour", investigate sexual repression and expound a controversial theory about orgasm. In the USA from 1939 he claimed to have discovered "orgone" energy, a supposed primal force in the atmosphere. For selling "orgone boxes" he was imprisoned in 1956, and he died in gaol.

Reich, name for the German state or commonwealth. There have been three Reichs, the first being the HOLY ROMAN EMPIRE (962-1806), the second Imperial Germany (1871-1918) and the so-called Third Reich, the period of NAZI rule (1933-45).

Reichenbach, Hans (1891-1953), German-born us philosopher. Closely associated with the development of LOGICAL POSITIVISM, he also contributed to the study of probability and inductive logic. He edited the *Journal of Unified Science* with Rudolph CARNAP and his works include *Elements of Symbolic Logic* (1947) and *The Rise of Scientific Philosophy* (1951).

Reichstag fire (1933), conflagration that destroyed part of the German Reichstag building (the lower house of parliament). A Dutchman, Marinus van der Lubbe, was convicted of the crime; HITLER used the incident to eliminate the Communists.

Reichstein, Tadeus (1897-), Swiss chemist and pharmacologist, b. Poland. After teaching chemistry at the Institute of Technology in Zurich from 1922 to 1938 he became head of the department of pharmacy at the University of Basel. He shared the 1950 Nobel Prize in physiology and medicine with Edward KENDALL and Philip S. HENCH for his work on the hormones of the cortex of the ADRENAL GLANDS. In 1933 Reichstein became the first to synthesize ascorbic acid (vitamin C).

Reid, Sir George Houston (1845-1918), Australian politician. He led the free trade group in the federal parliament, and was Prime Minister of New South Wales from 1894 to 1899. From 1904 to 1905 he was Prime Minister of Australia.

Reid, John Richard (1928-), New Zealand cricketer who led his country to its first-ever Test Match victory (over the West Indies in 1956). He was captain in 34 of his 58 Tests between 1949 and 1965 (scoring 3,431 runs and taking 85 wickets). He played for Wellington and Otago, and in the 1962-63 season hit a world-record 15 sixes in an innings.

Reid, Thomas (1710-96), Scottish philosopher who taught at the Universities of Aberdeen and Glasgow. He was the founder of the common sense school of philosophy, also known as the Scottish school, whose theory is known as COMMON SENSE REALISM. His works include *An Inquiry into the Human Mind on the Principles of Common Sense* (1764).

Reidy, Afonso Eduardo (1909-64), Brazilian architect who worked with LE CORBUSIER on the Ministry of Education building (1937-43) in Rio de Janeiro. His

other commissions include the Pedregulho estate (1948-50) in Rio de Janeiro.

Reigate and Banstead, county district in SURREY, England; created in 1974 under the Local Government Act (1972). Area: 99sq km (38sq miles). Pop. (1979 est.) 114,000.

Reign of Terror, phase of the FRENCH REVOLUTION, from the overthrow of the GIRONDINS in the CONVENTION by the alliance of the JACOBINS and the Parisian SANS CULOTTES in June 1793 to the overthrow of ROBESPIERRE in July 1794. The Terror was so called because of the authoritarian and often ruthless methods the government used to resist invasion and widespread rebellion.

Reims (Rheims), city in NE France, on the River Vesle, 136km (83 miles) ENE of Paris; a port on the Aisne-Marne Canal. Reims Cathedral (built 1211-c. 1320) is a noted example of French Gothic architecture. During WWI much of it was destroyed, but it was restored between 1927 and 1938 with funds from the Rockefeller Foundation. Germany's unconditional surrender was signed in Reims on 7 May 1945. The city has a university (1547). Reims is the centre of the champagne industry, and other industries include woollen goods and glass. Pop. (1975) 183,610. See also pp.1334, 1334.

Reincarnation, also called transmigration, rebirth, or metempsychosis, the passage of the soul through successive bodies, the process of existence thereby being infinite. In HINDUISM and BUDDHISM karma (one's earthly conduct) determines the condition into which one is next born. The successive states of rebirth (samsara) can only end if the soul is released by knowledge or arduous effort (Hinduism) or by union with the universe (Buddhism).

Reindeer, large DEER of northern latitude which ranges from Scandinavia across Siberia to North America, where it is known as the caribou. Its adaptations to the cold climate include thick fur (which is usually grey-brown, becoming lighter underneath) and broad hoofs that help to spread the animal's weight on the snow. It stands up to 1.4m (4.6ft) tall at the shoulders, and feeds on grasses and saplings in the summer and lichens (reindeer moss) it finds beneath the snow in the winter. It is domesticated for meat and as a pack animal by the Lapps. Both sexes carry antlers. Species *Rangifer tarandus*. See also pp.95, 305, 305, 361.

Reinforced concrete, type of strong concrete widely used in bridge construction. It is set on embedded steel rods, bars or mesh, which and tensile strength. Reinforced concrete can withstand heavy stresses over considerable spans. See also PRESTRESSED CONCRETE; pp.523, 534, 550, 550.

Reinforcement, in psychology, any event following a behavioural response that makes the response more or less likely to happen again. Positive reinforcement is roughly synonymous with "reward", whereas negative reinforcement is "punishment". Reinforcement is often advocated by behaviourist psychologists, notably B.F. SKINNER. See also p.1125.

Reinhardt, Jean-Baptiste ("Django") (1910-1953), Belgian jazz guitarist. Born a gypsy, he blended folk music with jazz and swing styles and he is noted for his guitar improvisations. In 1934 he formed a quintet with the violinist Stéphane Grappelly. In the late 1940s he played in the USA with Duke ELLINGTON.

Reinhardt, Max (1873-1943), Austrian actor and director, real name Max Goldmann. He specialized in spectacular productions in arenas such as Olympia, London, and the Berlin Schauspielhaus, and attempted to involve audiences completely in each performance by using the theatre's flexible mechanical resources to the full and controlling mass crowd scenes with great skill. He was equally capable of directing small-scale presentations.

Reis, Johann Phillip (1834-74), German scientist who c.1861 invented a device which transmitted sound electrically, i.e. an early telephone. Its capacity to reproduce speech was limited; the first practical tele-

Reisz, Karel

Lord Reith was a skilful negotiator in overcoming objection to a young BBC.

Relativity, introduced by Albert Einstein, revolutionized concepts of space and time.

Erich Remarque, called the Father of the Best-Seller, became a US citizen in 1947.

Rembrandt's *The Jewish Bride* shows the sensitivity which marks his finest work.

phone was patented by Alexander Graham BELL in 1876. See also p.636.

Reisz, Karel (1926–), British film director, b. Czechoslovakia, who was originally a film critic. His films include *Saturday Night and Sunday Morning* (1960), *Morgan: A Suitable Case for Treatment* (1966) and *Isadora* (1968).

Reith, Sir John Charles Walsam, 1st Baron of Stonehaven (1889–1971), general manager of the BBC from 1922 and then its Director-General (1927–38). He was the main architect of the pattern of publicly owned but independent corporations in Britain. He became chairman of British Overseas Airways Corporation (BOAC) in 1939 and was Director of Combined Operations Material at the Admiralty (1943–45). From 1946 to 1950 he was chairman of the Commonwealth Telecommunications Board, leaving to become chairman of the Colonial Development Corporation (1950–59).

Rejection, in the grafting of animal body tissues, the failure of the new tissue to grow as a part of the organism. It occurs when the ANTIGENS of the donor and recipient are incompatible; the LYMPHOCYTES, the main white blood cells that cause immune reactions, migrate to and damage the organ and the muscle areas that surround it. In TRANSPLANT surgery involving whole organs, rejection is the main cause for failure of an operation. In an attempt to combat this, the patient is given IMMUNOSUPPRESSIVE DRUGS to control the reactions of the IMMUNE SYSTEM and to prevent rejection of the graft.

Rejlander, Oscar Gustav (c.1813–1875), Swedish art photographer who worked chiefly in London. His reputation was established in 1857 with an ambitious pseudo-painting, *Youth and Age (The Two Ways of Life)*, a composite print made with 16 groups of models and 30 separate negatives.

Rejuvenation, being restored to youth. There is no known true means of rejuvenation, although the lifespan of certain animals (eg female octopuses) can be extended by severing the glandular links that cause death at the normal completion of the life-cycle. Humans have no such system; all attempts to discover a means of rejuvenation has so far failed, although cosmetic surgery can make people look younger for a while.

Relative density. See SPECIFIC GRAVITY.

Relative wind, in aviation, air moving past the AEROFOIL with respect to its attitude or position. The relative wind is always parallel and opposite to the flight path and equal in velocity to the speed of the aerofoil through the air.

Relativity, theory which linked the concepts of space and time, proposed in two parts by Albert EINSTEIN. The special theory of relativity, published in 1905, dealt with events as they are measured by observers in a state of uniform relative motion (constant VELOCITY) with respect to each other. Each observer of an event is said to have a frame of reference, a basic concept in relativity. This frame is the base-line from which physicists make measurements of various physical phenomena, such as velocity, acceleration and force. The relations of space and time underlie all these phenomena. NEWTON'S LAWS seemed to establish the absolute nature of space and time, inasmuch as each measurement in a particular frame was independent of any made in another, and that to transfer between the two merely required an allowance for the velocities between the two frames of reference. In 1887 the MICHELSON-MORLEY EXPERIMENT showed that there was no difference between the velocity of light as measured in the direction of the Earth's motion and its velocity at right-angles to this direction. In other words, it did not change with a new frame of reference travelling at a different velocity. To explain this the Lorentz-Fitzgerald transform was devised, which allowed for the experiment's results by postulating that an object's length contracts as its velocity increases (in the direction of motion), an effect appreciable only at velocities approaching that of light. Einstein postu-

lated that not only does an object's length contract, but its sense of elapsed time expands, with the result that the velocity of light remains constant for that object. Another consequence is that an object's mass increases appreciably as it nears the velocity of light.

In the general theory of relativity, published in 1916, Einstein dealt with the transforms relating non-uniform (accelerating) frames of reference. This showed the relation of space and gravitation. It may be put as the idea that in the presence of a gravitational field space becomes curved. The existence of BLACK HOLES is postulated as a consequence of this. See also pp.858–859.

Relay, electromagnetic switch that is operated (opened or closed) by variations in an electric current in a coil of wire. Current flowing through the wire coil sets up a magnetic field which moves a metal contact that can open or close another circuit. See also pp.479, 875.

Relay races, track, field and swimming events involving teams rather than individuals, in which each team member must run or swim an equal portion of the course. In running a baton is passed from one runner to the next at the completion of his part of the relay.

Relief printing, form of printing whereby a print is achieved from a raised, inked surface; the ink-bearing surface stands out above the surrounding non-printing area. The commercial, typographic LETTERPRESS process includes printing from one-piece stereotype plates and from formes which are commonly made up of both text matter and illustrations. In PRINTMAKING, relief processes include linocutting, woodcutting and wood engraving, wherein portions of the surface of the linoleum or wood are cut away if they are not to be inked and printed as part of the design. See also LITHOGRAPHY; INTAGLIO; pp.612–615.

Relief sculpture, three-dimensional sculpture projecting from a flat background in varying degrees of predominance. The term derives from the Italian noun *rilievo*, meaning relief or projection. In *alto-rilievo* (high relief) the protrusion is great, *basso-rilievo* (bas-relief) protrudes only slightly, and *mezzo-rilievo* is between the two. In a coelanaglyphic relief (*cavo-rilievo*), used in ancient Egypt, the highest surface of the relief is level with the surface of the original stone which surrounds the design.

Religion, code of beliefs and practices formulated in response either to faith in a state of existence after mortal death, or to a desire for union with a supreme and omnipotent spiritual Being, or to a combination of the two. Throughout the history of all cultures some form of religion has been present, generally with some form of sacred literature, and frequently in the worship of many distinct gods or personifications of nature, such as those of ancient Egypt, Greece and Rome. Many such cultures classified their deities into hierarchies – a supreme god or group of gods, with major and minor gods; some modern religions still have pantheons (eg HINDUISM). From within such structures other cults occasionally emerge: one god, even of an originally subsidiary order, may be made the focus of new devotional rites (eg the Dionysiac mysteries of Greece, and the worship of MITHRAS, introduced from Persia during the early Christian era). Other ancient religions, some of which also incorporated belief in a state of existence after death, were more a system of ethical philosophy concentrating on contemplation (eg BUDDHISM).

The ancient Israelites were among the first to worship a single omniscient Being; their record of this forms the basis of the OLD TESTAMENT of the Bible. Common to all religions dominated by an omnipotent force (monotheistic religions such as JUDAISM, ISLAM and CHRISTIANITY) is the ascription to it of the two qualities of immanence and transcendence: that the power is all places at once, and that it is beyond the physical plane occupied by humans. Also common to monotheistic religions is the notion of sacrifice, either in

propitiation (appeasement) or to redeem the faithful from what is considered a condition of sin; devotional alms-giving and charity are another consequence of this. See also pp.1910–1913, 1916–1919.

Religious orders, term applied to groups of Christian clergy, such as monks, nuns and friars, who have bound themselves together by similar vows and aims. Roman Catholic examples include the BENEDICTINES, CARMELITES and JESUITS. The OXFORD MOVEMENT revived Anglican interest in religious orders; the emphasis of those established was on social service as well as on contemplation and prayer.

Religious toleration, state policy which allows members of all religious sects to practise their religion without hindrance and to enjoy full civil rights and liberties. In Europe it is largely a development of the 18th and 19th centuries. In Britain the last obstruction to it was removed in 1886, when an atheist, Charles BRADLAUGH, was allowed to take his seat in Parliament. See also TOLERATION, ACT OF.

REM. See RAPID EYE MOVEMENT.

Remak, Robert (1815–65), German physician and physiologist who laid the foundation of modern EMBRYOLOGY. In 1842 he simplified Karl Baer's four germ layers to three, which he named ectoderm, mesoderm and endoderm, and showed their significance in embryological development. In 1838 he became the first to discover that sympathetic NERVE fibres are non-myelinated and that the axons of peripheral nerves arise from the SPINAL CORD. In 1844 he identified neurofibrils in NEURONS, the existence of six distinct cell layers in the CEREBRAL CORTEX and the sympathetic ganglia in the heart – Remak's ganglia. He was also a pioneer in the use of electrotherapy for treating nervous disorders.

Remarque, Erich Maria (1898–1970), German novelist. A wounded veteran of WWI, he settled in Switzerland in the 1930s when his books were banned in Germany. His novels, including *All Quiet on the Western Front* (1929), *The Road Back* (1931) and *Flotsam* (1941), are about war and post-war adjustment.

Rembrandt (Harmensz van Rijn) (1606–69), Dutch painter and graphic artist, prodigious creator of more than 600 paintings, about 300 etchings and nearly 2,000 drawings, many regarded as masterpieces. A miller's son, he was a pupil of Pieter LASTMAN in Amsterdam in 1624. His early, small, realistic works show the influence of CARAVAGGIO. During his Leiden period (1625–31) he began to paint self-portraits which were to number almost 100. He moved to Amsterdam in 1632, where he spent the rest of his life and became highly regarded as a painter of such group portraits as the *Anatomy Lesson of Dr Tulp* (1632). His marriage to Saskia van Uylenburgh, the daughter of a wealthy burgher, widened his social connections and brought him numerous commissions. With his new prosperity he began to collect works of art, especially ornate costumes which he often used in his portraits. By 1636 he was painting in the richly detailed BAROQUE style typified by *The Blinding of Samson* (1636) and the *Sacrifice of Abraham*. But a few years later a wave of misfortune assailed him. He ran into financial trouble with the purchase of an expensive house, and his wife died (1642) after the birth of their only surviving son, Titus. That year he finished his most famous group portrait *The Corporalship of Captain Frans Banning Cocq's Civic Guards*, better known as *The Night Watch*. When the painting was cleaned in 1946–47 it was shown to have a daylight setting. During the 1640s his interest centred on portraying inner character rather than outward appearances, an unfashionable pursuit at the time. By 1656 he was bankrupt and had withdrawn from society, and he began to paint for himself, choosing religious subjects and the old and downtrodden, for whom he had a life-long sympathy. During these later years he produced some of his greatest works, such as *Jacob Blessing the Sons of Joseph* (1656), *The Jewish Bride*

(c.1669) and *The Return of the Prodigal Son* (c. 1669). See also pp.1444-1445.

Remembrance Sunday, second Sunday of November, the annual commemoration in Britain of the armed forces who died in WWI and WWII. After WWII the dead were remembered on Armistice Day, 11 November, the date of the WWII ceasefire. Remembrance Sunday was introduced in Britain after WWII. In 1956 it was fixed as the second Sunday of November.

Remington, Philo (1816-89), US inventor. He entered his father's small-arms factory and was its president from 1861 to 1865, when he separated the agricultural implement works from the gun factory (which he controlled until 1889). During this time he perfected the Remington breech-loading rifle and began to manufacture typewriters and sewing machines.

Remizov, Alexei Mikhailovich (1877-1957), Russian writer. After his exile for political agitation in 1897, he returned to Moscow (1917-21). In 1923 he settled in Paris. His early stories, *Chasy* (1904; tr. *The Clock*, 1924), dealt with suffering and humiliation, and much of his work returns to the same themes. His works, *Flaming Russia* (1927), which shows the Russian Revolution through the medium of dreams, and *In the Pink Glimmer* (1952), have influenced much of subsequent Soviet writing.

Remonstrants, revisionist Dutch CALVINIST group condemned at the Synod of Dort (1618-19). Followers of ARMINIUS, their position was defined by the Remonstrance (1610) presented to the States General of The Netherlands. Their theological ideas were, however, unacceptable to the Reformed Church of the Netherlands, from which their ministers were expelled. They were persecuted less intensely after the death of MAURICE of Orange in 1625, but did not receive full toleration until 1795. The movement is still strong.

Remora, marine fish found throughout the world in tropical and temperate seas. Grey, reddish, or brown, it has a ridged sucking disc on the top of its head which it uses to cling to sharks, turtles, rays, whales and sometimes boats. Length: 18-91cm (7-36in). Family Echeneidae.

Remsen, Ira (1846-1927), US chemist who, with Constantin Fahlberg, in 1879 discovered saccharin and formulated the law that bears his name concerning the oxidation of methyl groups. At the age of 30 he became the first professor of chemistry at Johns Hopkins University.

Remus. See ROMULUS and REMUS.

Renaissance, The period of European history lasting roughly from the mid-15th century to the end of the 16th century. The word means rebirth and was used by scholars in late 15th-century Italy to describe the revival of interest in classical learning and classical principles in art and architecture. The Renaissance was immeasurably helped by the fall of Constantinople to the Ottoman Turks in 1453, which resulted in the transport of classical texts to Italy and closed Europe's traditional trading routes to the East; and by the invention, in Germany, of a printing press with moveable type, which greatly assisted the diffusion of the new scholarship. For the Renaissance meant the re-introduction of secular and humanist ideas into a Europe long dominated by the ideology of Christendom united under the Pope and the Holy Roman Emperor. In religion the spirit of questioning led to the Reformation. In politics the Renaissance saw the rise of assertive sovereign states - Spain, Portugal, France and England, and the expansion of Europe beyond its own shores, with the building of trading empires in Africa, the East Indies and America, an expansion led by Portugal and Spain. The growth of a wealthy urban merchant class led to a tremendous flowering of the arts, as city merchants became patrons of artists, jewellers, sculptors and musicians. See also pp.1380-1418.

Renaissance arts, style in the arts that emerged in Italy in the 15th century, heavily influenced by classical Greek or Roman models and by the new spirit of

HUMANISM. While the Renaissance produced its most spectacular artistic achievements in painting, sculpture and architecture, the movement was also apparent in literature, music and dance. Italy was the centre of most of the earliest developments. Many of the greatest Renaissance artists notably MICHELANGELO, the giant of Renaissance art, worked successfully in several different fields.

In painting, the decisive differences between Gothic and Renaissance painting emerged in Florence early in the 15th century, although these had been foreshadowed by the work of Giotto almost a century before; these differences included the development of PERSPECTIVE, a new interest in composition and colour harmonies, the increasing use of secular or pagan subject matter as patronage spread beyond the Church, the rise of portraiture, constant experimentation to develop new skills, and a growing concern for the expression of the individual artist. The creators of High Renaissance painting were LEONARDO, Michelangelo and RAPHAEL. The ideas of the Italian artists were taken to France and N Europe and emulated with national variations.

In architecture, Gothic vaulting, pointed arches and spires were replaced by pilasters, arches and columns, and domes. Classical models were adapted for both decoration and composition, and a new concern arose for overall harmony and spaciousness. The dome of Florence cathedral, designed by BRUNELLESCHI in the 1420s, initiated the style. It was developed by ALBERTI, but only reached its fullest form early in the 16th century. The buildings of PALLADIO were particularly highly regarded throughout Europe, although the style did not reach England until the 17th century.

Renaissance literature, which thrived on both scholarship and formal poetry, found an early exponent in PETRARCH. Closely linked with the spread of humanism and with the cult of the courtier, it inspired much poetry and history writing and culminated, in England, in the dramas of Shakespeare.

In music, changes took place in the form of composition as HARMONY took precedence over melody as till then largely exemplified by PLAINSONG. New instruments were developed, increasing the range and variety of musical tones. See also pp.1380-1399.

Renan, Joseph Ernest (1823-92), French historian, philosopher and philologist. Once a trainee priest, he left the Catholic Church in 1845 and became a rationalist Christian historian and Hebraist who caused controversy by suggesting that Jesus was merely "an incomparable man". His works include *Vie de Jésus* (1863) and *La Réforme intellectuelle et morale* (1871). **Renault, Louis** (1843-1918), French jurist who shared the 1907 Nobel Peace Prize with Ernesto T. Moneta. Renault was professor of international law at Paris from 1881 and in 1890 became counsellor to the French ministry of foreign affairs. He wrote many legal works, including *Introduction to the study of International Law* (1897).

Renault, Mary (1905-), pseud. of Mary Challans, British author best known for her fictional works depicting ancient times. *The Last of the Wine* (1956) and *The King Must Die* (1958) have been praised for their authenticity.

Renault, international manufacturing concern owned by the French government since 1945. It manufactures tractors, machine tools and automobiles and in the late 1970s was listed among the 10 leading industrial groups in Europe. **René, France Albert** (1935-), politician and lawyer of the Seychelles. He was a founder and the first leader of the People's United Party. He became Prime Minister in 1976, President in 1977 and advocates the Indian Ocean as a zone of peace. **René I** (1409-80), King of Naples, Duke of Anjou, Bar and Lorraine and Count of Provence. René's court in Provence saw a remarkable flowering of late medieval culture.

Renfrew, county town of the former county of Renfrewshire, w central Scotland, on the River Clyde; now in Strathclyde Region. Renfrew has been an important port since the 12th century and has shipbuilding, rubber, paint and soap industries. Pop. (1971) 18,589.

Renfrewshire, former county in SW Scotland, on the Firth of Clyde; since 1975 it has been part of Strathclyde Region. It was one of Scotland's smallest but most populous counties, and is an important industrial region. Shipbuilding, engineering, electric cables and food processing are the principal industries. Renfrew was the county town, but the administrative centre was Paisley. Area: 583 km (225sq miles).

Reni, Guido (1575-1642), Italian painter who worked in Bologna and Rome. His paintings were influenced by Lodovico CARRACCI, with whom he studied. After Carracci died in 1619, Reni became the leading master of Bolognese art. His powerful composition made him much sought after as a painter. His most celebrated works include *Massacre of the Innocents* (1611), *Aurora* (1613) and *Atlanta and Hippomenes* (c. 1625).

Renin, polypeptide HORMONE produced by the KIDNEY in response to lowered blood pressure. It activates angiotensin (a powerful VASOCONSTRICTOR), which reduces venous and arterial volume with a subsequent rise in blood pressure.

Rennell, James (1742-1830), English cartographer, geographer and oceanographer. He was an expert on the geography of W Asia and N Africa, and constructed the most accurate map of India of his time (1783). He pioneered the scientific study of winds and ocean currents.

Rennes, city in NW France, at the confluence of the Ille and Vilaine rivers, 311km (193 miles) WSW of Paris. During the Middle Ages Rennes served as capital of Brittany under the Angevin dukes. The city was destroyed during the HUNDRED YEARS WAR and damaged by fire in 1720. The University of Rennes was founded in 1735. Industries: leather goods, printing, textiles, motor vehicles. Pop. (1968) 180,943.

Rennet, substance used to curdle milk in cheesemaking. It is obtained as an extract from the inner lining of the fourth stomach of calves and other young ruminants, and is rich in rennin, an ENZYME which coagulates the casein (protein) of milk. See also p.727.

Rennie, John (1761-1821), Scottish civil engineer, builder of bridges and docks on the River Thames in London, including Southwark and Waterloo bridges and the East India and London docks. He also renovated dockyards at Plymouth and Portsmouth.

Reno, city in N Nevada, USA, on the Truckee River. Settled in 1859, the city grew with the construction of the Union Pacific Railroad in 1868. Reno is famous for its free port privileges, legalized gambling and its provision of speedy divorces. It has the University of Nevada (1874) and a rodeo, state fair, and national air race which are held annually. Industries: tourism, mining, meat packing, flour milling, beverages, sheet metals. Pop. (1970) 72,863.

Renoir, Pierre-Auguste (1841-1919), French IMPRESSIONIST painter. His early career in the 1860s was influenced by Gustave COURBET, but by 1868 he and Claude MONET, inspired by MANET's *Le Déjeuner sur l'Herbe* (1863), started painting out of doors. In 1874 he contributed to the first Impressionist exhibition and masterpieces of this period include *La Loge* (1874) and *Le Moulin de la Galette* (1876). In the early 1880s he became dissatisfied with the Impressionist technique. His interest in the human figure led to an enthusiasm for the Classical style of RAPHAEL with such works as *Bathers* (1884-87) and *After the Bath* (c. 1895). After 1900 he was increasingly afflicted by arthritis, but continued to paint with the brush strapped to his hand. See also pp.1596, 1597.

Renoir, Jean (1894-1979), French film director and actor, son of the painter Auguste RENAI. His films include *Nana*

(1926), *La Grand Illusion* (1936), *French-Cancan* (1955) and *C'est la Révolution* (1967). See also p.1760.

Reparations, term used after both world wars for war damage payments, especially those demanded by the victorious ALLIES from the defeated CENTRAL POWERS at the Treaty of Versailles (1919). The USA, however, did not ratify the treaty and waived all reparation claims.

Repeating rifle, firearm developed in the 1880s. Bullets stored in a magazine were introduced into the breech by a simple mechanical action, so that more than one round could be fired without reloading.

Repellent, animal, natural or artificial substance that is obnoxious to animals and causes them to move away. Repellents are produced by many animals themselves, especially insects, usually to warn off predators.

Repertory, theatrical presentation of a variety of plays in turn by a permanent ensemble rather than the more common practice of playing the same work each evening until the end of its run. In Britain that practice has rarely been properly realized except by the large state-subsidized ROYAL SHAKESPEARE COMPANY and the NATIONAL THEATRE. The term "repertory" or "rep" is also used to describe small provincial companies who perform different plays for one or two weeks at a time.

Repin, Ilya (1844-1930), Russian painter whose work was influential in bringing REALISM to Russian painting. *The Volga Boatmen* (1870-73) brought him international fame.

Replacement reaction, chemical reaction in which one atom of a molecule is replaced by another atom. A hydrogen atom in methane, CH₄, for example, may be replaced by a chlorine atom to yield chloromethane, CH₃Cl.

Report on the Sanitary Condition of the Labouring Population (1842), document by Edwin Chadwick which advocated that water supplies and the efficient disposal of sewage should be made available to the whole population. It is considered one of the best formulated reports of its time.

Representation of the People Act (1918), Parliamentary reform act in Britain which gave the vote to women over the age of 30. It redistributed seats, producing constituencies with an average of 70,000 electors and leaving only 10 two-member constituencies. Voting at a general election, hitherto spread over weeks, was to take place on one day.

Repression, process in Freudian psychology whereby the primal and instinctual urges of the id find no outward expression. Unless the repressed desires find an outlet in a sublimated form - such as physical contact - they may emerge in episodes of psychosis.

Reproduction, in art, the copying of a work of art by any of various means. The earliest methods in the 15th century used WOODCUTS and metal ENGRAVING to make reproductions of an original. Prior to this all reproductions were executed by hand. Marcantonio RAIMONDI, in his engravings of paintings by RAPHAEL, perfected that means which was used until about 1800. In the 17th century the invention of MEZOTINT made possible the fine gradations of tone. The 19th century brought important new developments: the discovery of LITHOGRAPHY combined the steps of drawing and engraving so that multiple copies could be taken from the artist's original design on stone; and the introduction of photography minimized the intervention of the reproductive engraver. The photo-mechanical HALF-TONE PROCESS, developed at the end of the 19th century, is that in most widespread use today, and other processes include photogravure (an INTAGLIO process) and COLLOTYPE, a process which guarantees reproduction of the highest fidelity. Photocopying machines give cheap reproductions of documents. See also pp.613, 613.

Reproduction, the process by which living ORGANISMS - plants and animals (with the exception of certain sterile hybrids such as the mule) - create new organisms similar to themselves. Reproduction falls into two

Reptile

chief classes, sexual and asexual, the first being the fusion of two special reproductive, or sex, cells and the second being the separation of a single organism into two or more organisms. Asexual reproduction is found mostly in PROTOZOA and some lower INVERTEBRATES. Most animals reproduce sexually. They may be (as most are) bisexual, the special having two kinds of individuals – male and female – with different sex functions. The male produces the sperm which fertilizes the female egg (ovum), to produce the ZYGOTE from which a new individual develops. Or they may be HERMAPHRODITE (like the earthworm and leech), each individual of the species having male and female functions, so that when two of them mate each individual fertilizes the other's eggs. Some animals, such as the TAPEWORM, can fertilize themselves. A few animals fall into a third class, parthenogenetic. Having lost the male sex, they reproduce from unfertilized eggs. Usually, however, such animals have alternating (not always regularly) generations of asexual and bisexual individuals. Examples are the APHID, JELLYFISH and some parasitic worms. Sexually reproducing plants (or generations) are called GAMETOPHYTE; ones which reproduce asexually, SPOROPHYTE. See also pp. 6, 39, 59, 65, 76-77, 88, 164-167, 382-383.

ASEXUAL REPRODUCTION; PARTHENOGENESIS; POLLINATION; SEXUAL REPRODUCTION; SPORULATION; REGENERATION.

Reptile, any one of about 6,000 species of VERTEBRATES, including TURTLES, CROCODILIANS, LIZARDS, SNAKES and the TUATARA, distributed throughout the world. Reptiles are cold-blooded. Most lay shelled, fluid-filled, yolk eggs on land. Some species carry eggs in the body and bear live young. The skin is dry and covered with scales or embedded with bony plates. Reptiles keep their skin clear by rubbing themselves through dry grass or leaves. Their limbs are poorly developed or non-existent. Those with limbs usually have five clawed toes on each foot; this distinguishes them from AMPHIBIANS, which do not have claws. The first reptiles appeared during the Carboniferous Period and flourished during the Mesozoic Era. There are now four living orders: Chelonina (turtles); Rhynchocephalia (tuatara); Squamata (scaly reptiles); and Crocodilia (alligators and crocodiles). See also pp. 3, 66-71, 280-283.

Repton, Humphry (1752-1818), British landscape gardener who initially followed the ideas of Lancelot ("Capability") BROWN but modified his style by re-introducing ordered flower-beds and straight paths close to houses. His 400 or more *Red Books*, containing watercolour sketches for his clients, are a proof of his success. See also p. 1547.

Republic, state in which sovereignty is vested in the people or their elected or nominated representatives. The word formerly denoted a form of government that was both free from hereditary or monarchical rule and had some type of popular control of the state. Today, in addition to this, a republic may also be understood to be a state in which all segments of society are enfranchised and the power of the state is limited.

Republic, The, philosophical treatise by PLATO in which he describes the working of an imaginary but ideal state. It also serves as an introduction to his thought, containing his theory of Forms, theory of knowledge and views on the proper roles of music and poetry. Divided into 10 books, it is written as a dialogue whose central figure is SOCRATES.

Republican Party, US political party, also known as the Grand Old Party (GOP). It was organized in 1854 as an amalgamation of WHIGS and Free-Soilers with businessmen, workers and professional people who formerly had been known as Independent Democrats. Know-Nothings, Barnburners or Abolitionists. Its first successful presidential candidate was ABRAHAM LINCOLN, who was elected in 1860. Since 1932 only three Republicans have been elected president, DWIGHT EISENHOWER (1952, 1956), RICHARD NIXON (1968, 1972) and RONALD REAGAN (1981).

The first two had to work with largely Democratic Congresses. See also pp. 1628, 1748, 1748-1749.

Requiem, solemn choral service for the dead sung in Christian churches, beginning with the Latin word *requiem* (repose). The chief characteristics are the Introit (or opening section) "Requiem aeternam" and the Dies Irae. There are seven other sections. Many composers have The Dies Irae, a plainsong melody to a 13th-century poem, is a long part of the service and is often divided into sections. **Reredos**, in church architecture, an ornamental wall or screen behind the high altar. Originally a moveable hanging tapestry, it later became adorned with elaborate sculpture, tracery or painting. See also TRIPTYCH.

Resale price maintenance, trading practice whereby the manufacturer specifies at what price the retailer should sell his goods. Resale price maintenance was abolished in Britain in 1964 since it was seen as an infringement of the shopkeeper's right to compete for custom. The only exceptions are those goods for which the manufacturer can demonstrate that the public interest is served by resale price maintenance (notably books and medicines) and those goods that are subsidized by government funding.

Research and development, or R & D, systematic scientific investigation and experimentation to make new discoveries, prove or disprove theories, and find practical applications for ideas. Basic R & D refers to the search for new knowledge without specific direction; applied R & D is concerned with the practical laboratory refinement of new processes and products; developmental R & D transfers the knowledge out of the laboratory and into the manufacture of useful products.

Reserpine, trade name Serpasil, derivative of RAUWOLFIA used to treat HYPERTENSION by acting either as a sedative or by reducing cardiac output. Its side-effects include serious depression. See also pp. 1090, 1090, 1116, 1116.

Reserves, in economics, the portion of deposits that a commercial bank has in its physical possession at any given time to meet the withdrawal demands of its depositors. Commercial banks use only fractional reserves, to limit the amount of capital they must hold.

Reservoir, man-made storage place for water. Reservoirs are usually formed by dams, but sometimes pipelines are used to carry water from rivers to natural depressions in the land-surface. Sedimentation causes most reservoirs to become useless after several decades; few last more than 100 years. See also pp. 540-542.

Reshevsky, Samuel Herman (1911-), US chess player, b. Poland. A child prodigy, he toured Europe in a series of exhibitions at the age of six. In 1920 he emigrated to the USA, where he was national champion five times between 1936 and 1946.

Resin, or rosin, viscous substance secreted by various plants. It is impermeable to water and when present in large amounts (eg in pine) makes wood resistant to rot and weather. Oleoresin secreted by conifers is distilled to produce turpentine; rosin – a yellow, brown or black material – remains after the oil of turpentine has been distilled off.

Resistance, in an electric circuit, the ratio of the potential difference (voltage) to the current. It is measured in ohms and represents the opposition to the flow of ELECTRONS in a conductor, the electrical energy being converted into heat. By OHM'S LAW, $R = V/I$, where R is resistance, V is voltage and I is current. In an alternating current circuit, resistance is the real part of the impedance. See also pp. 878-885.

Resistance, psychological, in PSYCHOANALYSIS, the resistance of the patient to the process of bringing unconscious elements into consciousness. This is usually taken to refer to the patient's reluctance to accept the analyst's interpretations. It may also describe the mechanism of the SUPEREGO which prevents repressed material from becoming conscious.

Resistance movements, underground organizations which worked against Nazi rule in those countries whose governments had capitulated to German occupation in WWII. They were strongest in Poland, Yugoslavia and France, but they were also helpful to the Allied cause in Belgium, Holland, Denmark and Norway. The most dramatic episodes in European resistance were the two Warsaw risings. The first was the revolt of the Jews in the Warsaw ghetto in April 1943. Before being put down and exterminated, they killed about 1,000 Germans. The second was the equally unsuccessful rising of the "Home Army" in August 1944, to which STALIN refused to lend Soviet support.

In general the resistance movements rendered four great services to the Allies. They carried out acts of sabotage; they acted as sources of information for the Allied intelligence divisions; they helped prisoners of war and crews of crashed aircraft to escape and, especially in France and Yugoslavia, they made the occupying forces maintain large numbers of troops, which they could ill-afford. See also MAQUIS.

Resistivity, electrical property (symbol ρ) of materials. Its value is given by $\rho = AR/l$, where A is the cross-sectional area of a conductor, l is its length and R is its resistance in OHMS. As the temperature of the conductor rises, the resistivity usually also rises. Resistivity is also called specific resistance and is generally expressed in units of ohm-metres.

Resistor, electrical or electronic circuit component that has a specified RESISTANCE. Resistors for electronic circuits usually consist of finely ground carbon particles mixed with a ceramic material and enclosed in an insulated tube. The value of the resistance is denoted by a coded set of coloured rings on the outside of the tube. Resistors for carrying larger currents consist of a coil of insulated wire. See also pp. 878, 880, 884, 884.

Resnais, Alain (1922-), French film director. He made a number of short films in the late 1940s and 1950s, his first full length feature being *Hiroshima Mon Amour* (1959). Alain ROBBE-GRILLET scripted *Last Year in Marienbad* (1961) which is regarded by many as Resnais' best film. Later work included *Je t'aime, Je t'aime* (1969) and *Stavisky* (1974). See also p. 1761.

Resolutioners, members of the moderate party in the Scottish General Assembly which, in 1650, accepted the resolution rehabilitating those who had not been enemies of the SOLEMN LEAGUE AND COVENANT (1643). The resolution enabled CHARLES II to be crowned king of Scotland.

Resonance, particle, extremely short-lived elementary particle produced in high-energy nuclear reactions occurring in particle accelerators. Such particles decay in a time of the order of 10^{-23} seconds, characteristic of HADRONS. More than 150 have been detected, all since the 1960s. A resonance can be considered as a marked increase in the probability of interaction between two energetic colliding particles, occurring when the combined energy of the particles attains a particular value, the resonance energy.

Resonance, wave, phenomenon in which a mechanical or acoustic system, set into forced vibrations by the application of an external vibration, responds with maximum amplitude. It occurs when the FREQUENCY of the applied force becomes equal to the natural vibrational frequency of the system. The large vibrations can cause damage to the system. See also pp. 829, 835.

Resources, in economics, a country's collective means of support. Economists divide resources into four categories: land, labour, capital and raw materials.

Respighi, Ottorino (1879-1936), Italian composer who studied in Bologna and was later influenced by RIMSKY-KORSAKOV. He is best known for the symphonic poems *Fountains of Rome* (1917) and *Pines of Rome* (1924). He also composed songs, chamber music and operas.

Respiration, exchange of gases between an organism and its environment. The

term refers to the overall process by which oxygen is taken from the atmosphere, transported to cells for the oxidation of organic molecules and the return of carbon dioxide and water to the environment. In single-celled organisms the exchange of gases occurs at the cell membrane. In more complex animals specialized systems transfer the gases to and from the internal organs.

In human beings, respiration (or BREATHING) involves the mechanical pumping of air into and out of the lungs. Oxygen in the air diffuses across the capillary membranes of the lung's ALVEOLI into blood capillaries where it combines with the red blood protein HAEMOGLOBIN to form oxyhaemoglobin. This is then distributed throughout the body to the cells. In exhalation the process is reversed. Carbon dioxide diffuses across the cell membrane into the blood and is taken to the lungs, where it passes into the alveoli.

Other types of respiration include AEROBIC and ANAEROBIC. In plants the gas exchange occurs in special organs, the stomata, which are mostly found in the leaves. In fish gaseous exchange occurs across the gill membranes which are supplied with blood vessels. See also pp. 58, 58, 158, 356, 356.

Restif, Nicholas-Edme (1734-1806), also called Restif de la Bretonne, French novelist. His familiarity with Paris and its underworld furnished him with vivid material for his prolific output of novels. His best-known works are *Nights of Paris* (1788-90) and *Monsieur Nicholas* (1794).

Rest mass, in RELATIVITY, mass of an object when it is at rest. It is therefore a measure of the INERTIA of the object and is sometimes called the inertial mass. See also pp. 858-859.

Restoration (1660), the return of CHARLES II to the English throne after the COMMONWEALTH and PROTECTORATE had faltered and a strong reaction had set in against the PURITANS and against military control. By the Declaration of BREDA in 1660, Charles II promised religious toleration, a general pardon to all former enemies of the house of Stuart (except regicides) and payment of arrears in salary to the army. He landed in England in May 1660 to general rejoicing. ANGLICANISM was restored but certain civil and religious restrictions were placed upon Roman Catholics and some Protestant sects, such as QUAKERS. See also pp. 1425-1427, 1425-1427.

Restoration theatre, plays and performances in the period following CROMWELL and the COMMONWEALTH when, with the RESTORATION of CHARLES II, the theatres were reopened. It was a licentious period and drama reflected the freedom of court morals by broad satire, farce, wit and bawdy comedy. The most distinguished playwrights of the time were DRYDEN, CONGREVE, ETHERIDGE and WYCHERLEY.

Restraint of Appeals, Act in (1533), act of the English Parliament that ended the practice of making appeals to the Papacy in disputes over marriages and wills. It made possible HENRY VIII's divorce from CATHERINE OF ARAGON. Its preamble asserted the supremacy of the English Crown in spiritual and temporal affairs.

Restrictive trade practices, in industry and professions, mutual agreements that establish fixed prices or charges. This is usually achieved between companies that sell similar products; professional groups which decide on minimum fees for their services; and manufacturers who "black-list" retailers for selling goods at lower than the manufacturer's recommended price. The latter practice was declared illegal in Britain by the Restrictive Trade Practices Act (1956), which set up a court to ascertain whether restrictive practices were in the public interest.

Resurrection, the rising of the dead to new life, either in heaven or on Earth. Both Christianity and Judaism hold that at the end of the world there will come the Day of Judgement on which those worthy of eternal joy will be allowed to draw near God, while those unworthy will be condemned to weeping, wailing and gnashing of teeth. Christianity further teaches that all true believers will be raised from the

dead with glorified and imperishable bodies.

Resurrection (1889), novel by TOLSTOY. His first full length work after *Anna Karenina* (1877), it is more moralistic than his previous novels. It deals with the repentance of the nobleman, Nekhlyudov, for his seduction of a servant girl.

Resurrection plant, popular name for Rose of Sharon, a plant of the mustard family. It survives desiccation by curling up its leaves tightly when dry and unfolding them when moistened. Species *Anastatica hieronichuntica*.

Retail Price Index, governmental measure of changing retail prices in Britain, from which the rate of inflation is calculated. It is based on a constant selection of goods, weighted according to their importance in a family budget. The average cost of a weekly shopping basket is estimated each month from surveys carried out in several parts of the country.

Rethel, Alfred (1816-59), German painter and engraver. Historical paintings such as his frescoes of episodes in the life of CHARLEMAGNE for the Aachen City Hall comprised the bulk of his work. The series of six woodcuts *Another Dance of Death in the Year 1848* (1849) is a masterpiece.

Reticular formation, complex mechanism in the vertebrate CENTRAL NERVOUS SYSTEM, located in the brainstem. It consists of interconnected clusters of nerve cell bodies (grey matter) and is believed to influence many aspects of behaviour, including sleep, blood pressure and coordination. See also pp.129, 129, 1081.

Retina, inner layer of the wall of the EYE, composed mainly of different kinds of NEURONS (nerve cells), some of which are the visual receptors of the eye. These receptor cells are stimulated by light. Some, known as cones, respond primarily to the spectrum of visible colours; others, known as rods, respond mainly to shades of grey and to movement. The rods and cones connect with sensory neurons that in turn connect with the OPTIC NERVE that carries the visual stimuli to the brain. See also p.136.

Retinal detachment, separation of the layers of the RETINA in the eye, after which the outermost layer (the pigment epithelium) remains attached to the choroid. It occurs mainly in older people and results in blurred vision. The retina can be restored to its position by draining fluid and applying heat or cold to the wall of the eyeball, or by surgery using a laser beam. See also pp.136, 862.

Retirement, period after a person's normal working life. In Britain the usual age of retirement is 65 for men and 60 for women. In some countries, retired people draw pensions from private or public funds.

Retriever, sporting dog originally used only as a water dog to kill or cripple downed game and return it to the hunter; today it is also used to locate game and is a popular pet. It has a water-repelling coat, a keen scent, a soft mouth and swims well. The main breeds include the golden retriever and the Labrador retriever.

Retrorocket, rocket engine used to slow a space vehicle to separate it from another one, place it in a desired orbit, or allow it to make a soft landing.

Reuben, in the biblical book of Genesis, eldest son of JACOB, and the founder of one of the 12 tribes of Israel. He stopped his brothers from murdering JOSEPH by suggesting he should be sold into slavery in Egypt, and later he offered his own two sons as hostages to Jacob as pledges for the safe return from Egypt of Jacob's youngest son, Benjamin.

Reuchlin, Johann (1455-1522), German lawyer and humanist. His *Rudimenta Hebraica* (1506) was the first Hebrew grammar by a Christian. His defence of non-polemical Hebrew classics gained him the fierce opposition of the Roman Catholic Church.

Réunion, island in the Mascarene group in the Indian Ocean, approx. 700km (435 miles) E of Madagascar; St Denis is the capital. Discovered in 1513 by the Portuguese, it was claimed by France in 1638 and used as a penal colony. The

island became a French overseas département in 1948. Exports: sugar, rum. Area: 2,510sq km (969sq miles). Pop. (1975 est.) 501,000.

Reuter, Baron Paul Julius von (1816-99), British founder of REUTERS international news agency, b. Germany. He went to London in 1851 where he opened a telegraph office. Within ten years, he was supplying British newspapers with overseas information from his worldwide telegraph connections. He was created a German baron in 1871.

Reuters, news agency which transmits international news between its offices in major cities throughout the world. It originated as a service between Britain and the continent, using the telegraph. It is jointly owned by Australian, New Zealand and British newspapers. It was founded by Paul REUTER, in the 1850s.

Revelation, or Apocalypse, last book of the New Testament, written c.95 from exile on the island of Patmos by a certain JOHN, sometimes called St John the Divine. He is not generally considered to be identical with John the evangelist although there is controversy over whether he may have been the author of the letters (Epistles) of St John. In highly mystical, allegorical and prophetic terms, he concentrates on depicting the end of Creation, the Day of Judgment.

Revere, Paul (1735-1818), American patriot, silversmith, engraver and printer who is immortalized in a poem by Henry Wadsworth LONGFELLOW for his ride (1775) to warn the Massachusetts colonists that British troops were on the march. He was also a leader of the protest known as the BOSTON TEA PARTY (1773).

Reversible reaction, chemical reaction in which the products can change back into the reactants. Thus nitrogen and hydrogen can be combined to give ammonia, and ammonia may be decomposed to nitrogen and hydrogen. Such processes yield an equilibrium mixture of reactants and products. The equation is written using a double arrow: $N_2 + 3H_2 \rightleftharpoons 2NH_3$. See also CHEMICAL EQUILIBRIUM; p.900.

Reve, Don (1926-), British footballer and manager. An inside-forward, he won FA Cup and England honours (six caps 1954-56) while with Manchester City, where he played as a deep-lying centre forward; he also played for Leicester City, Hull City, Sunderland and Leeds United. As manager of Leeds (1961-74) he took them to domestic and European successes. He was manager of England from 1974 until 1977.

Revolution, agricultural. See AGRICULTURAL REVOLUTION.

Revolution, in a political sense, fundamental and violent change in values, political institutions, social structure and leadership brought about by a large-scale, successful revolt. The totality of change distinguishes it from coups, rebellions and wars of independence, which seek and achieve only particular changes. The term is also used to indicate great economic and technical changes, such as the Industrial Revolution and the Scientific Revolution.

Revolution, orbital motion of a planet or satellite around its primary. A single revolution is the planet's or satellite's "year". See also p.916.

Revolution, Russian. See RUSSIAN REVOLUTION.

Revolutions of 1848, series of uprisings in western and central European countries, whose object in some places (notably France and Germany) was the establishment of liberal, constitutional regimes; elsewhere (eg, in nations under Austrian rule) national liberation was the aim. Everywhere the ruling authorities - Louis-Philippe in France, Metternich in Austria, Frederick William in Prussia - were forced briefly to give way. But the middle classes, who led the revolutions, were not supported by the peasantry and by the end of 1849 all the revolutions had been crushed. See also pp.1586-1587.

Revolver, handgun or pistol that can fire several shots without being reloaded, the rounds being fed to the gun barrel from a revolving cylinder. Modern revolvers are essentially similar to the early five-

shooters and six-shooters, such as those patented in 1835 by Samuel COLT in the USA, in which pulling the trigger also causes the cylinder to revolve. See also pp.556-557.

Revolving stage, turntable stage which was invented in Japan in the mid-17th century and introduced into the Western theatre in the late 19th century.

Revue, theatrical entertainment purporting to give a review, usually satirical, of current fashions, events and personalities.

Rex cat, or poodle cat, type of domestic CAT first developed in Britain in 1943. The coat is unusual in that each hair is waved, and guard hairs are short, producing a "permanent wave" effect. There are two main types, Devon Rex and Cornish Rex. The Devon has a shorter coat.

Reyes, Alfonso (1889-1959), Mexican writer. A critic, scholar and poet, he believed that Latin American writers should tackle basic human themes. His writing was collected in *Political Works* (1952) and *Complete Works* (2 vols, 1955-56).

Reyes, N. R. See NERUDA, PABLO.

Reykjavik, port and capital of Iceland, on the SW coast of the island. Founded c.870, it was the first permanent settlement. The city developed in the 18th century and became capital in 1918. It served as a British and US air base during WWII. Reykjavik has a university (1911), the Althing (parliament) and a National Theatre. Many buildings in the city are heated by means of hot springs nearby. Industries: food processing, fishing, textiles, metallurgy, printing and publishing, shipbuilding. Pop. (1975 est.) 84,900.

Reymont, Wladyslaw Stanislaw (1867-1925), Polish novelist whose works were mainly concerned with the detailed lives of workers and peasants. His early novels were written when he was a railway superintendent. He wrote the two-volume *The Promised Land* in 1899 using the novels of Émile ZOLA as models. His best-known work is *The Peasants* (1902-09), a four-volume epic about a peasant's almost mystical attachment to the land. Reymont was awarded the 1924 Nobel Prize in literature.

Reynolds, Sir Joshua (1723-92), English artist and portrait painter. He was the founder and first president of the ROYAL ACADEMY OF ARTS (1768) and one of the leading artistic figures of his time. His fashionable portraits, which include *Nelly O'Brien* (1762), show how the classic manner of the 1760s had gradually evolved into a more relaxed, naturalistic style by the 1780s (*The Duchess of Devonshire and her Daughters* 1786). See also p.1205.

Reynolds number, dimensionless quantity characterizing types of fluid flow. For a body of density ρ and linear dimension l traveling at velocity v in a fluid of viscosity ν , the Reynolds number is $\rho vl/\nu$. At low values of the Reynolds number, the fluid flow is laminar, or layered, and is well-understood mathematically; at higher values the flow becomes turbulent and complicated.

Reza'iyeh, city in NW Iran. It was sacked by the SELJUK TURKS in 1184 and later occupied many times by the OTTOMAN TURKS. It is also regarded as the traditional birthplace of ZOROASTER. Today it is a market centre for the surrounding agricultural region, which produces fruit and tobacco. Pop. (1971 est.) 120,000.

Reza Shah (1878-1944), King of Iran and founder of the Pahlavi dynasty. He seized power by a military coup in 1921, deposed Ahmad Shah in 1925 and was elected Shah in the same year. He abdicated in 1941 after the Anglo-Russian occupation of Iran.

Rhabdomyancy, divination by wands or rods, especially the art of discovering ores or water using a divining rod. See also DOWSING.

Rhapsody, musical term applied in the 19th and 20th centuries to orchestral works, usually performed in one continuous movement and most often inspired by a nationalistic or romantic theme.

Rh disease, also called haemolytic disease of the newborn, anaemic disease of fetuses

and of newborn infants due to Rh-factor incompatibility between the mother and the developing embryo. It is marked by destruction of mature red blood cells, presence of many immature red cells, and jaundice. It generally occurs only in second and subsequent pregnancies; severity varies and increases with each successive pregnancy. Exchange transfusions in which compatible blood is substituted in the newborn now save most affected babies. There is also a vaccine that prevents formation of Rh ANTIBODIES in the Rh negative mother. See also p.166.

Rhea, either of two species of large, brownish, flightless, fast-running South American birds resembling a small OSTRICH. They feed mostly on vegetation and insects. Height: to 1.5m (5ft). Family Rheidae. See also pp.72, 1896, 1897.

Rhea Silvia, in Roman mythology, mother of ROMULUS AND REMUS. She was the daughter of Numitor, king of Alba Longa. Forced to become a VESTAL VIRGIN, she nevertheless bore the twin boys by the war god MARS, who later founded Rome.

Rheims. See REIMS.

Rhenium, metallic element (symbol Re) of the third transition series, discovered in 1925. It is found in MOLYBDENITE, from which it is obtained as a by-product. It is used in THERMOCOUPLES and various alloys, and is also a useful catalyst. Properties: at. no. 75; at. wt. 186.2; s.g. 21.0; m.p. 3,180°C (5,756°F); b.p. 5,627°C (10,160°F); most common isotope Re¹⁸⁷ (62.93%). See also TRANSITION ELEMENTS.

Rheology, study of the ways in which matter deforms and flows. It includes the investigation of such physical properties as VISCOSITY, ELASTICITY and plasticity (non-elastic deformation). Although fluidity is most widely recognized as a property of liquids and gases, solids also flow to some extent and are included in rheological investigation. Rheological properties are influenced by temperature and pressure, often non-uniformly. Thixotropic liquids decrease in viscosity as they are stirred. These and other rheological phenomena are related to the molecular structure of materials. The science finds its major application in the manufacture of paints and other surface coatings.

Rheostat, device for regulating an electric current by means of variable RESISTANCE. The resistance element may be a metal wire, carbon or a conducting liquid, depending upon the application. Rheostats are used to adjust generator characteristics, to dim lights and to control the speeds of electric motors. See also POTENTIOMETER.

Rhesus, medium-sized, yellow-brown MACAQUE MONKEY of India. Short-tailed, it has a large head with a bare face, large ears and closely spaced, deep-set eyes. Used in scientific work, the rhesus gave the first two letters of its name to the Rh blood factor. Height: 60cm (2ft). Species *Macaca mulatta*. See also pp.106-107.

Rhesus factor, any of a group of antigens (substances that stimulate ANTIBODY production) found on the surface of red blood cells, so called because first discovered in the rhesus monkey. Rh-negative blood lacks the Rh factor and Rh-positive blood contains it; it is present in about 85% of human beings. Rh incompatibility (an Rh-negative pregnant woman with an Rh-positive fetus) is a major cause of a serious condition in newborn babies. See also RH DISEASE, pp.152, 166.

Rhetoric, art of discourse and persuasive speaking; language, written or spoken, designed to impress or persuade.

Rheumatic fever, inflammatory disorder caused by streptococcal infection and characterized by fever and swelling and pain in the joints. It is associated with inflammation of the heart and often results in rheumatic heart disease. Treatment is with ANTIBIOTICS, ASPIRIN and CORTISONE. Prevention entails immediate treatment of the streptococcal infections.

Rheumatism, general term for a group of disorders whose symptoms are pain in the joints and bones and their supporting tissues. Rheumatoid ARTHRITIS is a general

Rhine, Joseph Banks

Rhinoceros horn is made up of tubular horny fibres growing from the skin.

Rhizome is an underground food-storing organ in many flowering plants.

Cecil Rhodes devoted the last years of his life to the development of Rhodesia.

Rhododendron, meaning rose tree, is a flowering plant of the heath family.

constitutional disorder involving mainly the finger joints, although the wrists, knees, ankles, shoulders and sometimes hips may also be affected. Treatment may involve heat treatment or a range of drugs including CORTISONE. RHEUMATIC FEVER attacks the joints, but is due to bacterial infection. See also p.1070.

Rhine, Joseph Banks (1895-1980), US psychologist. He was a pioneer in the study of extrasensory perception (ESP) and psychic phenomena, bringing these subjects under objective, scientific scrutiny. Among his major publications are *Extra-sensory Perception* (1934) and *Parapsychology Today* (1968). See also pp.1892-1893, 1892.

Rhine (Rhein, Rhin or Rijn), major river in w Europe. It rises in se Switzerland in the Swiss Alps and flows n, bordering on or passing through Switzerland, Austria, Liechtenstein, West Germany, France and The Netherlands to enter the North Sea at Rotterdam. The Rhine is navigable to oceangoing vessels as far as Basel in Switzerland, and is a major transport route for some of w Europe's most industrialized areas. Length: approx. 1,320km (820 miles). See also p.761.

Rhineland, region in w West Germany along the w bank of the River Rhine. It includes the RHINELAND-PALATINATE, Rhenish Hesse, SW Hesse and NW Baden. The Treaty of Versailles (1919) provided for Allied occupation and demilitarization of the area; the last occupational troops were removed in 1930 (five years early), but by 1936 HITLER had formed the defensive SIEGFRIED LINE and denounced the LOCARNO PACT. The defence system was penetrated by Allied troops in WWII.

Rhineland-Palatinate, industrial state of w West Germany, bordered by France and Saarland (s) and Luxembourg and Belgium (w); the capital is Mainz. The state is drained by the rivers Rhine and Moselle (Mosel), whose valleys are famous for their vineyards. Potatoes, tobacco and fruit are also grown, although most of the people work in industry. Chemicals, machinery and shoes are produced. Area: 19,835sq km (7,658sq miles). Pop. (1974) 3,688,100.

Rhinencephalon, the part of the BRAIN that is concerned with the sense of smell. It is extremely large in sharks (which find their prey by smell) but is small in most higher animals, being completely enveloped in man by the massive growth of the cerebral hemispheres. See also p.143.

Rhinitis, inflammation of the mucous membrane of the nose. It may be an allergic reaction (ie, HAY FEVER) or a symptom of a disorder such as the common cold.

Rhinoceros, massive, hoofed, herbivorous mammal native to Africa and Asia. Depending on the species, rhinoceroses have either one or two horns on the snout. They have thick skins and poor eyesight, are solitary grazers or browsers, and in the heat of the day like to wallow in muddy pools. When alarmed they may charge. Now rare except in protected areas, rhinos were once hunted for their horns (which were believed to have aphrodisiac properties). Weight: 1-3.5 tonnes. Family Rhinocerotidae. See also pp.95, 284, 312, 342.

Rhinoceros beetle, large plant-eating SCARAB BEETLE of tropical and subtropical regions, named after the rhinoceros-like horns of some species. Length: to 150cm (6in), including the horn. Subfamily Dynastinae.

Rhizome, creeping, root-like underground stem of certain plants. It usually grows horizontally, is rich in accumulated starch, and can produce new roots and stems asexually. Rhizomes may be long and slender (as in Solomon's seal), or thick (as in the iris and water lily). They differ from roots in having nodes, buds and scale-like leaves. See also TUBER; pp.674, 682, 683.

Rhode Island, state in NE USA, on the Atlantic coast in New England; the smallest state in the USA and the second most densely populated. Much of the land is forested, but there is some dairy farming and the state is famous for its Rhode Island Red chickens. Potatoes, hay,

apples, oats and maize are the chief crops. Fishing is of great importance, particularly for shellfish. Mineral deposits include sand, gravel, stone and gemstones. The jewellery industry in Providence is one of the largest in the world. Other industries include textiles, fabricated metals, silverware, machinery, electrical equipment and insurance. The state attracts many tourists and has several leading educational institutions. The principal cities are Providence (the state capital), Warwick, Pawtucket and Cranston.

The region was first settled in 1636 by settlers from Massachusetts seeking religious freedom. Providence was the first settlement. Area: 3,144sq km (1,214sq miles). Pop. (1980) 947,154. See also p.2161.

Rhodes, Cecil John (1853-1902), British financier and statesman. He went to Africa for his health in 1870, where he began mining diamonds and gold. A firm believer in British colonial expansion, he formed the British South Africa Company in 1889 and with it controlled the large areas of se Africa later called Rhodesia. He was Prime Minister of Cape Colony from 1890 to 1896. Failure to gain control of the Transvaal by means of a conspiracy (the JAMESON RAID, 1895) destroyed his political career. He left his vast fortune to various public works and established scholarships for education. See also pp.1611, 1621.

Rhodes, Wilfred (1877-1973), British cricketer who played for England and Yorkshire. He took a record 4,187 first-class wickets with his slow left-arm bowling, scored 39,797 runs, and performed the "double" of 100 wickets and 1,000 runs in one season 16 times in his long career (1898-1930). He played in 58 Test matches between 1899 and 1930 (scoring 2,325 runs, at an average of 30.19, and taking 127 wickets, at an average of 26.96).

Rhodes (Ródhos), island in se Greece, in the Aegean Sea; one of the Dodecanese islands. Colonized by the Dorians c.1000 bc, Rhodes was conquered at different times by Persia, Sparta, Athens, Caria and Alexander the Great. The island was conquered in a special crusade (1308-10) by the KNIGHTS HOSPITALERS who successfully defended it against the Turks in the Siege of Rhodes. However it was taken by the Turks in 1522, and ceded to Italy in 1923, before being annexed to Greece in 1947. The principal city is Rhodes which is also capital of the Dodecanese department. Products: wheat, tobacco, cotton, olives, fruits, vegetables. Area: 1,400sq km (540sq miles). Pop. (island, 1971) 66,606; (city, 1971) 32,019.

Rhodes, Colossus of, one of seven wonders of the ancient world, a bronze statue of the sun-god overlooking the harbour at Rhodes. It stood more than 100ft (30.5m) high. It was built, at least in part, by Chares of Lindos between c.292 bc and c.280 bc. It was destroyed by an earthquake c.224 bc.

Rhodesia, official name for the British colony of Southern Rhodesia after 1963. It was renamed ZIMBABWE - Rhodesia in the late 1970s as the country finally achieved black majority rule. Northern Rhodesia, which was united with Southern Rhodesia and Nyasaland (now MALAWI) in the Central African Federation of 1953, became the independent country of ZAMBIA in 1964 after the dissolution of the federation.

Rhodesia, Northern, name of ZAMBIA before its independence in 1964. Formed (1911) from the protectorates of North-west and Northeast Rhodesia, it was taken over by the British Government from Cecil Rhodes' British South Africa Company (1924). From 1953-63 it was part of the Federation of Rhodesia and Nyasaland.

Rhodesia and Nyasaland, Federation of, former association founded in 1953 from two British colonies in Africa, also known as the Central African Federation. The common government was primarily white, and the ensuing black protest eventually caused its downfall in 1963. In the following year Northern Rhodesia became

independent as ZAMBIA and most of Nyasaland became MALAWI. Southern Rhodesia, with a change in name to simply RHODESIA, remained officially a British colony, but unilaterally proclaimed independence in 1965. Following a long civil war, it achieved independence in 1980 and was re-named ZIMBABWE.

Rhodesia man, fossil man whose remains were discovered in a cave at Broken Hill, Zambia (then Northern Rhodesia) in 1921, and dated as late Pleistocene - 40,000 or more years old. The skull is low-browed with brow ridges that are the most massive of all human skulls, but the cranial capacity (brain size) of about 1,300cc is comparable with those of Neanderthal and modern man. Rhodesian man's scientific name is *Homo sapiens rhodesiensis*. See also pp.109, 115.

Rhodes Scholarships, grants for study at Oxford University, England, provided for in the will of the British financier, Cecil Rhodes. They are awarded each year to students from the Commonwealth, South Africa and the USA.

Rhodium, metallic element (symbol Rh) of the second transition series, discovered in 1803. It occurs associated with platinum and its chief source is as a by-product of nickel smelting. It is used in hard platinum alloys. Properties: at. no. 45; at. wt. 102.9055; s. g. 12.4; m. p. 1,966°C (3,571°F); b. p. 3,727°C (6,741°F); most common isotope Rh¹⁰³ (100%). See also TRANSITION ELEMENTS.

Rhododendron, large genus of shrubs and small trees that grow in the acid soils of cool temperate, often mountainous regions in North America, Europe and Asia. Primarily evergreen, they have leathery leaves and bell-shaped white, pink or purple flowers. Many species are used in landscaping. Family Ericaceae. See also AZALEA.

Rhodophyta. See RED ALGAE.

Rhodopsin, or visual purple, visual pigment present in the rod cells of the RETINA of the eye. It absorbs light, producing a nerve impulse that is perceived as vision. See also pp.136-137.

Rhodri Mawr (The Great) (d.878), Welsh leader who became King of Gwynedd (844), Powys (855) and two parts of sw Wales, previously united as Seisyllwg (872).

Rhombus, PARALLELOGRAM (a four-sided plane figure with opposite sides parallel) with all of its sides equal in length.

Rhondda, former borough in Glamorgan, s Wales, made up of the towns and villages in the valleys of the rivers Rhondda Fawr and Rhondda Fach; since 1974 Rhondda has been a county of MID GLAMORGAN. The region was famous for coal-mining, but many pits have closed in the second half of the 20th century and the population has declined. Light industries are being encouraged.

Rhône, river in w Europe. It rises in the Rhône Glacier, runs through the Bernese Oberland of Switzerland, flows w to Lake Geneva, and from the sw end of the lake it crosses the French border. It continues in a valley separating the Massif Central from the French Alps, through Lyons and Avignon to Arles, where it branches into the Grand Rhône and the Petit Rhône. Both rivers flow into the Mediterranean Sea w of Marseilles, to which the river is connected by canal. Length: 813km (505 miles).

Rhubarb, perennial herbaceous plant native to Asia and cultivated in cool climates throughout the world for its edible leaf stalks. It has large poisonous leaves and small white or red flowers. Genus *Rheum*. Height: to 1.2m (4ft). Family Polygonaceae. See also pp.684, 685, 1062.

Rhuddlan, Statute of (1284), edict issued by EDWARD I of England to provide for the government of Wales. Counties were reorganized, sheriffs appointed and the English criminal law imposed on Wales. It lasted until 1536.

Rhum (Rum), mountainous island of the Inner Hebrides off the w coast of Scotland, in w Highlands Region. The island was made a nature reserve in 1957. The highest point is Askival, rising to 810m

(2,659ft). Area: approx. 182sq km (68sq miles).

Rhyme, similarity of sound in the final syllables of two (or more) words. It has been one of the most important devices, at various times considered almost essential, in poetry. Most common are end rhymes, where two words each at the end of a line of verse rhyme and thereby when read aloud establish the verse structure and reinforce the metre. Internal or **rhyming** rhymes emphasize rhythmic construction. Rhymes are also classified as masculine (when the last and rhyming syllable of a line is stressed) and feminine (when the last of two syllables, both rhyming with those of another line, is unstressed).

Rhymney Valley, county district in E MID GLAMORGAN, S Wales; created in 1974 under the Local Government Act (1972). Area: 176sq km (68sq miles). Pop. (1974 est.) 104,400.

Rhynchocephalia. See **REPTILE**.

Rhyolite, quartz-rich lava of such a fine grain that little or no crystalline structure can be detected in it. The fineness is caused by rapid cooling, giving a glassy texture. See also p.262.

Rhys, Jean (1894-1979), British novelist, who wrote intensely personally about the plight of the solitary woman. Her *Left Bank Stories* (1927) brought her to prominence and her novel *Wild Gargasso Sea* (1966) won the W.H. Smith Literary Prize. In 1977 she was awarded the C.B.E.

Rhythm, in music, duration of the notes, the rapidity with which they follow each other (tempo) and the pattern of sounds formed by changes in duration and tempo. Rhythm in Western music is generally based on metre, ie notes follow one another in a more or less regular pattern at some specified rate. In Oriental and primitive music rhythms may be more free.

Rhythm, in poetry, metrical movement determined by relation of long and short, or stressed and unstressed, syllables.

Rhythm and Blues, form of popular music. It developed as an urban form of the rural negro **BLUES**. In towns the portable instruments of the original bluesmen were supplemented by pianos, sets of drums and, in the 1950s, electric guitars.

Jazz influences, in the form of more insistent rhythms and the use of saxophones, also made themselves felt. This raw, energetic and relatively simple music was the basis of **ROCK AND ROLL**; it also had a great influence on British popular music of the 1960s, when groups such as the **ROLLING STONES** imitated American originals.

Rib, in architecture, an arch, part of an arch or a projecting band-like member of a vault or ceiling. It is commonly structural, but may be purely decorative, as a separation of the cells of a groined vault.

Rib, curved bones that are arranged in pairs to form part of the front and side support of the chest. There are 12 pairs of ribs in human beings. The first seven pairs, known as true ribs, are joined by costal cartilage to the **STERNUM** (breastbone); the next three, called false ribs, to the costal cartilage of the seventh pair; and the last two, called floating ribs, are not attached to anything at the front of the body.

The head of each rib joins with a thoracic vertebra in the spine. The shafts (main curved part of the bone) of adjacent ribs are joined by intercostal muscles that act to change the capacity of the chest during breathing. See also pp.146, 147, 147.

Ribalta, Francisco (c.1565-1628), Spanish painter. His works include *The Vision of Father Simon* (1612) and *The Vision of St Francis* (c.1620). He added to the success of his father's studio in Valencia and was one of the first Spanish painters to use **TENEBRIST** effects in religious paintings. His sons were also Valencian painters.

Ribbentrop, Joachim von (1893-1946), German diplomat and politician. A wealthy merchant, he joined the Nazi party in 1932 and became part of Adolf Hitler's inner circle as a foreign affairs adviser in 1933. From 1936 to 1938 he was ambassador to Great Britain and from 1938 German Foreign Minister. He was instrumental in the conclusion of the Russo-German non-aggression pact of

1939 and in planning the attack in Poland (1939) that precipitated WWII. He was tried at the Nuremberg Trials (1946), convicted of war crimes and hanged.

Ribbon fish, also called scythe fish or deal fish, marine fish found in cold deep waters. It is identified by its long, thin body and plume-like dorsal fin extending along the entire length of the body. Length: 2.4m (8ft). Family Trachipteridae.

Ribera, José (1591-1652), Spanish **BAROQUE** painter who after 1616 worked in Naples, then a Spanish possession. Until 1635 he painted religious subjects in sombre colours, influenced by Michelangelo CARAVAGGIO, but between 1635 and 1639 he began to use the brighter colours of TITIAN and Antonio CORREGGIO. One of his early works is *Crucifixion* (c.1620); his later paintings include *Apollo and Marsyas* (1637) and *The Mystic Marriage of St Catherine* (1648).

Riboflavin, vitamin of the B complex, lack of which impairs growth and causes skin disorders. Its formula is $C_{17}H_{23}N_4O_6$, it is soluble in water, and it plays an important part in the health of the skin.

Ribonucleic acid. See **RNA**.

Ribosome, ribonucleo-protein particle in the **CYTOPLASM** of cells and which appears to be the site of **PROTEIN** synthesis.

Ricardo, David (1772-1823), British political economist. He was a successful stockbroker, and his book *Principles of Political Economy and Taxation* (1817) made an important contribution to the study of economics.

Ricci, name of two Italian brothers, both of whom were composers, mainly of operas. Federico (1809-77) was involved in composing 19 operas, some of which were written in collaboration with his brother Luigi (1805-59). Their *Crispino e la comare* (1850) enjoyed worldwide success.

Ricci, Matteo (1552-1610), Italian **JESUIT** who settled in China in 1583. In 1601 he became the first Jesuit to enter Peking. He spent the rest of his life there teaching science, translating many Western works on science into Chinese and writing several of his own, and working as a missionary. He also presented the court with its first maps of the world.

Ricci, Sebastiano (1659-1734), Venetian painter who worked in the Schönbrunn Palace in Vienna before going to Britain in 1712. Some 30 of his paintings are now in the Royal Collection.

Riccio, Andrea Briosco (1470-1532), Italian Renaissance sculptor who was best known for his sculptured bronze miniatures, many of which depict themes from Classical mythology. His great bronze Paschal Candlestick (1507-16) in the Church of St Antony in Padua is his most famous work.

Rice, Elmer (1892-1967), US dramatist whose plays expressed his concern and compassion for the people of the economically depressed 1930s. Among his works are *Street Scene* (1929), of which Kurt WEILL wrote an operatic version (1947), and *Between Two Worlds* (1934).

Rice, plant native to SE Asia and Indonesia, now cultivated in many warm humid regions and the main grain food for Middle and Far East countries. It provides a staple diet for more than half the population of the world. It is an annual grass, the seed and husk of which is the edible portion. It is usually grown in flooded, terraced paddies with hard subsoil to prevent seepage. Because rice is generally grown underwater, it does not lend itself to regular crop rotation systems and so rice-growing land is often allowed to become fallow after a season or two. Species *Oryza sativa*. See also pp.652, 663, 677, 679, 700, 754.

Richard I (1157-99; r.1189-99), King of England, son of HENRY II and ELEANOR of AQUITAINE, also known as Richard Coeur de Lion or Richard the Lion-Heart. He revolted against his father from 1173 to 1174 and again from 1188 to 1189, succeeding to the throne on his father's death in 1189. In 1190 he set out on the Third CRUSADE and took Cyprus and Acre in 1191, but failed to gain Jerusalem. On his journey home he was captured and held for ransom in Austria. He eventually

returned to England in 1194 in time to suppress a revolt raised against him by his brother John. He then went to France where he spent the rest of his life. See also pp.1295, 1302, 1303, 1310, 1310, 1312.

Richard II (1367-1400), King of England (r.1377-99), the son of EDWARD THE BLACK PRINCE. He succeeded his grandfather, EDWARD III, to the throne. His uncle, John of Gaunt, controlled the government until the PEASANTS' REVOLT of 1381, and in 1388 the Duke of Gloucester (with four other lords) assumed control. Richard regained authority the following year but Gaunt's heir, Henry, Duke of Lancaster, raised an army against him and was crowned as HENRY IV. Richard was imprisoned and either starved himself to death or was murdered. See also pp.1313, 1313, 1315, 1315, 1343, 1348-1349, 1348, 1376, 1795.

Richard III (1452-85), King of England (r.1483-85), brother of Edward IV. When Edward died in 1483 his young son was proclaimed Edward V, but Richard put him and his other young nephew in the Tower of London and assumed the crown himself. His old supporter, the Duke of Buckingham, led an unsuccessful revolt against him shortly after in favour of Henry Tudor. Henry himself landed in Wales in 1485, killed Richard at the Battle of Bosworth Field and ascended the throne. Richard was the last Yorkist king and his death ended the Wars of the ROSES. See also pp.1376, 1795.

Richard, Cliff (1940-), British popular singer, b. India, real name Harold Webb. His first million-selling recording was *Living Doll* (1959). After appearing in the film *Expresso Bongo* (1960) he gradually lost his image of a ROCK AND ROLLER and became a family entertainer, with recordings of such songs as *The Young Ones*, *Bachelor Boy* and *Summer Holiday*, and his series of film musicals, culminating in *Wonderful Life* (1964). He remains popular in the 1980s.

Richard II (c.1595), historical play by William SHAKESPEARE, whose chief source was Raphael HOLINSHED's *Chronicles* (1577). Richard II yields his throne to his powerful cousin Henry Bolingbroke, who became Henry IV. Richard is imprisoned, then murdered.

Richard III (c.1594), historical play by William SHAKESPEARE. Richard, Duke of Gloucester, (a hunchback) murders his brother, the Duke of Clarence; and when his eldest brother, King Edward IV, dies he has Edward's two young sons imprisoned and killed. He seizes the crown but is defeated in battle at Bosworth Field and succeeded by Henry VII. The plot of the play and its characterization bear little relation to historical fact.

Richards, Barry Anderson (1945-), South African cricketer who played for Natal, Hampshire, South Australia and South Africa. A prolific opening batsman, he scored 508 runs (average 72.57) in his four Test matches (1969-70) for South Africa, before his country was barred from international competition.

Richards, Ceri Geraldus (1903-71), British painter who studied at Swansea School of Art and the Royal College of Art, London. Influenced in his early years by PICASSO and MAX ERNST, he worked on painted wooden reliefs in the 1930s but returned to his earlier imaginative abstract style after WWII, producing highly coloured works, often based on musical and literary themes. See also p.1771.

Richards, Dickinson Woodruff (1895-1973), US physiologist. He shared the 1956 Nobel Prize in physiology and medicine with André COURNAND and Werner FORSMANN for his part in discoveries concerning heart catheterization and pathological changes in the CIRCULATORY SYSTEM, advances that were fundamental to subsequent medical practice.

Richards, Frank (1875-1961), British writer of adventure stories for boys and creator of the character Billy Bunter; real name Charles Hamilton. His early stories appeared in *Gem* (1906-39) and *Magnet* (1908-40). He published his *Autobiography* in 1952.

Richards, Sir Gordon (1904-), British

David Ricardo strongly influenced the newly emerging science of economics.

Richard I, during his entire reign, spent little more than six months in England.

Cliff Richard speaking of the Gospel at a lunchtime concert in London 1970.

Frank Richards' schoolboy character Billy Bunter often appeared in children's comics.

Richards, Ivor Armstrong

Sir Ralph Richardson played opposite Gina Lollobrigida in *Women of Straw* (1963).

Cardinal Richelieu strengthened the French Monarchy and even ruled France himself.

Manfred von Richthofen (left) talking to an Allied airman whom he shot down.

Leni Riefenstahl used her talents to make films used for Nazi propaganda.

jockey who, in a career lasting from 1921 to 1954, rode an unparalleled 4,870 winners, including a record 269 in 1947 and 14 Classics. He was champion jockey 26 times in 29 seasons (1925-53), another record. He later became a trainer.

Richards, Ivor Armstrong (1893-1979), British literary critic and theorist, best-known for his innovative approach to the study of literature with its particular stress on semantics. His emphasis on the importance of the texture of literary language may be seen in *The Principles of Literary Criticism* (1924).

Richards, Theodore William (1868-1928), US chemist and professor at Harvard. He made accurate determinations of ATOMIC WEIGHTS and was awarded the 1914 Nobel Prize in chemistry. He provided experimental evidence that supported Frederick Soddy's theory of the existence of ISOTOPES.

Richardson, Dorothy (1873-1957), British novelist. Her most important novel was *Pilgrimage* (12 vols 1915-38). Her use of the "stream of consciousness" technique may have influenced the work of both Virginia Woolf and James Joyce.

Richardson, Henry Handel (1870-1946), Australian novelist, real name Ethel Florence Richardson. A naturalistic writer, her work includes a trilogy, *The Fortunes of Richard Mahoney* (1930), which is based on her father's decline after emigrating to Australia, and *The Young Cosima* (1939), her last novel, which reconstructs the love affair of Wagner, Liszt and Cosima.

Richardson, Jonathan (1665-1745), English portrait painter and author. A successful artist, he painted such well-known figures as Alexander Pope and Sir Richard Steele. He published several theoretical works on art, among them *The Theory of Painting* (1715) and *Essay on the Whole Art of Criticism in Relation to Painting* (1719).

Richardson, Sir Owen Willans (1879-1959), British physicist who was awarded the 1928 Nobel Prize in physics for his work on thermionic emission. In 1911 he showed that ELECTRONS are emitted from hot metals, disproving the theory that they arose from the surrounding air. In the same year he formulated a mathematical equation relating the absolute temperature of a metal to the rate of electron emission, known as Richardson's law, which was of fundamental importance in the development of ELECTRON TUBES (radio valves). He specialized in this field, which he named THERMIONICS, and wrote many works on the subject.

Richardson, Sir Ralph David (1902-), British actor. His distinguished career has included fine Shakespearean performances at both the OLD VIC and STRATFORD-UPON-AVON. He is equally at home, however, in plays such as Harold Pinter's *No Man's Land* (1975). Since 1933 he has appeared in a large number of films.

Richardson, Samuel (1689-1761), English novelist and printer. He contributed to the development of epistolary and psychological novels. His novels include *Pamela* (4 vols, 1740-41), and *Sir Charles Grandison* (1753-54).

Richardson, Tony (1928-), British film and stage director. His first stage production was *Look Back in Anger* (1956). He was much admired in the early 1960s for his films: *The Entertainer* (1960), *A Taste of Honey* (1961) and *The Loneliness of the Long Distance Runner* and *Tom Jones* (both 1963). His later films, such as *Joseph Andrews* (1976), were less popular.

Richelieu, Armand-Jean du Plessis de (1585-1642), French cardinal and statesman. He became chief of the royal council in 1624, establishing an ever-increasing royal power that lasted until the FRENCH REVOLUTION. In foreign affairs, he turned the Swedes and Protestant Germans against the Hapsburgs and advanced the French cause in the THIRTY YEARS WAR. A wealthy literary patron, he established the ACADEMIE FRANÇAISE. See also pp.1407, 1407, 1451.

Richert, Charles Robert (1850-1935), French physiologist. He was awarded the 1913 Nobel Prize in physiology and medi-

cine for his work on immune reactions, which led to research on ALLERGIES.

Richler, Mordecai (1931-), Canadian novelist. Although Richler has lived primarily in England since 1954, his satirical novels are about Canadians and the Jewish ghetto in his native Montreal, and include *The Apprenticeship of Duddy Kravitz* (1959), *Cocksure* (1968) and *St Urbain's Horseman* (1969).

Richmond, state capital and port of entry in the central Virginia, USA, on the James River. Settled in 1637, the city developed as a trading centre. It was made capital of the Commonwealth of Virginia in 1779, and the state capital in 1785. Richmond was the capital of the CONFEDERATE STATES in 1861, and fell to Union forces in 1865. The city includes the University of Richmond (1832). Industries: metal products, tobacco processing, textiles, clothing, chemicals, food processing, printing and publishing. Pop. (1980) 219,429.

Richmond-upon-Thames, borough of SW Greater London, SE England; formed in 1965 by the merging of the former boroughs of Barnes, Richmond and Twickenham. It is a residential area with a number of famous buildings, including HAMPTON COURT PALACE. Pop. (1981 est.) 164,900. See also pp.1546-1548.

Richter, Adrian Ludwig (1803-84), German painter. He was drawing-master at the MEISSEN porcelain factory. His paintings and woodcut illustrations were a combination of genre and landscape.

Richter, Burton (1931-), US physicist. Working with a very powerful particle accelerator consisting of a pair of electron storage rings which could drive matter and antimatter particles together with extremely high energy, he discovered (1974) a new sub-atomic particle (which he named psi) with the relatively long lifetime of 10^{-20} secs. Samuel Ting, working independently of Richter and using a different method, simultaneously discovered the same particle, which he named J. For this work Richter and Ting shared the 1976 Nobel Prize in physics.

Richter, Charles Francis (1900-), US geophysicist and seismologist. With Beno Gutenberg he developed the RICHTER SCALE to measure earthquake intensity.

Richter, Hans (1843-1916), Austrian conductor, b. Hungary, the personal assistant of Richard Wagner, whose operas he conducted throughout his career. He conducted at Munich, Bayreuth and Vienna, where he became music director of the Court Opera in 1875. He went to Britain in 1877 and in London conducted what became known as the Richter Concerts until 1897. From 1897 to 1911 he was conductor of the Hallé Orchestra in Manchester, England.

Richter, Sviatoslav (1915-), Soviet pianist. He studied at the Moscow and Odessa Conservatories and won the Lenin Prize in 1961. Acclaimed as a piano virtuoso, he has made extensive concert tours.

Richter scale, classification of earthquake magnitude set up in 1935 by the American geologist Charles Richter. The scale is logarithmic and is based on the total energy released by an earthquake as opposed to a scale of intensity that measures the damage done at a particular place. See also p.202.

Richthofen, Manfred von (1892-1918), German aviator in WWI who shot down 80 enemy aircraft. His fighter wing was called Richthofen's Flying Circus and he was known as the "Red Baron". He was killed in action in April 1918.

Rickets, children's disorder in which the bones fail to harden properly, with a simultaneous excessive growth of cartilage at the ends of the bones. Due to either a dietary lack of VITAMIN D or insufficient sunlight to allow its synthesis in the skin, the disorder results from the inability of the bones to calcify properly, for which vitamin D is essential. A similar disorder, osteomalacia, may occur with pregnant women, who lose calcium to the growing fetus, and with old people.

Rickettsia, group of micro-organisms intermediate between bacteria and viruses, although usually classified with the viruses. They are carried by fleas, lice

and ticks and cause many diseases of vertebrates, including TYPHUS, Rocky Mountain spotted fever and Q fever, all of which can be transmitted to humans. Among domestic animals, dogs are afflicted with canine rickettsiosis, of which the symptoms are fever and disorders of the nervous system.

Rickover, Hyman George (1900-), US admiral, b. Russia. From 1947 he managed the US Navy's atomic submarine project and directed the planning and construction of the world's first atomic-powered submarine, USS Nautilus, launched in 1954.

Rickshaw, two-wheeled vehicle with a chair-like body and a collapsible hood, pulled by a man between two shafts. Once used widely in the Far East, it was largely superseded by a rickshaw incorporating a bicycle and, later, a motorcycle. See also p.505.

Riders to the Sea (1903), one-act drama by J. M. Synge, first produced in Dublin in 1904. A stark tragedy of man's struggle in the face of the inevitability of death, it tells of a mother whose husband and six sons are drowned at sea.

Ridgeway, The, grassy track in England which dates from prehistoric times and runs along the Berkshire Downs from White Horse Hill to near Streatley. In early Saxon times, when the valleys were wooded, the line of the Ridgeway constituted a buffer zone between the two kingdoms of Mercia and Wessex.

Riding, Laura Jackson (1901-), US poet. While living in Majorca, she collaborated with Robert Graves on a critical work *A Survey of Modernist Poetry* (1927) and a novel *No Decency Left* (1932). Collections of her poetry include *Poems: A Joking Word* (1930) and *Poet: A Lying Word* (1933).

Riding, name of the three administrative divisions of the former county of YORKSHIRE, N England. The word means a third.

Riding, equestrian skill required in a variety of sports, including PQL, HORSE RACING and STEEPLECHASING. Riding as a specific skill is judged in SHOWJUMPING and HORSE TRIALS (which include DRESSAGE).

Ridley, Nicholas (c.1500-55), English religious leader and martyr. He was made Bishop of Rochester in 1547 and Bishop of London in 1550. He helped to compile the Book of Common Prayer, supported Lady Jane Grey and was deprived of his see on Queen Mary's accession. He was martyred in Oxford with LATIMER.

Ridolfi Plot (1571), scheme planned by Roberto Ridolfi, an Italian banker, and the Bishop of Ross to gain the English throne for Mary, Queen of Scots. The Duke of Norfolk was to wed Mary after a Catholic uprising had overthrown ELIZABETH I. The plot was discovered when Ridolfi was abroad. Norfolk was executed in 1572.

Riebeeck, Jan Anthoniszoon van (1619-77), Dutch founder of the Cape Town settlement (1652) and its first governor. He was sent to the Cape by the Dutch East India Company to establish a provisions station for ships. See also p.1606.

Riefenstahl, Leni (1902-), German film director who was employed by Adolf Hitler to make propaganda films, which she did with great talent. Her films include *The Blue Light* (1932), *Triumph of the Will* (1934) and *Olympische Spiele* 1936. She was also a writer and actress.

Riel, Louis (1844-85), Canadian rebel who led the RED RIVER SETTLEMENT rebellion in MANITOBA from 1869 to 1870. When it collapsed he fled the country but returned and was elected to the Dominion Parliament. He was banished in 1875 and lived in the USA, but in 1885 he led another revolt, after which he was captured and hanged.

Riemann, Georg Friedrich Bernhard (1826-66), German mathematician who, in a life dogged by ill-health, laid the foundations for much of modern mathematics and physics. He worked on integration, functions of complex numbers and differential and non-Euclidean geometry, which was later used in the general theory of relativity. See also p.1636.

Riemenschneider, Tilman (c.1460–1531), German sculptor. His work in the late German Gothic style is marked by a combination of vigour, emotion and restraint. One of his best-known works is the *Altar of the Virgin* (c.1505) in Creglingen, Württemberg-Baden. See also pp.1353, 1385.

Rietveld, Gerrit Thomas (1888–1964), one of the leading 20th-century Dutch architects. The Schröder House, Utrecht (1924), his masterpiece, was arguably the most modern European house at the time it was built; it is the classic example of De Stijl architecture. He also designed De Stijl furniture. See also pp.1658–1659.

Rievaulx Abbey, in North Yorkshire, England, one of the earliest Cistercian buildings in England, founded in 1131, now in ruins. Rievaulx means "Rye Valley", after the river which flows nearby. Built by Cistercian monks from France, it still has some of the finest existing English Gothic architecture.

Rif, *Er*, range of the Atlas Mts in NE Morocco, NW Africa, that extend along the Mediterranean coast from Ceuta to Melilla. The highest point is Tidguin (2,457m; 8,060ft).

Rifle, FIREARM with spiral grooves (rifling) along the inside of the barrel to make the bullet spin in flight, thereby greatly increasing range and accuracy over that of a smoothbore weapon. The principle was known in the 15th century, but was impractical for use with contemporary muzzle-loading muskets. Not until the minié rifle was invented in 1849 were rifled weapons widely used. Since then rifles have been the main small arm used in warfare. During the 19th century, breech-loading and repeating rifles were developed, and since WWII, assault rifles, capable of fully automatic fire, have come into general use. See also pp.556–559.

Rifleman, one of four types of New Zealand wrens, a brown-yellow perching bird that lives in both North and South Islands. It is a small bird, and derives its name from the "zing" of its call. Length: to 8cm (3in). Species *Acanthisitta chloris*. Family Acanthidae.

Rifle shooting. See SHOOTING.

Rift valley, depression formed by the subsidence of land between two parallel faults. Rift valleys are believed to be formed by thermal currents within the Earth's MANTLE that break up the CRUST into large slabs or blocks of rock, which then become fractured. The best example of a rift valley is the GREAT RIFT VALLEY in SW Asia and E Africa. See also p.213.

Riga, capital city of Latvia (Latvian: Rīga), USSR, at the extremity of the Gulf of Riga, on the Western River Dvina 14km (9 miles) above its delta. A major Baltic port, it was ceded to Peter the Great of Russia in 1710. The port was closed in 1915 and evacuated by the Russians. Latvia's independence was declared at it in November 1918; from 1918 to 1940, Riga was the capital of Latvia. In WWII, it was taken by the Germans (1941) and retaken by the Soviets (1944). Its manufactures include electrical machinery, telephone and radio equipment, superphosphates and textiles. Pop. (1970) 733,000.

Rigaud, Hyacinthe (1659–1743), French painter. He studied at Montpellier and Lyons, and went to Paris in 1681, where he enjoyed immense popularity as a portraitist. His subjects included royalty and the most distinguished people of the day. These included BOSSUET (1699), a celebrated portrait of LOUIS XIV (1701), Cardinal de Bouillon (1708) and Count Zinzendorf (1729). He also explored a more intimate style in unofficial portraits.

Rigel, or **Beta Orionis**, highly luminous bluish-white super-giant star in the constellation of Orion. Characteristics: apparent mag. 0.08; absolute mag. –7.0; spectral type B8; distance 850 light-years. See also pp.978–979, 988, 1017–1018, 1017–1018, 1020, 1020.

Riggs, Robert Larimore ("Bobby") (1918–), us tennis player. He won the us singles championship in 1939 and 1941 and the British singles championship in 1939, and later turned professional. In the

early 1970s, he played in exhibition matches with Margaret COURT and Billy Jean KING, beating COURT but losing to KING.

Right ascension, in astronomy, the angle measured eastwards along the CELESTIAL EQUATOR from the First Point of Aries to the line passing through a CELESTIAL BODY and the CELESTIAL POLES. It is measured in hours, minutes and seconds, the circumference of the celestial equator being 24 hours.

Rights of Man, *The*, work by Thomas PAINE, in which he defended the FRENCH REVOLUTION in reply to Edmund BURKE's *Reflections on the Revolution in France* (1790). Paine stated that all men held natural rights which could be guaranteed only under a democratic system.

Rights of Man and of the Citizen, *Declaration of the*, proclamation of human liberties during the FRENCH REVOLUTION (1789). It was inspired by the DECLARATION OF AMERICAN INDEPENDENCE and adopted by the NATIONAL ASSEMBLY to express the new spirit of liberty and equality in France. It was also a more radical document than its US counterpart, guaranteeing rights of "liberty, property, security and resistance to oppression", freedom of speech and equality before the law.

Right whale, any of a group of slow swimming WHALES that are characterized by smooth bodies without grooves, and most lack a dorsal fin. Bouyant when killed, right whales were once the mainstay of the whaling industry and, as a result, are near extinction. Length: 18m (55ft). Family Balaenidae. See also p.101.

Rigoletto (1851), three-act opera by Giuseppe VERDI, with libretto by Piave, based on Victor HUGO's play *Le Roi s'amuse*. Gilda, the beloved daughter of Rigoletto, a lonely hunchback jester, is mistakenly killed in a plot by her father to murder her lover, the Duke of Mantua.

Rigor mortis, tight contraction of skeletal muscles after death which causes stiffening of the entire body. Onset is gradual from minutes to hours, and disappears within about a day.

Rig Veda (c.1500–1000 BC), one of the four sacred books of Hinduism, consisting of a collection of 1,028 hymns generally directed to the gods of the forces of nature such as AGNI, INDRA and VARUNA. See also p.1168.

Rijeka (Fiume), city and port in NW Yugoslavia on the Gulf of Quarnero (Kvarner, Rijeci Zaliv); it is Yugoslavia's largest seaport. It was known to the Romans as Tarsatica, and was in turn Frankish, under medieval lords, and within the Austro-Hungarian Empire until 1918. Gabriele D'Annunzio seized it for Italy in 1919, then after being a free state it reverted to Yugoslavia in 1947. Pop. (1971) 132,222.

Riksdag, national parliament of Sweden, formed as a two-chamber assembly in 1666; the second chamber was abolished in 1971. Its 349 members are elected by universal suffrage for a three-year term, elections being held on a system of PROPORTIONAL REPRESENTATION. In 1975, by a new constitution, the Speaker of the Riksdag took over from the monarchy the right to appoint the prime minister.

Riley, Bridget (1931–), British painter, a leading exponent of OP ART. She paints mostly black and white patterns (influenced by VASARELY), creating dazzling optical effects which cover the entire surface of the painting and create an illusion of constant movement and change.

Riley, John (1646–91), English painter. Chiefly a portraitist, he was, with Godfrey KNELLER, official painter at the court of William and Mary.

Riley, Terry (1935–), us musician. Although trained in classical music he has always been popular with rock music enthusiasts. In his stage performances he uses tape loops, ostinatos (persistently repeated musical figures) and feedback systems for music that involves repeated patterns or series.

Rilke, Rainer Maria (1875–1926), Austrian lyrical poet and translator. His first volume of poems, *The Book of the Hours* (1905), was inspired by visits to

Russia. *Duino Elegies* (1923) and *Sonnets to Orpheus* (1923) praise human existence.

Rill, or rille, on the surface of the Moon, narrow cleft or valley apparently associated with surface collapse. These features are deep, often meandering for several hundred kilometres.

Rimbaud, Arthur (1845–91), French poet who influenced the SYMBOLISTS. After an unhappy childhood he lived with Paul VERLAINE, but they separated in 1873 after an argument. *Une Saison en Enfer*, renouncing his former life, appeared soon after. He then travelled and worked abroad, returning to France in 1891. *Les Illuminations*, containing the major part of his verse, was published in 1886. See also p.1576.

Rime of the Ancient Mariner, *The* (1798), romantic poem by S. T. COLERIDGE first published in *Lyrical Ballads*, published by Coleridge and William WORDSWORTH. This powerful ballad tells of a man alienated from his fellows, who relates his story to a passing stranger.

Rimsky-Korsakov, Nikolai Andreievich (1844–1908), Russian composer and one of the RUSSIAN FIVE. He taught and influenced Igor STRAVINSKY and edited a number of the works of MUSSORGSKY. His operas include *The Snow Maiden* (1881) and *The Golden Cockerel* (1907), and among his most popular orchestral works are *Sheherazade* (1888), *Spanish Capriccio* (1887) and *The Flight of the Bumblebee* from the opera *Tsar Sultan* (1900). See also pp.1583, 1599, 1754.

Rimu, coniferous tree native to New Zealand, also called the New Zealand red pine. It reaches heights to 45m (150ft).

Rindt, Jochen (1942–70), Austrian motor-racing driver, b. Germany. A leading points-scorer at the time of his death in practice in Monza, he became the first driver to win the world championship posthumously.

Ring of the Nibelungs, *The*, opera tetralogy by Richard WAGNER composed between 1852 and 1874, with libretto by the composer. Comprising the cycle are *Das Rheingold*, *Die Walküre*, *Siegfried* and *Götterdämmerung*, and the first complete performance was given in 1876 at the opening of the festival theatre at Bayreuth (which was built for the purpose). Wagner drew inspiration for the allegorical libretto from the 13th century German epic poem *Nibelungenlied* and the work is a mixture of mythological elements and national feeling.

Ring-tailed cat. See CACOMISTLE.

Ring-tailed monkey. See CAPUCHIN.

Ringworm, infection of the skin, hair or nails caused by the fungus *tinea*; so named because it appears as a red, ring-shaped eruption on the skin and spreads at the edges as it heals in the centre. If on the scalp, it is accompanied by burning, itching and loss of hair. See also p.1074.

Rinuccini, Ottavio (1562–1621), Italian poet and author of the first opera libretti. He wrote the texts for *Dafne* (1597) and *Euridice* (1600) by Jacopo PERI, and *Arianna* (1608) by Claudio MONTEVERDI.

Rio de Janeiro, city in SE Brazil, on Guanabara Bay. The capital of the country until 1960, it was originally settled by the Portuguese and later colonized by the French, who were driven out in 1567 by Mem de Sá, governor of the Portuguese colony of Brazil. By the 18th century it had grown as the export centre of all gold mined in the hinterlands. The second-largest city in the country, it is the cultural, commercial and industrial centre of Brazil. Its climate makes it a popular tourist resort and the Copacabana beach is world-famous. Pop. (1979 est.) 5,394,900.

Río de la Plata. See PLATA RIVER.

Rio Grande, river in North America. It rises in the San Juan Mountains of SW Colorado and flows generally S through New Mexico. It then forms the border between Texas and Mexico, emptying into the Gulf of Mexico just E of Brownsville, Texas, and Matamoros, Mexico. The river is used for irrigation and the generation of hydroelectricity; it is navigable only near the mouth. Length: approx. 3,035km (1,885 miles).

Riga, an industrial city, also retains some of its medieval character.

Bobby Riggs beat Willy van Horn to win the men's national singles trophy.

Arthur Rimbaud coined the phrase "the alchemy of words" to describe poetry.

Rimsky-Korsakov's students who achieved fame included Stravinsky and Prokofiev.

Rites of passage; a Balinese bride prepares for her wedding ceremony.

Rivers may have immense energy that can be harnessed to generate electricity.

Primo de Rivera, the Spanish politician, standing by a bust of King Alfonso.

Max Roach (right), the American jazz drummer, seen playing with Sonny Rollins.

Riopelle, Jean-Paul (1922-), French-Canadian painter working mainly in Paris, where he was for a time associated with SURREALISM and TACHISM. His work underwent various phases, by the 1950s showing a pronounced interest in texture and in paint applied with heavy IMPASTO (*Festival*, 1953); in the 1960s he developed a freer, more dramatic painting style, echoed in the sculpture which he also began producing.

Riot Act (1715), British Act of Parliament that charges magistrates with the duty, when 12 or more people are rioting, to command them to disperse in the name of the Queen within one hour. Those who do not disperse are guilty of a felony.

Rio Tinto-Zinc Corporation PLC., international mining, smelting and chemical corporation with headquarters in Britain, where it employed about 66,000 people in the early 1980s. The company has major holdings in Australia, Canada, South Africa and the USA.

Riouw (Riau) Archipelago, island group in Indonesia, off the SE tip of the Malay Peninsula. Area: 5,903sq km (2,279sq miles). Pop. (1971) 331,136.

Rip current, narrow, swift, short-lived surface current that flows seawards at right-angles to the shoreline. It occurs at the mouth of a bay or along a coast where wind and incoming waves pile up the water until the excess rushes quickly and forcefully back into the sea.

Ripon, Frederick John Robinson. See GODERICH, VISCOUNT.

Rippl-Ronai, Jozsef (1861-1930), Hungarian painter, graphic artist and member of the NABIS in Paris. He produced portraits in pastels, and bold incisive paintings or provincial scenes in Hungary.

Rip Van Winkle (1819), short story by Washington IRVING in which a Dutch colonist falls asleep in the Catskill Mountains of New York State for 20 years and wakes up to find himself a tottering old man.

Rise and Fall of the City of Mahagonny, The (1930), political opera in three acts by Kurt WEILL with libretto by Bertolt BRECHT, first produced in Leipzig. Set in an Alaskan gold-mining community, to illustrate the miseries of CAPITALISM, its score is notable for its jazz-orientated melodies and the social message of Brecht's libretto. See also p.1598.

Risman, name of two British rugby league players, father and son, who played for Great Britain. Augustus John Ferdinand ("Gus") (1911-) played in 15 Test matches between 1932 and 1946, and Augustus Beverley Walter ("Bev") (1937-) played in five internationals (1968). Bev also played rugby union for England (9 caps, 1959-61).

Risorgimento, ideological and political movement in 19th-century Italy which led to the unification of the country. After NAPOLEON's defeat in 1815, the Austrians regained control of Italy. When the republican revolution of 1848 failed, the Piedmontese House of SAVOY led the movement for unification, expelling the Austrians in 1859 and uniting most of Italy by 1861. The Risorgimento was completed with the annexation of Venetia in 1866 and the occupation of Rome in 1870, with the exception of the area that is today the VATICAN CITY.

Risso's dolphin. See GRAMPUS.

Ritchie-Calder, Peter. See CALDER, PETER RITCHIE-CALDER, BARON RITCHIE.

Rite of Spring (1913), ballet in two scenes, first choreographed by Vaslav NIZINSKY to music by Igor STRAVINSKY. The ballet has been revived many times.

Rites of passage, rites that accompany an individual's transition (passage) from one social status to another. Rites of passage, which include initiation, marriage and funeral, are characterized by special ceremonies and are considered to be a way of reconciling change and continuity in any society. See also pp.1898, 1898.

Ritt, Martin (1919-), US film director who worked originally in television. His films include *Hud* (1963), *Souther* (1972), *Conrack* (1974) and *The Front* (1977).

Ritter, Johann Wilhelm (1776-1810), Polish physicist who in 1801 discovered,

ultra-violet radiation, the previously undiscovered radiation beyond the violet end of the SPECTRUM. He made the discovery while working with silver chloride, which decomposes in the presence of light, especially ultra-violet.

Ritter, Karl (1779-1859), German geographer. His work included detailed descriptions of regions based upon his collections of geographical data. His greatest work was the 20-volume *Earth Science in Relation to Nature and the History of Man*, started in 1817 but never completed.

Rivals, The (1775), comedy by Richard Brinsley SHERIDAN. The rivals are Bob Acres and Ensign Beverly (*alias* Captain Absolute), who contend for the hand of Lydia Languish. Mrs Malaprop, a character in the play noted for her blunders in the use of words, has given literature the word MALAPROPISM to denote such mistakes.

River, large stream. Very few land surfaces are completely flat and rainwater flows down the steepest slope to collect in depressions creating small streams or rivulets which combine to form rivers. In general the steeper the slope, the faster the river flows; and the greater its volume, the more the underlying earth is eroded, thus deepening the river bed. The river tends to eliminate irregularities in its course, producing a smooth gradient. In its middle, or mature, stage the river's course is less steep, the water flows more slowly and the river begins to meander. In its final stage, or old age, the river approaches its base level, the lowest to which it can erode its bed (usually sea-level). At this stage downwards cutting is replaced by sideways cutting; the river's speed is much reduced and it may cut across the arc of a meander, creating an OXBOW LAKE. In its old age, a river may deposit alluvial material collected in its earlier stages. Deposition is caused when the river's velocity is checked by a less steep gradient, by the river entering a lake or the sea, or by flooding; features include FLOOD-PLAINS, DELTAS and alluvial fans. A river can even build up its bed to a higher level than that of the surrounding flood plain by the deposition of silt. The resultant frequent flooding forms LEVEES. Throughout history rivers have been important transport and trade routes, and their valleys have provided suitable sites for settlement and agriculture. The power of flowing water in rivers is increasingly being used to generate electricity. See also pp.220-223, 220-223, 328-329, 328-329, 428, 429, 540, 541, 760-761, 760-761.

Rivera, Diego (1886-1957), Mexican painter. From 1911 to 1920 he worked in Paris, where he absorbed CUBISM and was also influenced by Henri ROUSSEAU. He also visited Italy, before returning to Mexico in 1921. He is known primarily as a muralist. Characteristic of his style are carefully drawn, simplified, flat geometric forms in expressive colours. He often used symbolism and allegory in his murals to show Mexico's triumph over repression and to express his hope for a Marxist future.

Rivera, José Eustasio (1889-1928), Colombian novelist. His portrayal of the hardship of jungle life in *La vorágine* (1924) was a great advance in the development of the Latin American novel. He also wrote sonnets in classical style about the tropics in *Tierra de promisión* (1921).

Rivera, José Fructuoso (c.1790-1854), Uruguayan general and politician. He was one of the "33 immortals" who liberated Uruguay in 1825. Over the next 30 years he had a tangled political career; he became President twice (1830-35 and 1838-42) but was forced into exile in 1845. See also p.1562.

Rivera, Miguel Primo de (1870-1930), Spanish general and politician. From 1923, when he proclaimed himself dictator after a bloodless coup, Rivera was the most important political figure in Spain. He was forced to resign in 1930 after most other politicians and the king had united against him.

River boat, an essential form of transport in the USA, especially on the MISSISSIPPI, during the first half of the 19th century.

River boats lost their economic role there, with the advent of railways and improved communications, but are still much used in Africa and Asia.

River forecasting, predicting the water level of a river. The forecasting is based on measurements taken from all parts of the river and its tributaries, in areas where floods are frequent and difficult to control. River forecasting is important, too, for efficient use of reservoirs and for people who use river transport.

River herring. See ALEWIFE.

Riverina, district in s New South Wales, SE Australia between the Murumbidgee (N) and Murray (S) rivers, the principal towns are Albury and Wagga Wagga. The area's irrigation system has proved important to agricultural development; products now include early fruits and vegetables and rice. Pop. (1971) 89,968.

Rivers, Larry (1923-), US painter of the New York School, formerly a jazz saxophonist, who began painting in 1944. His *George Washington crossing the Delaware* (1955) was an important influence on the development of POP ART.

Rivers, William Halse (1864-1922), British psychologist and anthropologist who was one of the founders of modern physiological psychology. He studied colour vision, the influence of drugs and mental fatigue, and became director of Britain's first experimental psychology laboratory at London University in 1897. He went on several anthropological expeditions to Australia, India and Melanesia; from his studies of the indigenous populations he wrote *The Todas* (1906), which describes a polyandrous people of s India, and *History of Melanesian Society* (1914).

Riviera, region of SE France and NW Italy, on the Mediterranean Sea, extending 370km (230 miles) from Cannes, France, to La Spezia, Italy. Its spectacular scenery and mild climate make it a leading tourist area of Western Europe; well-known resorts include NICE and CANNES in France, MONTE CARLO in Monaco and San Remo and Alassio in Italy. Products include olives, grapes and citrus fruits, and flowers grown for export. The French Riviera has long been favoured by painters and writers.

Riyadh, capital of SAUDI ARABIA, approx. 378km (235 miles) inland from the Persian Gulf. It is the centre of desert trade and travel; the chief industry is the production of oil. Pop. (1974) 6,840.

Rizal, province on central Luzon island, the Philippines; the capital is Pasig. It includes Quezon city, the capital of the Philippines. The province has an earth satellite station (1968). Products: sugar cane, fruit, rice. Area: 1,898sq km (733sq miles). Pop. (1970) 2,781,081.

Rizzio, David (c.1533-66), secretary and favourite of MARY, QUEEN OF SCOTS, b. Italy. He entered Mary's service as a musician but soon became her secretary. Lord DARNLEY, her husband, and some nobles were jealous of his influence over Mary and had him murdered in 1566.

RKO Radio Pictures Inc., US film production company formed in 1921. Two cinema classics, *King Kong* (1933) and *Citizen Kane* (1940), were made at this studio. The company ceased production in 1953.

RNA, or ribonucleic acid, nucleic acid that controls the synthesis of PROTEINS in a cell and is the genetic material in some viruses. The molecules are copied from DNA and consist of a single strand of NUCLEOTIDES, each containing the sugar ribose, phosphoric acid, and one of four bases: ADENINE, GUANINE, CYTOSINE or URACIL. Messenger RNA carries the information for protein synthesis from DNA in the NUCLEUS to the RIBOSOMES in the CYTOPLASM. Each AMINO ACID to be formed is specified by a sequence of three bases in messenger RNA. Transfer RNA brings the amino acids to their correct positions in the messenger RNA. See also pp.176-177, 910.

Roach, Maxwell Lemuel (1924-), US jazz drummer. In the 1940s he played with many well-known jazz musicians, including Charlie PARKER, DIZZY GILLESPIE and Benny Carter. From the mid-1950s he led his own groups, which included such noted

musicians as Clifford Brown and Sonny Rollins.

Roach, European freshwater carp found in muddy and, occasionally, in brackish waters. Colours are silver, white and green. Length: to 40cm (16in). Family Cyprinidae; species *Rutilus rutilus*. See also pp.329, 743.

Roach. See COCKROACH.

Road building, making of roads and motorways, a branch of civil engineering. The course of the road is surveyed and levelled. Then the road bed is prepared: underlying soil is compacted and culverts laid to drain surface water. If the road is to be paved, asphalt may be laid and rolled on to the prepared surfaces. Alternatively, roads are surfaced with concrete, usually reinforced with steel mesh. Road surfaces are cambered, ie curved so that water runs from them. See also pp.522-523.

Road runner, fast-running desert cuckoo that lives in SW USA. It has a crested head, streaked brownish plumage, long, strong legs and long tail. It feeds on ground animals including snakes, which it kills with a series of quick stabs with its long, pointed beak. Family Cuculidae; species *Geococcyx californianus*. See also p.319.

Roads, paths and tracks made suitable for the passage of wheeled vehicles by being given a levelled, durable surface. The construction of Roman roads was extremely sophisticated, but not until the work of Telford and McAdam in the late 18th century were effective methods of making surfaces permanent rediscovered. The development of the motor car led to a great expansion in the scope and size of roads, and in countries such as Britain the road system became more important than the railways for industrial and personal transport. Roads in Britain are classified according to their size and function. Trunk roads are the responsibility of the central government; these roads are now usually motorways. Local authorities are responsible for all other roads, although only three classes of roads come under their direct administration: class one are principal roads, signposted as "A" roads, class two are "B" roads, and class three are not normally assigned any further classification. Various unclassified rural and residential roads are also maintained at the public's expense although the local authority commonly shares the cost with other local committees. See also pp.522-525, 522-525.

Robbe-Grillet, Alain (1922-), French novelist and theoretician who was one of the originators of the "nouveau roman" (new novel) in the 1950s. He later worked in films, writing the screenplay for *Last Year at Marienbad* (1960) and directing *Trans-Europe Express* (1966). His books include *The Vow* (1955) *Towards a New Novel* (1963) and *Project for a Revolution in New York* (1970).

Robber fly, any of numerous species of dull-coloured flies found throughout the world. It preys on other insects, catching them in flight. The largest species is almost 8cm (3in) in length. Family Asilidae.

Robbia, Luca della (c.1400-82), Florentine sculptor. He worked in bronze and marble, but his fame resulted chiefly from his numerous, glazed white terra-cotta half-length Madonnas, represented against a blue background.

Robbins, Frederick Chapman (1916-), US physician. He shared the 1954 Nobel Prize in physiology and medicine with John F. Enders and Thomas H. Weller for his part in the discovery of the ability of the poliomyelitis viruses to grow in cultures of various types of tissues. This discovery was vital to the development of a poliomyelitis vaccine.

Robbins, Harold (1916-), US author. His first novel, *The Dream Merchants* (1949), brought him immediate success and his other works include *A Stone for Danny Fisher* (1955), *The Carpetbaggers* (1961), and *The Pirate* (1974).

Robbins, Jerome (1918-), US dancer, choreographer and director. He created roles in Fokine's *Bluebeard* (1941) and Lichine's *Helen of Troy* (1942). He also devised ballet sequences for Broadway musicals, including *The King and I* (1951),

and the film version which he directed, *West Side Story* (1957, filmed 1961) and *Fiddler on the Roof* (1964).

Robbins, Lionel Charles, Baron (1898-), British economist. He was chairman of the government committee that produced the *Robbins Report* (1963), recommending an increase in the number of higher education places.

Robert, name of three kings of Scotland. For Robert I see BRUCE, ROBERT. Robert II (1316-90) was the founder of the house of Stuart. He acted as regent during the imprisonment of his uncle David II by the English. As king after 1371, he left the details of government to his sons, one of whom, Robert III (c.1340-1406), became king in 1390. He was crippled in 1388 and his brother Robert Stewart, Earl of Fife, took over the government.

Robert, name of two dukes of Normandy. Robert I (r.1028-35), the father of William the Conqueror, assisted Edward the Confessor to become King of England. He died on a pilgrimage to Jerusalem, and passed into legend as Robert the Devil. Robert II (c.1054-1134) was known as Robert Curthose. He succeeded to his father's dukedom in 1087. He participated in the First Crusade (1096-99) and warred with his brothers William II and Henry I of England. He was imprisoned by Henry (1106-34). See also p.1302.

Robert, Hubert (1733-1808), French painter and landscape architect. Classical ruins were a favourite subject in his paintings and his decorations for Fontainebleau are now in the Louvre. He also supervised the layout for part of the gardens at Versailles.

Robert Joffrey Ballet, leading US modern dance company, founded in 1954 by the dancer and choreographer Robert Joffrey. Its repertory includes works of choreographers such as Alvin Ailey and George Balanchine.

Robert, Nicholas-Louis (1761-1828), French inventor who launched one of the first hydrogen balloons in Paris in 1783, aided by his brother. In 1799 he patented the first papermaking machine. See also p.594.

Roberti, Ercole d'Antonia de (c.1450-96), Italian painter who in 1486 became court painter in Ferrara. He painted many religious subjects in a decorative style and helped to paint the frescoes *Occupations of the Months* in the Schifanoia Palace.

Robertson, Hugh Stevenson (1874-1952), British choral conductor, arranger and composer, known particularly for establishing and conducting the Glasgow Orpheus Choir.

Roberts, Sir Charles George Douglas (1860-1943), Canadian poet and short-story writer. He took up writing after working as a teacher, journalist and professor. His poetry includes *Orion and other Poems* (1880) and *Songs of the Common Day* (1893). He moved to New York in 1897 and wrote animal stories. His *Selected Poems* were published in 1936.

Roberts, Frederick Sleight, 1st Earl Roberts of Kandahar (1832-1914), British field marshal. He distinguished himself in the Indian Mutiny (1857-58) and in the relief of Kandahar in the Second Afghan War (1878-80). He was Commander-in-Chief in India (1885-93) and Ireland (1895-99). He was made a field-marshal in 1895 and commanded the British forces in the South African (Boer) War (1899-1900).

Roberts, Thomas William ("Tom") (1856-1931), Australian painter known for his portraits and landscapes, who was influential in the development of a purely Australian art. In 1885 he founded the Heidelberg School, a group of Impressionist painters in Melbourne. See also p.1605.

Roberts, William (1895-1980), British painter who studied at the Slade School. In the early part of his career he was a member of the Vorticism group, but later modified his abstraction in multi-figure compositions of scenes from everyday life that appear grotesque and mechanical. Among his paintings are *The Playground* (1934-35), and *Vorticists at the Restaurant de la Tour Eiffel, Spring 1915* (1962).

Robertson, Anna M. See MOSES, GRANDMA. **Robertson, Thomas William** (1829-71), British actor and playwright. He made his stage debut at the age of five, but he is chiefly remembered for his plays, which include *A Night's Adventure* (1851), *David Garrick* (1864), *Ours* (1866), *Caste* (1867) and *M.P.* (1870).

Robeson, Paul (1898-1976), US actor and bass singer who began his career with the Provincetown Players in 1924. He played the title roles in Eugene O'Neill's *Emperor Jones* and Shakespeare's *Othello* in 1930 and 1943. He was also a successful concert singer, famous for his rendition of negro spirituals.

Robespierre, Maximilian-François-Marie-Isidore (1758-94), French politician, one of the most important figures in the French Revolution. He was elected to the National Assembly in 1789, where he became one of the main spokesmen of radical democrats, and dominated the Jacobins, especially after 1791. The outbreak of war in 1792 gave him even more influence. In June 1793 he became a member of the Committee of Public Safety, the ruling executive, which he soon dominated. In spite of seemingly overwhelming odds he and his colleagues, using authoritarian methods known as the Reign of Terror, defeated the internal and external enemies of the republic. Robespierre was overthrown by the coup of 9th Thermidor in 1794 and executed. See also p.1551.

Robey, Sir George Edward (1869-1954), British comedian, real name George Edward Wade and billed as the "Prime Minister of Mirth". Noted for his distinctive low bowler hat and large eyebrows, his success was achieved as a performer of music-hall comic songs, but he later progressed to roles in pantomime, musicals and Shakespeare.

Robin, small Eurasian bird with a characteristic red-orange breast and a brown back. It has a highly developed song and feeds on worms and insects. Length: to 14cm (5.5in). Family Turdidae; species *Erithacus rubecula*.

Robin Hood, outlaw in English folk-lore, the subject of medieval ballads. Tradition describes him as a nobleman living in Sherwood Forest during the 12th century. The tales probably originated in the general peasant discontent of the 14th century and became linked to Celtic legends of a green man of the woods.

Robinia, genus of trees of the pea family (Leguminosae) that grow mainly in the USA and Central America; many are known as locust trees. Most familiar in Britain is *Robinia pseudoacacia*, which has long, pinnate leaves and because of this and other resemblances to the acacia is called the false acacia. Height: to 24m (80ft).

Robinson, Edward G. (1893-1973), US film actor, real name Emanuel Goldenberg. His most famous part was that of the snarling gangster in *Little Caesar* (1930). He also played character parts in such films as *Double Indemnity* (1944) and *The Night has a Thousand Eyes* (1948). His last film was *Soylent Green* (1973).

Robinson, Esmé Stuart Lennox (1886-1958), Irish playwright. He had his first play *The Clancy Name* (1908) produced at the Abbey Theatre. His plays include *The Cross Roads* (1909), *The Big House* (1926) and *Church Street* (1934). He also wrote a history, *Ireland's Abbey Theatre* (1951).

Robinson, W. Heath (1872-1944), British cartoonist and illustrator of children's books, famed for his drawings of ingenious life-improving contraptions. His autobiography *My Line of Life* was published in 1938.

Robinson, Henry Crabb (1775-1867), British diarist. He was a lawyer, journalist (war correspondent for *The Times*, 1807-1809) and brilliant conversationalist. He knew most of the literary figures of his time including William Blake, Charles Lamb, Samuel Coleridge and William Wordsworth who all appear in his posthumously published *The Diary, Reminiscences and Correspondence of Henry Crabb Robinson* (1869).

Robinson, Henry Crabb

Roach sometimes shoal so densely that they make a hiss as they rub together.

Road runners get their name from their habit of running along the highway.

Frederick Robbins shared the 1954 Nobel Prize for his work in preventing polio.

Robespierre eventually fell victim to the Reign of Terror, which he had started.

Robinson, Henry Peach

Robinson, Henry Peach (1830–1901), British photographer. After opening a commercial studio in Leamington in 1857 he went on to make what were called "high art photographs" from composite negatives. In 1869 he published *Pictorial Effect in Photography*.

Robinson, John Arthur Thomas (1919–), British theologian who was Bishop of Woolwich 1959–69, and then Fellow and Dean of Trinity College, Cambridge. His writings on theological issues, such as *Honest to God* (1963), caused controversy because of his flexible attitude to conventional morality. See also pp.1791, 1791.

Robinson, "Perdita" (1758–1800), British actress, real name Mary Darby. Her stage name came from her most successful role in a 1779 production of *The Winter's Tale*. She had a brief affair with the Prince Regent; illness compelled her to abandon her short stage career in 1780.

Robinson, Ray Charles. See CHARLES, RAY.

Robinson, Sir Robert (1886–1975), British chemist who was awarded the 1947 Nobel Prize in chemistry for research into ALKALOIDS and other plant chemicals. He succeeded in synthesizing the alkaloid tropinone using a solution of three simple compounds found in plants. This led to his formulating a theory of organic molecular structure in terms of the electronic processes occurring during the formation and disruption of chemical bonds which was to prove important for the understanding of all biosynthetic mechanisms. His other research concerned plant pigments and the genetics of variations in flower colours; he also helped in the synthesis of PENICILLIN and female SEX HORMONES.

Robinson, Stanford (1904–), British composer and conductor noted for his work in radio with the BBC from 1924 to 1966 and for his arrangements of choral and brass band music.

Robinson, Sugar Ray (1920–), US boxer, real name Walker Smith. Undeclared world welterweight champion from 1946 to 1950, he won the middleweight title five times in the 1950s. He fought the last of his 21 world title bouts in 1961.

Robinson Crusoe (1719), famous story by Daniel DEFOE. Robinson Crusoe runs away to sea, is shipwrecked and leads a solitary existence on an uninhabited island. At length he meets a young native, names him "Man Friday" and they become companions. The story is based on the adventures of Alexander Selkirk, a sailing-master who in 1704 was at his own request left for four years on a desolate island off the coast of Chile. See also pp.1466, 1467, 1478.

Robot, common name for any automated machine used in science or industry to carry out tasks formerly done by human beings. The line separating a robot from other automated machinery is not always distinct. The word was first used in *RUR*, a play (1920) by Karel ČAPEK. Even the most advanced computers are incapable of human qualities such as thought and emotion.

Rob Roy (1671–1734), Scottish bandit, real name Robert Macgregor, immortalized in Sir Walter SCOTT's novel *Rob Roy* (1818). After losing his estates he lived by cattle stealing and plunder. He was sentenced to transportation (1727) but was finally pardoned.

Roberts, Amy (1925–60), maiden name of the wife of Robert Dudley, who was the favourite of Queen ELIZABETH I of England. When Dudley became the Earl of LEICESTER and Amy Roberts was found dead it was rumoured that Dudley had murdered her so that he would be free to marry the Queen. The mystery of her death has never been solved.

Robson, Dame Flora (1902–), British actress. She made her debut in 1921 and soon established a reputation as a strong character actress in plays such as Eugene O'Neill's *Desire Under the Elms* (1931) and J. B. Priestley's *Dangerous Corner* (1932). Her most impressive performances were in such works as *The Innocents* (1952), *Ghosts* (1958) and *John Gabriel Borkman* (1962). A theatre in

Newcastle-on-Tyne named after her was opened in 1962.

Robson, Mark (1913–), US film director b. Canada. After working as a film editor, he became a successful commercial director with such films as *Peyton Place* (1957), *The Inn of the Sixth Happiness* (1958) and *Valley of the Dolls* (1967).

Rochdale, county district in NE Greater Manchester, England; created in 1974 under the Local Government Act (1972). Area: 160sq km (62sq miles). Pop. (1979 est.) 209,000.

Rochdale Pioneers, founders of the first successful CO-OPERATIVE MOVEMENT in Britain. The 28 original subscribers opened a shop at Rochdale, Lancashire, in 1844. Its principle of combining a fixed interest on capital with dividends on purchases was widely followed by other co-operative societies.

Roche, Mazo de. See DE LA ROCHE, MAZO.

Rochester, John Wilmot, 2nd Earl of (1647–80), English poet and courtier. The most notorious of the Restoration rakes, he lost the favour of CHARLES II on several occasions. His most famous poem is *Satyr Against Mankind* (1675).

Rochester, Sieges of, three sieges in British history. The first (1088) forced the surrender of Odo of Bayeux, who had led an uprising against WILLIAM I. The second (1215) was an unsuccessful attempt by King JOHN to take the barons' garrison. The third (1264), the first major episode of the BARONS' WARS, was an unsuccessful attempt by Simon de MONTFORT and the Earl of Gloucester to capture the town from HENRY III.

Rock, solid material that comprises the Earth's crust. Although solid, it is not necessarily hard – clay and volcanic ash are also considered to be rocks. Rocks are classified by origin into three major groups. IGNEOUS ROCKS are those formed by the cooling and solidification of molten material from the Earth's interior; volcanic LAVA and GRANITE are igneous rocks. SEDIMENTARY ROCKS are formed from older rock that has been transported from its original position by water, glaciers or the atmosphere, and consolidated again into rock; LIMESTONE and SANDSTONE are examples. METAMORPHIC ROCKS originate from igneous or sedimentary rocks, but have been changed in texture or mineral content or both by extreme pressure and heat deep within the Earth; MARBLE, derived from limestone, is a metamorphic rock. See also pp.208–211.

Rock, form of popular music characterized by amplified guitars and singing, often repetitive lyrics and driving rhythms. Rock extended from the ROCK AND ROLL and RHYTHM AND BLUES of the fifties and drew on the earlier BLUES and folk music of rural USA to become the cultural expression of the 1960s. Influential British groups were the BEATLES and the ROLLING STONES. Frequently the music relied on gifted guitarists or singers, such as Jimi Hendrix and Janis Joplin, and the lyrics of such writers as Bob DYLAN, Chuck BERRY and Lennon and McCartney Electronic equipment and experiments with lighting and LASERS became features of performances by groups such as Pink Floyd. See also pp.1756–1757.

Rockall, small rocky island in the Atlantic Ocean, approx. 370km (230 miles) W of the Outer Hebrides, annexed to Britain in 1955. Rockall gives its name to a sea area used in weather forecasting for shipping.

Rock and Roll, form of popular music. Originating in the USA in the early 1950s, it appealed largely to a white audience who found its forerunner, RHYTHM AND BLUES inaccessible and raw. The term became a household word with the advent of Bill HALEY and the release of the film *Rock Around the Clock* (1956). Its chief proponents were Jerry Lee LEWIS, Elvis PRESLEY and Gene Vincent.

Rockefeller, John Davison (1839–1937), US industrialist and philanthropist. In 1863, when oil drilling began in Pennsylvania, Rockefeller built an oil refinery nearby in Cleveland to exploit its commercial potential. Within two years it had become the largest refinery in Cleveland, becoming incorporated in 1870 into the

Standard Oil Company of Ohio. With mergers, the establishment of a trust and the purchase of other oil refineries, the Standard Oil trust acquired a monopoly in 1882. When he retired he devoted his attention to charitable corporations, to which his donations amounted to about \$550 million. See also pp.1630, 1631.

Rockefeller, Nelson Aldrich (1808–79), US politician. A member of the wealthy Rockefeller family, he held a number of administrative government posts before being elected Governor of New York (1858) as a Republican. He was re-elected three times (1862, 1866, 1870) but resigned in 1873.

Rockefeller Foundation, philanthropic institution established in the USA in 1913 by John D. ROCKEFELLER to promote "the well-being of mankind throughout the world". It finances research into medicine, education, natural and social sciences, humanities and agriculture.

Rocket, slender tapering missile or craft powered by a ROCKET ENGINE. Most of its volume contains fuel; the remainder is the payload (eg. an explosive, scientific instruments or a spacecraft). Liquid-fuelled rockets use a fuel, such as liquid hydrogen, and an oxidizer, usually liquid oxygen, which are burnt together in the engine. Solid-fuelled rockets have both fuel and oxidizer in a solid mixture. A single-stage rocket has one fuel load, or several which are used simultaneously. A multistage rocket has more than one fuel load which are ignited singly in succession as the preceding one burns out. Pioneers of the modern rocket include Konstantin TSIOLKOVSKY (USSR), Hermann OBERTH (Germany) and Robert H. GODDARD (USA). See also pp.1022–1024, 1026–1027.

Rocket engine, engine carrying its own supply of both fuel and oxidizer, as distinguished from a jet engine, which uses oxygen in the surrounding atmosphere as oxidizer. Rocket engines can therefore operate in outer space where there is no atmosphere. They gain thrust from the reaction (referred to in Newton's third law of motion) produced by rapid, continuous output of exhaust gases. Chemical rocket engines are powered by solid or liquid propellants that are burned in a combustion chamber and expelled at supersonic velocities from the exhaust nozzle. Nuclear engines heat fuel by RADIATION from reactor cores. Ion engines use thermoelectric power to expel ions rather than gases. See also pp.826, 1022–1023, 1052.

Rocket warfare, use of self-propelled projectiles in war. The Mongols and Chinese had rockets as early as the 13th century, but they were too inaccurate to be dangerous. The British army experimented with them during the Napoleonic War but even in the mid-19th century when angled vanes (rather like the feather of an arrow) enabled the rocket to be spun in flight, thereby greatly increasing accuracy, conventional artillery was still superior. Rocket warfare came into its own in WWII, when liquid and solid fuel propellants and ballistic principles were better understood. The most important developments were large German missiles, the V1 and V2 rockets, which formed the basis of post-war designs. After WWII, rockets armed with atomic and nuclear warheads, intercontinental ballistic MISSILES (ICBM), became the main strategic armaments of the great powers. See also pp.563, 563, 572–574.

Rockingham, Charles Watson-Wentworth, 2nd Marquess of (1730–82), British politician. He led a Whig faction in the 1760s, and was Prime Minister from 1765 to 1766. He repealed the STAMP ACT but failed to effect a reconciliation with the American colonies. He continued to oppose Lord NORTH, and became Prime Minister again in 1782.

Rockling, any of several species of small marine fishes of the cod family, Gadidae. It inhabits coastal waters of the Atlantic. Genus *Gaidropsarus*.

Rockrose, bushy plant or shrub native mainly to the Mediterranean region. It has small, scale-like leaves and five-petalled

flowers. Among the 170 species is the common yellow-flowered *Helianthemum chamaecistus*, found in grasslands of Europe and W Asia. Family Cistaceae.

Rockwell hardness test, method of measuring the hardness of a metal or alloy using an apparatus with a diamond-pointed cone. The cone is pressed into the metal with a standard force. Resistance to penetration is automatically indicated by a calibrated dial.

Rocky Mountains, major mountain system in W North America, extending from Mexico to the Bering Strait, N of the Arctic Circle. They form the continental divide, separating the rivers draining to the Atlantic and Arctic oceans from those draining to the Pacific. The mountains, formed in the Mesozoic era, are geologically extremely complex. The highest point is Mt Elbert, Colorado, rising to 4,399m (14,433ft). Length: approx. 4,830km (3,000 miles). See also p.215.

Rocky Mountain sheep. See BIGHORN.

Rococo, style of 18th-century decorative art. Colourful, clever and extravagant, it originated at VERSAILLES in the late 17th century and reached its height with the court of Louis XV. From France the style soon spread to the German courts and in some degree to Austria, Italy and to Britain, where its influence appeared in the work of Thomas CHIPPENDALE. A reaction against the pomp and solemnity of the BAROQUE which preceded it, Rococo brought to interior decoration the elegance of swirls, scrolls, shells and arabesques. It was adapted as much to the applied arts of furniture, porcelain and silverware as to the fine arts of painting and sculpture. In painting, its greatest exponents were Antoine WATTEAU and François BOUCHER. See also pp.1480–1481, 1480–1481.

Rodchenko, Alexander (1891–1956), Russian painter, sculptor and designer. Influenced by Kasimir MALEVICH, he turned from the FUTURIST style of his early works to a more ABSTRACT style and became a leading member of the CONSTRUCTIVIST movement. See also p.1686.

Rodent, any member of the vast order Rodentia, the most numerous and widespread of all mammals, characterized by a pair of gnawing incisor teeth in both the upper and lower jaws. Numbering close to 2,000 species, rodents live throughout the world. Most rodents are small and light. The distinctive incisor teeth continue to grow as long as the animal lives. Rodent incisors are chisel-shaped and sharpened by use. See also pp.87, 92–93.

Rodeo, sport with origins in the practical work of a cowboy. A major entertainment in North America, its seven main events are saddle bronco (unbroken horse) riding, bareback bronco riding, bull-riding, calf-roping, single-steer roping and team-roping, and steer-wrestling. The classic event is saddle bronco riding, in which a competing cowboy must keep his seat on a bucking horse for at least 8 seconds. The rodeo developed in the cattle-raising south-western states of the USA in the mid-19th century.

Rodgers, Richard Charles (1902–), US composer of BROADWAY musicals. He worked first with Lorenz Hart and then with Oscar HAMMERSTEIN II in a series of successful musicals which included *Oklahoma!* (1943), *Carousel* (1945), *South Pacific* (1949), *The King and I* (1951) and *The Sound of Music* (1959).

Rodin, Auguste (1840–1917), French sculptor who brought to a climax the age of ROMANTICISM in sculpture. A visit to Italy (1875–77) familiarized him with the work of MICHELANGELO and DONATELLO and his first major work *The Age of Bronze* was exhibited in 1878. *The Gates of Hell* (unfinished studies for a bronze door for the Musée des arts décoratifs) was a maze of almost 200 tortured figures inspired by GIBERTI's *Gates of Paradise* (1401–24) and DORE's illustrations (1861) for Dante's *Inferno*. These figures provided him with the subjects for further sculpture which included *The Thinker* (1880), *The Kiss* (1886) and *Fugit Amor* (1897). His works exude surface tension

and it was his preoccupation to express emotion and movement. Perhaps his most mature work is the full length-size bronze of Balzac (1897). A commission *See also* p.1575.

Rodney, George Brydges Rodney, 1st Baron (1718–92), British admiral. He was appointed Commander of the Fleet in the Leeward Islands in 1779. In 1780 he saved Gibraltar from Spanish attack, at Cape St Vincent. His greatest victory was against the French at Les Saintes in the West Indies in 1782.

Rodnina, Irena (1949–), Soviet ice figure skater who won the pairs gold medals at the 1972 and 1976 Olympic Games and eight world championship titles, first with Alexei Ulanov (1969–72) and then with her husband Alexander Zaitsev (1973–76).

Rods and cones, cells in the RETINA of the EYE which are sensitive to light. Located in the pigmented layer, the rod-shaped rhodopsin-secreting cells are the receptors for low-intensity light, and the cone-shaped iodopsin-secreting cells are adapted to distinguish colour. Rods detect only shades of black and white, but are particularly sensitive to movement. *See also* pp.136–137.

Roebuck, John (1718–94), British inventor who subsidized James WATT in the development of the first practical condensing steam-engine. In 1746 Roebuck originated a new method for producing sulphuric acid.

Roe deer, small agile Eurasian DEER. It has short, erect antlers and a reddish summer coat which turns brown-grey in winter. The gestation period is almost ten months because of delayed implantation of the fertilized egg. Height: to 86cm (34in) at the shoulder. Family Cervidae; species *Capreolus capreolus*. *See also* p.307.

Roeg, Nicholas (1928–), British film director. His films include *Performance* (1968), *Don't Look Now* (1973) and *The Man Who Fell To Earth* (1975).

Roehm, Ernst (1887–1934), leading German Nazi, commander of the SA. After 1930 he made the SA into a powerful army and became HITLER's chief rival. He was murdered on Hitler's orders in June 1934.

Roentgen, Wilhelm Konrad. *See* RÖNTGEN, WILHELM KONRAD.

Roerich, Nikolai Konstantin (1874–1947), Russian painter. He used large areas of flat bright colour and designed sets for Diaghilev's *Ballets Russes* prior to WWI.

Roger II (1095–1154), first Norman King of Sicily who was crowned in 1130. Roger's kingdom was one of the most powerful in the Mediterranean, and his court was noted for its encouragement of scientific thought. He refused to take part in any crusades, because his rule over the mixed Sicilian population was founded on religious tolerance.

Roger of Wendover (d.c.1236), English chronicler. His *Flores historiarum* covers the years 1201 to 1235 and contains a derogatory picture of King JOHN.

Rogers, Bruce (1870–1957), US book designer and typographer. He specialized in limited editions and fine printing, and designed the typeface known as Centaur (1915).

Rogers, Claude (1907–79), British artist. With Victor PASMORE and Sir William COLDSTREAM he founded the EUSTON ROAD SCHOOL (1937). His paintings are representational and include landscapes, genre and portraits.

Rogers, Derek ("Budge") (1939–), British rugby union player for England, the British Lions and Bedford. A wing-forward, he won a then-record 34 caps (1961–69) for England, and toured South Africa with the Lions in 1962.

Rogers, Ginger (1911–), US actress and dancer. She became famous in the 1930s for several film musicals co-starring Fred ASTAIRE, including *Flying Down To Rio* (1933) and *Top Hat* (1934). She also appeared in the theatre.

Rogers, John (c.1500–55), English Protestant martyr. He became a prebendary of St Paul's Cathedral in 1551. He was deprived of his post by MARY I and burned at Smithfield for heresy.

Rogers, William Penn Adair ("Will") (1879–1935), US comedian who appeared in VAUDEVILLE as a cowboy and joined the ZIEGFELD FOLLIES in 1914. He became known through the cinema, radio and a syndicated newspaper column as the "cowboy philosopher".

Roget, Peter Mark (1779–1869), British physician, physiologist and man of letters who helped to establish London University and is especially remembered for his *Thesaurus of English Words and Phrases* (1852), the famous dictionary of words and phrases which have similar meanings.

Rohan, Louis-René-Edouard, Cardinal de (1734–1803), French ecclesiastic and royal servant. He was ambassador to the court of MARIA THERESA of Austria (1772–74). He was implicated in the "affair of the diamond necklace" (1785) and, although acquitted, was deprived of his offices and exiled in 1786.

Rohe, Ludwig Mies van der. *See* MIES VAN DER ROHE, LUDWIG.

Róheim, Géza (1891–1953), Hungarian anthropologist. He was one of the earliest thinkers to attempt to apply psychoanalytic theory to the analysis of cultures and national character, in such works as *The Origins and Function of Culture* (1943).

Rohlf, Christian (1849–1938), German painter. Early in his career he painted in the IMPRESSIONIST manner and after c.1905 inclined towards EXPRESSIONISM, abandoning oil paint for watercolour and tempera after 1911.

Rohmer, Eric (1920–), French film director b. Jean Maurice Scherer. His works include *My Night with Maude* (1969), *Claire's Knee* (1970) and *Love in the Afternoon* (1972).

Rojas, Fernando de (c.1465–1541), Spanish writer. He is noted for his *Celestina* (1499), an extended prose work in 16 acts, about human passion.

Rokeby Venus, The (c.1648–49), properly *The Toilet of Venus*, full-length reclining female nude by VELÁZQUEZ. It exemplifies the artist's subtle use of colour and composition and its controlled sensuality made it the object of a suffragette attack in 1914.

Roland, the Song of. *See* CHANSON DE ROLAND.

Rolle, Frederick William (1860–1913), British writer, pen-name Baron Corvo. A Roman Catholic convert, he twice attempted to become a priest and became a professional writer in 1898. His works include his fantastical autobiography *Hadrian the Seventh* (1904) and *The Desire and Pursuit of the Whole* (1934).

Rolle, John (1585–1622), English colonist, the first to cultivate tobacco in the JAMESTOWN colony. He married POCAHONTAS in 1614 and returned with her to England.

Rolland, Romain (1866–1944), French novelist, playwright and musicologist. Among his best-known works are his 10-volume novel *Jean-Christophe* (1904–12), the pacifist essay *Above the Battle* (1915) and several biographies. He was awarded a Nobel Prize in 1915.

Rolle of Hampole, Richard (c.1300–49), English hermit whose writings became popular as manuals of spiritual life. He wrote various mystical tracts and verses, including the *Meditation of the Passion*.

Roller, any of several species of birds of Eurasia which are observed to roll over in flight. An occasional visitor to Britain, *Coracias garrulus*, has blue-green plumage and flies as far north as Sweden; it usually winters in Africa. Family Coraciidae. *See also* p.84.

Roller bearing, component used in engineering to minimize FRICTION by limiting contact between rotating parts of a machine. It consists of two concentric metal rings separated by, and in contact with, cylindrical, barrel-shaped or tapered rollers made of polished hardened steel. *See also* BEARINGS.

Roller derby, indoor ROLLER SKATING sport popular in the USA since the 1930s. It is played on a banked track by two teams each with five men, who take the rink first, and five women, who follow. Both sexes circle the rink for 12 minutes trying to outlap their opponents; a point is scored for

each opposing player passed.

Roller skating, recreation and sport based on the same principles as ice skating. It consists of gliding on a smooth surface on skates with wheels. The sport first gained popularity in the mid-19th century and in the 20th century, in addition to its recreational use, has taken on several competitive forms. Except for speed skating, which uses oval outdoor tracks or open roads, most skating is an indoor activity.

Roll film, spool of CELLULOID, coated with photographic emulsion, used to make several exposures which yield printed photographs. *See also* pp.628–631.

Rolling, metal, most widely-used method of shaping metal by passing it between revolving rollers. Hot rolling involves reducing the heated metal to thinner and thinner cross-sections (as from ingot to sheet). Cold rolling is used on relatively soft metals to develop in them new mechanical properties. *See also* pp.42–43.

Rolling Stones, British rock group of the 1960s and 1970s. Their raucous rhythm-and-blues based music expressed adolescent frustrations and their hit singles included *Satisfaction* (1965) and *Paint It Black* (1966).

Rollins, Sonny (1929–), US jazz saxophonist, b. Theodore Walter Rollins. He conceals solos based on scales and melodic fragments, rather than on the harmonic approach of his predecessors.

Rollo, Duke of Normandy, (c.860–c.931), Viking chief who founded NORMANDY. He led an invasion of NW France (c.890–910) which was so successful that Charles the Simple bought him off by granting him some land around Rouen in 911. Rollo and his successors increased this area by conquest, to form what became known as Normandy. *See also* p.1290.

Rolls-Royce, British engineering firm famous for the manufacture of motor car and aircraft engines. It was formed in 1904 by the merger of the Derby works of Sir Frederick Henry Royce (1863–1933) and the firm of Charles Stewart Rolls (1877–1910). The Rolls-Royce motor car produced in 1904 was the first fast, luxury motor car. The chassis of the Rolls-Royce has always been designed for large limousine and sedan bodies, but in the 1920s the firm brought out a light, fast Continental under the BENTLEY label. In 1973 part of the company passed under governmental control.

Roma. *See* ROME.

Romagna, historic region of N central Italy, now included in the region of Emilia-Romagna. A centre of Byzantine domination in the 6th century, Romagna resisted effective papal rule in later years until Pope Julius II incorporated it into the PAPAL STATES in the early 16th century. Papal domination continued except for a period of French occupation (1797–1815) until 1860, when Romagna became part of the kingdom of Italy.

Romains, Jules (1885–1972), pseud. of Louis Farigoule, French novelist, poet and playwright. The leading exponent of Unanimism, which posits a collective spirit, his works include *Death of a Nobody* (1911), *Doctor Knock* (1923), and the 27-novel cycle *Men of Good Will* (1933–46) which deals with the early 20th century period of French life.

Roman à clef, literally key-novel, novel containing one or more characters based on actual people (given fictitious names), often in situations that have occurred. The tradition evolved in 17th-century France. Notable modern examples are the political novels of Benjamin DISRAELI, *Point Counter Point* (1928) by Aldous HUXLEY and *The Mandarins* (1954) by Simone de BEAUVOIR.

Roman Britain, period of British history from either CAESAR's invasions of 55–54 BC or CLAUDIUS' occupation of AD 43 until c.410. Caesar's invasions failed when unrest in Gaul forced his legions to return to the mainland. The real Roman period began with the arrival of Claudius' army in 43. By 47 lowland Britain had been conquered south of a line from Exeter to the

Humber. Under the Flavian emperors the conquest was extended north and west. It was completed by the time of HADRIAN, whose wall (AD 122) marked the northern boundary of Roman Britain, from the Tyne to the Solway. In the south Romanization was fairly thorough, in the north more fitful, although even in the south Britain remained a colony, not an integral part of the Roman world. The Romans brought little change to the "highland" north; in the south they established villas, which were self-contained, unified labour centres as opposed to the isolated pre-Roman farms. The most lasting legacies were the towns, such as Camulodunum (Colchester, established as a *colonia* AD 49), Lindum (Lincoln, AD 71), Glevum (Gloucester, AD 98) and Eboracum (York, AD 237), and the ROMAN ROADS. The Romans exploited Britain's minerals – lead, iron, marble and slate; they also developed the wool and pottery trades. They introduced new plants such as roses, lilies, cabbages, broad beans, apples, walnuts and vines.

Latin was the official language, spoken by some urban artisans, but ignored by the illiterate peasantry, who retained the CELTIC tongue. Unlike Spain and France, Britain never became a Latin-speaking country. Christianity made little progress and even late Roman Britain was essentially pagan. The end of the Roman period began with the withdrawal of part of the Roman garrison by Magnus Maximus in 383 and was completed by Honorius in 409–10. *See also* pp.1234–1239.

Roman Catholic Church, Christian denomination which acknowledges the supremacy of the POPE, who in religious matters – particularly in tenets of faith and dogmatic tradition – is regarded as infallible. Before the REFORMATION the term Catholic (from the Greek, meaning "universal") applied to the Western Church as opposed to the Eastern ORTHODOX CHURCH based at Constantinople. Perhaps because of the Reformation, which was in itself a revolt against the Catholic love of elaborate ritual, rich vestments, costly church items and the fervent veneration of saints, the Roman Catholic Church tended to be characterized by rigid adherence to doctrinal tradition from that time until the early 20th century. The desire for a united Christendom has more recently led to a generally more liberal attitude, although the government of the Church is centred solely on the pope's council called the CURIA in Rome, made up of CARDINALS.

Romance, literary form, a heroic tale or ballad usually in verse. The form derives from the medieval narratives of TROUBADOURS and the name is due to the fact that they sang their songs in the vernacular, either French or Provençal, rather than Latin (the Old French word *romanz* means "vulgar tongue"). The romance spread through Europe in the 12th century and was used in English by Geoffrey CHAUCER. It continued to be used up to the 16th century, when pastoral romances, such as Sir Philip SIDNEY's prose *Arcadia* were popular. In modern usage romance has come to mean any love story.

Romance languages, languages that evolved from LATIN, the language of the Roman Empire. They include Italian, French, Spanish, Portuguese, Romanian, Catalan, Provençal and Rhaeto-Romanic (spoken in parts of Switzerland). The Romance languages developed as the Vulgar Latin spoken by Roman settlers merged with the language of the region; they all have a grammar and vocabulary based on Latin.

Roman Conquest, conquest of Britain by Rome. The first invasions of Julius CAESAR (55 and 54 BC) failed to establish Roman occupation of the island, which began with the invasion of CLAUDIUS' army in AD 43. Claudius' defeat of CARACTACUS at the Battle of Medway opened the way for his advance to Colchester, capital of the Catuvellauni. By 61 the island south of the river Humber had been conquered. In that year BOADICEA's revolt, although it was partly successful, failed to stem the Roman advance. By 80 Wales had been subdued and by 122 the northern limits of

Roman de la Rose

the Roman conquest was established by the building of HADRIAN'S WALL. See also ROMAN BRITAIN: pp.1234-1235.

Roman de la Rose (Romance of the Rose), old French romance of the 13th-century, by Guillaume de Lorris and Jean de Meung. Guillaume began the poem in c. 1240 as an allegory of the progress of a courtly lover. A translation of the work into Middle-English was one of CHAUCER'S earliest literary tasks.

Roman Empire, that part of the world, centred on the Mediterranean, which was ruled from the Italian city state of ROME from the mid-4th century BC to the Barbarian invasions of Italy and the deposition of the last Roman emperor of the West, ROMULUS AUGUSTULUS, in AD 476. Rome itself was, according to LIVY, founded in 753 BC by ROMULUS and REMUS and was under ETRUSCAN control until the expulsion of Tarquinius Superbus in c. 509 BC. His expulsion marks the beginning of the Roman republic, which was governed by two consuls and a senate; the expansion of Rome began soon after. By 340 BC Rome had defeated the cities of the Latin League and established a political and trading control over Italy south of the Po River.

The next phase of expansion took place against the Carthaginians in the PUNIC WARS. The defeat of HANNIBAL and the razing of Carthage in 146 BC left Rome in control of all of Italy, Sicily, Sardinia, Corsica, the southern coast of Iberia and the northern coast of Africa.

Expansion to the east began in the late 3rd century BC. PHILIP II of MACEDON was defeated in two campaigns (215-205 BC and 200-197 BC) and ANTIOCHUS III of Syria was defeated in 190 BC. By 168 BC Macedonia was a Roman province. Greece was never an imperial province, but it became at the same time subject to Roman hegemony. The next great addition of territory was made by Julius CAESAR'S conquest of Gaul between 58 BC and 51 BC. Britain was added to the empire by CLAUDIUS in AD 43. By that time the fact of empire had been recognized by the bestowing of the title emperor upon Octavian, Caesar AUGUSTUS, in 27 BC.

In AD 167 the first Barbarian invasions from the north crossed the Danube and the Alps into Italy. They, and the spread of Christianity, began to disrupt the stability of Roman society and in 285 the empire was divided by DIOCLETIAN into Western and Eastern halves. By the middle of the 5th century the Western empire had disintegrated and its lands were under Barbarian occupation. The eastern, or BYZANTINE EMPIRE, however, survived and was not finally dismembered until 1453. See also pp.1224, 1247.

Romanes, George John (1848-1894), British biologist who wrote popular works on evolution and founded the annual Romanes Lecture at Oxford university, in which speakers deal with a subject in science or literature.

Romanesque, architectural and, by association, artistic style prevailing in W Europe from the late 10th to the 12th century. The term was revised in the 19th century to describe the style derived from Roman models. Romanesque architecture was first explored at Cluny Abbey in France and was common in France, Spain, Italy and in England (where it was known as NORMAN architecture.) Despite many regional variations, its distinctive features included semicircular arches, magnificent west façades to its churches, huge barrel vaulting, complex apses, radiating chapels, heavy, solid walls and rounded pillars, often with their capitals decorated with narrative relief sculptures. In the mid-12th century it was superseded by GOTHIC styles, with higher vaulted roofs and pointed arches. Romanesque arts were associated with the architecture. See also pp.1306-1309.

Roman-fleuve (River-novel), French term for the type of lengthy novel, dealing with the same character through a number of years, which came to be characteristic of French fiction during the first half of the 20th century. The outstanding example of this form is Marcel PROUST'S *Remem-*

brance of Things Past (1913-1927).

Romania, country in SE Europe, official name the Socialist Republic of Romania. At the end of WWII the USSR aided the Communist Party in taking over the government. Agricultural output is high; most of the farms are collectives and cereals are the principal crops. Romania has rich mineral deposits, in particular oil and natural gas. Industries include machinery, steel, electrical equipment, textiles and chemicals. The capital is Bucharest (București). Area: 237,499sq km (91,698sq miles). Pop. (1975 est.) 21,245,000. See p.2125.

Roman law, system of CIVIL LAW developed between 753 BC and the 5th century AD, which forms the basis of the civil law that applies in many parts of the world. Roman law, based on principles of rights and obligations, was enacted originally by the PATRICIANS then increasingly after 287 BC by the PLEBEIAN assemblies. From 367 BC magistrates, usually PRAETORS, proclaimed the legal principles (*edicta*) which became an important source of law known as *jus honorum*. The emperor could also enact laws and by the mid-2nd century AD became the sole creator of laws.

Roman law can be divided into two parts: *jus civile*, or civil law, which applied only to Roman citizens and which was codified in the TWELVE TABLES of 450 BC; and *jus gentium*, which gradually merged into *jus civile*, originally applying to foreigners in Rome and to others within Roman lands who were not citizens, and taking many principles from Greek commercial law. Roman law was codified by the Emperor JUSTINIAN (r.527-64) and was adapted by many of the barbarian invaders of the Empire. See also pp.1227, 1871.

Roman numerals, the letters used by the ancient Romans in their counting system. There were seven: I (one), V (five), X (ten), L (fifty), C (100), D (500) and M (1000). From one to ten they ran: I, II, III, IV (=I less than V), V, VI, VII, VIII, IX (=I before X), X; and the tens: X, XX, XXX, XL (X before L=40), L and so on. Thus 1978 may be expressed as MCMLXXVIII. See also p.781.

Romanov, House of, the Russian imperial family from 1613 until the revolution of 1917. The first tsar, MICHAEL, was chosen in 1613, and his election ended a turbulent period in Russian history. Male inheritance was generally followed until PETER THE GREAT established the principle of a choice of successor by the ruling monarch in 1722. PAUL I however, formulated an order of succession in the Romanov family in 1797. NICHOLAS II, the last tsar, abdicated in 1917 during the Revolution and was apparently executed in 1918 with all the other members of his immediate family by the BOLSHEVIKS.

Roman roads, communications system built by the Romans throughout their empire. They systematized existing trackways and land routes and at the height of the empire about 85,000km (53,000 miles) of efficient roads were in use, based upon 29 military routes centred on Rome itself. The great Roman roads were notable feats of surveying. Renowned for their straightness (still observable on many modern trunk roads which follow their routes), they were equally remarkable in the strength of their construction (in five layers) and because of the attention given to efficient drainage. It has been estimated that messengers on horseback could travel 120km (75 miles) per day on the military roads. After the fall of the Roman Empire, no comparable roads were built in Europe before the 18th century. See also pp.522, 522-523, 1233, 1235, 1238, 1238, 1239, 1239.

Romans, the Epistle to the, letter by St PAUL c.57, written probably in Corinth. In it, Paul anxiously tries to counteract the doctrine being propounded by some early Judeo-Christian teachers in Rome, possibly even St PETER, who were proclaiming Christianity as a new form of Judaism. In his Hellenistic style Paul reveals his concept of salvation through faith for everybody, rather than through the Jewish Law.

Romansh. See ROMANCE LANGUAGES.

Romanticism, name of a specific historical movement in the arts. Romantic arts, which can be found in any period, emphasize the emotional perceptions of the artist and his self-expression above the formal requirements of the medium in which he is working. They frequently show an interest in the past or in nature, and stress the importance of the act of creation. The Romantic Movement occurred in the early 19th century in art, architecture, literature, music and political theory. It began as a late 18th-century reaction to the sterile repetition of CLASSICAL formulae and the facile emotions of 18th-century art and ENLIGHTENMENT thought. The Movement's most striking features included the expression of the artist's alienation from society; the depth of his emotions and his spiritual confusion; the attempt to fuse new links between man and the power of nature, and to replace Greek and Roman models with national mythologies. Romantic painting came to stress the terrible and dramatic rather than the lyrical or stylized - even the Romantic landscapes of TURNER are as full of drama as the historical paintings of DELACROIX - and many of the painters used violent brush-strokes to communicate the immediacy of their work. By the mid-19th century the search for immediacy led artists, especially COURBET, to turn to contemporary realistic themes. Romanticism in architecture brought the overthrow of the PALLADIAN style and a new appreciation of the medieval; the Gothic revival of PUGIN in England and VIOLET-LE-DUC in France and a general carefree eclecticism was typical. Romantic literature developed particular in Germany, with GOETHE and SCHILLER, and in Britain, where BYRON, SHELLEY and WORDSWORTH wrote highly personal poetry and Walter SCOTT created the genre of the historical novel. In France, CHATEAUBRIAND and Victor HUGO emulated Byron's Romantic lifestyle and propagated the concept of the Romantic genius, inspired by God and cut off from his own times. Romantic music, epitomized by its freer form and rich orchestration, is first evident in the late work of BEETHOVEN; it was taken up by SCHUBERT, WEBER and WAGNER and held sway until the early 20th century. In political theory, Romanticism was linked with ideas of man's innate goodness, and with movements for national liberation and for liberalism. The European revolutions of 1848 were the last fling of co-ordinated Romantic politics. See also pp.1548, 1549, 1556, 1557, 1578, 1579, 1582, 1583.

Romanus (d.897), pope. He was elected to the papacy after the murder of STEPHEN VI, and his year-long reign (897) was marked chiefly by the feud between his supporters and those of his predecessor, whose acts Romanus nullified.

Romanus, name of four emperors of BYZANTIUM. Romanus I Lecapenus (r.920-44) was regent for, and then co-ruler with, his son-in-law, the young Emperor CONSTANTINE VII. His reign marked the high point of Byzantine influence on the Bulgarian kingdom. Romanus II, his grandson, reigned from 959-63. He had no interest in state affairs, and his wife, Theophano, virtually ruled the empire. Romanus III Argyrus (c.1028-34) came to the throne when he married the Empress Zoe. A weak ruler, he depleted his treasury and abolished needed taxes. Romanus IV Diogenes (1068-72), a general, became emperor when he married the widow of Constantine X. His defeat by the Seljuk Turks at Manzikert in 1071 marked the end of the BYZANTINE EMPIRE. See also p.1277.

Romany, language spoken by the GYPSIES. It is an Indic language, related to SANSKRIT and HINDI, and is known to have originated in India. It is spoken by about three million people, but there is little written Romany literature other than translations of the Bible.

Romberg, Sigmund (1887-1951), Hungarian-born us composer whose best-known operettas include *Maytime* (1917), *The Student Prince* (1924) and *The Desert Song* (1926).

Rombouts, Theodor (1597-1637), Flem-

ish painter. His paintings of genre scenes and religious subjects were early influenced by the style of CARAVAGGIO in their use of chiaroscuro and after c. 1630, inclined towards the manner of RUBENS.

Rome (Roma), capital of Italy; in the centre of the country on the River Tiber; capital of Lazio region and Roma province. Rome was founded in the 8th century BC from settlements traditionally located on seven hills rising from the marshlands of the Campagna. It was probably an Etruscan city-kingdom in the 6th century.

The Roman Republic was founded c. 500 BC; by the 3rd century Rome ruled most of Italy and began to expand overseas. The ROMAN EMPIRE was founded in 27 BC. Caesar AUGUSTUS (Octavian) rebuilt the city and encouraged the development of art and education. The great fire of Rome in AD 64 destroyed much of the city. NERO rebuilt it and it remained capital of the Roman Empire until 330 AD. In the Middle Ages Rome was dominated by the papacy. Many great RENAISSANCE and BAROQUE artists and architects worked there. NAPOLEON annexed Rome from 1809 to 1814. Italian troops occupied the city in 1870 and in the following year it became the capital of Italy. The FASCIST march on Rome in 1922 brought MUSSOLINI to power. The city fell to the Allies during WWII in June 1944.

Rome includes VATICAN CITY, which has many fine libraries and museums. Notable buildings and monuments include the COLOSSEUM, the Forum and the Capitoline, the Farnese Palace, many ancient basilicas including ST PETER'S and St John Lateran, and the University of Rome (1303). Industries: tourism, printing and publishing, fashion, film, banking and finance. Pop. (1979) 2,911,671. See also pp.255, 2078.

Rome, School of, Italian school of painting which flourished from the mid-16th to the 19th centuries. MICHELANGELO and RAPHAEL were its most important members; it led the Baroque movement, represented by BERNINI and Pietro da CORTONA; and from the 17th century onwards included POUSSIN, CLAUDE LORRAINE, Piranesi and artists from all over Europe, who came to Rome to study the classical remains.

Rome, Treaties of, two agreements signed at Rome in 1957. They established the EUROPEAN ATOMIC ENERGY COMMUNITY (Euratom) and the European Economic Community (EEC). The signatory countries were Belgium, France, Italy, Luxembourg, The Netherlands and West Germany. Countries admitted into the EEC in 1973 - Britain, Denmark and Ireland - accepted the terms of the treaty as a requirement of admission. The treaty establishing the EEC provides for the eventual economic, monetary and political union of its member states.

Romeo and Juliet (c.1595), tragedy by William SHAKESPEARE. The story is set in Verona, in which two hostile families, the Montagues and the Capulets, reside. Romeo, a Montague, falls in love with Juliet, a Capulet, and an inevitable tragedy ensues. The two lovers die and their families end their feud. It is relatively early Shakespeare, with a few immature passages rubbing shoulders with some superb, lyrical writing. See also pp.1137, 1419.

Rommel, Erwin (1891-1944), German military commander. He proved his ability as a commander of tanks in France in 1940, and later led the AFRIKA KORPS. Known as 'The Desert Fox', he was defeated by the British at EL ALAMEIN. By 1944, Rommel was disenchanted with Germany's military leadership, and was in communication with plotters who tried to kill HITLER in July; when Rommel's association with the conspirators was discovered, he was forced to commit suicide. See also pp.1710, 1712-1713.

Romney, George (1734-1802), British portrait painter. He visited Italy (1773-75), where he was influenced by the paintings of RAPHAEL, TITIAN and CORREGGIO. He painted more than 50 portraits of Emma, Lady HAMILTON, NELSON'S mistress.

Romney Marsh, region of notorious coastal marshland in Kent, SE England, mainly

between Hythe and Dungeness. The area has been reclaimed and now provides excellent pasture for sheep. Area: approx. 176sq km (68sq miles).

Romulus and Remus, twin brothers and legendary founders of Rome. They were the children of Mars and Rhea Silvia, daughter of the rightful king of Alba Longa. Amulius, the usurper of his throne, fearing they might be a threat to his rule, ordered them to be drowned. They floated safely down the Tiber River, however, where creatures sacred to Mars, a woodpecker and a she-wolf, rescued them. They were brought up by the shepherd Faustulus and founded Rome at the site where they were taken from the river. Later Romulus murdered Remus.

Romulus Augustulus (b.c. 461), Western Roman emperor (r. 475-76). He was given the throne by his father, Orestes, the master of the soldiers, who had overthrown the Western emperor Julius Nepos. The Germanic mercenaries in Italy then mutinied, killed Orestes and forced Romulus to abdicate; ODOACER, leader of the Barbarian troops, assumed the title of king. The date 476 is therefore the traditional date for the fall of the Western Roman Empire. See also p.1247.

Roncalli, Angelo. See JOHN XXIII, POPE.

Roncesvalles. See CHANSON DE ROLAND.

Rondeau, French medieval verse form, consisting in its full form of four stanzas, with two rhymes only used throughout. The first line of the first stanza acts as a refrain ending the second and third stanzas. The fourth is the same as the first. Rondeaux were originally sung to music composed for several voices; today they are used chiefly as a vehicle for light or witty verse.

Rondo. See MUSICAL FORM.

Ronsard, Pierre de (1524-85), French poet and leader of the *PLÉIADE*. His *Odes* (1550) and *Les Amours* (1552) brought him fame and royal patronage, and he wrote several patriotic poems. His late *Sonnets pour Hélène* (1578) contained some of his finest love poems. See also p.1450.

Röntgen, Wilhelm Konrad (1845-1923), German physicist. In 1895, while teaching at Würzburg University, he discovered X-rays, for which he was awarded the first Nobel Prize in physics in 1901. He also did important work on the specific heats of gases, the heat conductivity of crystals, and electricity. See also RÖNTGEN.

Röntgen, unit (symbol r) used to measure the X-ray or gamma-ray radiation to which a body is exposed. One röntgen causes sufficient ionization to produce a total electric charge of 2.58×10^{-4} coulombs on all the positive (or negative) ions in one kilogramme of air.

Rood, old religious term for the cross on which Christ died. It was often set on a beam dividing the nave from the chancel in a church (the *ROOD SCREEN*), many of which were destroyed in the REFORMATION.

Rood screen, in most medieval and early Renaissance churches, the screen - made of wood or stone and often carved or painted - which separated the chancel from the nave. Upon it there was usually a representation of the Crucifixion scene; Christ on the cross and two flanking statues of the Virgin Mary and St John. The name derives from the Old English *rōd*, meaning gallows or cross. The rood and all other objects on many rood screens in England were removed during the REFORMATION, but the screen remained.

Rook, large gregarious European bird of the crow family. It has glossy black plumage but commonly loses the feathers from about its face. It feeds on grain and insects and has a characteristic raucous cry. Family Corvidae; species *Corvus frugilegus*.

Rooke, Sir George (1650-1709), English admiral. He defeated the French during the War of the Grand Alliance at the Battle of La Hogue in 1692 and in 1702 he triumphed over the combined French and Spanish fleets at Vigo. In 1704, during the War of the Spanish Succession, he captured Gibraltar from Spain.

Room With a View, A (1908), novel by E.M. FORSTER which wittily deflates the snobbery of the upper class in the early 20th century. The heroine falls in love with a young man of lower status and this is seen as a threat by all around her.

Roosevelt, Anna Eleanor (1884-1962), US reformer and humanitarian, wife of Franklin Delano Roosevelt. She visited Britain and the South Pacific in WWII and after the war became US delegate to the UN (1945, 1949-52, 1961) and was chairman of the UN Commission on Human Rights (1946-51). See also p.1691.

Roosevelt, Franklin Delano (1882-1945), 32nd US president (1933-45), the only one elected for four consecutive terms. He entered politics as Pres. Woodrow WILSON's assistant secretary of the Navy (1913-20). In 1921 he was stricken by polio which left his legs paralysed. Encouraged by his wife Eleanor ROOSEVELT to resume political life, he was elected governor of New York (1928). In 1932, during the DEPRESSION, he won the presidential election as the Democratic Party candidate. His "NEW DEAL", a set of measures designed to restore the economy through direct government intervention antagonized Republicans and conservatives, but Roosevelt's popularity led to a great electoral victory in 1936, and a narrower success in 1940. Early in his third term, he abandoned the traditional US foreign policy of isolationism and aided Britain against Nazi Germany; after the Japanese attack on PEARL HARBOR he led his country into WWII. Re-elected for a fourth time in 1944, he died soon after inauguration. See also pp.1691, 1691, 1700, 1717.

Roosevelt, Theodore (1858-1919), 26th US president (1901-09). After an eventful career, he was elected vice-president in 1900, succeeded to the presidency in 1901 when MCKINLEY was assassinated and was re-elected in 1904. He believed that the presidency should maintain a vigorous involvement in domestic affairs, and initiated much legislation designed to regulate big business; in foreign affairs he extended US power, acquiring the Panama canal zone and reducing European influence in S America. See also pp.1625, 1631.

Root, Elihu (1845-1937), US lawyer and diplomat who advocated US entry into the LEAGUE OF NATIONS and helped to bring the World Court of INTERNATIONAL JUSTICE into existence. He was awarded the 1912 Nobel Peace Prize for his contribution to peace in the Western hemisphere.

Root, John Welborn (1850-91), US architect who became a partner of Daniel BURNHAM in Chicago. Extremely influential in their day, their work includes the Montauk Building (1882) and the Monadnock Building. In these tall buildings Root linked technical innovation and aesthetic design.

Root, underground portion of a VASCULAR PLANT that serves as an anchor and absorbs water and nutrients from the soil. The primary root develops from the lower end of the plant embryo. Some plants, such as the dandelion and carrot, have taproots with smaller lateral branches. Others, such as the grasses (including cereal crops) develop fibrous roots with lateral branches equalling the main root in extent. In the mangrove, adventitious roots are produced from the stem above the ground and grow down to provide additional support and means of absorbing water and minerals. Some plants, such as beets and parsnips, have large taproots that store nutrients and are grown as food for men and animals. See also pp.356-357.

Root, in mathematics, fractional POWER of a number. The square root is written as either \sqrt{x} or $x^{1/2}$, and represents a number that, when multiplied by itself, gives the original number. The fourth root of a number, x , may be written in RADICAL form as $\sqrt[4]{x}$ or in power form as $x^{1/4}$. The fourth root of 16, for example, is 2 since $2 \times 2 \times 2 \times 2 = 16$.

Root and Branch Petition (1640), petition from London Puritans introduced in the House of Commons, asking for the abolition

tion of the episcopacy in the CHURCH OF ENGLAND "root and branch". The MPs who supported it became known as the Root and Branch party.

Rope, flexible, heavy cord made of twisted natural fibres, synthetic fibres or metal (CABLE). Among natural fibres, HEMP is most commonly used. In rope-making, fibres are first disentangled and spun into yarn, which is then twisted into strands that are laid up into rope. See also pp.712, 712.

Rops, Félicien (1833-98), Belgian painter and graphic artist. Working mainly in France, he was known for his prolific etchings and book illustrations, many of which were perverse or erotic in nature.

Roque. See CROQUET.

Roquefort, softish cheese made from the milk of ewes and goats, named after the town in S France where it originated. It has the veins caused by a mould, *Penicillium roqueforti*, which gives the cheese its individual strong flavour and aroma. See also pp.726-727, 727.

Roraima, Mount, flat mountain peak at the junction of the Guyanan, Brazilian and Venezuelan borders; the highest point of the Guyana Highlands. It is the source of tributaries of the rivers Amazon and Orinoco. Height: 2,810m (9,219ft).

Rorqual, any of five species of schooling WHALES, distributed throughout the world; they are the source of baleen, or whalebone. Included are the blue whale, fin whale and humpback whale. Genus *Balaenoptera*.

Rorschach, Hermann (1884-1922), Swiss psychiatrist. He invented the Rorschach Ink Blot Technique, often used to assess personality characteristics. See also RORSCHACH TEST.

Rorschach tests, in psychology, familiarly called the "ink blot tests", used to analyse a person's motives and attitudes when these are projected into ambiguous situations. The individual is presented with 10 standardized ink blots and interpretation is based on his description of them. Hermann RORSCHACH devised the tests.

Rosa, Salvator (1615-73), Italian painter and poet who lived mainly in Rome but worked for the MEDICI family in Florence from 1640 to 1649. He is best known for his savage landscapes which were executed boldly, although as painter of religious and historical subjects he was less successful. His poetry satirized his age.

Rosaceae, the rose family, a large group of flowering plants containing about 3,000 species, many of which are important food plants. It includes the APPLE, PEAR, PLUM, CHERRY, APRICOT, PEACH, NECTARINE, BLACKBERRY, RASPBERRY, STRAWBERRY, MEDLAR, QUINCE, LOQUAT, ALMOND and MOUNTAIN ASH. The roses themselves, genus *Rosa*, are of considerable variety. See also pp.674-675, 688-689.

Rosario, port in E central Argentina, on the Paraná River, 306km (190 miles) NW of Buenos Aires; the second largest city in Argentina. Founded in 1725, Rosario grew with the development of the pampas. Today it is a communications and exporting centre, and has food-processing industries. Pop. 810,840.

Rosary, form of meditational prayer in which the worshipper contemplates the life of Jesus and the Blessed Virgin Mary; it is almost entirely restricted to Roman Catholics. The term is also used as a name for the string of beads on which an account may be kept of the number of prayers said.

Rosas, Juan Manuel de (1793-1877), Argentine CAUDILLO and twice Governor of Buenos Aires province. By 1835, his rivals dead or in exile, he had become virtual dictator of Argentina. He ruled with absolute power and survived blockades by the British and French, but was finally defeated by Justo José de URQUIZA in 1852 and died in exile in Britain.

Roscellinus Johannes (c.1050-c.1125), Scholastic philosopher and theologian. Little is known of his life except that he was one of the first defenders of NOMINALISM. His teachings were attacked by his famous pupil, Peter ABELARD.

Roscommon, county in N central Republic of Ireland, in Connacht province. Part of the central plain of Ireland, Roscommon

Romulus and Remus; the theme of abandoned children originated in Greece.

Wilhelm Röntgen in his laboratory, where he investigated X-rays and electricity.

Roos are commonly seen at dusk when they fly back to their nesting colonies.

Franklin Roosevelt addressing Congress during his second term of office.

Rose, Murray

Ken Rosewall in the men's singles semi-final at Wimbledon in 1955.

Roberto Rossellini with Ingrid Bergman, who starred in several of his films.

Dante Gabriel Rossetti's romantic female quartet *Dallying on the Grass* (1872).

Gioacchino Rossini; Meyerndorff's portrait of the great Italian composer.

is generally low-lying and the Shannon is the principal river. Sheep and cattle rearing is the chief economic activity; coal-mining is important in the NE. Roscommon is the county town. Area: 2,463sq km (951sq miles). Pop. (1971) 53,519.

Rose, Murray (1939–), Australian freestyle swimmer, b. Britain. At the 1956 Olympic Games he won three gold medals (400m, 1,500m and 4 × 200m relay), retaining his 400m title in 1960, when he also won a 1,500m silver and a relay bronze. He also won four golds at the 1962 Commonwealth Games and established nine world records.

Rose, wild or cultivated flowering shrub. Most roses are native to Asia, several to America, and a few to Europe and NW Africa. The stems are thorny and erect, climbing or trailing. Flowers appear singly or in loose clusters and colours range from white to yellow, pink, crimson and maroon; many are fragrant. There are about 200 species. Family Rosaceae; genus *Rosa*. See also pp.674-675.

Roseau, port and capital of DOMINICA, in the Windward group, on the Roseau River. The port exports tropical vegetables, oils, spices, limes and lime juice. Pop. (1970 est.) 10,200.

Rosebay Willow herb. See WILLOW HERB. **Rosebery, Archibald Philip Primrose, 5th Earl of** (1847–1929), British Liberal politician. He succeeded GLADSTONE as Prime Minister (1894–95), but resigned following a split in the Liberal Party over imperial policy. He retired from political life in 1905, just before Henry CAMPBELL-BANNERMAN became Liberal Prime Minister.

Rosemary, strongly flavoured, perennial evergreen herb of the mint family. It has small, needle-like leaves and clusters of small pale-blue flowers. Sprigs of rosemary are commonly used as a flavouring when cooking various meats. Family Labiatae; species *Rosmarinus officinalis*. See also pp.709, 709.

Rosenberg, Alfred (1893–1946), German Nazi leader, b. Estonia. He was an early member of the Nazi Party, and his racial theories contributed to the party's ANTI-SEMITISM. In 1941 he became Minister for the occupied Eastern Regions. After the war he was executed as a war criminal.

Rosenberg, Isaac (1890–1918), British poet. After studying at the Slade School of Art 1911–14 he served as a private in WWI. His best poems were written about his war experiences. He was killed in action.

Rosencrantz and Guildenstern are Dead (1966), two-act comedy by Tom STOPPARD which established his reputation and with great wit and dramatic ingenuity explores the destiny of two minor characters from *Hamlet*.

Rosenfeld, Albert (1885–1970), Australian rugby league player. A fast, elusive wing-threequarter, he toured England in 1908–09 and returned to play for Huddersfield. In the 1911–12 season he scored 80 tries, a record that remained unbeaten in the mid-1970s.

Rosenkavalier, Der (1910), three-act opera by Richard STRAUSS, with libretto by Hugo von HOFMANNSTAL, first performed in Dresden in 1911. The light-hearted story centring on the love of the young rose-bearer Octavian (mezzo-soprano) for the betrothed Sophie (soprano) is set in 18th-century Vienna.

Rose of Sharon, hardy shrub, native to China, which can be grown farther north than many other *HIBISCUS* plants. The flowers are red, purple, rose or white. Height 4.6m (15ft). Family Malvaceae.

Roseola infantum, mild infectious disease of young children, probably caused by a virus. It is characterized by drowsiness and fever, followed by a mild rash on the trunk and neck. The usual treatment is bed rest and a light diet.

Roses, Wars of the (1455–85), English civil wars fought for the possession of the crown, taking their name from the badges of the House of LANCASTER (red rose) and the House of York (white rose). By 1455 the incompetence of the Lancastrian HENRY VI had led to widespread civil disorder. Henry's interests were promoted by his wife, MARGARET OF ANJOU, who was

determined to protect the inheritance of their son Edward (b.1453). In 1455 Richard, Duke of York, and a small group of lords attempted to gain control of the government but were at first defeated. York was killed in 1460, but his son claimed the throne, defeated HENRY VI at TOWTON FIELD in 1461 and was crowned as EDWARD IV. In 1470, Edward's closest ally, the Earl of WARWICK, deserted him for the Lancastrians. Briefly deposed, Edward regained his throne and defeated his enemies in 1471. HENRY VI and his son were killed. When Edward IV died in 1483, his brother usurped the throne as RICHARD III and Edward's sons were murdered. Their deaths allowed Henry Tudor to rally the Lancastrian faction and Richard III was overcome at Bosworth in 1485 by Henry who, as HENRY VII, married Edward IV's daughter, ELIZABETH OF YORK in 1486, thus reuniting the two warring factions. See also pp.1376-1377, 1377.

Rosetta stone, slab of black basalt inscribed in HIEROGLYPHIC, demotic and Greek, now in the British Museum. The stone was discovered in 1799 by an officer of Napoleon's army in Egypt. By comparing the three versions of the inscription, first Thomas YOUNG (1818) and later Jean-François CHAMPOLLION (1822) were able to decipher the Egyptian hieroglyphic, and this led to a full understanding of hieroglyphic writing.

Rosewall, Ken (1934–), Australian tennis player. He joined the Australian DAVIS CUP team in 1953 and won the Australian and French titles that year; he remained one of the world's top players for more than 20 years. His major victories after tennis became open to professionals and amateurs include the French Open in 1968, the US Open in 1970, the Australian championship in 1971 and the World Championship of Tennis in 1971 and 1972 (winning both matches against Rod LAVER). He was the beaten men's singles finalist at Wimbledon four times (1954, 1956, 1970 and 1974).

Rose window, decorated wheel-shaped window, popular in GOTHIC and some ROMANESQUE church architecture and usually used at the west end of the nave or in the transepts. It consists of delicate bar TRACERY which radiates symmetrically from a circular carved stone core. The openings are filled with stained glass.

Rosewood, any of several kinds of ornamental hardwoods derived from various tropical trees. The most important are Honduran rosewood, *Dalbergia stevensoni*, and Brazilian rosewood, *D. nigra*. It varies from a deep, ruddy brown to purplish and has a black grain, hard to work because of its high resin content. Once much in demand by cabinetmakers, it is now rare but is occasionally used to make musical instruments. See also p.714.

Rosh Hashana (*Rosh ha-Shanah*), the Jewish New Year and first day of the month of Tishri (generally in September). It is also the day on which the ceremonial ram's horn, the *shophar* or *shofar*, is blown to call sinners to repentance; the day called the Day of Judgement or of Remembrance; and the day which begins the Ten Days of Penitence that end with the Day of Atonement, YOM KIPPUR. It is a day for solemn recollection and meditation.

Rosicrucians, secret, worldwide brotherhood using supposedly magical knowledge, founded by Valentine Andrea (1586–1654), who used the pseudonym Christian Rosenkreuz.

Rosin, or colophony, yellowish amorphous resin obtained as a residue from the distillation of turpentine; the chief constituent is abietic acid. It is used in varnishes, soldering fluxes, linoleum and printing inks. Properties: s.g. 1.08; m.p. 100–150°C (212–308°F).

Ross, Sir James Clark (1800–62), British naval officer and explorer. He took part in six Arctic expeditions in search of a NORTH-WEST PASSAGE, and in 1831 discovered the magnetic North Pole. His expedition to the Antarctic in 1839, during which he discovered the Ross Sea in 1841, earned him a knighthood.

Ross, Sir John (1777–1856), British naval

commander and Arctic explorer. His first expedition in 1818 was to explore BAFFIN BAY and attempt a NORTH-WEST PASSAGE. His second, in 1829, produced valuable geographic and oceanographic data. In 1850 he led an unsuccessful search for Sir John FRANKLIN.

Ross, Martin, pen-name of Violet Florence Martin (1862–1915), Irish novelist. With her cousin, Edith SOMERVILLE, she wrote *Some Experiences of an Irish R.M.* (1899).

Ross, Sir Ronald (1857–1932), British bacteriologist, b. India, who was awarded the 1902 Nobel Prize in physiology and medicine for his research into MALARIA.

Ross and Cromarty, former county in N Scotland; since 1975 it has been part of Highland Region. It extends from the North Sea to the Atlantic Ocean, and includes some of the Outer Hebrides. The area is largely mountainous and moorland, with outstanding coastal scenery. The principal economic activities are sheep grazing, whisky distilling and fishing. Dingwall was the county town. Area: 8,000sq km (3,089 miles).

Ross Dependency, area of Antarctica which includes Ross Island, the coast along the Ross Sea and nearby islands. It has been under the jurisdiction of New Zealand by act of British Parliament since 1923. Area: land mass 427,350sq km (160,000sq miles); ice shell 336,700sq km (130,000sq miles).

Rossellini, Roberto (1906–77), Italian film director and producer. His interest in REALISM is shown in his major films *Open City* (1945), *Paisa* (1946), *L'Amore* (1948), *Stromboli* (1949) and *La Paura* (1954). From 1950 to 1956 he was married to Ingrid BERGMAN. See also pp.1760, 1761.

Roselli, Cosimo (1439–1507), Italian painter. With BOTTICELLI and GHIRLANDAIO he was commissioned (1481) to paint frescoes in the Sistine Chapel, Rome. These included *The Last Supper* and *The Sermon on the Mount*. Among his other works in *The Annunciation* (1473), and his pupils included Fra BARTOLOMEO and Piero di Cosimo.

Rossetti, Christina (1830–94), British poet, the sister of Dante Gabriel ROSSETTI. She specialized in religious poetry and verses for children.

Rossetti, Dante Gabriel (1828–82), British poet and painter. He was a founding member of the PRE-RAPHAELITE BROTHERHOOD. Although his poetry was first published when he was 19, he did not achieve recognition as a poet until long after his paintings had won acclaim.

Rossini, Gioacchino Antonio (1792–1868), Italian composer. He was a superb craftsman and his music dominated the world of opera in the early 19th century. Among his comic operas *The Italian Girl in Algiers* (1813) and *The Barber of Seville* (1816) demonstrate the sparkling sense of melody and humour that made him so popular. See also pp.1582-1583, 1598, 1599.

Ross Island, name of two islands in Antarctica. One lies in the Weddell Sea and was discovered by NORDENSKIÖLD in 1903. Area: approx. 3,880sq km (1,800sq miles). The other is in the Ross Sea and was discovered by Sir John ROSS in 1841. Area: approx. 6,500sq km (2,500sq miles).

Rosso, Fiorentino (1495–1540), Italian painter, real name Giovanni Battista Rosso. He worked in Florence, Rome and France, where in 1530 he became painter for FRANCIS I and helped to decorate FONTAINEBLEAU. See also pp.1397-1399, 1398.

Rosso, Medardo (1858–1928), Italian painter who became a sculptor in 1883. The play of light on surfaces was an absorbing interest of his, and he used it to good effect in his sculpture. He worked mainly in wax and was a friend of RODIN.

Ross Sea, arm of the Pacific Ocean between Victoria Land and Edward VII Peninsula, Antarctica. It was discovered in 1841 by Capt. James C. Ross.

Rostand, Edmond (1868–1918), French poet and dramatist. His first plays, such as *Les Romanesques* (1894) and *La Princesse Lointaine* (1895), were fanciful and of lit-

tle substance. They were followed by *Cyrano de Bergerac* (1897), *L'Aiglon* (1900) and *Chantecler* (1910). See also p.1577.

Rostock, port in N East Germany, on the Baltic Sea; capital of Rostock district. The city received its charter in 1218 and was an important Baltic member of the HANSEATIC LEAGUE in the 14th century. Its university, founded in 1419, was a centre of N European learning. The city was badly damaged during WWII. Today it is a fishing and food-processing centre and its industries produce farm machinery, watches, chemicals, diesel engines and furniture. Pop. (1979) 226,667.

Rostov-on-Don (Rostov-na-Donu), city in the Russian Republic (Rossijskaja SFSR), USSR, on the River Don near its mouth in the Sea of Azov; administrative centre of Rostov oblast. It grew around a fortress built between 1761 and 1763. The port was established in 1834 and was a major grain-exporting centre throughout the 19th century. The city suffered great damage during WWII. Industries include agricultural machinery, electrical equipment, barges and chemicals. Pop. (1975) 888,000.

Rostropovich, Mstislav Leopoldovich (1927-), Soviet musician who established a reputation as one of the century's best cellists. Leading composers such as SHOSTAKOVICH, KHACHATURIAN and PROKOFIEV dedicated works to him, as did Benjamin Britten, with whose ALDEBURGH Festival Rostropovich became closely associated.

Rosyth, town in S Fife Region, central Scotland, on the Firth of Forth; major naval base and dockyard. During WWII the dockyard was expanded and homes were built for workers. Rosyth is the only refitting base for nuclear submarines in Britain. Pop. 6,830.

Rotary Clubs, international organization of clubs for business and professional people. They promote ethical standards in business and professional practice and encourage the concept of public service in commercial dealings. In most countries they are also involved in welfare work.

Rotary printing press, machine which uses a cylinder revolving at high speed to print its image. It may be either a LETTERPRESS or LITHOGRAPHIC machine. In the former, STEREOTYPE plates are curved round the cylinder and print directly on to the paper; in the latter flexible metal plates offset their image to an intermediate rubber roller which then transfers it to the paper. Rotary photogravure presses operate in a similar way to rotary letterpress machines but use etched copper cylinders. See also WEB OFFSET; pp.612-613, 612-613, 615, 614-615.

Rotation, turning of a celestial body about its axis. In the Solar System the Sun and all the planets, with the exception of Uranus and Venus, rotate from W to E.

Rotation of crops. See CROP ROTATION.

Roth, Philip (1933-), US novelist and short-story writer. He established his name with the collection of stories, *Goodbye Columbus* (1959). His best-known novel is *Portnoy's Complaint* (1970).

Rothamsted Experimental Station, agricultural and biological research centre in Harpenden, W Hertfordshire, England, 6.5km (4 miles) N of St Albans. Founded in 1843, it is the oldest such experimental station in the world.

Rothenstein, name of a family of British artists of German stock. Sir William (1872-1945) was noted for his portraiture and was Principal of the Royal College of Art from 1920 to 1935. Sir John Knewstubb Maurice (1901-) was an art historian, critic and administrator who was Director of the Tate Gallery (1938-64) and whose numerous publications included *Modern English Painters* (3 vols, 1952, 1956, 1973). Michael (1908-) was an artist particularly noted for his printmaking.

Rotherham, county district in SE South Yorkshire, England; created in 1974 under the Local Government Act (1972). Area: 283sq km (109sq miles). Pop. (1979 est.) 248,800.

Rothermere, Lord. See NORTHCLIFFE,

ALFRED CHARLES WILLIAM HARMSWORTH, LORD.

Rothko, Mark (1903-70), US painter, b. Russia. He emigrated to the USA in 1913 and became a student of Max Weber; he later came under the influence of the SURREALISTS. In the 1940s he experimented with ABSTRACT EXPRESSIONISM. His large canvases generally consist of blurred rectangles of intense colour, such as his work *Green on Blue* (1956). See also p.1687.

Rothschild family, commercial and banking dynasty founded by Meyer Amschel Rothschild (1744-1812), son of a money changer in the Jewish ghetto of Frankfurt. His five sons established branches in the financial centres of Europe and the family fortune was established by profitable dealings during the NAPOLEONIC WARS. The Rothschilds were one of the chief financial powers in the 19th century but developments in state financing late in the century greatly reduced their influence.

Rotifer, or "wheel animalcule", microscopic METAZOAN found mainly in fresh water. Although it resembles a ciliate PROTOZOAN, it is many-celled with a general body structure similar to that of simple worms. Rotifers may be elongated or round and are identified by a crown of cilia around the mouth. Class Rotifera. See also pp.53, 329.

Rotor, helicopter, engine-driven rotary wing. Each of the blades is an AEROFOIL that produces lift in the same manner as an aeroplane wing. The hub also moves to permit altering the plane of rotation of the rotors to give sideways or forward and back motion. See also pp.520, 520.

Rotorua, city in central North Island, New Zealand, founded in the 1870s. Primarily a tourist resort noted for hot springs, geysers and mud pools, it is an important Maori cultural centre. Industries include food processing, cement, timber and engineering. Pop. (1972) 32,600.

Rotten boroughs, constituencies which before the 1832 Reform Act had very few electors and yet were represented in parliament. Such small electorates were entirely the result of historical changes of population but the outcome was that each elector could be approached with offers of bribery.

Rottenhammer, Johann (1564-1625), German painter who painted small mythological subjects on copper and paid particular attention to background landscapes.

Rotterdam, major European and industrial city in W Netherlands, on the New Meuse (Nieuwe Maas) River 24km (15 miles) from the North Sea; second largest city in The Netherlands. Rotterdam is one of the largest and most modern ports in the world. It has a large transit trade with industrial areas of Europe, in particular the Ruhr, West Germany. The city developed with the construction of the New Waterway (1866-72), connecting it to its outer port at Hoek van Holland, and making Rotterdam accessible to ocean-going vessels. During WWII the centre of the city was destroyed by German bombing. Industries: chemicals, textiles, paper, motor vehicle assembly, clothing, food processing, brewing, oil refining, machinery. Pop. (1980) 579,194.

Rottweiler, German cattle dog. The short-backed, strong body is set on muscular, medium-length legs and the tail is commonly docked. The short, coarse, flat coat is black with brown markings. Height: to 68.5cm (27in) at the shoulder; 34-41kg (75-90lb).

Rouault, Georges (1871-1958), French painter and printmaker. He painted naturalistic landscapes and pictures with religious and mythological themes. Influenced by FAUVISM, his style became less realistic with his use of dark reds and blues, blots and overpainting to depict the corruption of the world, embodied in his judges, clowns and prostitutes. He turned to printmaking in about 1914 but after 1940 concentrated on religious painting, using heavy black outlines, strong colouring and simplified forms. He destroyed much of his work shortly before his death.

Rouen, port in N France on the River

Seine 114km (71 miles) NW of Paris; capital of Seine-Maritime département. By the 10th century, Rouen was the capital of Normandy and one of Europe's leading cities. It was the scene of Joan of Arc's trial and burning in 1431. Rouen has many fine ecclesiastical buildings including the Cathedral of Notre Dame (12th-15th centuries). The city has a university (1966). Industries: textiles, flour milling, iron foundries, perfumes, leather goods. Pop. (1975) 388,711.

Roulette, game of chance popular at gambling houses. Thought to date from the mid-17th century, it uses a small ivory ball tossed into a wheel which is spun by the gaming-table attendant (the croupier), bets having been placed beforehand on where the ball will come to rest. The wheel is marked off into 37 squares (38 in the USA) with retaining walls. The squares, alternatively red and black, are numbered one to 36; the remaining square, marked 0, is usually green (in the US the extra square is marked 00). Players place a variety of bets on a table which has an arrangement of numbered squares corresponding to the numbers of the wheel.

Round, musical form in which a tune is sung in canon. Performers begin the melody one after another at regular time intervals; the tune is so constructed that the whole is together harmonious.

Round, Theatre in the. See THEATRE-IN-THE-ROUND.

Rounders, game resembling BASEBALL. Played mostly by children, it needs two teams, usually of nine players, who alternate as batting and fielding sides for two innings each. The aim is to score rounders by hitting the ball and running around a circuit of four posts or bases. A batsman is out if he is caught, runs inside a post or if a fielder holding the ball touches a post or the batsman while he is between bases. The team scoring the most rounders wins.

Roundheads, name given to Parliamentary party supporters during the ENGLISH CIVIL WAR (1642-51). The name was originally a derogatory term for PURITANS, who cut their hair short in contrast to the long hairstyles worn by CHARLES I and the Royalists. See also p.1422.

Round Table, in Arthurian legend, large circular table that seated KING ARTHUR'S knights. A table now in Winchester Cathedral, thought for many years to have been the Arthurian Round Table, was proved in the mid-1970s to be of the 14th century. See also p.1155.

Round Table Conferences, two series of talks in British history. The first were held in 1887 on the initiative of Joseph Chamberlain in an unsuccessful attempt to reunite the LIBERAL PARTY after the split over IRISH HOME RULE in 1886. The second were the discussions in London (1930-32), attended by British and Indian representatives, which laid the basis for the Government of India Act of 1935.

Roundworm, parasite of the class Nematoda, which inhabits the intestine of mammals. It breeds in the intestine. The larva bores through the intestinal wall, is carried to the lungs in the bloodstream and crawls to the mouth where it is swallowed. Length: 15-30cm (6-12in).

Rous, Francis Peyton (1879-1970), US pathologist who shared the 1966 Nobel Prize in physiology and medicine with Charles B. HUGGINS for the discovery of CANCER-inducing viruses. In 1910 Rous began a series of experiments on sarcomas in hens, injecting healthy birds with a solution made from sarcomas from cancerous ones. He filtered the solution to remove all cells and bacteria but found that the healthy hens developed cancer, which led him to postulate that this cancer could be caused by viruses. The theory was rejected at the time, but later experiments proved him correct.

Rous, Sir Stanley (1895-), British soccer administrator. After 15 years as a referee, he was secretary of the Football Association (1934-62) and president of FIFA (1962-74).

Rousseau, Henri "le Douanier" (1844-1910), French primitive painter who was self-taught. He was called le Douanier because before he retired to paint in 1885

he held a post in the Paris customs office. His style is characterized by a strong sense of pattern and colour combined with the use of exotic jungle themes showing tropical plants and beasts.

Rousseau, Jean-Jacques (1712-78), French philosopher born in Geneva, considered to be a founder of ROMANTICISM. He contributed to the *ENCYCLOPÉDIE* of DIDEROT in the 1740s, and won fame for his *Discourses on Science and the Arts* (1750). In *The Social Contract* (1762) he argued that man had been corrupted by civilization; he envisaged a society in which freedom and equality would be achieved by individuals agreeing to contribute to and be subject to a "General Will", and in which executive power was delegated by the people. His ideas on individual liberation from the constraints of society were developed in *Émile* (1762), in which he outlined his theories of education. He described his early, wandering life in a revealing autobiography, *Confessions*, published posthumously in 1782. See also pp.1467, 1549, 1827, 1870.

Rousseau, Théodore (1812-67), French painter, a leading member of the BARBIZON SCHOOL. Strongly influenced by CLAUDE LORRAIN, CONSTABLE and the 17th-century Dutch landscapists, he painted romantic landscapes which nevertheless retained an objective observation of nature.

Roussel, Ker-Xavier (1867-1944), French painter and member of the NABIS who used small IMPRESSIONIST strokes of clear unmixed paint to give a more poetic meaning to landscapes.

Roussillon, region and former province of S France on the Spanish border, bounded by the E Pyrenees (S) and the Gulf of Lion (E). After changing hands many times the region was conquered in 1642 by Louis XIII and annexed to France in 1659 by the Treaty of the Pyrenees.

Rowan. See MOUNTAIN ASH.

Rowe, name of two British table tennis players, twin sisters, who became world champions. Diane (1933-) was a left-hander, and her sister Rosalind was a right-hander. They won the world doubles title in 1951 and 1954 and were three times runners-up. Diane ("Di") reached another two doubles and one mixed doubles finals and was twice a European doubles champion.

Rowe, Nicholas (1674-1718), British dramatist. After becoming a lawyer he turned to literature and wrote his first play, *The Ambitious Stepmother*, in 1700. He rose to fame with *The Tragedy of Jane Shore* (1714).

Rowing, way of moving a boat through water using oars, popular as a sport. Modern racing boats hold crews of two, four or eight oarsmen, each crew member using both hands to pull one oar through the water (the use of two oars by a single oarsman is sculling). The oars are attached alternately to opposite sides of the boat, or shell. A COXSWAIN always steers for eights and directs the crew; pairs and fours may or may not have a coxswain. Rowing as a sport has been popular in Britain since 1829, when the first Oxford and Cambridge University crew races were held at Henley-on-Thames. It was unofficially included in the Olympic Games in 1900 and 1904; from 1908 it was an official olympic sport. See also BOAT RACE; DIAMOND CHALLENGE SCULLS.

Rowlandson, Thomas (1756-1827), British draughtsman and caricaturist who portrayed life and manners in 18th-century Britain. Among his drawings are *Vauxhall Gardens* (1784) and *The Comforts of Bath* (1798). He used ink and a reed pen, and the fluidity of his line has often been likened to the French ROCCO style of FRAGONARD. See also pp.1483, 1546, 1554.

Rowley, William (c.1585-c.1642), English dramatist and actor. Specializing in fat clown roles, he was a popular figure in the theatre. He wrote numerous plays, including *A Shoemaker a Gentleman* (1608), *All's Lost by Lust* (1619) and *The Changeling* (1621) with Ruddleton.

Rowling, Wallace Edward (1927-), New Zealand politician and Prime Minister (1974-75). He was Finance

Rowntree, Benjamin Seebohm

Minister (1972-74) and became Prime Minister on the death of Norman Kirk (1974), but in the general election of 1975 his Labour government was heavily defeated.

Rowntree, Benjamin Seebohm (1871-1954), British businessman and sociologist, son of Joseph ROWNTREE. In 1889 he joined the family chocolate firm and introduced employees' pensions (1906), a five-day week (1919) and employee profit-sharing (1923). He published three studies of York, *Poverty: A Study of Town Life* (1901), *Poverty and Progress* (1941) and *Poverty and the Welfare State* (1951).

Rowntree, Joseph (1836-1925), British manufacturer and social reformer. A Quaker, he was aware of the bad industrial conditions endured by the working class, and in the Rowntree cocoa factory he founded at York he strove to establish good working conditions and fair wages. He introduced unemployment relief, set up social and charitable trusts and built a model village in New Earswick (1904) for his workers.

Rowse, Alfred Leslie (1903-), British historian. He was a fellow of All Souls' College, Oxford, from 1925 to 1974. He was principally an Elizabethan and Shakespearean scholar.

Roxburgh, former county in Scotland on the border with England; since 1975 it has been part of Borders Region. An upland area in the Cheviot Hills, Roxburgh is drained by the Tweed, Liddel Water and Teviot rivers. Sheep rearing is the principal agricultural activity. Textiles is the most important industry. Jedburgh was the county town. Area: 1,722sq km (668sq miles).

Roy, Gabrielle (1909-), French-Canadian author. Her novels about the Montreal working class include *Bonheur d'occasion* (1945; tr. 1947, *The Tin Flute*) and *Alexander Chenevert caissier* (1954; tr. 1955, *The Cashier*).

Royal Academy of Arts, national academy of the arts in Britain, founded by GEORGE III in 1768 on the advice of William CHAMBERS. Its first president was Sir Joshua REYNOLDS. Since 1867 it has been housed at Burlington House, London. There are 40 academicians at any one time and 30 associates. See also p.1547.

Royal Academy of Dramatic Art. See RADA.

Royal Academy of Music, teaching institution officially opened in London in 1823 and chartered under royal patronage in 1830. It offers about 70 scholarships and competitive exhibitions to students.

Royal Air Force (RAF), youngest of the armed services of Great Britain. It was formed in 1918 by the amalgamation of the Royal Naval Air Service and the Royal Flying Corps. It was organized on a permanent basis under a scheme drawn up by Lord TRENCHARD in 1919, and controlled by the Air Ministry until this merged with the Ministry of Defence in 1964. In 1939, the RAF had 2,600 operational aircraft and 174,000 personnel. During the war its most famous action was the Battle of Britain. The work of coastal command in protecting convoys against U-boat attack in the Battle of the Atlantic was also important. Towards the end of the war, most resources were devoted to the bombing of Germany by long-range aircraft such as the *Lancaster*. By 1945 the RAF had grown immensely: it then consisted of 9,200 aircraft and 1,079,835 personnel. After WWII there were major technical innovations as jet aircraft came into service. Large manned aircraft, such as the "V" bombers of the 1960s, were gradually superseded as guided missiles became more important. The role of manned aircraft then became one of close support for ground troops, especially using manoeuvrable small planes capable of vertical takeoff. See also pp.570-572, 1671, 1710-1712.

Royal Albert Hall, circular concert hall in Kensington, London, built mainly by public subscription and opened in 1871 as a memorial to Prince ALBERT. It has a seating capacity of about 10,000 and is the venue for the annual Promenade Concerts started by Sir Henry Wood.

Royal and Ancient Golf Club, the leading administrative body, along with the US Golf Association, of world golf. Based at St Andrews in Scotland, it adopted responsibility for the game's rules in 1897.

Royal Ballet. See BALLET, ROYAL.

Royal Canadian Mounted Police, federal police of Canada which was originally organized in 1873 as the Northwest Mounted Rifles to bring law and order to the Canadian west. The prefix "Royal" was added in 1904.

Royal College of Music, institution founded to set standards of instruction, award degrees and promote the art of music in Britain generally. It was founded by the Prince of Wales in 1882. Its present premises in Prince Consort Road, Kensington, were opened in 1894.

Royal Court Theatre, London theatre which opened in 1888 and which during a chequered history has had two periods of popular and critical success. From 1904 to 1907 J. E. Vedrenne and Harley Granville-Barker produced seasons of classics and contemporary plays by SHAW, GALS-WORTHY, YEATS, Hauptmann, MAETER-LINCK and many others. Half a century later, the production by the English Stage Company of John OSBORNE's *Look Back in Anger* (1956) heralded a similarly influential and controversial succession of new plays by BOND, ARDEN, PINTER and WESKER. Their plays revitalized post-WWII British drama and, to encourage further new work, an experimental THEATRE-IN-THE-ROUND, the Theatre Upstairs, was opened at the Royal Court in 1969.

Royal Dutch Shell Oil Group. See SHELL.

Royal Exchange, building for the transaction of business by London merchants in Cornhill, London, founded by Sir Thomas Gresham in 1566. It was twice destroyed by fire, in the Great Fire of 1666 and in 1838. In 1928 the third building, opened in 1844, was taken over by the Royal Exchange Assurance Corporation.

Royal Family, the British monarch and the members of his or her family. The Royal Family is protected and controlled by various statutes, including the Statute of Treasons (1352) and the Act of Settlement (1701). Since the late 17th century, the Royal Family has had its prerogatives severely curtailed as part of the constitutional framework of the nation; the powers and status of each member have been closely defined. The reigning monarch has a great deal of control over the other members of the family, as in such matters as their marriage. A sum known as the CIVIL LIST is paid annually to the sovereign out of the Consolidated Fund. Other members of the Royal Family are also paid from this fund, but separately from the Civil List.

Royal fern, or flowering fern, common, widely distributed bush FERN of wetlands. It has large leaves and cylindrical pinnae on the ends of fronds, which are densely covered with *sporangia* (sacs in which spores are produced) and look like flowers. Height: to 1.8m (6ft). Family Osmundaceae; species *Osmunda regalis*.

Royal Festival Hall, concert hall on the South Bank of the River Thames, opened in 1951. Its design, by Sir Robert Matthew and Sir John Martin, favours excellent acoustics and it originally formed part of the South Bank Exhibition for the Festival of Britain. It holds an audience of about 3,000 people.

Royal Flying Corps, first national organization of military aviation in Britain. It was set up in 1912, and although the Royal Naval Air Service had split off by 1914, the two were merged as the ROYAL AIR FORCE in April 1918. See also pp.1671, 1671.

Royal Greenwich Observatory, building by Sir Christopher WREN, in Greenwich Park, London. It was formerly the site of Britain's major government observatory, which was gradually moved to Herstmonceux Castle in East Sussex after WWII. The prime MERIDIAN, which determines Greenwich Mean Time (GMT), ran through the original observatory in Greenwich Park. See also p.921.

Royal Horticultural Society, body founded in 1804 to encourage all forms of

HORTICULTURE and to collect information on plants and trees. The society has scientific gardens at Wisley in Surrey. Its library is probably the finest horticultural library in the world and the society publishes books and holds exhibitions, including the annual flower show at Chelsea.

Royal Institution, organization founded in London in 1799 for the "promotion, diffusion and extension of science and useful knowledge". Distinguished scientists who have used its research laboratories include Sir Humphry DAVY and Michael FARADAY. The "Christmas lectures" for young people, traditional since the 19th century, are now televised.

Royalists, people who supported the Stuarts from 1642 to 1660, during the ENGLISH CIVIL WAR and interregnum. There were few outright republicans in the country, but many people, while desiring to keep a king on the throne, wanted CHARLES I and CHARLES II to alter their policies.

Royal jelly, in HONEYBEE colonies, the special food given to female bee larvae destined to become queens. It is a glandular secretion of young worker bees who themselves are females, but have been fed on honey and pollen and so have not developed into queens.

Royal Marines, soldiers who serve at sea. The names of their ranks correspond with those of the army and their commander is a general, but since their foundation in 1664 they have been intended to operate on or from ships. In 17th- and 18th-century naval warfare, men trained in the use of firearms and able to undertake hand-to-hand combat were an essential part of a ship's complement. The marines were always available, also, as a mobile force which could be put ashore at any time to operate as conventional soldiers. Their first great success in such a role was when they captured Gibraltar in 1704. During WWII they were used in combined operations such as the Zeebrugge raid, and their strength reached 40,000; during WWII the scope for using seaborne troops was even greater, and 74,000 Royal Marines were in service, distinguishing themselves in operations from Iceland to the Irrawaddy River.

Royal Marriage Act (1772), act of the British parliament which established that descendants of GEORGE II, under the age of 25, may marry only with the royal consent.

Royal Military Academy. See SANDHURST.

Royal Navy, fighting force that defends Britain's coastal waters and its merchant shipping. The first naval fleet in Britain was built by ALFRED THE GREAT in 878 to fight off the Viking raids. In the 16th century Henry VII built the first specialist naval ships (previously merchant ships were commandeered when needed) and established the first dockyards, thus paving the way for England's subsequent rise as a naval power. The following centuries saw a struggle for naval supremacy between Britain, France and The Netherlands, culminating in the Battle of TRAFALGAR in 1805 in which the British navy under Lord NELSON defeated the French. This victory heralded the supremacy of the Royal Navy that lasted until well into the 20th century. Since WWII the role of the Royal Navy has diminished because of cuts in the defence budget. The emphasis is now on SUBMARINES and small, fast fighting ships such as FRIGATES and DESTROYERS, many of which are nuclear-powered. See also pp.478-479, 478-479, 568-569, 568-569, 1411, 1554, 1554, 1662, 1663, 1712.

Royal Opera, The, resident company of the ROYAL OPERA HOUSE, London. It was originally known as the Royal Italian Opera in 1847, and became the Royal Opera in 1892. From this time the custom was established of performing opera in the language in which it was written rather than in Italian. In 1946 it became known as the Covent Garden Opera Company which was formed by a trust founded by John Maynard KEYNES. It was again granted the title "Royal" by a charter of 1968. After WWII, for a time, many foreign operas were sung in English translation. Outstanding musical directors have

included Karl Rankl (1946-51), Rafael KUBELIK (1955-58), Sir Georg SOLTI (1961-71) and the present incumbent Colin DAVIS (1971-).

Royal Opera House, originally known as Covent Garden Theatre, home of The ROYAL OPERA and, from 1946, of SADLER'S WELLS Ballet (now The Royal Ballet). The theatre was first opened in 1732 and the present building was completed in 1858 by the architect Edward Barry (1830-80).

Royal palm, ornamental palm native to the Caribbean islands and Central America. It has a tall, light-coloured trunk and feather-shaped leaves. Species include the cabbage palm or palmetto, which grows to 37m (120ft), and the Cuban royal palm, to 21m (70ft). Family Palmaeaceae; genus *Roystonea*.

Royal Pavilion, the summer palace of George IV, major architectural attraction at the English seaside resort of Brighton. Originally built in 1784-87, it was remodelled by John NASH between 1815 and 1823 at the command of the then Prince Regent.

Royal Shakespeare Company (RSC), state-subsidized British theatrical repertory company based in STRATFORD-UPON-AVON, until 1961 (when it received a Royal charter) known as the Shakespeare Memorial Company. Its chief concern has always been with the plays of Shakespeare, and under the Artistic Directorships of Peter HALL (1960-68) and his successor Trevor NUNN the company became a permanent ensemble. In 1960 it established a second base in London at the Aldwych Theatre. Shakespeare has been presented there alongside other classics and new works by dramatists such as DÜRRENMAT, BECKETT, PINTER, MERCER and STOPPARD, so that plays by Shakespeare can be approached with a contemporary awareness and skilled classical actors can meet the challenge of important modern works. The RSC tours widely and in 1974 it was estimated that its total worldwide audiences had totalled one million for the first time.

Royal Society for the Prevention of Cruelty to Animals. See RSPCA.

Royal Society of London, scientific society founded in 1660 and incorporated two years later. The society's aim was to accumulate experimental evidence on the widest range of scientific subjects, including medicine and botany as well as the physical sciences. In the 20th century, the Royal Society became an independent body of distinguished scientists encouraging a wide variety of research. See also pp.1426, 1437.

Royal tennis. See REAL TENNIS.

Royal Ulster Constabulary, organization established in 1922 by the then Northern Ireland government. Its purpose is primarily that of a civil police force but since 1970 the constabulary has been increasingly involved in security. Its growing membership in the mid-1970s was more than 5,000.

Royal warrant holders, British tradesmen authorized to display the crest, currently of the Queen, the Queen Mother, the Duke of Edinburgh and, from 1980 of Prince Charles. Firms which have satisfactorily supplied royal households for a minimum of three years may apply to the Lord Chamberlain for a warrant.

Royal Worcester. See WORCESTER, ROYAL.

Rozeanu, Angelica (1921-), Romanian table tennis player. She won 17 world championship gold medals: six successive singles (1950-55), three doubles (1953, 1955, 1956), three mixed doubles (1951-53) and five team (1950, 1951, 1953, 1955, 1956).

RR Lyrae variable, formerly called a CEPHEID cluster, intrinsic regular short-period variable star of the Cepheid type, usually with a period of less than one day. Stars of this type are of Population II, ie they are old stars commonly found in globular clusters, and appear to be of uniform intrinsic brightness. Like the classic Cepheids, they have been effectively used in distance measurement. See also pp.979, 990, 991, 991, 995, 995, 998.

RSPCA (Royal Society for the Prevention of Cruelty to Animals), organization

established "to prevent cruelty and promote kindness" to animals. Founded in England in 1824, the RSPCA has its headquarters at Horsham, Sussex. In the mid-1970s it had some 225 inspectors in England and Wales, whose duties entail investigating cases of cruelty to animals and, if necessary, bringing offenders to court. There are similar organizations in Northern Ireland, Scotland and the Republic of Ireland.

Ruanda or Rwanda, East African tribe mostly inhabiting the state of RWANDA. Although the land is densely populated the people practise a predominantly agricultural subsistence economy, with families living together in self-contained kraals. The Ruanda language, a member of the BANTU group of languages, is spoken by about five million people.

Ruanda-Urundi. See BURUNDI; RWANDA. **Rubaiyat of Omar Khayyam**, The, collection of quatrains said to be by the 11th-century Persian astronomer-poet, OMAR KHAYYAM. The verses exalt the sensual, pleasure-seeking life and were translated in 1859 by Edward FITZGERALD in a free rather than a literal version. It is doubted whether more than a tenth of the verses can actually be attributed to Omar.

Rub' al-Khali, one of the largest sand deserts in the world, situated in the Arabian Peninsula. The Arabic name means "empty quarter" and the desert is considered unable to support any life. Area: 650,000sq km (251,000sq miles).

Rubber, elastic solid obtained from the latex of the rubber tree (*Hevea brasiliensis*). Natural rubber consists of a POLYMER of cis-isoprene and is widely used for tyres and other applications, especially after VULCANIZATION. Synthetic rubbers are polymers tailored to excel in certain properties for specific purposes; none have the overall advantages of natural rubber. They include styrene-butadiene rubber (SBR), neoprene, nitrile rubber and the newer stereo-rubbers based on synthetic cis-polyisoprene. See also p.588.

Rubber plant, evergreen fig native to India and Malaysia. Tree-sized in the tropics, it is grown as a pot plant in temperate regions. Once cultivated for its white LATEX to make india-rubber, it has large, glossy, leathery leaves and a stout, buttressed trunk. Height: to 30m (100ft). Family Moraceae; species *Ficus elastica*.

Rubber tree, any of several South American trees whose exudations can be made into RUBBER; especially *Hevea brasiliensis* (family Euphorbiaceae), a tall softwood tree native to Brazil but introduced to Malaysia. The milky exudate, called LATEX, is obtained from the inner bark by tapping, and then coagulated by smoking over fires or chemically. See also p.588.

Rubber tyre, part of a wheel made to make contact with the ground and provide friction for non-slip grip and springiness for a smooth ride. It is made in two parts; the outer rubber tread which holds the road, and the inner body which is a tough fabric impregnated with rubber and bordered by steel wire or nylon threads which hold the tyre to the wheel, and acts as a strengthening framework. Tyres are black in colour because carbon black is added to improve abrasion resistance. The rubber is also hardened by vulcanization or addition of sulphur. The body of early tyres had a cross-ply pattern for the strengthening cords; these are being replaced by radial-ply tyres which offer better road-holding at high speeds. See also pp.496, 499, 588-589.

Rubbra, Edmund (1901-), British composer, a pupil of HOLST and VAUGHAN WILLIAMS. He has written ten symphonies and concertos for piano, violin and viola. He has also written much choral music, including madrigals and the *Canterbury Mass* for double choir (1945).

Rubella. See GERMAN MEASLES.

Rubénisme, late 17th-century movement in French art. Its protagonists, following the work of TITIAN and RUBEN held that colour was the most important element in painting since it was the most convincing means of achieving reality. This theory was opposed in the French Academy of

Painting by poussinisme. Led by LEBRUN its followers maintained that colour was merely decorative and of less interest than the more formal elements of drawing and design, as shown in the paintings of POUSSIN. The Rubénistes won the debate, and the Academy's acceptance for exhibition of a painting by WATTEAU (1717) consolidated the victory.

Rubens, Peter Paul (1577-1640), Flemish painter and engraver. During two visits to Italy between 1600 and 1608 he painted religious subjects and was greatly influenced in his style by the works of Italian High Renaissance masters. Monumental muscular figures in action are characteristic of his heroic, Mannerist style. When he returned to Antwerp (1608), he established a workshop that became highly successful, producing huge portraits and allegorical series for the wealthy and nobility of western Europe. His best-known works are his crowded Baroque canvases in which he used light and colour to give a dramatic sense of action. His 21 paintings of *The Life of Marie de Medicis* are from this period (1622-25). His later landscapes show a softening of colours. See also MANNERISM; pp.1438-1439, 1439.

Rubiaceae, large family of flowering plants (the MADDER family) containing about 6,500 species, most of which are tropical. They include COFFEE and CINCHONA; temperate species include MADDER and GARDENIAS.

Rubicon, small river in N central Italy. It rises in the foothills of the Etruscan Apennines and flows into the Adriatic Sea N of Rimini. The river separated Cisalpine Gaul from Italy in Roman times. Julius CAESAR precipitated civil war against POMPEY after crossing the Rubicon with his army in 49 BC.

Rubidium, metallic element (symbol Rb) of the alkali-metal group, discovered in 1861. The element has few commercial uses; small amounts are used in photoelectric cells. Chemically it resembles SODIUM, but is more reactive. Properties: at. no.37; at. wt.85.4678; s.g.1.53; m.p.38.89°C (102°F); b.p. 688°C (1,270°F); most common isotope Rb⁸⁵ (72.15%). See also ALKALI ELEMENTS.

Rubinstein, Artur (1887-), US pianist, b. Poland. He studied in Warsaw and Berlin, making his debut with the Berlin Symphony Orchestra in 1901. He first played in the USA in 1906 and later became famous for his interpretation of CHOPIN and Spanish composers. He had one of the longest active concert careers of any musician.

Rubinstein, Helena (c.1871-1965), Polish-born founder of an international cosmetics business. She opened her first shop in Melbourne, Australia, marketing a Polish cold-cream she had used since childhood. After study with European dermatologists, she opened salons in London (1908), Paris (1912) and New York (c.1411). See also p.1454.

Rublev, Andrei (c.1370-1430), Russian fresco and icon painter. Painting in the BYZANTINE tradition, he was Russia's greatest iconographer and famous for his masterpiece *The Old Testament Trinity* (c.1411). See also p.1454.

Rubric, from the Latin *rubrica* ("in red"), originally the heading of chapter or section, but also the part of a manuscript or book, set in a different colour because of special importance. Directions for the conduct of religious services were often distinguished in red ink and are still called rubrics.

Rubus, genus of plants of the ROSE family (Rosaceae), well-known as berry-bearing bushes such as BLACKBERRY, RASPBERRY and LOGANBERRY. Less familiar in Britain are DEWBERRY and cloudberry. See pp.674, 710.

Ruby, gem variety of the mineral CORUNDUM (aluminium oxide), whose characteristic red colour is due to impurities of chromium and iron oxides. The traditional source of rubies is Burma. Today synthetic rubies are widely used in industry, especially in LASER technology. See also pp.260-261, 260-261, 862, 862.

Ruda Śląska, town in S central Poland, in

the coal-mining region of Upper Silesia. The town dates from the Middle Ages when it was an iron-mining centre. The first coal mine in Poland was opened there in 1751. Pop. (1974) 147,000.

Rudd, or red eye, fish related to the MINNOW. In the USA it is called pearl roach. Found also in Europe N and W Asia, the rudd is a large, full-bodied fish with reddish fins, the dorsal fin being farther back than that of the true ROACH. Length: to 40.6cm (16in); weight: to 2kg (4.5lb). Family Cyprinidae; species *Scardinius erythrophthalmus*.

Rudder, broad surface used to steer aeroplanes or ships. The first rudders, used by the ancient Romans and Greeks, were large oars fitted to one side of the rear of a ship. By the 14th century AD rudders were mounted in the centre of the stern, enabling more control to be exerted. Some modern liners have rudders which are 18m (60ft) long. For a left turn, the rudder is turned to its left, adding a drag to that side of the vessel or aeroplane, causing it to pull round. See also pp.518, 518.

Ruddigore, or The Witch's Curse (1887), comic opera in two acts by Arthur SULLIVAN, libretto by William GILBERT. It was first performed at the Savoy Theatre, London, and ran for eight months.

Rude, François (1784-1855), French sculptor who suffused CLASSICAL idealism with overt ROMANTICISM in patriotic works such as his famous relief on the ARC DE TRIOMPHE, *The Departure of the Volunteers in 1792*, known also as *La Marseillaise* (1833-36).

Rudolf, the name of two HAPSBURG rulers of Germany. Rudolf I (1218-91), the first Hapsburg monarch, reigned from 1273 to 1291 and laid the foundations of the Hapsburg dominions in 1278 by obtaining Austria, Styria and Carniola from Bohemia. Rudolf II (1552-1612) was Holy Roman emperor (r.1576-1612), King of Bohemia (r.1575-1611) and of Hungary (r.1572-1608). His attempt to force Catholicism on Hungary led to a revolt in 1604. Matthias, his brother, forced Rudolf to cede the rule of Hungary, Austria and Moravia (in 1608) and Bohemia (in 1611) to him.

Rudolf (or Rudolph), Archduke (1858-89), only son of the Austrian Emperor FRANCIS JOSEPH. He was a liberal reformer and committed suicide at Mayerling with his companion Baroness Marie Vetsera in 1889.

Rudolph, Wilma (1940-), US track athlete. As world 200m record holder she won two gold medals at the 1960 Olympics for the 200m and 100m sprints and a third gold medal in the relay. She retired after setting a world 100m record of 11.2 seconds in 1961.

Rue, any of about 40 species of evergreen plants or shrubs that grow in warm regions of S Europe and SW Asia. They have aromatic leaves used in medicine or as flavouring. Family Rutaceae; genus *Ruta*.

Ruff, bird of the SANDPIPER family (Scolopacidae). The male is noted for a collar of long feathers about its neck, and for its antic courtship performances. The female is called a reeve. The ruff is polygamous, unlike most sandpipers, and migrates across N Europe and N Asia to Africa and India. Species *Philomachus pugnax*. See also pp.73, 76.

Rug, loose covering, in general smaller than a CARPET, usually made of wool, now commonly placed on floors. Until the development of power looms in the 19th century, rugs were always manufactured on handlooms.

Rugby fives. See FIVES.

Rugby league football. See FOOTBALL, RUGBY.

Rugby union football. See FOOTBALL, RUGBY.

Ruhr, river in West Germany. It rises in the hills of N central West Germany and flows NW and W to join the River Rhine at Duisburg. The Ruhr valley, an industrial mining district, contains large coal deposits and is one of the most important industrial complexes in the world. The area along the river was occupied by French and Belgian troops between 1923 and 1925 because of a dispute with Germany

over reparations. The occupation was greatly resented by German nationalists. Length: 235km (146 miles).

Ruisdael (or Ruysdael), Jacob van (c.1628-82), Dutch painter. Greatest of the Dutch landscapists, he studied under his father, Isaak, and was influenced by his uncle, Salomon van Ruysdael. Jacob brought to his paintings of the flat northern landscape and cloud-filled skies an unusual breadth and accuracy. Among his many works are *Wooded Landscape* (c.1660) and *Windmill at Wijk* (c.1670). See also pp.1445, 1445.

Ruiz, Juan (fl.14th century), Spanish poet. Thought to be the author of what is probably the most remarkable poetic work of the Spanish Middle Ages, the *Libro de buen Amor* (c.1343), he employed rhetoric, dialogues, irony and ambiguity to create a vivid picture of a series of love affairs, allegorical and anecdotal.

Ruiz de Alarcón y Mendoza, Juan (c.1581-1639), Spanish dramatist. Before abandoning drama to take up a government position in 1626 he wrote 24 plays, many of them moral comedies.

Rum, alcoholic spirit made by the fermentation of MOLASSES and other sugar cane products, which are then distilled. As distilled, rum is colourless, but storage in wooden casks and the addition of caramel give it a brown colour.

Rûm, Muslim term used by Arabs in reference to the BYZANTINE Greeks who considered themselves heirs to the ROMAN EMPIRE and called themselves Romaioi. The term was also used to describe Byzantine territory, thus the sultanate of Rûm was a kingdom in Byzantine Anatolia established by the SELJUK TURKS after the Great Seljuk Sultanate had disintegrated.

Rumania. See ROMANIA.

Rumba, popular American ballroom dance with Afro-Cuban origins. The music is in syncopated 4/4 time, and the dance involves two quick side-steps and a slow forward step, the emphasis being on body movements rather than elaborate footwork.

Rumelia, area in S Bulgaria. Historically it was a possession of the Ottoman Turks encompassing modern Yugoslavia, Bulgaria, European Turkey, N Greece, and part of Albania. Bulgaria was made an independent area with Eastern Rumelia an autonomous state under Turkish protection by the Treaty of Berlin in 1878. The Eastern Rumelians voted in 1885 to unite with Bulgaria causing the Serbian War 1885-86. The Serbians were defeated and Prince Alexander of Bulgaria named as governor of Eastern Rumelia. This tacit surrender of the province remained in force until 1908 when Bulgaria and thus Eastern Rumelia became independent.

Rumford, Benjamin Thomson, Count (1753-1814), American-British scientist and administrator. He moved to Britain during the American War of Independence and was made a count of the Holy Roman Empire for service in Bavaria in 1791. In science, he discovered that heat, or KINETIC ENERGY, is a form of motion. In 1799 he founded the ROYAL INSTITUTION of Great Britain.

Rumi (1207-73), Persian poet, full name Jalâl ad-Dîn ar-Rûmî. He is considered the finest exponent of SUFI poetry, his main work being the *Mathnawî* (or *Masnawî*).

Ruminants, cud-chewing, even-toed, hoofed mammals, including the OKAPI, CHEVROTAIN, DEER, GIRAFFE, ANTELOPE, CATTLE, SHEEP and GOATS. All except the chevrotain have four-chambered stomachs. See also ARTIODACTYLA.

Rummy, card game for two to six players using a standard pack. In the two-hand game, ten cards are dealt to each player; in a three- or four-hand game, seven cards are dealt to each; in a five- or six-hand game, six cards are dealt to each. The rest of the pack is placed face down on the table and the top card is turned up. Players in turn take either a new card from the pack or the card discarded by the preceding player, before discarding a card themselves. The object is to acquire a hand with

Rump Parliament

Damon Runyon's stories describe New York and its inhabitants in the 1930s.

Prince Rupert; the original version of this portrait was painted by Van Dyck.

John Ruskin emphasized the importance of drawing and engraving in art education.

Russian blue cats have a thick coat with two layers of short dense fur.

all of its cards of the same suit in sequence, three or four cards in a sequence or three or four cards of the same rank. The first person to achieve this and set all his cards on the table wins. See also GIN RUMMY.

Rump Parliament (1645–53, 1659–60), name given to the Parliament that governed England after the ENGLISH CIVIL WAR had ended with the defeat of CHARLES I. It comprised members who had been elected to the House of Commons in the 1642 election except those hostile to the army, who had been expelled in Pride's Purge in 1648. In 1653 CROMWELL dismissed the Rump Parliament and ruled as virtual dictator of the Commonwealth. The Rump was restored in 1659, and the members expelled by Pride were readmitted in 1660, clearing the way for a general election and the RESTORATION. See also pp.1424, 1424–1425.

Rum Rebellion, popular name for the events of 1808 which drove Captain BLIGH from the governorship of New South Wales (1810). Its name derives from the fact that one cause of the revolt was the illegal import of rum stills on the *Parramatta*.

Runeberg, Johan Ludvig (1804–77), Finnish national poet. His simple style helped to check the tendency towards false rhetoric in Scandinavian literature. The first song from his poem on the Russo-Swedish war, *Songs of Ensign Sild* (1848–60), has been adopted as the Finnish national anthem.

Runes, angular letters of the runic alphabet formerly used by Germanic peoples. Also called futhork after its first six sounds (*f, u, th, a, r, k*), runic may have been developed by the GOTHs from the Etruscan alphabet.

Running, activity for sporting and recreational purposes. Many games involve running, and it is a sporting discipline in its own right, as in track athletics, cross-country and marathon running. Jogging, or running within one's limitations, has become internationally popular as a means of keeping fit.

Runnymede, meadow in s England, on the s bank of the River Thames at Egham, Surrey, w of London. It was either there or on nearby Magna Carta Island that King JOHN accepted the MAGNA CARTA in 1215. The meadow was given to the British nation in 1931. Today it also has a memorial to President John F. KENNEDY.

Runyon, Alfred Damon (1880–1946), US author and journalist who wrote humorous stories about colourful New York City characters. *Guys and Dolls* (1932) established his reputation.

Rupert, Prince (1619–82), Bohemian military commander. His uncle CHARLES I made him general of the horse and as the commander of the cavalry in the ENGLISH CIVIL WAR he was undefeated until MARSTON MOOR (1644). He was dismissed after the Royalist defeat at NASEBY (1645) and his surrender to FAIRFAX at Bristol. He led PRIVATEERS against English shipping during the PROTECTORATE and, back in England after the Stuart restoration, served as an admiral in the Dutch wars.

Rupture. See HERNIA.

Rural dean, term used in the Church of England to describe the supervisor of the parishes of a certain area. An ancient office, its duties have gradually been absorbed by those of Archdeacons.

Rural Rides (1830), best-known book by the radical British journalist William COBBETT. It is a classic portrayal of rural conditions showing his concern for the rural worker.

Rusalka, in Slavic mythology, lake-dwelling spirit of a drowned virgin or unbaptized child in the form of a beautiful girl robed in mist. She lured passers-by to join her in a dance of death.

Ruse, port city in NE Bulgaria on the River Danube, bordering Romania. Founded in the 2nd century BC, it developed under Turkish rule from the 17th to 19th centuries. It is now an industrial and communications centre. Pop. 145,000.

Rush, tufted, perennial bog plant found in temperate regions. It has long, narrow leaves and small flowers crowded into

dense clusters. Among about 700 species is *Juncus effusus* of Europe and N Africa. It has brown flowers and ridged stems. Height: 30–152cm (1–5ft). Family Juncaceae. See also pp.380, 381.

Rush-Bagot Convention (1817), British-USA agreement providing for disarmament of the US–Canadian border. It was agreed between Richard Rush, US Acting Secretary of State and Charles BAGOT, British minister in Washington.

Rusk, David Dean (1909–), US politician. In 1950 he was involved in the US decision to enter the KOREAN WAR and as Secretary of State from 1961 to 1969 advocated and defended US intervention in Vietnam.

Ruskin, John (1819–1900), British art theorist and social critic. He attempted to find the solution to many social problems through his approach to art. A strong religious conviction was the basis for his reflection of the Classical tradition in art and for his advocacy of Gothic naturalism as the style through which man could best express his praise for God and creation. These ideas are expressed most forcefully in his books on architecture: *The Seven Lamps of Architecture* (1849) and *The Stones of Venice* (three vols, 1851–53). His notion of the artist was essentially Romantic – as an aesthete, prophet and teacher. His five-volume work *Modern Painters* (1834–60) championed the paintings of J. M. W. Turner and after 1851 he supported the PRE-RAPHAELITE BROTHERHOOD.

Russell, English family, first prominent among the nobility in the 16th century. John Russell (c.1486–1555), Lord Keeper of the Privy Seal to HENRY VIII and EDWARD VI, was created 1st Earl of Bedford in 1550. His successors were politically influential and in 1694 the 4th earl was created Duke of Bedford. The two most notable members of the family outside the main line of succession were Lord John Russell later 1st Earl RUSSELL, who played an important part in 19th-century Parliamentary reform and was twice Prime Minister of England, and the philosopher Bertrand RUSSELL.

Russell, Bertrand Arthur William, 3rd Earl (1872–1970), British philosopher, mathematician and social reformer. His philosophy was of empiricism and logical atomism, which he applied to mathematics to demonstrate that mathematics could be explained by the rules of formal logic. His most famous work, *Principia Mathematica* (1910–13), was written in collaboration with his teacher, A. N. WHITEHEAD. He was a pacifist except during WWII and was a constant campaigner for educational and moral reforms. He was imprisoned twice (1918, 1961) for his activities on behalf of peace. He won the 1950 Nobel Prize in literature and wrote many books, both technical and popular. See also PRINCIPIA MATHEMATICA; p.1882.

Russell, Charles Taze. See JEHOVAH'S WITNESSES.

Russell, Countess. See ARNIM, MARY ANNETTE VON.

Russell, George William (1867–1935), Irish poet, essayist and journalist who wrote under the pen name A. E. He was a newspaper editor from 1923 to 1930 and published many collections of romantic poetry. Among them are *The Divine Vision* (1904) and *Midsummer Eve* (1928). See also p.1766.

Russell, Henry Norris (1877–1957), US astronomer. His work on plotting the stars according to their luminosities and spectral types led to the development of the HERTZSPRUNG–RUSSELL DIAGRAM. See also p.978.

Russell, John, 1st Earl (1792–1878), British statesman; Prime Minister from 1846–52 and 1865–66. He was the third son of the 6th Duke of Bedford and made an important contribution to the development of British politics in the 19th century, especially in the change from an aristocratic Whig Party to a more broadly based liberalism. He was associated with such major reform issues as Roman Catholic emancipation, parliamentary and municipal reform and the repeal of

the CORN LAWS. See also p.1591.

Russell, John Peter (1858–1931), Australian painter who joined the IMPRESSIONISTS in France and was a friend of MONET and RODIN. Among his works is a portrait of Vincent van GOGH, painted when they were both students together.

Russell, Ken (1927–), British film director. He began work in television and made his first film, *French Dressing*, in 1964. He specialized in biographies, such as *Mahler* (1973), *Lisztomania* (1975), and *Valentino* (1977).

Russell, Morgan (1886–1953), US painter and a founder of synchronism in 1912. This movement involved the arrangement of geometric forms of contrasting colours, the geometric forms being secondary to the colour theory they represented.

Russell, Lord William (1639–83), English politician who first entered parliament in 1660. He was an opponent of Catholicism and the STUART court. For his alleged participation in the RYE HOUSE PLOT he was convicted of treason and executed.

Russell, Sir William Howard (1820–1907), British journalist, b. Ireland. He was one of the first war correspondents, reporting the CRIMEAN WAR for *The Times* where he coined the phrase "thin red streak" which became "thin red line" in popular usage to describe embattled British troops. He also covered the FRANCO-PRUSSIAN WAR (1870) and the ZULU WAR (1879). In 1860 he founded the *Army and Navy Gazette*. See also p.1662.

Russell, oldest European settlement in New Zealand, on the Bay of Islands. It was founded in the early 1800s, called Kororareka. It was renamed after Lord John RUSSELL in 1840.

Russia, historical name of the region now forming the Russian SFSR, and the centre of the Russian Empire. The term is popularly used to apply to the entire USSR, of which it is the culturally dominant part. The name derived from the Viking kingdoms of the Rus, or Varangians, around Kiev in the 9th century AD. The Scandinavians were quickly assimilated within the Slavic population. As s Russia was taken over and destroyed by the MONGOLS, the kingdoms' focus shifted to the NE, where the state of moscow won supremacy by the 14th century. Russian colonization E of the Urals began in the 16th century, and early in the 17th century Russia invaded Poland for the first time. PETER the Great expanded Russia to the N into Finland and Livonia after 1700, and also tried to establish Russian influence on the Black Sea coast. By 1800 Russia had annexed much of Poland and taken the CRIMEA. In the mid-19th century, the CAUCASUS and TURKMENIS became Russian, and VLADIVOSTOK was founded in 1860, symbolizing Russian control throughout Asia to the Pacific. By the Treaty of BREST-LITOVSK (1918), areas such as WHITE RUSSIA and the UKRAINE were lost; when reincorporated in the Soviet state they were administratively separate from the Russian SFSR. See also pp.1454–1457, 1459, 1648–1649, 1676–1679, 1722–1723, 2153.

Russian blue, short-haired domestic cat of unknown origin. It has a longish face with green eyes and large, pointed ears. The dense double coat is a silvery blue.

Russian Five, group of Russian composers active in St Petersburg during the 1860s and 1870s who hoped to create a truly Russian style of music. They were Mily BALAKIREV, Alexander BORODIN, César CUI, Modest MUSSORGSKY and Nikolai RIMSKY-KORSAKOV.

Russian language, official language of the USSR, the mother tongue of about 142 million of its people (about 6 per cent of the population) and spoken as a second language by about 42 million more. It is the most important of the Slavic languages, which form a subdivision of the INDO-EUROPEAN family. Russian is written in the Cyrillic alphabet.

Russian Orthodox Church. See ORTHODOX CHURCH.

Russian Revolution (1905), year of uprisings and protests against Tsarist rule. It began on Bloody Sunday (22 Jan), when a peaceful demonstration of workers peti-

tioning the Tsar at St Petersburg was fired on by troops. Strikes and peasant risings spread, culminating in a general strike in October. The Tsar's October Manifesto promised full civil liberties and a democratically elected DUMA, but apart from the *Potemkin* mutiny the armed forces remained loyal and by the time the first Duma met in 1906 Nicholas had regained control. See also pp.1649, 1649.

Russian Revolutions (February and October 1917), overthrow of Russian monarchy and BOLSHEVIK accession to power. Incompetent management during WWI, loss of confidence in the regime and riots in the capital occasioned by acute shortage of food forced NICHOLAS II to abdicate in February 1917. A Provisional Government was formed by liberals in the DUMA, with Prince Georgy LVOV as Prime Minister, but had to contend with the growing influence of the soviets (local district councils). The Government's decision to continue the war and its failure to introduce land reform caused popular support in the soviets to shift to the Bolsheviks. In July the Bolsheviks attempted to rally popular support to overthrow the Provisional Government with their call of "All Power to the Soviets" but the Provisional Government was able to retain control. LENIN, who had arrived in July after the provisional government restored order in April, fled to Finland. In September, General KORNILOV unsuccessfully attempted to overthrow KERENSKY who took over as Prime Minister in July from Prince Lvov but was unable to muster support from the army. After the "Kornilov Affair", the Bolsheviks gained a majority in the St Petersburg and Moscow soviets, and increased their popular support with their slogan "Peace, Land and Bread".

Russian Soviet Federated Socialist Republic (Rossiyskaya Sovetskaya Federativnaya), largest constituent republic of the USSR, commonly abbreviated Russian SFSR, bordered by seas of the Arctic Ocean (N) and the seas of the Pacific (E), and occupying more than 75% of the total land area of the USSR. The main cities are Moscow (capital), Leningrad, Gorki, Novosibirsk, and Sverdlovsk. The republic contains the E European lowland, the Urals, the W Siberian Plain and the Siberian Plateau; it is drained by the rivers Volga, Ob, Yenisei, Lena and Amur. It formed a major part of the Tsarist Empire and was the first region to come under Soviet control in 1917. It joined the Ukraine and Belorussia and Transcaucasia to form the USSR in 1922. Industries include the manufacture of machinery, chemicals, textiles and leather goods and mining for coal, iron ore, copper, nickel, lead, manganese, zinc, and platinum. Area: 17,361,400sq km (6,703,235sq miles). Pop. (1980) 138,400,000.

Russian and Ludmila (1842), five-act opera by Mikhail GLINKA, with libretto by Shirkov and Bakhturin based on a poem by Alexander Pushkin.

Russo-Japanese War (1904-05), conflict originating from rivalry over Manchuria and Korea. In May 1904 Japanese troops crossed the Yalu River from Korea into Manchuria, while naval forces seized PORT ARTHUR, which fell in January 1905. In March 1905 the Japanese captured Mukden and in May destroyed the Russian fleet at TSUSHIMA. The Treaty of Portsmouth (1905) obliged Russia to recognize Japan's "paramount interest" in Korea. Japan was also given the southern half of Sakhalin by the Russians. The war established Japan as a world power and was a primary cause of the Russian Revolution of 1905. See also pp.1625, 1625.

Russolo, Luigi (1885-1942), Italian artist and musician. In his Futurist manifesto of 1913 he urged composers to "break out of the narrow circle of pure musical sounds, and conquer the infinite variety of noise sounds".

Rust, corrosion of iron by a combination of air and water. Carbon dioxide from the air dissolves in water to form an acid solution which attacks the iron to form iron (II) oxide. This is then oxidized by oxygen in the air to reddish-brown iron (III) oxide. Rusting may be prevented by coat-

ing the iron with zinc, a process called GALVANIZING, when the zinc is preferentially attacked by the acid solution.

Rust, in botany, group of fungi that live as parasites on many kinds of higher plants. The rust red colour of their spores gives them their name. Rusts are of particular concern for the damage they do to cereal crops, such as wheat and barley, and to several fruits and vegetables. They have complex life cycles that involve growth on more than one host plant, barberry (*Berberis*) being one of these secondary hosts. See also p.352.

Ruth, book of the Old Testament that recounts the story of Ruth, a Moabite widow, her fidelity to Naomi, her Hebrew mother-in-law, and her subsequent marriage to Boaz, whereby she becomes the great-grandmother of King DAVID.

Ruthenia, area now constituting an OBLAST within the Ukraine (Ukrainskaja SSR) USSR, its capital is Uzhgorod. Formerly an autonomous region, the name is the Latin for Russia. During the Middle Ages it referred to the Ukrainian population of the NE Carpathians. After 1918, however, the term applied only to the easternmost province of Czechoslovakia. The present day oblast is made up of land ceded to the USSR by Romania, in 1945. The economy is largely dependent on agriculture and much of the area is heavily forested. Industries include coal-mining, lumbering and tobacco. Area: 12,800sq km (4,942sq miles). Pop. (1970) 1,057,000.

Ruthenium, metallic element (symbol Ru) of the second transition series, first isolated in 1844. Ruthenium is alloyed with other platinum metals for electrical contacts and is also used as a catalyst. Properties: at. no. 44; at. wt. 101.07; s.g. 12.30; m.p. 2,310°C (4,190°F); b.p. 3,900°C (7,052°F); most common isotope Ru¹⁰² (31.61%). See also TRANSITION ELEMENTS.

Rutherford, Daniel (1749-1819), Scottish physician who was the first to distinguish between NITROGEN and CARBON DIOXIDE.

Rutherford, Ernest, Lord Rutherford (1871-1937), New Zealand-born British physicist. Working on RADIOACTIVITY and atomic structure, he discovered ALPHA, BETA and GAMMA RADIATION and was the first to show that the atom contains a central nucleus. He carried out the first splitting of the atom, and identified and named the PROTON. Awarded the 1908 Nobel Prize in chemistry, for his work on radioactivity, he was made a baron in 1931. See also pp.812, 814, 814, 1637.

Rutherford, Dame Margaret (1892-1972), British actress who became famous as a character actress. She appeared as Madame Arcati in *Blithe Spirit* and in 1964 won an Academy Award for her role as a dowager in *The V.I.P.s*.

Rutherfordium. See ELEMENT 104.

Rutile, black to red-brown oxide mineral, titanium dioxide (TiO₂), found in igneous and metamorphic rocks and quartz veins. It occurs as long prismatic and needle-like crystals in the tetragonal system and as granular masses. It has a metallic lustre, is brittle and is used as a gemstone. Hardness 6-6.5; s.g. 4.2.

Rutland, former county in central England; since 1974 it has been part of Leicestershire. It is an area of rolling country, drained chiefly by the River Welland. Sheep and cattle grazing is the main farming activity. Oakham was the county town. Industries: iron ore mining, cement, clothing, plastics. Area: 396sq km (153sq miles).

Ruwenzori, mountain range in central Africa on the Uganda-Zaire border between lakes Albert and Edward. The range was discovered by Henry STANLEY in 1889. The highest peak is Mt Margherita, 5,109m (16,763ft). Length of range: 121km (75 miles).

Ruysdael, Jacob. See RUISDAEL, JACOB VAN. **Ruzicka, Leopold Stephen** (1887-1976), Swiss chemist, b. Yugoslavia, who shared the 1939 Nobel Prize in chemistry with Adolf BUTENANDT for his research into ring molecules and terpenes, HYDROCARBONS found in the essential oils of many

plants. In 1916 Ruzicka began investigations into the active compounds in MUSK and CIVET, finding that they were ring structures consisting of 15 and 17 carbon atoms respectively. This discovery had a profound effect on organic chemistry, as until that time rings with more than six atoms were thought to be too unstable to exist. In the 1930s he also synthesized several male sex hormones including TESTOSTERONE, having previously discovered their molecular structure.

Rwanda, landlocked nation in E central Africa. Before 1962 it was part of the Belgian mandate of Ruanda-Urundi. Rwanda is one of the world's poorest nations; most of the people are subsistence farmers. Coffee is the principal commercial crop and tin and tungsten are mined, although there is little manufacturing. Kigali is the capital. Area: 26,338sq km (10,169sq miles). Pop. (1976 est.) 4,321,000. See also p.2126.

Rydberg, Abraham Viktor (1828-95), Swedish writer. His novel *The Last Athenian* (1859) contrasted classical values with contemporary Christian dogmatism. His lyrical but sometimes sombre verse reflected his unhappy childhood.

Ryder, Albert Pinkham (1847-1917), US painter, known for his imaginative works. The sea and the moon predominate in many of his paintings, which have a strange brooding quality.

Ryder Cup, biennial competition in which a team of professional male golfers from the USA plays a team from Britain and Ireland. After an unofficial match at Wentworth, Surrey, in 1926, Samuel Ryder presented a gold cup for the first official match in Massachusetts in 1927. The event consists of eight 18-hole foursomes, eight 18-hole four-balls and 16 18-hole singles. One point is awarded for a win and half a point for a halved game. Britain has won the cup only three times, in 1929, 1933 and 1957.

Rye, hardy cereal grass originating in SW Asia and naturalized throughout the world. It grows in poor soils and colder climates than most other cereals can stand. It has flower spikelets that develop one-seeded grains. It is used for flour, as a forage crop and for making alcoholic drinks. Height: to 0.9m (3ft). Family Gramineae; species *Secale cereale*. See also pp.652, 676, 677, 678.

Rye House Plot (1683), Whig conspiracy to kill CHARLES II and his brother James, Duke of York, later JAMES II, as they passed by Rye House on their way from Newmarket to London. The king did not make the journey on the expected day, the plot was revealed and Algernon SIDNEY and Lord William RUSSELL, prominent Whigs, were executed.

Rylands, John (1801-88), textile manufacturer. He contributed to many charities and was a main financier of the Manchester Ship Canal. The John Rylands Library at Manchester University was founded in his memory by his widow.

Ryle, Gilbert (1900-76), British philosopher concerned with problems caused by the confusion of grammatical with logical distinctions. He also argued interdependence between body and mind. His works include *Philosophical Arguments* (1945) and *The Concept of Mind* (1949).

Ryle, Sir Martin (1918-), British astronomer. After studying radar during WWI he went to Cambridge University where he pioneered RADIO ASTRONOMY. He also catalogued stellar radio sources, during which he discovered QUASARS. During the 1960s, Ryle developed a one-mile radio telescope with which ANTONY HEWISH and Jocelyn Bell discovered the first PULSAR in 1968.

Ryswick, Treaty of (1697), agreement that ended the War of the GRAND ALLIANCE, the signatories being France on one side and the Holy Roman Empire, England, Spain and the Netherlands on the other. France surrendered all the territories it had gained since 1679, with the exception of Strasbourg and Alsace. Trading concessions were granted to the Dutch, the independence of Savoy was recognized and France acknowledged WILLIAM III as King of England.

Ernest Rutherford with the apparatus he used for counting alpha particles.

Margaret Rutherford after her investiture as a Dame Commander of the British Empire.

Albert Ryder's work is typified in this detail from his painting *Jonah* (1890).

Rye harvest; traditionally the cut rye is gathered into stooks before threshing.

Ryukyu Islands

Ryukyu Islands (Nansei-skoto), Japanese archipelago in the w Pacific Ocean, extending approx. 965km (600 miles) between Kyushu and Formosa. It separates the East China Sea (w) from the Philippine Sea (E). The island groups, which are volcanic and coral formations, include Amami, Okinawa and Sakishima. Inhabited since early times, they were invaded by China in the 14th century and by Satsuma of Japan in the 17th century, paying tribute to both countries until relinquished by China to Japan in 1879. After WWII they were administered by the USA and restored to Japan in 1972. Agriculture and fishing are the chief occupations. Area: approx. 2,196sq km (848sq miles). Pop. (1974) 171,264.

Ryun, Jim (1947–), US athlete. He first ran the mile in less than 4min at the age of 17. In 1966 he broke the world 1,500m record with a time of 3min 33.1sec, and also set a new world half-mile record with 1 min 44.9sec; in 1967 he lowered the world's mile record to 3min 51.1sec.

S

S, 19th letter of the alphabet, derived originally from the Semitic letter *sin* or *shin*, meaning *tooth*, which had an *sh* sound. The Greeks had various letters for sibilants, but after about 600 BC used mainly *sigma* for *s*. It adopted its present form in the Latin alphabet. The two common pronunciations of *s* in English are voiced and unvoiced – as in *his* and *hiss*. The combination of *s* and *h* gives English virtually another sibilant letter, as in *show* and *wash*, although *s* alone has this sound in such words as *sure* and *mission*, and can have the voiced pronunciation of the combination, as in *division* and *treasure*. In a few words, such as *island* and *aisle*, the *s* is silent. See also pp.608–609.

SA, the *Sturmabteilung* ("Storm troopers") founded in 1921 in Germany as an armed corps to protect Nazi meetings. Officially recognized by the state as a volunteer force, it was actually a Nazi party organ. Ernst ROEHM took it over in 1931. ROEHM and the other SA leaders were murdered by HITLER in the ROEHM purge of 30 June 1934.

Saar (Sarre), river in NE France; it rises in the Vosges and flows N into West Germany, then N to join the River Moselle (Mosel) near Trier. The Saar flows through a highly industrialized region and carries much barge traffic. There was heavy fighting in the area during WWII. Length: 240km (150 miles).

Saareinen, Eero (1910–61), US architect and designer, son of Eliel SAAREINEN, b. Finland, whose experimental designs using curved concrete were influential in modern architecture. He is famous for the design of the General Motors Technical Center in Warren, Michigan (1948–56), the TWA terminal at Kennedy Airport (1956–62) and the US Embassy in London (1955–61). See also p.1821.

Saareinen, Eliel (1873–1950), Finnish-American architect, resident in the USA after 1923. His work had a significant impact on US architecture. In later years he collaborated with his son, Eero SAAREINEN, and together they won the highest award of the American Institute of Architects for the design for part of the Smithsonian Institution, Washington DC, in 1947.

Saarland. See SAAR.

Saavedra Lamas, Carlos (1878–1959), Argentine jurist who was influential in ending the Chaco War (1932–35) between Bolivia and Paraguay, for which he was awarded the 1936 Nobel Peace Prize. He was President of the League of Nations Assembly in 1936.

Sabah, Sheikh Sabah as-Salim as- (1913–), Amir of Kuwait. He was Minister of Foreign Affairs, deputy Prime Minister (1961–1963) and Prime Minister (1963–1965). He succeeded his brother as head of state in 1965.

Sabah (North Borneo), state of Malaysia,

and one of the four political subdivisions of Borneo. It is located on the NE section of the island; Kota Kinabalu is the capital. The terrain is mountainous and forested. Products include coconuts, rice, rubber and timber. Area: 76,522sq km (29,545sq miles). Pop. (1972 est.) 697,000.

Sabatier, Paul (1854–1941), French chemist who discovered that ethane could be obtained from ethylene and hydrogen by heating the two gases with powdered nickel as a CATALYST. This technique of nickel catalysis led to an economical method of manufacturing margarine by the HYDROGENATION of inedible fats. He shared the 1912 Nobel Prize in chemistry with Victor GRIGNARD.

Sabbatarianism, movement which seeks to maintain the Biblical injunction of the 4th commandment to keep the Sabbath as a day of rest. It first became powerful in Britain during the Puritan interregnum (1649–60). After the Sunday Entertainments Act of 1932 empowered local authorities to license Sunday entertainment, Sabbatarianism lost much of its force in England, although it remained strong in parts of Scotland and Wales.

Sabbath, for the Jews the seventh day of the week, set aside specifically as a day of rest (the word is from the Hebrew meaning "rest"). The term is consequently applied by Christians to Sunday, although Saturday is the Jewish Sabbath.

Sabattini, Nicola (1574–1654), Italian Renaissance stage designer and theoretician. His *Manual for Constructing Theatrical Scenes and Machines* (1638) was a major source of information about 17th century theatricals. See also p.1452.

Sabines, or Sabini, ancient people of central Italy who inhabited the Sabine Hills NE of Rome. A significant part of the early Roman population was Sabine in origin. After sporadic fighting the Sabines were conquered in 290 BC and gradually Romanized.

Sabinianus (Sabinian), Pope (r. 604–606). A Tuscan who succeeded Gregory the Great, he had previously been Gregory's envoy to the Byzantine Court of Patriarch John IV. His own period of office was troubled by famine and attacks by the LOMBARDS.

Sable, MARTEN native to northern pine forests and Siberia. It has been hunted almost to extinction for its thick, soft, durable fur which is dark brown to black, sometimes flecked with white; but conservation measures have restored the population to a much safer level. Length: to 60cm (24in). Family Mustelidae; species *Martes zibellina*. See also p.305.

Sabotage, deliberate wrecking of small parts of a system in order to prevent the whole system working properly. The word was first used before WWII to describe the activities of French railway strikers who destroyed the wooden shoes (sabots) which held rails in place. Since WWII sabotage has been associated primarily with military activity.

Sabre, largest weapon used in the sport of FENCING. Fenced only by men, it has a flattened V-shaped blade and a half-circular guard. The target area comprises the whole body above the hips.

Sabre-toothed tiger, popular name for a prehistoric member of the CAT family (Felidae) that existed from the Oligocene period to the Pleistocene period. It had extremely long canine teeth adapted to killing large herbivores. Genus *Smilodon*, subfamily Machairodontinae. See also pp.285, 287.

Saccharin, formula C₇H₅O₂NS, man-made substitute for sugar but is about 500 times sweeter. Derived from TOLUENE by a process involving sulphonation, it is used extensively in the food industry.

Sacchi, Andrea (1599–1661), Italian painter who studied in Rome and Bologna. One of the foremost 17th-century Roman painters in the classical tradition, his ideas influenced 18th-century artists through his pupil, MARATTA. Among his works are *The Vision of St Romuald* (c.1638) and the ceiling fresco for the Barberini Palace, *Divine Wisdom* (1629–33).

Sacher, Paul (1906–), Swiss conductor

who founded Basel Chamber Orchestra in 1926. Since 1941 he has conducted the Zürich chamber orchestra which is known as the Collegium Musicum.

Sachs, Hans (1494–1576), German playwright and poet, a cobbler by trade. His work is characterized by humour, common sense and moral purpose. Among his most popular works are *Das Schlauffland* (1530) and the *Fastnachtspiele*; he also created the *Meistersang*, a form of poet song based on minstrel tradition, of which he wrote 4,000.

Sachs, Julius von (1832–1897), German botanist, known for his studies of the metabolism of plants.

Sachs, Nelly (1891–1970), German-Jewish poet. She escaped from Nazi Germany in 1940 and her early stories and later poetic works, among them *In the Houses of Death* (1947) and *Later Poems* (1965), bore witness to the sufferings of her people. She shared the 1966 Nobel Prize in literature with S. Y. AGNON.

Sackbut, old English name for the trombone. Its origins are unknown, but it was mentioned in literature of 14th century Spain. Together with the SHAWM and the CORNETT it was an essential part of court bands.

Sackville, Thomas, 1st Earl of Dorset (1536–1608), English poet and statesman. He was the author of *Gorboduc* (1561), the first English tragedy in blank verse. He was Lord Treasurer from 1599 to 1608 and was made an earl in 1604. See also p.1415.

Sackville-West, Victoria Mary (1892–1962), British poet and novelist, friend of Virginia Woolf and a member of the BLOOMSBURY GROUP. She was married to the politician and diarist Harry Nicolson. Her best-known novels are *The Edwardians* (1930) and *All Passion Spent* (1931). Her long poem *The Land* (1926) won the 1927 Hawthornden prize.

Sacrament, rite in Christian churches, central to the LITURGY, that is a physical sign or symbol of spiritual reality. Sacraments impart the GRACE of God to men and the Church.

Sacramento, state capital and port in central California, USA, 116km (72 miles) NE of San Francisco. The city grew around the site of a fort built in 1840. It became the state capital in 1854. The city includes a branch of the University of California (1947). Industries: food processing, soap, machinery bricks. Pop. (1980) 274,488.

Sacred baboon. See HAMADRYAS.

Sacred Heart, devotion to the love of Jesus Christ in his human form, as symbolized by his heart. In its modern form it dates from revelations to St Margaret Mary Alacoque (1647–90), whose visions of Jesus involved His heart being honoured in this way.

Sacrifice, offering or destruction of precious objects – food and drink, flowers and incense, animals and human beings – for religious purposes. Sacrifices are important in many religions. They are made in the hope of winning divine favour, to atone for guilt or for some other mystical purpose. See also pp.1899, 1899.

Sacrum, or sacral bone, lowest region of the vertebral column, formed by the fusion of five vertebrae. The sacrum articulates with the pelvic girdle. See also p.146.

Sadat, Mohamed Anwar as- (1918–81), Egyptian soldier and politician. He became president of Egypt on the death of NASSER in 1970. He was proclaimed military Governor-General in 1973 and was Prime Minister 1973–74. In 1977 in an effort to solve Middle East problems, he went to ISRAEL, the first Arab leader to do so since the formation of the State in 1948; his efforts to find peace turned hard-liners against Sadat, and he met his death at the hands of a group of Moslem fanatics.

Sadducees, Jewish sect active in Judaea from c.200 BC until the fall of Jerusalem in AD 70. The Sadducees may have originated, however, as a political party representing an aristocracy that was particularly conservative in religious matters. By the time of Christ the main difference between them and the PHARISEES was their refusal to recognize the oral traditions

surrounding the Scriptures as part of the Hebrew Law.

Sade, Donatien Alphonse François, Marquis de (1740–1814), French novelist and playwright. He is one of the founders of the modern French prose style and the licentiousness of his works and the moral freedom which he espoused, especially in sexual relations, have gained him consideration as a forerunner of EXISTENTIALISM. During his 27 years in prison for sexual offences, he wrote many novels, among them *Justine* (1791) and *Juliette* (1797). See also SADISM.

S'Adi (Saadi) (c.1213–92), Persian poet who is generally regarded as one of the finest SUFI or mystic writers. His masterpiece, *Gulistan* (1258), is a miscellany of prose and verse including anecdotes and maxims. Other works include *Bustan* (1257), a long didactic poem.

Sadism, taking pleasure in hurting or abusing others physically or verbally. Sadism is frequently connected with deviant sexual behaviour in which beating or abuse of another person is a necessary part of sexual arousal and gratification. A person may alternate between these two forms of behaviour. The term is derived from the Marquis de SADE, much of whose writing glorified cruelty and sexual abuse.

Sadko (1898), opera in seven scenes by Nikolai RIMSKY-KORSAKOV, with libretto by the composer and Vladimir Belsky. It was first produced in Moscow.

Sadler, Michael. See FANNY BY GASLIGHT.

Sadler's Wells, theatre in N London. It was first established in 1683 as a music-hall in the garden of a Mr Sadler near a so-called medicinal spring. It was re-built (in 1927–31) to house Lilian BAYLIS's opera and drama company and subsequently, the Vic-Wells Ballet formed by Dame Ninette de VALOIS which, in 1939, became known as the Sadler's Wells Ballet. After the company moved to Covent Garden in 1946, the theatre was the home of Sadler's Wells Opera, until that too moved – to the Coliseum in 1968. See also p.1758.

Saenredam, Pieter (1597–1665), Dutch painter who painted carefully planned and accurate pictures of church interiors. His works, typically of the Gothic churches of Utrecht and Haarlem, depict large vaulted spaces in compositions of sensitive colouring and lighting. Among these is the *Interior of the Buurkerk at Utrecht* (1644).

Safavid dynasty, Muslim dynasty which ruled Persia from 1501 to 1736. Its name is taken from Sheikh Saft al-Din shaq, the founder of the Muslim order called the Safawiyya. The first Safavid ruler of Persia was Isma'il I. In 1736 the dynasty was overthrown by Nadir Shah.

Safety glass, form of plate glass, used for windcreens and windows, that does not shatter or splinter when broken. It is laminated with sheets of transparent plastic fused to the glass under pressure. Bullet-proof glass consists of several layers of glass and plastic.

Safety lamp, for coal miners, the best-known example of which was invented by Sir Humphry Davy early in the 19th century. His model had a wire gauze cylinder within which an oil flame burned. Miners also used the lamp as a test for mine gases such as firedamp (methane), in the presence of which the flame would change colour. Modern safety lamps rely on the same principle.

Safety match. See MATCHES.

Safeway Stores, American supermarket chain founded in 1926 with headquarters in Oakland, California. In the early 1970s there were more than 2,200 Safeway supermarkets operating in the USA, Canada, Britain, West Germany and Australia, making it the largest chain in the world.

Safflower, annual plant with large, red, orange or white flower heads that are used in making dyestuff. The seeds yield oil which is low in saturated fats and is used in cooking and in the manufacture of MARGARINE, paints and cosmetics. Family Compositae; species *Carthamus tinctorius*.

Saffron, or autumn crocus, perennial CROCUS native to Asia Minor and cultivated in Europe. Its purple or white flowers bloom

in autumn. The golden, dried stigmas of the plant, used as a flavouring or dye, are also called saffron, as is the yellow colour produced by it. Family Iridaceae; species *Crocus sativus*.

Safi, port in central w Morocco, on the Atlantic coast, approx. 200km (125 miles) sw of Casablanca. It was a Portuguese base in the 16th century and is today the centre of Morocco's fishing industry. Phosphates are exported, and industries include chemicals and fertilizers. Pop. (1971) 129,113.

Saga, in OLD NORSE LITERATURE (especially Icelandic), prose narrative which relates the lives of legendary or historical figures. Written between the 7th and 14th century, sagas are generally objective, have skilful characterization and reflect the old Icelandic devotion to honour and family.

Sagan, Françoise (1935-), pen-name of Françoise Quirez, a French novelist and playwright. Her works portray the disillusionment of the young and innocent, as in *Bonjour Tristesse* (1954), a theme developed in *Un Certain Sourire* (1956) and other works. Among later works are *Aimez-vous Brahms...* (1959) and plays, including *Les Violons, parfois...* (1961).

Sage, common name for a number of plants of the MINT family (Labiatae) native to the Mediterranean region. The best known is *Salvia officinalis*, an aromatic perennial herb used widely for seasoning. Height: 15-38cm (6-15in). See also p.372.

Sagebrush, aromatic shrub common in arid areas of w North America. The common sagebrush has small, silvery-green leaves and bears clusters of tiny white flower heads. Height: to 2m (6.5ft). Family Compositae; species *Artemisia tridentata*.

Sage grouse, or sage hen, largest North American grouse. The male fans his long slender tail behind his inflated orange neck air sacs, while bowing, dancing and groaning during courtship displays. Length: to 75cm (30in). Species *Centrocercus urophasianus*.

Sagittarius, or the Archer, southern constellation on the ecliptic between Scorpio and Capricorn. Rich in stellar clusters, this region of the sky also contains much interstellar matter which obscures the central region of the MILKY WAY GALAXY and is only penetrable with radio telescopes. The brightest star is Epsilon Sagittarii (*Kaus Australis*) of magnitude 1.8. See also pp.1006, 1016, 1016, 1894, 1894-1895.

Sagittarius, or the Archer, in astrology the ninth sign of the zodiac. It is represented by a centaur firing a bow and arrow. The Sun is in Sagittarius from 22 November to 21 December.

Sago, starchy substance obtained from the pith of a tropical PALM. A nourishing, highly digestible flour made from sago is used for thickening soups and making puddings. Up to 363kg (800lb) of flour can be made from one tree's yield. Sago palm: family Palmae; species *Metroxylon sago*.

Sago palm, or fern palm, feather-leaved PALM tree native to swampy areas of Malaysia and Polynesia. Its thick trunk contains sago, a starch used in foodstuffs. The sago palm flowers once after growing for 15 years and then dies when the fruit ripens. Height: 1.2-9.1m (4-30ft). Family Palmae. Some cycads are also called sago palms, but they are not true palms.

Saguaro, large cactus native to Arizona, California and Mexico. White, night-blooming flowers appear when the plant is 50 to 75 years old. Its red fruit is edible. Height: to 12m (40ft). Family Cactaceae; species *Carnegiea gigantea*.

Sahara, world's largest desert, in N Africa; extends from the Atlantic Ocean (w) to the Red Sea (e) and from the Atlas Mts Southward to N Sudan. It covers most of Spanish Sahara, Algeria, Niger, Libya, Egypt and Mauritania, the s parts of Morocco and Tunisia and the n parts of Senegal, Mali, Chad and Sudan. The annual rainfall is usually less than 12.7cm (5in). There is very little natural vegetation. Date palms, fruit, vegetables and cereals are grown by means of irrigation in

the oases, where most of the Sahara's estimated 2 million people live. The rest are nomads, herding sheep and goats. Mineral deposits include salt, iron ore, oil and gas. Area: approx. 9,065,000sq km (3,500,000sq miles). See also pp.228-229, 228-229, 759, 759.

Sahel, semi-arid region of Africa, bordered by the Sahara (N) Senegal (w) and Ethiopia (E). It extends through Mauritania, Mali, Upper Volta, Niger, N Nigeria, N Senegal and s central Chad. The area's agricultural economy was devastated by droughts in the late 1960s and early 1970s.

Sa'id, Qabus ibn (140-), sultan of Oman, who overthrew his father Sa'id ibn Timur in 1470. Previously the country had been isolated and had few diplomatic links, but Qabus ibn Sa'id made efforts to liberalize the government and changed the official name of the country from MUSCAT AND OMAN to the Sultanate of Oman.

Saidpur, town in N Bangladesh, in Rangpur district. Saidpur is a major rail centre and has large railway repair shops. Jute processing and exporting are the chief economic activities. Pop. 60,628.

Saiga, Eurasian ANTELOPE, found only in s Russia and central Asia. It is a sheep-like animal with "swollen" nose that ends in a pig-like snout. Its coat is brown in summer and white in winter. Males carry short, ridged, slightly curved horns which were prized as hunting trophies. Height: to 80cm (32in) at the shoulder. Family Bovidae; genus *Saiga*. See also pp.296, 296.

Saigon (Ho Chi Minh City), port in s Vietnam, at the mouth of the Saigon River; largest city in Vietnam. The French took it in 1859, and it became the capital of the Union of Indochina. Saigon was chosen as the capital of South Vietnam by the Geneva Convention in 1954. During the VIETNAM WAR it was the military headquarters for us and South Vietnamese forces. The city was severely damaged, and was taken by the North Vietnamese in May 1975. The city is the most important port, commercial and industrial centre in Vietnam and the focus of road and rail routes and the waterways of the Mekong delta. Industries: textiles, shipbuilding, food processing, building materials, glass, pharmaceuticals, rubber, paper. Pop. 3,500,000.

Sailendra, Buddhist dynasty that ruled central Java c.750-850 AD, and the Sumatra-based empire of SRIVIJAYA during the 8th-13th centuries. The Sailendras encouraged sea trade with China and India and were patrons of MAHAYANA BUDDHISM. See also p.1197.

Sailer, Toni (1935-), Austrian alpine ski racer who, at the 1956 Winter Olympic Games, became the first man to win all three gold medals: downhill, slalom, and giant slalom. The Olympic titles also counted as the world titles; winning all three made him that year's alpine combination world champion. In 1958 he again won the world downhill, giant slalom, and combination titles.

Sailfish, marine bill-fish found throughout the world in tropical seas. A popular sport fish, it is identified by a large, sail-like dorsal fin and sword-shaped upper jaw. Length: to 3.5m (11ft); weight: to 100kg (221lb). Genus *Istiophorus*.

Sailing, water sport, either solo or competitive, in a boat propelled through the water by wind upon sail. Sailing for sport began in Holland in the 17th century. The first yacht club (the usual name for a sailing club) was the Water Club of Cork Harbour in Ireland, founded in 1720. The traditional wooden hulls and canvas sailcloth have now given way to fibre-glass hulls and sails of synthetic materials. Dinghy sailing is becoming an increasingly popular sport, helped by these cheaper new materials.

Sailing ships, ships that harness wind power using cloth or canvas sails. From prehistoric times square-rigged sails have been used to drive boats, and in the ancient Mediterranean civilizations of Egypt, Crete, Greece and Rome large square sails were fitted to ships to supplement banks of oars. Viking ships of the

early Middle Ages also used these two methods of propulsion. The use of more sophisticated sets of sails and the development of triangular lateen sails (which enabled craft to make use of even light winds and sail at an angle to the prevailing wind) probably began in China. Sailing ships had reached such a level of sophistication by the late 19th century that CLIPPER ships were faster than many early STEAMSHIPS. By 1900 sail had been outmoded by steam, except for recreation. See also pp.472-473, 472-473.

Sail plane, type of GLIDER with particularly long narrow wings. See also GLIDING.

Saint, in Christianity, someone who has manifested exceptional love of God and holiness during his or her life. In some Christian writings all believers are called saints, but the title is usually reserved for men and women of the most outstanding merit, regarded as having a special relationship with God. See also CANONIZATION.

St Albans, county district in central Hertfordshire, s England; created in 1974 under the Local Government Act (1972). Area: 161sq km (62sq miles). Pop. (1979 est.) 124,300.

St Andrews, golf course in Fife, Scotland, honoured by golfers throughout the world as the headquarters of the ROYAL AND ANCIENT GOLF CLUB. As well as the Old Course, where major championships are played, it has three other courses: the New, the Jubilee and the Eden.

St Anne, town in the Channel Islands, United Kingdom; the only town of any size on the small island of Alderney. Tourism and the rearing of cattle are the chief occupations. Pop. 1,472.

Saint Augustine, city in NE Florida, USA, on the Atlantic Ocean. The oldest city in the USA, it was founded by Pedro Menéndez de Avilés in 1565. It is a port of entry, tourist resort and a fishing centre. Pop. 12,352.

St Basil the Blessed, Cathedral of, 16th-century Russian church in Red Square, Moscow, built between 1554 and 1560. It was commissioned by IVAN IV to commemorate his victories over the Volga Tatar Khanates of KAZAN and ASTRAKHAN. Famous for its ornately carved onion-shaped domes and colourful exterior decoration, it is thoroughly medieval Russian in style, without any trace of Western architectural influence.

St Bernard, two alpine passes in Switzerland. The Great St Bernard links Martigny-Ville, Switzerland, with Aosta, Italy. It was used by the Gauls, Romans, CHARLEMAGNE and NAPOLEON I. There is now a road tunnel linking the two countries. The Little St Bernard connects France with Italy. Altitude: Great St Bernard: 2,469m (8,110ft); Little St Bernard: 2,188m (7,178ft).

Saint Bernard dog, Swiss mountain and rescue dog with excellent scenting abilities; from the 17th century it has been used to track down lost people in deep snow. It has a massive head with characteristic forehead wrinkles, a short deep muzzle and pendulous jaws and ears. The broad straight body is set on long, muscular legs. The dense white and red coat may be either short or long. Height: to approximately 74cm (29in) at the shoulder; weight: to 77kg (170lb).

Sainte-Beuve, Charles Augustin (1804-69), French writer and critic. His major works are a series of *Portraits* (1836-39), his book *Chateaubriand et son groupe* (1849), and collections of biographical and psychological literary criticisms.

St Catharines, city in s Ontario, Canada, on the Welland ship canal. It was incorporated as a city in 1876. The city is the centre of a fruit-growing region and has shipbuilding and repair, machinery, paper and food canning industries. Pop. (1974) 109,725.

St Christopher. See SAINT KITTS-NEVIS.
Sainte-Claire Deville, Henri Etienne (1818-81), French chemist. He developed a method of producing aluminium commercially in 1854. He was one of the first chemists to produce toluene and the discoverer of nitrogen pentoxide.

St Dunstan's, British organization to assist and retrain servicemen blinded in active service. It was set up in 1915 by Sir Arthur Pearson (1866-1921), who had himself been forced to retire through blindness in 1910.

St-Etienne, city in E central France, 52km (32 miles) sw of Lyons on the Furens River; capital of Loire département. Textile and silk industries were established there in the 15th century, and firearms have been produced there since the 16th century. The manufacture of steel is the other major industry. Pop. (1970 est.) 216,000.

Saint-Exupéry, Antoine de (1900-44), French novelist and aviator. His experiences as a pilot provided the material of his novels, which explore the themes of duty, love and human brotherhood. His novels include *Southern Mail* (1928), *Night Flight* (1931) and *Flight to Arras* (1942).

St Gall, canton in NE Switzerland. It borders on Lake Constance (N), the River Rhine (E) and completely surrounds the canton of Appenzell; the capital is St Gall. The city of St Gall became a free imperial city in 1206 and joined the Swiss confederation in 1454. Products include wine and fruit, and the canton is known for its embroidery and silk. Area: 2,015sq km (778sq miles). Pop. (1970) 384,475.

Saint-Gelais, Mellin de (1487-1558), French poet who was a follower of Clément MAROT. He lived in Italy for many years and the ideas of the RENAISSANCE influenced his work. He was one of the first French poets to use Italian SONNET form.

St George's (St Georges), capital and port on the SW coast of GRENADA, in the West Indies. It was founded in 1650 as a French settlement and later became the capital (1885-1958) of the former British colony of the WINDWARD ISLANDS. Industries include rum distilling and sugar processing. Exports: cacao, nutmeg and mace. Pop. (1975) 8,600.

Saint-Germain, Treaty of (1919), WWI peace agreement between the Allies and Austria at the Paris Peace Conference. It established boundaries for the new republic of Austria, which replaced the AUSTRO-HUNGARIAN EMPIRE and lost a great deal of territory.

St Gotthard Pass, pass approx. 30.6km (19 miles) long and 2,108m (6,916ft) high, over the St Gotthard group of Lepontine ALPS; named after a hospice open since the 14th century. A carriage road built in 1820-30 has been little used since the completion of the St Gotthard Tunnel in 1880.

Saint Helena, island in the s Atlantic, discovered by the Portuguese in 1502. It was captured by the Dutch in 1633, but passed to the British East India Company in 1659. It became a British Crown colony in 1834. It was to St Helena that Napoleon was exiled in 1815 until his death.

St Helens, county district in E MERSEYSIDE, NW England; created in 1974 under the Local Government Act (1972). Area: 133sq km (52sq miles). Pop. (1979 est.) 188,700.

St Helier, chief town of JERSEY, one of the CHANNEL ISLANDS, in the English Channel. Local market-garden produce is sent to St Helier for export. Tourism is another important source of income. Pop. (1971) 28,135.

Sainthill, Loudun (1919-69), Australian theatre designer. He went to England in 1950 and subsequently worked at all the major London theatres, including the Old Vic and Sadler's Wells, as well as at the Shakespeare Memorial Theatre in Stratford-upon-Avon. In 1968 he won an award for his costumes for the New York production of the musical *The Canterbury Tales*.

St James's Palace, royal residence in the centre of London built by HENRY VIII, who surrounded it by St James's Park. It was the London residence of the monarchy from the WHITEHALL fire of 1697 to the accession of Queen VICTORIA (1837).

Saint Joan (1923), play in six scenes and an epilogue by George Bernard SHAW. It depicts Joan of Arc's direct and pure emo-

St John

tions and contrasts them with the impersonal political reasoning of her associates and enemies. Sybil THORNDIKE created the role of Joan.

St John, port in s New Brunswick, Canada, on the N shore of the Bay of Fundy, at the mouth of the St John River. It was founded as a fort and trading post in the early 1630s. A major year-round port, St John has shipping connections with Europe, the West Indies and South America. Industries: shipbuilding and repair, oil refining, paper, food processing. Pop. (1971) 87,910.

St John of Jerusalem, Knights Hospitalers of. See KNIGHTS HOSPITALERS.

St John's, port and capital of Antigua, in the Leeward Islands in the West Indies. During the 18th century St John's was the headquarters of the Royal Navy in the West Indies. Products: rum, sugar, cotton; tourism is an important industry. Pop. (1966) 24,367.

St John's, provincial capital and major port of Newfoundland, Canada, on the SE coast of Newfoundland Island. St John's is one of the oldest settlements in North America: it was founded in 1583 by Sir Humphrey GILBERT. Industries: fishing and fish processing, shipbuilding, textiles, iron. Pop. (1971) 88,102.

St John Ambulance, British organization founded in 1877 to provide voluntary first aid and rescue assistance for any gathering at which such aid might be required. The order developed from the KNIGHTS HOSPITALERS, and is divided into the Brigade, which provides uniformed volunteers to give first aid to public meetings and events, and the Association, which spreads first-aid education.

St John's wort. See HYPERICUM.

Saint-Just, Louis-Antoine-Léon de, (1767-94), politician of the FRENCH REVOLUTION, whose stern and ruthless devotion to the cause of the Republic made him both admired by some and reviled by others. He became deputy in the NATIONAL CONVENTION in 1792, and a member of the COMMITTEE OF PUBLIC SAFETY in May 1793; in this latter capacity he was one of the leaders of France during the REIGN OF TERROR. Saint-Just and his close associate Maximilien ROBESPIERRE were executed after a coup in July 1794.

St Kilda, group of three westernmost islands in the Outer Hebrides approx. 180km (110 miles) W of the Scottish mainland. The island became a bird sanctuary in 1930 and now has the largest gannetry in the world. The islands are entirely uninhabited.

Saint Kitts-Nevis, self-governing state in the Leeward Islands, in the West Indies. The state includes the islands of Saint Kitts (Saint Christopher), Nevis and Sombro. Basse Terre is the capital, on Saint Kitts. The islands were discovered in 1493 by Christopher COLUMBUS, and settled by the English (1623) and the French (1624). Anglo-French disputes over possession were settled in Britain's favour in 1783 by the Treaty of Paris. The islands achieved self-government in 1967. Tourism is the chief source of income. Sugar, cotton, salt and coconuts are exported. Area: 311sq km (120sq miles). Pop. (1976 est.) 48,000. See also p.2127.

Saint Laurent, Louis Stephen (1882-1973), Canadian statesman. A distinguished lawyer, he was Minister of Justice and Attorney-General (1941-1946) in the Mackenzie KING government. After King's retirement (1948), he became leader of the Liberal Party and served as Prime Minister until 1957. He played an important part in the creation of the UNITED NATIONS. See also p.1615.

St Laurent, Yves-Mathieu (1936-), French fashion designer. He popularized trousers for women for all occasions and is associated with the shortened skirts and jackets of the 1960s, the "chic beatnik" look, metallic and transparent fabrics, and geometric shapes and prints. The unique prestige of high couture has been weakened by his ready-to-wear clothes.

St Lawrence, Gulf of, inlet of the Atlantic Ocean between Newfoundland and the Canadian mainland. The Gulf has extensive fishing grounds, but is closed to

navigation by ice from Feb. to May. Area: 155,000sq km (60,000sq miles).

St Lawrence, major Canadian river, in SE Ontario and s Quebec provinces; it flows from the NE end of Lake Ontario, to the Gulf of St Lawrence on the SE Canadian shore. Since the completion of the ST LAWRENCE SEAWAY in 1959 the river has been navigable along its entire course to all but the very largest vessels. The river forms the boundary between the USA and Canada for approx. 184km (114 miles). Length: 1,244km (760 miles). See also pp.538, 761, 1997.

St Lawrence Seaway, international waterway in Canada and the USA, consisting of a series of canals and locks in the St Lawrence River between Montreal and Lake Ontario, and the Welland and SAULT STE MARIE CANALS, connecting the GREAT LAKES with the Atlantic Ocean. The waterway permits the passage of ocean-going vessels to industrial lakeside ports of central North America such as Detroit, Chicago and Toronto. Iron ore, wheat and coal are the chief cargoes carried. Construction of the waterway was authorized by Canada in 1951, and by the USA in 1954; it was built between 1955 and 1959. Length: 3,830km (2,380 miles). See also pp.538, 1997, 761.

Saint Leger, the oldest of the five English classic horse races. It is run at Doncaster in September and is the last leg of the Triple Crown (the other two being the Two Thousand Guineas and the DERBY). The first St Leger took place in 1776. Until 1913 it was run over 2 miles, but since then has been 1 mile, 6 furlongs, 127 yds.

Saint-Léon, Arthur (1821-70), French ballet dancer and choreographer. He won a reputation throughout Europe for his dancing (1838-59), and was ballet master at the Imperial Theatre St Petersburg (1859-69). His choreography included *La Fille de Marbre* (1847) and *Coppélia* (1870).

St Louis, port in E Missouri, USA, on the Mississippi River; largest city in Missouri. It was founded by the French as a fur-trading post in 1763, held by Spain from 1770 to 1800 and then returned briefly to France (1800), before being ceded to the USA in the LOUISIANA PURCHASE of 1803. St Louis was capital of the Territory of Missouri from 1812 to 1821. During the American Civil War the city was a supply base and medical centre. Today it is the seat of three universities, a financial centre and a market for grain and livestock. Industries: motor vehicles, brewing, chemicals, aircraft, food processing. Pop. (1980) 448,640.

St Louis Bridge, bridge over the Mississippi River at St Louis, opened in 1874. It was the world's first major steel bridge, carrying a road above the railway. See also pp.533, 533.

Saint Lucia, volcanic island in the Windward group in the West Indies; Castries is the capital. The island was discovered by Christopher COLUMBUS in 1502. In 1967 the island became one of the six Associate States of the West Indies and achieved self-government. Bananas are the principal export. Area: 616sq km (238sq miles). Pop. (1975 est.) 112,000. See also p.2127.

St Mark's, Venice, BASILICA renowned for its wealth of mosaics. Begun in 829 to enshrine the remains of the city's patron saint, St Mark, it was restored after a fire in 976 but was later demolished to be rebuilt in the 11th century in the BYZANTINE style. The terrace above its two-tiered façade bears four gilded bronze horses brought from Constantinople in 1204. It contains the Pala d'Oro, a particularly fine altarpiece of jewels, enamel and gold.

Saint-Martin, Yves (1941-), French jockey who dominated French horse racing in the 1960s. He won the national championship nine times riding for the trainer François Mathet. Among his many victories were the PRIX DE L'ARC DE TRIOMPHE, the Washington International, and French and English Classics.

Saint Michael and Saint George, Order of, British honour established in 1818. It is awarded for services abroad and in the

diplomatic service. The ribbon is saxon blue with a scarlet centre; its motto is *Auspiciis melioris aevi* ("Token of a better age").

St Michael's Mount, isolated granite outcrop near Penzance, Cornwall, SW England, in Mount's Bay. It is linked to the mainland by causeway passable at low tide and it is surmounted by a castle. Height: 61m (200ft). See also p.237.

St Paul, state capital and port of entry in E Minnesota, USA, on the Mississippi River just E of Minneapolis. The city was founded as Fort Snelling in 1823, and became a fur-trading post. It was made territorial capital in 1849 and state capital in 1858. Industries: iron and steel, motor vehicles, machinery, chemicals, paper, computers, food processing. Pop. (1980) 268,248.

Saintpaulia. See AFRICAN VIOLET.

St Paul's Cathedral, (1675-1710), Britain's only cathedral in the CLASSICAL style, built on the site of a medieval cathedral, destroyed in the Great Fire of LONDON in 1666. It was designed by Sir Christopher WREN in the shape of a latin cross with a vast circular space at the crossing where eight piers support the great dome. BAROQUE influences are evident in the towers, the main façade, and the sham-perspective window niches and the false walls in the upper storey in the side elevations which serve as buttresses.

St Paul's Cross, canopied pulpit, with a cross on top, in St Paul's Churchyard, London. It was the main place for the preaching of popular sermons in the 17th century. It was destroyed by the FIRE OF LONDON. See also p.1421.

St Peter Port (St Pierre-Port), chief town of GUERNSEY, one of the CHANNEL ISLANDS. Local market-garden produce is exported from the town. Pop. (1971) 15,245.

Saint Peter's, Rome, world's largest Christian church. The original structure was built upon the traditional site of the grave of St Peter by the Emperor CONSTANTINE. BRAMANTE was appointed as architect in 1506 to rebuild the church, but did not complete it. See also pp.1389.

St Petersburg, former name of Leningrad, city in the NW Russian Republic (Rossijskaja SFSR), USSR, on the Baltic Sea. The city was renamed Petrograd in 1914 and Leningrad in 1924. Founded in 1703 by PETER the Great with the construction of the Fortress of St Peter and St Paul, the city was the capital of Russia from 1712 to 1918. The cathedral is the burial place of almost all the tsars. St Petersburg was a centre of political unrest that culminated in the overthrow of the Tsars and the RUSSIAN REVOLUTION. See also pp.1456-1457.

Saint Pierre and Miquelon, group of nine small islands SW of Newfoundland, Canada, in the Gulf of St Lawrence; a self-governing French territory. The capital is St Pierre on the island of the same name; Miquelon is the largest island. The group was claimed for France by Jacques CARTIER in 1535. Their proximity to the GRAND BANKS makes fishing by far the most important activity of the main islands. Area: 241sq km (93sq miles). Pop. (1975 est.) 5,000. See also p.2127.

Saint-Quentin, city in N France on the River Somme. During the Middle Ages it was a centre of pilgrimage to the tomb of St Quentin. The city became part of the French crownlands in 1191. Saint-Quentin has been the scene of many battles as a result of its strategic location. It was captured by the Spanish in 1557 during the Wars of Religion. Industries: textiles, furniture, rubber, food processing. Pop. (1968) 64,196.

Saint-Saëns, Charles Camille (1835-1921), French composer, pianist and organist. He composed prolifically in all forms and is best remembered for his opera *Samson et Dalila* (1877), the *Third Symphony* with organ and two pianos (1886), the *Carnival of the Animals* (1886) and the symphonic poem *Danse Macabre* (1874). See also p.1583.

Saint-Simon, Claude-Henri de Rouvroy, Comte de (1760-1825), French political reformer and one of the founders of

socialism. As a young man he fought in the American War of Independence; he made a fortune by buying nationalized land during the French Revolution. In *Du Système Industriel* (1820-21) and other works, some written with Auguste COMTE, Saint-Simon proposed a productive industrialized state directed by scientist-businessmen. His writings were largely ignored during his lifetime, but they influenced later socialists. See also p.1694.

Saint-Simon, Louis de Rouvroy, Duc de (1675-1755), French courtier and memoir writer. He was an apologist for aristocratic privilege, presenting a biased but colourful view of life in the French court during the latter years of the absolutism of LOUIS XIV. The definitive edition of his diaries in 41 volumes did not appear until 1879-1923, although some parts were published in the 1780s.

St Sophia. See HAGIA SOPHIA.

St Valentine's Day, Christian festival, celebrated on 14 Feb. in memory of the martyrdom of St VALENTINE in the 3rd century. "Valentines", cards bearing romantic messages, usually in verse, are traditionally exchanged on that date, often with no signature.

St Valentine's Day Massacre, murder of seven bootleggers of the "Bugs" Moran gang by members of AL CAPONE's gang disguised as policemen in Chicago, USA on 14 Feb. 1929. The murders were part of Capone's attempt to monopolize the illegal traffic in liquor in the era of PROHIBITION.

Saint Vincent, self-governing island in the Windward group, in the West Indies. It is made up of Saint Vincent Island and the Grenadine Islands to the S. Kingstown, on Saint Vincent Island, is the capital. Saint Vincent achieved self government in 1969. The chief source of income is tourism and the export of arrowroot, bananas, copra and cotton. Area: 389sq km (150sq miles). Pop. (1975 est.) 100,000. See also p.2127.

St Vincent, Cape, SW extremity of Portugal and continental Europe, 97km (60 miles) W of Faro. In 1797 the British, under the command of Admiral John Jervis and Commodore Horatio NELSON, defeated the Spanish naval forces off the Cape.

St Vincent, Gulf, large inlet of the Indian Ocean, S Australia, E of Yorke Peninsula. The seaport city of Adelaide is on the E shore. Length: 167km (100 miles); width: 72km (45 miles).

St Vitus' Dance, or Sydenham's chorea, disease of the nervous system. Its symptoms are jerky and unco-ordinated movements. The cause is uncertain, but it is commonly associated with rheumatic fever. In the Middle Ages it was believed that St Vitus could heal the mania and its name derives from this.

Sakai, industrial city in W Honshu, Japan, on Osaka Bay approx. 10km (6 miles) S of Osaka, located in the Osaka industrial belt. It was an important port from the 15th to the 17th centuries, but the port business has declined since the silting up of the harbour. Industries include the manufacturing of iron, steel, chemicals and textiles. Pop. (1979) 787,000.

Sake, Japanese rice wine or, more accurately, rice beer. It is brewed by fermenting steamed rice with the mould *Aspergillus oryzae*, a process which takes about five weeks. It contains between 14 and 17% alcohol and is served warm.

Sakhalin, island off the coast of the Far East USSR, between the Sea of Okhotsk and the Sea of Japan. The island is mountainous and forested, with a harsh climate, but grains and potatoes are grown in the S. Timber and fishing are major industries but Sakhalin's chief importance lies in its deposits of coal and iron ore. Oil is extracted in the NE and piped to the Soviet mainland. Area: 76,400sq km (29,500sq miles). Pop. (1970): approx. 600,000.

Sakharov, Andrei Dmitriyevich (1921-), Soviet physicist and social critic. His work in nuclear fusion was instrumental in the development of the Soviet hydrogen bomb. An outspoken defender of civil liberties, he created the Human Rights Committee in 1970 and

received the 1975 Nobel Peace Prize. His books include *Sakharov Speaks* (1974) and *My Country and My World* (1975). **Saki**, pen-name of Hector Hugh Munro (1870-1916), British writer, b. Burma. He was chiefly a writer of short stories, among them the collections *Reginald* (1904), *Reginald in Russia* (1910), *The Chronicles of Clovis* (1912) and *Beasts and Superbeasts* (1914).

Sakhalin, island off the coast of the Far East USSR, between the Sea of Okhotsk and the Sea of Japan. The island is mountainous and forested, with a harsh climate, but grains and potatoes are grown in the s. Timber and fishing are major industries but Sakhalin's chief importance lies in its deposits of coal and iron ore. Oil is extracted in the NE and piped to the Soviet mainland. The island was settled by Russians and Japanese in the 18th and 19th centuries, and came under Russian control in 1875. Area: 76,400sq km (29,500sq miles). Pop. (1970): approx. 600,000.

Sakkara (Saqqarah), necropolis or burial place of MEMPHIS, on the edge of the Libyan desert. The Step Pyramid, built there by Zoser during Dynasty III, was the first Egyptian tomb to be built entirely in stone. Sakkara also has pyramids dating from the IV and V Dynasties. See also pp.1166, 1167.

Saladin (Salah ad-Din) (1137-93), Sultan of Egypt and Syria. As a lieutenant of NUR-AD-DIN, he suppressed the Fatimid dynasty of Egypt, became vizier and then proclaimed himself sultan in 1174. After conquering most of Syria he launched a campaign to drive the Christians from Palestine, gathering around him MUSLIMS of various groups. He won the battle of HATTIN and took Jerusalem in 1187. This resulted in the formation of an army for the third CRUSADE led by RICHARD I of England and PHILIP II of France. See also pp.1310-1311.

Salamanca, Battle of (1812), decisive battle in the PENINSULAR WAR. The British, led by the Duke of WELLINGTON, defeated the French under Marmont, near Salamanca, w central Spain. The victory allowed Wellington to march unopposed into Madrid. See also p.1554.

Salamander, any of 320 species of amphibians found throughout the world, except in Australia and polar regions. It has an elongated body, a long tail and short legs. Most species lay eggs, but some give birth to live young; fertilization is commonly internal. The largest European species, the strikingly coloured fire salamander (*Salamandra salamandra*), lives in hilly wooded areas and may attain a length of 28cm (11in). Order Urodela. See also pp.3, 64, 64-65, 306.

Salamis, Battle of, decisive naval engagement (480 BC) during the PERSIAN WARS. THEMISTOCLES lured the Persian fleet into battle and a Greek fleet, largely based on an Athenian contingent, destroyed 200 Persian ships. The Persians, who had expected to conquer all Greece, were forced to retreat northwards. See also pp.1186,, 1192, 1204, 1204.

Sal ammoniac, old name for the salt ammonium chloride, NH₄Cl. It does not melt when heated but sublimates (changes from solid to vapour), and was discovered by the ancient Chinese and widely used by alchemists. It has long been used as a flux in soldering and as an electrolyte in DRY CELLS.

Salazar, António de Oliveira (1889-1970), Portuguese politician. He was a professor of economics with right-wing, pro-Roman Catholic beliefs. He became Premier in 1932 and thereafter ruled as virtual dictator until 1968. In the SPANISH CIVIL WAR he supported the Nationalists but, although sympathetic to the Axis powers kept Portugal neutral in WWII. He presided over Portugal's economic revival after the war but fought an unsuccessful battle to retain the Portuguese colonies in Africa.

Salem, Mamdouh Muhammad (1918-), Egyptian politician. He served as Police Commissioner of Alexandria (1946-68), deputy Prime Minister (1971-75) and Prime Minister (1975-).

Salem, state capital of Oregon, USA, 71km (44 miles) s of Portland on the Willamette River. The city was founded in 1840 by Methodist Episcopal missionaries as a mission station and manual training school for Indians. It was made the territorial capital in 1851 and state capital in 1859. Salem is the seat of Willamette University (1842). Industries: timber, paper, textiles, food canning, meat packing. Pop. (1970) 68,296.

Salem, city in NE Massachusetts, USA, on Massachusetts Bay 22km (14 miles) NE of Boston. Fear of witchcraft in colonial America reached its peak in the Salem witch trials of 1692, as a result of which 19 people were hanged. Industries: electrical products and leather goods. Pop. (1970) 40,556.

Salerno, port in s Italy, 47km (29 miles) SE of Naples, on the Gulf of Salerno. Founded by the Romans in 197 BC, it was conquered by the Normans in 1076, sacked by the Swabian Hohenstaufens in 1194 and became part of the Kingdom of Naples in the 15th century. It was the scene of fierce fighting during WWII. The first European medical school was founded at Salerno in the 9th century. Industries include textiles and machinery. Pop. (1975 est.) 159,518.

Salesbury, or Salisbury, William (c.1520-c.1584), Welsh lexicographer. He was the first translator of the New Testament into Welsh, and edited and published a collection of Welsh proverbs in 1546, probably the first book printed in Welsh. He also issued the first Welsh-English dictionary (1547).

Salford, county district in SW GREATER MANCHESTER, England; created in 1974 under the Local Government Act (1972). Area: 97sq km (37sq miles). Pop. (1979 est.) 252,600.

Salian dynasty, royal and imperial ruling line in Germany from 1024 to 1125. Conrad of Swabia, one of the Salian FRANKS, was elected King of Germany in 1024 on the extinction of the Saxon dynasty. The last of the Salians, Henry V, was Holy Roman Emperor from 1106 to 1125, when he died heirless.

Salic Law, code promulgated in the 5th century by the Salian Franks, German settlers in Gaul, which included a law that forbade daughters to inherit land. This was cited, incorrectly, after the 14th century as judicial ground for the exclusion of women, and those descended through the female line, from succession to the French throne. It was contravened by EDWARD III's claim through his mother to the French throne, which contributed to the outbreak of the HUNDRED YEARS WAR. It was also invoked in 1593 to prevent the succession of Isabella, the Spanish infanta and Henry II's grand-daughter.

Salicylic acid, colourless crystalline solid, derivatives of which are antirheumatic drugs (including ASPIRIN) and dye-stuff. It is a coal-tar product, being a hydroxy-acid derivative of benzene with the formula C₆H₄(OH)COOH.

Salieri, Antonio (1750-1825), Italian composer who lived mainly in Vienna and was the teacher of BEETHOVEN, SCHUBERT and LISZT. The legend that he poisoned MOZART inspired Rimsky-Korsakov's opera *Mozart and Salieri*.

Salina, or playa lake, dried lake bed found in arid areas. It is covered with thick layers of salt and mud deposited when water runs into it from surrounding areas during rainy seasons and forms a lake that evaporates after a few days. See also p.228.

Salinger, Jerome David (1919-), US novelist whose first book, *Catcher in the Rye* (1951), made an impact in the USA in the 1960s. Salinger was a recluse and shunned publicity. This is perhaps reflected in the tone and style of *Franny and Zooey* (1961) and his two novellas *Raise High the Roof Beam, Carpenters* and *Seymour: An Introduction* (both published in 1963).

Salinity, total amount of dissolved salts in seawater, a concentration which averages 35 parts per thousand. Salinity analyses led to the discovery that the relative proportions of dissolved material in seawaters remain constant regardless of

the degree of salinity, thus proving that ocean water is constantly being mixed over long periods of time. See also p.232.

Salisbury, Robert Arthur Talbot Gascoyne-Cecil, 3rd Marquess of (1830-1903), British statesman and diplomat. A Conservative, he served in DISRAELI's administration (1874-80), first as Secretary for India and then as Foreign Secretary. On Disraeli's death (1881) he became leader of the Conservative Party and served three terms (1885-86, 1886-92, 1895-1902) as Prime Minister. Notable reforms were introduced at home but his policy abroad of "splendid isolation" left England with few friends during the SOUTH AFRICAN (BOER) WAR (1899-1902). See also pp.1591, 1591.

Salisbury, Robert Cecil, 1st Earl of. See CECIL, ROBERT, EARL OF SALISBURY.

Salisbury, county town and county district in Wiltshire, s England. The town was founded as New Sarum in 1220 when the bishopric was moved from Old Sarum. The city grew around the cathedral, which has the highest spire in England (123m; 404ft) and was added to the original cathedral in the 14th century. Salisbury's library contains one of the original four copies of MAGNA CARTA. Its industries are associated with its function as a market town. Pop. (1971) 35,271. The county district was created in 1974 under the Local Government Act (1972). Area: 1,005sq km (388sq miles). Pop. (1979 est.) 103,100.

Salisbury, city in NE Rhodesia (Zimbabwe), capital of Rhodesia and South Mashonaland province. It was founded in 1890 as a fort from which the Pioneer Column, a mercenary force organized by Cecil RHODES, could seize Mashonaland. The city was named after the British Prime Minister at the time, Lord Salisbury. It was the capital of the Federation of Rhodesia and Nyasaland from 1953 to 1963. It is the seat of the University of Rhodesia (1957). Industries: gold mining, textiles, steel, food processing, clothing, tobacco, chemicals, furniture. Pop. (1979 est.) 627,000.

Salisbury Plain, region of chalk downs in Wiltshire, s England. A number of prehistoric sites have been found on the plain, the most famous of which is STONEHENGE. The army now use much of the area as a military training ground. Area: 777sq km (300sq miles).

Saliva, fluid secreted into the mouth, under the control of the nervous system by the SALIVARY GLANDS. In vertebrates it is composed of about 99% water with dissolved traces of sodium, potassium, calcium and the ENZYME ptyalin. Saliva softens and lubricates food to aid chewing, dissolves some food, starts the digestion of starches, washes the teeth and keeps the mouth moist and flexible. See also p.160.

Salivary glands, one of three pairs of glands located on each side of the mouth that form and secrete SALIVA. The parotid gland, just below and in front of each ear, is the largest of the salivary glands and the one that becomes enlarged in MUMPS; the submaxillary gland is near the angle of the lower jaw; and the sublingual gland is under the side of the tongue. See also p.160.

Salk, Jonas Edward (1914-), US medical researcher. He developed the first vaccine against POLIOMYELITIS in 1952, using inactivated poliomyelitis virus as an immunizing agent. Extensive tests of the vaccine began in 1954 and mass immunization programmes followed.

Salk vaccine, preparation developed by Jonas SALK to immunize against POLIOMYELITIS. It is a "killed" virus vaccine given by means of a series of injections, unlike the Sabin "live" vaccine (which is taken orally).

Sallow, or goat willow, type of WILLOW tree in which large catkins appear in early spring before the unfolding of the leaves. Family Salicaceae; species *Salix caprea*. **Sallust, or Gaius Sallustius Crispus**, (86-c.34 BC), Roman historian. Having served, often with discredit, as senator, legion commander and governor of Africa

"Saki": a photograph by Hoppé of Hector Hugh Munro, who was killed in WWI.

Salamanders are generally small, but the Japanese variety can grow to 1.5m (5ft).

António de Salazar stabilized Portugal's finances but at the expense of freedom.

Salisbury Plain is used by the army for testing tanks and artillery.

Salmon

Salmon can leap more than 3m (10ft) when swimming upstream to lay their eggs.

Nova, he retired to devote the remainder of his life to writing. His works include *The Catline Conspiracy*, *The Jugurthine War* and the five books of *The History of the Roman Republic*.

Salmon, marine and freshwater fish of the Northern Hemisphere. A popular sport and commercially farmed fish, most species are silvery and spotted until the spawning season when they turn dark or red. The Pacific salmon (*Oncorhynchus*) hatches, spawns, and dies in freshwater, but spends its adult life in the ocean. The Atlantic salmon (*Salmo salar*) is actually a marine trout which spawns in rivers on each side of the Atlantic Ocean and then returns to the sea. Weight: to 36kg (80lb). Family Salmonidae. See also pp.61, 62, 740-741, 741-743, 743.

Salmonella, any of several species of rod-shaped bacteria that cause intestinal infections in human beings and animals. *Salmonella typhi* causes TYPHOID FEVER, but the effects of other species may result in only mild GASTROENTERITIS. The bacteria are transmitted by CARRIERS, particularly flies, and in food and water. See also pp.190, 1069, 1069.

Salome (fl. 1st century AD), daughter of Herodias, who conspired with her mother to remove JOHN THE BAPTIST. As a reward for her dancing she asked Herod for the head of John on a plate. She is not mentioned by name in the Gospels but the story is recounted by the Jewish historian JOSEPHUS.

Salomé, play (1893) by Oscar WILDE and opera in one act (1905) by Richard STRAUSS. The play was written in French and translated into English by Lord Alfred Douglas in 1894. It had its first performance in Paris in 1896. Strauss began to write the opera in 1904. It was produced at the Court Opera, Dresden in 1905. Both works are treatments of the story of SALOME.

Salon des Indépendants. See INDÉPENDANTS, SALON DES.

Salon des Refusés. See REFUSÉS, SALON DES.

Salonika. See THESSALONIKI.

Salop, county in w England; known as Shropshire until 1974 when its name was changed under the Local Government Act (1972). The county is crossed by the River Severn. To the N of the river the land is generally low-lying, and to the S it rises to the Welsh hills. The economy is primarily agricultural. Mineral deposits include coal, and the principal industries are iron-working, farm machinery, electrical goods. Area: 3,490sq km (1,347sq miles). Pop. (1976) 359,000.

Salote, Queen Tupou III (1900-65), Queen of Tonga. She succeeded her father, King George Tupou II, in 1918, and played a major role in reuniting the Tongan Free Church with the Wesleyan Church in 1924. She visited Britain in 1953 for the coronation of Queen Elizabeth II.

Salsify, also called oyster plant, or vegetable oyster, hardy biennial plant with a taproot resembling that of a parsnip. It is grown as a vegetable and prized for its oyster-like flavour. Height: to 1.2m (4ft). Family Compositae; species *Tragopogon porrifolius*.

Salt, Sir Titus (1803-76), British textile manufacturer and inventor. He started wool-spinning in 1834 and was the first to manufacture alpaca fabrics in England. The model village of Saltaire grew up after 1853 round his factories near Bradford, Yorkshire.

SALT agreements, armament control agreements worked out at Strategic Arms Limitations Talks (SALT), from 1969. SALT 1 was signed 26 May, 1972, by the US Pres. Richard NIXON and the Soviet General Secretary Leonid BREZHNEV. SALT 2 was signed in 1979, but remains unratified. The agreements limited anti-ballistic missile systems and offensive missile launchers. See also pp.1723, 1793.

Salt, chemical compound formed, along with water, when an ACID and a BASE react together. Salts are typically high-melting crystalline compounds that tend to be soluble in water. They are formed of IONS held together by electrostatic forces and in solution they conduct electricity (See

ELECTROLYSIS). Sodium chloride - common table salt - is a typical example. See also p.898.

Saltire, model village in the town of Shipley, West Yorkshire, England. It was set up in 1853 by Sir Titus Salt for the manufacture of wool.

Saltash, town in s Cornwall, England 6.5km (4 miles) sw of Plymouth (Devon). Situated on the Tamar Estuary, it is linked to Plymouth by a road bridge and a railway bridge, the Royal Albert Bridge (1859), designed by Isambard Brunel.

Saltbush, any of several species of herbs or shrubs of the genus *Atriplex*, found in salt-marshes and desert areas of Australia. To prevent excessive loss of water, the leaves are coated in salts. Family Chenopodiaceae. See also p.302.

Salt flat, level arid salt-encrusted lake floor. The type of shallow basin called a playa is a form of salt flat that results when a desert lake dries up.

Saltglaze, in ceramics, a thin glaze of sodium silicate, one of the traditional glazes used on stoneware. When salt is thrown into the kiln at the maximum temperature sodium from the salt combines with silica in the clay to produce the glaze, also giving the pot a slightly pitted texture.

Saltillo, city in NE Mexico, situated on the plateau of the Sierra Madre Oriental. It was founded in 1575. The chief activities are cereal growing and stock raising but the city also has textile and food processing industries. Pop. (1971) 211,129.

Salt Lake City, state capital in N central Utah, USA 21km (13 miles) E of the Great Salt Lake, on the Jordan River; largest city in Utah. The city was founded in 1847 by the MORMONS. It then became capital of the Territory of Utah in 1856, and of the State of Utah in 1896. Landmarks include the Mormon Temple (1853-93). Salt Lake City is the world headquarters of the Mormon Church. Zinc, gold, silver, lead and copper are mined nearby. Industries: food processing, missiles, rocket engines, tourism, oil-refining, printing and publishing. Pop. (1980) 162,960.

Salto, city in NW Uruguay, situated on the opposite bank of the Uruguay River to Concordia, Argentina. It is the centre of an extensive fruit-growing region. Salto also has boat building and meatpacking industries. Pop. (1963) 57,958.

Salt processing, production of common salt (sodium chloride) from sea water, natural brines and rock salt. Beds of rock salt are mined and quarried and, if sufficiently pure, simply ground and screened. The heat of the sun or artificial heat is used to crystallize sodium chloride from solutions of salt.

Saltwort, or grasswort, annual, weedy herb of temperate seashores in Eurasia and the USA. It has greyish leaves and was once a source of crude soda ash. Height: to 60cm (2ft). Family Chenopodiaceae; species *Salsola kali*.

Saluki, royal coursing dog of Egypt and perhaps the oldest domesticated breed; it was known as long ago as 7000-6000 BC and introduced to England in the 19th century. It may also be called Persian greyhound. A graceful dog, it has a long, narrow head with long pendulous ears. The deep but narrow-chested body has a broad back and a slightly arched loin; it is set on long legs and the tail is long and slender. Height: to 71cm (28in) at shoulder; weight: to 27kg (60lb).

Salvador (Bahia), seaport city in E central Brazil, 1,207km (750 miles) N of Rio de Janeiro. Founded by the Portuguese as Bahia, it was the first formally established colony in Brazil. Salvador was a slave market in the 17th and 18th centuries and the capital of Brazil until 1763. Today the most important industry is food processing; exports include tobacco, sugar, oil and industrial diamonds. Pop. (1970) 998,258.

Salvador, El. See EL SALVADOR.

Salvage, compensation paid to someone who saves a ship or its cargo from imminent disaster. In Britain salvage is an ancient maritime right which has been incorporated into statute law, with the courts being authorized to fix the rate of salvage. For salvage to be claimable, the

claimant's assistance must have been voluntary and have involved an element of skill and risk.

Salvarsan, first drug that was effective in the treatment of SYPHILIS, introduced by Paul EHRLICH in 1909. It is a yellow powder whose systematic chemical name is arsphenamine and the formula $C_{12}H_{14}As_2Cl_2N_2O_2 \cdot 2H_2O$. It was also called 606, after the number of previous drugmaking experiments made by Ehrlich. Injections of Salvarsan, although a great boon to syphilis sufferers who otherwise might have developed the fatal tertiary forms of the disease, were usually followed by jaundice and other ill-effects. See also pp.1092, 1092.

Salvation Army, Christian society devoted to the propagation of the Gospel among the working classes. Its origin was the Christian Revival Association, founded in 1865 in the Whitechapel district of London by William BOOTH. In 1867 it became the East London Christian Mission and in 1878 the Salvation Army, led by "General" Booth. Under the leadership of Booth's son, Bramwell, who was head of the army from 1880 to 1928, its work spread throughout the British Empire and other parts of the world. The Salvation Army also carries out extensive social work among the poor.

Salvi, Nicola. See TREVI FOUNTAIN.

Salvia, genus of about 700 species of flowering plants that includes SAGE, *S. officinalis*, which is used as a culinary herb. The genus is represented throughout the world. Family Lamiaceae. See also pp.372, 709.

Salviati, Francesco de' Rossi (1510-63), Italian painter best known for his decorative frescoes for the Palazzo Farnese in Rome, done in the MANNERIST style.

Sal volatile, or smelling salts, mixture of ammonium carbonate crystals, alcohol and a perfume, often lavender. The mixture was usually held to the nostrils of fainted persons so that the sharp smell of ammonia could revive them.

Salween (Nu Chiang or Nu Jiang in China; Mae Nam Khong in Burma and Thailand), river in South-East Asia. It rises in the Tibetan Plateau, E Tibet, and flows S through Yunnan province, cutting deep gorges through the terrain almost parallel to the Mekong, Yangtze and Irrawaddy rivers. It empties into Burma's Gulf of Martaban, near Moulmein. It forms many rapids along its course and despite its long total length is navigable for only 120km (75 miles) upstream. Length: approx. 2,400km (1,500 miles).

Salzburg, city in NW Austria on the River Salzach, 114km (71 miles) ESE of Munich, Sw Germany. It grew around a 7th-century monastery. For more than 1,000 years it was ruled by the archbishops of Salzburg, who were later princes of the HOLY ROMAN EMPIRE. Salzburg became part of Bavaria in 1809, but was later returned to Austria by the Congress of VIENNA. Salzburg University dates from 1622. The city has an annual music festival in honour of MOZART, who was born there. Tourism is an important industry. Pop. 128,845.

Samadhi, in Buddhist and Hindu philosophy, "total collectedness", a state of higher trance which can lead to greater self-knowledge and the awareness of ultimate reality. Death is the final realization of this state of freedom from the body.

Samaria, ancient city of central Palestine, now the site of Sabastiyah in Israel. It was built as the capital of the northern kingdom of Israel in the 9th century BC but was conquered by SHALMANESER in 722-21 BC. Samaria was later destroyed by John Hyrcanus I and rebuilt by HEROD THE GREAT. It gives its name to the religious sect of SAMARITANS.

Samaritans, descendants of Israelites who were not deported from Palestine by the Assyrians in the 8th century BC. The Jews to the south rejected them, which probably forms the basis of Christ's famous parable of the Good Samaritan (Luke 10:23-37). They call themselves "Children of Israel" (Bene-Yisrael) and their sole form of religious observance is the TORAH (the first five books of the Old Testament). See also SAMARIA.

Salt Lake City near the Wasatch Range. Most of the population are Mormons.

Salukies are among the swiftest of dogs and were once used to hunt gazelles.

Salzburg; Hohensalzburg castle on top of the Mönchsberg (Mountain of the Monks).

Samaritans, The, organization founded in Britain by Chad Varah in 1953 to prevent suicide by befriending those in despair. Varah set up a telephone service manned 24 hours a day by volunteers of all ages who were able to respond in complete confidence to calls from the suicidal. The organization also has a flying squad of volunteers who can meet those in need of immediate personal contact. By the mid-1970s there were 20,000 Samaritans in 167 branches throughout Britain. Similar organizations also exist in many other countries.

Samarium, metallic element (symbol Sm) of the LANTHANIDE SERIES, first identified spectroscopically in 1879. Its chief ores are monazite (phosphate) and bastnäsite (fluorocarbonate). The element is used in carbon-arc lamps and as a neutron absorber in NUCLEAR REACTORS. Some samarium alloys are used in making powerful permanent magnets. Properties: at.no. 62; at.wt. 150.35; s.g. 7.5 (α), 7.4 (β); m.p. 1,072°C (1,962°F); b.p. 1,778°C (3,232°F); most common isotope Sm¹⁵² (26.72%).

Samarkand, city in Uzbekistan (Uzbekistan SSR), USSR on the w spur of the Alai Mts 270km (180 miles) sw of Tashkent. One of the oldest cities in the USSR, it was conquered by ALEXANDER THE GREAT in 329 bc. Samarkand was an important trading point on the SILK ROUTE from China to the West, flourishing under the Arab Umayyad empire of the 8th century AD. It was destroyed in 1220 by GENGHIS KHAN but became the capital of TAMERLANE's empire in 1370. Almost uninhabited by 1700, it was taken by the Russians in 1868 and incorporated into Uzbekistan in 1924. Its products include cotton, silk, leather goods, wine, tea and motor vehicle parts. Pop. (1980) 481,000.

Samarra, town in N central Iraq, on the River Tigris. The existing town was founded as the new Abbasid capital in 836 on the site of an ancient settlement which gave its name to a type of NEOLITHIC pottery. The town contains a gold-domed mosque built in the 17th century and other ruins dating from that period. Pop. (1970 est.) 62,000. See also pp. 1158, 1282.

Samaveda, one of the four collections of prayers and hymns that contain the liturgy of the HINDU religion. The Samaveda, or Veda of the Chants, contains the hymns of the RIGVEDA set to music.

Samba, ballroom dance of Brazilian origin which became popular in Europe and the USA in the 1940s. The music is in syncopated 4/4 time and derives from the late 19th century dance called the maxixe.

Samian ware, also known as *terra sigillata*, mass produced bright-red pottery tableware. It was in common use throughout the Roman Empire from the 1st century BC until the third century AD. The moulded reliefs with which it was decorated were known as "sigilla".

Samizdat (Russian: "self-publication") underground political works banned or censored by the Soviet authorities which are distributed usually in typewritten form. *Tamizdat* is the similar distribution of underground literature that has been printed abroad. *Radizdat* is the broad-casting of Samizdat works.

Samnites, ancient warlike people of s central Italy, probably descendants of the SABINES, who formed a Samnite confederation in the s Apennines. After being defeated by the Romans in the Samnite Wars (343-41, 316-04 and 298-90 bc) and again by SULLA in the civil war (82 bc), they were eventually Romanized.

Samoa, group of Pacific islands approximately 2,000km (1,600 miles) N of New Zealand. The group consists of American Samoa, a US dependency, and Western Samoa, an independent country. Pago Pago, the capital of American Samoa, is a tourist centre with an international airport and Western Samoa relies heavily on trade with New Zealand and capital provided by migrant workers in New Zealand. Exports consist of tropical fruits, especially bananas and copra. Pop: American Samoa (1975 est.) 29,000; Western Samoa (1976 est.) 151,275. See also p. 1972, 2171.

Sámos, island in se Greece in the Aegean Sea; one of the Sporades Islands. It was colonized by Ionian Greeks in the 11th century BC. The island was held by the Ottoman Turks from 1500 to 1913, when it was annexed to Greece. Sámos was the home of AESOP, and PYTHAGORAS was born there. Grapes, tobacco and citrus fruits are grown. Industries: boat-building, silk. Area: 477sq km (184sq miles). Pop. (1971) 32,664.

Samothrace (Samothraki), mountainous island in NE Greece, in the NE Aegean Sea. It was an independent community under Roman protection in the 2nd century BC, and occupied by the Ottoman Turks from 1456 to 1912, when it was annexed to Greece. Excavations in the 19th century unearthed the Winged Victory of SAMOTHRACE. Products: cereals, olive oil, honey, sponges. Area: 179sq km (69sq miles). Pop. 3,830.

Samoyed, ancient sled and guard dog originally bred in N Asia. It has a broad, wedge-shaped head with thick, erect, triangular ears and dark, almond-shaped eyes. The deep-chested, medium-length body is set on moderately long, sturdy legs with large feet, and the long tail is curved over the back. The dense double coat - white, biscuit, or cream - is full and bushy. Height: to 60cm (24in) at the shoulder; weight: to 29.5kg (65lb).

Samoyeds, URALIC-speaking people who inhabit N USSR and consist of a number of groups, including the Nentsy, Yenisey, Tavgis and Selkups. They practise fishing, hunting, PASTORALISM (reindeer and horses) and trapping.

Sampan, small boat used in China, Japan and SE Asia, rigged for sailing but sometimes rowed with one or more oars. Most have wide sterns with the after portion of the deck raised, and are open with a cabin aft. See also p. 505.

Samphan, Khieu (1932-), Cambodian politician who succeeded Prince Norodom SIHANOUK as head of state in 1976. He was deputy Prime Minister (1970-76) and became Commander-in-Chief of the KHMER ROUGE High Command in 1973.

Samphire, or glasswort, plants that grow in salt marshes and on seashores. They have fleshy stems with small, scale-like leaves and tiny flowers. Family Chenopodiaceae; genus *Salicornia*.

Sampling, in statistics, the selection of a small sample to be accurately representative of a larger set. Thus in a public opinion poll, a sample of perhaps 1,000 people may be taken to reflect the views of the entire country. Representativeness is sought by choosing the sample randomly, but the randomness itself is carefully protected by seeking the views of a predetermined proportion of people from each region, occupation group, sex, etc.

Samsara. See WHEEL OF LIFE.

Samson, Israelite judge and hero renowned for his great strength. When his mistress DELILAH discovered that his strength came from his long hair she had his hair cut off and handed him over to his enemies, the Philistines. Blinded by the Philistines and chained in their temple, Samson regained his strength and destroyed the temple of Dagon in Gaza, killing himself and his captors. See also p. 1908.

Samson Agonistes (1671), verse tragedy by John MILTON relating the biblical tale of SAMSON in the form of a Greek tragedy.

Samson et Dalila (1877), three-act opera by Camille SAINT-SAËNS, with French libretto by Ferdinand Lemaire. It was first performed in Weimar in a German translation, having been consistently refused by the Paris Opera.

Samuel I and II, two books of the OLD TESTAMENT. Through the stories of the prophet Samuel, and of SAUL and DAVID, Israel's first two kings, they describe the transition of Israel from a collection of tribes under separate chiefs to a single nation under a king.

Samuel Pepys's Diary, private journal by Samuel PEPYS, containing entries from 1660 to 1669. It is a frank, personal diary written in a private shorthand and not intended for publication, which provides an honest view of RESTORATION manners.

A partial edition was published in 1825, a complete edition in 1893-96. See also pp. 1428-1429.

Samuelson, Paul Anthony (1915-), US economist. Noted for his work in MACROECONOMICS and mathematical economics, his *Economics: An Introductory Analysis* is the standard textbook in its field and has been translated into many languages. Other works include *Foundations of Economic Analysis* (1947). He received the 1970 Nobel Memorial Prize in economics for his efforts to "raise the level of scientific analysis in economic theory".

Samurai, warrior class of feudal Japan. Beginning its rise to prominence in the 12th century, the samurai (or *bushi*) class was supreme during the Tokugawa era (1603-1867). Samurai alone were privileged to bear arms, usually wearing two swords, and received a pension from their *daimyo* (feudal lord), to whom they pledged allegiance. Samurai followed BUSHIDO, a special code of conduct. Events such as the Satsuma Rebellion of 1877 had their roots in samurai feudalism.

San'a, capital city of the Yemen Arab Republic, or North Yemen, 145km (90 miles) from Hodeida. The city was occupied by the Ottoman Turks in the 17th century, after which it became the seat of the Rasside dynasty until the second Turkish occupation of 1872-1918. San'a became the capital of the independent Imam of Yemen in 1918 and of the Arab Republic in 1962. Today San'a is an agricultural and trade centre; its products include coffee, leather goods and jewellery. Pop. (1973) 125,000.

San Agustín culture, pre-Columbian culture found in s Colombia, in the region of the town of San Agustín. It made megalithic tombs and large statues of men or human-like deities, which have been dated to the first five centuries AD. See also pp. 1178, 1366.

San Andreas Fault, geological FAULT that forms the boundary between the North American and North Pacific plates and separates sw California from the rest of North America. Over the past 15 million years the total movement along the fault has amounted to more than 320km (200 miles). It is a region in which earthquakes occur (the great San Francisco earthquake of 1906 occurred along it).

San Antonio, city in s central Texas, USA, on the San Antonio River. It was founded in 1793 on the site of the mission San Antonio de Valero, and was the scene of the Mexico-Texas struggles at the Alamo (1836). A military centre, San Antonio has several US air force bases, and it is the seat of two universities. Industries: food processing, aircraft, building materials, chemicals, wood products, tourism. Pop. (1980) 783,296.

Sancho, the name of two kings of Portugal. Sancho I (1154-1211), son and successor of ALFONSO I, ruled from 1185 to 1211 and achieved some success in the Algarve in the struggle against the Moors. His grandson, Sancho II (c. 1209-1248), was faced during his reign (1223-c. 1246) with a powerful and ambitious Roman Catholic Church, and he failed to prevent increasing anarchy. He was deposed at the instigation (1245) of Pope INNOCENT IV and his brother assumed power as Alfonso III.

San Cristóbal, city in w Venezuela, located at the sw end of the Cordillera Mérida in the Andean uplands. It was founded in 1561 and, although severely damaged by an earthquake in 1875, became an important trade centre. Products include coffee, tobacco, asphalt and leather goods. Pop. (1971) 151,717.

Sanctuary. See NONJURORS.

Sanctions, punitive action taken by one or more nations against another stopping short of direct military intervention. Sanctions can include the cessation of trade, the severing of diplomatic relations or the use of a blockade.

Sanctis, Francesco de. See SPANISH STEPS. **Sanctuary**, holy or reserved part of any religious building. In a Roman temple the sanctuary was called the *adytum* or *cella*; in a Christian church, the chancel or presbytery. The term also applied in the Mid-

The Samaritans, led by Chad Varah, is a carefully recruited team of volunteers.

Samoyeds are protected from the intense cold by two layers of thick, woolly hair.

Samson destroys his captors and the temple of Dagon, from an engraving by Doré.

San Antonio: a pre-WW11 view, showing the Medical Arts Building (right).

Sand, George

George Sand, photographed in middle age by the pioneer French photographer Nadar.

Sandpipers; most nest on the ground but some use abandoned tree nests.

The 4th Earl of Sandwich invented the "sandwich" to eat at gaming-tables.

San Francisco; statue of Juan Bautista de Anza, the founder of the city.

dle Ages to a church precinct or other sacred place where a fugitive from justice could claim immunity from arrest. This right was abolished in the 17th century. **Sand, George** (1804–76), French novelist, real name Amandine-Aurore-Lucie Dupin. After an unhappy marriage she went to Paris with Jules Sandeau, from the first half of whose name she took her pseudonym. Among her later companions were Alfred de Musset and Frédéric Chopin and her novels from this period, including *Lélia* (1833) and *Mauprat* (1837), examine women's rights to independence. See also pp.1574, 1583.

Sand, mineral particles worn away from rocks by erosion, individually just large enough to be distinguished with the naked eye. Sand is composed mostly of quartz, but black sand (containing volcanic rock) and coral sand also occur.

Sandage, Allan Rex (1926–), US astronomer and cosmologist. A leading authority on stellar evolution, he participated in the discovery of the first quasars in 1961.

Sandalwood, any of several species of Asian trees, many of which are parasitic on the roots of other plants. They have oval hairy leaves and straw-coloured flowers which turn blood-red. Height: to 10m (33ft). Family Santalaceae.

Sand blasting, industrial method for cleaning the surfaces of materials such as metals and concrete. It is an efficient means of cleaning the outer walls of dirty buildings, but its most frequent use is to remove the oxide scale from metals prior to painting, spraying, electroplating or dip-coating. Articles to be cleaned are subjected to a high pressure blast of sand, where possible inside a closed chamber.

Sandburg, Carl (1878–1967), US poet, biographer and folklorist. His first volume of poetry *Chicago Poems* appeared in 1916. It contains his most famous poem, *Chicago*. Other volumes of poetry include *Cornhuskers* (1918), *Smoke and Steel* (1920), *Good Morning, America* (1928), *The People, Yes* (1936) and *Honey and Salt* (1963). His poetry, inspired by Walt Whitman, draws on American history and idiom. His novel *Remembrance Rock* was published in 1948.

Sandby, Paul (1725–1809), British painter who is known for his watercolour landscapes. He reproduced many of his works in aquatint, a process which he introduced into Britain.

Sand casting, method of moulding metals and alloys in which the molten metal is poured into a mould made of firmly packed sand. To help the sand grains cohere, they are mixed with clay, water and other binders. The method is used in the casting of steel, brass, bronze and aluminium. See also p.408.

Sand dune, bank of sand found in deserts, formed and kept in motion by the wind. Dunes may be crescent shaped (barchans), linear (seif), or they may be formed in wind shadows. Large numbers merging with one another give rise to a "sand sea" (erg). The term is also used to refer to dunes found together with vegetation, such as those on shorelines. See also pp.229, 229.

Sand eel, any of about 18 species of small, eel-like, marine fish; it has a long, slender body, a long head and a forked tail. Often found in schools, it lives beneath the sand in shallow water. Length: to 46cm (18in). Families Hypotyphidae and Ammodytidae.

Sand fly, any of several species of two-winged flies, not all closely related. They include species of *Phlebotomus*, which, when biting human beings, transmit papataci fever. Other serious diseases spread in this manner by sand flies include leishmaniasis and dengue. Order Diptera. See also p.1082.

Sandgrouse, terrestrial bird of central and s Eurasia and Africa that lives in large flocks in open arid areas, feeding on seeds and vegetable shoots, and sometimes resting in shallow sand depressions. It looks like grouse but is related to the pigeon and, like a pigeon, drinks with its bill held in the water. Length: 22–40cm (9–16in). Family Pteroclididae. See also pp.73, 319.

Sand hopper, also called sand flea, any of several species of small, terrestrial crustaceans. The nocturnal European sand hopper (*Talitrus saltator*) lives on beaches near the high tide mark, emerging to feed on organic debris. Length: to 1.5cm (0.6in). Order Amphipoda; family Talitridae. See also p.334.

Sandhurst, Royal Military Academy, training school for potential officers of the British army. Located near Camberley, Surrey, since 1813, it was first established at Great Marlow in 1802. Cadets generally enter Sandhurst at the age of 19 and follow a course lasting either eight or 16 months. They are then commissioned to the various branches of the army.

San Diego, city in s California, USA; port of entry for s California, Arizona and New Mexico. It was founded in 1769 as a mission site named San Diego de Alcalá. It has a large naval base, is an important centre for scientific research (especially in oceanography) and has a branch of the University of California. Industries: aerospace, electronics, shipbuilding, tourism, fishing, clothing, furniture. Pop. (1980) 870,000.

Sand painting, ritual painting practised by American Indians of the sw USA. Regarded as the vital core of a powerful magic performance designed to heal, the sand picture is believed to absorb the illness from the sick man sitting in its centre.

Sandpiper, wading bird that breeds in cold regions and migrates long distances to winter in warm areas, settling in grass or low bushes near water. It feeds on invertebrates and nests in a grass-lined hole in the ground. Length: 15–60cm (6–24in). Family Scolopacidae.

Sandringham, one of the residences of the British royal family, in Norfolk, England. The estate was bought for the Prince of Wales (later Edward VII) in 1861 and the house was built in 1869–71. George VI died there in 1952.

Sand River and Bloemfontein Conventions (1852 and 1854), recognition by the British of Boer self-government in the Transvaal and the Orange River Sovereignty respectively. The Conventions allowed the Boers but not the Africans to carry arms, thus shifting power to the former. See also p.1666.

Sands, David ("Dave") (1926–52), Australian boxer of Aboriginal and Puerto Rican parentage. A devastating puncher with either hand, he held Australian titles at middleweight, light-heavyweight and heavyweight, and was a leading contender for the world middleweight crown when he suffered fatal injuries in a road accident.

Sandstone, sedimentary rock composed of sand grains cemented in such materials as silica, iron oxide or carbonate or lime. Its hardness depends on the character of the cementing material. See also p.210.

Sandstorm, strong wind carrying with it dense clouds of desert sand and more coarse-grained than the particles in dust storms. See also p.250.

Sandwell, county district in SW West Midlands, England; created in 1974 under the Local Government Act (1972). Area: 86sq km (33sq miles). Pop. (1974 est.) 320,100.

Sandwich, John Montagu, 4th Earl of (1718–92), British naval administrator. During his second term (1771–82) as First Lord of the Admiralty he presided over British defeats during the War of American Independence and became highly unpopular in consequence. In fact he was an able, if corrupt, administrator and was prevented from expanding the navy, as he wished, because of the stringent economies of Lord North.

Sandwich Islands, name given to the islands of Hawaii in the N central Pacific Ocean by Capt. James Cook in 1778. They were named after John Montagu, the Earl of Sandwich.

Sand yachting. See LAND YACHTING.

Sanfelice, Ferdinando (1675–1750), Italian architect who was the greatest of the late baroque Neapolitan architects. He is best known for his monumental staircases, as at the Palazzo Serra Cassano, Naples.

San Francisco, port in w California, USA, on a peninsula bounded by the Pacific Ocean (W) and San Francisco Bay (E), which are connected by the Golden Gate Strait. The city was founded by the Spanish as a mission in 1776, and acquired by the USA in 1846. Devastated by an earthquake and fire in 1906, the city was quickly rebuilt and prospered with the opening of the Panama Canal. Landmarks include Chinatown, Fisherman's Wharf, Nob Hill, Telegraph Hill, the Golden Gate Bridge (1937), the city's cable cars, Market Street and the Latin Quarter. There is a branch of the University of California (1855). Industries: tourism, shipbuilding, food processing, oil refining, chemicals, aircraft, fishing, printing and publishing. Pop. (1980) 674,063.

Sangallo family, Italian Renaissance architects. Giuliano da Sangallo (1445–1516), designed the first great Renaissance villa at Poggio a Caiano in Florence. (See also HC1 pp.254, 255.) His brother, Antonio da Sangallo, the Elder (1455–1534), and their nephew, Antonio da Sangallo, the Younger, (1485–1546) were both influenced by Bramante. Antonio the Younger became the most noted architect of his time. He designed the Farnese Palace, Rome and was a successor to Raphael and Peruzzi on the building work on St Peter's.

Sanger, Frederick (1918–), British biochemist who was awarded the 1958 Nobel Prize in chemistry for being the first to determine the exact structure of insulin. He discovered a chemical, Sanger's reagent, that will attach itself to only one end of an amino acid chain (which constitutes a protein). Then, by breaking up the chain into its component amino-acids, he could tell which acid contained the chemical and therefore which one was at the end of the chain. By repeating this technique he determined the exact order of the 51 amino-acids that make up insulin.

Sanger, Margaret Higgins (1883–1966), US social reformer who established the first birth control clinic in North America. As a public health nurse, she became convinced of the necessity of birth control as a primary means of alleviating urban poverty. Her crusade, begun in 1912, was unpopular at first, and she was jailed for sending birth control information through the post. See also pp.1103, 1103.

Sanger's Circus, British circus formed by two brothers, John (1816–89) and George (1825–1911) Sanger. Begun as a small touring entertainment, the circus evolved in 1871 into an equestrian spectacle produced each winter in London and a large travelling circus which toured the provinces in summer.

Sanhedrin, Great, ancient council or court of Judaism, prominent in Jerusalem during the period of Roman rule in Palestine until the Second Temple was destroyed in AD 70. Essentially a rabbinical court whose authority was accepted by the Jews, the Great Sanhedrin is believed to have served as a legislative and judicial body on both religious and political issues. Jesus Christ appeared before the Sanhedrin.

San Isidro, city in e central Argentina, 21km (13 miles) NW of Buenos Aires. It grew up in the 18th century around a chapel. Modern manufactures include leather, dairy goods and paper; tourism is also an important source of income. Pop. (1970) 250,008.

Sanitation, in civil engineering, provision of public hygiene by various methods, including refuse collection and disposal, drainage maintenance, purification of water and sewage disposal. See also pp.542–543, 1082.

San José, capital and largest city of Costa Rica, in central Costa Rica, capital of San José province. Founded c.1736 as Villa Nueva, San José succeeded Cartago as capital of Costa Rica in 1823. The city soon became the centre of a prosperous coffee trade. It is the seat of the University of Costa Rica (1843). Products: coffee, sugar cane, cacao, vegetables, fruit, tobacco. Industries: food processing, wine, brewing, chocolate, leather goods, textiles, furniture. Pop. (1980) 625,763.

San José, city in w California, USA, 64km

(40 miles) SE of San Francisco. It was founded in 1777 and was California's capital from 1849 to 1851. San José has a branch of the University of California, and Lick Observatory is nearby. The city is the centre of a rich fruit-growing region. Pop. (1973) 523,116.

San Juan, capital and largest city of Puerto Rico, on the NE coast of the island. It has one of the finest harbours in the West Indies. Founded in 1508, the port prospered during the 18th and 19th centuries, and fell to the USA in 1898. The city has the University of Puerto Rico (1903), a school of tropical medicine, a US air base and an international airport. Exports include coffee, tobacco, fruit and sugar, which go mainly to the USA. Industries: tourism, cigars and cigarettes, clothing, sugar refining, rum distilling, metal products, pharmaceuticals, tourism. Pop. (1980) 432,973.

San Justo, city in E central Argentina, 24km (15 miles) WSW of Buenos Aires. Founded in 1856 as a market for the grain and alfalfa produced in the surrounding region, San Justo is now an important industrial suburb of Buenos Aires. Industries: farm machinery, paper, rubber products, motor vehicle parts. Pop. (1970) 659,193.

Sankara (780–820), Indian philosopher and theologian who founded the Advaita Vedanta school of philosophy. In his major work, *Brahma-sūtra-bhāṣya* (a commentary on *Brahma-sūtra*) he affirmed the one true reality (BRAHMA) as the source of all things and that change is illusory. See also pp.1886–1887.

San Marcos University, university at Lima, Peru. It was founded in 1551 and is consequently the oldest university in South America, although teaching was suspended for many years (1821–61).

San Marino, one of the smallest independent republics in the world, in NE Italy. It was founded by a Christian refugee named Marino, who established a community there in the 4th century AD. Most of the population are farmers. The republic's income is derived from tourism, the export of wine and wool and the sale of postage stamps. The capital is San Marino. Area: 62sq km (24sq miles). Pop. (1976 est.) 20,000. See also p.2127.

San Martín, José de (1778–1850), South American revolutionary, b. Argentina. He played a significant part in winning independence for Argentina, Chile and Peru. In 1817 he led an army across the Andes into Chile and in 1821 entered Lima in triumph and became protector of Peru. The following year, however, he resigned in favour of Simon Bolívar and retired to Europe. See also pp.1562, 1563.

San Michele, The Story of (1929), book by Axel Munthe. Describing his life as a doctor in Paris and Rome, and on the island of Capri, the work won immense popularity chiefly because of its lively characterization and deeply sympathetic portrayal of human suffering.

Sanmichele, Michele (c.1484–1559), Italian architect and engineer. Trained in Rome, he worked mainly in the Venetian Republic after 1527 designing palaces, villas and military fortifications. Among examples of his work are the Palazzo Bevilacqua in Verona and the Palazzo Grimani in Venice. See also p.1391.

San Miguel, city in E central El Salvador, at the foot of the volcanoes of San Miguel and of Chinameca. The city is a trade and processing centre for a region producing cotton, henequen, coffee and sugar cane. The chief industry is textiles. Pop. (1971 est.) 59,500.

Sannazaro, Jacopo (c.1456–1530), Italian Renaissance poet. Noted for his highly influential pastoral romance *Arcadia* (1504) and Italian lyrics, he also wrote elegant Latin poetry.

San Pedro de Macoris, city in the Dominican Republic, at the mouth of the Higuamo River. It is the nation's leading sugar-exporting port. Textiles and the distilling of rum are the major industries. Pop. (1970) 70,092.

San Quentin, US prison, first established in 1852 on a peninsula in the San Francisco Bay, NW of San Francisco.

San Remo, Conference of (April 1920), meeting of Belgium, Britain, France, Greece, Italy, and Japan at San Remo, Italy, to discuss the Treaty of Versailles (1919), consider the outlines of the Allied peace with Turkey and award mandates in the Middle East. See also p.1782.

San Salvador, capital and largest city of El Salvador, in central El Salvador. Founded in 1524, the city has frequently been damaged by earthquakes. San Salvador served as the capital of the Central American Federation from 1831 to 1839. Products: soap, sugar, beer, textiles, tobacco. Pop. (1971) 337,171.

Sans-culottes, radical supporters of the French Revolution. They received their name because they wore long trousers (*pantalons*) rather than the knee breeches (*culottes*) worn by aristocrats. The term usually refers to the lower classes who demanded that the revolutionary government enact social and economic measures for their benefit.

San Sebastián, seaport city in N Spain, on the Bay of Biscay 77km (48 miles) E of Bilbao. Noted for its scenery and beaches, it is a popular resort area and former summer residence of the Spanish court. Its industries include chemicals, metallurgy and fishing. Pop. (1974) 177,534.

Sanskrit, classical language of India, the literary and sacred language of HINDUISM, and the forerunner of the modern Indo-Aryan languages. Like Latin and Greek it is an Indo-European language and was introduced to India from the north in about 1500 BC. Only about 3,000 Indians are able to speak it today but it has nevertheless been designated one of the national languages of India.

Sansom, William (1912–76), British short story writer and novelist whose writing is precise, detailed and realistic. His stories range over a wide variety of subjects, and collections include *The Ulcerated Milkman* (1966) and *The Vertical Ladder* (1969). His novels include *The Body* (1949) and *Hans Feet in Love* (1971).

Sansovino, Andrea Contucci (1460–1529), Italian religious sculptor of the High Renaissance. His graceful, classical marble carvings were much admired. Among his surviving works are the tombs of Cardinal SPORZA and Cardinal Basso (1505–09) in Sta Maria del Popolo, Rome, and the group *The Virgin and Child with St Anne* (1512) at Agostino. **Sansovino, Jacopo** (1486–1570), Italian architect and sculptor. His early work was done in Florence and Rome, but he moved to Venice in 1527 and helped to establish the grand Roman style there. He designed the library of St Mark's (1536) and many other public buildings in Venice. See also pp.1390, 1391.

San Stefano, Treaty of (March 1878), treaty concluding the war declared by Russia against the Ottoman Empire in April 1877. According to the treaty Russia won border areas in Asiatic Turkey and southern Bessarabia, and an independent Bulgarian principality was established. See also p.1664.

Santa Anna, Antonio Lopez de (1794–1876), Mexican President. He identified himself with both liberal and conservative factions and intrigued ceaselessly. While he was President Mexico lost Texas to the USA (1836) and Santa Anna's attempt to recapture the province was crushed. In 1847, after defeat by US forces, he went into exile in Jamaica. He again became President, 1853–55, after which he was exiled again. He returned to Mexico in 1874 and died a pauper.

Santa Claus, variant of the Dutch name Sinter Klaas, itself a version of the name St NICHOLAS (fl. 4th century), Bishop of Myra. Santa Claus has become associated with the feast of Christmas and is identified with Father Christmas in Britain and in the USA. Late on Christmas Eve he traditionally brings presents, which he places in the stockings that children have put out as they go to bed.

Santa Cruz, Álvaro de Bazán, marqués de (1526–88), Spanish admiral. He distinguished himself against the Turks at the battle of LEPANTO (1571) and against the French off the Azores at Terceira (1583).

He was appointed chief planner of the attempted invasion of England (1588) and commander of the Spanish ARMADA, but died before the expedition could set sail.

Santa Cruz, city in central Bolivia on the Piray River, founded in the 16th century as a Jesuit mission. A railway built in the early 1960s has given the city access to the Atlantic and Pacific oceans, and it is now a trade centre for sugar, coffee, rice and cattle. Pop. (1971 est.) 135,000.

Santa Cruz de Tenerife, city on the NW coast of Tenerife in the Canary Islands, Spain. Founded in 1494, it has a fine harbour and exports fruit, vegetables and sugar cane. Industries include oil refining. Pop. (1974) 157,791.

Santa Fe, state capital in N New Mexico, USA. Founded c.1609 by the Spanish, the city was a centre of Spanish-Indian trade for more than 200 years. A seat of government since it was founded, Santa Fe is the oldest capital in the USA. The city became the W terminus of the SANTA FE TRAIL in 1821. Industries: tourism, Indian and Mexican handicrafts, food processing. Pop. (1977) 46,855.

Santa Isabel, former name of Malabo, capital of Equatorial Guinea, on Macías Nguema Biyogo (formerly Fernando Póo island), in the Gulf of Guinea. It is the financial and commercial centre and exports coffee, cacao and timber. Pop. (1976) 19,869.

Santa Maria Maggiore (c.432), early Christian BASILICA in Rome. Long perspective is achieved by the combination of a low roof and a row of IONIC marble columns. There are some fine mosaics in the triumphal arch which depict scenes from the childhood of Christ. It is the only basilican church which bears evidence that it was once a pagan place of worship.

Santander, Francisco de Paula (1792–1840), Colombian politician who became the first constitutional President of NEW GRANADA (1833–37).

Santander, city in N Spain in the Bay of Biscay. It was a centre of trade with the New World in the 16th century. In June 1937 it was blockaded and captured by the Nationalists in the SPANISH CIVIL WAR. Much of the town centre was destroyed by fire in 1941. Pop. (1974) 161,947.

Santayana, George (1863–1952), US philosopher and poet. His works tended towards scepticism but admitted a positive knowledge of the realm of universals or "essences". After WWII he withdrew from the world, which was reflected in the moral detachment of his writing. His works include *The Sense of Beauty* (1896), *The Life of Reason* (1905–06), *Skepticism and Animal Faith* (1923) and a novel, *The Last Puritan* (1935).

Santiago, capital of Chile, in central Chile on the Mapocho River. Founded in 1541 by Pedro de Valdivia, it was destroyed by an earthquake in 1647. It is the economic and cultural centre of the country and also has a number of manufacturing industries, which include textiles and footwear. Pop. (1975 est.) 3,186,000. See also pp.1740–1741.

Santiago de Compostela, city in N central Spain, 52km (32 miles) S of Lt Coruna. Founded in the 9th century of Alfonso II, who built a chapel on the site of the tomb of St James, the city became a major centre of pilgrimage. It is the site of the annual festival of St James and the cathedral of St James, which was built in the 11th–13th centuries on the site of the original chapel. There are more than 45 churches and a university (1525) in the city. Industries: tourism, handicrafts, wood products, furniture, leather goods. Pop. (1970) 70,893.

Santiago de Cuba, port on the S coast of Cuba; second-largest city in Cuba and capital of Oriente province. Founded in 1514, it was capital of Cuba from 1522 to 1589. Fidel CASTRO's campaign against Fulgencio BATISTA began by an attack on a military garrison there in July 1953. Exports: agricultural produce, timber. Pop. 277,600.

Santillana, Íñigo López de Mendoza, Marqués de (1398–1458), Spanish poet and soldier. His sonnets *Sonetos fechos al*

José de San Martín, early in his career, fought in Spain against Napoleon.

San Remo Conference was held in the Municipal Casino of the resort.

Santa Claus distributing presents to the delighted children of a Spanish village.

Santiago; a 19th-century print. Most of the city is today of modern construction.

Sappho, Plato's "Tenth Muse", shown in a detail from Paolo's Fidenza's engraving.

italico modo are imitative of PETRARCH and DANTE, but the lyrical *serranillas* were inspired by folk themes. Santillana's *Proemio e carta* (1449) is the first important work of literary criticism in Spanish.

Santo Domingo, capital of the DOMINICAN REPUBLIC, on the S coast of Hispaniola. Founded in 1496 by Bartholomew Columbus, it is the oldest European-founded community in the Western Hemisphere. The cathedral of Santa Maria (1514) is believed to contain the tomb of Christopher COLUMBUS. The Dominican Republic's leading port, Santo Domingo exports tobacco, coffee and cacao. Industries: textiles, woodworking. Pop. (1978) 1,103,425.

Santomaso, Giuseppe, (1907–) Italian painter and member of the *Fronte nuova delle arti*. This group set up after WWII and sought to free painting and sculpture from hidebound traditions and assimilate the emerging styles and techniques.

Santos, city in SE Brazil, 72km (45 miles) SSE of São Paulo on São Vicente Island. Founded by the Portuguese in the 1540s, it is second only to Rio de Janeiro in the tonnage of shipping handled. Santos is the world's largest exporter of coffee and major distributor of other Brazilian products. Pop. (1970) 341,317.

San Vitale (built AD 526–47), Byzantine church in Ravenna, Italy. It has a central octagon which is surrounded by an octagonal ambulatory. The columns of the inner octagon have beautifully carved capitals. The chancel, an apsed extension at the east end, contains famous mosaics of Justinian and Empress Theodora with their court.

Saône, river in E France which rises in the Vosges uplands and flows SW to join the River Rhône at Lyon. The Saône is connected by canal to the rivers Moselle, Marne, Yonne and Loire. Length: 480km (298 miles).

São Paulo, city in SE Brazil, on the Tietê River; capital of São Paulo state and largest city in Brazil. Founded by the Jesuits in 1554, it was the base for expeditions into the interior in search of mineral wealth. São Paulo grew rapidly in the 17th century as a trading centre for a region producing coffee. It now ships large quantities of agricultural produce through its port of Santos. Industries: motor vehicles, printing and publishing, chemicals, electrical equipment, heavy machinery, pharmaceuticals. Pop. (1979) 8,407,500.

São Tomé and Príncipe, independent island republic in the Gulf of Guinea, off the W coast of Africa. Formerly a Portuguese colony, the islands became independent in 1975. Cocoa, coffee, bananas and coconuts are grown on plantations and their export provides the republic's only source of income. The capital is São Tomé. Area: 964sq km (372sq miles). Pop. (1975 est.) 80,000. See also p.2127.

Sap, in vascular plants, fluid that circulates water and nutrients through them. Water is absorbed by the roots and carried, along with minerals, through the XYLEM to the leaves. Sap from the leaves is distributed throughout the plant; it travels upwards by OSMOSIS (specialized diffusion), root pressure, and pressure differences created by leaf transpiration coupled with capillary action. The sugar maple (*Acer saccharum*) has sap with a high sugar content that is used to make maple syrup and sugar. See also pp.356–357.

Sapodilla, fruit-bearing evergreen tree of tropical regions. The fruits are spherical or ovoid, brown, and contain a sweet pulp surrounding shiny black seeds. Species *Achras zapota*. See also p.690.

Saponin, GLUCOSIDES present in some plants that produce a lather when agitated with water. Used as a soap substitute, it is found in horse chestnut, soapberry, soapnut and soapwort.

Sapper (1888–1937), British novelist, real name Herman Cyril McNeile. He achieved success with *Bulldog Drummond* (1920) and its numerous sequels involving the same hero, an ex-officer endowed with charm, commonsense, immense chauvinism and a sense of fair play.

Sapper, in the British armed forces, a pri-

vate in the Royal Engineers, formerly the Royal Sappers and Miners. It was originally his job to dig "saps", which were fortifications, tunnels or trenches, used to approach the enemy unseen.

Sapphire, transparent to translucent gemstone variety of CORUNDUM. It has various colours, the most valuable being deep blue. They are brilliant when cut and polished, but lack fire. See also pp.260–261, 260–261.

Sappho (fl. early 6th century BC), Greek poet whose name has come to connote female homosexuality. Her passionate love poetry, written on the island of Lesbos – from which the word lesbian comes – was regarded by PLATO as the expression of "the tenth Muse". Of noble birth, Sappho was the centre of a literary coterie.

Sapporo, city on Hokkaidō, Japan; capital of Hokkaidō prefecture. A growing industrial and commercial city, it has become the business centre of N Hokkaidō. Hokkaidō University (1918) is in the city. Industries: timber, food processing, printing and publishing, tourism. Pop. (1979) 1,319,000.

Saprophyte, plant that obtains its food from dead or decaying plant or animal tissue. Generally it has no CHLOROPHYLL and grows in humus. Included are fungi such as puff-balls, mushrooms and moulds, and some flowering plants. See also PARASITE; pp.352, 352.

Saqarra. See SAKKARA.

Sarabande, dance of 16th-century Spanish origin. At this time it was accompanied by the castanets and lively music and was regarded with much disfavour by the Church. By the 17th century it had spread to Italy and France where it became popular as a court dance.

Saracens, term applied originally to an Arab tribe in the Sinai Peninsula and then extended to include all Arabs and later all Muslim subjects of the caliph. It was used particularly by medieval Christians to denote their Muslim enemies. The Saracens held Sicily from the 9th to the 11th century, leaving a cultural influence that can still be discerned there.

Saragossa, or Zaragoza, capital of Saragossa province and the foremost city of ARAGÓN in NE Spain. It is an ancient city which the Goths captured from the Romans in the 5th century and in turn lost to the Moors in the 8th century. In 1118 it was captured by Alfonso I of Aragon, who made it his capital. Today it is the commercial centre of Aragon and serves the surrounding agricultural region. Industries: timber, food processing. Pop. (1970) 479,845.

Sarah, in the Bible, wife and half-sister of ABRAHAM. Following the custom of the time, and because she was childless until her old age (when she bore ISAAC), she gave Abraham her maid Hagar, who bore Ishmael, as concubine.

Sarajevo, city in SW central Yugoslavia, on the River Bosna, the capital of Bosnia and Herzegovina. The city is first mentioned c.1415 as the Vrh-Bosna citadel; it fell to Turks in 1429, passed to Austro-Hungary in 1878 and was incorporated into Yugoslavia in 1918. The city was the scene of the assassination of the Archduke Francis Ferdinand and his wife, in June 1914, an act which precipitated WWI. Its present industries include the manufacture of textiles, steel, beer, carpets, handicrafts and electrical equipment. Pop. (1971) 243,980.

Saratoga, Battle of (17 Oct. 1777), decisive defeat for the British army during the War of AMERICAN INDEPENDENCE. Gen. John BURGOPYNE led 8,000 troops from Canada to the Hudson valley, trying to link with British forces in New York, but his advance south was halted in two engagements on the west bank of the Hudson. Burgoyne surrendered to Horatio GATES at Saratoga. The American victory was instrumental in persuading the French to intervene directly on the side of the rebels.

Sarawak, state in Malaysia, on NW Borneo Island; Kuching is the capital. Ruled as an independent state by Britain's James BROOKE after 1841 (when it was ceded from the sultan of Brunei) it was made a

British protectorate in 1888 and a Crown colony in 1946 after the Brooke family passed it to Britain. Sarawak became a part of Malaysia in 1963. Products include: coconuts, rice, rubber, oil and sago. Area: 125,205sq km (48,342sq miles). Pop. (1977 est.) 1,159,822.

Sarcoidosis, systemic disorder of unknown cause, characterized by the formation of scar-like tissue in the lungs, lymph nodes, muscles, liver and elsewhere in the body.

Sarcoma, cancerous growth or TUMOUR made up of tissues from muscles and bones, or cells embedded in connective tissue. It is usually highly malignant. See also CANCER.

Sardana, Catalan national dance usually in 6/8 time performed to the folk music accompaniment of pipes and hand-drum. Dancers form a circle and dance with controlled and formal steps, at first slowly, then more rapidly.

Sardine, small marine food fish found throughout the world. It has a laterally compressed body, a large toothless mouth and oily flesh. Length: to 30cm (1ft). Species include the California *Sardinops caerulea*, South American *Sardinops sagax* and the European sardine, or PILCHARD, *Sardina pilchardus*. Family Clupeidae.

Sardinia, mountainous island of Italy, 208km (129 miles) W of the Italian mainland, from which it is separated by the Tyrrhenian Sea. Farming and fishing are the chief occupations; wheat, barley, grapes, olives and tobacco are grown and sheep and goats are reared. Salt extraction is important, and other mineral deposits include gold, silver, coal, zinc, lead and copper. The only large city is Cagliari, the capital. A trade centre for the Phoenicians, Greeks and Carthaginians, Sardinia became a kingdom in 1720. In 1861 it was incorporated into the kingdom of Italy. Area: 23,813sq km (9,194sq miles). Pop. (1980 est.) 1,601,586. See also p.2075.

Sardinia, Kingdom of, possessions of the House of Savoy from 1720, when it was ceded Sardinia to compensate for the loss of Sicily. The kingdom included Sardinia, Savoy, Nice, Montferrat and PIEMONTE, and further lands were acquired during the 18th century. Most of the mainland possessions were lost to France between 1792 and 1814. Genoa became part of the kingdom in 1815 and, during the RISORGIMENTO, Lombardy in 1859, most of the PAPAL STATES and the TWO SICILIES in 1860. VICTOR EMMANUEL II of Sardinia became King of Italy in 1861. See also pp.1588, 1589.

Sardis, ancient city in Asia Minor, 80km (50 miles) E of Smyrna in the Hermus valley. It was the capital of ancient Lydia c.650–519 BC and the site of the first minting of coins in the 7th-century BC. It was taken by the Ionians in 499 BC and the Romans in 133 BC. Sardis was destroyed by TAMERLANE in the 15th century, but its ruins were not discovered until 1958.

Sardou, Victorien (1831–1908), French dramatist. He wrote more than 70 plays, mostly light comedies and historical dramas including *Diorçons!* (1880) and *Dora* (1877). He was particularly well-known for his dramas of a type known as the Well-made Play.

Sargasso Sea, moving region of water in the N Atlantic Ocean which takes its name from the large quantities of floating seaweed (*Sargassum*) covering the surface. Because the sea is choked with seaweed, it resembles an oceanic desert and has the least amount of life of any area of sea water.

Sargent, Sir Harold Malcolm Watts (1895–1967), British conductor. Particularly noted for his choral work, he conducted the Royal Choral Society from 1928 and the BBC Symphony Orchestra from 1950 to 1957. From 1951 he was particularly associated with the Henry Wood Promenade concerts.

Sargent, John Singer (1856–1925), US painter. He studied in Florence and Paris but most of his work was done in London. He is best known for his numerous portraits, especially those of society ladies which made him the most fashionable portraitist of his generation.

Sardine oil is used in the manufacture of margarine, paint, varnish and cosmetics.

Sardinia; Osilo, a typical hill village near Sassari in the north of the island.

John Singer Sargent's portrait of Henry James captures his subject's character.

Sargeson, Frank (1903–), New Zealand novelist and short-story writer who began his career as a lawyer. He achieved recognition with *A Conversation with My Uncle* (1936) and also published a collection of short stories (1964) and a later novel, *The Hangover* (1967).

Sargon I (the Great) (r. c. 2334–2279 BC), King of Akkad, Mesopotamia. He defeated Lugalzaggisi of Urut and subdued Sumeria, Syria and part of Asia Minor. The Akkadian Empire was destroyed by the Gutis. See also pp. 1163, 1163.

Sargon II (d. 705 BC), king of Assyria (r. 721–705 BC). He conquered Samaria in 721 BC and completely destroyed the northern kingdom of Israel. He also subjugated Babylonia (710). See also pp. 1165, 1191.

Sark, one of the CHANNEL ISLANDS of the United Kingdom, divided into Great Sark, and Little Sark which are connected by a causeway. Sark is part of the Bailiwick of GUERNSEY; its feudal organization dates from the late 17th century. Area: 5 sq km (2 sq miles). Pop. (1971) 604.

Sarkis, Elias (1924–), Lebanese banker and politician. He was the governor of the Bank of Lebanon from 1968 to 1976. He became President of the Lebanon in 1976.

Sarmatians, ancient nomadic and pastoral peoples who in the 5th century BC lived in central Asia between the Urals and the River Don. By the 2nd century BC they had conquered most of the territory of the SCYTHIANS in S Russia and began to threaten the Romans. They were overpowered by the Goths from the W in the 3rd century AD and the Huns from Asia in the 4th century AD.

Saroyan, William (1908–), US author whose works combine optimism and sentimentality. They include short stories, such as *The Daring Young Man on the Flying Trapeze* (1934), and plays, such as *My Heart's in the Highlands* (1939) and *Time of Your Life* (1939).

Sarraute, Nathalie (1902–), French novelist, b. Russia, whose novels are masterpieces of texture rather than of structure. Her preoccupation with psychological detail can be seen in *Tropismes* (1957) and *Les Fruits d'Or* (1963).

Sarsaparilla, wild perennial plant with greenish flowers that grows in the USA. Family Araliaceae; species *Aralia nudicaulis*. It is also a general name for several species of cultivated plants of genus *Smilax*, and for the medicinal preparation and soft drink (root beer) prepared from their dried roots. Family Liliaceae.

Sarto, Andrea del. See ANDREA DEL SARTO.

Sartre, Jean-Paul (1905–80), French philosopher and writer who was instrumental in the popularization of EXISTENTIALISM. A fighter in the French Resistance during WWII, Sartre's increasing political awareness led him to COMMUNISM, in particular the theories of MARX. He refused the 1964 Nobel Prize in literature. His works include *Nausea* (1938), *Being and Nothingness* (1943), the trilogy *The Roads to Freedom* (1945–49), *Saint Genet* (1952) and *Critique of Dialectical Reason* (1960). See also pp. 1885, 1886–1887, 1886–1887.

Saskatchewan, province in W central Canada, in the Great Plains. The cultivation of wheat is the most important agricultural activity; oats, barley, rye and flax are also grown. The province has rich mineral deposits, including uranium, copper, zinc, gold, coal, oil, natural gas and potash. Most industries process raw materials; steel is also manufactured. The principal cities are Regina (the capital and largest city), Prince Albert, Saskatoon and Moose Jaw.

The first permanent settlement was at Cumberland House in 1774. Development was slow until the construction of the transcontinental Canadian Pacific Railroad in 1885. Saskatchewan was admitted to the federation of Canada in 1905. Area: 651,900 sq km (251,700 sq miles). Pop. (1975 est.) 920,000. See also p. 1997.

Saskatchewan, river in S central Canada. Formed at the confluence of the North and South Saskatchewan rivers near Prince Albert, it flows E to empty into

Lake Winnipeg. With its tributaries, the Saskatchewan drains most of the Canadian prairie provinces. Length: approx. 550 km (340 miles).

Saskatoon, city in S central Saskatchewan, Canada, in the South Saskatchewan River. The city was founded in 1883 and grew with the construction of a railway. The second-largest city in Saskatchewan, it is a major industrial and distribution centre. It is the site of the University of Saskatchewan (1907). Industries: food processing, oil refining, chemicals. Pop. (1974) 126,450.

Sassafras, small E North American tree with furrowed bark, green twigs, yellow flowers and blue berries. An aromatic tea is made from the outer bark of its roots, and oil from the roots is used to flavour root beer. Family Lauraceae; species *Sassafras albidum*.

Sassanids (Sassanians), last native dynasty of Persian kings, founded by ARDASHIR I (r. AD 224–241). The Sassanids revived the ACHAEMENID tradition and Zoroastrianism was restored as the state religion. There were about 30 Sassanid rulers, the most important after Ardashir being SHAPUR II (309–79); KHOSHRU I (531–79), who fought the Byzantine empire; and KHOSHRU II (590–628), whose conquest of Egypt marks the height of the dynasty's power. See also pp. 1192, 1246.

Sassetta (Stefano di Giovanni) (c. 1400–50), Italian painter of the SIENESCHOOL. He incorporated elements of the decorative International Gothic style into his imaginative and lyrical style. The best example of his work is the now dismembered altarpiece (1437–44) for S Francesco at Sansepolcro.

Sassoon, Siegfried (1886–1967), British writer. His military service in WWI (during which he protested against the conduct of the war) inspired considerable poetry. The autobiographical trilogy *The Complete Memoirs of George Sherston* (1937) includes his most famous novel *Memoirs of a Fox-hunting Man* (1928) an account of his life as a country gentleman.

Sastrugi. See ZASTRUGI.

Satan, name for the devil. To the early Jews "Satan" simply meant "opponent", and did not refer to a particular being. Satan appears in the Old Testament by the 6th century BC as an individual angel, subordinate to God. Gradually Satan became considered the source of all evil.

Satellite, celestial body orbiting a planet or star. In the Solar System planets with satellites include the Earth (1), Mars (2), Jupiter (13), Saturn (10), Uranus (5) and Neptune (2). The moons of the Earth and Mars are rocky with little or no atmosphere. The satellites of the other planets are believed to consist of ice or frozen methane and ammonia. Titan, the largest of Saturn's moons, is the only one known to have an appreciable atmosphere.

The Earth's Moon is the largest in relation to its planets: its diameter is 3,476 km (2,160 miles). Jupiter's satellite Ganymede is the largest moon in the Solar System: it has a diameter of 5,000 km (3,100 miles). See also pp. 926, 926, 928–937, 952–953, 964–965, 966–967.

Satellite, artificial, man-made object placed in orbit around the Earth or other celestial body. Sputnik 1 was the first artificial satellite; it was launched on 4 Oct. 1957 by the USSR. Today there are hundreds of satellites of various sizes and descriptions in orbit around the Earth. Satellites that orbit the Earth at heights less than about 160 km (100 miles) are slowed by the resistance of the atmosphere and eventually spiral in and burn up. The main uses of satellites are military, for weather studies, communications and scientific research. See also pp. 1022–1023, 1026–1041.

Satie, Erik (1866–1925), French composer. Rebelling against Wagnerian ROMANTICISM, he developed a deceptively simple style in piano pieces such as *Trois Gymnopédies* (1888), which influenced POULENC, MILHAUD and other composers. He also composed the ballets *Relâche* (1924) and *Parade* (1917), and a choral work, *Socrate* (1918). See also p. 1754.

Satinwood, tree that grows in E India; it

has smooth, hard wood that is valued for furniture and veneer. Height to 15 m (50 ft). Family Rutaceae; species *Chloroxylon swietenia*.

Satire, literary work in which human foibles and institutions are mocked and ridiculed. Roman satire was a poem in hexameters on appropriate themes, and was established through the work of LUCILIUS, HORACE and JUVENAL. In the Middle Ages satire often took the form of the *fabliau*, or bestiary, which used animals to represent typical human failings. Since Thomas MORE's *Utopia*, satire has also found frequent expression in utopian fiction, such as Zemyatin's *We* and SWIFT's *Gulliver's Travels*. Dramatists have often used satire, as demonstrated by the plays of ARISTOPHANES, BEN JONSON, MOLIÈRE, OSCAR WILDE and Bertolt BRECHT. Satire may work in two ways: either by inflation, as in DRYDEN's satires which blow figures up to the monumentally ridiculous, or by diminution, as in the works of Alexander POPE, in which heroic pretension is frequently made trivial.

Sato, Eisaku (1901–75), Japanese political figure. In 1948 he became vice-minister of transport. A Liberal-Democratic member of the Diet (parliament), he served as Finance Minister (1958–60) and later as Prime Minister (1964–72). His chief successes in foreign policy were normalizing relations with Asian countries including China, and the signing of a treaty returning the Ryukyu Islands to Japanese jurisdiction (1969). In 1974 he was awarded the Nobel Peace Prize for his part in persuading Japan to sign the treaty on the non-proliferation of nuclear weapons.

Saturated compounds, in organic chemistry, compounds in which the carbon atoms are bonded to one another by single chemical bonds only, never by the more reactive double or triple bonds. For this reason, they tend to be unreactive. A simple example is methane, an inert but inflammable gas in which the molecule has one carbon atom singly bonded to four hydrogen atoms, CH₄.

Saturated fats, organic fatty compounds, the molecules of which contain only saturated FATTY ACIDS combined with GLYCERIN. These acids have long chains of carbon atoms which are bound together by single-bonds only. See also SATURATED COMPOUNDS.

Saturated solution, in chemistry, a solution containing so much of a dissolved compound that, at the same temperature and pressure, no more will dissolve.

Saturation, in physical chemistry, equilibrium condition of a solution when the maximum amount of the dissolved substance (solute) has been taken into solution at a given temperature. The saturation concentration depends on temperature; usually the higher the temperature, the higher the concentration.

Saturday, seventh day of the week and, for Jews and some Christians, the SABBATH. Christians in the early Church worshipped on both the seventh day (prescribed in the Bible as the Sabbath) and the first or Lord's Day, the latter gradually becoming the Sabbath in most Christian churches. From the Latin *Saturnus* (Saturn) and the Old English *daeg* (day), it is the only day named after a Roman god.

Saturn, in Roman mythology, the father of the gods and protector of the harvests. He was the husband of Ops. His festival, the SATURNALIA, held in the third week of December, was a time of popular merry-making that influenced the later festivities of Christmas and New Year.

Saturn, sixth planet from the Sun and second largest in the SOLAR SYSTEM. Saturn has ten satellites and a system of narrow rings composed of icy or ice-covered particles. Mean distance from the Sun, 1,427,000,000 km (887,000,000 miles); mass, 95 times that of Earth; volume, 744 times that of Earth; equatorial diameter, 120,000 km (75,000 miles); rotation period, 10 hr 14 min; sidereal period, 29.46 Earth-years. See also pp. 926–927, 926–927, 962–963, 962–963, 965, 965, 1048–1049, 1049.

Saturnalia, Roman festival commemorat-

William Saroyan's works are about the poor, whom he applauds for their vitality.

Jean-Paul Sartre has expressed his views in novels, plays and theoretical works.

Sassafras leaves may be crushed to yield a substance used in condiments or tea.

Stefano di Sassetta: a detail from his *Marriage of St Francis and Poverty*.

Satyagraha

ing the mythical Golden Age of Rome under SATURN who, identified with the Greek god Cronus, had established a kingdom of infinite happiness in LATIUM. The festival was celebrated by the exchange of gifts and feasting; masters and slaves changed places, business ceased and moral codes were relaxed. It originally took place on 17 Dec. but its duration was later extended. See also p.1227.

Satyagraha, political philosophy, developed by Mohandas GANDHI, which was central to the non-violent resistance of the Indian people to British colonial rule. The concept has been translated as "truth force" and it relies upon the satyagrahi's moral certainty in confronting what he considers wrong. See also pp.1698-1699.

Satyr, in Greek mythology, gods of the woods, fields and mountains. Sensual and lascivious, and associated with Dionysus, they were later depicted by the Romans as goat-legged, goat-bearded men with budding horns. The term is today accordingly used to describe a lecherous person; medically, SATYRIASIS is a morbid condition of overwhelming sexual desire. Satyr is also the common name for any butterfly of the Satyridae family; the name is sometimes applied to a species of orang-utan.

Satyriasis, behaviour pattern in which a man needs continually to seduce women. ORGASM is of secondary importance.

Satyr Play, type of classical Greek drama which was presented as a light contrast to the tragic trilogies performed at festivals. The plays dealt with mythical subjects using a grotesque humour, the chorus always consisted of SATYRS. The plays survive mostly in fragments. *Cyclops* by Euripides is the only complete one.

Saud (1902-69), King of SAUDI ARABIA (r. 1953-64), also known as Ibn Abd al-Aziz Al Faisal Al Saud. The son and successor of IBN SAUD, he became Crown Prince in 1933. His fiscal mismanagement and personal extravagance caused a severe financial crisis in 1958. Soon after his brother FAISAL took over all administrative powers, formally replacing him as king in 1964.

Saudi Arabia, Arab nation occupying much of the Arabian Peninsula in SW Asia. An impoverished desert area before the discovery of oil in the 1930s, the country is now one of the wealthiest lands in the Middle East. The oil revenues are being used to diversify the economy and to improve education. The capital is Riyadh. Area: 2,149,690 sq km (829,995 sq miles). Pop. (1975 est.) 8,966,000. See p.2127.

Saul (c.1020-1000 BC), anointed by SAMUEL as the first King of the Hebrews. Through much of his reign he waged war against the PHILISTINES, AMALIKITES and other Gentile nations. He was killed in battle and succeeded by DAVID. See also pp.1190-1191.

Saul (1739), oratorio by George HANDEL, first performed in London. The text is by Charles Jennens and the music includes the famous *Dead March*.

Sault Sainte Marie Canals (Soo Canals), artificial waterway on the USA-Canadian border, between lakes Huron and Superior at the twin cities of Sault Sainte Marie, N Michigan, and Sault Sainte Marie, S central Ontario, Canada; a major link in the GREAT LAKES waterway. There are two canals, which bypass the rapids of the St Marys River. The Canadian canal, 2.2 km (1.4 miles) long, was completed in 1895. The US canal, 2.6 km (1.6 miles) long, was built between 1881 and 1919.

Saumur, town in the Maine-et-Loire département, W France, noted for its sparkling white wines and its long association with the French cavalry. In the 16th and 17th centuries the town was a centre of the Huguenot movement. Pop. 21,000.

Sauna, wood-lined room in which a heater raises the temperature to between 60° and 135°C. Because the atmosphere in the room is totally dry, the human body can without hardship tolerate a temperature higher than that of boiling water, although perspiration becomes increasingly intense. To increase perspiration still

further, very small amounts of water are thrown on to red-hot stones on top of the heater; the resulting steam rebounds from the walls to give the body a momentary burning sensation.

Saunders, James (1925-), British playwright. The structure of his plays recalls those of PIRANDELLO. His reputation was established with *Next Time I'll Sing to You* (1962), an examination of the life and death of a hermit, and *A Scent of Flowers* (1964), which explored the reasons for a young girl's suicide.

Sausages, cooked or uncooked meat product cased in a thin tubular skin. Sausages that are sold uncooked contain various preparations of assorted fresh meats, including beef, pork, mutton and veal. See also pp.732-733.

Saussure, Horace Bénédict de (1740-99), Swiss geologist. He studied the region of the Alps, and published his study of its weather, geology and botany in *Voyages dans les Alpes* (4 vols, 1779-96). He also developed the first electrometer in 1766 and the first hygrometer for measuring humidity in 1783.

Sauternes, village of the Gironde département, SW France. The sweet, white table wines of the district are named after it. Pop. (1973) 585.

Savage, James (1779-1852), British architect, an early exponent of the Gothic revival. The church of St Luke (1820-24) in Chelsea, London, was the first built in this style and is unusual for its flying buttresses spanning the aisles.

Savage, Michael Joseph (1872-1940), New Zealand politician, b. Australia. He moved to New Zealand in 1907, becoming active in the trade union movement. He joined the Labour Party in 1916 and became its leader in 1933. He led Labour to a landslide election victory in 1935 and was Prime Minister of the first Labour government (1935-40).

Savanna, plain with coarse grass and scattered tree growth, particularly the wide plains of tropical and subtropical regions. An extensive example is the savanna of the East African tableland. See also pp.292, 293.

Savannah, city and port of entry in E Georgia, USA, on the Savannah River. The oldest city in Georgia, it was chosen as the seat of colonial government and the capital of Georgia Colony in 1754. It was captured by the British in 1778 during the War of AMERICAN INDEPENDENCE and was held until the end of the war. Today it is a major shipping centre, and its exports include tobacco, cotton, sugar, clay and wood pulp. Industries: chemicals, rubber, plastics, timber, petroleum products. Pop. (1973) 105,768. See also p.1629.

Savannah, first steamship to cross the Atlantic. In 1819 it sailed from Savannah, Georgia, to Liverpool, England, on a voyage lasting 27 days 11 hours.

Savery, Thomas (1650-1715), English engineer. In 1696 he patented a machine for pumping mines, which employed the principle of a vacuum steam-engine. He also designed an early form of paddle-driven boat. See also pp.422, 423.

Savings Bank, one of three kinds of bank in Britain, the others being the BANK OF ENGLAND and joint-stock or "commercial" banks. Savings banks arose in the 19th century from the habit of placing money for safe keeping with goldsmiths. They are run on the principle of paying interest to the depositors, or savers, and charging a higher interest from borrowers who are lent money from the accumulated savings.

Savitri, or **Savitri**, in Hindu mythology, the universal motivating force, personified as a goddess with golden eyes, tongue and hands, riding a chariot drawn by glittering horses. He is worshipped as the king of heaven who bestows immortality on other gods and remits the sins of those mortals who pray to him.

Savonarola, Girolamo (1452-98), Italian religious reformer. He abandoned medicine to become a Dominican monk, when convinced of the sinfulness of the world. He was a lecturer at San Marco, Florence, from 1482 to 1487, and became a famous preacher. In 1490 he led a crusade against corruption, and after the collapse of

MEDICI rule in 1494 Savonarola became virtual dictator of the city. He was executed by his political enemies following his excommunication.

Savory, any of several hardy aromatic herbs of the MINT family (Labiatae). Its long thin leaves are used, green or dried, for flavouring. Summer savory (*Satureia hortensis*) is an annual; winter savory (*S. montana*) is a perennial. See also p.709.

Savoy, area of SE France, bounded by Lake Geneva (N), the River Rhône (W), the Dauphiné (S) and the Alps of Italy and Switzerland (E); it includes the départements of Haute Savoie and Savoie. It was part of the first Burgundian kingdom, the kingdom of Arles and, in the 11th century, the Holy Roman Empire (as a county). In 1416 it became a duchy and its area was enlarged, incorporating parts of France, Switzerland and Italy. An Italian state in the 16th century, it was part of the kingdom of SARDINIA after 1713. Savoy was annexed by France in 1792, returned to Sardinia in 1815, and finally ceded to France by the Treaty of Turin in 1860, its former rulers then becoming kings of Italy.

Savoy, House of, royal European dynasty and ruling house of Italy from 1861 to 1946. Descended from Humbert the Whitehanded (d.c.1047), the first Count of Savoy, they became dukes in 1416, kings of Sicily in 1713, kings of Sardinia in 1720, and kings of Italy in 1861. Italian unification was led by the house of Savoy in the mid-19th century. See also pp.1588, 1589.

Savoy Operas, the operettas by Arthur SULLIVAN, libretti by William GILBERT. They are so called because they were either first produced or revived at the Savoy Theatre, London, which opened in 1881 with *Patience* (which was transferred from the Opera Comique). The performers in the operas became known as "Savoyards".

Sawchuck, Terrance Gordon (1929-70), Canadian ice hockey player. He was a goalkeeper with the Detroit Red Wings (1949-55, 1957-64), the Boston Bruins (1955-57), the Toronto Maple Leafs (1964-67) and the Los Angeles Kings (1967-70). He won the Vezina Trophy as the National Hockey League's best goalkeeper four times. In 1967 he set an NHL record with his 100th shutout.

Sawfish, any of several species of shark-like, flat bodied rays that live in tropical marine and brackish waters. It has a grey or black-brown body with an elongated, saw-toothed snout resembling a flat blade. Length: to 5m (16ft). Family Pristidae; genus *Pristis*.

Sawfly, any of 400 species of primitive, plant-feeding WASPS that lack a narrow waist between thorax and abdomen. Most typical sawflies are included in the family Tenthredinidae. Their LARVAE are caterpillar-like, with eight abdominal legs. The females have a two-bladed, saw-like ovipositor for laying eggs in plant tissue. Length: to 20mm (0.8in). Order Hymenoptera. See also pp.306, 719.

Sax, Antoine Joseph Adolphe (1814-94), Belgian musician. In the 1840s he invented various instruments such as the saxhorn and SAXOPHONE.

Saxe-Coburg-Gotha, one of four Ernestine Saxon duchies in E central Germany from 1485 to 1918, and a prominent contributor to European royal houses. LEOPOLD I of Belgium was of the house of Saxe-Coburg-Gotha, as were Queen Victoria's husband, Prince ALBERT, and Ferdinand, the prince consort of Maria II of Portugal.

Saxe-Weimar, former duchy in central Germany. It became a separate entity in 1547 when the Ernestine lands were divided into the duchies of Weimar, Gotha, Coburg, Eisenach and Altenburg. In 1741 it became the Saxe-Weimar-Eisenach duchy and developed into a European cultural centre under Grand Duke Carl August (1757-1828), the patron of Johann Wolfgang von GOETHE. In 1920 the duchy was incorporated into the German state of Thuringia.

Saxifrage, perennial plant native to tem-

perate and mountainous regions of Europe and North America. The leaves are massed at the base and the small flowers are white, pink, purple or yellow. Height: to 61cm (2ft). Family Saxifragaceae; genus *Saxifraga*. See also pp.321, 324, 370.

Saxo Grammaticus (c.1150-1220), Danish historian who wrote *Danish History*, a history of the Danish kingdom before 1185, at the suggestion of Archbishop Absalon of Lund. The first nine books are mostly based on legend; the remaining seven deal with historical events and his account of those close to his own time, and are a valuable source of reference.

Saxons, ancient Germanic people. Originating in N Germany and S Denmark, they extended S and W, and colonized Britain c. AD 450, where they amalgamated with the Angles to form the ANGLO-SAXON civilization. At the same time the continental Saxons, or Old Saxons, expanded into N Germany, which brought them into conflict with the Franks. They were finally subjugated and converted to Christianity by CHARLEMAGNE in the early 9th century. See also pp.1270, 1271, 1286.

Saxon shores, name given by the Romans to those shores of the Roman Empire that suffered from SAXON raids from the 3rd century AD. They comprised the N coast of Gaul to the Scheldt estuary, and the SE coast of Britain from the Wash to the Solent. See also p.1272.

Saxony, former German state bordered by Thuringia (W), Bavaria (SW), Czechoslovakia (S) and Brandenburg (N); since WWII it has been part of East Germany. The territory of the Germanic Saxon tribe, it had become by the early 10th century the Duchy of Saxony and by the mid-13th the duke was one of the seven imperial electors of medieval Germany. Saxony included almost all the land between the rivers Elbe (E) and Rhine (W); the ducal and electoral title of Saxony passed to the Margrave of Meissen and the area known as Saxony came to include his territories in Thuringia and Lower Lusatia. In 1815 more than half of Saxony, which had been a kingdom since 1906, was ceded to Prussia and, with several Prussian districts, became the province of Saxony (which included Wittenburg and N Thuringia). In 1945 the state of Anhalt was added to form the Saxony-Anhalt state.

Saxophone, wind musical instrument with single reed, curved conical metal tube and finger keys. It was invented by Adolphe SAX in the 1840s and by 1846 there was a double family of 14, seven in F and C for orchestral music and seven in E and B for bands; the latter are more common today. It is now mostly used in jazz.

Saye and Sele, William Fiennes, 1st Viscount (1582-1662), English politician. He was a Puritan opponent of JAMES I and CHARLES I, although he opposed the execution of Charles. He helped to colonize Connecticut and Providence Island, an island in the Caribbean Sea.

Sayem, Abu Sadat Mohammed (1916-), Bangladesh lawyer and politician. He was Chief Justice of the Supreme Court (1972-75) and President of Bangladesh (1975-77). He was succeeded by Maj.-Gen. Ziaur Rahman.

Sayers, Dorothy Leigh (1893-1957), British novelist and playwright, considered a master of the detective story. Her first novels featured Lord Peter Wimsey, a titled detective who appeared in 10 books including *Whose body?* (1923) and *Strong Poison* (1930). She later wrote religious dramas and several radio plays.

Scabies, skin inflammation caused by a female mite, *Sarcoptes scabiei*, which burrows into the skin to lay eggs. It can be seen as a dark wavy line on the skin and is treated with creams containing either hexachlorophane or benzyl benzoate.

Scabious, garden flowers of the genus *Scabiosa* of the TEASEL family, (Dipsacaceae), including plants with showy heads coloured red, orange, yellow, brown and many shades of blue. The sheep's bit scabious, *Jasione montana*, is a member of the BELLFLOWER family.

Scall Pike, highest peak in England, in the LAKE DISTRICT, Cumbria, NW England;

part of the Scafell mountain group. Height: 978m (3,210ft).

Scalar, mathematical quantity that has only a magnitude, as contrasted with a vector, which also has direction. Mass, energy and speed are scalars (whereas weight, force and velocity are vectors).

Scald, burn caused by hot liquid or steam. The extent of injury ranges from mere reddening of the skin, to deep damage of underlying tissues, with consequent severe shock and danger to life. Treatment of minor scalds includes immersion of the scalded part in cold water; subsequently they should be kept dry and sterile. Severe scalds should always be attended by a doctor.

Scaldic poetry, courtly verse written in Old Norse and popular in Norway from the 10th to the 13th century. It is characterized by elaborate verse forms combining alliteration, rhyme and other technical devices.

Scale, in biology, small hard plate that forms part of the external skin of an animal; it is usually a development of the dermal or epidermal skin layers. In most fish scales are composed of bone in the dermal skin layer; the scales of some primitive fish contain ganoin, a hard glassy substance. The scales of reptiles, those on the legs of birds and on the tails of scaly-tailed mammals are horny growths of the epidermal skin layer, and are comprised mostly of the fibrous protein KERATIN.

Scale, in music, the ordered arrangement of intervals which forms the basis of musical composition. There is a great variety of scales. In Western music the most important has been the seven-note DIATONIC scale, both in its MAJOR and MINOR forms. The 12-note CHROMATIC scale has a regular progression of semi-tones, represented by all the white and black keys on the piano within the octave. The six-note whole-tone scale was much used by DEBUSSY, but its lack of variety has limited its appeal to composers. The 20th century has seen a number of developments and revivals. There has been a conscious return by some composers to the system of the ecclesiastical MODES; the ancient PENTATONIC SCALE has been assimilated with varying degrees of success; and oriental and experimental scale systems have also been employed. See also SERIAL MUSIC.

Scale insect, any of several species of small insects found throughout the world. All species are covered by a waxy, scale-like covering secreted by the insect. It feeds by sucking plant juices. Length: to 25mm (1in). Order Homoptera. See also COCHINEAL; p.41.

Scaliger, Joseph Justus (1540–1609), French scholar, son of Julius Caesar SCALIGER. One of the foremost classical scholars of his time, he was a historian and linguist. His *Opus de emendatione temporis* (1583) introduced scientific method to chronology.

Scaliger, Julius Caesar (1484–1558), also known as Giulio Cesare Scaligero, Italian scholar and critic. His most famous work is *Poetices* (1561), a manual on the theory of literature. He also wrote commentaries on THEOPHRASTUS, HIPPOCRATES and ARISTOTLE, and it is through his work that Aristotle's theory of the dramatic unities was transmitted to the 17th-century French theatre.

Scallop, edible BIVALVE mollusc. One shell, or valve, is usually convex and the other almost flat. The shell's surface is ribbed (scallop). Most scallops have a row of eyes that fringe the fleshy mantle. Width: 2.5–20cm (1–8in). Family Pectinidae. See also pp.22, 23.

Scalping, the custom of taking the scalp of an enemy, once practised in Europe, Asia and Africa and among the North American Indians. A circular cut was made around the crown of the head and the skin raised at one side and torn off.

Scampi, any of several types of large PRAWNS familiar as the dish of the same name. They are generally cooked individually by frying in batter. Other foods, such as crayfish and monkfish, are sometimes prepared like and sold as scampi. See also p.746.

Scanderbeg (Skanderbeg) (1405–68),

Albanian hero. A hostage of the Ottoman sultan, Murad II, he was brought up as a Muslim but renounced ISLAM when the Turks were defeated in Serbia. He returned to his country, defeated the Ottoman army and maintained Albanian independence until his death, after which resistance to the Turks collapsed.

Scandinavia, region of N Europe, including SWEDEN, NORWAY, and DENMARK, and from a cultural and historical point of view, FINLAND and ICELAND. Together these are sometimes called the Northern Countries. The climate ranges from subarctic in the N to humid continental in the centre and marine in the W and SW. The terrain is mountainous in the W with swift-flowing streams, and the coastline has many fiords. In the E the land slopes very much more gently and there are thousands of lakes. Some of the region lies within the Arctic Circle where tundra predominates. Denmark and S Sweden have the best farmland. A large proportion of the land is forested and there are rich mineral deposits, particularly of iron ore and copper. Fishing is important off the coast. The largest cities are Stockholm and Gothenburg (Göteborg) in Sweden, Oslo in Norway, Copenhagen in Denmark, and Helsinki in Finland. Area: approx 1,258,000sq km (485,250sq miles).

Scandium, metallic element (symbol Sc) of group IIIB of the periodic table predicted (as ekaboron) by MENDELEEV and discovered in 1897. It is found in thorite and, in small amounts, in other minerals. It is a soft metal with few commercial uses. Chemically it resembles the LANTHANIDES. Properties: at.no. 21; at.wt. 44.9559; s.g. 2.99 (25°C); m.p. 1,539°C (2,802°F); b.p. 2,832°C (5,130°F); most common isotope Sc⁴⁵ (100%).

Scannell, Vernon (1922–), British writer and broadcaster. His first work was a novel, *The Fight* (1953); thereafter he wrote mainly poetry, including *The Masks of Love* (1960) and *The Loving Game* (1975). His autobiography, *The Tiger and the Rose*, appeared in 1971.

Scanning, in medical, diagnostic method in which a patient is given a dose of a radioactive ISOTOPE either orally or by injection, and a RADIATION detector is then used to build up a picture of internal areas by successive sweeps of the detector over the isotope.

Scansion, analysis of the metre of a poem by breaking down each line into "metrical feet". Each foot consists of a group of two or three syllables, stressed (long) or unstressed (short).

Scapa Flow, naval anchorage surrounded by the ORKNEY ISLANDS off NW Scotland. The main entrance is from the Pentland Firth to the S and it was the scene of the scuttling of part of the German fleet in 1919. The British fleet was stationed at Scapa Flow in both World Wars, and HMS Royal Oak was sunk there in 1939.

Scapegoat, in ancient Israel, goat used in the ritual on the Day of Atonement. The people touched the goat, confessing their sins, and the high priest then enacted a complex ceremony. The animal was finally driven from the village to die in the wilderness, symbolically bearing the sins of the people. In later times the scapegoat was pushed to its death from a cliff. The term has come to mean anyone blamed unfairly for another's guilt.

Scapolite, or **werneite**, group of SILICATE minerals related to the FELSPARS and of variable chemical composition, common in metamorphosed limestones. They are grey and glassy, with a hardness of 5–6 and s.g. 2.7.

Scapula, or **shoulder blade**, large, roughly triangular flat bone, found on the upper part of the back. It provides for the attachment of muscles that function in arm movement. See also p.146.

Scapulimancy, ancient method of DIVINATION by heating an animal's shoulder blade (usually that of an ox) on which questions had been scratched and examining the resultant cracks. See also p.1176.

Scar, mark left on the skin after a wound or sore heals. Scars contain no oil glands, hair follicles or elastic tissue as in normal

skin. Severe scars are prone to malignant changes. See also p.1074.

Scarab beetle, any of several different species of broad beetles distributed worldwide. Most, including the June bug, Japanese beetle and RHINOCEROS BEETLE, are leaf chafers. A smaller group, including the DUNG BEETLE, are scavengers. Family Scarabaeidae. See also p.37.

Scarborough, one of the five boroughs of Toronto, SE Ontario, on Lake Ontario, Canada. Originally a farming settlement, Scarborough has grown rapidly since WWII into an industrial and residential area, and includes a college (1964) of the University of Toronto. Pop. (1971) 334,310.

Scarborough, holiday resort and county district in NORTH YORKSHIRE, N England. The town, on the North Sea coast, has fine beaches and a 12th-century castle. The county district was created in 1974 under the Local Government Act (1972). Area: 817sq km (316sq miles). Pop. (1979 est.) 99,900.

Scarborough, port and principal city on Tobago island in Trinidad and Tobago, in the Caribbean Sea. Formerly known as Port Louis, the city replaced Georgetown as the capital of Tobago in 1796. Scarborough is a market for the surrounding region and has saw-milling industries. Pop. 2,029.

Scarfe, Gerald (1936–), British caricaturist, famous for his grotesque renderings of public figures. His drawings, made usually with fine-pen lines, are always informed by a sense of moral outrage.

Scarification, also called cicatrization, production of keloids (raised scars) on the human body for decoration. It has generally been done in decorative patterns by cutting the skin and rubbing in charcoal and other substances. It was primarily practised by peoples in much of Africa and by Australian Aborigines, whose skins would not show clearly the effects of tattooing. See also pp.1074, 1075.

Scarlatti, Alessandro (1660–1725), Italian BAROQUE composer who laid the foundations of musical idioms which shaped musical thought to the time of BEETHOVEN. He turned his attention from the principles of contrapuntal writing to harmonic thinking. His genius is displayed in his dramatic music, and in his many operas (only some of which have survived) he developed the use of string accompaniment for the vocal part, in preference to the conventional use of the harpsichord. He is known as the founder of OPERA SERIA.

Scarlatti, Giuseppe Domenico (1685–1757), Italian composer, son of Alessandro SCARLATTI. A harpsichord virtuoso, he settled in Spain and is primarily known for his harpsichord sonatas, of which he composed more than 500. He is considered the founder of modern keyboard technique and the greatest Italian composer of keyboard music of the BAROQUE period.

Scarlet fever, or **scarlatina**, acute infectious disease, usually affecting children, caused by streptococcal BACTERIA. It is characterized by a bright red body rash, fever and throat infection. It may be transmitted by direct contact or through use of the same utensils. It is not as dangerous as it once was, being easily treated with penicillin or other ANTIBIOTICS.

Scarp, abbreviated form of ESCARPMENT, a line of inland cliffs, of any height, produced by faulting or erosion. The steep margins of a plateau, MESA or terrace are examples. See also p.213.

Scarron, Paul (1610–60), French burlesque writer who rebelled against the artificiality of the literature of his time. He is best remembered for his novel *Le Roman comique*.

Scattering, in physics, deflection of the path of subatomic particles by atoms. It is the means by which the structure of atoms was discovered. Ernest RUTHERFORD "fired" ALPHA particles through thin metal films, noted their scattering, and postulated the atomic nucleus (positively charged and centrally placed in the atom). Most knowledge on ELEMENTARY PARTICLES and the discovery of new ones has been obtained by scattering experiments carried out in particle ACCELERATORS.

Scattering, light, deflection of light waves from the main direction of a beam by fine particles of solid, liquid or gaseous matter. The effects observed depend on the size of the particles; small particles cause DIFFRACTION and larger particles also produce reflection. See also p.854.

Scenery, theatrical stage equipment used to represent the place of action, including painted FLATS, curtains and box sets. The setting of earliest drama was the theatre itself and no special scenery was used. With the advent, first of the RENAISSANCE and then OPERA in the 17th century, elaborate scenic effects came into vogue. The 19th century saw a move towards accurate representation in scenery and from stage realism there was a turn towards SYMBOLISM.

Scepticism, philosophical attitude which asserts the uncertainty of all knowledge. The first important sceptic was DEMOCRITUS, who held that sense perceptions are not a reliable means to true knowledge of the material world.

Schaerbeck. See SCHAEERBECK.

Shadow, Johann Gottfried (1764–1850), German sculptor. Shadow was a leading exponent of NEO-CLASSICISM and his works include the Quadriga on the Brandenburg Gate in Berlin and monuments to Frederick the Great (in Szczecin), and to Blücher von Wahlstatt (in Rostock).

Schaerbeck, suburb of Brussels, in central Belgium. It is an important railway junction and has machinery, clothing and chemical industries. Pop. (1971 est.) 118,947.

Schally, Andrew (1926–), US physiologist, b. Poland. He studied in Britain and Montreal, and became professor of physiology at the Veterans' Administration Hospital, New Orleans, in 1962. He was awarded a share in the 1977 Nobel Prize in physiology and medicine with Roger Guillemin and Rosalyn YALOW for their work on peptide hormones.

Scharff, Edwin (1887–1955), German sculptor who first studied painting but turned to sculpture while in France (1911–13). He was a founder member of the *Neue Sezession* group in Munich. The monumental quality of his best works after 1920 derives from Aristide MAILLOL.

Scharnhorst, Gerhard Johann David von (1755–1813), Prussian general. After the Prussian defeat by the French in 1807, he became head of the Army Reform Commission. He reorganized the army and circumvented French limitations on its size by calling up small numbers of men at a time who, after quick training, would become reserves.

Scharnhorst, German battle cruiser which was responsible for the sinking of much Allied shipping in WWII. It was launched in 1939 and sunk in 1943 by HMS *Duke of York*.

Scheel, Walter (1919–), West German political leader. As head of the Free Democratic Party, he formed a coalition government in 1969 with the Social Democrats and served as Foreign Minister in the cabinet of Willy BRANDT. He was President of West Germany from 1974 to 1979.

Scheele, Carl Wilhelm (1742–86), Swedish chemist. An apothecary, his interest in chemistry led to an investigation of combustion and discovery of OXYGEN, but publication of his discovery was delayed and the credit went to Joseph PRIESTLEY. He made other important discoveries, including CHLORINE, GLYCERIN and a number of organic acids.

Scheelite, mineral, calcium tungstate molybdate, Ca(WO₄,MoO₄), an important ore of tungsten. It is found in metamorphic deposits and in pegmatites. It has tetragonal system bipyramidal crystals, also occurring as massive and granular aggregates. It reveals various tints with adamantine lustre, fluoresces under ultraviolet light, and is brittle. Hardness 4.5–5; s.g. 6.

Scheemakers family, Flemish sculptors who did the majority of their work in England. Peter (1691–1781) executed the Shakespeare monument in Westminster Abbey. He made other tombs in the Abbey and at other churches, and his

Schelde

work was competent but lacking in force. His son Thomas (1740–1808) also worked on monuments, many of which were designed by James STUART.

Schelde (Escaut), river in NW Europe. It rises in N France and flows N and NE through W Belgium to Antwerp, then N into the North Sea through two estuaries (the East and West Schelde) in the SW Netherlands. The Schelde is navigable for most of its course. Length: 435km (270 miles).

Scheler, Max (1874–1928), German philosopher. Influenced by Franz BRENTANO and some of Edmund HUSSERL's disciples, he made important contributions to the PHENOMENOLOGICAL MOVEMENT. His works include *Formalism in Ethics and Material Value Ethics* (1921), *On the Eternal in Man* (1921) and *The Place of Man in the Universe* (1928).

Schelling, Friedrich Wilhelm Joseph von (1775–1854), German philosopher. Profoundly Romantic, his philosophy of nature linked nature and spirit as real and ideal poles of one essential reality. Ultimately, he asserted, PANTHEISM merges into total MYSTICISM. Clearest accounts of his philosophy appear in *First Sketch of a System of "Naturphilosophie"* (1799) and *System of Transcendental Idealism* (1800).

Scherbius, Arthur. See ENIGMA CIPHER MACHINE.

Scherzo, musical piece or, more commonly, movement of a larger work such as a SONATA or SYMPHONY. It is the Italian word for "joke". It may take the place of the MINUET movement. It has the rhythm of the minuet, but is usually quicker (in 6/8 rather than 3/4 time) and lighter.

Schiaparelli, Giovanni Virginio (1835–1910), Italian astronomer, best known for his discovery in 1877 of the markings on the surface of MARS that he called canals. See also p.944.

Schick, Bela (1877–1967), US paediatrician who devised (1913) the Schick test which determines susceptibility to diphtheria. A small amount of diphtheria toxin is injected into the skin and swelling indicates a low level of antibody production. If the subject has an adequate immunity no skin reaction will occur.

Schick Test, test of immunity to DIPHTHERIA, devised by the Austrian paediatrician Bela SCHICK.

Schiele, Egon (1890–1918), Austrian EXPRESSIONIST painter who was influenced by the IMPRESSIONISTS and then by Gustav KLIMT. Using bright colours he developed a taut, linear style and painted nudes and landscapes.

Schiller, Johann Christoph Friedrich von (1759–1805), German dramatist, historian and philosopher. He wrote blank verse STURM UND DRANG plays: *Don Carlos* (1787), *Wallenstein* (1800), *Mary Stuart* (1801), *Maid of Orleans* (1801) and *William Tell* (1804). His *Ode to Joy* is set to music in the last movement of Beethoven's 9th Symphony.

Schindler, Rudolph (1887–1923), Viennese-born architect who emigrated to the USA in 1913 and worked with Frank Lloyd WRIGHT. With Wright he introduced into the USA such European architectural innovations as cubistic design and austerity of line.

Schinkel, Karl Friedrich (1781–1841), German architect and painter. Working in the classical tradition, he designed the School of Artillery and Engineering, the Royal Theatre and the Old Museum, all in Berlin. See also p.1482.

Schipperke, dog originally bred in Flanders several centuries ago. It has a fox-like head with small triangular, erect ears. The short, stocky body is set on medium-length legs and the tail is commonly docked. The harsh short coat is ruffed at the neck and long at the back of the hind legs, and is usually solid black. Height: to 33cm (13in) at the shoulder; weight: to 8kg (18lb).

Schism, in religion, division within a church or a break-away from a church. Before the Protestant Reformation, there were two important schisms within the Christian Church. The first was the schism between East and West, which culminated

in the complete break between the Eastern (ORTHODOX) church and the Western (ROMAN CATHOLIC) church in 1054. The Western GREAT SCHISM involved a split within the Roman Church itself and the election of rival popes between 1378–1417.

Schist, large group of METAMORPHIC ROCKS which have been made cleavable, causing the rocks to split into thin plates leaving a wavy, uneven surface. They are named after their predominant mineral, eg phyllite (or mica) schist. See also pp.210–211, 211, 213, 215, 259.

Schistosomiasis. See BILHARZIA.

Schizoid personality, personality pattern disturbance marked by avoidance of close relations with others, inability to express hostility directly, and AUTISTIC thinking. A schizoid person appears shy, aloof and detached, and may be described as introverted and withdrawn.

Schizophrenia, one of a group of psychotic disorders marked primarily by disturbances of cognitive functioning, particularly thinking. Eugen BLEULER, who introduced the term in 1911, saw schizophrenia as a "splitting of the personality" from reality, a tendency of thinking to become wish-fulfilling, idiosyncratic and dominated by fantasy. See also pp.1110, 1111.

Schizophyta, division of plants in which some plant taxonomists place single-celled plants that do not have organized nuclei. The Schizophyta contains two classes, the blue-green ALGAE (class Cyanophyceae) and the BACTERIA (class Schizomycetes). In other classifications these subgroups are regarded as divisions of the plant kingdom.

Schlegel, August Wilhelm von (1767–1845), German poet, critic and scholar, noted for his translations of the Bhagavad-Gita and of Shakespeare. In 1798, as a professor in Jena, he led the Romantic movement with his brother Friedrich Johann SCHLEGEL, Ludwig TIECK and Friedrich von Hardenberg, nicknamed NOVALIS.

Schlegel, Friedrich Johann von (1772–1829), German writer and philosopher, brother of August SCHLEGEL. His works include *Lectures on the History of Literature* (1815), *On Language and the Wisdom of India* (1808) and the novel *Lucinde* (1799).

Schleiden, Matthias Jakob (1804–81), German biologist who established the CELL theory for plants in his paper *Contributions to Phytogenesis* (1838), in which he recognized that all parts of a plant are composed of cells.

Schlemmer, Oskar (1888–1943), German painter, sculptor and stage designer who taught at the BAUHAUS from 1920 until 1929. Versatile in a wide range of media, Schlemmer attempted to represent the movements of dance on canvas using unusual perspective. An example of this is his painting *Concentric Group* (1925).

Schlesinger, John Richard (1926–), British film director. His films often explored the influence of social mores on personal relationships. His work included *A Kind of Loving* (1962), *Billy Liar* (1963), *Darling* (1965), *Midnight Cowboy* (1969), *Sunday*, *Bloody Sunday* (1971), *Day of the Locust* (1975), *Marathon Man* (1976) and *Yanks* (1978).

Schleswig-Holstein, state in W Germany, in the S Jutland peninsula. Its capital is KIEL. In the mid-19th century the duchy of Schleswig-Holstein was claimed by both Denmark and the North German Confederation. When CHRISTIAN IX of Denmark tried to incorporate Schleswig in Denmark in 1863, Prussia (at BISMARCK's instigation) and Austria led a campaign to capture the area, which was shared between the two by the Treaty of Gastein. Following the Austro-Prussian war of 1866, the region passed to Prussia. In 1920 N Schleswig became part of Denmark following a plebiscite. See also p.1589.

Schlick, Moritz (1882–1936), German philosopher and head of the VIENNA CIRCLE. He studied physics with MAX PLANCK and taught the philosophy of inductive science at the University of Vienna. His

works include *General Theory of Knowledge* (1918) and *Problems of Ethics* (1930).

Schlieffen Plan, German war strategy named after Field-Marshal Alfred von Schlieffen (1833–1913). The plan, devised while he was Chief of Staff (1891–1905), called for a lightning attack on France through Belgium by a strong German army. Germany could then concentrate on fighting Russia. The plan was implemented by von MOLTKE in WWI but the attacking force was weakened and the Germans were unable to sweep over France. See also pp.1666–1667, 1666.

Schliemann, Heinrich (1822–90), German archaeologist. In 1871 he began excavations at his own expense at Hisarlik, Turkey, which he believed to be the site of the Homeric city of TROY, and uncovered four superimposed towns. He also made important discoveries in Greece, especially at Mycenae. See also p.1173.

Schlüter, Andreas (1662–1714), German Baroque sculptor and architect whose main work, the Royal Palace, Berlin, (1698–1707), reveals the influence of BERNINI.

Schmalkaldic League, alliance of German Protestant states formed in 1531 to protect Lutheranism against the Holy Roman Emperor CHARLES V. Its leaders were PHILIP OF HESSE and John Frederick of Saxony. War between the Empire and the league broke out in 1546 and the following year the league was decisively defeated at Mühlberg. See also p.1402.

Schmidt, Bernhard Voldemar (1879–1935), Estonian optician who, in 1930, developed the telescope that bears his name. The telescope allows large areas of the sky to be photographed with each exposure, and it has a complex correcting plate that reduces optical distortion. See also pp.921, 921.

Schmidt, Helmut (1918–), West German political leader. Elected to the BUNDESTAG in 1953, he became chairman of the Social Democratic Party in 1967 and Minister of Defence when the Social Democrat-Free Democrat coalition government was formed in 1969. He replaced Willie BRANDT as chancellor of West Germany in 1974.

Schmidt-Rottluff, Karl (1884–1976), German painter and woodcut artist who was a co-founder of die BRÜCKE. A leading German Expressionist, his best works are woodcuts. See also pp.1654, 1654.

Schnabel, Artur (1882–1951), Austrian pianist and composer, who lived in the USA after 1939. He was best known as an interpreter of the classical repertoire, including Mozart and Beethoven, whose 32 piano sonatas he edited and recorded.

Schnauzer, dog originally bred as a guard dog in Germany. There are now three breeds: standard, giant and MINIATURE SCHNAUZER. The standard breed has a square head with a blunt, heavily whiskered muzzle and folded triangular ears. The strong straight body is set on lean muscular legs and the tail is commonly docked. The coat, which may be black, grey or brown, is harsh and wiry. Height: to 51cm (20in); weight: to 17kg (37lb).

Schneider Trophy, trophy in aviation presented in 1913 by Jacques Schneider to the winner of the international seaplane races. The Frenchman Prevost flying a Deperdussin at 73.7km/h (45.75mph) was the first holder (1913). Such races encouraged improvements in design during the 1920s. The trophy was won outright by Britain after wins in 1927, 1929 and 1931. See also p.514.

Schnitzler, Arthur (1862–1931), Austrian dramatist, novelist and doctor. His witty plays explore the themes of love and sex. They include *Anatol* and *Merry-go-Round* (1893), *Light-O'Love* (1896) and *The Reckoning* (1897). His famous novels are *None But the Brave* (1901), *The Road to the Open* (1908) and *Flight into Darkness* (1931).

Schockemöhle, Alwin (1937–), West German show jumping rider. In 1976 he was the reigning European champion and won the Olympic Games individual show

jumping gold medal, guiding *Warwick Rex* to the first double clear round in the history of the competition. In 1960 he had won a team gold, and in 1968 a team bronze.

Schöffer, Peter (c.1425–1503), German printer whose name, together with that of Johannes Fust (his father-in-law and associate), appear on a Psalter printed in 1457, the first printed book that shows the name of its printer. See also p.612.

Scholar-Gipsy, The, poem by Matthew Arnold, published in 1853. A lament for the passing of youth, Arnold called it an elegy, intended to commemorate his wanderings, as an Oxford undergraduate, in the Cumnor Hills. It has 25 stanzas of 10 iambic PENTAMETER lines.

Scholasticism, medieval philosophy that attempted to join faith to reason by synthesizing theology with classical Greek and Roman thought. It was based on the writings of ST AUGUSTINE, BOETHIUS, the Pseudo-Dionysius and the Arabic commentaries on ARISTOTLE. Scholasticism was first explored by John SCOTUS ERIGENA in the 9th century and by ANSELM in the 11th century. Its greatest thinkers were Albertus Magnus and Thomas AQUINAS in the 13th century and DUNS SCOTUS at the turn of the 14th century. The new universities of Paris and Oxford were the centres of scholastic thought. See also pp.1322, 1323.

Scholes, James Christopher (1852–90), British antiquary. He became a reporter on a local newspaper and was noted for his *Bolton Bibliography and Jottings of Book Lore*, with *Notes on Local Authors and Printers*, published in 1886.

Schollander, Donald Arthur ("Don") (1946–), US freestyle swimmer who, at the 1964 Olympic Games, became the first swimmer to win four gold medals (100m, 400m, 4×100m freestyle relay and 4×200m freestyle relay). He won a fifth gold and a silver in 1968, won three golds at the 1967 Pan American Games, and set 13 individual world records.

Schoenberg, Arnold (1874–1951), Austrian composer who abandoned traditional tonality for an atonal method (without key centre) using "tone-rows" drawn from the 12-note scale. Extending the chromaticism of the later romantics in early works, eg the string sextet *Verklärte Nacht* (1899), he reached strict atonality in his *Suite for Piano* (1924). See also SERIAL MUSIC, TWELVE-TONE MUSIC.

Schönbein, Christian Friedrich (1799–1868), German chemist, the discoverer of OZONE. After studying at various universities, he became professor at the University of Basle (1835). He invented gun cotton, recognizing its potential as a smokeless substitute for gunpowder. See also p.582.

Schönberg, Arnold. See SCHOENBERG, ARNOLD.

Schönbrunn, palace in the BAROQUE style in Hietzing, a W suburb of Vienna. Begun in 1695 and based on plans by J.B. FISCHER VON ERLACH, it was a royal summer house influenced by VERSAILLES. It was completed during the reign of MARIA THERESA. The gardens were designed by Ferdinand von Hohenberg.

Schongauer, Martin (c.1450–91), German painter and prolific engraver who produced more than 100 signed engravings, mostly religious. His style, rich in detail, was influenced by Rogier van der WEYDEN. See also p.1385.

School, term commonly used to describe a place of primary or secondary EDUCATION. In Western countries there are usually two parallel school systems, one provided by the state and the other privately financed (British "public schools" are in fact private). In Communist countries schools are entirely state-run. In almost every country, school attendance is compulsory between certain ages. British state secondary schools formerly included academic "grammar schools" and vocational "secondary moderns". They have been largely replaced by comprehensive schools, intended to combine the two functions. In Australia and New Zealand the educational system is broadly similar to Britain's before the introduction of

comprehensive schools.

School for Scandal, The (1777), five-act satirical comedy by Richard Brinsley SHERIDAN.

School for Wives (1662), comedy in verse by Molière. A satire on the narrow education given to middle-class girls in 17th-century France, it tells how a man plans to keep his young wife faithful by keeping her uneducated.

Schooner, sailing ship with at least two masts and a bowsprit, and with fore-and-aft sails rather than square sails. Larger schooners appeared in the early 20th century when the small crews needed to operate the fore-and-aft sails allowed them to remain competitive with steamships for several years. See also pp.472-473.

Schopenhauer, Arthur (1788-1860), German philosopher whose system, described in his main work, *The World as Will and Idea* (1819), establishes the will to endure as an individual's prime motivation and the negation of will and desire as the possibility of escape from pain.

Schouten, Willem Cornelis (c.1580-1625), Dutch navigator. In 1616, on a voyage to find a new trade route to the East, he sailed past a cape at the extreme S of South America. He named it after his birthplace, Hoorn.

Schreiner, Olive Emilie Albertina (1855-1920), South African novelist. In 1881 she moved to Britain and there published a novel, *The Story of an African Farm* (1883), under the pseudonym Ralph Iron. Her next novel, *Trooper Peter Halkett of Mashonaland* (1897), was attacked for its criticism of Rhodesian society.

Schrieffer, John Robert (1931-), US physicist. In 1957, working at the University of Illinois with Leon COOPER and John BARDEEN, he helped to formulate a theory of SUPERCONDUCTIVITY, which is known as the BCS theory after their initials. All three shared the 1972 Nobel Prize in physics.

Schrödinger, Erwin (1887-1961), Austrian physicist who formulated the quantum mechanical wave equation named after him. With Paul DIRAC he shared the 1933 Nobel Prize in physics for the wave equation, which was based on Louis de BROGLIE's suggestion that moving particles have a wave-like nature.

Schröter, Johann Hieronymus (1745-1816), German astronomer. He built an observatory at Lienthal which became, from the excellence of its instruments, an international centre. He was the first man to observe the surface of the moon and the planets systematically over a long period.

Schubert, Franz Peter (1797-1828), Austrian composer whose symphonies represent the final extension of the CLASSICAL sonata form and whose songs are the height of ROMANTIC lyricism. Among his more popular works are symphonies such as the Eighth ("Unfinished") (1822) and the Ninth in C major (1828). He wrote more than 600 songs to the lyrics of such poets as HEINE and SCHILLER and these include such cycles as *Die Schöne Müllerin* (1823) and *Die Winterreise* (1827). In his tragically short lifetime he also composed much chamber music, and his string quintet (1828) is regarded as a masterpiece. See also pp.1582, 1583.

Schulberg, Budd Wilson (1914-), US scriptwriter, short story writer and novelist, whose works deal with success and failure in American life. They include the novel *What Makes Sammy Run* (1941) and the script for *On the Waterfront* (1954).

Schultze, Max Johann Sigismund (1825-74), German biologist. He studied the nervous system of vertebrates, the electric organs of fish and the anatomy of worms and molluscs. His most important work was the identification of a cell as an organism containing both nucleus and protoplasm and his recognition that protoplasm is a basic substance of plant and animal cells.

Schumacher, Ernst Friedrich (1911-77), German economist who spent most of his life in Britain. He was economic adviser to the National Coal Board (1950-70) and their director of statistics (1963-70).

Among his publications are *The Roots of Economic Growth* (1962) and *Small is Beautiful: Economics as if People Mattered* (1973).

Schuman, Robert (1886-1963), French politician and Foreign Minister from 1948 to 1952. In 1950 he proposed the creation of a single authority to control the production of coal and steel in Europe. This so-called Schuman Plan became effective in 1952 in the form of the EUROPEAN COAL AND STEEL COMMUNITY, which was the first step towards the creation of the EEC. See also pp.1742, 1742.

Schumann, William (1910-), US composer. He became president of the Lincoln Centre in 1962. He has written symphonic works and an opera, *The Mighty Casey* (1953). His cantata, *A Free Song* (1942), won the first Pulitzer Prize for music.

Schumann, Clara Josephine Wieck (1819-1896), German pianist, composer and wife of Robert SCHUMANN. She taught at the Frankfurt Conservatory of Music from 1878 to 1892 and was an outstanding interpreter of the works of her husband and of BRAHMS.

Schumann, Elisabeth (1895-1952), German-born US soprano. She made her debut with the Hamburg Opera in 1910, and thereafter excelled in major roles in the operas of MOZART and Richard STRAUSS, with whom she toured the USA in 1921.

Schumann, Robert Alexander (1810-56), German composer and leader of the ROMANTIC movement. He married the pianist Clara Wieck in 1840 and both were friends of Johannes BRAHMS and Frederic CHOPIN. Schumann's piano compositions include *Kinderszenen* (1838), *Carnaval* (1834-5) and *Waldscenen* (1848-9), and in the early 1840s he wrote many songs and orchestral music. He set to music words by such poets as HEINE and GOETHE and among his best song cycles is *Frauenliebe und Leben* (Women's Love and Life; 1840). His *Piano Concerto in A Minor* (1841-45) and *Spring Symphony* (1841) represent his best orchestral works. See also p.1582.

Schuster, Sir Arthur (1851-1934), British physicist, b. Germany, whose work covered a wide variety of subjects, including electrical discharge in gases, calorimetry and SEISMOLOGY and was an authority in the field of SPECTROSCOPY. In 1875, he led the expedition to Siam (now Thailand) to study the solar eclipse.

Schütz, Heinrich (1585-1672), German composer who wrote the earliest German opera, *Dafne* (1627), now lost. Most of his surviving works were written for the Church and they had a great influence on BACH and HANDEL. They include *Passions*, oratorios, madrigals and *Symphonae Sacrae* (1619, 1647, 1650). See also p.1484.

Schutzenberger, Paul (c.1827-97), French chemist. He worked chiefly in physiological chemistry, especially dyestuffs and fermentation. He wrote *Traité des Matières Colorantes* (1867) and *Les Fermentations* (1875).

Schwann, Theodor (1810-82), German biologist who laid the foundation of modern HISTOLOGY by establishing the CELL theory. In 1836 he became the first to prepare an ENZYME from animal tissue when he isolated and named PEPSIN.

Schwartz, Rudolf (1905-), British conductor, b. Austria. He worked for the Jewish Cultural Organization in Berlin (1936-41) and was put in a concentration camp during WWII. He was conductor in chief of the BBC Symphony Orchestra (1957-62).

Schwarz-Bart, André (1928-), French novelist, best-known for his novel, *The Last of the Just* (1959). This work traces the sufferings of Ernie Lévy in a Europe dominated by the Nazis. The novel was awarded the PRIX GONCOURT.

Schwarzenberg, Prince Karl Philipp von (1771-1820), Austrian soldier. In 1812 he led the Austrian forces sent to aid NAPOLEON in the Russian campaign, and the following year commanded the victorious allied armies against Napoleon at Dresden and Leipzig.

Schwarzkopf, Elizabeth (1915-), Ger-

man soprano known for her versatility in recitals, oratorios and opera. She sang with the Berlin State Opera from 1938 to 1942 and became principal soprano of the Vienna State Opera in 1944.

Schweitzer, Albert (1875-1965), theologian, musician, medical missionary and philosopher. Born in Alsace, he spent most of his life in Gabon (then French Equatorial Africa) where he founded the Lambaréné Hospital in 1913. Honoured as a scientist and humanitarian, as an organist and an expert on BACH, his ethic was "reverence for life" and he was awarded the 1952 Nobel Peace Prize. His works include *Kant's Philosophy of Religion* (1899) and *Out of My Life and Thought* (1931).

Schwinger, Julian Seymour (1918-), US physicist who shared the 1965 Nobel Prize in physics with R. P. FEYNMAN and S. TOMONAGA for work on quantum ELECTRODYNAMICS. Schwinger's contribution was to combine QUANTUM THEORY with RELATIVITY in treating the interactions between particles and the ELECTROMAGNETIC FIELD.

Schwitters, Kurt (1887-1948), German artist best known for his constructions and collages in which he used refuse items such as old newspapers and tram tickets to create works of remarkable sensitivity. See also pp.1684, 1684.

Sciatica, NEURALGIA OF NEURITIS associated with severe pain in the legs. It is caused by irritation or swelling of the sciatic nerve, which passes from the lower spinal column down the back of the thighs and legs. It can be treated with bedrest, sedation or corrective exercise.

Science fiction (SF), literary genre in which reality is subject to certain transformations in order to explore man's potential and his relation to his environment; usually these transformations are technological and the stories are set in the future or in imaginary worlds. Science fiction became a popular genre only with the comic strip *Amazing Stories* in the USA in 1926. Until the 1960s most science fiction involved adventure stories set in space, with stereotyped middle-American characters. Some writers, such as Isaac ASIMOV, explored the paradoxes contained in purely scientific ideas; others like Ray BRADBURY stressed the moral implications of their stories. A "new wave" of SF writers in the late 1960s, led by Michael Moorcock, stressed the role of SF as a means of liberating the reader from his perceptual confines. In the late '70s and early '80s it became increasingly popular.

Scientific method, established procedure for scientific study. In the scientific method, a problem is isolated and observations are made (this includes visual analysis as well as making measurements). Next, a theory is postulated and its validity is tested by experiments. If the experiments fit the theory, the theory becomes a law; if not, the theory is rejected or modified.

Scientific Revolution, name given to the great changes which came over the methods and ideas of science, especially cosmology and mathematics, in Europe in the 16th and 17th centuries. In cosmology the movement is traced from COPERNICUS' radical assertion that the Earth revolves around the Sun, through GALILEO and KEPLER, to NEWTON's law of gravity. Along with other aspects of the RENAISSANCE it laid the foundations of modern Western culture. See also AGE OF REASON; ENLIGHTENMENT; pp.1436-1437.

Scientific socialism, phrase used by Karl MARX and Friedrich ENGELS to distinguish their political theory from the SOCIALISM of people such as Robert OWEN and SAINT-SIMON. The phrase was meant to convey that Marxist ideas were founded on objective historical analysis of the economic forces which determined social and political development.

Scientology, US movement founded by L. Ron Hubbard in 1952. It advocates confrontation with, and assimilation of, painful experiences from the past to achieve true mental health. The movement has aroused controversy but in the early 1970s it claimed to have 600,000 members.

Schooners' rigging allowed them greater speed and less crew than other craft.

Franz Schubert wrote the song *Gretchen at the Spinning Wheel* when he was 18.

Clara Schumann, a brilliant pianist, was taught by her father, Friedrich Wieck.

Robert Schumann, who all his life feared losing his reason, died in an asylum.

Scilla, or squill

Scilla, or squill, genus of perennial garden plants of the LILY family native to temperate regions of the Old World. Squat and bulbous, they have white or blue bell-shaped flowers.

Scilly, Isles of, group of more than 140 islands in the Atlantic Ocean off the coast of Cornwall, SW England, 45km (28 miles) SW of Land's End. Five of the islands are inhabited: they are St Mary's (the largest), Treco, St Martins, St Agnes and Bryher. The climate is mild and flowers and early vegetables are grown; tourism is also important. Pop. (1971) 2,428.

Scintillation, or twinkling, in astronomy, slight variability in the brightness and colour of the stars caused by local disturbances in the Earth's atmosphere that change its REFRACTIVE INDEX.

Scintillation counter, instrument containing a crystal that emits scintillations of light when bombarded by radiation. Each light flash, corresponding to a single particle, is converted into an electric pulse by a PHOTOMULTIPLIER. The number of pulses, counted electronically, indicates the activity of the source of radiation.

Scipio, Publius Cornelius (d.211 BC), Roman general, father of SCIPIO AFRICANUS MAJOR. As consul in 218 he attempted to halt HANNIBAL in N Italy failed when he was forced to put down a revolt of the Gauls. Later that year he lost two-thirds of his army fighting Hannibal at Trebia.

Scipio Africanus Major (Publius Cornelius Scipio) (c.236–183 BC), Roman general, the greatest military genius of the Scipio family. He defeated the Carthaginian forces in Spain in 209 BC and established Roman rule. In 204 BC he captured Tunis with a volunteer army and defeated Hannibal at Zama in 202 BC, earning himself the title of Africanus. See also p.1225.

Scipio Africanus Minor (Publius Cornelius Scipio Aemilianus) (c.185–129 BC), Roman general and scholar who was adopted by the son of SCIPIO AFRICANUS MAJOR. He destroyed Carthage in 146 BC and ended the Third PUNIC WAR, and in 134 BC ended the prolonged war in Spain by devastating the city of Numantia.

Scleroderma, skin disorder characterized by thickening and hardening of the skin, which becomes attached to the underlying tissues.

Sclerosis, degenerative hardening of tissue, especially in the arteries and central nervous system. Normal tissue is replaced by connective tissue, as in a SCAR.

Scotfield, David Paul (1922–), leading British actor celebrated for his roles in John Osborne's *Hotel in Amsterdam* (1968) and Christopher Hampton's *Savages* (1973) at the ROYAL COURT THEATRE. In 1966 his portrayal of Sir Thomas More in the film version of Robert Bolt's *A Man for All Seasons* earned him an Oscar.

Scoliosis. See CURVATURE OF THE SPINE.

Scone, village in SE Perth, Scotland. Old Scone was the Pictish and Scottish capital where the kings of Scotland resided from 1157 to 1488. The Coronation Stone or Stone of Scone, was removed to Westminster Abbey by EDWARD I of England in 1296. There was an attempt in 1950 by Scottish nationalists to return it to Scone.

Scoter, motor, lightweight, small engine-capacity MOTOR-CYCLE which was popular in many countries during the 1950s and 1960s. See also pp.491, 491.

Scopas (fl. mid-4th century BC), Greek sculptor whose figures are known for their intense facial expression, achieved by carving the eyes deeply into the face and the lips in a slightly parted position. See also p.1212.

Scopolamine. See HYOSCINE.

Score, written representation of a musical work which includes all the music, not simply that of one part. A full score shows each part separately. The score of a choral work in which each vocal part is shown, but the orchestral parts of which are reduced to a piano version, is called a vocal score.

Scorel, Jan van (1465–1562), Dutch painter who studied in Italy and helped to introduce the Italian High RENAISSANCE to the Netherlands. He was influenced by

MICHELANGELO and RAPHAEL, and among his works is *Portrait of Agathe Schoonhoven* (1529).

Scorsby, William (1789–1857), British scientist and Arctic explorer who made several voyages to Greenland between 1799 and 1822. He collected information about the little-known coasts of Greenland and made valuable observations on the Earth's magnetic field.

Scorpio. See SCORPIUS.

Scorpio, the eighth astrological sign of the ZODIAC. The ancients identified it with the hunter Orion and stung the horses of PHAETHON. The Sun enters the sign on 24 Oct. and leaves it on 21 Nov.

Scorpion, any of numerous species of variously coloured ARACHNIDS that live in warmer regions throughout the world. It has two main body sections, two eyes, a pair of pedipalps (pincers) and a long slender tail ending in a curved, poisonous sting. Length: to 17cm (7in). Class Arachnida; order Scorpionida. See also pp.32, 33, 317.

Scorpion fish, also called rockfish, any of several species of perch-like marine fish of temperate waters. It can be identified by its venomous fin spines capable of inflicting painful and sometimes fatal injury. Length: to 1m (39in). Family Scorpaenidae. See also LIONFISH.

Scorpion fly, any of several species of brown to grey insects found throughout the Northern Hemisphere. Its chewing mouthparts are at the end of a long beak-like structure. Males of some species have an abdomen resembling a scorpion's tail. Length: to 40mm (1.6in). Order Mecoptera. See also pp.36–37, 37.

Scorpius (Scorpio) or the Scorpion, southern constellation on the ECLIPSE between Libra and Sagittarius. It contains several open and globular CLUSTERS. The MILKY WAY also passes through the region. The brightest star is the 1st-magnitude Alpha Scorpii (Antares). See also pp.1006, 1007, 1015, 1015, 1020–1021, 1021, 1894, 1894–1895.

Scotland, N part of the United Kingdom of Great Britain, N of England and bounded by the Atlantic Ocean and the North Sea. Most of the people live in the Lowlands but Scotland is noted for its Highlands – its magnificent scenery and the traditions of the Scottish clans. The principal agricultural activity is the rearing of livestock; oats and potatoes are the chief crops. Fishing is important and Scotland's main export is Scotch whisky. Industrial growth has declined since WWI but new industry is being attracted and the development of the North Sea oilfields has stimulated the economy. Edinburgh is the capital. Area: 78,764sq km (30,411 sq miles). Pop. (1974 est.) 5,226,400. See pp.2130, 2160.

Scotland, Church of. See CHURCH OF SCOTLAND.

Scotland Yard, name given to the headquarters in London of the Metropolitan Police and synonymous with the Criminal Investigation Department (CID). Originally located in Scotland Yard, off Whitehall, when the force was formed in 1829 by Sir Robert PEELE, it was moved to New Scotland Yard on the Embankment in 1890 and to further new premises in Broadway, Victoria, in 1967.

Scots, originally a Celtic people from northern Ireland. They were Goidelic-speaking. Their raids on the W coast of Roman Britain from the 3rd to the 5th century failed to establish independent settlements in Wales or NW England. In the 5th century, however, they were able to establish the kingdom of Dalriada in Pictish territory. From the 11th century the term has been applied to those people living in Scotland.

Scots Guards, British regiment commissioned by CHARLES I. They were originally the Scots Regiment of Guards. The present name dates from 1877. Their motto is *Nemo me impune lacessit* ("No man provokes me with impunity").

Scots Pine. See PINE.

Scott, Duncan Campbell (1862–1947) Canadian poet and short story writer. He was a civil servant in the Canadian depart-

ment of Indian Affairs, and a romantic interest in the Indians can be seen in his poetry. A selection of his poetry was published in 1951.

Scott, George Campbell (1927–), US actor whose brilliant portrayal in the film *Patton* won him the Oscar for best actor in 1970. He was also featured in *The Anatomy of a Murder* (1959) and *The Hustler* (1961).

Scott, Sir George Gilbert (1811–78), British architect, a prominent figure in the Gothic Revival. He achieved a European reputation with his design for the church of St Nicholas, Hamburg. He was involved in much restoration work for churches and cathedrals, such as Bath Abbey and Ripon Cathedral. He designed and built the Albert Memorial (1862–70), the Foreign Office (in Renaissance style) and St Pancras Station – all in London.

Scott, Sir Giles Gilbert (1880–1960), British architect and grandson of Sir George Gilbert Scott. He designed the new Anglican Cathedral in Liverpool (1904–24), and other works include the New Bodleian Library (1941), Oxford, and Waterloo Bridge (1945) over the River Thames, London.

Scott, Paul (1920–78), British novelist. He is best known for the four novels set in India before the partition, called *The Raj Quartet*: *The Jewel in the Crown* (1966), *The Day of the Scorpion* (1968), *The Tombs of Silence* (1971) and *A Division of Spoils* (1975). *Staying On*, set in independent India, won the Booker Prize in 1977.

Scott, Sir Peter Markham (1909–), British ornithologist and artist who was best known for his studies of birds, his *Key to the Wild Fowl of the World* (1949) and his illustrations for GALICO's *The Snow Goose*. In 1946 he founded the Wildfowl Trust. He was the first president of the WORLD WILDLIFE FUND from 1961 to 1967, president of the Wildlife Youth service from 1969 and chairman of the Survival Service Commission of the International Union for the Conservation of Nature and Natural Resources from 1963.

Scott, Captain Robert Falcon (1868–1912), British Antarctic explorer and naval commander. He reached the South Pole in Jan. 1912, only to find that AMUNDSEN had been there first. Beset by blizzards, Scott and his party perished during their journey across the ice back from the pole. His diaries were published as *Scott's Last Expedition* (1913).

Scott, Robert William Henry "Bob" (1921–), New Zealand rugby player, a fullback. He played for the All Blacks 30 times, the first time in 1946.

Scott, Sheila Christine (1927–), British aviator. She took up flying in 1959 and from 1965 undertook a series of record-breaking solo flights, flying around the world, and over the North Pole (1971). She won the light-aircraft London-New York race in 1969.

Scott, Sir Walter (1771–1832), Scottish novelist and poet who started his career as a lawyer. His first published works were translations of two German ballads by Bürger in 1796, followed by a collection of old Scottish ballads, *Minstrelsy of the Scottish Border* (1802–03). His first novel *Waverley* (1814), published anonymously, was an immediate success and was followed by such others as *Rob Roy* (1817), *Ivanhoe* (1819) and *The Talisman* (1825). See also pp.1475, 1475, 1574, 1574.

Scottish. See GAELIC.

Scottish deerhound. See DEERHOUND.

Scottish Labour Party, political party formed in 1975 when two Labour MPs resigned the Labour WHIP in order to work for a greater degree of devolution to Scotland than they believed the Labour party would expect. The MPs were James Sillars (Ayrshire South) and John Robertson (Paisley).

Scottish law, separate judicial system from English law, although many STATUTES passed by the British Parliament have force throughout the country. At the Act of UNION (1707) Scotland was allowed to retain its own legal system. Scotland also has its own distinctive structure of courts. The supreme civil court in Scotland is the

COURT OF SESSION, which hears new cases, acts as an Appeal Court and may direct an appeal to the HOUSE OF LORDS. Below it are the sheriff courts, one for each former county. The supreme criminal court is called the High Court of Justiciary. The Scottish jury in criminal cases consists of 15 members, who return a verdict by majority vote. In Scotland there is no CORONER.

Scottish National Party, political party in Britain, founded in 1928. It grew out of the Scottish Home Rule Association, formed in 1886. It elected its first MP at a by-election in 1945. In the late 1960s it entered a period of remarkable growth and at the elections of October 1974 it returned 11 MPs. Its official policy is complete independence from the British parliament. See also pp.1744–1745.

Scottish Office, department of state in the British government, responsible for Scottish affairs; in particular agriculture, education, home and health affairs and development. After the union of England and Scotland in 1707, special secretaries of state for Scotland were appointed, down to 1745. Thereafter Scottish matters were charged to one of the two secretaries of state and then to the home secretary. In 1885 a secretary for Scotland was again appointed. The post became that of a secretary of state in 1926.

Scottish terrier, ancient Highland breed of dog that was originally used for hunting. The short, deep-chested body is set on short, heavy legs and the tail is straight. The hard, wiry coat may be grey, brindle, or black. Height: to 25.5cm (10.5in) at the shoulder; weight: to 10kg (22lb).

Scotto, Renata (1934–), Italian soprano who studied in Milan and made her debut there in 1953; since that year she has been a resident singer at LA SCALA. She has appeared frequently at Covent Garden since 1962 and made her debut at the Metropolitan Opera, New York, in 1965. Her repertoire includes *La Bohème*, *La Sonnambula*, *The Marriage of Figaro* and *La Traviata*.

Scotus, John Duns. See DUNS SCOTUS, JOHN.

Scouts. See BOY SCOUTS.

Scrabble, word game for two to four players. Words are built using individual letters on a board marked out to resemble a crossword puzzle. Each letter has a points value, and certain areas on the board double or triple the value of a letter or word. The player with the most points at the end of a game wins.

Scrambler, electronic device used to render a transmitted message unintelligible to all but its sender and its receiver, used particularly on voice messages sent by radio or telephone. The message is distorted in a prearranged way by the sender's scrambler, for instance by oscillating its frequency or by rearranging its order; the receiver's scrambler reverses this process to make the message intelligible again. See also p.607.

Scrambling, or moto-cross, motorcycle sport in which races are held over rough, cross-country circuits featuring natural hazards. It originated in Surrey, England, in the mid-1920s, and was introduced to the Continent in 1946. A team championship, the *Moto-Cross des Nations*, began in 1947, and in 1952 the FIM (the international controlling body) inaugurated a European championship for riders of machines up to 500cc. Since then team and individual championships at 250cc have been introduced. Lightweight bikes of Swedish, Czech and Japanese origin have been the most successful.

Screamer, aquatic South American bird closely related to DUCKS, GEESE and SWANS. It has a hooked, chicken-like bill and short, sharp spurs on its wings. It gets its name for the loud, two-note trumpeting sound it makes. Height: 75cm (30in). Family Anhimidae. See also p.301.

Serec, or talus, heap of rock waste lying at the bottom of a cliff. It is made up of particles ranging in size from sand grains to boulders that have been loosened from the cliff rock by weathering.

Screech owl. See OWL.

Screw, variant of a simple machine, the

inclined plane. It is an inclined plane cut around a cone, usually of metal, in a helical spiral. When force is exerted radially on the screw, eg by a screwdriver or the lever of a screw-jack, the screw advances to an extent determined by its pitch, or the distance between crests of its thread. See also p.446.

Screw pine, woody Old World plant distributed throughout tropical Asia, the islands of Polynesia and the Indian Ocean; a few species are found in Africa. Not a true pine, its long, tough, narrow leaves rise from a rosette in a spiral, like the thread of a screw. It bears cone-like fruit. Height: to 12m (40ft). Family Pandanaceae. Genus *Pandanus*. See also p.378.

Screw propeller, device that converts the torque of a rotating shaft into propulsion or thrust. It is based on the principle of a helical screw, which advances in wood when it is rotated; the propeller advances in air or water when it is rotated by an engine. Simple propellers have a fixed pitch so that the amount of thrust increases as the speed of rotation increases; variable-pitch propellers are rotated at constant speed, and thrust is varied by adjusting the angle at which the blades meet the air or water. See also pp.398, 402, 402.

Screw-tape Letters, *The* (1942), work by C.S. Lewis. As with his religious allegories for children in the Narnia series, the book deals in an entertaining and instructive way with Christian theological and moral problems.

Screw worm, larva of several species of bluegreen BLUEBOTTLES (blow flies) and parasite of warm-blooded animals. It enters through wounds in the skin and is a serious pest of domestic animals in the USA and South America. Family Calliphoridae; genus *Callitroga*.

Scriabin, Alexander Nicolas (1872-1915), Russian composer and pianist who wrote highly original piano music introducing chords built in fourths instead of the conventional major and minor triads. His most significant works include ten piano sonatas, *The Poem of Ecstasy* (1908), three symphonies and numerous short piano pieces. See also pp.1754, 1754.

Scribe, Augustin Eugène (1791-1861), French playwright. He wrote more than 300 plays and is generally thought to have originated the Well-made Play. His varied dramatic output includes the historical play *Le verre d'eau* (*The Glass of Water* 1840) and *Adrienne Lecouvreur* (1849), a tragedy which he wrote with E. Legouvé.

Scribes, in Jewish history, court secretaries who later took on legal functions. Following the return of the Jewish exiles to Palestine led by EZRA, they became teachers and interpreters of the law.

Scriptures, in Christianity, the books of the OLD TESTAMENT and NEW TESTAMENT, often including the APOCRYPHA; also a text or passage from one of these books of the Bible. The term, as used in the New Testament, refers primarily to the sacred Hebrew writings of the Old Testament. Scripture, in the singular, usually refers to the collection of Biblical writings thought of as a whole. The term scriptures is also applied to the sacred writings of other religions, such as the KORAN of Islam.

Scrofula, general name used variously in the history of medicine, especially to describe TUBERCULOSIS of the bones and lymphatic glands. It was also known, in popular tradition, as KING'S EVIL.

Screpe, Richard (c.1350-1405), English prelate. He was appointed Bishop of Coventry and Lichfield in 1386 and Archbishop of York in 1398. For leading a rebellion north of the Tyne with the Earl of Northumberland in 1404 he was executed at York.

Scrotum, in male human beings and most other mammals, a thin external sac of skin, divided into two compartments, each of which contains one of the two TESTES. It is located in the pelvic region behind the PENIS. See also p.164.

Scrub bird, either of two species of small, rare, brown birds of Australia; together they comprise the genus *Atrichornis*. They

rarely fly, but run swiftly and have a loud call of various notes. The reddish-hued scrub bird (*A. rufescens*), was discovered in the wet forests of New South Wales in the 1860s. Length: to 18cm (7in). The noisy, or western scrub bird (*A. clamoratus*), of Western Australia was believed to have become extinct after 1889, but was rediscovered in 1961. It inhabits dense coastal scrub and bushlands. Length: 22cm (9in). Family Atrichornithidae. See also p.345.

Scuba diving, water sport. It consists of diving with the use of self-contained underwater breathing apparatus (SCUBA), known as an aqualung. Other equipment includes a wet suit and rubber fins for the diver's feet. The sport has attracted more than a million enthusiasts since the design of the modern aqualung by Jacques Yves COUSTEAU. See also p.484.

Scud. See AMPHIPOD.

Sculling, water sport which first became competitive in London in 1715. It is similar to ROWING except that the sculler uses two small oars or sculls (whereas an oarsman rows with one oar only). There are main events for single, double and, for women, quadruple scullers. The most prestigious race is for the DIAMOND CHALLENGE SCULLS at the Henley Royal Regatta, established in 1844 and still held each summer.

Sculpin, any of 300 species of bottom-dwelling usually marine fish found in temperate and cold waters of the N Atlantic Ocean. Greyish and mottled with yellow, it has a large bony head covered with prickles. Length: to 60cm (2ft). Family Cottidae.

Sculpture, the art of creating natural or abstract forms in three dimensions, either in the round or in relief. Techniques employed in sculpture include carving (in wood, stone, marble, ivory, etc), modelling (in clay, wax etc), casting (in bronze and other metals). These materials, and others such as cement and plaster, have long been in use; in modern times artists have used plastics and any other material or object that has appealed to them.

The history of sculpture basically parallels that of PAINTING. The early civilizations of Egypt, Mesopotamia, India and the Far East were rich in sculpture, often of monolithic proportions and of deeply ritualistic significance. The Greeks developed a style of relief and free-standing sculpture, based on the idealized representation of the human form, that reached such perfection during the Classical and Hellenistic periods as to inspire European sculptors for many centuries. Roman sculptors were profoundly influenced by the Greeks, but forsook the Greek ideal in the field of portraiture, which they enriched with individual characterization.

Medieval European sculpture was frequently an integral feature of great ROMANESQUE and GOTHIC churches and cathedrals, many of which were covered externally and internally with thousands of figure and narrative carvings whose function was didactic as well as decorative. Highly stylized in the Romanesque period, this architectural sculpture grew in humanity and realism in the Gothic era, while still retaining perfect unity with its setting.

The sculptor emerged only rarely as an individual (the PISANOS in 13th-century Italy were exceptional), before the Renaissance. Then, however, Florence, its birthplace, was enriched by the works of such masters as Ghiberti, Donatello, the della Robbia and Pollaiuolo families, Cellini and Michelangelo, who enjoyed Church, civic and private patronage. Important Renaissance sculptors north of the Alps include the elder Peter Vischer in Germany, and Jean Goujon and Germain Pilon in France, where secular art thrived under royal patronage. High BAROQUE sculpture at its most inventive and technically brilliant is exemplified in the works of the architect-sculptor BERNINI in Rome. PUGET was the movement's leading exponent in France where, in the 18th century, it was superseded by NEO-CLASSICISM. This extended into the 19th

century, when it was rivalled and replaced by a movement of Realist sculpture.

RODIN above all others led the way in freeing early 20th century sculpture from the dual yoke of Greek domination and slavish subservience to realism. Influences which contributed to this liberation were African, Aztec and other ethnic and ancient sculpture, whose direct and exuberant treatment of form and materials has stimulated great modern sculptors such as PICASSO, MODIGLIANI, Brancusi and Henry Moore. Movement in sculpture, as used in mobiles and kinetic works, is a relatively recent feature, as is the practice of having large works of sculpture made and assembled in factories to the artist's specifications.

Sculthorpe, Peter Joshua (1929-), Australian composer. The first public performance of his works was in 1945. His best-known work is the ballet *Sun Music* (1968).

Scumbling, in art, technique used in oil painting. A second layer of opaque paint is applied so that the under layer is not obliterated. The technique is generally associated with such artists as TINTORETTO, TITIAN, VELÁZQUEZ and HALS. In pen-drawing, scumbling refers to loose rambling scribbling or unforming cross-hatching, both of which are used to fill out various areas and to create tones.

Scurvy, disorder caused by a prolonged deficiency of VITAMIN C. It is characterized by weakness, inflamed gums, loose teeth and swollen joints and also absorption by tissues of blood from ruptured vessels, which causes ANAEMIA. See also MS pp.70-71.

Scurvy grass, plant of the MUSTARD family native to N Europe and Arctic regions. It has white flowers, and the stems and leaves have an unpleasant taste; these were used on early polar expeditions to treat scurvy. Species *Cochlearia officinalis*.

Scylla and Charybdis, two figures in Greek mythology. Scylla, beloved of Poseidon, had been changed by CIRCE into a long-necked, six-headed beast. Charybdis was changed into a violent whirlpool by the thunderbolt of ZEUS. These two creatures lived on each side of the Straits of Messina and devoured sailors.

Scyphozoa, class of COELENTERATE marine animals that includes the largest of the JELLYFISHES. Their life cycles include a larger jellyfish (MEDUSA) stage and a smaller POLYP, hydra-like stage, although either of these stages may be absent.

Seythia, ancient region, occupied by the Scythians from the 8th to the 3rd centuries BC, considered by the Greeks to be an ill-defined area north of the Black Sea. The Scythians originally came from Siberia.

Seythians, ancient people from central Asia who ruled an empire in S Russia from the 8th-7th centuries BC until they were confined to the Crimea by the SARMATIANS in the 2nd century BC. In the 7th century BC they temporarily extended their power into Mesopotamia, the Balkans and Greece. They were a nomadic tribe with an advanced civilization.

Sea, body of water, containing salt and other mineral deposits, that covers about 71% of the Earth's surface, and represents about 98% of all the water on the face of the Earth. The salt content of seawater, between 3.3% and 3.7% is the result of washout from the land and interchange with the atmosphere over the ages. Water vapour evaporated from the surfaces of the oceans provides the material of clouds. Surface layers of the oceans are normally saturated with atmospheric gases. Light penetrates seawater to a maximum depth of about 300m (1,000ft), below which plant life cannot grow. See also SEA-WATER; pp.232-233.

Sea anemone, sessile, polyp-type COELENTERATE animal found in marine tidal pools and along rocky shores. It has a cylindrical body with many tentacles around its mouth; the colour varies according to species. Height: 20cm (8in). Class Anthozoa; genera include *Tealia*, *Anemonia* and *Metridium*. See also pp.2, 12-13.

Sea bass, marine food fish found in tropi-

Screws vary in shape and size depending upon their particular purpose.

Screw worms: the larvae of these blowfly maggots often infest animals' wounds.

Alexander Scriabin first won fame as a pianist, touring the USA and Russia.

Scuba diving: named after the self-contained underwater breathing apparatus used.

Sea-bed

cal and some temperate waters. It includes white and striped bass in the genus *Roccus*, the groupers, and the black bass *Centropomus striatus*. Family Serranidae. See also p.744.

Sea-bed, floor of the oceans, which extends from the shallow CONTINENTAL SHELF regions to abyssal depths approaching 11km (7 miles) deep in some regions of the PACIFIC OCEAN. The geological composition of the abyssal sea-bed is SIMA, the material that also underlies the SIAL of the continents. See also pp.238-239.

Seaborg, Glenn Theodore (1912-), US physicist. During WWII he worked on the development of the atomic bomb and was responsible for isolating uranium-233. For his work with the TRANSURANIC ELEMENTS and the discovery of the ACTINIDE ELEMENTS he shared the 1951 Nobel Prize in chemistry with Edwin McMillan.

Sea bream, any of numerous marine, spiny-finned fishes, usually of the family Sparidae. They have deep bodies and massive jaws with heavy crushing teeth. See also pp.740, 744, 745.

Sea butterfly, any of several species of small, marine gastropod molluscs that swim by undulating a flat elongation of the foot. It lives at or near the surface of the water, feeding on small animals. The shell, if present, is translucent and delicate. Length: to 1cm (0.4in). Order (with shell) Thecosomata; (without shell) Gynanostomata. See also p.21.

Sea cow. See DUGONG.

Sea cucumber, marine ECHINODERM found in rocky areas. It is a cylindrical animal with a soft, fleshy body that can be divided into five parts around a central axis; it has branched tentacles around the mouth. Edible species are smoked and dried; the end product is called bêche-de-mer. Species include the cotton-spinners (*Holothuria* spp.). Class Holothuroidea. See also pp.50-51, 341.

Sea dragon, marine fish of coastal waters of Australia. It is a PIPEFISH, closely related to the SEA-HORSE, and its reddish-brown body is covered with leafy and spine-like projections, making it resemble floating seaweed. Family Syngnathidae.

Sea eagle. See EAGLE.

Sea fan, or gorgonian, colonial COELENTERATE animal found in coral reefs in tropical marine waters. The colonies are branching but flat, and eight-tentacled POLYPS live in tiny pits along the horny branches. Class Anthozoa; species *Eunicella verrucosa*.

Seafloor spreading, part of the theory of PLATE TECTONICS that covers the creation of new lithospheric plate material (rocky material of the Earth's crust) at the mid-ocean ridges and its destruction in the deep ocean troughs. The proof of the theory lies in the presence of bands of reversed magnetic polarity in the ocean crust and the increase in age and thickness of sediments away from the ridges. See also pp.197-199, 198-199, 483, 1936.

Seafood, any of numerous edible products of the sea including FISH and SHELLFISH; it includes species of CRAB, LOBSTER, PRAWN, SHRIMP, CLAM, ABALONE, OYSTER, WHELEK, WINKLE, COCKLE, SQUID and OCTOPUS. See also pp.746, 747.

Sea gooseberry. See COMB JELLY.

Seagram Company, world's largest producer of wine and spirits, founded in Canada in 1924. In 1977 its total sales exceeded \$2,000 million. Seagram's head offices in New York, designed by Mies van der Rohe, are a major example of skyscraper building.

Seagull. See GULL.

Seagull, The (1896), four-act drama by Anton Chekhov. The first of his four plays, it is typical of his tragic-comic depiction of yearning and futility, here involving the love of two men for the same woman. See also p.1235.

Sea-horse, marine fish found in shallow tropical and temperate waters. It swims in an upright position and has an outer bony skeleton of platelike rings, a mouth at the end of a long snout, and a curled, prehensile tail with which it clings to seaweed. The male incubates the young in a brood pouch. Length: 3.8-30.5cm (1.5-12in). Family Syngnathidae. See also p.61.

Sea Island cotton, fine COTTON fabric that was developed in the Sea Islands, a chain of islands off the coasts of Florida, Georgia and South Carolina, USA. The cotton plant, *Gossypium barbadense*, has long staple fibres and is native to tropical America.

Sea kale, any of several species of fleshy, cabbage-like plants that grow in coastal regions of Eurasia. Common sea kale, *Crambe Maritima*, has bluish leaves and small clusters of white flowers. Its young leaves may be cooked and eaten, and have a bitter taste. Family Brassicaceae. See also pp.685, 686.

Seal, any of several species of carnivorous, primarily marine, aquatic mammals. It feeds on fish, crustaceans and other marine animals; various species are hunted by man for meat, hides, oil and fur. Species of true, earless seals such as the leopard seal (*Hydrurga leptonyx*), hooded seal (*Cystophora cristata*) and bearded seal (*Erignathus barbatus*) are included in the family Phocidae. They swim with powerful strokes of their hind flippers and sinuous movements of the whole trunk, but are clumsy on land and move by wriggling. Members of the eared family Otariidae have longer fore flippers, used for propulsion, and use all four limbs when moving on land. They include fur seals (genera *Callorhinus* and *Arctocephalus*) and species of SEA LION. Order Pinnipedia. See also pp.87, 322-323, 339, 342.

Seal, symbol of authenticity attached to an official or legal document. Seals were originally substitutes for signatures in the days of illiteracy. They have been maintained by custom and by statute. They may be single-sided or double-sided and may be pressed on to the document or left to hang from it. They were originally made of beeswax; they are now commonly plastic. There are three royal seals in Britain, the GREAT SEAL, the PRIVY SEAL and the Signet seal.

Seal, in engineering, liquid or gas-tight union, eg between mating pipe flanges, beneath bolted or clamped hatches and between moving parts of machines. Seals are made from rubber, plastics, fibres such as cotton and flax, and materials made from all these. See also pp.420, 447, 545, 552, 597.

Sealab, experimental programme conducted by the US Navy to determine man's ability to live for long periods at the bottom of the sea. The aquanauts live in habitats placed on the ocean bed and spend some hours outside them working on the ocean floor. See also p.485.

Sea lavender, widespread plant of coastal areas, particularly in the Near East and parts of Europe. It is a stiff, branching plant with sprays of tiny white, pink, yellow or lavender flowers, and broad basal leaves. Height: 30-61cm (1-2ft). Species include *Limonium vulgare*. Family Plumbaginaceae. See also p.332.

Sea lettuce, any of various green SEAWEEDS (genus *Ulva*) with edible, crinkly fronds. They resemble the lettuce used in salads. See also GREEN ALGAE; p.358.

Sea-level, level from which topographic heights are measured. It is usually the mean sea-level and is reckoned on being the average of regular sea-levels taken over a long period of time. It may also be referred to as the Ordnance Datum (OD). See also TIDE.

Sea lily, CRINOID ECHINODERM animal found in deep marine waters. Seldom seen, it has many branched arms with ciliated grooves for food-collecting radiating from a tiny body disc. It is spineless and attaches itself to the ocean bottom with a stalk. Class Crinoidea. See also p.50.

Sea lion, any of five species of SEALS that live in coastal waters of the Pacific and feed primarily on fish and squid. It has a streamlined body and long fore flippers for propulsion. The males of all species, except the California sea lion (*Zalophus californianus*), have manes. The largest species is the Steller sea lion (*Eumetopias jubata*); it may reach 3.3m (11ft) in length. Order Pinnipedia; family Otariidae. See also pp.7, 99.

Sealyham terrier, working dog, with a long head with pronounced whiskers and rounded ears. The deep-chested body is set on short, strong legs and the tail is commonly docked. The hard, wiry top coat is generally white. Height: to 30.5cm (12in) at the shoulder; weight: to 9kg (20lb).

Sea mat. See MOSS ANIMALS.

Seami Motokyo. See ZEAMI MOTOKYO.

Sea mouse, large marine ANNELID WORM with matted bristles on the sides and top of the body. The common sea mouse *Aphrodita aculeata* lives in sandy mud on both sides of the North Atlantic. Length: 15cm (6in). See also pp.18, 334.

Sea otter, marine otter that was once widespread along the Pacific coast of the USA. Now a protected animal, it was almost exterminated for its valuable dark brown fur. Its hind feet are flattened into flippers and it swims and floats on its back in kelp beds, usually close to the shore. It eats fish and invertebrates and often uses stones to open hard shells. Length: to 1.2m (4ft); weight: to 39kg (20lb). Family Mustelidae; species *Enhydra lutris*. See also p.342.

Sea pen, any of several species of marine animals that are related to sea anemones and corals and live in feather-shaped colonies; it resembles a quill pen. Order Pennatulacea; genera include *Stylatula* and *Funiculina*.

Sea perch, or surf perch, marine fish found in temperate Pacific waters. Often quite colourful, its young are born alive. Length: 45.7cm (18in). Family Embiotocidae; species include *Amphistichus argenteus*.

Seaplane, aeroplane that lands on and takes off from water using floats or pontoons that are shaped to offer minimum water resistance. The first seaplane was built by Glenn H. Curtiss in the USA, and flown in 1911. In the 1930s flying boats with boat-shaped hulls as well as wing pontoons carried more passengers than any other aircraft. They have often been used in air/sea rescue operations. See also p.471.

Search warrant, order authorizing a person to enter premises and seize specified goods, usually stolen ones. In Britain, the order may be given by a JUSTICE OF THE PEACE or by a police officer of at least the rank of superintendent (by the latter, however, only if the person suspected of harbouring stolen goods has been convicted of a crime relating to dishonesty in the previous five years).

Searle, Humphrey (1915-), British composer and pupil of Anton von Webern in Vienna (1937-38). His works include *Gold Coast Customs* (1949) and *The Shadow of Cain* (1952) both for speaker, men's chorus and orchestra with texts by Edith Sitwell, as well as a ballet, *Noctambles* (1956), the opera *The Photo of the Colonel* (1964), and *Cello Fantasia* (1972).

Searle, Ronald (1920-), British cartoonist and artist whose cartoons of the outrageously naughty girls of St Trinian's School were the basis for a successful series of films. His work has appeared in satirical magazines such as *Punch* and the *New Yorker*. He attracted attention as a serious artist for his drawings made when a prisoner of the Japanese during WWII.

Sea robin, also known as gurnard, marine fish found throughout the world in tropical and temperate waters. Edible but not popular, it has a bony head, can produce sound, and "walks" on the sea bottom with its large pectoral fins. It is red, grey, yellow or green with dark blotches. Length: to 70cm (28in). Family Triglidae.

Sea serpent, legendary and mythological marine creature that appears in the literature of most ancient cultures. Almost all alleged sightings and carcasses have proved to be hoaxes or known marine species. In a very few cases, such as that of the LOCH NESS MONSTER, the results have been inconclusive.

Seasickness, severe form of travel sickness brought on by the rolling and pitching movements of seagoing boats and ships. Many people who are seasick initially in rough weather become accustomed to the ship's motion and lose their discomfort.

Others remain dizzy and nauseated for the duration of a voyage. Anti-seasickness tablets often contain scopolamine or other ALKALOID preparations which desensitize nerves, including those of the Automatic nervous system.

Sea slug, also called nudibranch, any of numerous species of marine gastropod molluscs, related to snails and found throughout the world. They have no shells, quills or mantle cavities, frequent shallow water and feed primarily on sea anemones. Order Nudibranchia. See also pp.21, 26, 335.

Sea snail, also called snailfish, any of several species of small marine fish. It has a soft, elongated, scaleless body with a long dorsal fin. Most species are bottom-dwellers, either in shallow coastal waters or deep seas. Length: to 30cm (12in). Family Liparidae. See also p.341.

Sea snake, any of about 50 species of colourful, highly poisonous marine snakes found in coastal waters of the Indian and Pacific oceans. Length: to 1.2m (4ft). Family Hydrophiidae.

Seasons, four astronomical and climatic periods of the year based on differential solar heating of the Earth as it makes its annual revolution of the Sun. Due to the parallelism of the Earth's axis of rotation, pointed near the Pole Star throughout the year, the Northern Hemisphere receives more solar radiation when its pole is aimed toward the Sun in summer and less in winter when it is aimed away, whereas the opposite holds for the Southern Hemisphere. The seasons are conventionally initiated at the vernal (spring) and autumnal EQUINOXES and the winter and summer SOLSTICES. See also pp.252-253.

Sea spider, also called Pycnogonid, any of numerous species of small, bottom-dwelling, marine arthropods. It has four to seven pairs of long, slender legs and generally feeds on juices, which it sucks from small marine invertebrates. Length of body: 0.3-50cm (0.1-20in). Class Pycnogonida. See also p.34.

Sea squirt, any of numerous species of small, sac-like, marine animals; it has no true backbone. A sedentary creature, it constantly draws in and discharges water for food and oxygen, and can shoot out water when disturbed. Class Ascidiacea. See also pp.3, 54, 55.

Sea star. See STARFISH.

SEATO (Southeast Asia Treaty Organization), regional defence agreement signed by Australia, New Zealand, France, Pakistan, the Philippines, Thailand, Britain and the USA in Manila in 1954. It was formed in response to Communist expansion in Southeast Asia. With administrative headquarters in Bangkok, SEATO had no standing forces but combined military exercises were undertaken. The final exercise was held in 1976.

Seaton, John Colborne, Baron of (1778-1863), British general and colonial administrator. Lieutenant-governor of Upper Canada when the Canadian Rebellion of 1839 broke out, he was ordered to assume the office of Governor-general of British North America and the revolt was quickly suppressed. He later served as commander of forces in Ireland.

Sea trout, any of several species of marine fish, related to the Atlantic SALMON (*Salmo salar*); it is commonly confused with the salmon or TROUT. Although it spawns inland, it never leaves the waters around the river mouth. Family Sciainidae; genus *Cynoscion*.

Seattle, city and port of entry in Washington, USA between Lake Washington and Puget Sound; the largest city in the Pacific North-West. Settled in 1851, it developed with the construction of the railway and the Alaska Gold Rush (1897). The city has two universities. Seattle is an important shipping point for Alaska and the Far East. Industries: aerospace, shipbuilding, precision instruments, building materials, chemicals, timber, food processing, fishing. Pop. (1980) 491,897.

Sea turtle. See TURTLE.

Sea-urchin, spiny ECHINODERM animal found in marine tidal pools along rocky shores. Round with long, radiating (often poisonous) moveable spines, its skeletal

Sedimentary rock

plates fuse to form a perforated shell. Class Echinoidae. See also pp.50-51, 747.

Sea walnut. See COMB JELLY.

Sea wasp. See COMB JELLY.

Sea-water, solution of several minerals in the sea. It has a high concentration of microscopic life and tastes salty. The dissolved salt content varies between 3.3 and 3.7%, most of which is common salt (sodium chloride, NaCl) but nearly all elements are found in seawater, including vast reserves of magnesium, potassium and calcium. Large amounts of nitrogen, oxygen and carbon dioxide are present as dissolved gases. The freezing point of sea water of salt content 3.5% is -1.9°C (28.6°F). See also pp.232-233.

Seaweed, any of numerous species of brown, green or red ALGAE, found in greatest profusion in shallow waters on rocky coasts. KELP is the largest species, often exceeding 33m (100ft) in length. Many species are commercially important for the manufacture of fertilizers or food, or as a valuable source of chemicals such as iodine. See also pp.350, 359, 412, 687.

Sebaceous gland, skin gland, often occurring along the walls of hair follicles. It secretes SEBUM, a waxy substance containing fats, and waste products from the EPITHELIUM. See also p.150.

Sebastian, Saint (d. AD 288), Roman Christian martyr. Little is known of his life but he was a favourite of the emperor Diocletian who, on learning that Sebastian was a Christian, had him put to death.

Sebastian (1554-78), King of Portugal (1557-78), grandson and successor of John III. Fanatically religious, he was killed during an unsuccessful crusade against the Muslims in Morocco.

Sebastiano del Piombo (Sebastiano Lucian) (c. 1485-1547), Italian painter of the VENETIAN SCHOOL who went to Rome in 1511 to work at the Villa Farnese, where he was influenced by RAPHAEL.

Sebastopol, port in the SW of the Crimean Peninsula, USSR. A heavily fortified naval base of the Russian Black Sea fleet during the CRIMEAN WAR, it was besieged in Oct. 1854 by 60,000 British, French and, later, Piedmontese troops. Despite heavy Allied casualties the siege ended with the Russians' evacuation in Sept. 1855.

Seborrhea, disorder of the SEBACEOUS GLANDS, characterized by an increased and altered secretion of fatty matter that results in oily or scaly skin. It may cause baldness and dandruff.

Secant, in TRIGONOMETRY, ratio of the length of the hypotenuse to the length of the side adjacent to an acute angle in a right-angled triangle. The secant of angle A is usually abbreviated to "sec A", and is equal to the reciprocal of its COSINE.

Secchi, Pietro Angelo (1818-78), Italian astronomer who was the first to use photography and SPECTROSCOPY in astronomy. In 1851 he photographed a solar eclipse and between 1864 and 1868 he examined the spectra of 4,000 stars, classifying them into spectral types. His system formed the basis of the classification used today. See also pp.970, 978.

Secession, formal separation from an organized body. In 1860-61 eleven states (South Carolina, Mississippi, Florida, Alabama, Georgia, Louisiana, Texas, Virginia, Arkansas, Tennessee and North Carolina) seceded from the USA and formed the CONFEDERATE STATES OF AMERICA. See also pp.1628-1629.

Secondary deviance, term used by sociologists to describe the behaviour of a person who reacts to being labelled deviant for some initial action (primary deviance) by the adoption of even more deviant behaviour.

Secondary emission, in physics, emission of ELEMENTARY PARTICLES by a target, such as a gas or metal surface, that is bombarded with primary (newly generated) radiation or particles. Secondary COSMIC RAYS are emitted when primary cosmic rays bombard the atmosphere. The anode of an ELECTRON TUBE emits secondary electrons when it is bombarded by primary electrons from the cathode. This principle is employed in electron-

multiplying devices, eg an image intensifier.

Second Coming, religious term referring to the return in the future of Christ. Christians believe this will end the present world order and involve the judgement of the living and the dead.

Second Empire (1852-70), French government set up by NAPOLEON III after staging a coup against the SECOND REPUBLIC in Dec. 1851. The empire collapsed when France was easily defeated by the Prussians in 1870, and the THIRD REPUBLIC was set up.

Second Mrs Tanqueray, The (1893), four-act drama by Arthur Wing PINERO, the story of a woman's struggle with Victorian ideas of respectability.

Second Republic (1848-52), government of France. After popular insurrection brought the abdication of Louis Philippe, the republic was set up in early 1848. The constitution of 1848 provided for election by male suffrage of a president and assembly; the elections were mainly won by radical or conservative deputies, and Louis Napoleon was elected president of the republic in Dec. 1848. He eventually staged a coup in Dec. 1851 and set up the SECOND EMPIRE in 1852, making himself NAPOLEON III.

Second Vatican Council, (1962-65), 21st Roman Catholic ecumenical council convened by Pope JOHN XXIII. Its purpose was to renew the Church's religious life, bring its discipline, teaching and organization up to date and unify all Christians. The first session (Oct.-Dec. 1962), presided over by Pope John, issued a *Message to Humanity* but reached few definite conclusions. Among the pronouncements of the other three sessions (1963, 1964 and 1965), presided over by Pope PAUL VI, were many concerning the ECUMENICAL MOVEMENT. The Council was closed on 8 Dec. 1965.

Second World War. See WORLD WAR II.

Secret Agent, The (1907), novel by Joseph CONRAD. It tells the story of Verloc (the secret agent) among anarchists and in his home life, and gives a particularly nihilistic picture of the political activities it describes. It was filmed by Alfred Hitchcock in 1936.

Secretary bird, bird of prey found in Africa, S of the Sahara. It is pale grey with black markings and has quill-like feathers behind its ears, large wings, and long legs and tail. It feeds on reptiles, birds' eggs, and insects and lays its eggs in a tree nest. Height: 1.2m (4ft). Species *Sagittarius serpentarius*.

Secretary of State, name for several government officers in Britain. The office dates from the 14th century, when the king's secretary was keeper of the SIGNET and a leading adviser on matters of state. From 1540 there were two secretaries. There are now secretaries of state for many departments. In the USA the name is given to the man with overall responsibility for foreign affairs.

Secretin, polypeptide HORMONE secreted by the small intestine. It stimulates the release of pancreatic juice and also stimulates bile secretion by the GALL BLADDER.

Secret Life of Walter Mitty, The (1945), short story by James THURBER. It tells how Mitty escapes from his problems through daydreams, in which he always plays the hero. A film version of the story, starring Danny KAYE was made in 1947.

Secrets Acts, Official, series of acts passed by the British Parliament in the want of a remedy at COMMON LAW to make illegal the breach of official confidence. They were passed in 1889, 1911, 1920 and 1939.

Secret Service, government intelligence organization maintained in most countries to obtain information concerning activities which might endanger the state. In Britain it is divided into two main parts: MI5 (Military Intelligence 5), which is responsible for counter-espionage in Britain and is subject to the HOME OFFICE which in turn reports to the Prime Minister; MI6, responsible for overseas intelligence and answerable to the FOREIGN OFFICE. In the USA the Secret Service is a branch of the Treasury Department. See also CIA; FBI; KGB.

Security Council, UNITED NATIONS council responsible for preserving international peace and security. It consists of five permanent members and ten non-permanent members, elected for two-year terms by the UN General Assembly. The permanent members are China, France, Britain, the USSR and the USA. The Security Council investigates disputes threatening world peace and applies pressure such as SANCTIONS on countries which violate international law or codes of practice. Each permanent member can veto an initiative of the rest of the council. See also pp.1784-1785.

Sedan, town in NE France, on the River Meuse. It became part of the French Crown lands in 1642 and was a Protestant stronghold in the 16th and 17th centuries. The town was the scene of the defeat of the French in 1870 during the FRANCO-PRUSSIAN WAR and the surrender of Napoleon III. There was heavy fighting there during WWI, and in WWII it was the point of the initial breakthrough of German forces in the invasion of France. Industries: brewing, textiles, metal goods. Pop. 23,000.

Sedan chair, mode of transport common among the upper classes in 17th- and 18th-century Europe and the USA; it was probably introduced into England from Naples. It had poles projecting at each end, by which it was carried by animals or, more usually, two or four servants.

Sedative, drug used to reduce excitement, induce sleep or control convulsions. Sedatives are classified as BARBITURATES and non-barbiturates, the latter including bromides and chloral compounds.

Seddon, Richard John (1845-1906), New Zealand politician known as "King Dick". Emigrating from Britain to Australia and then New Zealand as a gold prospector, he became prominent in local politics and was Prime Minister from 1893 to 1906. He laid down the basis of the social welfare system and in 1893 New Zealand women became the first in the world to have the vote. See also p.1605.

Sedimentary rock, SEDIMENTARY ROCK formed at the place where the rock is found, rather than deposited from material brought from elsewhere. Reef limestone is an example.

Seder, meaning "order" in HEBREW, a religious meal held on the first night of PASS-OVER in Jewish homes and returned Jews in Israel, and on the first two nights outside Israel. The Haggadah is recited and the ancient temple service, based on the MISHNA, is commemorated.

Sedge, any of numerous species of grass-like perennial plants widely distributed in temperate, cold and tropical mountain regions, usually on wet ground or in water. Cultivated as ornamental plants, they have flat leaves and spikes of flowers. Family Cyperaceae; genus *Carex*.

Sedgfield, county district in E DURHAM, England; created in 1974 under the Local Government Act (1972). Area: 220sq km (85sq miles). Pop. (1974 est.) 90,400.

Sedgemoor, Battle of (1685), victory of the army of JAMES II of England over the Duke of Monmouth's forces. It took place on 6 July on the plain of Sedgemoor, near Bridgwater, Somerset. The royal army, led by the Earl of Feversham and Lord Churchill, destroyed Monmouth's army and ended his rebellion. See also MONMOUTH'S REBELLION.

Sedgwick, Adam, (1785-1873), British geologist. He was appointed professor of geology at Cambridge in 1818 and is famed for his work on the LOWER PALAEOZOIC rocks, and the CAMBRIAN PERIOD rocks which he named.

Sediment, in geology, a general term used to describe any material in suspension in air or water; the total load transported by a stream, including materials moved along its bed and those that are in solution as well as sediment in suspension; and any unconsolidated sand and gravel deposit in river valleys and along coastlines.

Sedimentary rock, rock formed of mineral or organic particles that have been moved by the action of water, wind or glacial ice (or have been chemically precipitated from solution) to a new location. Follow-

Secretary birds are long-legged like storks but have characteristic crests.

Security Council; the UN Security Council during one of its first sessions in 1946.

Sedan chairs; a caricature, published in 1796, ridiculing the fashions of that time.

Andrés Segovia, the classical guitarist, with his three-day-old son, Carlos, in 1970.

Sedition

ing a process of compaction and cementation the particles form strata of sedimentary rock.

Sedition, in English law, the misdemeanour of publishing orally ("seditious words") or in print ("seditious libel") anything with the object of exciting disaffection. The main Act is the Act of 1819.

Sedum, genus of succulent perennial plants that grow in dry areas throughout the world. They bear clusters of tiny yellow, pink or blue flowers. Among the numerous species are *Sedum acre*, the yellow STONECROP, with small triangular leaves and yellow star-shaped flowers. Height: to 38cm (15in). Family Crassulaceae.

See, word synonymous with DIOCESE, referring to the geographic area over which a bishop has ecclesiastical jurisdiction. Properly the official seat or throne of a bishop, it normally stands in the cathedral of the diocese.

Seebeck, Thomas Johann (1770–1831), German physicist, b. Russia, who discovered the SEEBECK EFFECT in 1821. His discovery was neglected for many years but is widely used today.

Seebeck effect, thermoelectric effect important in THERMOCOUPLES. If wires of two different metals are joined at their ends to form a circuit, a current flows if the junctions are maintained at different temperatures. It is the opposite effect to the Peltier effect.

Seed, part of a flowering plant that contains the embryo and food store. It is formed in the ovary by fertilization of the female GAMETE by sperm nuclei. The seed coating may be thin as in the GROUNDNUT or hard as in the Brazil nut. The embryo consists of hypocotyl, one or more cotyledons, a growing shoot and root. In some seeds, a nutrient tissue to endosperm, formed by the parent plant, surrounds the seed, as in cereals. In others, such as the bean, food is stored in the embryo itself. See also GERMINATION; pp.688, 706–707.

Seed drill. See TULL, JETHRO.

Seeler, Uwe (1936–), West German footballer. A stocky centre-forward and, later in his career, midfielder player, he won a record 72 caps for West Germany (1954–70) and had the distinction of scoring in four World Cups (1958–70).

Seferis, George (1900–71), pseud. of Georgios Seferiadis, Greek poet and diplomat. Educated in Paris, he had a distinguished diplomatic career and was Greek ambassador to Britain from 1957 to 1962. His volumes of lyrical poetry include *The Turning Point* (1931) and *Mythistorema* (1935). In 1963 he became the first Greek to be awarded the Nobel Prize in literature.

Sefton, county district in NW MERSEYSIDE, England; created in 1974 under the Local Government Act (1972). Area: 147sq km (57sq miles). Pop. (1974 est.) 307,200.

Seghers, Hercules Pietersz (c.1589–c.1638), Dutch landscape painter and etcher who usually painted mountain scenes. His conception of landscape was romantic and imaginative, but his rendering realistic and detailed. He had a great influence on early 17th-century Dutch painting.

Segonzac, André Dunoyer de (1884–1974), French engraver and painter. His work is essentially IMPRESSIONIST in style, although it does show some influence of CUBISM. From the 1920s he concentrated on engravings, of which he produced about 1,500, and book illustrations.

Ségou, town and port in s Mali on the River Niger. It was part of the Bambara Kingdom until 1861 when it was captured by a militant Muslim reformer, Al-haji Umar. Ségou was occupied by the French in 1890. It is now the market centre for the surrounding agricultural region producing cotton, cereals and peanuts. Pop. (latest est.) 30,000.

Segovia, Andrés (1893–), Spanish guitarist who successfully established the guitar as a concert instrument. He created many new techniques of GUITAR playing, adapting the instrument to the complex compositions of modern composers. His

transcriptions of early contrapuntal music for solo guitar have contributed to the resurgence of interest in the instrument. Composers such as Manuel de FALLA and Heitor VILLA-LOBOS wrote works specially for him.

Segrave, Sir Henry O'Neal de Hane (1896–1930), British motor-racing driver. The first Briton to win a grand prix (the French in 1923), he set a world land speed record of 245 km/h (152.33 mph) in 1926 and went on to raise the land speed record to 372.38 km/h (231.44 mph) in 1929 driving the *Golden Arrow*. He was killed while attempting a record of 193 km/h (120 mph) on Lake Windermere, having just set a new water speed record of 158.91 km/h (98.76 mph).

Segrè, Emilio Gino (1905–), us physicist, b. Italy, who shared the 1959 Nobel Prize in physics with Owen CHAMBERLAIN for the discovery of the antiproton. In 1937 Segrè discovered TECHNETIUM, the first element to be artificially produced, and in 1940 he helped to discover another element, ASTATINE. Paul DIRAC had predicted the existence of antiparticles in 1930 and in 1955 Segrè, in collaboration with Chamberlain, produced and identified antiprotons using a bevatron particle accelerator to bombard copper with high-energy protons. See also ANTIMATTER.

Segregation. See APARTHEID.

Seguidilla, formal Spanish folkdance performed with light, springing steps; also a verse form that was widely used in Spanish folk songs.

Seiber, Mátyás (1905–1960), British composer, b. Hungary. His works include three string quartets, piano music, songs and choral works, including the cantata *Ulysses* (1946–47). His early music shows the influence of Zoltan KODÁLY, with whom he studied. Jazz elements are evident in the inventive rhythms he employed, and he also experimented with the TWELVE-TONE technique of Arnold SCHOENBERG.

Seiche, in oceanography, tide-like rise and fall of water in lakes, semi-enclosed bays and harbours. Sudden changes in barometric pressure, tides or unusual winds can cause the water in such basins to oscillate and tilt back and forth. In harbours, seiches are also known as surges.

Seidler, Harry (1923–), Australian architect, b. Austria, who underwent his training at Harvard under Walter GROPUS. In 1948 he established a firm of architects in Australia. Among his works there which won him international acclaim is the 50-storey circular office block, Australia Square (1970) in Sydney.

Seine, river in n central France. It rises in Langres Plateau and flows NW through Paris to enter the English Channel near Le Havre. It is connected to the rivers Loire, Rhône, Meuse, Schelde, Saône, and Somme by canals. With its tributaries, the Aube, Marne, Oise, Yonne, Loing and Eure, the Seine drains the entire Paris Basin. The most important river of n France, it is navigable for ocean-going vessels as far as Rouen, 560km (350 miles) of its course. Length: 776km (482 miles).

Sei Shonagon (c.967–c.1013), Japanese poet and diarist. Residing in the court of the Empress Sadako from 991, she kept a diary from 991 to 1000 which is noted for its excellent style.

Seismic profile, continuous record of sound waves bounced off sea-bottom sediments. The sounds become SEISMIC WAVES and as such are used to determine the thickness and structure of bottom sediments. See also ECHO SOUNDER; p.483.

Seismic survey, use of SEISMIC WAVES produced by underground explosions to cause shock waves through the ground so that minerals (eg oil and coal) can be detected and their extent measured. The speed of the shock waves indicates the type of material they are passing through. See also GRAVITY SURVEY; p.416.

Seismic waves, shock waves produced by EARTHQUAKES. Their velocity (speed and direction) vary according to the material (type of rock, molten core or oil through

which they pass). Primary (P) and secondary (S) waves are transmitted by the solid Earth. P waves vibrate in the direction that they are advancing; S waves vibrate at right-angles to the direction in which they are advancing. Only P waves are transmitted through fluid (liquid or gas) zones. See also SEISMOLOGY; pp.202–203.

Seismograph, or seismometer, instrument for measuring and recording SEISMIC WAVES caused by movement (earthquake or explosion) in the Earth's crust. See also pp.202–203, 772.

Sekhmet, in Egyptian mythology, wife of PTAH and mother of NEFERTUM. She is depicted as a lioness or a woman with the head of a lioness.

Sekondi-Takoradi, seaport city in sw Ghana, on the Gulf of Guinea, 177km (110 miles) wsw of Accra; the capital of the Western Region. The two settlements, Sekondi and Takoradi, were amalgamated in 1946. The city has shipbuilding and railway maintenance industries. Pop. (1970) 89,686.

Selaginella, or spike moss, genus of small-leaved, moss-like plants found throughout the world. Two kinds of spores are borne in cones at the branch tips. Some of the plants grow on trees, others on the ground. Height: 7.6cm (3in). Family Selaginellaceae. There are more than 700 species. See also CLUB MOSS; p.364.

Selangor, state in Malaysia, on the s Malay Peninsula, bounded by the Strait of Malacca (s and w); Shah Alam is the state capital. It was made a British protectorate in 1874, became a member of the Federated States of Malaya in 1895, part of independent Malaya in 1957 and a state of Malaysia in 1963. Products include tin, rubber, rice, pine-apples, coal and oil palms. Area 8,159sq km (3,150sq miles). Pop. (1970) 1,629,386.

Selassie, Haile. See HAILE SELASSIE.

Selborne. See NATURAL HISTORY AND ANTIQUITIES OF SELBORNE.

Selden, John (1584–1654), English jurist and scholar. Elected to parliament in 1623 he supported parliamentary sovereignty and was co-author of the 1628 PETITION OF RIGHT. One of the most scholarly men of his time, he wrote on a wide range of subjects. A record of his conversations was published posthumously as *Table Talk* (1689).

Selective breeding, process by which stockbreeders and agriculturalists improve the strains of domesticated animals and cultivated plants; it involves selection and pairing of individuals with desirable qualities in the PHENOTYPE. Today a growing knowledge of GENETICS ensures more predictable results.

Selene, in Greek mythology, a moon goddess, daughter of the TITAN, HYPERION, and a more ancient deity than ARTEMIS or DIANA. Each night after bathing she dressed in gleaming robes and drove her chariot across the sky, as her brother, HELIOS, had done during the day.

Selenium, METALLOID element (symbol Se) of group VIA of the periodic table, discovered in 1817 by J. J. BERZELIUS. Its chief source is a by-product in the electrolytic refining of copper. The element is photoactive (its conductivity is proportional to the light shining on it) and is extensively used in PHOTOELECTRIC CELLS, SOLAR CELLS and XEROGRAPHY. Properties: at.no. 34; at.wt. 78.96; sp.gr. 4.79 (grey); m.p. 217°C (423°F); b.p. 684.9°C (1,233°F); most common isotope Se^{80} (49.82%).

Selenology, study of the moon's physical and chemical composition and formative processes. Current research reveals that the Moon greatly resembles the Earth in physico-chemical makeup. Its surface is composed mainly of volcanic basalts and evidence has been found suggesting that the moon was formed at a high temperature along with the other planets of the SOLAR SYSTEM. See also pp.674–675.

Seleucid Empire, HELLENISTIC kingdom stretching in its heyday from the E Mediterranean to India, set up by the Greek general Seleucus I in 312 BC, and eventually conquered by the Romans in 64 BC. The kingdom, which was centred on

Syria, lost most of its Anatolian territory as well as Parthia and Sogdiana in the 3rd century. The BACTRIANS gained their independence in c.250 BC. The kingdom was an important channel for spreading Greek culture through the Middle East.

Seleucus, name of two kings of Syria. Seleucus I (c.355–281 BC) was one of ALEXANDER THE GREAT's most valued generals. By 281 BC he had secured control of Babylonia, Syria and all of Asia Minor, but he was murdered before he could take the vacant throne of Macedonia. Seleucus II (d.226 BC) spent his reign fighting Ptolemy III of Egypt and Antiochus Hierax, eventually losing territory to both.

Self, the part of the person's mind that is sentient as an individual, that allows the person to think individually and not merely react. In Freudian psychology the self is comprised of three parts: id, ego and super-ego. His successors proposed more complex configurations. See also p.1844.

Self-denying Ordinance, resolution passed by the English LONG PARLIAMENT in April 1645 which required every member of parliament to relinquish within 40 days any military or civil office he might hold. It was put forward by CROMWELL in order to rid the command of the parliamentary army of peers and was provoked by the indecisive second Battle of Newbury (1644).

Self determination, movement of people of the same race or political or cultural consciousness to establish their own government. It is usually associated with NATIONALISM and was implemented by peace treaties following WWI. It is also recognized by the articles of the UN. See also pp.1664–1665.

Self-fulfilling prophecy, in social psychology, the unconscious tendencies of individuals to make their behaviour or situation conform to expected or desired outcomes.

Selridge, Harry Gordon (c.1864–1947) British businessman, born in the USA, the founder of Selridge's department store in London. He was a partner of Field, Leiter and Co., Chicago, before moving to Britain in 1906. The London store was opened in 1909, the first of its kind in Britain. Selridge remained in charge of the company until 1939.

Selim, name of three Ottoman sultans. Selim I (1470–1520) also called the Grim or Inexorable came to power in 1512, defeated the SAFAVID dynasty in Persia and destroyed MAMLUK rule in Syria and Egypt, so opening the agriculturally rich Nile region to the Empire. Selim II (1524–74) who ruled from 1566, fought Venice and Spain, losing the battle of LEPANTO in 1571. Although Ottoman rule was later restored in the Mediterranean, the sultan's personal power was curbed by the JANISSARIES. Selim III (1761–1808) who reigned from 1789 to 1807 passed the Nizam-i Cedid (New Order), a series of social and administrative reforms. These and a number of military changes provoked a revolt in which Selim was deposed and later killed.

Seljuk Turks, semi-nomadic tribesmen who conquered Khorasan in the first half of the 11th century. They entered Baghdad in 1055 and their leader, Toghril, was proclaimed sultan. His successor, ALP ARSLAN, defeated the Byzantines at Manzikert in 1071, opening the BYZANTINE EMPIRE to Seljuk invasion. This defeat was one of the causes of the CRUSADES. In the early 12th century the Seljuk empire began to disintegrate and the Seljuk states were conquered by MONGOLS in the 13th century. See also pp.1277, 1310, 1321.

Selkirk, Alexander. See ROBINSON CRUSOE. **Selkirk, Thomas Douglas, 5th Earl of** (1771–1820), Scottish colonizer. In 1803 he went to Canada and established a settlement on Prince Edward Island for emigrants from the Scottish Highlands. Taking control of the HUDSON'S BAY COMPANY in 1810, he founded the RED RIVER SETTLEMENT in 1812 in what became Manitoba. **Selkirk**, former county town of SELKIRK(SHIRE), in SE Scotland, on the Ettrick River 48 km (30 miles) SE of Edinburgh. Since 1975 it has been part of the Borders region. It is a market town and the principal industries are the manufac-

ture of woollens. Pop. (1974 est.) 5,600. **Selkirk Mountains**, range in SE British Columbia, Canada; extension of the Rocky Mts. They are crossed by the Canadian Pacific Railway; the highest peak is Mt Sir Sanford, rising to 3,535m (11,591ft). Length: 322km (200 miles). **Selkirk (shire)**, former county in SE Scotland; since 1975 it has been part of Borders region. Part of the southern uplands, the county is mostly hilly, and is drained chiefly by the rivers Ettrick and Yarrow. The rearing of sheep and cattle are the chief occupations. The chief industry is the manufacture of woollens. The region was annexed to Scotland c.1020 from the Saxon kingdom of Northumbria. The county town was Selkirk. Area: 694sq km (268sq miles).

Sellick, Phyllis Doreen (1911–), British pianist who studied at the ROYAL ACADEMY OF MUSIC and was appointed a professor at the ROYAL COLLEGE OF MUSIC in 1964. She gave many performances in Britain and abroad with her husband Cyril Smith in music for two pianos, including a work specially composed by VAUGHAN WILLIAMS, *Introduction and Fugue "For Phyllis and Cyril"* (1946).

Selwyn, George Augustus (1809–78), British missionary. He was the first bishop of New Zealand (1841) and was famous for his work among the MAORI. Selwyn College, Cambridge, is named after him.

Selye, Hans (1907–), Canadian physician. Known for his pioneer studies of the effects of stress on human and animal physiology, he outlined the "general adaptation syndrome", a series of stages the body undergoes when subjected to stress. His works include *The Stress of Life* (1956) and *Stress in Health and Disease* (1976). **Selznick, David Oliver** (1902–65), US film producer. He founded the independent Selznick International Pictures in 1936. His films included *A Star is Born* (1937), *Gone With the Wind* (1939) and *The Third Man* (1949). He also produced several films starring his wife, Jennifer Jones, including *Duel in the Sun* (1946). His final film was *A Farewell to Arms* (1957).

Semantics, study of words, their meanings and uses, and how they reflect reality. Semantics is a branch of both LINGUISTICS and of PHILOSOPHY in so far as it studies the connection between words and perceptions. See also p.1877.

Semaphore, device or technique that communicates messages visually, a type of optical telegraph. A railway semaphore signal consists of a vertical post on which is mounted a single projecting arm whose angle indicates "all clear" or "danger". In flag semaphore a signaller indicates letters and numerals by the position of his outstretched arms, emphasized with flags. See also pp.584, 606.

Semarang, port in N Java, Indonesia, on the Java Sea; capital of Central Java province. The city was occupied by the Dutch in 1748 and the Japanese during WWII. Exports include kapok, rubber, coffee, sugar and tobacco. Industries: fishing, shipbuilding, textiles. Pop. (1971) 646,590.

Semele, figure in Greek mythology who bore Dionysus to ZEUS. On Semele's request Zeus appeared in divine form, but the fire of his thunderbolts killed her. Zeus seized the unborn Dionysus from her ashes and placed him in his thigh, from which he was later born.

Semele (1744), secular oratorio by George Frederick HANDEL, with text adapted from a libretto by William CONGREVE. The oratorio, a finely proportioned example of Handel's music genius, contains the air *Where'er you walk*.

Semen, liquid ejaculated by the male at his climax of sexual intercourse; it contains sperm and the secretions of various accessory sexual glands. In man the volume of each ejaculate is about 3 to 6ml and contains about 200 to 300 million sperm. See also pp.164-165.

Semenov, Nikolai (1896–), Russian chemist. After studying at Leningrad he moved to Moscow State University. He shared the 1956 Nobel Prize in chemistry with C.N. HINSHELWOOD for his work on

branched chain reactions in combustion processes.

Semicircular canals, three parts of the inner ear which function as balance organs. They are tubular ducts which project in different planes and can detect, by the movement of a liquid within them, movement in any direction in space. See also pp.138-139.

Semi-conductivity, ability of a solid to carry electricity, at room temperature, more efficiently than an INSULATOR, but less efficiently than a CONDUCTOR. At higher temperatures the efficiency increases; at lower, it declines. Semi-conductivity is a function of the limited movement of ELECTRONS, determined by the CRYSTAL structure of the solid. There are two types of semi-conductor: N-type, in which the current is carried by negatively-charged electrons, and P-type, in which it is carried by positively-charged holes. See also pp.882-883.

Seminary, term applied to colleges for the training of priests of the Roman Catholic Church. They were introduced by the Council of TRENT and first established in Italy, largely through the inspiration of S. CHARLES BORROMEO.

Seminole Indians, North American tribe that separated from the main CREEK INDIAN group in the late 18th century and fled s into Florida under pressure of wars with the white settlers. Bitter conflict with the US Army in the 1800s virtually annihilated them and a treaty in 1842 removed most of the Seminole to territory west of the Mississippi. About 5,000 inhabited Florida and Oklahoma in the mid-1970s.

Semi-Pelagianism, 17th-century term describing doctrines on human nature current in the 5th and 6th centuries. According to these the first steps towards spiritual salvation should ordinarily be taken by man on his own initiative, afterwards aided by divine GRACE. See also PELAGIANISM.

Semipermeable membrane, thin sheet-like material that permits the passage of a solvent (such as water) but not larger dissolved substances (such as salt and sugar). The property of permeability depends on the molecular diameter of the dissolved substance and the nature of the membrane. Common membranes include thin palladium foil, pig's bladder, copper ferrocyanide (cyanoferrate) and the walls of plant and animal cells. See also OSMOSIS.

Semi-precious stones, minerals and other hard substances worn as jewellery other than the precious stones diamond, emerald, sapphire, pearl and ruby. They include the minerals garnet, turquoise, tourmaline, amethyst, topaz, opal, aquamarine and many others, and the non-minerals, jet, coral and amber.

Semiramis, Greek form of Sammu-ramat, queen of ancient ASSYRIA. Historically she was the wife of Shamshi-Adad V (r.823-811 BC) and queen-regent for her son Adad-nirari III (r.810-783 BC). In Assyrian mythology she was the daughter of the fish goddess, Atargatis, and the god of wisdom, Oannes. She is acclaimed as the builder of BABYLON.

Semites, peoples whose native tongue belongs to the SEMITIC LANGUAGES. They originally inhabited an area in Arabia and spoke a common language, Proto-Semitic, from which the Semitic languages descend. The migration of many Semites to Mesopotamia, the Mediterranean coast and the Nile Delta before 2500 BC led to the development of individual states whose inhabitants commonly traced their descent from Shem, Noah's eldest son. Among the modern Semites are Arabs, native Israelis and many Ethiopians.

Semitic languages, group of languages of peoples native to N Africa and the Near East that is one of the five branches of the Hamito-Semitic language family. They have quasi-alphabets in which only the consonants are written, with vowels indicated by marks above or below them. Semitic languages are divided into four groups, which contain the modern Hebrew, Arabic, Ethiopic and Assyrian languages.

Semmelweis, Ignaz Philipp (1818-65), Hungarian physician, probably the first to

recognize the importance of ANTISEPTICS in preventing infection. In 1847 he ordered doctors under him at the University of Vienna hospital to wash their hands in strong chemicals before touching a patient - with the immediate result of a dramatic decrease in the incidence of childbed fever. See also pp.1096-1097.

Semolina, meal obtained from the grinding of hard WHEAT, the main ingredient in SPAGHETTI, macaroni and other PASTA.

Sempervivum, genus of garden plants grown as ornamental SUCCULENTS, also called houseleeks. Species include perennial herbs and small shrubs having rosettes of fleshy leaves bearing, very occasionally, red flowers. Height: to 30cm (1ft). Family Crassulaceae.

Senancour, Étienne Pivert de (1770-1846), French writer. Although destined for the Church, he was influenced by the works of Jean-Jacques ROUSSEAU and took up writing. His most famous work was the epistolary novel *Obermann* (1804), which influenced the ROMANTICS.

Senate, Roman, governing body of the Roman republic, first convened during the monarchy as the king's council. By the 2nd century BC it controlled military, religious, financial, domestic and foreign policy. The senators were chosen for life by the CENSORS; they originally numbered 300, but were 600 under SULLA, 900 under CAESAR and 600 again under AUGUSTUS. Patriarch members had privileges of precedence over plebeian members; all enjoyed freedom of speech during the republic. The senate met in Rome to debate legislation; resolutions could be vetoed by the tribunes. After Sulla defeated MARIUS in 83 BC, the Senate was controlled by generals until Caesar defeated Pompey in 48 BC. During the Empire the senate's power was reduced to judicial functions and freedom of debate was lost. See also pp.1226-1227.

Senate of the United States of America, upper house of the US legislature. It is composed of two senators from each state, who are elected by the people and serve six-year terms. Senators are elected every other year, with about one third of the Senate elected at a time. There are usually 16 standing committees and committee chairmen retain their positions for as long as their party has a majority of the votes. The approval of a simple majority of the Senate is necessary for major presidential appointments and a two-thirds majority for treaties. The Senate can initiate legislation except on fiscal matters.

Sendai, city on NE Honshū, Japan; capital of Miyagi prefecture. It was the seat of the powerful daimyo of Date Masamune from the 17th to the 19th century. Today Sendai is the chief industrial and commercial centre of N Honshū. Tokoku Imperial University (1907) is in the city. Industries: textiles, wood products, brewing. Pop. (1974) 575,603.

Seneca the Elder, Lucius Annaeus (c.55 BC-c. AD 40), Roman rhetorician and writer. He lived most of his life in his native Spain. His *Controversiae* contain model arguments for legal cases and *Persuasiones* contains model orations.

Seneca, The Younger, Lucius Annaeus (c.4 BC-AD 65), Roman statesman and philosopher, b. Spain, the son of SENECA THE ELDER. Tutor to the young NERO, he was extremely influential in the first years of the emperor's reign. A stoic, he wrote many philosophical essays, including *De Clementia* on the duty of a ruler to be merciful. He also made nine adaptations of Greek tragedies, the best known of which is *Phaedra*. When his influence over Nero waned, he was compelled to commit suicide. See also p.1416.

Senefelder, Alois (1771-1834), Bavarian inventor who discovered the process of LITHOGRAPHY (1798) and in 1818 wrote a book *The Complete Course of Lithography*. See also pp.612, 613.

Senegal, republic in the extreme W of Africa. Formerly a French colony, it gained independence in 1960. The land is mostly low-lying and 75 per cent of the people are farmers. Ground nuts account for 80 per cent of exports. Fishing is an important industry and phosphates are

David O. Selznick with Jennifer Jones, after filming *A Farewell to Arms* (1957).

Semarang, a general view of the Javanese port, showing warehouses and barges.

Seminole Indians on a reservation at Musa Island, near Green Gables in Florida.

Seneca: an illustrated translation of his work. His plays greatly influenced drama.

Sénég

Senna; both its leaves and pods yield a syrup which may be used as a purgative.

Sense and Sensibility is one of the most gently satirical of Jane Austen's novels.

Serbia; chapel in Belgrade dedicated to the royalty but maintained by the Tito regime.

Serfdom; Russian nobles and serfs in 1861, when serfdom was abolished in Russia.

mined and exported. The capital is Dakar. Area: 197,161sq km (76,124sq miles). Pop. (1976 est.) 5,085,400. See also p.2133.

Sénég, river in Senegal formed by the confluence of the Bafing Falémé and Bakoye rivers. It rises near the Sierra Leone border, flows N then NW to form the Mauritanian-Senegal border, and empties into the Atlantic Ocean at St Louis. The Sénég irrigates a large rice-growing region. Length: approx. 1,633km (1,015 miles).

Senghor, Léopold Sédar (1906–), Senegalese politician and poet. He was President of the Federal Assembly in the Mali Federation of Senegal and the Sudan (1959–60) and was elected President in Senegal when his country became a republic in 1960.

Senility, serious decline in mental and physical abilities in old age. Symptoms in elderly people so afflicted include lack of attention, forgetfulness, delusions and incontinence.

Senlac, name given by Ordericus Vitalis in the 12th-century *Historia Ecclesiastica* to the site of the battle commonly known, since DOMESDAY BOOK, as the Battle of HASTINGS.

Senna, plants, shrubs and trees of the pea family native to warm and tropical regions; some species grow in temperate areas throughout the world. They have oblong, feathery leaves and yellow flowers. The dried leaflets yield a cathartic drug of the same name. Family Leguminosae; genus *Cassia*.

Sennacherib, King of Assyria (c. 704–681 BC), son and successor of SARGON II. He led expeditions to subdue Phoenicia, Palestine and Philistia in 701, and defeated the Elamite-Chaldean alliance in 691, after which he destroyed Babylon (689). With the peace of his empire thus assured he devoted himself to rebuilding NINEVEH. See also pp.1165, 1187–1188, 1189.

Sennett, Mack (1884–1960), US film director, producer and actor whose many short slap-stick comedies enlivened the age of silent films. Films made by his KEYSTONE company brought fame to Charlie CHAPLIN, Mabel Normand, Fatty ARBUCKLE and the Keystone Kops. See also pp.1682, 1683.

Sense and Sensibility, novel by Jane AUSTEN written in 1797 and published in 1811. It describes the characters and fortunes in love of two sisters, Elinor and Marianne Dashwood.

Sense receptors, in the body, minute organs situated at nerve endings to detect physical and chemical changes occurring inside the body and on or near its surface. Receptors in the SENSE organs detect external stimuli such as light, sound, touch and taste. Others, eg those in muscles, the ear and visceral organs, tell the brain how the body is positioned and how it moves.

Senses, means by which animals gain information about their environment and physiological condition. The five senses, SIGHT, HEARING, TASTE, SMELL and TOUCH, all rely on specialized RECEPTORS on or near the external surface of the body. Additionally, receptors within the body detect internal physical and chemical changes. See also pp.128, 134, 135, 136, 143, 151.

Sensory deprivation, in psychology, depriving someone of variation in sensory stimulation. Such deprivation can be achieved by confining volunteer subjects to small, soundproof rooms and having them wear gloves, goggles and ear muffs. Studies show that normal behaviour is highly dependent on variation in stimulation from the environment. See also p.135.

Sensory nerves, nerves that carry information from outside the body to the brain. Their nerve endings are in the SENSE organs, including the skin, and their fibres carry messages either directly to the brain or via the spinal cord.

Sentence, unit of language, defined grammatically as a string of words consisting of at least a subject noun explicit or understood and a verb. In written language sentences are delimited by capital letters and full stops.

Sentimental Journey, A (1768), episodic novel by Laurence STERNE. Published in two volumes, it is an expanded version of the seventh book of *Tristram Shandy*. Its full title is *A Sentimental Journey Through France and Italy by Mr Yorick* and it tells mainly of the hero's encounters with women. See also p.1478.

Seoul (Söul), capital of South Korea, on the Han River, 64km (40 miles) E of its port at Inch'on; capital of Kyönggi province. Founded in 1392, it became the capital of South Korea (1948) and the headquarters of US occupation forces. The city was occupied by North Korean troops at the beginning of the KOREAN WAR and suffered great damage. Industries: textiles, metallurgy, food processing, chemicals, agricultural machinery. Pop. (1975) 6,879,464.

Sepal, modified leaf which makes up the outermost portion, or CALYX, of the flower-parts of a plant. Although usually green and inconspicuous once the flower is open, in some species such as the orchid, the sepals look like the petals, whereas, in others, such as the anemone, they are absent.

Sepik, river in the N of the island of New Guinea, in Papua New Guinea. It rises in the Central Highlands and flows NW and then E to the Bismarck Sea. It drains a large area of central New Guinea. Length: approx. 1,127km (700 miles).

Sepoy, Indian soldier employed in a European army, especially a British one. The term derived from the Urdu word meaning a horseman. The INDIAN MUTINY of 1857–59 is sometimes called the Sepoy Mutiny.

Seppuku. See HARA-KIRI.

Sepsis, poisoning of the body by the presence of pathogenic bacteria or their toxins in the bloodstream and tissues. Local or widespread inflammation may occur, possibly followed by NECROSIS, death of the tissues. Treatment includes the use of ANTISEPTICS, ANTIBIOTICS or, in severe cases, surgery.

Sep-Szarzynski, Mikolaj (c. 1550–80), Polish poet whose works were collected and published posthumously as *Rymy abo wiersze polskie* in 1601. His style resembles that of the METAPHYSICAL poets and he wrote some of the best sonnets in early Polish literature.

Septennial Act (1716), act of the British parliament, introduced by the Whigs to put off the election due in 1718. It was meant to protect the Whig government against the danger of riots at elections by raising the maximum term of a parliament's life from three years to seven. It lasted until 1911, when the maximum term was reduced to five years.

Septicaemia, generalized bacterial infection in which BACTERIA, usually STAPHYLOCOCCUS, STREPTOCOCCUS or PNEUMOCOCCUS, multiply in the bloodstream. They may enter from a wound or from an infection within the body.

Septic tank, unit for sewage disposal, usually in rural residences not connected to sewers. It is buried in the ground and is watertight and airtight. ANAEROBIC bacteria in the sewage decompose solids to form a sludge which should be pumped out every 3–6 months, although tanks can function for several years before being emptied. See also pp.544–545.

Septuagesima, in the Christian Church, the third Sunday before LENT, the ninth before EASTER. The Roman Catholic Church suppressed the term in 1969 but the name is still used in the Church of England.

Septuagint (3rd–2nd century BC), Greek translation of the Hebrew OLD TESTAMENT, written for the Greek-speaking Jewish community in Egypt. It is the oldest Greek translation of the BIBLE. The Septuagint contains the entire Jewish CANON plus the APOCRYPHA. It is divided into four sections: the law, history, poetry and prophets. The books of the APOCRYPHA are inserted throughout where suitable. The Septuagint is still used by the GREEK ORTHODOX CHURCH.

Sequence, numbers or terms in an organized list, eg the set of counting numbers, 1, 2, 3, 4, ... Sequences may be finite (having

a limited number of terms) or infinite, like the counting numbers. Infinite sequences may be divergent, with the values of the terms increasing indefinitely, or convergent, tending to a limiting value. Sequences are sometimes called progressions. See also ARITHMETIC PROGRESSION, GEOMETRIC PROGRESSION, HARMONIC PROGRESSION; p.788.

Sequoia, two species of mammoth evergreen trees native to California and Oregon. They are the giant sequoia or big tree (*Sequoia gigantea*) and the redwood (*Sequoia sempervirens*). The size and scarcity of these trees have made them a natural wonder of the USA. Height: more than 90m (300ft). Family Taxodiaceae. See also pp.350, 366.

Sequoya (c.1760–1843), scholar of the CHEROKEE tribe of American Indians who reduced the CHEROKEE language to writing with an alphabet of 86 characters. He completed his task c.1821 after 12 years work.

Seraglio, The, or The Abduction from the Seraglio, opera in 3 acts by MOZART. The text is by Gottlob Stephanie, from an adapted libretto. First produced in Vienna in 1782, the story tells of the rescue of Constanze by her lover Pedrillo from the clutches of Pasha Osman.

Seraphim, heavenly beings described in the OLD TESTAMENT as having human form but six wings (Isaiah 6:2–6). Although this is the only mention of them in the BIBLE, the Seraphim became high-ranking angels in Jewish and Christian theology.

Serapias, genus of flowering plants, including about ten species of ORCHIDS of the Mediterranean region. All species have bulb-like flowers formed by the fusion of two sepals and one petal with a long triangular lip. The leaves are lance-shaped. Height: approx. 30cm (12in). Family Orchidaceae.

Serbia, constituent republic in E Yugoslavia; Belgrade is the capital. The region is mountainous in the S and W; the NE is part of the fertile plain drained by the River Danube. Wheat, corn, flax, sugar-beet and fruits are grown, and mining is an important industry. The area was settled by Serbs in the 7th century AD and came under Turkish rule in the mid-15th century. After the Russo-Turkish war (1877–78) Serbia became an independent kingdom but continued to be the focus of expansionist policies of the Great Powers in the Balkans. The assassination of the Austrian Archduke Ferdinand by a Serbian nationalist precipitated WWI. After the war the Kingdom of Serbs, Croats and Slovenes was created; its name was changed to Yugoslavia in 1929. Serbia became a constituent republic in 1940. Area: 88,357sq km (34,115sq miles). Pop. (1971 est.) 8,436,547. See also pp.1560, 1561, 1665, 1664–1665, 1666–1668, 1667, 1670.

Serbo-Croatian, principal language of YUGOSLAVIA. It is spoken by more than 15 million people in Yugoslavia, being the native tongue in the republics of Croatia, Serbia, Montenegro and Bosnia-Herzegovina and a second language in Slovenia and Macedonia.

Serbs, Slavic people who settled in the Balkans in the 7th century and who became Christians in the 9th century. They were distinguished from CROATS and SLOVENES by their use of the Cyrillic, not the Roman, alphabet. Most of them now live in Yugoslavia.

Seremban, city in W Malaysia, on the S Malay Peninsula, on the Linggi River; capital of Negeri Sembilan state. Linked by rail to Port Dickson on the Strait of Malacca, Seremban is a trade centre for the rubber-growing region. Tin is mined nearby. Pop. (1970) 79,915.

Serenade, in music, traditionally an "evening song" of love or courtship, sung in the open air. An instrumental serenade, from the late 18th century onwards, is in a number of short movements.

Serfdom, labour system, chiefly of medieval Europe, by which agricultural labourers were bound to their landlords by obligatory ties of service. Such men were distinguished from slaves by their rights to possession of their land and by certain feu-

dal rights owed to them by the lord. In England serfs were generally called **VILLEINS**. Serfdom disappeared in England by the end of the 15th century, and in Europe generally by the end of the 18th century. It was abolished in Russia in 1861.

Sergius, name of four Popes. **Sergius I** (r.687-701), elected despite opposition from the archpriest **THEODORE**, introduced the **Agnus Dei** into the mass and improved political relations with the **FRANKS**. **Sergius II** (r.844-87) was supported by the Roman nobility and became the first Pope to practise nepotism by appointing his brother a bishop. **SIMONY** was prevalent during his reign. **Sergius III** (r.904-11) was said to have murdered two predecessors and was a supporter of Pope **STEPHEN VI**. **Sergius IV** (r.1009-12) was the first Pope to call for a crusade.

Sergè, Emilio Gino (1905-), us physicist, b. Italy. He shared the 1959 Nobel Prize in physics with **Owen Chamberlain** for discovering the anti-particle of the **PROTON**, called the anti-proton. They achieved this by bombarding copper atoms with high-energy protons in a particle **ACCELERATOR**. **Sergè** also discovered two new elements, **TECHNETIUM** and **ASTATINE**, by **NEUTRON** bombardment of **MOLYBDENUM** and **BISMUTH** respectively.

Serial music, technique of musical composition, also known as note-row music, which structures a work on a serial pattern of notes repeated for the duration of the work. The twelve-note system of **Arnold Schoenberg** is the most common form of serial music, although it is only in its most literal application that the notes are heard as a definite repeating entity.

Series, mathematical expression obtained by adding the terms of a **SEQUENCE**. Thus, the series $1 + 4 + 9 + 16 + \dots$ is formed from the sequence 1, 4, 9, 16, ... Series may be finite or infinite and infinite series may converge or diverge. A series formed from increasing powers of a variable is a power series; convergent power series are used for representing many functions. See also p.788.

Serjeants-at-arms, royal officers in Britain who attend the monarch, two of whom, however, are deputed to attend on the two Houses of Parliament.

Serjeants-at-law, members of the highest order of counsel at the English bar, now an obsolete, although not abolished, order. The office was introduced into England by **WILLIAM I**. Until the Judicature Act of 1873 judges of the **QUEEN'S BENCH** and of **Common Pleas** were serjeants. They had their own inn until their society was dissolved in 1877.

Serkin, Rudolf (1903-), us pianist, b. Bohemia, who studied with **Arnold Schoenberg**. In the early 1920s he gave sonata recitals with **Adolf Busch**, and he went to the USA in 1939. He has become famous for his performances of the works of **BEETHOVEN** and **MOZART**.

Serlio, Sebastiano (1475-1554), Italian architect who settled in France (1540). His masterpiece, the **Grand Ferrare**, at Fontainebleau (1544-46), established the standard for the French **hôtel**, or town house, for more than a century. His *L'Architettura* (1537-1551), the first practical rather than theoretical book on architecture, coded the five **ORDERS**, diffused the style of **BRAMANTE** and **RAFAEL**, and gave a vast range of motifs.

Sermon on the Mount, a discourse spoken by **JESUS CHRIST** to his disciples and others in the hills of **GALILEE**. Delivered early in His ministry, it is recorded in the Gospel of **MATTHEW**. Beginning with the **BEATITUDES**, the Sermon continues with a discussion of social responsibility and sets out the principles of the Christian ethic. See also p.1588.

Serotonin, 5-hydroxytryptamine, a chemical found in cells of the gastrointestinal tract, in blood platelets and in brain tissue. In the latter it is concentrated in the mid-brain and **HYPOTHALAMUS**. It is a vasoconstrictor and has an important role in the functioning of the nervous system.

Serov, Valentin (1865-1911), Russian painter and theatrical designer. A well-known portrait and landscape artist, Serov was a member of the **WORLD OF ART** move-

ment. Among his many portraits is one of **Rimsky-Korsakov**.

Serowe, town in central Botswana, s. Africa, 258km (160 miles) NNE of the capital Gaborone. It is a trade centre for a fertile farming region. Serowe is the seat of the **Bamangwato** tribe. Pop. 34,186.

Serpens, or the **Serpent**, extensive equatorial constellation situated between **Libra** and **Hercules** and divided into two parts, **Serpens Cauda** and **Serpens Caput**, by **Ophiuchus**, the **Serpent-bearer**. **Serpens Caput** contains the bright globular cluster **M5** (NGC 5904), and **Serpens Cauda** includes **M16** (NGC 6611), an open cluster shining through surrounding nebulosity. The brightest star is **Alpha Serpentis** (Unukalhai).

Serpent. See **SNAKE**.

Serpent, in music, now obsolete bass wind instrument with a cup mouthpiece resembling that of a trumpet. It was almost always made of wood and had a characteristic undulating serpent-like shape.

Serpent, in religious symbolism, a subtle treacherous and dangerous creature. In the Bible, the tribe of **DAN** (Gen 49:17) and the **SCRIBES** and **PHARISEES** (Matt 23:33) are likened to serpents and the symbol is used throughout both the Old and New Testament to evoke wickedness and slyness. The serpent's most memorable appearance is in Gen 3, where it symbolizes the temptation to disobedience of **Adam** and **Eve**. See also **DRAGON**.

Serpentine, group of sheet silicate minerals with a pattern of green mottling like a snake's skin; hydrated magnesium silicate. They are of varied hues and are commonly used in decorative carving; fibrous varieties are used in asbestos cloth. Hardness 2-5; s.g. 2.2.

Serpent star. See **BRITTLE STAR**.

Serra, name of two Spanish painters, the brothers **Jaime** (fl.c.1361-c.99) and **Pedro** (c.1343-c.1405). Influenced by the **SIENNESE SCHOOL**, they painted religious subjects in a decorative manner; the altar piece (1394) in **Manresa Cathedral**, Catalonia, is a fine example of their work.

Serum, liquid that remains if whole blood is allowed to clot, and the clot removed; essentially the same composition as **PLASMA**, but without **fibrinogen** and clotting factors. See also pp.152-153.

Sérusier, Paul (1865-1927), French painter of the post-Impressionist style. He was influenced by **GAUGUIN** and was a founder of the **NABIS**. His approach to art was highly methodical and he expressed his theories in *ABC de la peinture* (1927).

Servetus, Michael (c.1511-53), Spanish physician and theologian. He practised medicine in France and was said to have discovered that blood is circulated from the right chamber of the heart to the lungs. Forced to flee from the Inquisition because of his religious beliefs, he was arrested as a heretic and burnt by Calvinists in Geneva. See also p.1403.

Service, Robert William (1874-1958), Canadian writer, b. Britain. He went to Canada in 1894 and worked for a bank in **British Columbia** and **The Yukon** where his rollicking ballads of the **Klondike** gold-miners, such as *Songs of A Sourdough* (1907), which included "The Shooting of **Dan McGrew**", were popular.

Service tree, European tree of the **ROSE** family, (**Rosaceae**), native to the Mediterranean region and cultivated for its acid-flavoured fruit. It resembles the **MOUNTAIN ASH**. Height: 9-15m (30-50ft). Species *Sorbus domestica*.

Servomechanism, device that provides remote control by converting an input signal (eg a radio impulse or mechanical movement) into a mechanical output (eg a lever movement or amplified hydraulic force) to activate a mechanism. It usually forms part of a control system. Some servomechanism, such as the automatic pilot of an aircraft, incorporate a feedback mechanism that makes it independent of human control. See also pp.464-465.

Servranckx, Victor (1897-1965), Belgian artist. He worked within many of the styles of the early 20th century, including **FUTURISM** and **PURISM**, and he was one of the first Belgian abstract painters. He was also an influential industrial designer.

Sesame, tropical plant native to Asia and Africa. It is also cultivated in Mexico and SW USA for its oil and seeds, both used in cooking. An annual, it has oval leaves, small pink or white flowers, and seed capsules along the stem. Height: 61cm (2ft). Family **Pedaliaceae**; species *Sesamum indicum*. See also pp.706, 707.

Sesshū (1420-1506), Japanese artist of the **Muromachi** period who is best known for his intense brushdrawings in ink (**Sumi-e**). His best works were painted from 1469, after a journey to China, and showed a strong mixture of Chinese motifs executed with Japanese sensitivity.

Session, Court of. See **COURT OF SESSION**. **Sessions, Roger Huntingdon** (1896-), us composer whose complex and highly individual works include a *Violin Concerto* (1935), eight symphonies, *Concertino for Chamber Orchestra* (1972) and various piano and organ works.

Seth, in the Bible, son of **ADAM** and **EVE**, thought by **Eve** to be recompense from **God** for the death of **ABEL**. According to the **NEW TESTAMENT**, Seth is an ancestor of **JESUS CHRIST**.

Seth, Egyptian god. Although a beneficent god in predynastic Egypt, Seth became associated with darkness and was later identified as a god of evil. See also pp.1506, 1901.

Sétif, city in NE Algeria; the capital of Sétif province. The city was largely built by the French on the site of the ancient Roman town of **Stifis**. Sétif is the trade centre for a region producing cereals and zinc. Textile manufacture is an important industry. Pop. (1966) 98,000.

Seton, Ernest Thompson (1860-1946), us writer and naturalist, b. Britain, who spent many years in the prairies of Manitoba. The knowledge he gained there formed the basis of his stories and work as an illustrator of wild animals. Many of his stories were collected in his best-known book *Wild Animals I Have Known* (1898).

Setter, long-haired hunting dog used to locate game and stand on point until the hunter arrives; it also retrieves on command. Setters have good scenting powers and endurance. They were developed in 16th-century England, and modern types include **English**, **Irish** and **Gordon**.

Set theory, branch of mathematics developed by **Georg Cantor** in the late 19th century. It is based on **George Boole's** work on mathematical logic, but manipulates sets of abstract or real objects rather than logical propositions. It is concerned with the properties of sets, the relations between them and operations on them, and can be applied to most of the other branches of mathematics. See also pp.1172-1173.

Settlement, Act of (1701), statute regulating the succession and defining the rights of the English monarchy. It provided that, if **WILLIAM III** and the future **Queen Anne** died without heirs, the crown would pass to **James I's** granddaughter, **Sophia of Hanover**, or her heirs if they were Protestants. It led to **Hanoverian** succession to the throne in 1714; it also restricted the rights of the Crown to appoint foreigners, and allowed the monarch to leave the country only with the consent of Parliament. See also p.1462.

Seurat, Georges Pierre (1859-91), French painter and founder of **NEO-IMPRESSIONISM**. During 1876-84 he developed his theories of colour vision based on the juxtaposition of dots which became known as **Pointillism**. His works include *Bathing at Asnières* (1883-84), of iridescent brilliance, and *Sunday in Summer on the Island of La Grande-Jatte* (1886), which shows the developed pointillist technique.

Sévastopol. See **SEBASTOPOL**.

Seven, The. See **EFTA**.

Seven against Thebes, in Greek mythology, the legend of the battle brought about by the sons of **OEDIPUS**. When **Oedipus** was banished, his sons **Eteocles** and **Polynices** agreed to share the throne of Thebes, ruling in alternate years. **Eteocles** reneged, causing **Polynices** to raise an army with seven chieftains against him. The sons met in single combat and killed each other.

Sergius IV was nicknamed "Pig-mouth" before he succeeded John XVIII as pope.

Sebastiano Serlio and Vignola designed the extensions to Fontainebleau.

Sermon on the Mount: is, for Christians, the distillation of Christ's teachings.

Georges Seurat's paintings influenced the Fauves and the Futurists.

Seven Bishops, The

Seven Wonders of the World; an artist's impression of the Colossus of Rhodes.

Seven Hills of Rome, site of ROME since its foundation. The hills are the Palatine (central site of the earliest settlement and later of sumptuous houses, palaces and temples); to the NW the Capitoline (settled c.6th century BC, it became the ancient city's religious centre and was the site of the great temple of Jupiter); and, in a curve to the E and S, the Quirinal, Viminal, Esquiline, Caelian, and Aventine. See also p.1224.

Seven Lamps of Architecture, The (1849), treatise by John RUSKIN that deals with the guiding principles of architecture (sacrifice, truth, power, beauty, life, memory, and obedience) and advocating Gothic architecture in particular as displaying these virtues.

Sevenoaks, county district in W KENT, England; created in 1974 under the Local Government Act (1972). Area: 371sq km (143sq miles). Pop. (1979 est.) 108,600.

Seven Pillars of Wisdom (1926), book by T.E. LAWRENCE. It is an account of the campaign against the Turks in the Arabian Peninsula during WWI, in which he became known as Lawrence of Arabia. The book is important as a work of military history and as the self-portrait of a complex personality.

Seven Samurai, The (1954), Japanese film directed by Akira KUROSAWA. It is based on the 16th-century legend of seven SAMURAI warriors who aid a small village under constant attack by bandits.

Seventh-Day Adventists, Christian denomination whose members expect JESUS CHRIST to return to earth in person. They hold the SABBATH on Saturday, the seventh day, and accept the BIBLE literally as their guide for living. The sect was formally organized in 1863 and today, it is the largest ADVENTIST denomination. See also p.1790.

Seven Wonders of the World, group of sights listed as wonderful by ANTIPOPER of Sidon in the 2nd century BC. They were the PYRAMIDS of Egypt, the COLOSSUS of RHODES, the PHAROS at Alexandria, the temple of ARTEMIS at Ephesus, the MAUSOLEUM at Halicarnassus, the Hanging Gardens of BABYLON and the statue of ZEUS by PHIDIAS at Olympia.

Seven Years War (1756-63), major conflict between Britain and Prussia on the one side and France, Austria, Russia and Sweden on the other. It was fought at sea and on land, in Europe, America, the West Indies and India. It began on 15 May 1756, when Britain declared war on France after France's attack on Minorca. It ended in the signing of the Peace of Paris and the Treaty of Hubertusburg in 1763. The principal results of the war were the supremacy of Britain in India and North America, and the emergence of Prussian power in Europe. See also pp.1492, 1493, 1539.

Severini, Gino (1883-1966), Italian painter who, influenced by CUBISM, was instrumental in developing the style of FUTURIST painting. His later work became more objective, and he did many murals and mosaics. See also p.1657.

Severinus, pope (d.640). A Roman, he was elected successor of Pope HONORIUS in 638, but Emperor HERACLIUS refused confirmation of his election. He was finally consecrated in 640 and died soon after.

Severn, river in NW Ontario, Canada. It rises in the Finger Lake region and flows NE through the Severn Lake into Hudson Bay. The Hudson's Bay Co. established a trading post at the river's mouth in 1685. Length: 982km (610 miles).

Severn, major river in W England. It rises on Mt Plynlimon, in W Wales, flows NE to Shrewsbury, curves SE and then SW to enter the Bristol Channel through a wide estuary. Major tributaries include the rivers Vyrnwy, Teme, Stour and Wye. The

Severn is connected by canal to the rivers Thames, Mersey and Trent. A railway tunnel passes under the estuary. Length (river): 290km (180 miles).

Severus, Lucius Septimius (AD146-211), Roman emperor. He assumed the throne in 193 and went to Britain in 208. He divided the country into two provinces, with York as the northern capital and London as the southern one. He marched on Scotland, but was forced to retreat and died at York. See also p.1246.

Séguin, Marie, Marquise de (1626-96), French letter-writer. She wrote more than 1,500 letters, mostly to her daughter on personal, social and literary matters. They are distinguished by their elegance of style and acute observation.

Seville, port in SW Spain, on the River Guadalquivir 543km (337 miles) SW of Madrid; capital of Sevilla province. Ruled by the Romans from the 2nd century BC to the 5th century AD, it was taken by the Moors in 712. In 1248 Ferdinand III conquered Seville. The city has a 15th-century cathedral, which contains the tomb of Christopher COLUMBUS and paintings by Goya and El Greco, and the 12th-century Alcázar palace. Seville oranges are widely used for making marmalade. Industries: agricultural machinery, shipbuilding, chemicals, textiles, shipping. Pop. (1974) 588,784.

Sèvres, in ceramics, high-quality porcelain made from 1765 to the present day at the factory at Sèvres, near Versailles, France. As the MEISSEN factory ceased to hold premier position, Sèvres surpassed it in the production of high-quality European porcelain. Pieces are either of soft-paste (a porcellaneous substance) or hard-paste (true porcelain) and include glazed and unglazed figurines and various vessels.

Sèvres, Treaty of (1920), peace treaty after WWI signed by Turkey and the Allied powers (except the USSR and the USA). It virtually ended the Ottoman empire and Turkish sovereignty in Europe. It was superseded by the Treaty of LAUSANNE (1923).

Sewage disposal, treatment of human waste to render it biologically and ecologically safe before dumping. At a typical sewage plant, incoming sewage is screened free from stones and other hard materials. Heavy sludge is settled off and removed to closed digester vessels in which bacteria break it down to a relatively inoffensive material that can be used as a fertiliser. Liquid sewage passes on to trickle filters or activated sludge tanks, in either of which it is purified by the combined digestive action of bacteria and protozoa; chemical treatment may also be used. Further settling tanks remove the inactive humus materials, after which the remaining water is fully purified and can be reused. See also pp.544-545.

Sewell, Anna (1820-78), British writer. She wrote prose, verse and children's stories, of which the best-known is *Black Beauty*, the *Autobiography of a Horse* (1877).

Sewing machine, machine used to join fabrics by interlocking two threads to form stitches. Industrial sewing machines operate at high speeds and are usually specialized, i.e. they produce only one type of stitch. Modern domestic sewing machines can make various types of stitches, including lock stitch, chain stitch and an assortment of zig-zag stitches used for finishing and embroidery, and can also sew buttons and button-holes. See also p.602.

Sex, classification of an organism according to specific qualities and denoting the reproductive function of the organism. There are two divisions of the classification, male and female. The two sexes have fundamental physiological, functional and behavioural differences which distinguish them. In animals the sex glands, OVARIES in the female, TESTES in the male, are primary sexual characteristics. Secondary sexual characteristics such as size, coloration and, in human beings, the development of the breasts and the growth of facial and body hair, are governed by the secretion of SEX HORMONES. See also SEX DETERMINATION; SEXUAL REPRODUCTION.

Sexagesima (from the Latin for "sixtieth"), the Sunday of the week in which the sixtieth day before Easter falls. No longer celebrated as a feast, it is followed by QUINAGESIMA and QUADRAGESIMA Sundays.

Sex determination, finding the gender of an organism. Its sex depends on the combination of CHROMOSOMES. There are two types of sex chromosomes, the X type and the Y type. All female eggs have one X chromosome, whereas male sperm has either an X or a Y. If the sperm that fertilizes the egg has an X chromosome, the resulting zygote and the organism that develops from it will be XX, or female. If the egg is fertilized with a Y-carrying sperm, the zygote will be XY, or male. See also p.178.

Sex hormones, chemical "messengers" secreted by ENDOCRINE glands and carried by the blood, which regulate sexual activity in male and female animals, including the body changes occurring at PUBERTY and during PREGNANCY. In males they include TESTOSTERONE, made by the TESTES, the production of which is itself controlled by a hormone made by the PITUITARY GLAND. In females, the sex hormones OESTROGENS and PROGESTERONE are made by the ovaries, the general development of which is regulated by two further hormones secreted by the pituitary gland. See also pp.154-155, 1134, 1134.

Sexism, discrimination against and subordination of people on the basis of their sex. Sexism may result from prejudice, stereotyping or social pressure. See also WOMEN'S LIBERATION ORGANISATION.

Sextant, navigational instrument used to establish latitude (distance north or south of the equator) by determining the angle between the horizon and the Sun or a star. It consists of an arc, marked in degrees, a movable arm with a mirror pivoted at the centre, and a telescope mounted to the framework. See also p.450.

Sexton, Anne (1928-74), US poet. Her poetry relates intimate personal experience, and her works include *To Bedlam and Part Way Back* (1960), a record of her recovery from a nervous breakdown, and *Live or Die* (1966), for which she won a Pulitzer Prize.

Sexual Behavior in the Human Male (1948), pioneering statistical study of sexual behaviour carried out by Alfred KINSEY in the USA. Although its findings were criticized for the methods used it was frequently quoted by other authors in this field. The study was paralleled by *Sexual Behavior in the Human Female* (1953); together these works are often referred to as the Kinsey Reports.

Sexual reproduction, biological process by which living organisms generate others of their own kind. It occurs in different forms throughout the plant and animal kingdoms from PROTOZOA to vertebrates, and involves the exchange of genetic material. This process gives rise to variations of the PHENOTYPE and GENOTYPE within a species. GAMETES (haploid cells), produced by MEIOSIS, are daughter CELLS which contain only half the number of CHROMOSOMES of their parent cells (which are diploid). At fertilization the gametes, generally one from each parent, fuse to form a ZYGOTE with the full complement of chromosomes. The zygote divides repeatedly and the cells differentiate to give rise to an embryo and, finally, a fully formed organism. ASEQUAL REPRODUCTION occurs in many plants and in most lower animals from protozoa to hydra. The type of cell division, called MITOSIS, gives rise to new individuals that are identical to the "parent" organisms. See also pp.6-7, 76-77, 164-165, 382-383, 670-675.

Seychelles, independent island republic in the Indian Ocean, approx. 970km (600 miles) N of Madagascar. It is made up of 85 small islands, the largest of which is Mahé. Formerly a British colony, the Seychelles gained independence in 1976. The main products are copra, cinnamon, tea and fish; tourism is of increasing importance to the economy. The capital is Victoria, on Mahé. Area: 269sq km (105sq miles). Pop. (1976 est.) 60,000 See also p.2133.

Seyfert galaxy, type of SPIRAL GALAXY that

Sewage disposal uses a system of pipes from homes to the treatment plant.

has a small, extremely bright nucleus and tightly wound arms. The nucleus is almost stellar in appearance and is believed to be made up of clouds of hot gas moving with velocities in the region of 5,000km (3,000 miles) per second. Many of these objects, first discovered by the US astronomer Carl Seyfert in 1943, are radio sources. *See also* p.1000.

Seymour, James (1702–52), English painter. With John WOOTTON he was a pioneer of sporting art in England and mostly painted hunting and racing pictures and portraits of horses.

Seymour, Jane (c.1509–37), queen of England and the third wife of HENRY VIII, whom she married in 1536. She died in 1537 after the birth of her son, the future EDWARD VI.

Seymour, Thomas, 1st Lord Seymour of Sudeley (c.1508–1549), brother of Jane SEYMOUR and second husband of HENRY VIII's widow, Catherine PARR. His desire to marry the princess Elizabeth (later ELIZABETH I) led to his execution for treason.

Sezession Group. *See* VIENNA SEZESSION.

Sfax (Safagis), seaport city in E Tunisia, on the N shore of the Gulf of Gabès. It was once a Barbary pirate stronghold and is now a trade and industrial centre, exporting phosphates and olive oil. Pop. (1966) 70,472.

Sforza family, Italian dynasty that ruled Milan from 1450 until 1535. Muzio Attendolo (1369–1424) became a *condottiere*, the leader of a strong group of mercenaries that fought for Milan, Florence, Ferrara and Naples. He adopted his nickname "Sforza", which he passed on to his descendants. The first Sforza Duke of Milan was Muzio's son Francesco (1401–1466), who ruled from 1450 until his death. He was one of Italy's most powerful *condottieri*. He subsequently played an important role in Italian politics. Ludovico (1452–1508) was the second son of Francesco and one of the most noted of the Renaissance princes. His ruthless drive for power gave him effective rule in Milan by 1480. He was, however, deposed by Louis XII of France in 1499 and it was not until 1512 that another Sforza – Massimiliano, the son of "il Moro" – was Duke of Milan. He was ousted in 1515 and his brother Francesco Maria was restored by the Emperor Charles V in 1522. On Francesco Maria's death the duchy passed to Charles and the HAPSBURGs.

Sgraffito, in art, the deliberate scratching away of an upper layer of paint, glass or GLAZE to reveal the one beneath. The technique has been used in paintings executed in such mediums as gold leaf, oil paint and TEMPERA; in STAINED GLASS, where a superficial layer of coloured glass may be scratched away; in pottery, before firing, where a layer of coloured or white SLIP (clay or water) is scratched away to reveal a colour that had previously been applied.

's **Gravenhage.** *See* HAGUE, THE.

Shaba. *See* KATANGA.

Shackleton, Sir Ernest Henry (1874–1922), British antarctic explorer, who was a member of Robert SCOTT's first expedition from 1901–1904. From 1907 to 1909 he led his own expedition, getting within 155km (97 miles) of the south pole. He led another expedition from 1914 to 1916 to the Ross Sea, but his ship was crushed close to Elephant Island. From there he and a few companions crossed to South Georgia island where he received aid.

Shad, saltwater food fish of the HERRING family that swims upriver to spawn. Shads are prized for their roe. Deep-bodied, they have a notch in the upper jaw for the tip of the lower jaw. Length: to 75cm (30in). Family Clupeidae.

Shadbolt, Jack Leonard (1909–), Canadian painter b. Britain. He studied in England with VICTOR PASMORE and Sir William COLDSTREAM. His paintings, which show a variety of influences, are inspired by the countryside of British Columbia.

Shadbolt, Maurice (1932–), New Zealand novelist. He has published *The New Zealanders* (1959) and *Strangers and Journeys* (1972), both collections of short stories, and the novels *Among the Cinders*

(1965) and *Danger Zone* (1975).

Shadow, area screened from a light source and thus in relative darkness. In two dimensions it is perceived as an exact representation of the obstruction to the light source, although it can differ very much in size (greater or smaller) depending on the proximity of the light source to the screening object. Sometimes the outline of the shadow is blurred, there is an area of mid-shadow (penumbra) outside the shadow itself (umbra).

Shadow play, type of PUPPET THEATRE originating in E Asia in which flat, jointed puppets, often made of leather, are manipulated by rods or wires between a strong light source and a translucent screen on which their shadows are cast. In 19th-century Britain, the shadow play (or galanty) found popularity in London streets and at fairs.

Shadrach, in the BIBLE, DANIEL's companion who, with Meshach and Abed-nego, was saved by an angel when thrown into the fiery furnace by NEBUCHADNEZZAR for refusing to worship an idol.

Shadwell, Thomas (c.1642–92), English dramatist who was influenced by Ben JONSON's comedy of humours. His many plays include *The Sullen Lovers* (1668), *Epsom Wells* (1672) and *Bury Fair* (1689). He is remembered as DRYDEN's great rival and he succeeded Dryden as poet laureate in 1688.

Shaffer, Peter (1926–), British dramatist. After establishing his reputation as a playwright with *Five Finger Exercise* (1960), he wrote a double-bill *The Private Ear and the Public Eye* (1962). *The Royal Hunt of the Sun* (1964), which dealt with the conquest of Peru, *Black Comedy* (1965) and *Equus* (1973) were produced by the National Theatre. His other work includes *The Battle of Shrivings* (1970) and numerous plays for television.

Shafi'i, Abu'Abd Allah ash- (767–820), Muslim theologian who made great contributions to the jurisprudence of Islam. He belonged to the tribe of Quraysh, as did the prophet Mohammed, to whom he was distantly related. He spent much of his time with Bedouins and later travelled widely studying the various legal ideas of Islam, before writing his great legal work, *Risalah*.

Shaftesbury, Anthony Ashley Cooper, 1st Earl of (1621–83), English statesman, one of the 12 commissioners sent to BREDA to invite CHARLES II to return to England after the collapse of the PROTECTORATE. A member of the CABAL, he was made Earl of Shaftesbury and Lord Chancellor in 1672. He attempted to exclude JAMES II from the succession, supporting the Duke of MONMOUTH. When Monmouth at first held back from open rebellion, Shaftesbury fled to Holland, where he died. *See also* pp.1426, 1427.

Shaftesbury, Anthony Ashley Cooper, 7th earl (1801–85), British social reformer. A Tory MP (1826–51), he led the factory reform movement in the House of Commons, first proposing the ten-hour factory working day in 1833 (passed in 1847). The Coal Mines Act (1842), which prohibited the employment underground of women and children under 13, and the 1850 Reform Act were also fruits of his work. *See also* p.1572.

Shag, large, long-billed seabird of the CORMORANT family, which nests on rocky coasts and is native to most continents. The adult is completely dark except for pale patches at the base of the bill and round the eyes. The feet are webbed. Length: to 100cm (40in). Family Phalacrocoracidae.

Shah Jehan (1592–1666), Mogul emperor of India (r.1628–58) responsible for the building of the Taj Mahal, considered one of the most beautiful tombs in the world. During his reign he subjugated the Deccan and took Kandahar from the Persians.

Shah-Nama, Persian epic poem by FIRDASI, presented to the Sultan Mahmud of Ghazna in 1010. The title means "book of kings" and it describes the history of Persia in 60,000 verses from mythical times to the 7th century.

Shahn, Ben (1898–1969), us painter, lithographer and photographer, b. Lithu-

ania. He emigrated to the USA in 1906. His work consistently reflected his concern with social and political injustices. He painted in the realist and abstract styles.

Shah of Iran. *See* REZA SHAH.

Shaka. *See* CHAKA.

Shakers, millenarian religious organization more properly named the United Society of Believers in Christ's Second Appearing. The practice of shaking, shouting and dancing forms part of its ritual. The Shakers developed in Britain in the mid-18th century and founded their first colony in North America in 1774. They believe that total sexual abstinence is the basis of spiritual salvation.

Shakespeare, William (1564–1616), English poet and dramatist who is generally regarded as the greatest playwright of all time. Despite this, little is known of his life. By 1592 he was established in London, having already written the three parts of *Henry VI*. By 1594 he was a member of the Lord Chamberlain's Men and in 1599 a partner in the Globe Theatre, where many of his plays were presented. He retired to Stratford-upon-Avon in 1614 and died in 1616.

Critics have been tempted into reading personal references in his plays and poetry, especially the 154 *Sonnets*, which were first published in 1609.

The plays are usually divided into four groups: the historical plays, the comedies, the tragedies and the romances. Shakespeare seldom invented the plots of his plays, preferring to take his outlines from earlier works and building characters from hints contained therein and adding others to serve his dramatic intentions. *See also* articles on individual works.

Shakhlin, Boris (1932–), Soviet gymnast. In the Olympic Games of 1956, 1960 and 1964 he won seven gold and four silver medals, and at the World Championships of 1954, 1958, 1962 and 1966 a further six gold and six silver.

Shakti, name for the female partner of a Hindu god. Shakti is the symbol of the creative energy of the divine reality.

Shale, common SEDIMENTARY ROCK made from mud or clay. It may contain various materials such as fossils, carbonaceous matter, and oil. *See also* pp.210–211, 211.

Shallot, perennial plant native to W Asia, and widely cultivated in temperate climates. It has thin, small leaves and clustered bulbs like garlic, but with a milder flavour like onion. It is used in cooking. Family Liliaceae; species *Allium ascalonicum*. *See also* ONION; pp.684, 685.

Shalmaneser, the name of five kings of Assyria. Shalmaneser I (r.1274–1245 bc) liberated the Hittites and took Babylon. Shalmaneser II was king 1019–1008 bc. Shalmaneser III (r.858–824 bc), son and successor of ASHURNASIRPAL II, campaigned against Damascus and Urartu and defeated in 842 the alliance of Damascus, Tyre and Sidon, and Jehu of Israel. Shalmaneser IV (r.782–772 bc) led expeditions against the Chaldeans. Shalmaneser V (r.726–722 bc), successor of TIGLATH-PILESER III captured King Hosea of Israel during a revolt but died during the conquest of Samaria. *See also* pp.1165, 1188–1189, 1191.

Shaman, in primitive cultures, a witch doctor or medicine man believed to have magical powers. Shamanism is found among the ESKIMOS and AMERICAN INDIANS and in Siberia, where the term originated. *See also* ANIMISM; SORcery, p.1911.

Shamash, in ASSYRIO-BABYLONIAN MYTHOLOGY, the sun god, son of the moon god SIN and brother of ISHTAR. Shamash was also a god of DIVINATION who gave messages to men through soothsayers. *See also* p.1165.

Shamrock, plant with three-part leaves, usually taken to be *Trifolium repens* or *T. dubium*, the national emblem of Ireland. Legend tells that St Patrick used it to symbolize the Trinity. Other plants also called shamrock include *Oxalis acetosella* and *Medicago lupulina*.

Shang Dynasty, or Yin Dynasty (c.1600–c.1030 bc), Chinese dynasty, the earliest for which accurate records exist.

Jane Seymour, Henry VIII's favourite wife, painted by Hans Holbein.

Shackleton's expedition of 1907–09: the snow pillars were used for guidance.

Shad are valued as food fish. Both the flesh and the roe have good flavour.

William Shakespeare: Martin Droeshout's portrait is probably the best likeness.

Shanghai

Shanghai; rickshaws and bicycles are the most popular forms of transport.

Ravi Shankar gave concerts in 1971 in aid of the Bangladesh fund.

Sharks have graceful, streamlined bodies, enabling them to move at speed.

George Bernard Shaw defended his views in the prefaces to his plays.

Shang rule was based in the valley of the Yellow River. During this period the complex Chinese written language was perfected, as well as techniques of flood control and irrigation. Bronze was also worked for the first time. It was overthrown by the CHOU DYNASTY. See also pp.1176-1177.

Shanghai, port in SE China, 22km (13 miles) from the Yangtze (Changjiang) delta; largest city in China and the most populous in mainland Asia, and one of the world's major ports. By the Treaty of Nanking in 1842 the city opened to foreign trade, which stimulated tremendous economic growth. The USA, Britain, France and Japan all held their own areas, known as concessions, within the city. The city was restored to China by the end of WWII. It fell to the Communists in 1949. Industries: textiles, steel, chemicals, publishing, food processing, rubber products, farm machinery, shipbuilding, pharmaceuticals. Pop. 10,800,000. See p.2007.

Shankar, Ravi (1920-), Indian musician. Responsible for popularizing the sitar and Indian music in general in the West, Shankar founded the National Orchestra of India and was music director of All-India Radio (1948-56). He toured Europe and the USA extensively during the 1960s and 1970s.

Shankly, William ("Bill") (1915-), British footballer and manager. After a distinguished playing career with Preston North End (1933-49) and Scotland, winning five caps (1937-39), he became manager of Liverpool in 1959 and created teams that won League, Cup and European honours. He retired in 1974.

Shannon, longest river in the Republic of Ireland. It rises on Cuilcagh Mountain in NW County Cavan and flows s through loughs Allen, Ree and Derg, s across the central plain of Ireland to Limerick, then w to enter the Atlantic Ocean between Loop Head and Kerry Head. Length: 370km (230 miles).

Shans. See TAL.

Shansi (Shanxi), province in N central China, bounded by the Yellow River (Hwang Ho) (w and s), the GREAT WALL OF CHINA (N) and the North China Plain (E); the capital is Taiyuan. Much of the province is a high plateau region. The chief crops, grown by means of irrigation, are winter wheat, cotton, tobacco, grapes and soya beans. Livestock is reared in the N and hides and wool are exported. Forestry is also important. Iron ore, coal and salt are the chief mineral deposits. Industries include fertilizers, chemicals, machinery, cement and locomotives. Area: 157,170 sq km (60,683 sq miles). Pop. 18,000,000.

Shantung (Shandong), province in E China; the capital is Tsinan (Tinan). The E part of the province is a peninsula between the Po Hai and the Yellow Sea; the W is part of the Hwang Ho (Yellow River) delta. Products: wheat, cotton, fruits, tobacco, groundnuts, maize, soya beans, timber, silk, fish, salt, oil, coal, iron ore, gold. Area: 153,600 sq km (59,304 sq miles). Pop. 57,000,000.

Shanty town, city or part of a city in which the common residential building is the shanty, a small house (often single-storied) made of the cheapest materials available - generally wood or corrugated metal sheets. See also p.1789.

Shapiro, Karl (1913-), US poet and critic, interested in the role of the poet as a cultural teacher. His volumes of verse include *V-Letter and Other Poems* (1944) and *Poems of a Jew* (1958). He published his essays in such volumes as *In Defense of Ignorance* (1960).

Shapley, Harlow (1885-1972), US astronomer who provided the first accurate model of our GALAXY (The Milky Way). By observing CEPHEID stars in globular clusters, he calculated the distance to each cluster in the galaxy and thereby obtained a picture of its shape and size. See also pp.995-997.

Shapu, wild mountain sheep of N India and Tibet, living at altitudes of 4,000m (13,100ft) or more in the Himalayas. The Shapu (*Ovis vignei*) is grey-brown, with a white belly and a beard, and lives at higher

altitudes than the Red Sheep or Elbur's Urial (*O. occidentalis*), which it resembles. Height: 75cm (2.5ft); weight 50kg (110lbs).

Shapur (Sapor), name of three kings of the Sassanian Empire of Persia. Shapur I (d. AD 272) succeeded to the throne in 241. Although defeated by the Roman Emperor Gordian III in 243, he concluded an advantageous treaty with the Emperor Philip in 244 and in the years that followed penetrated deep into Syria. His defeat and capture of the Emperor VALERIAN in 260 was an important factor in the decline of Rome. Shapur II (309-79) was reputedly born king. He defeated the central Asian tribes and fought the Romans over the control of Armenia, which he achieved after the death of the Emperor Julian in battle in 363. Shapur III (d. 388) came to the throne in 383. He surrendered part of Armenia to the Romans in an attempt to settle a dispute over the region.

Sharaku, Toshusai (d.1801), Japanese printmaker. His brilliant UKIYO-E prints, numbering about 145, appear to have been produced in only ten months in 1794-95.

Sharecroppers, tenant farmers in the USA who were provided with land, seed, stick, tools and living facilities in return for their labour and some of their crop. After the AMERICAN CIVIL WAR many former slaves became sharecroppers in the southern states.

Shares, division of the capital of a LIMITED LIABILITY company. Shares are expressed in monetary units, for example in Britain 50p or £1. There are two types of shares: ordinary shares (those that carry a fixed rate of DIVIDEND that is dependent on the net profit of the company) and preference shares (paid before the dividend on ordinary shares). See also pp.1861, 1861.

Sharia. See ISLAMIC LAW.

Sharjah (Ash-Sharīqah), capital of the Sheikhdom of Sharjah, one of the UNITED ARAB EMIRATES, in E Arabia. It is situated on the Persian Gulf. The sheikhdom was a British protectorate until 1971. Sharjah is part of a prosperous oil producing area. Pop. (1968) 19,198.

Shark, torpedo-shaped elasmobranch fish found in subpolar to tropical marine waters. They have well developed jaws, bony teeth, a cartilaginous skeleton, skin denticles, usually 5 gill slits on each side of the head and a characteristic lobe-shaped tail with longer top lobe. Lateral lines are used to detect hydrostatic pressure and the location of other things. The sense of smell is well developed. Sharks are carnivorous and at least 10 species are known to attack man. There are about 250 living species. Order Selachii. See also CHONDRICTHYES; DOGFISH; HAMMERHEAD SHARK; MAKU; NURSE SHARK; TIGER SHARK; WHALE SHARK; WHITE SHARK; pp.56, 58-59, 62, 340, 341.

Sharm el Sheikh, bay or inlet at the S end of the Sinai Peninsula, overlooking the Strait of Tiran. Taken from the Egyptians during the 1967 ARAB-ISRAELI WAR, it has since been surrendered by the Israelis as a result of the 1973 war and UN negotiations in 1974.

Sharp, Cecil (1859-1924), British FOLK MUSIC specialist. His life was given to the collection, publication and performance of English folk music, whose preservation owes more to him than to any other man. Cecil Sharp House, London, is the centre of the English Folk Dance and Song Society.

Sharp, in musical notation, an accidental (sign) which is placed before a note to indicate that the note is to be sounded a semitone higher. When used in the key signature at the beginning of a stave of music it indicates a note which is always to be sharpened by a semitone.

Sharpeville, black suburb in Vereeniging, South Africa. It came to international notice on 21 March 1960 when a large gathering of blacks staged a demonstration there against the pass law. In an attempt to disperse the demonstrators, the police fired at the crowd, killing 67 and wounding 186.

Shatt al-Arab, channel in SE Iraq, formed

by the confluence of the rivers Tigris and Euphrates. It flows SE to the Persian Gulf through a wide delta and is navigable for ocean going vessels as far as Abadan.

Shaw, George Bernard (1856-1950), British dramatist, critic and member of the FABIAN SOCIETY, b. Ireland. He replaced the artificial MELODRAMAS, then dominating the Victorian stage, with vigorous dramas of ideas. His plays, noted for their mastery of prose and brilliant wit, include *Candida* (1895), *Man and Superman* (1903), *Pygmalion* (1913), *Heartbreak House* (1917) and *Saint Joan* (1923). He received the 1925 Nobel Prize in literature. See also pp.1577, 1692, 1694, 1766.

Shaw, Irwin (1913-), US novelist, dramatist and short story writer. Much of his work deals with the problems facing men in wartime, for instance *Bury the Dead* (1936) an early one-act play, and *The Young Lions* (1948). Other works include the short story collection *Tip on a Dead Jockey* (1957) and a novel *Rich Man, Poor Man* (1970), which was made into a successful television series.

Shaw, Richard Norman (1831-1912), British architect whose domestic architecture recreated Queen Anne and Georgian styles, rather than the more prevalent Tudor and Gothic. An associate of William Morris, Shaw emphasized traditional workmanship. In 1875 he created London's first garden suburb at Bedford Park, and designed New Scotland Yard (1888). See also p.1600.

Shaw, Robert (1927-78), British actor and author. His films include *The Dam Busters* (1955), *A Man for All Seasons* (1966), *The Sting* (1973) and *Jaws* (1975). He wrote the play *The Man in the Glass Booth* (1967) and the novel *The Sun Doctor* (1961).

Shaw, T.E. See LAWRENCE, THOMAS EDWARD.

Shawm, double-reed woodwind instrument, the ancestor of the OBOE. Shawms were of various shapes and lengths, between them they encompassed a range from high treble to base. They were much used in European music from the 13th to the 17th century.

Shearer, Norma (1904-), Canadian film actress who made her debut in 1920 and whose film career with MGM was guided by Irving THALBERG, whom she married in 1927. She made notable appearances in *The Barretts of Wimpole Street* (1934), *Romeo and Juliet* (1936) and *The Women* (1939). She received an Oscar for her role in *The Divorcée* (1929), and retired in 1942.

Sheares, Benjamin Henry (1907-), President of Singapore. He was professor of obstetrics and gynaecology at the University of Malaya (1950-60) and then went into private practice. He became President of the Republic of Singapore in 1971.

Shearwater, seabird related to the ALBATROSS and PETREL. Most species are brown or black with pale underparts. Shearwaters live most of their lives on the ocean; they feed on fish and squid and burrow nests in coastal cliffs. Length: 19-56cm (7.5-22in). Family Procellariidae. See also p.72.

Sheba, ancient kingdom of southern Arabia celebrated for its trade in gold, spices and precious stones. Its queen came from the "utmost parts of the earth" to hear the wisdom of SOLOMON as recorded in the Bible.

Shebelle, river that rises in central Ethiopia. It flows SE into central Somalia, 32km (20 miles) inland from the coast of the Indian Ocean, following the coastline for approx. 320km (200 miles) and ending in swampland N of the Juba River. Length: 2,013km (1,250 miles).

Sheene, Barry (1950-), British motorcycle racer who lived up to the reputation established by superb promotion when, riding Suzukis, he won the 500cc world road racing titles in 1976 and 1977. In 1973 he had won the first-ever international 750cc championship.

Sheep, ruminants of the genus *Ovis*, together with those of the far less numerous genera *Pseudois* and *Ammotragus* (both non-European). Domestic sheep,

Ovis aries, are now bred for several purposes: fine wool, coarse wool, fur (karakul) and mutton. Wild species are found in the mountains of Europe, Asia, Africa and North America. The blue sheep (*Pseudois nayaur*) of w China is the only wild sheep that does not interbreed with domestic sheep. All are of the Family Bovidae. See also WOOL; pp.652, 657, 722, 723, 729, 754.

Sheepdog, any of several breeds of dog that were originally bred to herd and guard sheep. The term includes such breeds as the OLD ENGLISH SHEPDOG, SHETLAND SHEPDOG, COLLIE, BORDER COLLIE and ALSATIAN. Today, collies are most commonly used for the original purpose.

Sheep liver fluke, parasitic FLATWORM that collects in liver bile passages of cattle and sheep. It develops in a host snail, then a tiny, tailed version of the adult fluke escapes, encysts on grass, and is eaten by livestock. Length: 19mm (0.75in). Phylum Platyhelminthes; class Trematoda; species *Fasciola hepatica*. See also p.16.

Sheerness, seaport and resort town in N Kent, SE England. Strategically located at the confluence of the rivers Thames and Medway, the fortress settlement was captured by the Dutch in 1667.

Sheffield, city and county district in South Yorkshire in N England. The city lies at the confluence of the Don River and its tributaries, the Sheaf, Rivelin and Loxley rivers. It is a major industrial city, noted for its special steels and steel products, in particular cutlery which has been manufactured there since the 14th century. The first BESSEMER steel plant was constructed in Sheffield in 1858. The university college of Sheffield (1897) received its charter as a university in 1905. The county district was created in 1974 under the Local Government Act (1972). Area: 242sq km (150sq miles). Pop. (1979 est.) 544,200.

Sheffield plate, any article of silversware, made of copper coated with a fused layer of silver, not a deposit of silver like that achieved by electroplating. In 1742 Thomas Boulsover discovered that copper coated with a layer of silver remained workable, retaining the pliability of both metals. Sheffield plate was granted an authorized hallmark in 1774 and today it is a collector's item.

Sheffield Shield, Australian cricket trophy awarded to the winners of the annual competition between the five states. First contested in the season 1892-93, it has been dominated by New South Wales. Matches are played over four days with positions determined on a league table system.

Sheik, (The 1922), US silent film which starred Rudolph VALENTINO. A number of other films which romanticized the desert and Arab way of life were made in the 1920s. These included *Blood and Sand* (1922) and *Son of the Sheik* (1926), and also starred Valentino.

Shelburne, William Petty FitzMaurice (1737-1805), British statesman. A WHIG, he served in the ministries of GRENVILLE and CHATHAM and as Prime Minister concluded the 1783 peace with the USA. In 1784 he was made Marquis of Lansdowne.

Shelduck, large colourful duck that lives in estuaries and on coasts of Europe, North Africa and Asia. The common shelduck has a dark glossy green head and red, brown and black bands about its wings and body. The female is smaller but similarly marked. Length: 59cm (23in). Species *Tadorna tadorna*. See also pp.79, 333, 335.

Shell, in biology, the chalky protective case secreted by various MOLLUSCS. Shells have been important to man as tools, decorations, jewellery and in trade: COWRIE shells are used as money in Africa and as jewellery in the Pacific Islands. WAMPUM was the name given to shell-beads used by North American Indians. See also pp.20-27.

Shell, in artillery, explosive projectile that ranges in size from a pistol cartridge to a big-gun shell with a weight of tonnes. Types of shell include high explosive, armour-piercing, illuminating and anti-

personnel (designed to maim as many people as possible). See also pp.582-583.

Shellac, purified RESIN made from the secretions of the lac insect, *Laccifer lacca*. Shellac is soft and fluid (it flows) when heated but hard at room temperature, and is used in the production of adhesives, hair sprays, varnishes and sealants.

Shelley, Mary Wollstonecraft (1797-1851), British novelist, daughter of William GODWIN and Mary Wollstonecraft. She went abroad with Percy Bysshe SHELLEY in 1814 and married him in 1816. Her works include *Frankenstein* (1818), *The Last Man* (1826) and *Lodore* (1835).

Shelley, Percy Bysshe (1792-1822), English Romantic poet whose passions and enthusiasms entered both his life and his writing, making of the two an ambiguous mixture of beauty and sordidness. His first wife committed suicide when he deserted her for Mary SHELLEY. Other poems include *Prometheus Unbound* (1820), *Ode to the West Wind* (1819) and *Adonais* (1821), a poem partly based on the life of John KEATS.

Shellfish, common name for shelled MOLLUSCS and CRUSTACEANS used as food by man. Shelled molluscs include CLAMS, OYSTERS and SCALLOPS; crustaceans include SHRIMPS, LOBSTERS, CRABS and CRAYFISH. See also pp.22-23, 740, 746.

Shell Shield, West Indian cricket trophy competed for annually by the major cricketing countries in the Caribbean. It was donated in 1965 by the Shell Oil Company to promote inter-island cricket.

Shell shock, also called battle fatigue, acute hysterical NEUROSIS caused by TRAUMA suffered in warfare as a result of overwhelming stress. Patients suffer from hypersensitivity to noise, movement and light, reacting defensively to such stimuli; they may be irritable and violent and commonly experience sleeplessness and nightmares. Treatment includes rest, food and sedation. See also p.1107.

Shem, in GENESIS, eldest son of NOAH. He received the first blessing of Noah after the FLOOD and settled on land between that of his brothers HAM and JAPHETH.

Shen Chou (1427-1509), Chinese ink painter and leader of the WU SCHOOL. Although he copied the style of masters of the YUAN DYNASTY, he is well known for his small hand-rolls of landscapes. See also pp.1500, 1500.

Shensi (Shānxī), province in central China; capital Sian (Xi'an). The province can be divided into four geographical regions; in the N is a fertile plateau where crops are raised with the aid of irrigation, and there are rich deposits of coal and iron ore; the Wei River valley which has rich farmlands and where most of the population is concentrated; the Chinling mountain range; and the Han River valley where rice and tea are grown. Textiles and timber are important industries. Area: 195,880sq km (75,630sq miles). Pop. 21,000,000.

Shenyang, capital of Liaoning province, NE China; formerly known as Mukden. One of the largest cities in the country, Shenyang is the centre of a group of communes which grow rice, cereals and vegetables under intensive cultivation. It is also part of an industrial area whose products include aircraft, machine tools, heavy machinery, cables and cement. Pop. 2,800,000.

Shepard, Ernest Howard (1879-1976), British artist whose reputation was established with the definitive illustrations he provided for children's books such as A. A. MILNE's *Winnie-the-Pooh* (1926).

Shepherd's Calendar, The (1579), twelve poems by Edmund SPENSER. His earliest major work, they are in the pastoral tradition of THEOCRITUS and VIRGIL.

Shepherd's purse, wild flower growing throughout the world. It has deeply lobed basal leaves and tiny, white flower clusters. The pouch-like seedpods have a peppery flavour. Height: 20-45cm (8-18in). Family Cruciferae; species *Capsella bursa-pastoris*.

Shepstone, Sir Theophilus (1817-93), South African politician. His administra-

tive skill and adroitness in dealings with African peoples led to his appointment as Secretary for Native Affairs in 1856. He carried out the annexation of the Transvaal in 1877.

Sherardizing, industrial method of coating steel parts with zinc for protection from corrosion. The parts, which may be steel castings, nuts and bolts, welded tubes or sections, are tumbled in heated drums containing zinc dust. After some hours the zinc forms a very thin intermetallic surface coating the steel. See also GALVANIZING.

Sheraton, Thomas (1751-1806), British furniture designer whose designs became influential through his manuals, such as *Cabinet-Maker and Upholsterer's Drawing-Book* (1791). His style is marked by a delicacy and simplicity with an emphasis on straight, vertical lines.

Sheridan, Richard Brinsley (1751-1816), British dramatist and politician who became part owner and director of the DRURY LANE THEATRE in 1776. He excelled in comedies of manners, such as *The Rivals* (1775) and *The School for Scandal* (1777). Entering parliament as a WHIG member in 1780, he became one of the most brilliant speakers of his time. See also p.1471.

Sheriff, royal officer in medieval England; the name is a shortened form of "shire reeve". Originally each sheriff looked after the royal DEMESNE in his shire, but by the 11th century the sheriff had become the chief officer of local administration. After the 13th century the office declined in importance. It is now chiefly ceremonial.

Sheriffmuir, Battle of (1715), bloody but indecisive clash at Sheriffmuir, Scotland, between JACOBITE rebels under the Earl of Mar and Hanoverian forces led by the Duke of Argyll. See also p.1472.

Sherlock Holmes, fictional private detective, a character in works by Arthur Conan DOYLE. He first appears in *A Study in Scarlet* (1887). Holmes has many eccentricities and mannerisms, but has amazing powers of observation and detection, and knowledge of obscure subjects. Dr Watson acts as his ponderous foil, and Professor Moriarty is a worthy villain-antagonist.

Sherman, General William Tecumseh (1820-91), US military officer. As a brigadier-general during the AMERICAN CIVIL WAR he took part in the Battle of BULL RUN and in the capture of VICKSBURG. His most noted exploit was his march eastwards through Georgia, including the "march to the Sea" from Atlanta to Savannah in 1864.

Sherpas, Buddhist people who inhabit the Khumbu Valley in NE Nepal. Of Tibetan origin, they are renowned for their portering of Himalayan mountaineering expeditions. They cultivate cereals and potatoes and herd sheep and cattle.

Sheriff, Robert Cedric (1896-1975), British dramatist, who wrote the war play *Journey's End* (1929). Other plays include *Windfall* (1933), and *Home at Seven* (1950). He also wrote film scripts, such as *The Invisible Man* (1933), *Goodbye Mr. Chips* (1936) and *Odd Man Out* (1945).

Sherrington, Sir Charles Scott (1857-1952), British physiologist. A pioneer in the study of how the nervous system works, his book *The Integrative Action of the Nervous System* (1906) helped to establish physiological psychology. He shared with Edgar ADRIAN the 1932 Nobel Prize in physiology and medicine. See also p.125.

Sherry, fortified wine with a characteristic flavour produced by admitting air to the wine during maturation. Sherrys range from the light yellow dry (fino) to the sweeter and richer wines of golden brown colour (oloroso). The name sherry derives from Jerez, a town in southern Spain.

Sherwood Forest, ancient royal hunting ground in Nottinghamshire, central England. Little of the original forest remains. The forest is famous as the home of ROBIN HOOD.

Sheshonk (r.c.935-c.914 bc), king of ancient Egypt and founder of the 22nd or Libyan dynasty. After the decline of the dynasty at Tanis, a city in the Nile delta, he

assumed the kingship and seized Gaza and Palestine c.930 bc. Excavations at the temple at Karnak revealed records of the tribute paid him in Nubia and Palestine. His tomb was discovered in 1938.

She Stoops to Conquer (1773), five-act comedy by Oliver GOLDSMITH. Originally subtitled *The Mistakes of a Night*, it concerns the relationships of young Marlowe and a friend with the Hardcastle family. See also p.1471.

Shetland Islands, group of approx. 100 islands NE of the Orkneys, 209km (130 miles) off the N coast of Scotland, in Shetland Region. The principal islands are Mainland (which has the main town Lerwick), Yell, Unst, Whalsay and Bressay. The islands are generally rocky with thin soils, but oats and barley are grown in places. Fishing and the rearing of livestock are of great importance: the islands are famous for breeding ponies. The region is also noted for its production of Fair Isle woollen goods. Tourism is a major industry. Pop. (1974 est.) 18,445.

Shetland pony, one of the smallest and oldest types of light horses. Originating in the Shetland Islands, it has since been introduced to most parts of the world. A small, hardy horse, it has been used for draught or road work and also makes an ideal children's mount. It can be any horse colour, piebald or skewbald. Height: 71cm (28in) at the shoulder; weight: 169kg (350lb).

Shetland sheepdog, miniature COLLIE used as a guard and farm dog; also called Sheltie. Probably bred from small collies, it has a long blunted, wedge-shaped head; high-set, small ears held three-quarters erect; a moderately long body; medium-length legs and a long tail. The long, straight, double coat is black, blue-grey or sable with white or tan marks; it is short and smooth on the face, feet and ears. Average size: 33-41cm (13-16in) at the shoulder; weight 7kg (15lb).

Shi'a, rite of Islam, whose followers are called Shi'is or SHI'ITES.

Shield, in geology, large, low-relief, exposed mass of PRECAMBRIAN rock, commonly having a gently convex surface and surrounded by belts of younger rock. Shields contain rock that is more than 2,500 million years old, now changed by METAMORPHISM but originally composed of basaltic lava. Shields form the nucleus of continents, such as the one occupying two-thirds of Canada and known as the Canadian Shield.

Shield, in warfare, form of personal armour that protects the carrier from blows and missiles aimed at his body. Materials for shields ranged from the bronze used by the Ancients, to the remarkably effective hides employed by African and North American tribes, to highly ornate iron or steel in shields of Medieval knights. Shields became obsolete with the advent of gunpowder. See also pp.554-555.

Shield, radiation, material, such as loaded concrete (concrete containing lead, iron or barium) or lead, surrounding a radioactive source to absorb NEUTRONS and RADIATION. The core of a NUCLEAR REACTOR is surrounded by a massive concrete biological shield to protect personnel, and an inner iron thermal shield to protect the concrete from high temperatures.

Shield, spacecraft, metal or plastic plates or structures that protect the interior of a spacecraft from heat of re-entry, radiation (eg. solar radiation and cosmic rays) or micrometeorites (small objects in space). See also SHIELD, RADIATION; ABLATION; PTFE.

Shigella, genus of bacteria. They form no gas as part of their metabolic process, and produce dysenteries (shigellosis) in man and other animals. See also DYSENTERY.

Shih Ching, the Classic of Odes, one of the Five Classics in the canonical literature of CONFUCIANISM. The first anthology of Chinese poetry, it was compiled by Confucius (551-479 bc). See also p.1259.

Shih Huang Ti (259-210 bc), Emperor of China (r.221-210 bc). The first king of the CH'IN DYNASTY to rule the whole of China, he organized the country into feudal provinces, reformed the bureaucracy and

Shih tzu

completed the GREAT WALL OF CHINA. See also p.1256.

Shih tzu, dog bred in the imperial court of China as a pet of the nobility; first brought to the West in about 1930. It has a square, short muzzle with a long moustache; a long, broad-chested body; short muscular legs; and a tail that curves up over its back. The long, luxurious coat is slightly wavy and may be any colour. Standard size: to 26.5cm (10.5in) high at the shoulder; weight 5–7kg (9–16lb).

Shi'ites, followers of the MUSLIM Shi'a sect. They are distinguished from the Sunnis by their belief in ALI as the first true CALIPH of Islam and their rejection of the Sunna. The most important subject is the Isma'ili group. SUFISM also draws on many Shi'a beliefs. The largest Shi'a communities are found in Iran, Iraq and India.

Shikoku, smallest of the four main islands of Japan, s of Honshu and e of Kyushu. The interior is mountainous and extensively forested and most settlements are on the coast. The principal cities are Matsuyama, Takamatsu and Tokushima. Products: rice, tea, wheat, timber, fish, tobacco, fruit. Area: 18,780sq km (7,245sq miles). Pop. 3,904,014.

Shillelagh, village in County Wicklow, Republic of Ireland. Its forest gave its name to a type of cudgel made from oak or blackthorn.

Shilling, English coin, first made in 1504. It had originally a deeply indented cross and was easily divided into halves and quarters. It was replaced by the new five-pence piece in 1971.

Shiloh, ruins of a Biblical city of Jordan, on Mt Ephraim 24km (15 miles) w of the River Jordan. The modern town is called Khirbat Saylun, and is in the Israeli occupied West Bank area.

Shiloh, Battle of (6–7 Apr. 1862), battle in the AMERICAN CIVIL WAR, also called "Pittsburg Landing". In this engagement in Tennessee, the Confederate Albert S. Johnston surprised a Unionist force led by Ulysses S. GRANT. On the second day, Grant regained the lost ground and eventually won the battle. There were 13,000 Union and 10,000 Confederate casualties. See also p.1629.

Shimazaki, Tōson (1872–1943), Japanese novelist and poet who was converted to Christianity in 1888. His work consisted of idealistic, romantic poetry collected in *Wakanashu* (Collection of Young Leaves, 1907) and many novels including *Hakai* (The Broken Promise, 1906) and *Yoake-mae* (Before the Dawn, 1929–35).

Shin Buddhism, sect of Japanese MAHAYANA BUDDHISM known as the Pure Land sect. It was founded by Shinran (1173–1262), and stresses that sinful human nature can only be saved through the grace of Amida, the saviour-BUDDHA. Maintaining the proper attitude of faith is central to Shin's teaching that secular life is no bar to salvation. The sect has more than 13 million followers.

Shingles, or herpes zoster, acute virus infection of the skin and nerves. Groups of small blisters appear along segments of nerves, usually on the side, sometimes preceded by pain in the affected place. See also p.1075.

Shingon ("True Word"), a translation of the Sanskrit *mantra*, the name of a mystical Japanese BUDDHIST sect founded in the 9th century by Kobo Daishi, who was also known as Kukai. Shingon teachings describe the development of spirituality in terms of stages which are reflected in various forms of religious belief and which culminate in the esoteric doctrines of their own school.

Shinto, the "way to the gods", indigenous religion of Japan. Originating as a primitive cult of nature worship, it was shaped by the influence of CONFUCIANISM and BUDDHISM from the 5th century until the 17th century, when a revival of the ancient rites began. Shinto has a hierarchy of gods, which are the forces in mountains, rivers, trees and other forms of nature. It is concerned with ceremonial purity. The followers of Shinto in its present form number more than 60 million. See also p.1910.

Shinty, Scottish version of hockey. Also

known by its Gaelic name *camanachd*, it is a 12-a-side game played on a rectangular pitch up to 182m (600ft) long and 90m (300ft) wide. The object is to hit the ball through the opposing goal (*hail*). The stick (*caman*) is longer than a hockey stick and has a broader blade.

Ship, vessel for conveying passengers and freight by water. Modern ocean-going ships developed from the carracks of the 13th century and the larger early ships called galleons. Fighting ships of the 17th and 18th centuries included frigates of various designs, later models had several rows of guns. Sailing freighters led to the development of the great clippers of the late 19th century, some of which had iron hulls. A century or so earlier, the first steamships had been built. They were powered by wood or coal-burning steam engines that drove large paddle wheels, hence the term PADDLESTEAMER. In 1819 the first Atlantic crossing was made by "steam-assisted sail" and this crossing soon became a regular service. By the mid-19th century steamships driven by propellers, or screws, were in general service and were voyaging on trade missions in all oceans. Marine steam TURBINES were developed at the turn of the 19th century and gradually replaced reciprocating (back-and-forth cranking) steam ENGINES for large vessels, early examples being ocean liners of the 1900s with displacements (weight of water that a ship displaces when fully laden) up to 10,000 tonnes. Oil, rather than coal, was now the favoured fuel for large marine engines. Some of the newest military ships and icebreakers are fitted with nuclear engines in which heat from a NUCLEAR REACTOR raises steam in boilers to drive steam turbines. The larger modern ships are classified as warships, passenger vessels, bulk dry cargo ships, TANKERS for bulk liquids, freighters for mixed cargo and container ships. The largest of these are the supertankers carrying oil, with displacements of about half a million tonnes and lengths of several hundred metres. See also BOAT; SAILING SHIPS; pp.470–479, 566–569.

Shipbuilding, industry concerned with the design, making and repair of ships. All ships have similar parts. The longitudinal keel, the stempost and the sternpost are the basic components. A series of symmetrically curved ribs, running transversely and fastened to the keel at their centres, give the ship its shape. Longitudinal stringers, or clamps, run the length of the ship, holding the ribs in position. Additional braces extend across the width of the ship; these serve as supports for the deck and superstructure. The skin, which is mounted on the framework of ribs, may be of riveted or welded metal plates, or horizontal wooden planks. Transverse walls, called bulkheads, stiffen the frame and divide the hull into watertight compartments. After the various parts have been prepared, the ship is assembled either on slipways or in a dock. The major shipbuilding nation in the world is Japan, followed by Sweden, West Germany and Great Britain. See also pp.470, 472–479, 566–569.

Ship money, ancient English tax whereby sea ports provided ships for the Crown in times of war. By the 17th century it had been commuted to a money tax. CHARLES I revived it in 1634 to provide a permanent source of income without calling parliament. When it was extended to inland towns in 1635, John HAMPDEN, a Buckinghamshire squire, created a test case by refusing to pay. The case was the first great blow against Charles' attempt at arbitrary rule, and one of the most celebrated incidents which preceded the English Civil War. See also p.1421.

Ship of Fools. See NARRRENSCHIFF, DAS. **Ship of the line**, large fully-rigged naval sailing ship serving in the major battle formation, "the line", of the 17th and 18th centuries. British warships of the period were rated by the number of cannon carried: first- through to sixth-rate ships carried more than 100, 90, 64, 44, 32 and 20 cannon respectively. Only first-, second- and third-rate ships were considered strong enough to take part in the

battle line, and were thus designated ships of the line. See also pp.567, 567.

Shipton, Eric Earle (1907–77), British mountaineer. He scaled many of the mountains of e and Central Africa in the 1930s and between 1933 and 1951 was present on five expeditions to Mt EVEREST, paving the way for the successful British ascent in 1953. His published works include *Upon that Mountain* (1948).

Shipworm. See TEREDO.

Shiraz, city in s central Iran, approx. 185km (45 miles) ENE of Bushire. It has been an active trade centre since the 7th century and by the 9th century had also developed into an important Muslim centre. Shiraz was the capital of Persia 1750–94 and many buildings date from that period. The city's products include wines, carpets, metalwork, textiles, cement and sugar. Pop. (1973) 373,000.

Shire, unit of local government in ANGLO-SAXON England that replaced the Roman *provincia* and became the COUNTY of Norman administration. A shire was administered by an EALDORMAN and a shire-reeve, the latter acquiring great power after the NORMAN CONQUEST as the king's representative.

Shire horse, earliest breed of draught horse. It was bred in its present form in England during the 18th century and is a descendant of the great horse of the Middle Ages. Also called war horse and cart horse, this heavy-boned horse has a sluggish temperament. Its colours may be bay, brown or black with white markings. Height: approx. 1.7m (5.7ft) at the shoulder; weight: 1,000kg (2,200lb).

Shirley, James (1596–1666), English dramatist. He wrote many plays in the period before the Civil War, after which he returned to his original profession of schoolmaster. The 36 plays and masques which survive include the comedy *The Gamester* (1633), the masque *The Triumph of Peace* (1634) and a revenge tragedy *The Cardinal* (1641). He is said to have died from fear and exposure in the Great FIRE OF LONDON.

Shirley (1849), novel by Charlotte BRONTË. It is a story of conditions in industry in the mid-19th century, a question of great contemporary concern. The heroine of the title is an heiress who influences workers to accept the changes proposed by the factory owner, Robert Moore.

Shiva (Siva), one of the three great HINDU gods, with BRAHMA and VISHNU. A complex god, he represents both reproduction and destruction, although a combination of contradictory qualities is not uncommon in HINDUISM. His name means "Auspicious One" in SANSKRIT. The cult of Shiva is one of the most popular in modern Hinduism. See also pp.1169, 1252, 1906, 1914.

Shkoder, town in NW Albania, at the se end of Lake Scutari. It is the cultural and industrial centre of N Albania. Manufactures include food products, textiles and leather goods; fishing is another important activity. Pop. 55,000.

Shock, acute progressive circulatory failure, due to the heart's inability to pump enough blood through the major organs. It may be caused by injury, burns, haemorrhage, major surgery or poisoning. It is characterized by weakness, shallow breathing, rapid heartbeat and low blood pressure. Treatment involves keeping the patient warm and giving oxygen.

Shock absorber, elastic mechanism for absorbing shock to prevent damage to a machine. The shock absorbers of motor vehicles typically have a piston, attached to the vehicle body, moving inside a cylinder attached to a wheel. The piston moves against a liquid which escapes from and returns to the cylinder through a spring-loaded valve.

Shockley, William Bradford (1910–), US physicist instrumental in the development of the TRANSISTOR. For this he shared with John BARDEEN and Walter BRATTAIN the 1956 Nobel Prize in physics.

Shock therapy, induction of transient comas or convulsions by electrical, chemical or other artificial means in an attempt to treat severe mental illness. Electroconvulsive therapy (ECT) has been the most common method; another procedure

commonly used before the discovery of tranquillisers was insulin shock, in which hypoglycaemia and shock are induced by injections of INSULIN. See also pp.1116, 1117.

Shock wave, in fluids (liquids or gases), region across which sharp discontinuities in pressure and density occur. Shock waves are brought about by objects moving at supersonic velocities. Because the surrounding fluid can propagate disturbances only at the local speed of sound, the moving object "piles up" the disturbances it is causing into a V-shaped "wake" attached to the object. The "sonic boom" of supersonic aircraft is the passage of this shock wave past the eardrum. See also EARTHQUAKE; SEISMIC WAVES; pp.831, 833.

Shoebill stork, tall wading bird found in papyrus marshes of tropical NE Africa. Also known as the whale-headed stork, it has a swollen, shoe-shaped bill with a sharp hook, a short neck, darkish plumage and long legs. It feeds at night on small animals, including lungfish, frogs and turtles. Height: to 1.4m (4.6ft). Family Balaenicipitidae; species *Balaeniceps rex*. See also p.330.

Shofar, ancient Jewish musical instrument made from the curved horn of a ram. It is still sounded in synagogues on ROSH HASHANAH and YOM KIPPUR.

Shōgun, title of the military ruler of Japan, first conferred upon Yoritomo in 1192, acknowledging him as the supreme military commander in Japan. The term means "Barbarian-quelling general". The Minamoto (1192–1333), ASHIKAGA (1338–1568) and TOKUGAWA shōgunates (1603–1868) provided the *de facto* rulers of feudal Japan, although there was still an emperor. Their authority was in theory purely military, but the bakufu ("tent government") exercised control over all aspects of life. The shōgunate ended with the MEIJI RESTORATION in 1868.

Sholes, Christopher Latham (1819–90), US journalist and politician who developed the first commercially successful typewriter. Development costs forced him to sell his patent rights to the Remington Arms Company who developed and marketed the machine. See also p.604.

Sholokhov, Mikhail Alexandrovich (1905–), Soviet novelist who became internationally famous for his epic novel about his native land, *The Silent Don* (1928–40; trans. as *And Quiet Flows the Don*, 1934), and *The Don Flows Home to the Sea* (1940). *Virgin Soil Upturned* (1932–60) deals with the collectivization of agriculture. Several of his short stories are collected in *Tales of the Don* (1926). He was awarded the 1965 Nobel Prize in literature.

Shona, negroid people of e Zimbabwe (formerly Rhodesia). The Shonas' exogamous, patrilineal society is based on subsistence agriculture and is centred on small villages, traditionally abandoned when the local resources are exhausted. Their culture is noted for its pottery, music and dance.

Shooting, competitive sport involving a wide variety of firearms. Its rules are fixed by two bodies: the International Shooting Union (ISU) founded 1907 and the National Rifle Association (NRA) founded in Britain in 1860. Shooting with air weapons (ie guns firing projectiles by the force of compressed air, or in some cases carbon dioxide) takes place at ranges of 10m (32.75ft); the competitor stands without any support. This is not a recognized Olympic sport.

Competition with shotguns consists of firing at clay pigeons, saucer-shaped discs 11cm (4.5in) in diameter which are projected at speed from a spring-loaded trap. The targets are hit when they are about 36.5m (120ft) from the competitor. There are two forms of competition: "Trench" (an Olympic sport since 1900), which involves firing at 200 clay pigeons from a set position, and "skeet" (an Olympic sport since 1972), in which the competitors move round a set of positions.

Pistol shooting has been an Olympic event since 1896; competition is over ranges from 25–50m (82–164ft). It includes

Sickle-cell anaemia

rapid and free fire for automatic, standard and centre-fire pistols. Rifle shooting has also been an Olympic sport since 1896. Ranges may be up to 914m (3,000ft) and the competitors may have to adopt certain stances – such as kneeling or standing – or may be allowed to use the more efficient prone position. There are various classes of rifle shooting, depending on the weapons available to the competitor.

Shop, permanent retail establishment for the sale of goods. Deriving its name from the Teutonic word for a cobbler's stall or booth, it became common usage in about the 14th century. Originally places where craftsmen or merchants sold their own products, shops did not undergo any significant changes until the growth of the manufacturing industries and urbanization in the 19th century. The retail industry flourished during this time, aided by the development of the wholesale industry and the increased purchasing power of people. Department stores and chain stores such as Woolworths developed during this retail boom, and supermarkets and shopping complexes have developed in the 20th century, particularly since WWII. See also p.1639.

Shops, early closing, in Britain, legal requirement that every shop should close for one full day and one half day each week; the half day should not extend beyond 1 pm. Early closing is regulated by the Shops (Early Closing Days) Act of 1965, but it is also covered by local by-laws, and any shop wishing to stay open for six or more full days a week may do so with local authority permission.

Shop steward, TRADES UNION official elected by his or her colleagues to represent their interests in management/staff negotiations. See also p.1853.

Shorthand, system of codes used to record speech, which date from as early as Roman times. Phonetic shorthand systems first appeared in the 18th century, and the most famous system of this kind, Pitman's shorthand, in 1837. All the sounds of the English language are represented by 49 signs for consonants and 16 signs to indicate vowels. A simplified version was also developed. The Gregg system of phonetic shorthand, widely taught in the USA, has a script based upon the pen movements of ordinary writing. Some recent types of shorthand, often referred to as speedwriting, use no special signs but rely on abbreviations of ordinary written language.

Shorthorn, most widespread breed of BEEF CATTLE. Shorthorns are red, red and white or roan. They were originally developed in Durham, England in the late 1700s. There are two strains, one strictly for beef and one which is also used for milk. Polled shorthorns have no horns. See also CATTLE; p.724.

Short Parliament (1640), English parliament that ended 11 years of personal rule by CHARLES I. It was called because Charles needed money after his defeat in the first of the Scottish Bishops' Wars in 1639. The Short Parliament was dissolved after three weeks, after its members made redress of political grievances the conditions for financial subsidy for the king. See also p.1421.

Short wave, RADIO communication employing electromagnetic radiation having wavelengths of 60 metres or less.

Shoshone Indians, North American Indians of the UTO-AZTECAN language group. They occupy reservations in California, Idaho, Nevada, Utah and Wyoming. They were divided into the COMANCHE, the Northern, the Western and the Wind River Shoshone. In the 1970s, they numbered about 9,600.

Shostakovich, Dmitri Dmitrievich (1906–1975), Soviet composer who worked prolifically in every form and is perhaps the most important modern Russian composer since TCHAIKOVSKY. His works include 15 symphonies, 13 string quartets, ballets, concertos, piano music, film music and vocal works. The opera *Lady Macbeth of Mzensk* (1934) was disapproved of by the Soviet government but he was restored to favour with his *Fifth*

Symphony (1937). See also pp.1754, 1754.

Shot put, athletics field event in which a heavy spherical shot is projected from a position close to the neck by an extension of the arm. Throughout the put the athlete must remain inside the throwing circle. Men throw a 7.257kg (16lb) shot; women a 4kg (8lb 13oz) shot. The shot put has been an Olympic event since 1909. Modern athletes often put the shot to distances exceeding 21m (68ft).

Shoulder, in human anatomy, joint at the top of the arm. It consists of the ball-and-socket joint between the upper arm (humerus) and the shoulder blade (scapula). It is the most movable joint in the body. The main muscle in the shoulder is the deltoid.

Shoveller, widely distributed river duck that dabbles, or feeds from the water surface. The male engages in a complex courtship routine to attract a female. Family Anatidae. Species *Spatula clypeata*.

Showboat (1927), musical with lyrics by OSCAR HAMMERSTEIN II and music by JEROME KERN, originally produced on Broadway and adapted from a novel by Edna FERBER. It was made into a film in 1929.

Showboat, paddleboat or steamboat first used in 1831 to bring entertainment to pioneers settled on western US rivers, especially the Mississippi and the Ohio.

Showjumping, equestrian sport in which horse and rider jump a series of fences arranged in a special order within an arena. As well as being an event in its own right, it is a part of horse trials. Showjumping competitions were first organized in the 1860s. There are now three main types of competition, the most common being that in which penalty points (faults) are incurred for failures at fences and the water jump, for refusals, and for exceeding the time allowed. *Puissance* events test jumping ability alone, and speed competitions test hardness and obedience.

Shrapnel, Henry (1761–1842), British artillery officer who, in about 1793, invented the shrapnel shell, a device containing a number of "bullets" and a charge of powder fired by a time-fuse that burst the shell and showered its contents over the enemy.

Shrew, the smallest mammal, found throughout the world. It is an active, voracious insectivore that eats more than its own weight daily, feeding on any animal that it can overpower (mainly insects). Some shrews weigh only 2g (0.07oz). Family Soricidae. See also pp.93, 304, 310.

Shrewsbury, Battle of (1403), battle in which HENRY IV of England defeated the rebellious Henry "Hotspur", a leader of the PERCY faction that was attempting to place Edmund, Earl of March, on the throne. Hotspur was killed and the rebellion destroyed.

Shrike, or butcherbird, small perching bird found throughout the world, except in South America and Australia. It dives at its prey – insects, small birds, mice – hitting them with its strong hooked bill and then impaling them on a sharp fence post, twig or thorn.

Shrimp, mostly marine, swimming DECAPOD crustacean including true, sand and pistol shrimps. Its compressed body has long antennae, stalked eyes, a beak-like prolongation, segmented abdomen with five pairs of swimming legs and a terminal spine. Large edible shrimps are often called PRAWNS. Length: 5–7.5cm (2–3in); some freshwater shrimps reach 20cm (8in). See also pp.30, 34, 35, 302, 341.

Shropshire. See SALOP.

Shropshire Lad, A (1896), collection of poetry by A.E. HOUSMAN. It was the first of two of his volumes of verse and was extremely successful. It contains poems in a simple, pastoral style, many of which are ballads.

Shrove Tuesday, in the Roman Catholic Church, the day before ASH WEDNESDAY, which is the beginning of LENT.

Shrub, low, woody perennial plant of limited height, usually less than 10m

(30ft) high. Instead of having a main stem, it branches at or slightly above ground level into several equally strong stems.

Shu, in Egyptian mythology, the god who supports NUT, the sky. In the myth of creation he separated Nut from her brother GEB, the earth, and maintained their separation. Shu is also the god of air, the space between the earth and sky. See also pp.1902, 1902.

Shubra al-Khaymah, suburb of Cairo, N Egypt, on the E bank of the River Nile. Originally a market town for the fertile Nile delta, Shubra al-Khaymah was developed in the 19th century as an industrial centre. Industries: textiles, glass, ceramics. Pop. (1974) 346,000.

Shubun, Tensho (fl. mid-15th century), Japanese painter and sculptor, considered the greatest ink painter of his time. He was the official painter of the SHOGUN and was a pioneer in the development of monochromatic ink painting.

Shute, Nevil (1899–1960), British novelist, real name Nevil Shute Norway. He wrote more than 20 novels whose fast-moving plots usually have moral themes. They include *Ordeal* (1939), *No Highway* (1948), *A Town Like Alice* (1950), *On the Beach* (1957) and *Trustee from the Tool-room* (1960).

Shuttleworth, Sir Thomas Philips Kay. See KAY-SHUTTLEWORTH, SIR THOMAS PHILLIPS. Si. See SI-KIANG (XI-JIANG).

Sial, in geology, uppermost of the two main rock-classes in the Earth's crusts. Sialic rocks are so called because their main constituents are silicon and aluminium. They make up the material of the continents and overlay the SIMA.

Sialkot, city in E Pakistan approx. 110km (70 miles) N of Lahore, situated between the Chenab River and the Indian border. It is the site of an ancient mausoleum and fortress. Industries: surgical instruments, cutlery, rubber products and ceramics. Pop. (1972) 203,779.

Siam. See THAILAND.

Siamang, large, black, arboreal, diurnal ape of Sumatra and Malaya. More robust than the related GIBBON, it has an inflatable, hairless throat sac, used to produce a booming call. It swings strongly from branch to branch, and eats fruit, leaves and flowers. Length: to 55cm (21in). Family Pongidae; species *Symphalangus syndactylus*. See also p.312.

Siamese cat, exotic short-haired domestic cat breed of disputed origin. An affectionate pet with a distinctive cry, it has a wedge-shaped head, blue almond-shaped eyes, large ears, long slim body and long tapered tail. Small or medium-sized, its albino to fawn coat has darker coloured points on the ears, mask, feet and tail. Recognized varieties: seal point, chocolate point, blue point and lilac point.

Siamese fighting fish. See FIGHTING FISH.

Siamese twins, conjoined, identical twins sometimes sharing organs. Usually fusion is along the trunk or at the head. When both are normal, except for fusion, surgical separation is sometimes possible.

Sian (Xi-an), city in NW China 128km (80 miles) W of the confluence of the Wei and Yellow rivers. As Siking, the city was the western capital of the T'ANG DYNASTY (618–906). Since the MING DYNASTY (1368–1644) Sian has been its official name. Products include cotton, textiles, iron, steel, electrical equipment and chemicals. Pop. (1970 est.) 1,900,000.

Sibelius, Jean Julius Christian (1865–1957), Finnish composer who represents the culmination of NATIONALISM in Finnish music. He wrote chamber music, piano music and organ music, but is best known for his orchestral works, including seven symphonies, a violin concerto (1903–5), and the tone poems *En Saga* (1892) and *Finlandia* (1899). See also p.1583.

Siberechts, Jan (1627–1703), Flemish landscape painter. His early style is displayed in delicate landscapes. About 1672, he settled in England and his style gained in grandeur, often achieved by the use of powerful blues. He painted simple views of country houses such as Longleat. **Siberia** (Sibir'), extensive region of NE Asia, comprising most of Asian USSR, extending from the Ural Mts to the Pacific

Ocean, and from the Arctic Ocean to the Soviet border with China and Mongolia. The region includes areas of tundra, taiga and steppe. Almost half of the area is forested. Siberia is drained by the Ob, Yenisey and Lena rivers. The region can be divided into four geographical areas: the lowlands of the W, the central uplands, the mountains of the S and the NE mountain systems. Two-thirds of the population live in the SW, where industry is concentrated in cities such as Novosibirsk and Omsk. The KUZNETZ Basin has large deposits of coal and iron ore, and there are rich oil and natural gas fields. E Siberia has deposits of gold, mica, diamonds and aluminium. Forestry is an important industry. The fertile black soils of W Siberia favour dairy farming. Wheat, oats, flax, potatoes, rye and sugar beet are grown. The breeding of reindeer, fishing and seal hunting are the chief occupations in the far N of Siberia. The Russian Cossacks conquered Siberia between 1581 and 1644. The Far Eastern territory was held by the Chinese until 1860. Siberia was administered as a colony of the Russian Empire. Mining was developed in the first half of the 19th century, and the region was used as a penal colony and an exile for political prisoners. Settlement on a large scale came after the construction of the TRANS-SIBERIAN RAILWAY. Area: 13,807,020sq km (5,330,896sq miles). Pop. 35,605,000.

Siberian husky, muscular working dog. It has a broad tapering head with erect triangular ears. Its stout body is set on strong, stocky legs. The dense coat, consisting of a downy underlayer and thick outer coat, may be black, white, grey or tan. Height: to 60cm (24in).

Sibley, Antoinette (1939–), British dancer. She joined Sadler's Wells Ballet in 1956 and became a principal dancer in 1960. She has created many new roles and danced all those of the standard repertory.

Sibyl, prophetess of Greek mythology. The Sibyl of CUMAE offered nine books of her prophecies to Tarquinius Superbus of Rome. He refused her price so she began burning the books until he bought the remaining three for the price she had asked for all nine. The temple of Jupiter on the Capitoline Hill housed these Sibylline books, which were consulted only in times of national emergency.

Sica, Vittorio de (1902–74), Italian film director and actor. He first appeared in films in 1932, establishing his reputation with *Gli uomini...che mascalzoni!* (1932). He appeared in nearly 40 films before co-directing *Rose Scarlatte* (1940). With *Sciucchia* (Shoeshine; 1946) he was hailed as a proponent of NEOREALISM; his next film, *Ladri de Biciclette* (Bicycle Thieves; 1948) is his best-remembered. His subsequent films include *Umberto D* (1952) and *Il Giardino dei Finzi-contini* (The Garden of the Finzi-contini; 1970).

Sicily, Italian island in the Mediterranean Sea off the SW tip of the Italian peninsula; with nearby islands it forms an autonomous region of Italy. The largest island in the Mediterranean Sea, Sicily was once part of the mainland, but is now separated from Italy by the narrow Strait of Messina. Mostly mountainous, it has the volcano Mt Etna 3,323m (10,902ft), the highest in Europe. There are fertile valleys in the central plateau. Fishing and farming are the chief occupations, although tourism is extremely important to the economy. The island's principal cities are Palermo and Messina. Strategically situated between Europe and Africa, Sicily has been invaded many times. Area: 25,706sq km (9,925sq miles). Pop. (1980 est.) 4,999,032. See also p.2075.

Sickert, Walter Richard (1860–1942), British painter; founder member of the CAMDEN TOWN GROUP and later the LONDON GROUP. He was influenced by many artists, including JAMES WHISTLER, EDGAR DEGAS and the IMPRESSIONISTS. He painted numerous city scenes in subdued colours.

Sickle-cell anaemia, inheritance of an abnormal HAEMOGLOBIN, occurring mainly in negroes. The haemoglobin is sensitive to a deficiency of oxygen, and red blood cells become rigid and sickle-shaped. If anaemia becomes chronic, there may be

Siddhartha Gautama

Sidewinders hunt their prey early at night when temperatures are lower.

Siena: the Piazza del Campo, where the annual race on horseback takes place.

Siennese School, 13th–16th centuries: St Bartholomew in S. Michele, Valdelsa.

Sierra Madre, Mexico, has the same name as another mountain range in Spain.

bone and kidney abnormalities. See also p.123.

Siddhartha Gautama. See BUDDHA.

Siddons, Sarah (1755–1831), British actress, née KEMBLE. The most successful member of a noted theatre family, she appeared in her father's repertory company. She achieved success in such classic roles as Ophelia, Desdemona and Lady Macbeth.

Side-drum. See SNARE DRUM.

Side-necked turtle, TURTLE, found only in southern continents, which can bend its neck sideways under its shell to hide its head. There are two families: hidden-necked turtles (Pelomedusidae) of Africa and South America, and snake-necked turtles (Chelidae) of Australia and South America. Several species of side-necked turtles inhabit fresh water. Length: 15–80cm (6–23in). See also MATAMATA.

Sidereal period, length of time taken by a planet to make a complete orbit of the Sun (or a satellite of its planet). Thus the sidereal year of Mars is equal to 686.96 Earth days. The sidereal month, week, day, hour, minute and second are appropriate subdivisions of the sidereal year. See also p.927.

Siderite, green, brown or white mineral, iron carbonate (FeCO₃), found in sedimentary iron ores and as vein deposits with other ores. Its crystals are rhombohedral in the hexagonal system and it occurs as massive deposits or in granular form. Hardness 4; s.g. 3.8. See also pp.258–259.

Sidewinder, or **horned rattlesnake**, nocturnal RATTLESNAKE found in deserts of SW USA and Mexico. It has horn-like scales over the eyes and is usually tan with a light pattern. It loops obliquely across the sand, leaving a J-shaped trail. Length: to 75cm (30in). Family Viperidae; species *Crotalus cerastes*.

Sidgwick, Henry (1838–1900), British philosopher and author whose ethical theories were based on UTILITARIANISM; his *Methods of Ethics* (1874) is regarded as the most important ethical work in English. See also p.1892.

Sidi-bel Abbas, city in NW Algeria, on the River Mékerra. Settled by European colonists in the mid-19th century, the modern city developed around an old French town which was the headquarters of the French FOREIGN LEGION until 1962. It is the commercial centre for surrounding vineyards and orchards. Pop. (1966) 86,581.

Sidmouth, Henry Addington, Viscount. See ADDINGTON, HENRY.

Sidney, Algernon (c.1622–83), English politician. He declared for Parliament in the Civil War but took no part in the trial of CHARLES I. After CROMWELL's seizure of absolute power he retired from public life and after the RESTORATION, lived on the continent. He was pardoned by CHARLES II in 1677 and returned to England. In 1683, at the time of the RYE HOUSE PLOT (in which he was thought to be implicated), he was arrested and later executed.

Sidney, Sir Philip (1554–86), English poet, diplomat and courtier. Of distinguished family, he was interested in the sciences and the arts and typifies the Renaissance man. His works include the intricate prose allegory *Arcadia* (1590) and the sonnet sequence *Astrophel and Stella* (1591), which was based on the poetry of PETRARCH. He died gallantly at the Battle of Zutphen, an embodiment of gentlemanly virtue. See also p.1416.

Sidon, one of the chief Phoenician towns, and bitter rival of TYRE, until conquered by Assyria in 677 BC. Thereafter it was subject to repeated conquests until taken by the Turks in the 16th century.

Siebe, Augustus (1788–1872), German engineer who settled in Britain. In 1837 he introduced the helmet diving suit, the first reliable system of supplying compressed air to divers.

Siegbahn, Karl Manne Georg (1886–1978), Swedish physicist who was awarded the 1924 Nobel Prize in physics for research into X-ray SPECTROSCOPY. He improved techniques for measuring the wavelengths of X-rays and used these new methods to discover groups of X-rays both less penetrating and with longer

wavelengths than had been thought possible. This discovery lent support to Niels BOHR's shell theory of atomic structure. In 1924 Siegbahn also proved the similarity between X-rays and visible light by showing that X-rays could be diffracted by a prism.

Siegfried, in ancient Germanic literature, hero figure who corresponds with Sigurd in Norse mythology, although accounts vary. In the story of Brunhild he is slain, but elsewhere is generally victorious in his adventures. He plays a major part in the Germanic epic tale of the *Nibelungenlied* and in WAGNER's operatic adaptation of that tale, *The Ring of the Nibelung*.

Siegtfried Line, system of fortifications built along Germany's western frontier before WWII. In 1944 it provided a brief respite for the retreating German army and prevented a US breakthrough until the spring of 1945.

Siemens family, four German brothers, electrical engineers and industrialists. Ernst Werner von Siemens (1816–92), developed an ELECTROPLATING process in 1842 and in 1849 developed a telegraph system. With Karl (1829–1906) he set up subsidiaries of the family firm in London, Vienna and Paris. Frederick (1826–1904) and William (1823–1883) developed a regenerative furnace that was used extensively in industry. William introduced the Siemen electroplating process to Britain in 1843 and was head of the British branch of the firm, which became known as Siemens brothers in 1865.

Siemens AG, West German industrial corporation that is a major producer of electrical and electronic equipment. In the mid-1970s it employed 350,000 people. **Siena**, city in Tuscany, central Italy; capital of Siena province. It became a commune in the 12th century and reached a peak of prosperity in the 13th century. In the 13th and 14th centuries the city was the centre of the SIENNESE SCHOOL, and has many art treasures. The Palazzo Pubblico (1297–1310), which contains frescoes by Simone Martini and Ambrogio LORENZETTI, and the cathedral (11th–14th centuries) are both fine examples of Italian Gothic architecture. Tourism is the major industry. Pop. 69,000. See also p.1351.

Siennese School, Italian school of painting which flourished between the 13th and 15th centuries. It rivalled the School of Florence although it remained more conservative, combining Byzantine richness of colour and decoration with the grace and elegance of GOTHIC art. Its most important representatives include DUCCIO, SIMONE MARTINI, the LORENZETTI brothers and SASSETTA.

Sienkiewicz, Henryk (1846–1916), Polish novelist and short-story writer who glorified his country's struggle for national existence in the trilogy *Ogniem i Mieczem* (With Fire and Sword; 1884), *Potop* (The Deluge; 1886) and *Pan Michael* (1888). He gained international recognition with *Quo Vadis?* (1896), a story of NERO's Rome, and was awarded the 1905 Nobel Prize in literature.

Sierra Leone, republic on the W coast of Africa. A former British protectorate, it gained independence in 1961. Most of the people are subsistence farmers; the principal cash crops are coffee, palm kernels and cacao. Minerals are, however, of greater importance to the economy; diamonds, iron ore and rutile account for 75% of the nation's exports. The capital is Freetown. Area: 71,740sq km (27,699sq miles). Pop. (1978 est.) 3,470,000. See also p.2133.

Sierra Madre, principal mountain range in Mexico, from the US border to SE Mexico and extending S into Guatemala; it is made up of Sierra Madre Occidental, Sierra Madre Oriental, Sierra Madre de Sur, and the sub-range Sierra Madre del Guatemala. The ranges enclose the central Mexican plateau and have long been a barrier to E–W travel. The highest peak is Orizaba (Giltaltepetl) in the Sierra Madre Oriental, rising to 5,700m (18,700ft). Length of main range: 2,400km (1,500 miles); width: approx. 16–480km (10–300 miles).

Sierra Nevada, chief mountain range in S Spain, extending E to W in the provinces of Granada and Almería. The Sierra Nevada is a source of iron, lead, copper and zinc ores and its southern slopes are intensively cultivated, producing grapes and sugar cane. The highest peak is Mt Mulhacén 3,478m (11,411ft). Length of range: 97km (60 miles).

Sierra Nevada, mountain system in E California, USA, running parallel to the COAST RANGES. In the E it rises steeply from the Great Basin; the W edge slopes more gently down to the Central Valley of California. The snow-fed rivers are used to irrigate the Central Valley and also to provide hydroelectric power. Mount Whitney, 4,418m (14,494ft), is the highest peak. Length: 650km (400 miles).

Siger of Brabant (c.1240–c.1284), Belgian-French philosopher, head of the movement known as Latin Averroism. His belief that something could be true in rational philosophy but false in religious belief was attacked by St Thomas AQUINAS. See also p.1322.

Sight, or vision, faculty by which form, colour, size, movement and distance of objects are perceived. The human EYE works in much the same way as a camera. Light rays are focused on to the RETINA, which contains cells known as RODS and CONES, in which the focused light evokes chemical changes. The cones contain the pigments iodopsin and cyanopsin and they provide colour vision. The rods contain visual purple or rhodopsin, and they differentiate the light into shades. The two chemicals are broken down to form a protein and a vitamin A compound (by an unknown mechanism). This biochemical process stimulates an electrical (nerve) impulse to the brain along the optic nerve, which separates into two parts, each going to either the left or right hemisphere of the BRAIN. Here they join the visual cortex in each hemisphere and are combined to be perceived as a single image. See also pp.136–137.

Sigismund, name of three kings of Poland. Sigismund I (1467–1548), succeeded his brother in 1506. During his reign Polish domains were expanded and LUTHERANISM was introduced. He was succeeded by his son, Sigismund II Augustus (1520–72), last of the JAGELLON kings. He extended Polish rule over Lithuania and Ukraine, tolerated Protestant sects and encouraged the arts. Sigismund III (1566–1632), nephew of Sigismund II, was elected King of Poland in 1587 and was King of Sweden from 1592 to 1604. In his attempt to gain the throne of Russia he took Moscow in 1610 but the Poles were expelled two years later. In spite of such temporary military successes, Polish power declined during his reign. See also p.1406.

Signac, Paul (1863–1935), French painter of the NEO-IMPRESSIONIST style who was first influenced by Claude MONET and later associated with Georges SEURAT and PONTILLISM. He was interested in the science of colour and his vigorous, colourful works include *View of the Port of Marseille* (1905). See also p.1654.

Signalling, in civil and military communications, sending and receiving of visual and electrical messages. SEMAPHORE is a visual method of hand signalling long used by navies but superseded in WWI by signal codes flashed by lamps. RADAR signalling is used in ground control approach systems for guiding aircraft. Signalling by LASER beams is a new method under development which has many possible applications.

Signet, one-sided seal, smaller than the privy seal, three of which are given to each British secretary of state (four to the home secretary) when he takes office. It was first cast in the reign of EDWARD II and bears the royal coat of arms.

Significant digits, digits of a number that express a magnitude to a desired accuracy, the last digit possibly being rounded up or down. Thus 2.87182 to six significant digits is 2.87183; 2.872 has four significant digits.

Sign languages, non-verbal means of personal communication, especially through hand movements. It is commonly

used between people speaking mutually unknown languages. Sign language is extensively used by deaf-mutes as the primary means of communication. Its origins probably lie in the extensions of facial expressions, gestures and other bodily movements which accompany speech.

Signorelli, Luca (c.1441-1523), Italian painter of the Umbrian School and probably a pupil of PIERO DELLA FRANCESCA. He worked in Rome in the 1480s and was probably associated with the Sistine Chapel frescoes with BOTTICELLI and ROSELLI before starting decorations for the Orvieto Cathedral in 1499.

Signoret, Simone (1921-), French stage and film actress. Her stage performances included the Arthur MILLER production of *The Crucible* in 1956. Her film career began in the 1940s and included *Thérèse Raquin* (1953), *The Witches of Salem* (1957), *Room at the Top* (1959), for which she won an Oscar, and *Ship of Fools* (1965).

Signurd, See SIEGFRIED.

Sihanouk, Norodom (1922-), Cambodian king, head of state and politician. Born into the Cambodian royal family, he succeeded to the throne in 1941 but abdicated in 1955 to become Prime Minister after establishing a socialist government. In 1960 he became head of state and in 1965 broke off diplomatic relations with the USA because of its military involvement in Indo-China. In 1970 he was deposed by Lon Nol in a right-wing military coup but returned from exile when the KHMER ROUGE took over in 1975. He finally resigned in 1976. See also pp.1779, 1997.

Sikhism, Indian religion founded in the 16th century by NANAK. Combining HINDU and MUSLIM teachings, the Sikh scripture, the ADI GRANTH, stressed the need for a guru's guidance in seeking the One Lord (the word Sikh means "disciple"). Begun by Nanak as a passive way of life, Sikhism became an activist faith in the late 17th century under GOVIND RAI, its tenth guru. Sikhism today has some six million followers, mainly in the PUNJAB.

Sikh Wars (1845-46, 1848-49), military conflicts between the Sikhs and the British in India. After being overrun by the MOGULS, the Sikhs fled to the mountains; they returned to the Punjab to form a powerful state at Lahore with Ranjit Singh (1780-1839) as maharajah. By 1824 they controlled most of northern India. The British took Lahore in the first Sikh War after a victory at Sobraon (1846) and the Sikhs were finally defeated at Gujrat in Feb. 1849, after which the Punjab was annexed. See also p.1618.

Si-Kiang (Xi-Jiang), longest river of southern China, rising in the YUNNAN highlands. It flows for 1,957km (1,216 miles) to the South China Sea via CANTON and drains a basin of 329,000sq km (127,000sq miles).

Sikkim, state and protectorate in N India, bounded by Tibet, China (N and NE), Bhutan (SE), India (S) and Nepal (W); the capital is Gangtok. The terrain is generally mountainous, rising to Mt Kanchenjunga, 8,591m (28,185ft), the third-highest peak in the world. The original inhabitants of the area are the Lepchas but after the 17th century Sikkim was ruled by the rajas of Tibet. It had come under British influence by 1816. After British withdrawal from India in 1947, Sikkim became independent but political unrest led to the country becoming an Indian protectorate in 1950. It was made an associate state in 1975. Agriculture is the main source of income. Maize, rice, barley, fruits and cardamom are grown. Area: 7,298sq km (2,818sq miles). Pop. (1977 est.) 250,000.

Sikorski, Wladyslaw (1881-1943), Polish general and statesman. He distinguished himself in the defence of Warsaw against the USSR in 1920. In 1922-23 he was Premier, but fled to Paris in 1928 because of his opposition to Pilsudski, who had taken control by a coup in 1926. When Germany overran Poland (1939), Sikorski became Commander-in-Chief of the Free Polish forces and head of the government in exile. In July 1943 he died in an air crash over Gibraltar.

Sikorsky, Igor Ivan (1889-1972), US aeronautical engineer and designer, b. Russia. His first aircraft was a helicopter (1909), which was unsuccessful, and he built and flew the first four-engined aeroplane (1913). He emigrated to the USA in 1919 and four years later established the Sikorsky Aero Engineering Corporation. This was later merged with the United Aircraft Corporation. Sikorsky also designed amphibian planes but from the late 1930s specialized in helicopters; he designed and built the first commercially successful helicopter, which was flown on 14 Sep. 1939. See also pp.520, 521.

Sila, one of the three fundamentals of BUDDHISM. Sila is morality, and together with SAMADHI (concentration) and PANNNA (wisdom) is one basis over which the Buddhist traverses the eightfold path needed to reach NIRVANA. See also p.1915.

Silage, moist, green fodder used to supplement livestock feed. It is made by chopping and storing crops such as hay and alfalfa in airtight silos, where controlled fermentation will preserve the silage for months.

Silas, in the NEW TESTAMENT, early Christian disciple and St PAUL's companion on his missionary travels. He is believed to be the Silvanus referred to by St Paul when writing to the THESSALONIANS (1 and 2 Thess. 1:1).

Silbermann, Gottfried (1683-1753), most eminent member of a German family of keyboard instrument manufacturers. He built 47 ORGANS in Saxony. He also made fine CLAVICHORDS and was the first German to build a PIANO (c.1735).

Silchester, village in Hampshire, near Basingstoke and the site of Calleva Atrabatum, the only Roman town in Britain to have been completely excavated. See also pp.1236, 1236, 1238.

Silence, **Theatre of**, dramatic theory evolved by Jean-Jacques BERNARD in the 1920s. Based on the ideas of MAETERLINCK, it emphasized the dramatic significance of silences and other devices to express the content of a play, where speech alone is insufficient.

Silent Spring (1962), book by US environmentalist Rachel CARSON. It was one of the first books to draw attention to environmental problems, particularly the depletion of wildlife through industrial pollution. It also describes the dangers of commonly used pesticides and fertilizers.

Silenus, in Greek mythology, a companion of BACCHUS. He was represented as a drunk, fat old man who followed the deity while swaying awkwardly on the back of a donkey. He was also revered because he knew the past and could foretell the future, and had taught Bacchus much of his wisdom.

Silesia, historic region in E Europe, mostly lying in SW Poland; the remainder forms parts of Czechoslovakia and Germany. A former Polish province, it passed from Poles to Bohemians in the 14th century, became part of the Hapsburg empire and was seized by Prussia from Austria in 1742. In WWII it was invaded by the USSR, but in 1945 a greater part of the land was returned to Poland by the terms of the POSTSDAM CONFERENCE.

Silhouette, profile of an image in dark colour imposed upon a light ground or the reverse. Named after Etienne de Silhouette (1709-67), a French politician whose hobby was cut-out portraiture, silhouette portraiture as an art form was at its most fashionable during the later 18th and early 19th centuries.

Silica, silicon dioxide, a compound of SILICON and oxygen (SiO₂). Silica is the main constituent of 95% of all rocks and accounts for 59% of the Earth's crust. It is used in the manufacture of glass, ceramics and SILICONES. It is a temperature-resistant material and is frequently of gemstone quality. See also pp.209, 258, 261, 897.

Silicate, in chemistry, salt of silicic acid (HSiO₃). Silicates form a large part of the material of the Earth's crust. Glass is a mixture of silicates with small amounts of other substances. See also SIL; SIMA.

Silicon, common non-metallic element

(symbol Si) of group IVA of the periodic table, discovered by J.J. BERZELIUS in 1824. It is the second most abundant element in the Earth's crust (27.7% by weight), a common constituent of rocks and minerals. It is extensively used in semiconductors (eg in TRANSISTORS). Properties: at. no. 14; at. wt. 28.086; s. g. 2.33 (25°C); m. p. 1,410°C (2,570°F); b. p. 2,355°C (4,271°F); most common isotope Si²⁸ (98.21%); See also SILICA; pp.819, 849, 888-889.

Silicone, group of polymers based on SILICON and having the general formula (R₂SiO)_n, where R is a hydrocarbon radical and n is a whole number. Silicones are inert and stable at high temperatures, and are used in lubricants, adhesives, water repellents and artificial heart valves. See also p.897.

Silicosis, chronic occupational lung disease, caused by prolonged inhalation of SILICA dust in occupations such as mining and metal grinding.

Silk, natural fibre produced by the spinning glands of the larva (caterpillar) of the silkworm, *Bombyx mori*, to make its cocoon. A single cocoon can provide between 600-900m (2,000-3,000ft) of unbroken filament. Chemically, silk is a complex mixture of protein, wax and salts.

Silk, artificial, name given at the beginning of the 20th century to RAYON, a fibre made from cotton or wood-pulp and used for the weaving of lightweight fabrics. See also pp.590-591.

Silk routes, name given to the trade routes leading from China to Asia Minor and Europe in Roman times and particularly in the early Middle Ages. The routes led from Sian, in the Shensi province, China, around the Takla Makan desert to the Pamir mountains then across Afghanistan and on to the Levant. One of the first Europeans known to have reached China by the Silk routes was Marco POLO.

Silk-screen printing, also called serigraphy, in PRINTMAKING, a means of producing a print, generally on paper. A screen composed of a mesh of silk or man-made fibres is stretched over a wooden frame; a design is "stopped out" (painted) on the mesh, using glue, varnish, gelatin or a paper stencil. To make the print, ink is taken, under pressure, across the screen, with a squeegee; the pressure of this pushes the ink through the unstopped areas of the mesh. Several screens may be used to build up a multi-coloured print. Using cylindrical screens with both ink and squeegee inside, it is the most usual method of printing on textiles.

Silkworm, moth CATERPILLAR that feeds chiefly on MULBERRY leaves. The common domesticated *Bombyx mori* is raised commercially for its SILK cocoon. Length: 7.5 cm (3in). Family Bombycidae. See also p.652.

Silky terrier, small Australian dog originally bred from Australian and Yorkshire terriers. It has a wedge-shaped head and small, V-shaped, erect ears. The long body is set on straight, fine-boned legs and the tail is commonly docked. Height: to 25.5cm (10in) at the shoulder; weight to 4.5kg (10lb).

Sill, sheet-like intrusion of IGNEOUS ROCK that is parallel to the bedding or other structure of the surrounding rock. Sill rock is normally medium-grained; basic sills (DOLERITES) are the most common. See also pp.204, 209.

Sillanpää, Frans Emil (1888-1964), Finnish author whose first novel *Life and Sun* (1916) won him immediate fame. *Meek Heritage* (1919) describes the impact of the Finnish civil war of 1918 with sympathy and realism. *Fallen Asleep While Young* (1931) treats the conflicts of the same period, caused by the disintegration of older values. He also wrote many short stories, and received the 1939 Nobel Prize in literature.

Sillimanite, or fibrolite, mineral, aluminium silicate (Al₂SiO₅), found in mica SCHISTS and GNEISS. Its crystals are of the orthorhombic system, usually fibrous masses, and are satin-like or glossy white, brown, green or blue. Pale blue gem variety occurs in Sri Lanka. Hardness 6-7.5; s.g. 3.2.

Sillitoe, Alan (1928-), British novelist and short-story writer whose blunt accounts of the frustrations of working-class life include the novels *Saturday Night and Sunday Morning* (1958) and *The Flame of Life* (1974). He also wrote the collection of short-stories *The Loneliness of the Long-Distance Runner* (1959).

Silo, in agriculture, large container for the storage of SILAGE. Tower silos are built of brick, concrete or steel sheeting, and are usually 10 to 20m (33-65ft) tall and 3 to 6m (10-20ft) in diameter.

Silo, missile, underground bunker reinforced with concrete, in which intercontinental ballistic missiles (ICBMs) are kept aimed and ready for launch. The silo contains all necessary equipment, living quarters and crewmen to service and fire the missile. See also p.563.

Siloe, Diego de (c.1495-1563), Spanish sculptor and architect whose works represent the height of the Spanish Renaissance. After studying sculpture in Florence he returned to Spain and his first masterpiece, the *Escalera Dorada* (Golden Staircase) (1519-23) in the Burgos Cathedral, combines both his sculptural and architectural talents in an exuberant fashion. His major work was the design of the cathedral at Granada.

Silt, mineral particles, produced by the weathering of rock. These particles, varying in size between grains of sand and clay, are carried along in streams and rivers, to be deposited in the gently flowing lower reaches of rivers. When the river changes course or overflows its bank, the silt deposit forms very fertile land. Siltstone (flagstone) is a hard, durable stone which is formed from hardened silt.

Silurian period, third oldest division of the PALAEOZOIC Era, lasting from 430 to 395 million years ago. Marine invertebrates resembled those of Ordovician times, and fragmentary remains show that jawless fishes began to evolve. The earliest land plants (psilopsids) and first land animals (archaic mites and millipedes) developed. Mountains formed in NW Europe. See also pp.268-269.

Silvanus, Roman god associated with the mysterious forces in woodlands; often, like another agricultural god Faunus, represented as a countryman. His character became merged with that of the similarly goatish Greek woodland deity PAN. He was generally worshipped in solitude at a particular tree or group of trees.

Silver, metallic element (symbol Ag) of the second series of TRANSITION ELEMENTS, known from the earliest times. It occurs naturally in argentite (a sulphide) and horn silver (a chloride), and is also obtained as a by-product in the electrolytic refining of copper. It is the most efficient conductor of heat and electricity known and is used in electrical contacts and printed circuits. Other uses include jewellery, decorative ornaments, mirrors and silver salts for photography. The metal does not oxidize in air but quickly tarnishes when exposed to sulphur compounds. Properties: at.no. 47; at.wt. 107.868; s.g. 10.5; m.p. 961.93°C (1,763°F); b.p. 2,212°C (4,104°F); most common isotope Ag¹⁰⁷ (51.82%). See also pp.888, 890-891, 891.

Silver chloride, white crystalline compound, insoluble in water, having the formula AgCl; it occurs naturally as the mineral horn silver. It darkens on exposure to light and for this reason is, like silver bromide, used for making photographic emulsions.

Silverfish, or bristle-tail, primitive, grey, wingless insect found throughout the world. It lives in cool, damp places feeding on starchy materials such as food scraps and paper. It gets its name from the silvery scales that cover its body. Length: 13mm (0.5in). Family Lepismatidae; species *Lepisma saccharinum*. See also p.36.

Silverius, Saint (d.537), Italian pope (r.536-37). Defamed by the Byzantine empress THEODORA, he was banished to Palmaria where he died a martyr. Feast day: 20 June.

Silver point, in art, small sharpened rod of silver used for precise drawings on parchment or paper; the result is a permanent

Silverstone

drawing, the strokes of which are hard to erase. Lead, copper and gold have been used in this way. The technique was popular with 15th-century Flemish artists such as van Eyck, van der Weyden and Memling. Albrecht Dürer used it to great effect in such works as *Self Portrait* (1484). **Silverstone**, motor-racing circuit built on a disused airfield in Northamptonshire, England. The grand prix circuit has a lap course of 4.7 km (2.932 miles).

Silver sulphide, dark-brown solid having the formula Ag_2S ; it occurs naturally as the mineral silver glance. The tarnishing of silverware is due to the formation of silver sulphide, which is produced as the silver reacts with atmospheric sulphur compounds such as sulphur dioxide (SO_2) and hydrogen sulphide (H_2S).

Silvestri, Constantin (1913–69), Romanian conductor. He was the chief conductor of the Bucharest radio orchestra from 1930, and the Bucharest Opera from 1935. He moved to Britain to become the conductor of the Bournemouth Symphony Orchestra in 1961.

Silviculture, cultivation and propagation of shrubs and trees for ornamentation or shade purposes. It includes planting, pruning and harvesting. See also pp.714–717.

Sima, in geology, undermost of the two main rock-classes that make up the Earth's crust, so called because its main constituents are silicon and magnesium. It underlies the *sial* of the continents.

Simenon, Georges (1903–), French novelist. A prolific writer of popular fiction, he wrote well over 500 novels and many more short stories. He became famous for his Maigret detective novels, begun in 1931. He later wrote more ambitious novels, including *The Stain on the Snow* (1948).

Simeon Stylites, Saint (c.390–459), first of the stylites or pillar ascetics. Born in Sisan, Syria, he spent some years as a monk and hermit before mounting a pillar on which he lived until his death.

Simile, figure of speech comparing two things. It differs from ordinary comparisons in that it compares, for effect, things usually considered dissimilar and sharing only one common characteristic, as "fleece as white as snow". A simile is most often recognized by its use of "like" or "as".

Simala, hill station in the PUNJAB, India, situated in the Himalayas. It came under British rule after the GURKHA War of 1814–16. From 1865 it became the summer capital of the British government of India, because of its cool climate. When India gained independence in 1947, the practice of maintaining a summer capital was abandoned. See also p.1619.

Simmel, Georg (1858–1918), German sociologist and philosopher. He was influential in establishing sociology in Germany. His works include *Sociology* (1908) and *The Philosophy of Money* (1900). See also p.1841.

Simmel, Lambert (c.1475–1535), English impostor. The son of a baker, he was tutored by a priest to impersonate Richard, Duke of YORK, younger son of EDWARD IV. Richard and his elder brother EDWARD V had in fact disappeared and were probably murdered in 1483. The plan was changed and in 1487 Simmel impersonated the Earl of Warwick, the imprisoned nephew of Edward IV. Simmel was accepted as Edward VI by the Irish nobility, and became the focus of a rebellion under Lincoln and Lovell against Henry VII. The rebels invaded England but were defeated at Stoke in 1487. See also p.1400.

Simon and Garfunkel, us singers (Paul Simon and Arthur Garfunkel). Both were born in 1942 and they sang together from their early teens. In 1966 their *Sound of Silence* sold more than a million copies and established them as among the most successful recording artists. Their subsequent recordings include *Scarborough Fair* (1966), *Bookends* (1968) and *Bridge over Troubled Water* (1970).

Simonides (c.556–c.468 BC), Greek poet. He developed the *epinikion* into a choral composition, produced many epigrams of

high quality and claimed that poetry is verbal painting. See also p.1208.

Simonstown, town in Cape Province, s South Africa, on the shore of False Bay 32 km (20 miles) s of Cape Town. It was founded by the Dutch in 1841 as a naval base; it is now a naval depot for the South African navy. The principal industries are shipbuilding and repair and fishing. Pop. (1970) 12,091.

Simony, trading in sacred offices. The name comes from a NEW TESTAMENT figure. Simon (called a magician) who was rebuked for trying to buy the power of conferring the gifts of the HOLY GHOST (Acts of the Apostles 8:18–24). In the MIDDLE AGES, simony came to mean buying and selling church benefices. The practice was denounced at various times by the papacy and was one of the chief targets of the attacks of the Protestant reformers; it gradually disappeared.

Simple harmonic motion (shm), periodic motion about a point. A pendulum moves in shm as does a weight, hung on a spring, which bobs up and down. It is defined as the motion of a point which oscillates about a fixed point such that the restoring force F (the force which maintains the oscillations) is proportional to the distance x of the moving point from the fixed point. Thus $F = -kx$, where k is a constant of proportionality and the minus sign denotes that the restoring force is opposite in direction to the displacement x . As the moving point passes through the fixed point its ACCELERATION is zero. Its VELOCITY, however, is a maximum. At the maximum displacement the velocity is zero and the acceleration is a maximum. See also NEWTON'S LAWS; pp.828–829, 828.

Simple multiple proportions, law of, law announced in 1803 by John DALTON. It states that when two elements combine to form more than one compound, the fixed weight of one element that always combines with weights of the other are in ratios of small whole numbers. It was a powerful argument for Dalton's atomic theory.

Simplicius, Saint (d.483), pope from 468 to 483. During his pontificate there occurred the first of the schisms over the MONOPHYSITE CONTROVERSY and the last emperor of the w Roman Empire was deposed. Simplicius upheld Chalcedonian orthodoxy against the ideas of the Emperor ZENO. Feast: 2 March.

Simplon Pass, in Switzerland, pass between the Pennine and Lepontine Alps; it reaches an altitude of 2,009 m (6,590 ft). In 1906, the longest transport tunnel in the world was opened beneath the pass to connect Brig, Switzerland with Iselle, Italy. Surveyed by Alfred Brandt, it runs for 19.8 km (12.3 miles) and required a new tunnelling method to overcome problems created by working at depths of as much as 1.6 km (1 mile).

Simpson, Sir James Young (1811–70), Scottish physician and obstetrician. He was noted for the discovery of CHLOROFORM as an anaesthetic (1847) and first used it on himself and his assistants to test its efficiency. See also p.1096.

Simpson, Norman Frederick (1919–), British dramatist whose plays such as *A Resounding Tinkle* (1957) and *One Way Pendulum* (1959) are noted for the way they present fantasy within a framework of satire and social comment.

Simpson, Orenthal James (1947–), us football player. He won the 1968 Heisman Trophy at the University of Southern California as a running back. In 1969 he joined Buffalo in the National Football League and set a single season rushing record in 1973 with 1,831 m (2,003 yards).

Simpson, Thomas ("Tommy") (1937–67), British road-racing cyclist. In 1962 he became the first Briton to wear the TOUR DE FRANCE yellow jersey. He won the world road-race championship in 1965. He collapsed and died during the 1967 Tour de France, probably from a heart attack caused by a combination of heat, the thin mountain air and drugs he had taken to improve his performance.

Simpson, Mrs Wallis Warfield Spencer, Duchess of Windsor (1896–), wife of Prince Edward, Duke of Windsor, the former King EDWARD VIII of Britain, b. USA.

In Oct. 1936 she divorced her second husband, Ernest Simpson. Her relationship with Edward VIII caused controversy that resulted in Edward's ABDICATION in Dec. 1936. They married in June 1937 and lived abroad, chiefly in France. See also p.1707.

Simultaneous equations, two or more equations that can be manipulated to give common solutions. In the simultaneous equations $x + 10y = 25$ and $x + y = 7$, the problem is to find values of x and y . This can be done by substituting the value of x from one equation into the other to give a single equation in y , which can then be solved. Simultaneous equations can be solved only if the number of equations equals the number of unknowns. See also pp.784–785.

Sin, in ASSYRIO-BABYLONIAN MYTHOLOGY, the moon god, father of SHAMASH and ISHTAR. He is depicted as an old man with a long beard who sailed the crescent moon as a boat across the sky. Sin measured time and served as adviser to the gods.

Sin, act in thought, word or deed that is contrary to the ideals of righteousness propounded by Christianity. It is considered to estrange the sinner from God. Reconciliation is attained through PENITENCE, Penance and GRACE, although the New Testament states that a sin against the Holy Ghost will never be forgiven. See also p.1913.

Sinai Peninsula, peninsula constituting a protectorate of Egypt, bounded by the Gulf of Suez and the Suez Canal (w), the Gulf of Aqaba and the Negev Desert of Israel (e), the Mediterranean Sea (n) and the Red Sea (s); the capital is Al-'Arish. It is a barren plateau region sandy in the n, rising to granite ridges in the s, inhabited chiefly by nomads. The peninsula is the site of Jabal Musa or Mt Sinai. The monastery of St Catherine was established there c. AD 250, and an early New Testament manuscript was discovered in the monastery in 1844. The Sinai Peninsula was the scene of fighting in the ARAB-ISRAELI WARS of 1956, 1967 and 1973. Area: 60,715 sq km (23,442 sq miles). Pop. 140,000.

Sinān (c.1489–1588), considered one of the greatest Islamic architects. He worked under Suleiman I and other Ottoman sultans, and his huge number of projects included 79 mosques and 34 palaces. His masterpieces include the mosques of Suleiman I at Istanbul (1550–57) and of Selim at Edirne (1568–74).

Sinanthropus pekinensis. See PEKING MAN. **Sinatra, Francis Albert ("Frank")** (1915–), us popular singer and actor. He sang with the bands of Harry James and Tommy Dorsey and became immensely popular with teenagers of the 1940s for such songs as *Night and Day*. In the 1950s he became a film actor and won an OSCAR for a supporting role in *From Here to Eternity* (1953). See also p.1757.

Sinclair, Keith (1922–), New Zealand author and poet. His works include *A Time to Embrace* (1963), a volume of poetry, and *A History of New Zealand* (1959).

Sinclair, Upton (1878–1968), us novelist and social reformer. *The Jungle* (1906), a novel about the Chicago meat-packing industry, led to the reform of food inspection laws. His novels include *The Money Changers* (1908), *King Coal* (1917), about the Colorado miners' strikes, and *Dragon's Teeth* (1942), for which he won the Pulitzer Prize.

Sind, province in s Pakistan, bounded by India (e and s) and the Arabian Sea (sw). It largely consists of the alluvial plain and delta of the River Indus. The region is hot and arid and farming depends on irrigation; the SUKKUR and Kotri barrages are the main schemes. Wheat, rice, millet, cotton, sugarcane, fruits and tobacco are grown. Mineral resources include gypsum and limestone. Hyderabad is the principal industrial city. Fishing is important along the coast. The region was taken by the British in 1843, and held until 1937. Karachi is the capital. Area: 152,966 sq km (58,983 sq miles). Pop. 13,965,000.

Sine, ratio of the length of the side opposite to an acute angle to the length of the

hypotenuse in a right-angled triangle. The sine of angle A is usually abbreviated to "sin A ". See also p.796.

Sine die (without day), in law, adjournment of a case by a court to a date that is to be fixed in the future.

Singapore, island nation in se Asia at the s end of the Malay Peninsula, made up of Singapore island and 60 smaller islands. Formerly a British colony, it became part of Malaysia in 1963 and an independent republic two years later. Vegetables, tobacco, fruits, rubber and coconuts are the chief agricultural products. Industries include shipbuilding, shipping, steel, tourism and food processing. Singapore city is the capital: one of the Far East's chief commercial centres. Area: 580 sq km (224 sq miles). Pop. (1980 est.) 2,390,800. See also p.2134.

Singer, Isaac Bashevis (1904–), us novelist and short story writer, b. Poland, who emigrated to the USA in 1935. His works, written in Yiddish, include *The Family Moskat* (1950) and *The Slave* (1962). In 1978 he was awarded the Nobel prize for literature.

Singer, Isaac Merrit (1811–1875), us manufacturer, inventor of a rock drill (1839) and in 1852 of a single-thread sewing machine. Singer's machine allowed continuous and curved stitching; it was immediately popular and ensured the financial success of his Singer Manufacturing Company.

Sing Sing, famous us state prison, noted for its stern discipline, in Ossining, New York. Prisoners sentenced to death and awaiting execution are often detained there. In 1969 the prison was renamed the Ossining Correctional Facility.

Singspiel, German vernacular form of opera similar to OPERA BUFFA but with spoken dialogue. Primarily an 18th-century form, several operas by Mozart, including the *Abduction From the Seraglio* (1782) and *The Magic Flute* (1791), strengthened the status of Singspiel.

Sinhalese, people who make up the largest ethnic group of Sri Lanka (Ceylon). They speak an INDO-EUROPEAN language and practise Theravāda Buddhism.

Sink hole, hollow or hole in LIMESTONE formations which extends from the surface all or part of the way down to underground channels and caverns. Such holes are formed by water dissolving the limestone.

Sinkiang-Uigur (Xinjiang Weiwei Zizhiqu), autonomous region in nw China, bordered by the USSR (nw), Mongolia (ne), Afghanistan and Jammu and Kashmir (sw) and Tibet (s); the capital is Urumchi (Wulumuqi). The region includes the Dzungarian Basin to the e and the Tarim basin to the w. Cotton, wheat, maize, rice, millet, vegetables and fruit are grown; livestock rearing, particularly sheep, is also important. Mineral deposits include oil, copper, zinc, gold and silver. Iron and steel, chemicals, textiles and food processing are the main industries. Area: 1,647,435 sq km (636,075 sq miles). Pop. 8,000,000.

Sinn Féin, Irish nationalist party which developed out of the Society of Gaelic founded in 1902 by Arthur GRIFFITH. Its aim to achieve total Irish independence was not satisfied with the establishment of the Irish Free State in 1921. It has sometimes been regarded as the political wing of the IRA. See also p.1643.

Sino-Japanese War (1894–95), military conflict between China and Japan over control of Korea. Japan declared war on 1 Aug. 1894 and her better-equipped forces had an overwhelming advantage. After crippling the Chinese fleet at the mouth of the Yalu River (17 Sept. 1894), Japanese forces captured Port Arthur and Weihaiwei, and the remainder of the Chinese fleet. The war ended with the signing of the Treaty of Shimonoseki (17 April 1895), under the terms of which China ceded territory to Japan and agreed to pay a huge indemnity.

Sintering, process in powder METALLURGY in which compressed particles are heated at temperatures below the melting point of the metal. This forms the particles into a coherent solid body. Glass and ceramics

are non-metals that may be sintered. **Sinus**, hollow space or cavity, usually in bone. Most often the term refers to the paranasal sinus, any of the four sets of cavities in the skull near the nose. Their function is not fully understood, except that they reduce the weight of bone in the skull.

Sinusitis, acute or chronic disorder involving inflammation of the paranasal sinuses. Acute sinusitis, causing pain and nasal obstruction, may occur after a cold, a secondary bacterial infection, improper breathing while swimming or sudden changes in barometric pressure. Chronic sinusitis causes obstructed breathing and loss of the sense of smell.

Sioux, or **Dakota**, group of seven North American Indian tribes inhabiting Minnesota, Nebraska, North and South Dakota and Montana. Their first contact with Europeans occurred in 1640. The tribes concluded several treaties with the US government during the 19th century and finally agreed in 1867 to settle on a reservation in sw Dakota. The discovery of gold in the Black Hills and the subsequent rush of prospectors brought great resistance from Sioux chiefs such as SITTING BULL and CRAZY HORSE. The last confrontation resulted in the massacre of more than 200 Sioux at the battle of Wounded Knee in 1890. The Sioux culture was typical of the GREAT PLAINS Indians. They hunted bison (buffalo) and practised the Sun Dance. All seven tribes speak a language of the Hokan-Siouan family of languages. Today the Sioux live on reservations and number more than 40,000. In 1973 approximately 200 Indians, most of them Sioux, occupied the settlement at Wounded Knee for 69 days and demanded a government investigation of Indian conditions.

Siphon, principle by which a liquid is raised from a container at one level and delivered to a lower level; also any inverted U-shaped tube used for this purpose. The tube is filled with the liquid, and one end of it is placed below the surface of the liquid in the container. When the other end hangs below the level of the surface (outside the container) liquid flows out due to the imbalance of atmospheric pressure. See also pp.830-831.

Siphonaptera. See FLEA.

Siqueiros, David Alfaro (1896-1974), Mexican painter. He was an active socialist, and viewed art as a vehicle for social and political expression. He is best known for his murals of revolutionary themes.

Siren, aquatic, tailed AMPHIBIAN of North America. The adult is neotenic (reaches sexual maturity while retaining the larval physical form). These eel-like animals have external gills, tiny forelegs and minute eyes. They have no hind legs. Length: to 92cm (36in). Family Sirenidae. See also SALAMANDER.

Sirenia, order of plant-eating aquatic mammals with paddlelike flippers for forelimbs, no hind limbs, and a horizontally flattened tail fin. The four species include the DUGONG (family Dugongidae) and three MANATEES (family Trichechidae). Length: 2-6m (7-20ft); weight: to 356kg (790lb). See also p.87.

Sirens, The, in Greek mythology, three sea nymphs with women's heads and birds' bodies. They lived on a rocky island near the straits of SCYLLA AND CHARYBDIS and their beautiful singing was believed to attract sailors on to the rocks. ODYSSEUS escaped shipwreck by blocking his sailors' ears with wax and tying himself to the mast so that he might hear their song.

Sir Gawain and the Green Knight, 14th-century northern English poem written in long, alliterative stanzas each ended by a rhyming quatrain. Its anonymous author is referred to as the Gawain poet.

Siricius, Saint (c.334-99), Roman Catholic pope elected in 384. He began a new stage in papal authority and ensured the continued separation of the Church in ILLYRIA from Constantinople.

Sirius, or **Alpha Canis Majoris**, brightest star visible from Earth, in the northern constellation of Canis Major. Sirius is a white MAIN SEQUENCE binary star whose

brightness results more from its relative closeness to the SOLAR SYSTEM than from its power. Characteristics: apparent mag. -1.47; absolute mag. 8.7; spectral type A1; distance 8.7 light-years. See also pp.921, 978, 978, 996, 1014, 1014, 1018, 1018, 1020-1021, 1020-1021.

Sirocco, wind often arising over the Sahara Desert, picking up moisture from the Mediterranean Sea, and bringing hot, rainy weather to the Mediterranean coast of Europe.

Sisal, or **sisal hemp**, fibre plant native to Central America and cultivated in Mexico, Java, E Africa and the Bahamas. Fibres from the leaves are used for rope, matting and binder twine. Fibre length: 1-1.5m (3-5ft). Family Agavaceae; species *Agave sisalana*. See also AGAVE; p.712.

Sisinnius (r.708), pope, a Syrian, who reigned for less than a month.

Siskin, FINCH that nests in evergreen woods in Europe and in cooler climates throughout the world. It has muted green plumage. The male is marked with yellow and black; the female is greyer with white banded underparts. Length 12cm (4.8in). Species *Carduelis spinus*.

Sisley, Alfred (1839-99), Paris-born painter of English parentage. A leading IMPRESSIONIST, he spent most of his life in France. He was almost exclusively a landscape painter, especially of the countryside around Paris. His paintings include *Flood at Port Marly* (1876) and *Effect of Snow* (1874). See also pp.1596-1597.

Sistine Chapel, private chapel of the popes in the Vatican. It was built between 1473 and 1481 for SIXTUS IV; its ceiling and altar wall were decorated with frescoes of Old Testament scenes by MICHELANGELO. The side walls of the chapel are decorated with frescoes by PERUGINO, Pinturicchio, BOTTICELLI and GHIRLANDAIO. See also p.1388.

Sistrum, simple ancient percussion instrument, consisting of a clay, metal or wood frame, across which crossbars were set, hung with small metal discs which would jingle when the instrument was shaken.

Sisyphus, in Greek mythology, King of Corinth. He was punished for trying to trick Death by being condemned to work for eternity, pushing a huge rock to the top of a steep hill. The rock always rolled back to the base of the hill when Sisyphus reached the summit.

Sita, in Hindu mythology, the wife of RAMA and the embodiment of purity and devotion. After being kidnapped by RAVANA, her faithfulness was challenged by her husband and she walked into fire, emerging unburned as proof of her purity. See also VEDAS.

Sitar, Indian stringed musical instrument with a gourd-like body and long neck. Similar to the lute, it has three to seven gut strings, tuned in fourths or fifths, and a lower course of 12 wire strings.

Sitatunga, or **marshbuck**, ANTELOPE of central and w Africa, closely related to the RUSHBUCK. It is medium-sized with long hoofs, an adaptation for life in marshes. Height: 82-106cm (32-42in). Species *Tragelaphus spekii*. See also p.330.

Sitter, Willem de (1872-1934), Dutch astronomer who, by applying the theory of relativity to the universe, deduced that it is expanding. This was confirmed by Edwin P. HUBBLE's observation in 1929 of the DOPPLER Shift in the spectra of distant stars.

Sitting Bull, Chief (c.1831-90), American Indian chief of the Sioux who in 1876 defeated a punitive force led by Gen. George CUSTER's 7th Cavalry detachment at Little Big Horn. He led his men to Canada in 1877, but finally surrendered to the Army in 1881. He appeared in Buffalo Bill Cody's Wild West Show (1885). He was killed during Indian unrest on the Standing Rock Reservation. See also p.1627.

Sitwell, name of English literary family, Dame Edith (1887-1964) and her brothers Sir Osbert (1892-1969) and Sacheverell (1897-). Edith was best known as a poet. Her collected verse was published in 1954. She also wrote a biography of POPE (1930), several works of

criticism and the famous *English Eccentrics* (1933). Osbert wrote verse, stories and novels, but he is famous chiefly for his five volumes of family reminiscences, especially *Left Hand, Right Hand* (1944). Sacheverell made his reputation as an art critic - *Southern Baroque Art* (1924), *German Baroque Art* (1927) and *The Gothick North* (1929). He also wrote biographies of MOZART and LISZT.

SI units, internationally agreed system of units, derived from the Metre Kilogramme Second (mks) system. Systeme International (si) units are now used for many scientific purposes and have replaced the Foot Pound Second (fps) and Centimetre Gramme Second (cgs) systems. The seven basic units are: the metre (m), kilogramme (kg), second (s), ampere (A), kelvin (K), mole (mol) and candela (cd).

Siva. See SHIVA.

Six, Les, collective name for six French composers who were organized as a group by Jean COCTEAU in 1917. The members were Georges AURIC, Louis DUREY, Arthur HONEGGER, Darius MILHAUD, Francis POULENC and Germaine TAILLEFERRE. The grouping was somewhat artificial.

Six, The. See EEC.

Six Articles (1539), articles imposed on the Church by HENRY VIII to prevent the spread of the practices and doctrines of PROTESTANTISM. TRANSUBSTANTIATION and communion in one kind were maintained, clerical celibacy and monastic vows were upheld and private Masses and auricular confessions were defended.

Six Day War, war between Israel and its Arab neighbours, 5-10 June 1967. It began with surprise Israeli attacks on the airfields of Egypt, Jordan, Syria and Iraq. The immediate cause was Israeli concern at Egypt's closure of the Strait of Tiran and her increasing war hysteria under the leadership of President NASSER. The war resulted in victory for the Israelis, who gained control of the Old City of Jerusalem, Jordanian territory w of the River Jordan, the Golan Heights and the Sinai Peninsula including the Gaza Strip. See also p.1783.

Six Dynasties, governments in s China from 220 to 589 with their capital at Nanking, (the Toba TARTARS ruled in the North). In a time of political discord, South China nevertheless developed new forms of literary expression and a sophisticated court life. Gunpowder was invented during this period and the tea plant introduced.

Six Nations, association of North American Indians, after it was joined by the Tuscarora between 1720 and 1727. The original members, known as the Five Nations, were the Cayuga, ONEIDA, Onondaga, MOHAWK and Seneca.

Sixtus, the name of five popes, the most important of whom were the last two. Sixtus IV (1414-84; r.1471-84), b. Francesco della Rovere, was a famed patron of the arts and pursued an ambitious territorial policy. He built the SISTINE CHAPEL and opened the VATICAN Library to scholars. His nepotism, however, led to many abuses and the moral authority of the papacy declined during his pontificate. Sixtus V (1521-90; r.1585-90), b. Felice Peretti, was an inquisitor under Pope PAUL IV. As Pope, he repressed licence, reformed the administration of the law and improved church finances.

Size, dilute mixture of glue, or resin, used to prepare a canvas for painting. It reduces the absorbency of the canvas and protects it from the corrosive action of oil paints.

Skagerrak, strait between Norway and Denmark. With the Kattegat, the strait connects the North Sea and the Atlantic Ocean. Shallow on the Danish coast, the Skagerrak deepens towards Norway. Length: 204km (130 miles); width: 113km (70 miles).

Skald, Icelandic bard who was an exponent of oral court poetry of the 9th to the 13th century. The style originated in Norway but was developed by skalds, the greatest of whom was probably Egill Skallagrimsson. The metres of the skaldic style are strictly syllabic; the content is subjective and descriptive. Of the 100 verse

Alfred Sisley's *Church of Morelet* is in the Musée des Beaux Arts, Rouen.

Sitar; the lower strings vibrate when the main strings are played.

Sitting Bull told Indians to fight to kill, not merely to show bravery.

Skating: some positions and equipment used in this exciting winter sport.

Skanda

forms, the court metre (which uses alliteration and internal rhyme) was most often employed.

Skanda. See KARTTIKĒYA.

Skate, flattened fish belonging to the RAY family, living mainly in shallow temperate and tropical waters. The pectoral fins are greatly expanded to form wing-like flaps. In Europe, skate is a commercially valuable fish. Length: to about 2.5m (8ft). Family Rajidae. See also p.744.

Skating. See ICE SKATING; ROLLER SKATING. **Skat,** **Walter William** (1835–1912), British literary scholar and philologist. Although chiefly famous for his editions of early English writers, such as *Complete Works of Geoffrey Chaucer* (7 vols, 1894–97) and *Piers Plowman* (1866), he also published many etymological works, including *The English Etymological Dictionary* (1879–82).

Skeet shooting. See CLAY PIGEON SHOOTING.

Skeletal muscle, in human beings and other mammals, one of the three types of muscle; it comprises the bulk of the trunk and limbs, contributing strength and mobility. Mostly attached to bone, either directly or through TENDONS, it includes flexors to bend joints and extensors to straighten them. See also INVOLUNTARY MUSCLE; pp.148, 148–149.

Skeleton, bony connective tissue that makes up the general framework of the body. It supports and protects the soft inner organs; serves as a place of attachment for muscles, ligaments, and other structures; provides storage for some minerals; and produces some blood cells. In man the skeleton is divided into two parts. The axial skeleton, or main axis of the body, includes the cranium (skull); the spinal, or vertebral, column; the sternum (breastbone) and the ribs. The appendicular skeleton, serving for the attachment of appendages, includes the shoulder girdle and arm bones and the pelvic, or hip, girdle and leg bones. See also pp.146–147.

Skelton, John (c.1460–1529), English poet who was originally HENRY VIII's tutor and later a parson. He wrote satires on the court, the clergy and Cardinal Wolsey, written in forms he himself devised, called Skeltonics, consisting of short lines and insistent rhymes.

Sketches by Boz, series of articles by Charles DICKENS, published originally in the *Monthly Magazine*, the *Evening Chronicle* and other periodicals and published collectively between 1836 and 1837 with illustrations by CRUICKSHANK. They are satirical essays on English life.

Skibob racing. See SKIING.

Skiffle, British musical movement of 1956–58, led by Lonnie Donegan and Johnny Duncan.

Skiing, winter sport in which the participant moves over snow using skis (up to 2.4m (8ft) long) attached to his boots and holding poles to assist balance and movement on the level. Skiing, which also has a utilitarian function, is the national sport of Norway, where it began as a competitive sport in the 19th century. Competition includes four events: Nordic jumping and cross-country, and Alpine downhill and slalom racing. In ski jumping, each participant leaps twice from a specially designed jump slope and scores points on distance and style. Downhill racing is a timed descent, and a slalom course is marked by poles between which the skier must race. The most gruelling event is cross-country, which is over a course 15–50km (9–31 miles) long for men and 5–10km (3.1–6.2 miles) for women. Women compete in all events except jumping. The sport is governed by the Fédération Internationale de Ski, founded in 1924, the same year as the first Winter Olympic Games were held at Chamonix, France.

Skiing, water, sport in which the participant, balancing on one or two skis, is towed by a motor boat and planes on the surface of the water at speeds of up to 80km/h (50mph). The first world championships were held in 1949. Competition takes place in three events: the slalom, in which a course of six diagonally-placed buoys must be negotiated; jumping, over a

6m (20ft) ramp; and figures or tricks in which the skier gains points with a range of freestyle movements.

Ski jumping, winter sport in which skiers gather speed down a ramp and launch themselves through the air to land on the snow below. Points are awarded for distance and style, the latter decided by a panel of judges. World and Olympic Games titles are decided on jumps from heights of 70m and 90m. Only men compete in the Olympic event.

Ski kiting, sport that has developed from water skiing. The participant is towed on water skis while strapped to the framework of a large kite that lifts the skier into the air. Speeds of more than 48 km/h (30mph) can be attained. Ski kiting originated in Australia and the USA in the early 1950s.

Skimmer, any of several species of nocturnal shorebirds that frequent warm seas, rivers and lakes and use their long, knife-like bills to "skim" the water for food. Family Rhynchopidae; genus *Rhynchops*. **Skin,** continuous, tough, elastic and sensitive covering of the body, serving many functions. The skin protects the body from mechanical injury, water loss and ultraviolet rays. Nerve endings in the skin provide the sensations of touch, warmth, cold and pain, each perceived at discrete points on the surface. It helps to regulate body temperature through sweating, regulates moisture loss and keeps itself smooth and pliable with an oily secretion from SEBACEOUS GLANDS.

Structurally the skin consists of two main layers: an outer layer (epidermis) and an inner layer (dermis, corium or cutis vera). The epidermis is itself composed of several layers: the stratum corneum, a horny layer made of closely packed dead cells constantly shed as microscopic scales; the stratum lucidum, a layer of flattened cells fixed together to form a kind of membrane; the stratum granulosum in which the cells are changing from soft, living cells to dead, horny cells; the Malpighian layer, living cell layers which contain pigment and nerve fibrils and which divide to replace outer shed layers. The dermis contains dense networks of connective tissue, blood vessels, nerves, glands and hair follicles. See also p.150.

Skin diving, water sport in which minimum equipment (a mask, snorkel, fins and sometimes a wet suit) is used. As with SCUBA DIVING, one of the main interests in the sport is the exploration of marine life.

Skink, common name for any of more than 600 species of lizards of tropical and temperate regions. They have cylindrical bodies, cone-shaped heads and tapering tails. They live in varying habitats and eat vegetation, insects and small invertebrates. Length: to 66cm (26in). Family Scincidae. See also p.69.

Skinner, Burrhus Fredric (1904–), US psychologist. A key figure in psychological behaviourism, he developed the concept of operant conditioning (the control of behaviour by its consequences or reinforcements). See also pp.1119, 1119, 1125–1126.

Skinner box, device used in psychological studies of operant conditioning, named after B. F. SKINNER, its inventor. An animal, often a rat, placed in the box learns to press a lever in order to get food or water. The device allows precise control of learning conditions and measurement of changes occurring in behaviour during the learning process. See also p.1119.

Skipjack, name of several fishes, not closely related, that swim near or on the surface. Best known is the skipjack TUNA, *Katsuwonus pelamis*. Length: 1m (39in).

Skipjack. See CLICK-BEETLE.

Skittles, indoor bowling game, popular in Britain and other countries of Western Europe. It is usually played by two teams on an alley with nine pins (skittles) and a hard flattened ball or cheese-shaped missile. Each player is allowed three tries to knock down the nine pins. A perfect score on each turn (chalk) is 27 points. The highest aggregate score at the end of a predetermined number of chalks wins.

Skoblikova, Lydia (1939–), Soviet ice speed-skater. In 1964, she became the

first person to win four gold medals in one Winter Olympic Games. She won two Olympic golds in 1960, and in seven world championships (1959–64 and 1967) was awarded 12 titles, including the overall titles of 1963 and 1964.

Skopje, city in s Yugoslavia on the River Vardar. It was founded in Roman times, became the capital of the Serbian empire in the 14th century, fell to the Ottoman Turks in 1392 and was incorporated into Yugoslavia in 1918. Most of the city was destroyed in an earthquake in 1963; many buildings date from after that time. Products include metals, textiles, chemicals and glassware. Pop. (1971) 312,980.

Skua, any of several species of dark-coloured, swift-flying shorebirds that pirate food from other birds in flight, but also prey on mice, voles and penguin chicks. It nests in colonies on the tundra, but migrates to the oceans in winter. Length: to 56cm (23in). Family Stercorariidae. See also pp.323, 325.

Skull, skeleton of the head. It consists of the CRANIUM, or brain case, which in man is made up of eight bones, and the facial bones, 14 irregularly shaped bones that support and protect the eyes, nose and mouth. See also pp.146–147.

Skunk, nocturnal omnivorous mammal that lives in the USA, Central and South America. It has powerful anal scent glands which eject a foul-smelling liquid, used in defence. It has a small head and a slender, thick-furred body with short legs and a large bushy tail. The coat is black with bold white warning markings along the back. The most common species is the striped skunk, *Mephitis mephitis*. Length: to 38cm (15in); weight: 4.5kg (10lb). Family Mustelidae.

Skydiving. See FREE-FALL PARACHUTING.

Skye, largest island in the Inner Hebrides, off the NW coast of Scotland; the chief town is Portree. It has an irregular coastline, a number of lochs and the Cuillin Hills to the SE; its spectacular scenery makes it a popular tourist resort. Other occupations include livestock raising, weaving and fishing. Area: 1,735sq km (670sq miles). Pop. (1971) 7,372.

Skye terrier, small dog, originally bred in the Isle of Skye, Scotland, in the 16th century. It has a large head with erect or pendulous ears. The body is long and low, with short legs and a long tail. The straight, flat coat is long and parts from head to tail; it may be blue, grey, fawn or cream. Height: to 25.5cm (10in) at the shoulder; weight: 11kg (24lb).

Skyjacking. See HUACKING.

Skylab, US programme of manned orbiting space laboratories. In the mid-1970s three 3-man Skylab crews spent a total of 84 days in space. Further missions using a space shuttle took place in the 1980s. See also SPACE SHUTTLE; SPACE STATION; pp.1026–1041.

Skyllark. See LARK.

Skyros, largest of the N Sporades group of islands belonging to Greece, situated in the Aegean Sea. Rupert BROOKE, the British poet, is buried there. Products include cereals, figs, citrus fruits, olive oil and cheese. Marble, chromite and iron ore are mined. Area: 210sq km (81sq miles). Pop. (1971) 2,352.

Skyscraper, very tall building, generally constructed on a steel skeleton, for commercial or domestic use. The invention of practical electric lifts and the lack of space in central cities spurred construction of taller buildings in the mid-19th century. The first were of all masonry construction. Next came cage construction – the building's metal framework supported the floors, while the masonry walls supported themselves. True skyscraper construction, in which the metal skeleton supported both floors and walls, was introduced in the Home Insurance Building in Chicago (1885). Many modern skyscrapers have riveted metal skeletons and the walls merely enclose the internal space. The tallest skyscraper existing in 1975 was Chicago's Sears Roebuck Tower, with 110 storeys and 443m (1,454ft) tall (excluding the TV aerial). See also pp.550, 551, 1688, 1689.

Slade, Julian (1930–), British composer

and dramatist. With Dorothy Reynolds he wrote the book, lyrics and music for *Salad Days* (1954) which ran for 2,329 performances, the third longest run in the British theatre. His other works include a musical *Fresh as Air* (1957), *Follow That Girl* (1960), *Wildest Dreams* (1961) and *Tre-lawny* (1972).

Slade School, British school of art at University College, London. It was opened in 1871 following the endowment of six scholarships in fine art by the collector Felix Slade, and the school's courses include painting, sculpture, printmaking, theatre design and film studies.

Slag, in the production of iron and steel, liquid layer of ore impurities such as oxides, ash and limestone. It floats on molten steel during refining, protecting the metal from oxidation and removing some unwanted substances. See also pp.396–397.

Slalom, obstacle race in SKIING or CANOEING. In Alpine skiing, the slalom is raced on a downhill course between a series of gates placed in a zigzag pattern. In the canoe slalom, the racer must negotiate a number of "gates" which are hung just above the water.

Slander, in law, oral defamation of a person's character made in the presence of one or more witnesses. See also LIBEL.

Slang, colloquial, vernacular vocabulary not normally accepted as standard written language, and often employing obscure and colourful imagery. Much modern slang is of North American origin, but in Britain perhaps the most interesting form of slang is COCKNEY rhyming slang, which employs parts of a phrase to stand for an original word which rhymes with the entire phrase. Some of these phrases are ancient and relate to London's history. Thus "Barnet" is short for "Barnet Fair", which rhymes with "hair". A Cockney may therefore say "Barnet" to mean "hair". Slang is not the same as dialect and has nothing to do with a regional accent.

Slash-and-burn agriculture, primitive and wasteful agricultural technique that involves the felling of trees, which are then burned to make land arable. The land is rarely usable after two seasons and the farmer moves on to new woodland to follow the same procedure. See also pp.652–653.

Slate, grey to blue, fine-grained homogeneous METAMORPHIC ROCK, which splits into smooth, thin layers. It is formed by the metamorphism of SHALE, and is valuable as a roofing material. See also pp.210–211, 211.

Slav, largest ethnic and linguistic group of peoples in Europe. Slavs are generally classified in three main divisions: the East Slavs, the largest division, include the Ukrainians, Russians and Belorussians; the South Slavs include the Serbs, Croats, Macedonians and Slovenes (and frequently also the Bulgarians); the West Slavs comprise chiefly the Poles, Czechs, Slovaks and Wends. See also pp.1298, 1454, 1560–1561, 1664–1665, 1665.

Slave Coast, name given to a part of Africa's Guinea coast that supplied vast numbers of slaves from about 1500–1800. See also pp.1490–1491, 1492, 1493, 1504–155, 1504, 1606.

Slavery, condition in which people are held in involuntary servitude, the slave usually being obliged to perform labour or services as a condition of his servitude. In the New World from the late 16th century, slavery provided a supply of much-needed labour. Although American Indians were the first slaves in the New World, trade in African slaves became highly profitable and was carried on with great brutality. The antislavery movement, which was stimulated by the spread of humanitarian ideals in the 18th century, led to the abolition of slavery in all US States north of Maryland between 1777 and 1804. Eventually growing opposition to the institution in the USA led to the emancipation of the slaves during the AMERICAN CIVIL WAR. Other nations followed suit but in 1962 The International Labour Organisation claimed that slavery still existed in some parts of Asia and Africa. See also ABOLITIONISTS; pp.1206, 1206, 1228, 1504–

1505, 1504, 1606, 1612, 1613, 1846, 1846. **Slave trade**, commercial dealing in human beings as an unpaid self-reproducing labour force. The ancient practice of committing captives to a life of servitude was brought to a peak in western Europe – beginning with the Portuguese explorations of the African coast in the 15th century – by the Spanish, British, Dutch and French, all of whose depredations lasted until the 19th century. The British outlawed the slave trade in 1807, having made vast profits by transporting great numbers of Africans to the sugar plantations in the Americas. Slavery continued in British colonies for over 20 more years, however; it was abolished in the USA in 1863. See also pp. 1490, 1492, 1504-1505, 1612-1613.

Slavaykov, Petko (1827–95), Bulgarian poet and patriot. He used the vernacular in his poetry so preparing the way for a revival of Bulgarian literature. He campaigned against his country's domination by the Turks and was co-founder of the Democratic Party (1879).

Slavonic languages, group of languages spoken in E Europe and the USSR, constituting a major subdivision of the INDO-EUROPEAN family of languages. Those spoken today are Russian, Ukrainian, Belorussian, Polish, Czech, Slovak, Bulgarian, Serbo-Croatian, Slovenian, Macedonian, and Sorbian or Lusatian (which is spoken in East Germany). Some Slavic languages are written in the Cyrillic alphabet, others in the Roman, depending chiefly on whether the main religion of the region is Eastern Orthodox or Roman Catholic.

Sledge, vehicle for carrying passengers and freight across ice and snow, on runners or skis.

Sleep, periodic relaxation of consciousness. Its precise function is not understood, but its importance is clear. Studies in sleep deprivation have distinguished between two types of sleep: light sleep and rapid eye movement (REM) sleep. Subjects show little to no ill effects when deprived of light sleep, which corresponds to specific brain wave patterns as measured on electroencephalographs (EEGs). During REM sleep a different pattern is registered on an EEG, and the deprivation of this type of sleep leads subjects to become disordered, confused and irritable with possible hallucinations and psychotic interludes. See also pp. 131, 1081.

Sleeping Beauty, The (1890), Russian ballet by Marius PETIPA, based on the fairy tale by Charles PERRAULT to music by TCHAIKOVSKY. Its huge popularity in the West dates from the London performances staged by DIAGHILEV in 1921.

Sleeping pill, drug prescribed to induce sleep in cases of restlessness or pain. Depending on the cause of insomnia, a sleeping pill may be a SEDATIVE, a hypnotic drug, an analgesic such as codeine or a PLACEBO.

Sleeping sickness, or trypanosomiasis, disease caused by a parasite transmitted by the TSETSE FLY. It is characterized by fever and may affect the brain and spinal cord, leading to profound lethargy and sometimes death. See also pp. 1061, 1082, 1083.

Sleepwalking, also called somnambulism, neurotic reaction in which a sleeper rises from his bed and walks without waking, sometimes undertaking complex journeys, avoiding furniture and opening doors. Less commonly the sleeper may engage in an activity such as letter-writing, re-enactment of a trauma or past event, or may appear to search for a lost object. Such actions are believed to be the fulfilment of wishes, or the release of tension.

Sleepy sickness, popular name for a form of ENCEPHALITIS; it affects the CEREBRUM and the brain stem, causing swelling, HAEMORRHAGES and destruction of tissue. Other parts of the brain or spinal cord may be affected. Symptoms include drowsiness, restlessness, paralysis or unconsciousness. Treatment includes PHYSIOTHERAPY and long convalescence.

Slide rule, calculating device consisting of two rules engraved with logarithmic scales of numbers, one of which slides next to the other. Most mathematical functions can

be accomplished using slide rules See also LOGARITHMS; pp. 789, 789.

Sligo, county in Northern Ireland in Connacht province, bounded by the Atlantic to the N. The land is mountainous, rising in the W to the Ox Mts. The main activity is stock-raising. The county town is Sligo, at the mouth of the River Caravogue on Sligo Bay. It is a fishing centre and seaport. Industries include grain-milling, brewing and meat processing. Area: (county) 1,795sq km (693sq miles). Pop. (1971) (county) 50,236; (town) 14,070.

Slim, William Joseph, 1st Viscount (1891–1970), British general. He achieved international prominence in WWII as commander of the 14th Army in the reconquest of Burma (1943–45). He was British Commander-in-Chief in SE Asia (1944–45) and Chief of the Imperial General Staff (1948–52). He served as Governor-General of Australia from 1953 to 1960. He began his career as a private soldier. See also pp. 1713, 1713.

Slime eel. See HAGFISH.

Slime mould, any of a small group of strange, basically single-celled organisms that are intermediate between the plant and animal kingdoms. During their complex life cycle they pass through several stages. These include a flagellated swimming stage, an amoeba-like stage, a stage consisting of a slimy mass of protoplasm with many nuclei and a flowering sporangium stage.

Slip, in ceramics, cream-like mixture of clay and water, used as an adhesive in pottery for casting ceramic ware, and as a decorative element.

Slipped disc, or herniated disc, intervertebral disc in which the centre has slipped out from between abutting vertebrae, causing pressure against the spinal cord. The patient should stay in bed, and may be treated with analgesic medication, traction, support, physiotherapy and, occasionally, surgical removal of the protruding portion. See also pp. 1070, 1070.

Sliven, or Slivno, city at the foot of the Balkans Mts. in central Bulgaria. It holds a strategic position at the entrance to the Balkan passes. Products include textiles, glass, electrical goods and metalware. Pop. (1970) 84,167.

Sloan, John (1871–1951), US painter. A member of The Eight (ASHCAN SCHOOL) he painted realistic city scenes of people engaged in their daily activities.

Sloane, Sir Hans (1660–1753), British physician and naturalist, whose extensive collection of natural history specimens, books and manuscripts formed the nucleus of the British Museum. He was physician to Queen Anne and then to George II. During a brief stay in Jamaica he collected about 800 new species of plants which he catalogued in Latin.

Sloe. See BLACKTHORN.

Sloop, small single-masted sailing vessel with fore and aft sails. In the 18th century it was a sail-powered warship with about 20 guns. See also pp. 566–567.

Sloth, any of several species of slow-moving, herbivorous tropical American edentate mammals. It has long limbs with long claws and spends most of its life climbing in trees, where it generally hangs upside down. Length: to 60cm (2ft); weight: to 5.5kg (12lb). Family Brachipodidae. See also pp. 86, 287, 314.

Slough, county district in NE BERKSHIRE, S England; created in 1974 under the Local Government Act (1972). Area: 28sq km (11sq miles). Pop. (1979 est.) 98,400.

Slovakia, constituent republic of E Czechoslovakia, now divided into three provinces. It is bounded by Poland (N), USSR (E), Hungary (S), and Austria and Moravia (W); the capital is Bratislava. Most of Slovakia lies within the region of the Carpathian Mts. Until 1918 it was primarily under the control of Hungary; it became part of the new country of Czechoslovakia in 1918, but retained broad powers of autonomy. It was occupied by Germany in WWII and by the Soviet Union in 1968. The mountainous parts of the region are rich in minerals; lead, copper and lignite are mined. The soil is fertile and farming, stock rearing and vine growing form the basis of the economy. Area: 49,010sq km

(18,923sq miles). Pop. 4,600,000.

Slovenia, constituent republic of Yugoslavia, in the SW part of the country, primarily in the Karst plateau and Julian Alps. It is bounded by Austria (N), Hungary (NE), the Croatian republic (S) and Italy (W); the capital is Ljubljana. It was part of the German Empire until 1918, when it was included in the Kingdom of Serbs, Croats, and Slovenes which was known as Yugoslavia after 1929. In 1946 it was made a constituent republic of Yugoslavia incorporating part of the former Italian region of Venezia Giulia. It is the most industrialized of all Yugoslav republics. Aluminium, steel and iron are produced; other occupations include farming and the raising of livestock. Area: 20,259sq km (7,819sq miles). Pop. (1971), 1,725,088.

Slowacki, Juliusz (1809–49), Polish Romantic poet. His works include the poetical drama, *Kordian* (1834) and two dramatized legends, *Balladina* (1834) and *Lilla Weneda* (1840).

Slow-worm, also called blind-worm, European snake-like, legless lizard of grassy areas and woodlands. It is generally brownish; the female has a black underside. It has pointed teeth and feeds primarily on slugs and snails. Length: to 30cm (12in). Family Anguillidae; species *Anguis fragilis*. See also p. 66.

Slug, mostly terrestrial gastropod MOLLUSC identified by the lack of shell and uncoiled viscera. It secretes a protective slime, which is also used to aid locomotion. Length: to 200mm (7.9in). Class Gastropoda; subclass Pulmonata; genera *Arion* *Limax*. See also SEA SLUG; pp. 20, 21, 26.

Slum clearance, removal of buildings in urban areas that have deteriorating and congested housing, poor sanitation and depressed living standards. In Britain the Torrens Act of 1868 provided for the demolition or improvement of slum areas. Slum clearance has become a systematic policy of LOCAL GOVERNMENT and has led to the development of tower blocks and NEW TOWNS. Tower blocks themselves are seen by many as vertical rather than lateral slums, and have given rise to new social problems.

Sluter, Claus (c. 1340–1406), Flemish sculptor. Under the patronage of PHILIP The Bold of Burgundy, he worked on the portal sculptures and the *Well of Moses* sculpture for his patron's family mausoleum in Charterhouse at Champmol. See also pp. 1384, 1384, 1396.

Sluys, Battle of (1340), English naval victory over the French in the HUNDRED YEARS WAR. EDWARD III, wishing to invade France through Flanders, attacked and destroyed the French fleet moored at Sluys in the Zwin estuary. It was the first major engagement in the history of the English navy.

Small arms, FIREARMS designed to be carried and fired by one man, as distinguished from ARTILLERY and heavy automatic weapons. They first came into use in the 15th century but were so cumbersome and inefficient that until the early 18th century many infantrymen were armed with pikes instead. Since then, small arms of some kind have been carried by all infantrymen, and the hand-to-hand combat of earlier warfare has now become comparatively rare. See also pp. 556–557, 556–557.

Small bore shooting. See SHOOTING.

Small intestine, part of the DIGESTIVE SYSTEM that extends – about 6m (20ft) coiled and looped – from the STOMACH to the large intestine, or colon. See also pp. 160–161.

Smallpox, highly contagious, often fatal, viral disease (*Variola*). Its symptoms are high fever and a severe rash on the face and extremities, which leaves permanent scars. Death is caused by toxins or when the lungs, heart and brain are infected. The disease has been controlled in most countries by the use of VACCINES. See also pp. 1075, 1083–1084, 1085, 1088.

Smallpox vaccination, inoculation against SMALLPOX. It was first used by Edward JENNER in 1796, when he inoculated an eight-year-old boy with infectious

Smallpox vaccination

Field Marshal Slim was appointed Governor General of Australia in 1953.

Sir Hans Sloane recorded his discoveries in his *Natural History of Jamaica*.

Sloop, the name given today to a vessel with one mast and two sails.

Slugs live underground or in damp places and are usually nocturnal.

Smart, Christopher

Bedřich Smetana, painted by Johan der Södermark. He became deaf in later life.

Frederick Edwin Smith was feared in Parliament for his caustic wit.

William Smith, the geologist, was the first to be awarded the Wollaston medal.

Smithfield market: porters hard at work in London's famous meat market.

material from the scabs of the milder but related cowpox, which is caused by the *Vaccinia virus*. See also pp.1075, 1083, 1084, 1085.

Smart, Christopher (1722–71), British poet. His lyric poetry, especially *A Song to David* (1763), still attracts praise, as do his classical translations and his *Hilliad* (1753), a satirical work. He was twice committed to an asylum, where he wrote his fine poem *Jubilate Agno*.

Smeaton, John (1724–92), British engineer. He was responsible for building the FORTH AND CLYDE CANAL and rebuilding the EDDYSTONE LIGHTHOUSE.

Smell, or olfaction, one of the five senses; stimulus to the brain caused by particles of a substance. The olfactory receptors can detect even a few molecules per million parts of air. The sense of smell in humans is less developed than in some other species (eg dogs and cats). See also pp.142–143.

Smellie, William (c.1740–95), Scottish printer and natural historian. He co-founded the Newtonian Society (1760) and the Society of Antiquaries of Scotland (1780), and in 1765 became a master printer. He prepared the first edition of the *Encyclopaedia Britannica* (1768–71) for press at the invitation of the engraver Andrew Bell. See also p.1473.

Smelt, small, silvery food fish related to SALMON and TROUT. It lives in the N Atlantic and Pacific oceans and in North American inland waters. Family Osmeridae.

Smelting, processes by which metals are separated from their ORES by heating, often involving chemical reduction. The ore (and often other ingredients) is heated in a FURNACE to remove the non-metallic constituents, and the metal is purified by another stage. In the smelting of iron, the ore (iron oxide) is heated in a BLAST FURNACE with COKE and limestone. The oxide combines with carbon (from the coke) to form gaseous oxides of carbon and pig iron (an alloy of carbon, iron and other impurities). See also pp.396–397.

Smetana, Bedřich (1824–84), Czech Romantic composer who promoted Czech nationalistic style in operas and orchestral music. His masterpiece, *The Bartered Bride* (1866), is one of the greatest folk operas, and is regarded as the national opera of Czechoslovakia. Among other popular works by Smetana is the cycle of symphonic poems, *My Country* (1874–79). See also pp.1583, 1598.

Smibert, John (1688–1751), Scottish-born colonial American painter. He studied in Florence and Rome (1717–20) and held the first art exhibition in the colonies at Boston in 1730.

Smiles, Samuel (1812–1904), Scottish writer. He wrote a number of biographies of captains of industry (including the three-volume *Lives of the Engineers*; 1861–62) and established his reputation with *Self-Help* (1859) as the great apostle of the mid-Victorian work ethic.

Smilodon. See SABRETOOTHED TIGER.

Smith, Adam (1723–90), Scottish economist who laid the foundation of modern economics. Reflecting the emergence in Britain of the industrial system, he argued that the commercial liberty of a competitive market would stimulate production and act in the interests of the public. He wrote his economic treatise *The Wealth of Nations* (1776) after meeting French PHYSIOCRATS. See also pp.1467, 1475.

Smith, Arthur James Marshall (1902–), Canadian academic and poet. Although he spent little time in Canada, he influenced its poetry, editing *The Book of Canadian Poetry* (1943) and *The Oxford Book of Canadian Verse* (1958).

Smith, Bessie (c.1895–1937), US BLUES singer. She started recording in 1923 and toured with bands as a soloist, her mournful rendering of blues becoming part of JAZZ history. See also p.1757.

Smith, Clarence ("Pinetop"), (1904–29), US JAZZ pianist and composer. He originated the term BOOGIE-WOOGIE in his *Pinetop's Boogie Woogie*.

Smith, Cyril (1909–74), British pianist. Disabled in 1956 by a cerebral thrombosis, he began in the following year to perform with the right hand alone and

became well known for his performances (with his wife Phyllis SELICK) of music for two pianos.

Smith, David (1906–65), leading US sculptor. A pioneer in welded metal sculpture, some of his work has been called "drawing in space" because it seems two-dimensional and linear.

Smith, Dodie (1896–), British novelist and playwright, she achieved success in the 1930s with the plays *Autumn Crocus* (1931), written under the pseudonym C. L. Anthony, and *Dear Octopus* (1938). Her best-known work is *The Hundred and One Dalmatians* (1956), which was made into a film by Walt DISNEY (1960).

Smith, Frederick Edwin, 1st Earl of Birkenhead (1872–1930), British lawyer and politician. He was a Conservative MP (1906–18) and served as Solicitor-General (1915), Attorney-General (1915–19), Lord Chancellor (1919–22) and Secretary of State for India (1924–28). He opposed the inclusion of Ulster in IRISH HOME RULE, and was prominent in the negotiation of the Anglo-Irish Treaty (1921).

Smith, Harvey (1938–), British show jumping rider esteemed by the public as much for his outspokenness as for his skill at training and riding winning horses.

Smith, Henry John Stephen (1826–83), British mathematician who was noted for his work on elliptic functions and the NUMBERS THEORY.

Smith, Ian Douglas (1919–), Rhodesian politician who became Prime Minister in 1964. He declared RHODESIA independent in 1965, rejecting Britain's plans for black majority rule. This resulted in increasing economic pressures and nationalist guerilla attacks from adjoining states, which eventually forced him to form an interim government with black leaders in 1978. 'Free' elections in 1979 established Bishop Abel Muzorewa as Rhodesia's first black Prime Minister but did not end the fighting. See also pp.1701, 1737.

Smith, John (c.1580–1631), English soldier and colonist. He took a leading part in establishing JAMESTOWN SETTLEMENT in Virginia, and was instrumental in obtaining maize from the local Indians, thus saving the colony from starvation during the early years of hardship.

Smith, Joseph (1805–44), US founder of the MORMON Church of Jesus Christ of the Latter Day Saints (1830). His *Book of Mormon* (1829) was based on sacred writings he claimed to have found on golden tablets. In 1844 he was jailed on a charge of treason with his brother, Hyrum, at Carthage, Illinois. There they were murdered by a mob.

Smith, Joseph Fielding (1838–1918), MORMON leader, nephew of Joseph SMITH, the founder of the Mormon Church. From 1901 to 1918 he served as the 6th president of the Mormon Church.

Smith, Lloyd Logan Pearsall (1865–1946), US critic and essayist, friend of Matthew ARNOLD and WHISTLER, who became a British subject in 1913. His criticism includes *On Reading Shakespeare* (1933) and *Milton and His Modern Critics* (1940).

Smith, name of two brothers who made the first flight from England to Australia; they took off on 12 Nov. and landed at Darwin on 10 Dec. 1919. Sir Keith Macpherson (1890–1955) flew as a pilot in WWI. Sir Ross Macpherson (1892–1922) was a cavalryman who did not learn to fly until 1916. He made his first flight from Cairo to Calcutta in 1918. On their momentous flight the Smiths flew a Vickers Vimy twin engine bi-plane; after landing they were knighted.

Smith, Stevie (1902–71), British poet, real name Florence Margaret Smith, who became famous at public poetry readings during the 1960s. Her poetry is both pathetic and gay and includes the volume *Not Waving But Drowning* (1957).

Smith, Sydney (1771–1845), British clergyman, author and wit, one of the founders of *The Edinburgh Review* (1802).

Smith, William (1769–1839), British geologist. A founder of STRATIGRAPHY, he studied the geological strata of England

and Wales, relating his findings to identified fossils and thus estimating the age of geological formations.

Smith, William Henry (1825–1891), British businessman and politician who entered his father's newsagent business and greatly expanded it by securing the right to sell books and newspapers at railway stations. He entered Parliament in 1868 as a Conservative, serving in DISRAELI's second administration as First Lord of the Admiralty (1877–1880) and in the second SALISBURY administration as First Lord of the Treasury and Leader of the Commons.

Smith, Sir William Sidney (1764–1840), British admiral. He gave distinguished service during the NAPOLEONIC WARS and, while plenipotentiary to Constantinople, hurried to ACRE when that town was threatened by NAPOLEON. He held the town until the siege was raised (1799). In 1807 he destroyed the Turkish fleet off ABYDOS and successfully blockaded the TAGUS. He became an admiral in 1821.

Smithfield, district of the city of London and home of the world's largest meat market. In the 12th century it was the site of a weekly horse fair and various tournaments. Bartholomew Fair, a general livestock and linen fair held as a festival for St Bartholomew and lasting 14 days, was held there from 1133 to 1855.

Smithson, Alison Margaret and Peter Denham, British husband and wife architectural team, exponents of BRUTALISM. Alison (1928–), and Peter (1923–), designed the Hunstanton School, Norfolk (1954) and The Economist Building, London (completed 1964).

Smithson, James (1765–1829), British chemist and mineralogist; the mineral smithsonite (zinc carbonate) was named after him. Angered at the Royal Society's rejection of a paper by him in 1826, he left £105,000 to found an institution, the SMITHSONIAN INSTITUTION in Washington for the "increase and diffusion of knowledge among men".

Smithsonian Institution, US independent trust establishment, in Washington D.C., created (1846) by the bequest of James Smithson of England. Among its activities the Institution funds research, publishes the results of explorations and investigations and preserves for reference over 65,000,000 items of scientific, cultural and historic interest.

Smithsonite, carbonate mineral, zinc carbonate (ZnCO₃). It is generally white, but may be other colours; blue specimens from New Mexico were once used as gemstones. Hardness 4–4.5; s.g. 4.4.

Smog, dense atmospheric mixture of smoke and fog or chemical fumes, commonly occurring in urban or industrial areas. It is most dense during temperature inversions. See also pp.756, 757.

Smoke signal, column of smoke from a fire used as a means of communication. Smoke signals have been known since the time of Alexander the Great, but the Plains Indians of North America are most famous for employing them. Their use was limited to signalling danger or acting as a prearranged sign.

Smollett, Tobias George (1721–71), Scottish novelist and surgeon. His novels include *The Adventures of Roderick Random* (1748), *The Adventures of Peregrine Pickle* (1751) and *The Expedition of Humphrey Clinker* (1771). Smollett also translated VOLTAIRE and edited several periodicals. See also p.147.

Smooth muscle. See INVOLUNTARY MUSCLE.

Smuggling, illegal movement of goods or people across national or state boundaries. A corollary of trade restrictions and prohibition, smuggling has flourished in Britain since the 18th century particularly in the importation of highly taxed goods such as silk and spices and prohibited goods such as narcotics. Penalties for smuggling have traditionally been high. In most Western countries it is a criminal offence punishable by a fine or prison sentence. See also p.1490.

Smut, group of plant diseases caused by parasitic fungi, also called smuts, that attack many cereals including maize,

wheat and other grasses. The diseases are named after the sooty black masses of reproductive spores produced by the fungi.

Smuts, Jan Christiaan (1870–1950), South African political leader. A lawyer, he was alarmed by the JAMESON RAID of 1895 and entered Boer politics. He was a guerrilla leader during the SOUTH AFRICAN WAR (1899–1902) but afterwards worked for the establishment of a unified republic, repressing Boer rebellions during WWI. He served in various ministries under Louis BOTHA and predicted the disastrous consequences of the Treaty of VERSAILLES following WWI. He was Prime Minister from 1919–24 and 1939–48 and helped form the United Nations following WWII. His government was replaced (1948) by the nationalist government of Daniel MALAN. See also pp.1736, 1736.

Smyrna. See IZMIR.

Smyth, Dame Ethel (1858–1944), British composer. She wrote songs, chamber and choral music, and several operas, including *The Wreckers* (1906). She wrote *March of the Women* (1911) for the British SUFFRAGETTE MOVEMENT.

Smythe, Patricia ("Pat") (1928–), British showjumping rider. Women's European champion in 1957, 1961, 1962, 1963 on Flanagan, she was the first woman to ride in Olympic showjumping, winning a team bronze in 1956.

Snail, terrestrial, marine or freshwater gastropod mollusc. It has a coiled protective shell enclosing an asymmetric visceral mass, a large fleshy foot and antennae on its head. It may breathe through gills (aquatic species) or through a kind of air-breathing lung (terrestrial species) and has a radula, a rasping organ located within its mouth. Some species such as the Roman snail (*Helix pomatia*), are edible. Length: to 35cm (14in). Class Gastropoda. See also pp.20–21, 26–27, 182, 188, 328–330, 340.

Snake, any of some 2,700 species of legless, elongated REPTILES forming the suborder Serpentes of the order Squamata (which also include LIZARDS). There are 11 families. They range in size from about 10cm (4in) to more than 9m (30ft). There are terrestrial, arboreal, semi-aquatic and aquatic species; one group is entirely marine; many are poisonous. They have no external ear openings, eardrums or middle ears; sound vibrations are detected through the ground. Their eyelids are immovable and their eyes are covered by a transparent protective window. Internal organs are elongated, with the left lung reduced or absent. The long, forked, protracile tongue is used to detect odours. Their bodies are covered with scales. Upper and lower jaws are movable and each half of either jaw can be moved independently of the other, allowing snakes to swallow large prey. See also pp.3, 66, 67, 69–71, 296, 303, 313, 330, 332.

Snakebird, or anhinga, bird that lives in or near fresh water of the tropics and subtropics. Snakebirds have dark metallic plumage, straight bills, on long necks, slender bodies, long tails and webbed feet. Length: 90cm (35in). Family Anhingidae.

Snake dance, ritual dance of the HOPI Indians of North America in which men hold live rattlesnakes in their mouths. See also RAIN DANCE.

Snappedragon, any of several species of perennial plants with salsike, two-lipped, purple, red, yellow or white flowers. The common snappedragon (*Antirrhinum majus*) is a popular garden plant; height: 15–91cm (0.5–3ft). Family Scrophulariaceae.

Snapper, marine food fish found in tropical waters of the Indo-Pacific and Atlantic oceans. Length: to 91cm (3ft); weight: 50kg (110lb). The 250 species include the red snapper *Lutjanus campechanus*, yellowtail *Ocyurus chrysurus* and Atlantic grey L. *griseus*. Family Lutjanidae. See also p.745.

Snapping beetle. See CLICK-BEETLE.

Snare-drum, Drum slung underneath with gut, nylon or wire strings (snare). It vibrates with a hard rattle when played.

SNCC (Student Non-Violent Co-

ordinating Committee), US organization founded in 1960 to campaign for racial equality in the USA. It worked closely with such integrationist organizations as CORE and the NAACP until 1966, when Stokely CARMICHAEL became its president and it became identified more with the BLACK POWER movement.

Snead, Samuel Jackson (1912–), US golfer. He won more than 100 tournaments, including three US PGA Golf Championships (1942, 1949, 1951), three US Masters (1949, 1952, 1954) and the British Open Championship (1946).

Snell, Peter (1938–), New Zealand athlete. He won three Olympic gold medals, for the 800m in 1960 and 1964, and for the 1,500m in 1964. He set a world mile record of 3 min. 54.1 sec. in 1964.

Snipe, any of several species of migratory long-billed, wading shorebirds found in swampy grasslands and coastal areas over most of the world. It is generally mottled brown and buff. Length: 30cm (12in). Family Scolopacidae; genus *Capella*.

Snook (snook), any of several species of long, silvery, tropical, marine fish of the Pacific and Atlantic coasts. It has a long head, a projecting lower jaw and two dorsal fins. Length: to 1.5m (5ft). Family Centropomidae; genus *Centropomus*.

Snooker, game usually for two players, played on a BILLIARDS table, using 15 red balls (valued at 1 point each), 6 coloured balls – yellow (2), green (3), brown (4), blue (5), pink (6) black (7) – and 1 white cue-ball. Points are scored by potting a red, after which the player is allowed to attempt to pot any one of the colours. Colours potted thus are returned to their respective spots on the table until all the reds have been potted, when the colours are potted in ascending order of values and this time remain off the table. Penalties are incurred when the cue-ball misses everything, hits a colour without having potted any red remaining on the table, or itself falls into a pocket. When the balls are so arranged that a player cannot strike directly at the ball he is supposed to, he is said to be snookered. The player scoring the highest number of points wins.

Snoring, vibration of the soft PALATE and the narrowed opening between the mouth and throat. It generally occurs during sleep when breathing takes place through the mouth. Mouth breathing may be caused by nasal blockage due to the common cold or CATARRH. Further causes of snoring may be enlargement of the ADENOIDS or TONSILS, or weakening of the soft palate and surrounding tissues due to ill health, smoking or obesity.

Snorri Sturluson (1178–1241), Icelandic historian. His *Prose Edda* is a collection of Norse mythology and a discussion of the art of poetry. *Heimskringla*, sagas of the Norwegian kings to 1184, mingles history and legend.

Snow, Charles Percy, Baron (1905–), British novelist and physicist who held several important positions in the British government. As a novelist he is famous for his sequence of novels, known collectively as *Strangers and Brothers*.

Snow, flakes of frozen water that fall from clouds to the Earth's surface. Snowflakes are symmetric (usually hexagonal) crystalline structures. See also p.801.

Snowberry, shrubby plant native to North America and China. It has pink or white bell-shaped flowers and soft berries. Wild species are coralberry, wolfberry and snow or waxberry. The latter has large, pulpy, white berries. There are 18 species. Family Caprifoliaceae; genus *Symphoricarpos*.

Snowdon, Anthony Armstrong-Jones, Earl of (1930–), British designer and photographer who married, in 1960, HRH Princess MARGARET. After his divorce in 1978 Snowdon married TV researcher Mrs. Lindsay-Hogg.

Snowdon, mountain in Gwynedd, NW Wales. Much of the area is included in the Snowdonia National Park which was established in 1951. The summit can be reached by a rack-and-pinion railway from Llanberis. Snowdon has five peaks, one of which is the highest in England and Wales. Height: 1,085m (3,560ft).

Snowdrop, low-growing perennial plant of the Mediterranean region, widely cultivated as a garden ornamental. The green and white, fragrant flowers appear early in spring. The common snowdrop (*Galanthus nivalis*) has narrow leaves; height: to 15cm (6in). Family Amaryllidaceae.

Snow Leopard. See LEOPARD, SNOW.

Snowmobile, petrol-powered sled which has ski runners and rubber tracks to propel the vehicle over snow or ice.

Snowshoe rabbit, or varying hare, medium sized HARE of N North America with large furry hind feet that act as snowshoes. It is brownish in summer, white in winter. Species *Lepus americanus*.

Snowy, river in SE Australia. It rises in the Australian Alps and flows through Gippsland into the Bass Strait. It is part of a large hydroelectric project. Length: 448km (278 miles).

Snowy Mountains (Munioing Range), range of the Australian Alps, Australia. They are the location of Australia's major hydroelectric power project, which has been designed to double the country's output of electricity.

Snowy owl, any of several species of white and grey owls, camouflaged to blend with the snowy barren Arctic tundra where they live; especially *Nyctea scandiaca*. It feeds mainly on lemmings and hares, hunting in daylight during the summer. Length: to 60cm (2ft). Family Strigidae. See also pp.73, 304, 305, 325.

Snuff, ground and perfumed tobacco which was inhaled as a stimulant or medicine, most commonly in 17th-century England. The practice was widespread in Europe by the 18th century, when exquisite snuff boxes were made; these are now sought after as collectors' pieces.

Snyder, Gary (1930–), US poet who also worked as a forester, sailor, carpenter and lumberjack. He recorded his experiences in poems, most of which are included in *A Range of Poems* (1966).

Snyders, Frans (1579–1657), Flemish painter. He is known especially for his still-lives and pictures with animals. He was a pupil of Pieter BRUEGEL the younger and a friend of RUBENS, whom he often helped to paint large, important pictures.

Soane, Sir John (1753–1837), British architect. A leader of the Greek revival, he designed the Bank of England (1795–1827). His own residence at Lincoln's Inn Fields was bequeathed to the nation. See also p.1456.

Soap, substance made by the action of ALKALI on FAT, and used to remove dirt and grease. Common soaps are sodium or potassium salts of stearic or oleic acids. Soap consists of long-chain molecules, one end of which attaches to grease and the other dissolves in the water so that the grease loosens and forms a floating scum. See also DETERGENT; pp.580, 581.

Soap Box Derby, event for children in which four-wheeled motorless carts coast downhill, steered on a course, powered only by gravity. The original construction of such a cart was of four wheels, two axles and a soap box. The classic Soap Box Derby is held annually in Akron, Ohio, USA.

Soap opera, dramatic serial programme, either on radio or television, originally sponsored in the USA by companies manufacturing soap and detergents. The story often centres on marital problems and other family situations, frequently involving melodramatic events.

Soapstone, also known as steatite and TALC, ROCK with a soft soapy or greasy texture. There are many types but all contain a large proportion of magnesium silicate, often associated with various amounts of serpentine and carbonates. Food vessels and carvings made from soapstone have been found amongst the remains of prehistoric human cultures.

Sobers, Sir Gary (1936–), West Indian cricketer for West Indies, Barbados, South Australia and Nottinghamshire. A magnificent left-handed all-rounder, he played in 93 Test matches, 1954–74, 39 as captain, scored a world-record aggregate of 8,032 runs, including a world-record Test innings of 365 not out, took 235 wickets, and held 110 catches.

Sobhuza, name of two rulers of Swaziland. Sobhuza I (r. 1815–36) founded the kingdom and maintained it in the face of Zulu attacks. Sobhuza II (1899–) became king of independent Swaziland in 1968, and assumed absolute powers in 1973.

Sobieski, John. See JOHN, KINGS OF POLAND.

Sobrero, Ascanio (1812–88), Italian chemist who in 1846 discovered the explosive nitroglycerine (glyceryl trinitrate) by adding glycerine to a mixture of nitric and sulphuric acids. Horrified at his discovery he made no attempt to develop it.

Soccer. See FOOTBALL, ASSOCIATION.

Social contract, concept that society is based on the surrender of natural freedoms by the individual to the organized group or state in exchange for his personal security. The concept can be traced back to the ancient Greeks and was developed by the English philosophers Thomas HOBES and John LOCKE, and by Jean-Jacques ROUSSEAU in *The Social Contract* (1762).

Social Credit Movement, Canadian political party. In 1935 William ABERHART won Alberta on a programme of redistribution of income through "social dividends", cash payments to consumers, the amount being determined by an assessment of the nation's wealth. Aberhart's attempts to tax banks and control the money supply were declared unconstitutional and the party became divided. It is considered a voice of regional conservatism. In 1971 it lost the election to the Progressive Party.

Social Democrats, name originally taken by MARXIST parties of central and east Europe before 1914, but now used by people who wish to distinguish their socialist beliefs from the dogmas of Marxist parties. In particular, a social democrat in western Europe accepts the pluralism of liberal democracy and wishes to retain a mixed economy. In the early 1980s disaffected British Labour MPs formed a new party, the SDP, or Social Democratic Party.

Socialism, system of social and economic organization in which property is owed not by private individuals but by the community, in order that all may share more fairly in the wealth produced. Many different forms of socialism exist in both theory and practice, differing mainly in their interpretation of how much property the individual should be allowed; what definition of "the community" is used, whether it be the factory, the town or the state; and to what degree individual liberty is subordinated to the requirements of the society as a whole.

As a system of social organization, socialism has been practised by many primitive communities. Western society, however, has been founded on the principle of private property since Greek times, and until the 19th century socialism was preached only by radical or millenarian groups, such as the ANABAPTISTS or the DIGGERS of the 16th and 17th centuries. Socialism became seriously considered with the rise of industrialism and the breakdown of paternalist, aristocratic society. The early 19th-century socialists, such as Robert Owen, Henri de SAINT-SIMON and Charles FOURIER, were later dubbed UTOPIAN SOCIALISTS by KARL MARX, who, unlike them, claimed to be "scientific" in that his own vision of the future was based on the economic inadequacies of CAPITALISM.

In the 20th century, the term socialism has changed its meaning. Marx made no distinction between socialism and COMMUNISM, defining both as "from each according to his abilities, to each according to his needs", but as the term communism began to apply to those supporters of the Communist Party and therefore of the USSR, socialism was used either to refer to those who adopted reformist rather than revolutionary tactics, or to those who stressed the need for individual liberty within the post-capitalist state. Thus both the British LABOUR PARTY and the Maoists may describe themselves as socialists. In the same way, communities such as Israeli KIBBUTZIM, whose goods are to be sold on the open market within a capitalist economy, may be considered socialist. See

Socialist parties

also pp.1304-1305, 1346-1347, 1851, 1855.

Socialist parties, political parties in many countries throughout the world, each of which professes a devotion to the general principles of SOCIALISM as they have developed since the 19th century. The first socialist party in Europe was the German Social Democratic Party, founded in 1875. The British Labour Party was founded in 1906. The Socialist Party of America was founded in 1901. Since 1945 socialist parties have spread to most countries of the Third World, where socialism and NATIONALISM have often developed simultaneously. In Europe socialist parties have been most successful in gaining power in Scandinavia, Germany, Italy, Britain and the Low Countries. Most socialist parties in the Western world call themselves SOCIAL DEMOCRATS, in order to distinguish their policies from those of COMMUNIST PARTIES.

Social realism. See REALISM, SOCIAL.

Social security, welfare payments in Britain under two heads, NATIONAL INSURANCE and supplementary benefits, the latter known before 1966 as national assistance. Supplementary benefits ensure that a minimum weekly income is maintained and, unlike national insurance, are not financed by contributions, but are available to the needy as a right. Social security is managed by the Department of HEALTH AND SOCIAL SECURITY.

Social Security, Department of Health and. See HEALTH AND SOCIAL SECURITY, DEPARTMENT OF.

Social Security, Ministry of, British government ministry formed in 1966 from the merger of the Ministry of PENSIONS AND NATIONAL INSURANCE and the NATIONAL ASSISTANCE BOARD to provide welfare payments. In 1968 it merged with the Ministry of Health to form the Department of HEALTH AND SOCIAL SECURITY.

Society Islands, two island groups in the Pacific Ocean, part of French Polynesia and comprising the LEeward Islands and the LEeward Islands; the capital is Papeete. They were first sighted in 1607 by the Portuguese navigator Pedro Fernandes de Queiroz and were claimed by Great Britain in 1767 and by France in 1786; they were made a French protectorate in 1842. The islands support a tropical fruit industry and export rum, sugar, mother-of-pearl and vanilla. Area: 1,610sq km (620sq miles). Pop. (1971) 100,300.

Society of Friends. See QUAKERS.

Society of Jesus. See JESUITS.

Sociology, the scientific study of society, its institutions and processes. It examines such areas as social change and mobility and underlying cultural and economic factors. Auguste COMTE invented the term "sociology" in 1843 and from the 19th century numerous complex and sophisticated theories have been expounded by Herbert SPENCER, Karl MARX, Emile DURKHEIM, Max WEBER and others. See also pp.1747, 1750-1751, 1751, 1754-1755, 1788.

Socotra, island territory of the People's Democratic Republic of Yemen, in the Indian Ocean, s of the Arabian Peninsula and 256km (160 miles) ENE of Cape Guardafui, Somalia; the capital is Tamridah. The mountainous terrain includes peaks rising to approx. 1,520m (5,000ft). The economy is based on agriculture; farming and herding are important occupations. Exports include tobacco, ghee, dates and pearls. Area: 3,100sq km (1,200sq miles). Pop. 8,000.

Socrates (c.469-399 BC), Greek philosopher. Information about his life and philosophy is found in the writings of PLATO and XENOPHON. Believing that the highest meaning of life is attained through self-knowledge, Socrates taught the value of self-analysis. His method of cross-questioning challenged conventional wisdom and his sceptical approach to religion led to his trial for impiety and corrupting the young. Condemned to death, he poisoned himself with hemlock. See also pp.1880, 1881, 1886-1887.

Soda, sodium carbonate, Na_2CO_3 , usually manufactured from common salt (sodium

chloride) and ammonia by the SOLVAY PROCESS. In anhydrous form it is known as soda ash; washing soda is hydrated sodium carbonate, $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$.

Sodalite, glassy silicate mineral, sodium aluminium silicate with some chloride, found in alkaline IGNEOUS ROCKS. It occurs as small dodecahedral crystals in the cubic system and also as masses. It may be colourless, white, blue or pink; it is sometimes used as gem. Hardness 5-6; s.g. 2.2.

Soddy, Frederick (1877-1956), British chemist who was awarded the 1921 Nobel Prize in chemistry for his studies of radioactive substances and his work on isotopes (he coined the term). In 1920 he revealed the value of isotopes in computing geological age. With Ernest RUTHERFORD, he worked out an explanation of RADIOACTIVE DECAY and later, with William RAMSAY, detected helium as a product of uranium decay.

Söderberg, Hjalmar Erik Fredrik (1869-1941), Swedish novelist and playwright. His novels about the upper-middle classes are lyrical but disillusioned in tone, and include *Martin Bircks Ungdom* (1901; tr. *Martin Birck's Youth*, 1930) and *Doktor Glas* (1905; tr. *Doctor Glas*, 1963).

Söderblom, Nathan (1866-1931), Swedish theologian who was awarded the 1930 Nobel Peace Prize for his work towards world peace through Church unity. He was ordained in 1893 and spent seven years in Paris as a chaplain to the Swedish legation. In 1914 he was appointed Archbishop of Uppsala, Sweden, and primate of the Lutheran Church of Sweden.

Soderini, Piero (1452-1522), political leader who held the highest office in Florence from 1501 until he was ousted in 1511. During his administration, MACHIAVELLI was commissioned to raise a standing army.

Sodium, common metallic element (symbol Na) of the alkali-metal group, first isolated in 1807 by Sir Humphry DAVY. It occurs in the sea (as salt) and in many minerals. Its chief source is sodium chloride (common salt), from which it is extracted by electrolysis. The metal is used as a heat-transfer medium in nuclear reactors. Chemically, sodium is one of the most reactive elements. Properties: at.no. 11; at.wt. 22.9898; s.g. 0.97; m.p. 97.81°C (208.05°F); b.p. 882°C (1,620°F). See also ALKALI ELEMENTS: pp.888, 890.

Sodium carbonate. See SODA.

Sodium chlorate, white, crystalline compound, NaClO_3 , which is a strong oxidizing agent. It is used as a general herbicide and soil sterilizer and as a laboratory reagent. It is made by the ELECTROLYSIS of a solution of sodium chloride.

Sodium chloride, common salt, NaCl . Found in salt-pans and salt-domes, it is the major mineral component of SEA-WATER. It is also the major ELECTROLYTE of living cells and the loss of too much salt, through evaporation from the skin or through illness, is dangerous. Sodium chloride is also an important chemical in industry, a starting material for various other sodium compounds and for making CHLORINE.

Sodium hydroxide. See CAUSTIC SODA.

Sodium oxide, white, crystalline compound, Na_2O , which dissolves violently in water to form sodium hydroxide (caustic soda). It is usually made by heating sodium peroxide, Na_2O_2 , with sodium.

Sodium thiosulphate. See HYPO, PHOTOGRAPHIC.

Sodom and Gomorrah, in the Bible, two of the five "cities of the plains", probably sited near the Dead Sea, destroyed by God with fire and brimstone for their carnality and vice. The incident is described in Genesis 13-19. The region probably suffered a severe earthquake c.1900 BC.

Sodor and Man, the DIOCESE of the ISLE of MAN. The original diocese of Sodor included the HEBRIDES and other islands w of Scotland. The bishop is a member of the council (upper house) of the Court of Tynwald, the Manx Parliament.

Sofia (Sofija), capital of Bulgaria and Sofia province, in w central Bulgaria. The city was founded in the 2nd century AD and

ruled by the Byzantine Empire from 1018 to 1185, and was the residence of Constantine I. Sofia passed to the second Bulgarian empire (1186-1382), and then to the Ottoman Empire (1382-1878). The city was taken by Russia in 1877 and chosen for capital of Bulgaria by the Congress of Berlin. The University in Sofia dates from 1888. Industries: machinery, textiles, rubber, leather goods, food processing. Pop. (1978) 1,031,597.

Softball. See BASEBALL.

Soft style, term for the style of art found mainly in Germany in the late 14th and early 15th centuries. Closely related to INTERNATIONAL GOTHIC, it is characterized by gentleness of sentiment and softness in the representation of drapery.

Soho, area of London bounded by Coventry Street, Charing Cross Road, Oxford Street and Regent Street and noted for its busy nightlife and foreign restaurants. Its name is reputed to come from the hunting cry "So-ho" associated with the battle-cry at Sedgemoor of MONMOUTH, who had a house in Soho Square.

Soil, surface layer of earth capable of supporting plant life. It consists of undissolved minerals produced by the weathering and breakdown of surface rocks, organic matter, water and gases. See also pp.660-661.

Soil conservation and reclamation, preserving and reconstituting arable soils through programmes to prevent soil EROSION and nutrient depletion and to improve crop yields. Semi-arid soils are being reclaimed by laying moisture barriers below the soil surface to improve water retention. See also pp.652-671.

Soil profile, vertical view of layers of soil from the surface down to the unaltered parent material. It is used in classifying soils with the ideal being one in which soluble substances from the top layer have reached into the second layer and the third layer is the parent material of the surface soil. See also p.660.

Soil testing, process of analyzing the chemical and mineral composition and porosity of soil.

Soissons, town in N France, on the River Aisne. It was the capital of MEROVINGIAN France, after CLOVIS seized it in 486. It was the scene of fighting in many wars throughout history, and was taken by the Germans in both 1918 and 1940. It has a 13th-century cathedral. See also p.1334.

Soke, estate in the DANELAW of England before the Norman Conquest in which groups of peasant proprietors, or sokemen, were given land in return for their service to the lord (socage). They could, however, alienate it as they wished. Sokes were therefore freer than other areas in the early Middle Ages. The modern Soke of Peterborough represents the survival of the ancient system.

Sokolova, Lydia (1896-1974), British ballet dancer, b. Hilda Munnings. In 1913 she joined the BALLETS RUSSES of DIAGHILEV, the first British dancer to do so.

Solanaceae, NIGHTSHADE family of plants with about 2,000 species. It includes the POTATO, TOMATO, AUBERGINE and SWEET PEPPER (CAPSICUM), as well as TOBACCO, DEADLY NIGHTSHADE (belladonna), HENBANE and other poisonous weeds. Less well-known members include the MANDRAKE and the THORN APPLE (also highly poisonous). The flower is trumpet-shaped or bell-shaped and the fruit is a berry, some of which are particularly rich in poisonous ALKALOIDS.

Solar battery, assembly of SOLAR CELLS, most commonly silicon photocells. A battery of about half-a-dozen photocells will have an output of the order of milliamps at a few volts.

Solar cell, device that converts sunlight directly to electric power. It normally consists of a p-type silicon crystal coated with an n-type silicon crystal. Solar radiation causes charge to polarize in the two crystals and creates a potential difference, so that current flows between electrodes connecting them. All wavelengths shorter than one micrometre can create electrical energy; the cells are about 10% efficient. Several thousand cells may be deployed in

panels to provide power of a few hundred watts. See also pp.430-431, 821, 860, 1040, 1041.

Solar constant, steady rate at which heat from the Sun is received from just outside the Earth's atmosphere, measuring approximately 1.36×10^{-3} joules per square metre (perpendicular to the Sun's rays) per second.

Solar energy, RADIATION consisting of ELECTROMAGNETIC WAVES, including heat (infrared rays), light and radio waves. Approx. 35% of the energy reaching the Earth is absorbed; most is spent evaporating moisture into clouds, and some is converted into organic chemical energy by PHOTOSYNTHESIS of plants. All forms of energy (except NUCLEAR ENERGY) come ultimately from the Sun. SOLAR CELLS are used to power instruments on spacecraft, and experiments are being done to store solar energy in liquids from which electricity can be generated. The effective use of solar energy is hampered by the diurnal cycle, seasonal and climatic variations, and at present there are still cheaper forms of energy available. See also pp.430-431, 764-765, 820-821, 860.

Solar engine, machine that converts the energy of sunlight into mechanical work, particularly for the purpose of providing thrust to a spacecraft. Solar engines now under development have one or more large solar collectors which gather the energy of the Sun's rays to heat up a working fluid such as hydrogen. The heated hydrogen can be used directly to provide thrust or it can be fed to a turbo-generator.

Solar flares, brief but extremely powerful outbursts of radiation from the Sun's surface. They are associated with sunspots and are seen as rapid local brightenings which may last for only a few seconds. Solar flares are also linked with the appearance of AURORAS at extreme latitudes in the Earth's atmosphere, and with radio disturbances caused by disruptions in the IONOSPHERE. See also pp.974-975.

Solar heating, domestic heating unit which usually employs roof-mounted heat collectors. These have transparent glass or plastic panels behind which water circulates over black-painted metal surfaces which absorb heat energy from the Sun's rays. The warmed liquid passes on to a tank from which hot water is supplied to domestic radiators. See also p.430.

Solar physics, study of the Sun's physical behaviour. This includes study of the solar spectrum and of the nature and causes of surface phenomena. From these may be inferred the inner thermal, electrical, magnetic, nuclear and gravitational processes.

Solar plexus, network of ganglia from the autonomic nervous system that controls the functions of the internal organs. See also p.126.

Solar system, celestial group consisting of the Sun and the assemblage of bodies, gas, and dust particles that revolve around it in closed orbits under the influence of its gravitational attraction. The known constituents include the major planets (Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto), the planetary satellites or moons, thousands of minor planets, or asteroids, many comets, meteorites, dust and gas. See also pp.924-927.

Solar time, system of time reckoning based upon the interval between successive transits of the Sun across the observer's MERIDIAN (the solar day). Because of variations in the Earth's orbital velocity and changes in the Sun's apparent position as viewed from the orbiting Earth, solar days vary in length throughout the year. A mean solar day has therefore been adopted, giving a mean solar time. As measured on the 0° meridian at the Greenwich Observatory, mean solar time is GMT or Universal time.

Solar wind, particles accelerated by high temperatures of the solar CORONA to velocities great enough to allow them to escape from the Sun's gravity. The solar wind deflects the tail of the Earth's MAGNETOSPHERE and the tails of comets away

from the Sun. See also pp.974-975.

Solar year, also called tropical year, interval of time between two successive passages of the sun through the vernal equinox. It is the calendar year, comprised of 365.2422 mean solar days.

Soldati, Mario (1906-), Italian author and film director. His best-known novel is *Le lettere da Capri* (1954). *OK Nerone* (1951) and *La Provinciale* (1952) are his best-known films.

Solder, low-melting point alloy used to join together metals with a higher melting point. Soft solders consist of alloys of tin and lead in varying proportions; brazing solders are alloys of copper and zinc. See also pp.406-407.

Soldering, means of joining metals by the use of **SOLDERS** and the application of heat. Soldering is used to join metal at temperatures less than 430°C (806°F). Firstly, the metal pieces are cleaned, then a soldering flux is applied. This flux may be either **ROSIN** (extracted from pines) or zinc or ammonium chloride.

Sole, marine flatfish found in the Atlantic Ocean from NW Africa to Norway, especially *Solea solea*. A food fish, which is farmed in some countries, it is green-grey or black-brown with dark spots. Length: to 60cm (24in). Family Soleidae. See also pp.740, 741, 745, 745.

Solemn League and Covenant (Sept. 1643), agreement between the LONG PARLIAMENT and the Scots that, in return for Parliament's promise to reorganize the established Church on a PRESBYTERIAN basis, the Scots would raise an army in the North of England against CHARLES I, to be paid £30,000 a month. It led directly to the Parliamentary victory at MARSTON MOOR, where Scottish forces gave the Parliamentarians a great advantage.

Solenodon, either of two species of endangered nocturnal insectivores that resemble large shrews; one occurs in Cuba, the other in Hispaniola. They have long, scaly tails and at least one species has poisonous saliva. Length: 30cm (1ft). Genus *Solenodon*. See also p.343.

Solenoid, ELECTROMAGNET in which a soft iron core moves so as to open or close an electrical circuit, thus acting as a switch or RELAY. See also p.872.

Solent, The, part of the English Channel between the ISLE OF WIGHT and the Hampshire mainland, s England.

Sol-fa, tonic. See TONIC SOL-FA.

Solferino, Battle of (1859), indecisive battle between an Austrian army and Franco-Piedmontese forces. Both sides suffered heavy losses (more than 14,000 casualties each) and agreed to an armistice. Horror at the plight of the wounded during this battle led Henri DUNANT to set up the RED CROSS.

Solicitor, legal officer, originally in Britain an officer of the Court of Chancery. By the Judicature Act of 1843 all attorneys, solicitors and proctors were named solicitors of the Supreme Court. To become a solicitor a candidate must be articled to a solicitor for five years and pass examinations set by the Law Society. He is qualified to advise counsel in superior courts and to act as an advocate in inferior courts. **Solicitor-General**, second-ranking law officer under the Crown in Britain, appointed on the recommendation of the Prime Minister. He is always a member of the House of Commons and is the deputy of the Attorney-General. It is the custom to grant the holder of the office a knighthood, although in several Labour governments the honour has been refused.

Solid angle, in mathematics, ratio of the surface area of the portion of a sphere enclosed by the conical surface forming the angle, to the square of the radius of the sphere.

Solidarity, independent trade union formed in Poland, during 1979-80 which challenged state power and was a major contributory factor to the imposition of martial law in 1981.

Solid circuit, electrical circuit that is present inside a semiconductor or other solid-state device. See also SEMICONDUCTIVITY; pp.882-883.

Solid geometry, study of figures in three dimensions. It includes the study of planes

intersecting with planes, planes intersecting with solids, solids intersecting with solids and the mensuration of solid figures. See also pp.798-799.

Solid-state chemistry, study of the chemical properties of solid chemical compounds. It includes investigations into the structure of crystalline compounds and into the mechanism involved in decomposition, oxidation and other reactions of solids. pp.840, 841.

Solid-state physics, physics of SOLID materials. From the study of the structure, binding forces, electrical, magnetic and thermal properties of solids has come the development of the SEMICONDUCTOR, MASER, LASER and SOLAR CELL. Solid-state physics is a relatively recent branch of physics, involving far more complicated quantum mechanical calculations than the preceding studies of gases and liquids. See also pp.840, 841.

Solihull, county district in SE West Midlands, England, created in 1974 under the Local Government Act (1972). Area: 180sq km (70sq miles). Pop. (1979 est.) 198,300.

Solimena, Francesco (1657-1747), Italian Baroque painter. Called 'La'Abate Ciccio', he was the most famous and successful Italian painter of his day. Much of his work which was influenced by Giotto, was done in churches in Naples and featured dramatic figures and lighting, painted with great energy and style.

Solo man. See JAVA MAN.

Solomon (fl. 10th century BC), third King of Israel, last-born son of DAVID and traditionally the author of the SONG OF SOLOMON. The first Temple of Jerusalem was built during his reign, but the financial burden of the construction caused the kingdom to divide after his death. See also pp.1190, 1190-1191.

Solomon (1902-), British pianist, b. Solomon Cutner who used only his first name professionally. He made his debut at the age of eight and after 1916 studied in London and Paris. He toured Europe, the USA and Australia and became internationally famous.

Solomon Islands, volcanic island group in the w Pacific Ocean. Extending for 1,400km (900 miles), the group is made up of the BRITISH SOLOMON ISLANDS, which include Guadalcanal, Malaita, Santa Isabel, New Georgia, Choiseul and the Shortland Islands, and to the N, Bougainville and Buka which are part of PAPUA NEW GUINEA. Discovered in the 16th century, the islands were not successfully colonized until the 18th century, when German and British traders and missionaries arrived. The chief exports are copra and timber. Area: approx. 40,150sq km (15,500sq miles). Pop. 250,000 (1972). See also pp.1993, 2117.

Solomon's seal, or **David's harp**, perennial plant native to cool temperate regions of Europe and Asia. It has broad, waxy leaves, white or greenish flowers and red berries. Height: to 0.9m (3ft). Family Liliaceae; species *Polygonatum multiflorum*.

Solon, (c.630-560 BC), Athenian lawgiver, statesman and poet. In c.594 BC he was made archon (annual chief ruler) and in c.574 was empowered to institute reforms. His innovations included the amendment of laws relating to debt, the freeing of slaves, the widening of the basis for political status, and the introduction of a new code of laws. He thereby laid the foundation of the Athenian democracy. See also pp.1203, 1870.

Sols, colloidal suspensions of particles in liquid such that the suspensions remain liquid and do not solidify as in a GEL.

Solstice, either of the two days of the year when the Sun is at its greatest angular distance from the celestial equator, leading to the longest day and shortest night (summer solstice) in one hemisphere of the Earth, and the shortest day and longest night (winter solstice) in the other hemisphere. In the northern hemisphere the summer solstice occurs on about 21 June and the winter solstice on about 22 Dec.

Solti, Sir Georg (1912-), Hungarian conductor who studied with KODÁLY, BARTÓK and ERNŐ DOHNÁNYI. Having

directed operas in Munich, Frankfurt and London he became music director of the Chicago Symphony Orchestra in 1968 and of the Orchestre de Paris (1972-75). He has distinguished himself as one of the world's most versatile conductors.

Solubility, mass of a SOLUTE that will saturate 100 grams of SOLVENT under given conditions. Solubility generally rises with temperature, but for a few solutes, such as calcium sulphate, increasing temperature decreases solubility in water.

Solute, gaseous, liquid or solid substance that is dissolved and dispersed homogeneously in a medium (a SOLVENT) to form a SOLUTION. Ionic solids, such as common salt, sugars and starch dissolve in water. Liquids can dissolve in liquids (eg ethanol and water are miscible in all quantities at room temperature) as can gases, such as hydrogen chloride (HCl).

Solution, in chemistry, liquid consisting of two or more chemically distinct compounds, inseparable by filters. A solution consists of a liquid (the SOLVENT) into which the other substance (the SOLUTE) dissolves. Water is the most universal solvent, ie a vast range of substances will dissolve in it to various extents. The amount of a solute dissolved in a solvent is called the concentration of a solution. The ability of one substance to dissolve another depends on the type of chemical BONDING, the temperature, and to a small extent the pressure. Heat can be evolved (an exothermic solution) or absorbed (endothermic) when a solution is formed. See also MOLARITY; MIXTURE; SATURATED SOLUTION.

Solution, electrolytic. See ELECTROLYTIC SOLUTION.

Solution, molar. See MOLARITY.

Solutrean culture, European culture of late Palaeolithic times. Solutrean man, like the Magdalenian cave painters who succeeded him, was a race of *Homo sapiens* or modern man. His artefacts included delicately-flaked tools and weapons and bone needles with eyes.

Solvay, Ernest (1838-1922), Belgian industrial chemist. He discovered a process for preparing sodium bicarbonate (and hence sodium carbonate) from salt and calcium carbonate. He patented the process in 1861 and by 1913 was supplying a large part of the world's sodium carbonate. See also SOLVAY PROCESS.

Solvay process, widely used industrial method of making SODA, or sodium carbonate, Na₂CO₃, invented by Ernest SOLVAY in 1863. Brine is saturated with ammonia, and carbon dioxide gas is bubbled into this solution in a Solvay tower. Sodium bicarbonate is formed, which precipitates from the brine, and is then heated to make soda.

Solvent, liquid that dissolves substances without changing their composition. Water is the most universal solvent, and many inorganic compounds dissolve in it. Ethanol, ether, acetone and carbon tetrachloride are common solvents for organic substances. See also SOLUTE; SOLUTION; pp.838, 839.

Solway Firth, inlet of the Irish Sea separating Cumbria, England, from the Dumfries and Galloway region, Scotland. Length: 61km (38 miles).

Solvay Moss, Battle of (1542), English victory over the Scots at Solway marshes on the Anglo-Scottish border. The battle stemmed from HENRY VIII's interest in forcing JAMES V to abandon his pro-French, pro-Catholic policy. By the ensuing treaty of Greenwich (1543) the infant Scots queen Mary Stewart (MARY, QUEEN OF SCOTS) was to marry Prince Edward (later EDWARD VI).

Solzhenitsyn, Alexander (1918-), Soviet writer. Sentenced to a forced labour camp in 1945 for criticizing STALIN, he was subsequently exiled to Ryazan but was officially rehabilitated in 1956. A major spokesman for Soviet dissident intellectuals, his novels include *One Day in the Life of Ivan Denisovich* (1962), *The First Circle* (1968) and *Cancer Ward* (1968). Criticism of the Soviet regime in *The Gulag Archipelago* (1974) led to his forcible exile to the West. He was awarded the 1970 Nobel Prize in literature. See also pp.1774-1775.

Soma, in Vedic mythology, personification of the soma plant or juice and, in the post-Vedic period, the personification of the moon, the waning of which was sometimes attributed to the gods' drinking of soma. Another story is that the god Soma married the 27 daughters of Daksha, one of the Lords of Creation, but allegedly neglected them all except one. Cursed to die by his father-in-law, Soma grew weaker but Daksha relented, making Soma's punishment periodic rather than eternal and thus causing the moon to wax and wane. See also VEDAS; SOMA SACRIFICE.

Somalia, republic in NE Africa, on the Indian Ocean. It is a poor, arid country and 80 per cent of the population are nomadic pastoralists. Animals and animal products account for 66 per cent of exports, and the chief crop is bananas. There are a few processing industries. The capital is Mogadisho. Somalia was at war with Ethiopia over the Ogaden region in the late 1970s. Area: 637,657sq km (246,199sq miles). Pop. (1976 est.) 3,258,000. See also p.2134.

Somaliland, British, region on the African coast of the Gulf of Aden, a British protectorate from 1884 to 1960. In 1960 it was joined to Somalia (Italian Somaliland until 1950) to form the independent United Republic of SOMALIA.

Somare, Michael Thomas (1936-), Papua New Guinean politician. A school teacher and then a journalist, he was elected to the House of Assembly in 1968 and became leader of the Pangu party in the same year. He became Prime Minister in September 1975, when his country was granted independence.

Soma sacrifice, one of the most important Vedic rituals. As described in the Rig Veda the juice of the SOMA plant is passed through sheep's wool and mixed with milk and water. It is offered to the gods and the remainder is consumed by the sacrificer and the priests. The plant is supposed to have originated in heaven.

Somatotropin (STH), growth HORMONE made by cells of the anterior, or frontal, PITUITARY GLAND, lying under the brain. It stimulates growth in young animals and human beings.

Somerset, Edward Seymour, 1st Duke of (c.1500-52), Protector of England, brother of Jane SEYMOUR. Having won the favour of HENRY VIII, he successfully commanded English forces in Scotland in 1544 and at Boulogne in 1545. Appointed protector of EDWARD VI, a minor, on Henry's death in 1547, he enjoyed monarchical powers. His religious reforms, leading to the Act of UNIFORMITY in 1549, consolidated PROTESTANTISM in England. Deposed as protector in 1549 by NORTHUMBERLAND, he was subsequently beheaded. See also pp.1404, 1414.

Somerset, county in sw England on the Bristol Channel. The land is generally low-lying in the centre, rising to the Mendip Hills in the NE and the Quantock Hills and Exmoor in the W. The region is drained chiefly by the rivers Avon, Exe and Parrett. Dairy farming and fruit-growing are the most important economic activities. Somerset is noted for Cheddar cheese and cider; leather and woollen goods are also manufactured. The county town is Taunton. Area: 3,450sq km (1,332sq miles). Pop. (1979 est.) 415,500.

Somerset House, English palace in the Strand, London, first built between 1547-51 for Edward Seymour, Duke of Somerset (then Lord Protector to the boy king, Edward VI). The architect was Sir John Thynne. Somerset House was rebuilt between 1776 and 1786 in the Palladian style and is the work of Sir William CHAMBERS. It houses various government departments. See also pp.1414, 1546.

Somerville, Edith Anna Oenone (1858-1949), Irish writer, b. Corfu. She is best known for her literary partnership with her cousin Violet Martin (pseudonym, Martin Ross). As Somerville and Ross they produced several works, including *Some Experiences of an Irish R.M.* (1899) *Further Experiences of an Irish R.M.* (1908) and *In Mr Knox's Country* (1915).

Somerville (Somerville), William (1675-

Somes, Michael

Somme; British Mark V howitzers in action in the Fricourt-Mametz valley.

Songs of Innocence was written and illustrated by William Blake.

Sophocles was more than 90 years old when he wrote *Oedipus at Colonus*.

Soul music's best-known performers include the American James Brown.

1742). British poet and writer. After studying law he became a country gentleman, taking up the sports that were later described in his poems. His best-known work is *The Chace* (1735), which documents the history of hunting to 1066.

Somes, Michael (1917–), British dancer and ballet director. He became a principal dancer with the Sadler's Wells company in 1938. He was assistant director of the Royal Ballet (1963–70) and since then a principal teacher and répétiteur. He has choreographed the ballet *Summer Interlude* (1950) to music by Respighi.

Somme, Battle of the (1916), WWI battle, the first major predominantly British offensive on the western front. It was a war of attrition, fought in the trenches, begun on 1 July and ending in the mud on 18 Nov. There were 95 German divisions opposed by 55 British and 20 French divisions. The casualties were: British 420,000, French 190,000 and German probably 465,000 (although some authorities have put the German total higher). See also p.1670.

Sommering, Samuel Thomas von (1755–1828), German scientist. In 1809, using the voltaic pile invented by Alessandro Volta, he developed an early electric telegraph system that sent signals indicated at the receiving end by the appearance of hydrogen bubbles liberated at a gold electrode in a solution of acid.

Somnambulism. See SLEEPWALKING.

SONAR, underwater detection and navigation system. The letters stand for Sound Navigation and Ranging. The system emits high-frequency sound that is reflected by underwater objects. See also pp.646–647.

Sonata, in music, instrumental chamber form of musical composition in several movements. The earliest surviving example is probably the two sonatas included in *Sacrae symphoniae* (1597) by Giovanni Gabrieli. The baroque era sonata contained distinct parts: one or more melodic parts, a bass part and a continuo. In the classical period, the sonata became a more clearly defined form for one or two instruments. The movements, usually three or four in number, are based on key relationships. The first movement is arranged with the statement of two subjects in related keys in the Exposition, this is developed in the Development or middle section with varied key changes, and the restatement of the original subjects both in the tonic (principal) key in the Recapitulation, and a coda or conclusion. The second movement of a sonata is generally slow in tempo and the third and perhaps fourth movements faster (allegro or presto).

Sonderbund, defensive pact formed in 1845 by seven Roman Catholic cantons in Switzerland – Lucerne, Uri, Schwyz, Unterwalden, Zug, Fribourg and Valais – against a revision of the federal pact of 1815 and a reduction of the sovereignty of the cantons. Sonderbund was declared unconstitutional, and in the civil war which followed the Catholic cantons were defeated.

Son et lumière, form of open-air entertainment which originated in France in the early 1950s. Performed at night, it involves the use of coloured lights, which are played on the façades of buildings to an accompanying soundtrack of music and a pre-recorded commentary which are broadcast by loudspeakers. Effects such as fireworks or smoke bombs may also be included.

Songhay, w African empire, founded c. AD 700 which flourished in the 15th and 16th centuries.

Songnim, city in sw North Korea, on the Taedong River. During the Japanese occupation (1910–45), an iron works was established there (1916), since when Songnim has become the largest iron and steel centre in North Korea. The city was destroyed during the Korean War, but was later rebuilt. Pop. 53,000.

Song of Hiawatha, The (1855), narrative poem by William Wadsworth Longfellow, based on the life of an Ojibway chieftain. Written in a distinctive trochaic metre, it tells of Hiawatha's childhood and

his contest with his father, the West Wind, over his mother Wenonah.

Song of Myself (1855), poem by Walt Whitman, considered his most characteristic and possibly his best. It first appeared in his collection *Leaves of Grass* and consists of a sequence of 52 loosely connected sections.

Song of Roland, The. See CHANSON DE ROLAND.

Song of Solomon, The (Song of Songs), book of the Old Testament. A series of love poems spoken alternately by a man and a woman, it is attributed in the Bible to Solomon but was probably edited to its present form in the 3rd century BC.

Songs of Experience (1794), volume of lyric poetry by William Blake, including *Earth's Answer*, *The Tyger*, *The Garden of Love* and *To Tirzah*. He illustrated the poems himself, which are complementary to those in *Songs of Innocence*, expressing the fallen state of man.

Songs of Innocence (1789), volume of lyric poetry written and illustrated by William Blake, including *The Lamb*, *The Echoing Green* and *Infant Joy*. The poems express a mystical joy in the innocence of youth.

Sonic boom, thunder-like sound produced when the high-pressure shock waves formed at the nose and leading edges of wings and tail of aircraft going through the sound barrier spread out behind the aircraft and strike the ground. See also SUPERSONIC FLIGHT; pp.830–831.

Sonnet, poem of 14 lines in iambic pentameter, usually employing Petrarchan or Shakespearean rhyme schemes. The Petrarchan consists of an octet and a sestet, usually with an *abbaabacdecde* rhyme scheme. The Shakespearean, having a final rhyming couplet, is *ababedcdefeggg*. The form originated in Provence, was widely used in Italy and was introduced into England by Sir Thomas Wyatt.

Sons and Lovers (1913), partly autobiographical novel by D. H. Lawrence. Attacked on its first publication because of its openness in dealing with sexual matters, it has been praised for its portrayal of life in a mining community.

Soo Canals. See SAULT STE MARIE CANALS.

Sophia, (1630–1714), Electress of Hanover, granddaughter of James I of England. In 1658 she married Ernest Augustus, Duke of Brunswick-Lüneburg who became Elector of Hanover. In 1701, by the English Act of Settlement, she was recognized as Protestant heir to the throne. Her son became George I of England. See also p.1447.

Sophists, itinerant Greek teachers of the 5th and 4th centuries BC who taught in return for fees. Protagoras was perhaps the first Sophist, and others were Gorgias, Thrasymachus and Hippias. They tended to emphasize rhetoric rather than pure knowledge.

Sophocles (c.496–406 BC), Greek playwright, b. Colonus. Of his 100 plays only seven tragedies and part of a satyr play remain. These include *Ajax*, *Antigone* (441), *Electra*, *Oedipus Rex* (c.428) and *Oedipus at Colonus* (produced 402). His works introduced a third speaking actor, added stage scenery and increased the chorus from 12 to 15 members. See also pp.1208, 1208.

Soprano, highest range of the human voice, above the mezzo-soprano. The normal range may be given as an octave below and above the B natural above middle C, although exceptional voices may reach notes considerably higher.

Sopwith Camel, British fighter biplane of WWI. It was made of wooden box-girders covered with fabric and was powered, at a top speed of 182km/h (113mph), by a 9-cylinder rotary engine. It was armed with twin synchronized 0.30in Vickers machine guns which fired through the arc of the propeller. See also p.570.

Sorbonne, college of the University of Paris, founded in 1253 by Robert de Sorbon (1201–1274) and located in what is now the Latin Quarter of Paris. Established for the education of students of theology, it was for centuries an intellectual centre of Roman Catholic religious

thought, but towards the end of the 19th century became purely secular in its course. Sorbonne is now often used as a synonym for the whole of Paris University.

Sorcery, manipulation of the natural world by means of magic. Anthropologists sometimes distinguish sorcery from witchcraft – witches claim inherent spiritual powers whereas sorcerers do not.

Sordello (c.1200–c.1269), Italian poet who wrote numerous poems in Medieval Provençal. Although much of his verse is about love, his most famous work is a lament on the death of his patron Blacatz.

Sorghum, tropical cereal grass native to Africa and cultivated throughout the world. Types raised for grain are varieties of *Sorghum vulgare* that have leaves coated with white waxy blooms and panicles that bear up to 3,000 seeds. It yields meal, oil, starch and dextrose (a sugar). Height: 0.5–2.5m (2–8ft). Family Gramineae. See also pp.662, 676, 754.

Sorrel, or dock, herbaceous perennial plant native to temperate regions. It has large leaves which can be cooked as a vegetable and small green or brown flowers. Height: to 2m (6ft). Family Polygonaceae; genus *Rumex acetosa*.

Sorting, in geology, process by which sedimentary particles that are transported by wind or water are segregated according to their physical properties such as weight, shape, durability and density. Flat, thin material is carried farther than round objects of similar weight, weaker materials are more easily fragmented and destroyed, but the most durable, usually quartz objects, survive. See also BEDDING PLANE.

SOS, general distress at sea. It is a simple pattern in Morse code consisting of three dots, three dashes and three more dots, which is internationally understood as a call for help.

Sosnowiec. See KATOWICE.

Sotatsu, Nonomura (d.1643), Japanese painter. An artist of the Edo period, he was one of the founders of the Korin style of Japanese painting, which is based on the older Yamato-e style.

Soterus, Saint (d.c.175), pope from c.166, during the persecution of Christians by Marcus Aurelius. He is said to have died a martyr.

Soto, Hernando de (c.1498–1542), Spanish explorer who led explorations in 1539 to what later became the SE USA. He followed the Mississippi River, hoping to find wealth, but died before the journey was completed.

Soto, Jesús Rafael (1923–), Venezuelan painter and sculptor. In 1950 he went to live in Paris. Using optical illusion and geometric relief he produced a type of kinetic art; an example is *Horizontal Movement* (1963).

Soufflot, Jacques-Germain (1713–80), the outstanding French neo-classical architect. He studied architecture in Rome, settling on his return in Lyons, where he made his reputation with his design for the vast Hôtel Dieu (1741). In 1757 he began work on the church of Ste Geneviève (renamed the Panthéon after the Revolution). Regarded as the masterpiece of French Neo-Classicism, its Italianate features and Roman monumentality are reminiscent of St Peter's, Rome.

Soul. See SOUL.

Soulages, Pierre (1919–), French painter well known for his abstract work, which he began after WWII. His style, similar to that of Franz Kline is characterized by thick black strokes on an almost neutral background. Among his paintings is *Black, Brown and Grey* (1957).

Soul Music, form of popular music. The term designates black music which developed in the 1960s from rhythm and blues.

Soult, Nicolas-Jean de Dieu (1769–1851), Duke of Dalmatia, created a marshal by Napoleon in 1804. He fought at Austerlitz and Jena, and commanded French troops in Spain from 1809 to 1814. He served three times as Minister of War under Louis-Philippe (r.1830–48).

Sound, physiological sensation perceived by the brain via the ear, caused by an oscillating source, and transmitted

through a material medium as a sound wave. The human ear can respond to sounds with frequencies between about 20 and 20,000 hertz (one Hz is one oscillation per second).

The velocity (c) at which a sound wave travels through a medium depends on the ELASTICITY of the medium (K) and its density (ρ): $c = \sqrt{K/\rho}$. If the medium is a gas, the sound wave is longitudinal and the velocity of propagation depends on the gas temperature $c_g = c_0 \sqrt{1 + \alpha\theta}$, where c_0 and c_g are the velocities at 0°C and $\theta^\circ\text{C}$ and α is the coefficient of expansion of the gas. The velocity of sound in dry air at Standard Temperature and Pressure (STP) is 331.4m per sec (741mph) and depends on the height above sea level. Every pure sound is characterized by its intensity, PITCH and TIMBRE. The intensity is the rate of flow of sound energy through unit area perpendicular to the direction of flow. See also NOISE, pp.832-833.

Sound barrier, large and sudden increase in drag experienced by aircraft at near Mach 1 (the speed of sound). This drag is due to the compressibility of air, which is negligible at lower speeds. To overcome this barrier it was necessary to design aircraft with more powerful propulsion systems, less surface area and swept-back wings. At supersonic speeds an aircraft outruns its own sound, but as it passes through the sound barrier it produces a series of shock waves - the SONIC BOOMS. See also p.831.

Sound distortion, various aural effects. Sounds may be distorted if the organs of hearing are congenitally defective or affected by disease. For example, partially deaf people may be able to hear only the lower sound frequencies. Sound distortion occurs in a concert-hall when its acoustics affect sound waves so that these reach the listener out-of-phase or deadened. Sounds can be distorted intentionally by using electronic devices, as in electronic music.

Sounding, determining the depth of water. The simplest means of sounding is by dropping a measured weighted line till it reaches the bottom. Acoustic SONAR, a sonic depth finder, is often used. See also p.646.

Sounding machine. See ECHO SOUNDER.

Sounding rocket, ROCKET designed for upper-atmosphere studies. It is usually single-staged and follows a vertical trajectory. Data collected may be parachuted or radioed back to a ground tracking station.

Sound of Music, *The* (1965), US film of the stage musical directed by Robert Wise. The original score was by Richard RODGERS and Oscar HAMMERSTEIN II. The film won five OSCARS.

Sound recording and reproduction, mechanical conversion of sound waves into a form which can be stored and reproduced. Thomas EDISON's phonograph (1877) recorded sound vibrations as indentations made by a stylus on a revolving cylinder wrapped in tinfoil. German-born Emile BERLINER's GRAMOPHONE improved the process by using a zinc disc instead of a cylinder. The volume was amplified by the addition of acoustical horns, which were replaced before WWI by valve amplifiers. Moulded thermoplastic records were introduced in 1901, and subsequently improved plastics allowed finer grooving with reduced surface noise. In 1927 and 1928 patents were issued in the USA and Germany for MAGNETIC TAPE recording processes. Later innovations include HIGH FIDELITY, STEREOPHONIC and quadrophonic reproduction.

Sound track, usually a band of varying width through which a light shines as the film is projected. A photoelectric cell detects the transmitted light signal, converting it into an electric current which is amplified and converted into sound. See also p.1633.

Souphanouvong, Prince (1902-), Lao-tian nationalist politician. He held several government posts between 1958 and 1962, he became president of the Lao People's Democratic Republic in 1975.

Sousa, John Philip (1854-1932), US composer and bandmaster. He composed about 100 marches, including *Semper*

Fidelis (1888) and *The Stars and Stripes Forever* (1896). He also composed numerous operettas, of which the most famous is *El Capitan* (1896).

Sousaphone, largest brass musical instrument of the TUBA family. It was introduced by John SOUSA to fortify the bass section of US military bands. The tube coils around the player, with the removable flaring bell directed forwards, not upwards, as with orchestral tubas.

Sousse (Susa), coastal town in NE Tunisia, N Africa, on the S shore of the Gulf of Hammamet. Settled by the Phoenicians, it became a Roman port, was destroyed in AD 434 by the Vandals, and was rebuilt by JUSTINIAN. Today it is a trade centre of an agricultural region. Manufactures include textiles and food products. Pop. (1966) 58,161.

South, one of the four cardinal points of the compass, opposite north. Lines of magnetic flux emanate from the Earth's north pole and enter its south pole.

South Africa, republic formed in 1910 from two British territories, Cape Colony and Natal, and two Afrikaaner states, Orange Free State and Transvaal. Since WWI manufacturing has greatly increased in South Africa. The chief industries include engineering, iron and steel, metal working and motor vehicle assembly. There are valuable deposits of gold and South Africa leads the world in the production of diamonds. Maize is the chief crop and dairy cattle and sheep are reared. South Africa has two capitals: Cape Town is the seat of the legislature and Pretoria is the seat of the government. Area: 1,221,042sq km (471,444sq miles). Pop. (1975 est.) 25,471,000. See p.2134.

South African (Boer) Wars, two wars between the BOER and British settlers in southern Africa. The first (1880-81) arose from the British annexation of the Transvaal in 1877. Under KRUGER's leadership the Boers defeated the British at LAING'S NEK and MAJUBA Hill and won self-government by the Pretoria Convention (1881). That convention allowed Britain to retain suzerainty over all of southern Africa. The second war (1899-1902) was the outcome of the Boers' desire for entire independence and British desire to take control of the Transvaal gold mines. It began with the Boers' besieging MAFEEKING in Oct. 1899 and ended with the signing of the treaty of VEREENIGING in May 1902. See also pp.1606, 1607.

South African mackerel. See BARRACOUTA.

South America. See AMERICA.

Southampton, port and county district in Hampshire, S England. The city, at the head of Southampton Water, is Britain's principal passenger port and a major commercial port. It is the seat of Southampton University (1952). Industries: shipbuilding, engineering, oil refining, food processing. The county district was created in 1974 under the Local Government Act (1972). Area: 49sq km (19sq miles). Pop. (1979 est.) 207,800.

South Arabia, Federation of (1963-67), federation formed by the merger of Aden with the Federation of the Emirates of the South. The latter was formed in 1959. The federation collapsed in 1967, due to the emergence of the National Liberation Front. Aden and South Arabia became the independent state of Southern Yemen. The name People's Democratic Republic of Yemen was adopted in 1970 to distinguish it from the neighbouring North Yemen or Yemen Arab Republic.

South Australia, state in S central Australia, on the Indian Ocean. The area is hilly in the E (Flinders Ranges) and the N (Musgrave Ranges), and in the W are the Great Victoria Desert and the Nullarbor Plain. The Murray River in the SE is the only important river and farming is confined to this area. Barley, oats, wheat, grapes and rye are the chief crops. Livestock are grazed in the N. Important mineral deposits in the state include iron ore, salt, gypsum, coal and natural gas. The principal industries are heavy metals and transport equipment. Whyalla has the largest shipyards in Australia. The main cities are Adelaide (the state capital),

Salisbury and Elizabeth. The S coast of Australia was visited by the Dutch in 1627. The first English colonists arrived in 1836 and the region was federated as a state of the commonwealth in 1901. From 1863 until 1911 South Australia included Northern Territory. Area: 984,380sq km (379,760sq miles). Pop. (1979 est.) 1,293,800. See also p.1982.

South Bedfordshire, county district in SW and central BEDFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 212sq km (82sq miles). Pop. (1979 est.) 105,900.

South Cambridgeshire, county district in S and central CAMBRIDGE(SHIRE), England; created in 1974 under the Local Government Act (1972). Area: 904sq km (349sq miles). Pop. (1979 est.) 103,800.

South Carolina, state in SE USA, on the Atlantic Ocean. The land rises from the coastal plain to the rolling hills of the Piedmont plateau to the Blue Ridge Mts in the NW. The region is drained chiefly by the Pee Dee, Santee and Savannah and Edisto rivers. Tobacco and soya beans have surpassed cotton in importance. Maize, cattle, sweet potatoes and groundnuts are also important. The state's great potential for hydroelectric power has helped to steer South Carolina's traditionally agrarian economy towards manufacturing. The chief industries are chemicals, machinery, textiles, food processing, clothing, timber and fishing. The principal cities are Columbia (the state capital and largest city), Charleston, Greenville and Spartanburg. The Spanish and the French visited the coast in the 16th century but the English were the first permanently to settle the area, from 1663 when Charles II granted a charter of settlement. South Carolina became a royal province in 1729. A plantation society evolved based on rice, indigo and cotton. The state was the first to secede from the union and the first shots of the AMERICAN CIVIL WAR were fired at Fort Sumter in Charleston harbour. The state was devastated in 1865 by Union troops. Area: 80,432sq km (31,055sq miles). Pop. (1980) 3,119,208. See also p.2161.

South China Sea, W part of the Pacific Ocean, surrounded by SE China, Indochina, the Malay Peninsula, Borneo, the Philippines and Taiwan; it is connected to the East China Sea by the Formosa Strait. Its chief arms are the Gulf of Tonkin and Gulf of Thailand, and the Si, Red, Mekong, and Chao Phraya rivers. Area: 2,300,000sq km (848,000sq miles). Depth: (average) 1,140m (3,740ft) but more than 4,920m (15,000ft) in some places.

Southcott, Joanna (1750-1814), British religious fanatic. In about 1792 she proclaimed she was divinely instructed to forewarn the world of the SECOND COMING.

South Dakota, state in N central USA, in the GREAT PLAINS. The land rises gradually from the E to the Black Hills in the W. The Missouri River flows through the centre of the state. One-fifth of the area W of the river is semi-arid plain, inhabited by Indians. The rest is divided into large cattle and sheep ranches. East of the Missouri, livestock rearing is important and wheat, maize, oats, soya beans and flax are also grown. Meat-packing and food processing are by far the most important industries. South Dakota is one of the largest producers of gold in the USA; tin, beryllium, stone, sand and gravel are also important minerals. Pierre is the state capital and Sioux Falls, Aberdeen and Rapid City are the largest cities.

French trappers claimed the region for France in the 1740s. The USA acquired the land in the LOUISIANA PURCHASE of 1803. Lewis and Clark explored the area in 1804-05 but trading and military posts were the only settlements until the late 1850s. Dakota Territory was formed in 1861. The discovery of gold in the Black Hills in 1874 led to an increase in population and the territory was divided into the states of North and South Dakota, both of which joined the Union in 1889. Area: 199,551sq km (77,047sq miles). Pop. (1980) 690,178. See also p.2161.

South Downs, range of chalk hills in SE

Sousaphones rest on the player's shoulder. They are used in march music.

Southampton, Britain's major passenger and commercial port, on the River Test.

South Carolina: an 18th-century Charleston house where Washington stayed in 1791.

Joanna Southcott's followers believed that she would come to life again.

South-East Asia Treaty Organization

Southend-on-Sea, a popular resort for Londoners, is famous for its pier.

Robert Southey's liberal political opinions changed in later life.

South Pacific; Janet Blair in the 1950 Broadway production of this musical.

Spacecraft; the solar panels generate electricity to operate the instruments.

England, stretching E-W from E Sussex to W Dorset. They are separated from the North Downs by the Weald and are drained by the Adur, Arun and Ouse rivers. The highest point is Butser Hill, 271m (889ft).

South-East Asia Treaty Organization. See SEATO.

Southend-on-Sea, county district in SE Essex, E England, created in 1974 under the Local Government Act (1972). Area: 42sq km (16sq miles). Pop. (1974 est.) 160,200.

Southern Alps, mountain range on South Island, New Zealand, extending NE to SW almost the entire length of the island. The most important pass is Arthur's Pass, linking Christchurch (E) with Greymouth (W). The highest peak is Mt Cook, 3,764m (12,349ft).

Southern Cross, or Crux, cross-shaped constellation in the Southern Hemisphere, used as a navigational aid because the vertical arm points south. It contains the Coal-sack nebula. See also pp. 978, 988, 1007, 1014-1015, 1014, 1020-1021.

Southern Rhodesia. See ZIMBABWE.

Southey, Robert (1774-1843), British poet and biographer, related to Samuel Taylor Coleridge by marriage. His long epic poems include *Thalaba* (1801), *Madoc* (1805), *The Curse of Kehama* (1810) and *Roderick the Last of the Goths* (1821). He also wrote numerous biographies. He was appointed Poet Laureate in 1813.

South Georgia, island in the S Atlantic Ocean, about 1750km (1100 miles) E of Tierra del Fuego and a dependency of the Falkland Islands. It was illegally occupied by the Argentinians in 1982 until liberated by British Marines a few weeks later. The chief town is Grytviken Harbour.

South Glamorgan, county in S Wales, on the Bristol Channel, formed in 1974 from parts of the former counties of Glamorgan-shire and Monmouth-shire. The administrative centre is Cardiff. Area: 416sq km (161sq miles). Pop. (1975 est.) 391,600.

South Island, larger of the two principal islands that comprise New Zealand; separated from North Island by Cook Strait. Its chief cities are Christchurch, Dunedin and Invercargill. The Southern Alps extend the length of the country and separate the thickly forested W coast from the broad Canterbury Plains in the E. Cereal growing, sheep and cattle rearing, and dairying are important on the Plains; tourism is a valuable source of income. Area: 150,461sq km (58,093sq miles). Pop. (1971) 811,268. See p. 2105.

South Lakeland, county district in S Cumbria, England, created in 1974 under the Local Government Act (1972). Area: 1,549sq km (598sq miles). Pop. (1979 est.) 94,500.

Southland, statistical area of New Zealand, the SW tip of the South Island. It includes Stewart Island. It is chiefly a farming province.

South Oxfordshire, county district in SE Oxfordshire, England, created in 1974 under the Local Government Act (1972). Area: 690sq km (266sq miles). Pop. (1974 est.) 134,700.

South Pacific (1949), musical play by Richard Rodgers and Oscar Hammerstein II, originally produced on Broadway, adapted from stories by James Michener. It contains several songs that became famous, including *Some Enchanted Evening* and *Younger than Springtime*.

South Pole, southernmost geographical point on the earth's surface. The magnetic South Pole is located about 2,400km (1,500 miles) from the geographical South Pole. Roald Amundsen was first to reach the Pole on 14 December 1911.

South Ribblesdale, county district in SW central Lancashire, England, created in 1974 under the Local Government Act (1972). Area: 111sq km (43sq miles). Pop. (1979 est.) 96,100.

South Saskatchewan, river in SW Canada. It rises in the Rocky Mts and forms, with its tributary the River Bow, the longest branch of the River Nelson. Length: 1,940km (1,205 miles).

South Sea Bubble (1720), speculation in the shares of the English South Sea Company, ending in financial collapse. The company, founded by Robert Harley in 1711, was formed on the assumption that the terms of the treaty concluding the War of the Spanish Succession would give Britain a trading monopoly in the Pacific Ocean and South America. This monopoly did not materialize but the government, to fund the National Debt, encouraged public confidence in the company, persuading investors to exchange state annuities for its stock. In 1720 the bubble burst; banks failed and many people were ruined. The consequences of the disaster brought Robert Walpole to power (1721).

South Seas, name used by early explorers to describe the whole of the Pacific Ocean. It later came to mean the area of the central and S Pacific, but in particular the islands and waters of Oceania.

South Tyneside, county district in E central Tyne and Wear, England, created in 1974 under the Local Government Act (1972). Area: 64sq km (25sq miles). Pop. (1979 est.) 162,600.

South Uist. See UIST.

Southwell, Robert (1561-95), English writer and poet, canonized in 1970. Educated abroad and ordained a Jesuit priest in 1585, he was imprisoned upon returning to England and executed for his faith. His works include *An Epistle of Comfort to the Reverend Priests* (1587) and *Mary Magdalen's Funeral Tears* (1593).

South West Africa. See NAMIBIA.

South Yorkshire, metropolitan county in N central England, formed in 1974 from part of the West Riding of Yorkshire. Sheffield is the administrative centre. Area: 1,561sq km (603sq miles). Pop. 1,318,300.

Soutine, Chaim (1894-1943), Lithuanian-born artist who became associated with the Expressionist movement in Paris. His paintings are violent and passionate.

Sovereign, English gold coin first issued in 1489 by Henry VII. It was replaced by the unite in the 17th century but the new sovereign became the standard gold coin in 1817. It ceased to be minted in 1914. Sovereigns are still minted periodically for commemorative purposes.

Sovereignty, ultimate authority, held by a person or institution, against which there is no appeal. In early modern Europe sovereignty came to be ascribed to the absolute monarchs of the new nation states. In Britain (where absolute monarchy never quite established itself) sovereignty, before the country's entry into the EEC, resided in Parliament.

Soviet, Russian word meaning council. Soviets, elected councils of workers, are part of the organizational structure of the Russian government which appeared during the revolutions of 1905 and 1917. After 1917, the Soviets were confirmed as the basic political unit of government. Soviets are organized in a hierarchical system, from the rural council to the Supreme Soviet, the highest legislative body in the USSR. See also pp. 1676-1677.

Soviet Far East, area in the extreme E of the USSR, coextensive with Primorsky and Khabarovsk krais. As the Far Eastern Republic, it was formed in 1920 with the capital at Chita as a zone between Japan and the USSR territories. The region is almost self-sufficient economically; industries include mining for precious metals, oil refining, and the manufacture of iron and steel. Hunting for pelts and meat and fishing are other important activities. Area: 6,216,000sq km (2,400,000sq miles). Pop. 5,780,000.

Soviet Union. See USSR.

Soweto (South-Western-Township), black township of about 1 million people situated on the outskirts of Johannesburg. A demonstration by students protesting against the compulsory use of Afrikaans in addition to English in Bantu schools in June 1976 gradually culminated in widespread riots against the police, and against unemployment, in which 618 lives were lost. Further sporadic demonstrations and riots occurred in 1977.

Soya bean, annual plant native to China and Japan. It has oval, three-part leaves and small lilac flowers. Grown for food, forage, green manure and oil, its seed is an important source of protein. Height 60cm (24in). Family Leguminosae; species *Glycine soja*. See also pp. 680, 681, 713.

Soyinka, Wole (1934-), Nigerian writer whose works explore the conflict between the traditional African way of life and corrupting 20th-century influences. His plays include *The Lion and the Jewel* (1966), *Madmen and Specialists* (1970) and *Jero's Metamorphosis* (1972). *The Interpreters* (1965) and *Season of Anomy* (1973) are novels.

Soyuz, series of Soviet manned space missions. Soyuz 1 was launched in April 1967; Soyuz 2 and 3 in 1968 and 4 and 5 in 1969 docked in space. Soyuz 9 established the record for a manned space flight in 1970 - 18 days. The first joint US-Soviet space project took place in 1975, when Apollo and Soyuz spacecraft docked in space. See also pp. 1027, 1041.

Spaak, Paul-Henri (1899-1972), Belgian and international statesman. An advocate of European unity, he was Prime Minister of Belgium (1938-39; 1947-50) and Foreign Minister (1936-38; 1939-45; 1945-47; 1954-57; 1961-65). He served as first President of the UN General Assembly (1946) and Secretary-General of NATO (1957-61). See also p. 1743.

Space, part of the unlimited four-dimensional continuum in which the physical extensions of matter occur, rather than their temporal extensions, which occur in time. Relativity postulates that space and time are aspects of one thing. More usually space is taken to mean the rest of the Universe which lies beyond the Earth's atmosphere and in which the density of matter is low.

Spacecraft, vehicle capable of flight above the Earth's atmosphere. It is launched from the ground by powerful rockets which fall away once the fuel has been exhausted. Unmanned spacecraft respond to commands from ground stations, but they can function under the control of computers carried aboard. The first unmanned spacecraft, Sputnik 1, was launched by the USSR on 4 Oct. 1957. Manned spacecraft have life-support systems comprising pressure, temperature and oxygen regulators, carbon dioxide and waste management systems, water, food and fuel. The first manned spacecraft, Vostok 1, carried Yuri Gagarin and was launched, again by the USSR, on 12 Apr. 1961. See also pp. 1022-1025.

Space exploration, investigation, by spacecraft, of regions of space beyond the Earth's atmosphere. Sputnik 1, launched 4 October 1957 by the Soviet Union, began the research that resulted in the landing of two men on the Moon in July 1969. Major milestones: first space probe (Explorer 1, discoverer of Van Allen radiation belts, launched 31 Jan. 1958); first lunar probe (Luna 2, 12 Sept. 1959); first manned flight (Yuri Gagarin, 12 April 1961); first close-up pictures of Mars (Mariner 4, 1965); first manned lunar landing (Neil Armstrong, 21 July 1969); first pictures from surface of another planet (Venera 9, 22 Oct. 1975); first re-usable space vehicle, (the Space Shuttle launched 12 April 1981). See also pp. 1026-1041, 1022-1025.

Space heating, in homes, factories and public buildings, heating of the interior of buildings. It is achieved using one or another type of central heating system.

Space probe, unmanned craft sent to explore regions beyond the Earth's atmosphere. The first US space probe was Explorer 1, launched 31 January 1958; it discovered the inner Van Allen radiation belt. The first lunar probe was Luna 2, launched 12 September 1959. The first planetary probe was Mariner 2, launched 27 August 1962, which flew past Venus (22 Oct. 1975); Viking 1 landed on Mars and collected information to test the Martian surface for life (July 1976). See also pp. 1026-1027.

Space research, scientific and technological investigations into new methods for

studying and travelling in space. In the last quarter of the 20th century, following the successes of the US Apollo Moon Project, it will probably include (besides exploration of other planets) the establishment of large space stations orbiting the Earth. Through these astronomy and space science generally will enter new phases of advancement. To build, maintain and supply such space stations, the US SPACE SHUTTLE is being developed. New engineering techniques will be evolved and a whole range of new handling equipment and propulsion machinery designed. The medical problems of prolonged stays in space will have to be overcome, and research into the sociology of space communities may be necessary. Among the developments of chemists and biologists will be the design of sophisticated systems of recycling of wastes employing microbes genetically tailored for the purpose. See also pp.1040-1053.

Space shuttle, re-usable ROCKET and aerodynamic vehicle carrying men and supplies between Earth and a SPACE STATION. The shuttle is carried on a modified Boeing 747 until a predetermined height is reached. A booster rocket launches the shuttle, which returns to the launch pad to be re-used. The shuttle is planned to have rocket power for manoeuvre into orbit and for deceleration during re-entry, and wings and a tail for flying through the atmosphere. The first space shuttle, Colombia, was successfully launched by the U.S. in 1981.

Space station, orbiting laboratory in space where men can construct and maintain spacecraft and conduct scientific and medical experiments. Early stations included the Russian SOYUZ (1971) and the US SKYLAB (1973).

Spacesuit, pressurized, sealed garment allowing an ASTRONAUT to function in adverse conditions of space, i.e. extremes of temperature and pressure, RADIATION and meteorite bombardment, and weightlessness. It has a self-contained life-support system, which includes an oxygen supply and a cooling system, and maintains pressures of 0.35-1kg/cm² (5-15lb/in²) with a neoprene coating. Layers of aluminized plastic, fabric, and nylon provide insulation. Plastic visors guard against micrometeorites. See also pp.1022-1025.

Space-time, in RELATIVITY theory, concept that unifies the three space dimensions with time to form a four-dimensional frame of reference. In 1907 Hermann MINKOWSKI devised a presentation of relativity theory by extending three-dimensional geometry to four dimensions. A line drawn in this space represents the whole history of a particle as its path both in space and time (its world line). See also pp.858-859.

Space travel, the launching of manned vehicles to regions in space beyond the influence of the Earth's gravity. Within the next century space travel can be expected to reach the stage when spacecraft are assembled and launched from orbiting space stations, on missions to other stations which orbit sister planets, or probing regions beyond the solar system. For travel within the inner regions of the solar system, spacecraft can employ solar engines (which derive their power from the Sun's radiation). For journeys to outer space nuclear-powered ion engines could provide the thrust needed over longer periods of time. At the end of a space journey, passengers and crew may return to Earth from orbiting terminal in the re-entry vehicle of the SPACE SHUTTLE.

Space walks, exciting features of early space flights. Alexei Leonov, in 1965, was the first astronaut to manoeuvre himself outside his spacecraft, Voskhod 2. Astronauts secured themselves to their craft by lifelines and obtained propulsion using jet pistols.

Spadefoot toad, tailless AMPHIBIAN with a horny "spade" on the inside of each hind foot. It is squat and smooth-skinned. Genus *Scaphiopus* is found from Canada to Mexico and genus *Pelobates* is found in Europe and central Asia. Family Pelobatidae. See also p.317.

Spadix, in some flowering plants, a spike of small flowers; it is generally enclosed in a SPATHE. A familiar plant, with an inflorescence of this kind, is the cuckoo-pint (*Arum maculatum*). See also p.382.

Spaghetti, variety of PASTA which takes the form of thin strings which soften when it is cooked in boiling water. Spaghetti is ready to eat after about ten minutes cooking.

Spain, kingdom occupying four-fifths of the Iberian Peninsula in SW Europe. Civil War in the 1930s put Spain under a Fascist dictatorship until the mid-1970s. It is predominantly an agricultural country and three-quarters of the arable land is pasture. The chief crops are cereals, potatoes, sugar-beet and fruits. Mineral deposits include mercury, iron ore, coal, zinc and tin. The principal industries are shipbuilding, motor vehicles, textiles, paper, machinery, iron and steel and cement. Tourism and fishing are also important. The capital is Madrid. Area: 504,750sq km (194,884sq miles). Pop. (1976 est.) 35,972,000. See p.2140.

Spallanzani, Lazzaro (1729-99), Italian biologist who demonstrated the falsity of the theory, then widely believed, that micro-organisms spontaneously generate themselves. The belief was based on the growths of moulds etc. in liquids left standing exposed to the air. Spallanzani, boiling a flask of liquid for an hour, thoroughly sealed it and left it to stand. Even after several days no micro-organisms appeared.

Spandrel, in architecture, triangular space between the curve of an arch, the horizontal drawn from its apex and the vertical drawn from its springing.

Spanghero, Walter (1943-), French rugby union player. From the Narbonne club, he played in 42 matches (1964-73) against International Board countries, captaining France in his final season. Powerfully built, he was equally effective as a lock forward or No.8.

Spaniel, any of several breeds of sporting dogs that may be trained to locate and flush game, to drop for the hunter's shot and sometimes to retrieve on command. Mentioned as early as the 14th century, it was called setting spaniel before the introduction of the gun. The dog's task then was to locate game and sit while the hunter threw a net over it. Land spaniels include the COCKER and TOY. Water spaniels are usually RETRIEVERS.

Spanish Armada. See ARMADA, SPANISH.

Spanish Civil War (1936-39), conflict between LOYALISTS (often called Republicans) and Nationalists for control of SPAIN. Both sides began as loose alliances: the Loyalists, so called because they were loyal to the government of the Second Republic, consisted of Republicans, Socialists, Communists and BASQUE and CATALANIAN separatists. The Nationalists comprised the right-wing professional army, the more conservative faction of the Roman Catholic Church, monarchists, CARLISTS and the great landowners. In 1931 the Spanish Monarchy was abolished and the Second Republic instituted. Church and state were separated; land was redistributed and military influence curtailed. All these measures were anathema to the traditionalist forces of Spain, especially the Church, the landed interests and the military. War broke out in July 1936, with an uprising of the Spanish army in Morocco. The commander in Morocco, Francisco FRANCO, soon emerged as the leader of the Nationalist side. Nazi Germany and FASCIST Italy gave aid, including troops and supplies, to the Nationalist forces. Franco used this aid unscrupulously and the aerial bombing of civilians was employed for the first time by the Nationalist air-force, notably at GUERNICA in 1937. The democracies, on the other hand, maintained strict neutrality, leaving the USSR to support the Loyalists, which greatly strengthened the COMMUNISTS within the Loyalist ranks. INTERNATIONAL BRIGADES were formed and fought on the side of the Loyalists. The well-organized Nationalists in late 1938 began a major assault on Catalonia. When Barcelona fell in January 1939, the Loyal-

ist cause was doomed. On 28 March 1939 the Nationalists entered Madrid, and the war was over. More than 1,000,000 Spaniards had been killed and more than 250,000 were forced into exile. See also pp.1695, 1695, 1700, 1705, 1708.

Spanish flu, virulent and contagious form of INFLUENZA which became a world-wide epidemic in 1918-19. An estimated 20 million people died. The young were particularly vulnerable to secondary infection such as bacterial pneumonia for which no cure then existed.

Spanish fly. See BLISTER BEETLE: CANTHARIDES.

Spanish Guinea, former name of EQUATORIAL GUINEA, in W central Africa.

Spanish Inquisition. See INQUISITION.

Spanish Main, term used to refer to the West Indies and the Caribbean coast of Panama, Colombia and Venezuela during the area's exploration and development. A number of offshore islands provided ideal bases for buccaneers and pirates who, in the 16th century, raided ships taking gold and silver from South America to Europe.

Spanish Sahara, former name of Western Sahara. See p.2171.

Spanish Steps, The (1721-25), stepped passageway in the Piazza di Spagna, Rome with the impressively sited French-built church Trinita dei Monti as a backdrop. A masterpiece of BAROQUE architecture with curvilinear flights of steps, the design was begun by Alessandro Specchi (1668-1729) and completed after 1723 by Francesco de Sanctis (1693-1740). The stairway takes its name from the Spanish Embassy established in the piazza in the 17th century, but the idea was French and the costs were defrayed by a French diplomat.

Spanish Succession, War of the (1701-14), dynastic struggle for the throne of SPAIN. When it became apparent that CHARLES II of Spain would die childless, there were three claimants who had dynastic ties with the Spanish royal family: LOUIS XIV of France, who claimed the throne for his grandson Maximilian II; Emanuel the elector of Bavaria, who claimed the throne for his son Joseph Ferdinand; and the Holy Roman Emperor LEOPOLD I, who claimed the throne for his son. In his first will, Charles II left all his possessions to Joseph Ferdinand but Joseph's sudden death in 1699 reopened the dispute.

While new negotiations were in progress, the dying Charles II named Philip of Anjou, (grandson of Louis XIV) as his heir. When he ascended the throne as PHILIP V in 1701, most of Europe was plunged into war. France was supported by Spain, Bavaria and Cologne, and Mantua and Savoy. The Allies comprised the imperial forces, England, Holland, Prussia and other German states, and Portugal. Despite impressive Allied victories at BLENHEIM, RAMILLIES, OUDENARDE and MALPLAQUET, the war lasted for more than a decade. In 1713-14, an exhausted France signed the Treaties of UTRECHT and in 1714 those of Rastatt and Baden were concluded. Philip V remained on the Spanish throne but the Allies, and particularly England, gained great territorial and trading concessions. See also pp.1446, 1446, 1448.

Spanish Town, city in SE central Jamaica, West Indies, on the Cobre River. Founded c.1523, the city was capital of Jamaica from 1692 to 1872. It is a commercial and processing centre for sugar cane, coffee, cocoa, bananas, breadfruit, dyewood and citrus fruits. Pop. (1970) 41,600.

Spanish Tragedy, The (1594), blank verse tragedy by Thomas KYD. One of the best known of 16th-century plays that piled up revenge, blood and horror, it greatly influenced the development of Elizabethan drama. See also p.1417.

Spare part surgery, medical treatment that involves replacing the bones or organs of the patient with steel alloy or plastic parts; metal plates may also be used to strengthen existing bones. See also p.1097.

Spark, Muriel (1918-), British novelist who also wrote short stories, plays, poems and criticism. Her novels include

Spain; a statue of Christopher Columbus in Columbus Square, Madrid.

Spaniels are descended from a Spanish breed: the name derives from "Spain".

Spanish Civil War; Nationalist artillery aimed at Government lines at Teruel.

Spanish Steps, one of Rome's attractions, with St Trinita de Monte Church.

Spark plug

Spark plugs should be kept clean and changed every 16,000km (10,000 miles).

Spartacus: his victory over a Roman force at Mount Vesuvius in 73 BC.

Spearmint grows in temperate zones, and is often cultivated as a garden herb.

Spectacled bears, agile climbers, inhabit the Andes from Ecuador to Chile.

Memento Mori (1959) and *The Prime of Miss Jean Brodie* (1961), which was later adapted for the stage and made into a film in 1969, and *The Abbeys of Crewe* (1974).

Spark plug, component in a petrol engine. It has two ELECTRODES separated by an air gap, across which electric current from the ignition discharges to form a spark. The spark plug fits into the cylinder head and the spark ignites the compressed mixture of fuel and air. See also pp.426-427.

Sparrows Can't Sing (1960), comedy by Stephen Lewis which was first performed by THEATRE WORKSHOP and subsequently filmed under the direction of Joan Littlewood in 1962. It is an affectionate portrait of East End Cockney life.

Sparrow, any of a number of small FINCH-like birds that have become almost entirely dependent on man and live on or around human settlements. Typical, and most familiar, is the house sparrow. The male has a chestnut mantle, grey crown and rump and black bib. The female is duller and lacks the bib and grey rump. Highly gregarious, sparrows feed, roost and dust-bathe in noisy, twittering flocks. Basically seed-eaters, with a preference for grain, they can quickly strip a seed crop bare and are widely regarded as pests. They also eat fruit, worms and household scraps. Length: 14.5cm (5.75in). Family Ploceidae; species *Passer domesticus*.

Sparrowhawk, any of several species of birds of prey, especially *Accipiter nisus*, the Eurasian sparrowhawk. An inhabitant of wooded areas, it perches and swoops to catch ground-feeding sparrows, other small birds, small mammals and insects or may catch prey in flight. Its plumage is grey and white barred with brown. Length: to 33cm (13in). Family Accipitridae. See also pp.307, 315.

Sparta (Spart), town in SE Peloponnesos, Greece, on the River Evrotas; capital of Lakonia department. Just as the ruins of ancient Sparta, a Greek city-state founded by the Dorians c.1000 BC in the province of Lakonia. Spartan society consisted of three classes: the Spartiates (ruling class), perioeci (free inhabitants with no political power) and helots (slaves). After its conquest of Arcadia, Argos and Messinia (c.734-716 BC), Sparta flourished as an economic and cultural centre. After a massive helot revolt in late 7th century BC, it changed into an armed camp with all Spartiates trained as soldiers from an early age. It was originally ruled by two kings and later by the *gerousia*, the assembly (*apella*) and *ephors*. In c.500 BC the Peloponnesian League was formed with Sparta as the most powerful member. After the Persian Wars (500-449 BC), Athenian power began to rival Sparta's, leading to the Peloponnesian War (431-404 BC), which ended in the defeat of Athens. Sparta dominated Greece until 371 BC when it was defeated by Thebes at Leuctra, and Messinia was freed. Prosperity revived under the Romans but Sparta was destroyed by Visigoths in AD 396. The modern town was built in 1834. Popp. (1971) 13,400. See also pp.1204-1208.

Spartacists, members of the German political party called the Spartacus League, which broke away from the SOCIAL DEMOCRATS during WWI. Led by Karl Liebknecht and Rosa Luxemburg, the Spartacists refused to support the war effort and rejected participation in the post-Versailles republican government. They instigated a number of uprisings, including one in Berlin in 1919, after which they were brutally repressed and their leaders murdered. See also pp.1694, 1695.

Spartacus (d.71 BC), Thracian gladiator in Rome who led a slave revolt known as the Third Servile (Gladiatorial) War (73-71). His soldiers devastated the land and then moved south towards Sicily, where they were eventually defeated by CRASSUS with POMPEY's aid. Spartacus died in battle.

Spasm, involuntary, abnormal muscle contraction. In clonic spasm, repeated contractions are sudden with frequent relaxations, as in EPILEPSY. Tonic spasm, or cramp, is prolonged contraction, as in TETANUS. Drugs called antispasmodics are used to counteract spasm.

Spassky, Boris Vasilyevich (1937-), Soviet chess player who at the age of 18 became an international grand master. He became the world champion in 1969 but in 1972 lost his title to Bobby FISHER, a US grand master.

Spastics, people afflicted with a type of CEREBRAL PALSY in which the victim suffers spasms of the muscles. The legs are generally more affected than the arms. Spastic paralysis is caused by damage to the brain's upper motor neurones, generally incurred before or at birth. No other brain functions are implicated and the commonly supposed mental abnormalities of spastics are a myth.

Spathe, broad leaf-like organ that spreads from the base of, or enfolds, the SPADIX of certain plants, such as the GUCKOO-PINT (*Arum maculatum*). See also p.382.

Speakeasy, bar or nightclub in the USA in which illicit alcohol was sold during the years of PROHIBITION. Personal contacts or a membership card were necessary to obtain entry.

Speaker, radio. See LOUDSPEAKER.

Speaker, The, chairman of the House of Commons in the British Parliament and of other assemblies modelled on it. He is an MP elected to the office by his fellows. The speaker does not vote in divisions unless there is a tie.

Spear, weapon consisting of a long wooden shaft to which is attached a pointed head, of various designs. The earliest spears were sticks sharpened to a point which was hardened by fire. The sticks were later tipped with heads of stone, bone, bronze and iron. Spears are of two basic kinds: those used for throwing and those designed to be used at close quarters. See also pp.554-555.

Spear fishing, fishing underwater with a hand-spear, resembling a trident, or a spear-propelling gun. Divers use either SCUBA or SKIN DIVING equipment, and their guns are usually powered by compressed air, springs or elastic rubber thongs.

Spearman, Charles Edward (1863-1945), British psychologist. A pioneer in the application of statistical and mathematical methods to the analysis of data, he attempted to analyse human abilities into their components by using a method he helped to create called FACTOR ANALYSIS.

Spearmint, common name of *Mentha spicata*, a hardy perennial herb of the MINT family (Labiatae). Its leaves are used for flavouring, especially in sweets. Oil distilled from spearmint is used as a medicine. The plant has pink or lilac flowers that grow in spikes. See also p.371.

Speciation, emergence of new species in EVOLUTION. It results from the separation of parts of a homogeneous population. Over many generations, NATURAL SELECTION operates within the separated groups to produce gradually increasing differences. New species can be said to have evolved when individuals of the separated groups are no longer capable of interbreeding successfully.

Species, in taxonomy, group of physically and genetically similar individuals that interbreed to produce fertile offspring under natural conditions. It ranks below a GENUS and above a variety. More than 300,000 plant species and one million animal species have been identified.

Specific gravity, ratio of the DENSITY of a substance to the density of water. Thus, the specific gravity of gold is 19.3; ie it is about 19 times heavier than an equal volume of water.

Specific heat, heat energy necessary to raise the temperature of a given amount of a substance by one degree centigrade. Substances with a high specific heat, such as water, require much more energy to raise their temperatures than do substances of low specific heat. Thus oceans can exert a moderating influence on the Earth's climate by absorbing excess heat from the land during the day and returning it at night.

Spectacled bear, small black bear that lives in the forests of the Andes. It has light brown, spectacle-like rings around its eyes and is the only native bear of the Southern Hemisphere. Species *Tremarctos ornatus*.

Spectacles, lenses in frames worn in front of the eyes to correct defective vision. They were first made in the late middle ages, and were crude instruments until lens grinding became a fine art in the 17th century. Today most types of visual defect can be prescribed for by an oculist. Short sight is corrected by a diverging, or concave lens; long sight by a converging, or convex lens; and astigmatism by a lens resembling a slice from the side of a cylinder.

Spectator, The (1711-1712, 1714), English periodical edited and largely written by Richard STEELE and Joseph ADDISON, a successor to the *Tatler*. It gave a picture of the social life of the times and had many distinguished contributors, among them Alexander POPE.

Spectrograph, instrument for producing and recording a SPECTRUM. Light from an incandescent source falls on to a prism or DIFFRACTION GRATING, and is split into its component wavelengths. This emission spectrum is then focused on to a photographic plate. To record an absorption spectrum light from a source emitting a continuous spectrum is passed through an absorbing medium before entering the instrument. See also p.850.

Spectrometer. See SPECTROSCOPY.

Spectrophotometer, optical instrument used widely in chemical analysis. Light or other radiation is passed through a filter (monochromator) in which all but a limited range of wavelengths are removed. Emergent radiation of a specific wavelength is then passed through a solution of the specimen to be analysed, and is absorbed by an amount related to its concentration.

Spectroscope, instrument for producing and studying the SPECTRUM of light from some source. Spectroscopes are used in astronomy to study the light from stars, and in chemistry to detect the presence of traces of various elements in samples that are too small to detect by other means. The light entering a spectroscope is collimated into a narrow beam by means of a slit and lens. The beam then passes through either a prism or DIFFRACTION GRATING so that it is dispersed into a spectrum. Combined with the grating or prism is a scale from which the spectral wavelengths may be read directly through the telescope that magnifies the spectrum. See also pp.812, 813, 850, 905, 973.

Spectroscopy, or spectrometry, branch of OPTICS dealing with the measurement of the wavelength and intensity of lines in a SPECTRUM. The main tool in this study is the SPECTROSCOPE. A spectrograph photographs a spectrum and an analysis of the spectrogram can reveal the substances giving rise to the spectrum, because the position of emission and absorption lines and bands characterize each substance. A spectrometer is a calibrated spectroscopy, capable of precise measurements. See also pp.850-851.

Spectrum, distribution obtained when ELECTROMAGNETIC RADIATIONS radiation. Frequencies. A well-known example is provided by the rainbow colours produced when white - or visible - light passes through a prism. This effect, which is also produced when visible light passes through a DIFFRACTION GRATING, produces a continuous spectrum, in which all wavelengths (between certain limits) are present. Spectra formed from objects emitting radiations are called emission spectra. These occur when a substance is strongly heated or bombarded by electrons. An absorption spectrum, consisting of dark regions on a bright background, is obtained when white light passes through a semi-transparent medium that absorbs certain frequencies. A line spectrum is one in which only certain wavelengths or "lines" appear. The emission and absorption spectra of a substance are basic characteristics of it and are used as a means of identification. These spectra arise as a result of transitions between different stationary states of the electrons, atoms or molecules of the substance, which give rise to the emission or absorption of electromagnetic radiation. See also pp.850, 851, 854, 922-923, 973-978.

Speculum, instrument for widening an aperture or passageway of the body, in order to examine the interior.

Spee, Maximilian Johannes Maria Hubert, Graf von (1861–1914), German admiral. He commanded German forces in the battles of CORONEL and the FALKLAND ISLANDS early in WWI. His flagship, the armoured cruiser *Scharnhorst*, was sunk with all hands in December 1914 by British battle cruisers.

Speech, verbal or vocal expression of ideas and feelings, specifically intended to convey meaning. An infant's babbling is the first stage towards learning to speak; progress thereafter depends on the maturing of speech organs, the ability to hear, intelligence and environment (stimulation, attentive parents, reinforcement of vocalization). See also pp.1876–1879, 1876, 1877, 1879.

Speech disorders, speech and language defects resulting from such diverse causes as emotional disorder, organic deficiency, faulty speech mechanisms, brain damage and sensory deficiency. Various remedies for speech disorders have been recorded since ancient times but it was not until the 1900s, and especially since WWII, that scientifically developed techniques were used by trained therapists to treat speech disorders. See also pp.1126–1127.

Speed, rate of movement. It is the ratio of the distance covered to the time taken by a moving object. It is a SCALAR quantity. Speed in a specified direction is VELOCITY, a VECTOR quantity.

Speedball, game played on an outdoor field by two teams of 11 players each. The game contains elements of basketball, volleyball, soccer and American football. The object is to advance the ball towards the opponent's goal by throwing or kicking it. Tackling, blocking and running with the ball are forbidden. Field goals (between the goal posts) count three points, a touchdown (catching a forward pass in the end zone) and an end kick (kicking the ball across the end line from within the end zone) each count one point. Single points are also scored by a drop kick (over the crossbar) and a penalty kick.

Speed measurement, of road and track vehicles, is usually made using a SPEEDOMETER. The airspeed indicator of an aeroplane employs a pitot tube, mounted externally and facing into the airstream. Airspeed is then measured automatically as a function of the dynamic pressure of air in the pitot tube and the static air pressure at the aeroplane's particular altitude. A boat's speed is usually calibrated in knots (nautical miles per hour). In the simplest instruments a small propeller mounted on the boat's underside turns a flexible cable similarly to that of a car's speedometer.

Speedometer, apparatus for recording the speed of a vehicle. In a car or lorry, it is driven by a flexible cable connected to the transmission which turns at a speed proportional to the road speed. Inside the speedometer the cable turns a magnet which partly rotates a spring-loaded drum to which the indicator needle or coloured strip is attached.

Speed records, for both humans and machines, have been computed since the late 19th century. The fastest speed travelled by a human being is 39,897km/h (24,791mph), achieved by the crew of Apollo 10 on its return from the Moon on 26 May 1969. The world land speed record, achieved by Gary Gabelich of the USA in a jet-powered car on 23 Oct. 1970, is 1,046km/h (650mph); the women's land speed record is held by Kitty O'Neil of the USA, who achieved 843km/h (524mph) on 6 Dec. 1976. The world water speed record, held by Ken Warby is 514.39km (319.67mph), achieved on a lake in New South Wales, Australia on 8 Oct. 1978. The fastest railway train speed was achieved on 21 Dec. 1979 by a Japanese National Railway magnetically levitated experimental train – 515km/h (321 mph).

Speedway, motorcycle sport in which lightweight, specially built machines are raced around oval tracks with cinder, shale, or granite surfaces. It originated in Australia in 1923, and is now popular in Britain, the USA, Scandinavia, Eastern

Europe, and Australasia. Riders amass points during a series of races at a meeting, which may be a team match or an individual championship.

Speedwell, common name applied to herbaceous plants of many species of the genus *Veronica*. It is a numerous family, found throughout the world. Germander speedwell, *V. chamaedrys*, is a common British wild flower. Family Scrophulariaceae.

Speenhamland system, form of poor relief in England initiated by the magistrates of Speenhamland, Berkshire, in 1795. Wages were brought up to a minimum level by payments out of the poor rates, according to a schedule based on the price of bread and the size of the recipient's family. It spread throughout much of the south, but was superseded by the Poor Law Amendment Act of 1834.

Speer, Albert (1905–), German architect and NAZI official, a close associate of Adolf HITLER. Speer drew up the plans for Germany's autobahns and for the stadium at Nuremberg. By 1943 his authority over the entire war economy was second only to that of Hermann GOERING. Speer was tried in 1946 by the Nuremberg war crimes tribunal and sentenced to 20 years in Spandau prison.

Speke, John Hanning (1827–1864), British soldier and explorer of Africa. After service in India he made African expeditions with Sir Richard BURTON, during which he alone discovered Lake VICTORIA (1858) and asserted it to be a source of the Nile. See also p.1620.

Speleology, scientific study of CAVES and cave systems. Included also are the hydrological and geological studies concerned with the rate of formation of stalagmites and stalactites and the influence of groundwater conditions on cave formation. A special aspect is the study of the animals that live in caves. See also pp.218–219.

Spelthorne, county district in N SURREY, England, created in 1974 under the Local Government Act (1972). Area: 56sq km (22sq miles). Pop. (1974 est.) 95,700.

Spemann, Hans (1869–1941), German zoologist and comparative anatomist. He was awarded the 1935 Nobel Prize in physiology and medicine for his discovery of the "organizer effect" in embryonic development.

Spence, Sir Basil (1907–76), British architect, famous for his design (1951) of Coventry Cathedral, which was consecrated in 1962. Other spectacular works include the Household Cavalry Barracks (1970) at Knightsbridge, London, and the British Embassy in Rome (1971). See also p.1769.

Spencer, Lady Diana, second daughter of the 8th Earl Spencer, married 1981 HRH the Prince of Wales, so becoming consort to the future king of Great Britain. She will be the first English-born woman to be queen since Anne Boleyn.

Spencer, Herbert (1820–1903), British sociologist. He generalized DARWIN's theory of EVOLUTION, developing the idea of a natural progression between primitive and advanced societies based on survival of the fittest. Among his works are *First Principles* (1862) and *The Principles of Ethics* (2 vols 1879–93). See also pp.1652, 1652.

Spencer, Sir Stanley (1891–1959), British painter. He is famous chiefly for his original and allegorical treatment of religious incidents which are presented in commonplace settings, especially that of Cookham-on-Thames, Berkshire, where he was born and lived for most of his life. *The Resurrection* (1923–27) is set in Cookham churchyard and includes portraits of both himself and his wife, Hilda. A series of his murals (1926–34) decorate the War Memorial Chapel at Burghclere, Hampshire.

Spencer, Sir Walter Baldwin (1860–1929), British ethnologist who, with F. J. GILLEN, explored the interior of Australia and studied the ABORIGINES. Together they wrote books on the aborigines such as *Native Tribes of Central Australia* (1889) and *Across Australia* (1912).

Spencer Gulf (Spencer's Gulf), large inlet

of the Indian Ocean off the coast of s Australia, between the Yorke and Eyre peninsulas. The entrance is partly blocked by the islands of Thistle, Gambier and Neptune. Length: 320km (200 miles); width: 145km (90 miles).

Spender, Stephen Harold (1909–), British poet who became well known in the 1930s with works which were inspired by social protest. His autobiography *World Within World* (1951) is a re-creation of the political and social atmosphere of the 1930s.

Spengler, Oswald (1880–1936), German philosopher and historian. In *The Decline of the West, Outlines of a Morphology of World History* (2 vols, 1918–22), he expounded a cyclic theory of civilization that established his reputation. He proposed that Western culture was in decline, having passed its creative zenith. Spengler felt that the state needed to have absolute power to reverse this process. Although his theories had some affinity with those of the Nazis, they were critical of his work.

Spenser, Edmund (1552–99), English poet; his *The Faerie Queene* (1589–96) greatly influenced English lyric poetry. His best poetry is to be found in the witty sonnet sequence *Amoretti* (1595). See also p.1416.

Spenserian stanza, poetic form devised by Edmund SPENSER. It is a STANZA of nine iambic lines, all of 10 syllables except the last, which is an ALEXANDRINE. Spenser devised it for his *The Faerie Queene* (1589–1596). It was also used in Lord BYRON's *Childe Harold's Pilgrimage*, SHELLEY's *Adonais* and KEATS's *The Eve of St Agnes*.

Speranski, Mikhail Mikhailovich, Count (1772–1839), Russian statesman. The son of a village priest, he rose to become personal assistant of ALEXANDER I in 1807, but his plans to increase the duties of the hereditary nobility and to establish an elected DUMA were unpopular in government circles, and he was dismissed in 1812. In 1819 he was appointed Governor of Siberia, where he instituted many reforms.

Sperm, or spermatozoon, male sex cell (GAMETE) in sexually reproducing organisms, corresponding to the female OVUM. Its head contains the genetic material of the male parent, its tail the fertilizing motility.

Spermaceiti, white waxy substance from the head of a whale, usually a sperm whale, used in the manufacture of cosmetics and ointments. Its main constituent is cetyl palmitate.

Spermatophyte, seed-bearing plant, including most trees, shrubs and herbaceous plants. It has a stem, leaves, roots and a well-developed VASCULAR system. The dominant generation is the SPOROPHYTE. Spermatophyta was formerly a division in plant classification; now seed plants are classified in the division TRACHEOPHYTES. See also pp.350–351.

Sperm bank, store of the semen of men or of farm animals, kept alive by carefully controlled freezing methods. Banks of human sperm are used in the treatment of some kinds of infertility. In animal husbandry sperm banks provide the means of propagating favoured strains of animal.

Sperm whale, largest of the toothed whales. It has a squarish head and feeds on squids and cuttlefish. Species *Physeter catodon*. See also WHALE.

Sperry, Elmer Ambrose (1860–1930), US inventor and industrialist who is remembered for the practical development of the gyroscope. He developed a gyroscopic compass and gyroscopic stabilizers for ships and aircraft. He made improvements to equipment in other fields including electricity and illumination.

Speusippus (fl. 347–339 BC), Greek philosopher. Nephew and follower of PLATO, he succeeded him as head of the ACADEMY.

Speyer (Spires), port in sw West Germany, on the River Rhine 35km (22 miles) N of Karlsruhe. Notable buildings include an 11th century Romanesque cathedral, which contains the tombs of eight emperors. Industries: paper, chemicals, textiles, oil refining, brewing, wine. Pop. (1970) 42,323.

Albert Speer's stadium at Nuremberg was built for Nazi gatherings in the 1930s.

John Hanning Speke: a studio photograph of the discoverer of the Nile's source.

Stephen Spender is known for his drama and fiction, as well as his poetry.

Sperm whale: the greatest recorded length for a male is 26m (84ft).

Sphagnum

Sphagnum, genus of mosses which grow on boggy soils. They are also known as peat mosses and are gathered for use by horticulturalists, being packed around potted seedlings.

Sphalerite, or blende, sulphide mineral composed of zinc sulphide (ZnS), an important source of zinc. It has cubic system tetrahedral crystals or granular masses. It is white when pure, but impure forms may be yellow, black, red or green with a resinous lustre. Hardness 3.5-4; s.g. 4.

Sphenisciformes. See PENGUIN.

Sphenodon. See TUATARA.

Sphincter, ring of muscles controlling a body passage. Important sphincters include the pyloric sphincter in the stomach, the anal sphincter and the sphincter pupillae in the eye.

Sphinx, mythical beast of the ancient world, usually represented with the head of a man or woman and the body of a lion. Although found throughout the Middle East, sphinxes were especially popular in Egypt, where thousands were built. The most famous was the Great Sphinx at Giza. See also p.1185.

Sphinx, Riddle of the, in Greek mythology, the riddle of the three ages of man which OEDIPUS alone could answer. Those who failed to answer were killed by the SPHINX. When Oedipus solved the riddle the Sphinx killed herself.

Sphygmomanometer, instrument used to measure blood pressure. A rubber cuff connected to the device is wrapped around the upper arm and inflated with a rubber bulb, stopping the flow of blood in a major artery. When this air pressure is slowly released, the systolic pressure of the blood - which corresponds to a contraction in the pumping cycle of the heart - is registered.

Spice, dried part of any of various tropical and sub-tropical plants. Of distinctive aroma and taste, spices are used for enhancing the flavour of food. In the ancient world spices had medicinal and religious, as well as culinary, functions, and were first used in medieval Europe to help in the preservation of food.

Spice Islands. See MOLUCCAS.

Spicule, spear-like column of hot gas ejected from the Sun's CHROMOSPHERE as a jet, often reaching heights of 8,000km (5,000 miles) above the solar surface. Most spicules are less than 500km (300 miles) in diameter. See also p.974.

Spider, any of numerous species of terrestrial, invertebrate, arthropod ARACHNIDS found throughout the world in a wide variety of habitats; fossil species have been found that date from the Devonian period (395 million years ago). Species have an unsegmented abdomen attached to a cephalothorax by a slender pedicel. There are no antennae; sensory hairs are found on the appendages (four pairs of walking legs). Most species have pairs of spinnerets on the abdomen for spinning silk to make egg cases, shelters and webs. Many exhibit ingenious methods of trapping or catching prey, which generally consists of insects. See also pp.3, 32, 33, 34, 314, 317.

Spider crab, any of 500 species of marine crabs of the Atlantic and Pacific oceans. It has a spiny, sac-shaped carapace that is pointed in front and extremely long, thin legs. The Japanese spider crab (*Macrocheira kaempferi*) may reach 4m (13ft) from claw tip to claw tip, and is the largest species. Family Majidae. See also pp.30, 35.

Spider monkey, medium-sized arboreal MONKEY found from S Mexico to SE Brazil. It has long, spidery legs, a fully prehensile tail, and is an agile climber, using the tail as a fifth hand. It eats mainly fruit and nuts. Genera *Ateles* and *Brachyteles*.

Spiderwort, any of several species of perennial plants with long, keeled, grass-like leaves and blue, rosy-purple or white flowers in flat-topped clusters. Family Commelinaceae; genus *Tradescantia*.

Spikenard, perfume obtained from a herb (*Nardostachys jatamansi*) of the Valerian family, native to India. Substitutes for the perfume are often grown in S Europe and include *Valeriana celtica* and *V. phu*.

Spillane, Mickey (1918-), US writer, real name Frank Morrison Spillane whose tough, often sadistic detective novels include *I, The Jury* (1947), *My Gun Is Quick* (1950), *The Big Kill* (1951) and *The Deep* (1961).

Spin, in quantum mechanics, intrinsic angular momentum possessed by some SUBATOMIC PARTICLES and nuclei which may be regarded by analogy as the spinning of the particle about an axis within itself. It is limited in magnitude to half the whole integral values (eg. 0, $\pm\frac{1}{2}$, ± 1 , $\pm\frac{3}{2}$, ...), and it is one of the quantum numbers by which a particle is specified.

Spina bifida, congenital disorder in which the bones of the spine do not develop properly to form the channel for the SPINAL CORD. This may deform the cord itself, affecting the nerves controlling the limbs and the bladder. Mild cases can benefit from surgery.

Spinach, herbaceous annual plant widely cultivated in a wide cool summers. Its dark green leaves contain substantial amounts of iron and vitamins A and C; they are also high in fibre content. Family Chenopodiaceae; species *Spinacia oleracea*. See also p.684.

Spinal anaesthesia, injection of a local ANAESTHETIC into the fluid surrounding the SPINAL CORD, causing loss of sensation in parts of the body served by nerves below the site of the injection.

Spinal column. See SPINE.

Spinal cord, tubular central nerve cord, lying within the vertebral column (spine). With the brain, it makes up the central nervous system. It has 31 pairs of spinal nerves extending from it, each of which has sensory and motor fibres. The spinal cord receives sensory input and conveys messages to all parts of the body and to the brain. See also p.126.

Spinal fluid. See CEREBROSPINAL FLUID.

Spinal nerves, nerves branching out from the spinal cord which supply the muscles of the trunk and limbs and carry sensory information to the brain. They are mixed nerves containing both sensory and motor fibres. The motor fibres arise from the anterior (frontal) side of the spinal cord and the sensory fibres from the posterior. See also pp.126-127.

Spinal tap (lumbar puncture), puncture of the lumbar (lower back) portion of the spinal cord to remove spinal fluid for examination or to make an injection.

Spine, or spinal column, series of vertebrae running from the skull to the tip of the tail in VERTEBRATES. It encloses the SPINAL CORD.

Spine, curvature of the. See CURVATURE OF THE SPINE.

Spinel, oxide mineral, magnesium aluminium oxide ($MgAl_2O_4$), found in IGNEOUS and METAMORPHIC ROCKS. It has cubic system, frequently twinned, octahedral crystals. In colour it is either glassy black, red, blue, brown or white. Ruby spinel from Sri Lanka is a valuable gemstone. Hardness 7.5-8; s.g. 3.8.

Spinnet, early musical instrument of the HARPICHOORD family with one keyboard and one string to each note. The strings, which were plucked with a quill or leather plectrum, were at an angle of 45° or less to the keyboard. Highly decorative in appearance and usually wing shaped, the instrument normally had a range of four to five octaves.

Spinifex, Australian genus of sharp, tufted grasses which live in coastal sandy or desert areas.

Spinning, process of making thread or yarn by twisting together fibres of animal, vegetable or synthetic origin. Various machines were developed for mechanizing the process. See also SPINNING FRAME; SPINNING JENNY; SPINNING MULE; SPINNING WHEEL.

Spinning frame, machine for spinning yarn; driven by horsepower or water power, and invented by Sir Richard ARKWRIGHT in about 1768. The motion of a wheel and belt turned several spindles. See also SPINNING JENNY; SPINNING MULE.

Spinning jenny, in textiles, hand-operated spinning machine invented by James HARGREAVES in about 1764. It used several spindles to spin several strands of yarn

simultaneously, operating upon the same basic principles as the SPINNING WHEEL. See also pp.592-593, 1543.

Spinning mule, in textiles, spinning machine invented by Samuel CROMPTON in 1779, called a mule because it was a hybrid combining the main features of HARGREAVE'S SPINNING JENNY and ARKWRIGHT'S SPINNING FRAME. See also SPINNING FRAME; pp.592-593.

Spinning wheel, simple spinning machine driven by a hand- or foot-cranked wheel attached to a spindle by a belt of heavy twine. See also p.592.

Spinola, Ambrogio di, marchese de los Balbases (1569-1630), Italian soldier. He entered the service of Spain and led an army to the Netherlands in 1602. He captured Ostend in 1604, after which he became Commander-in-Chief of the Spanish armies in the Netherlands. He later fought with great distinction in the THIRTY YEARS WAR.

Spinola, Antonio Sebastião Ribeiro de (1910-), Portuguese general and political leader. In April 1974 he led a military revolt that overthrew the dictatorship of Marcello Caetano, and in May he became President. His attempts to form a coalition government of socialists, liberals and military officers were unsuccessful, and he resigned in September 1974.

Spinoza, Baruch (1632-77), Dutch philosopher. A rationalist, he argued that all knowledge could be deduced from the key substance, which he called alternatively God and Nature. In *Ethics* (1667) he held that free will was an illusion which would be dispelled by man's recognition that every event has a cause, and his *Theological-Political Treatise* (1670) contained the first modern historical interpretation of the Bible. See also pp.1885-1886.

Spiny anteater. See ECHIDNA.

Spiracle, external opening for respiration in various animals. In insects and spiders it is the opening to a trachea (air tube). In sharks, rays and some bony fish water passes through a pair of spiracles during gill respiration. In whales the nasal opening is called a spiracle. See also GILLS.

Spiraea, genus of flowering perennial shrubs native to the Northern Hemisphere. They have small flat leaves and clusters of small white, pink or red flowers. Many of the 100 species are grown as ornamentals. Height: 1.5m (5ft). Family Rosaceae.

Spiral galaxy, type of regular GALAXY as classified by Edwin HUBBLE. It is shaped like a flattened disc with a central nucleus from which spiral arms project. Normal spirals have a spherical nucleus. Those galaxies which have spiral arms projecting from a bar-shaped nucleus are known as barred spirals. Spiral galaxies are further classified Sa to Sc, or SBa to SBc in the case of barred spirals, according to the degree to which their arms are tightly or loosely wound. See also pp.1000-1001, 1000-1001.

Spirit, alcoholic. See ALCOHOL.

Spiritual, religious folk music, especially that associated with US Negro culture of African ancestry. The words are generally adaptations of passages from the Bible and the music is often in four-part harmony with certain specific features like five-note melodies.

Spiritualism, belief that, at death, the soul and spirit of a person are transferred to another plane of existence, wherein communication with those one has left is through ectoplasm. See also p.1891, 1910-1911.

Spirochete, general name applied to a group of protozoa-like BACTERIA that are spiral-rod shaped and capable of flexing and wriggling their bodies as they move about. SYPHILIS is the best known disease caused by a spirochete (*Treponema pallidum*).

Spit, ridge of sand or shingle on a coastline produced by the interaction of long-shore drift and river current. Spits often form across river mouths, forcing them to change course. A British example is Chesil Bank in Dorset. See also pp.230, 230.

Spithead, a part of the channel between Hampshire, England and the Isle of Wight. A traditional place of anchorage of the Royal Navy for centuries, it was the

scene in 1797, of a mutiny. The sailors involved won their claim for better pay and conditions.

Spitsbergen (Svalbard), island group in the Arctic Ocean, approx 930km (580 miles) N of Tromsø, Norway, to which it belongs. Although well within the Arctic Circle, the w edge of the islands is ice-free for most of the year as a result of the NORTH ATLANTIC DRIFT. Large coal deposits were discovered on Spitsbergen in the late 19th century, and coal mining is now a major industry. The islands are an important refuge for Arctic wildlife and protective measures have saved certain mammals from extinction. Area: 62,050sq km (23,958sq miles). Pop. (1971) approx. 3,000.

Spitteler, Carl Friedrich Georg (1845-1924), Swiss poet whose reputation rests on his epics, *Prometheus und Epimetheus* (1881) and *Der Olympische Frühling* (1900-05) for which he received the 1919 Nobel Prize.

Spittlebug. See FROG HOPPER.

Spitz, Mark Andrew (1950-), US swimmer. He set 35 US records and 23 world records. He won two gold medals at the 1968 Olympics and then an unprecedented seven gold medals at the 1972 Olympics. He retired from professional swimming in 1972.

Spleen, important organ of the lymphatic and blood systems. It lies in the abdominal cavity to the left of the stomach. It stores blood and through the action of its macrophages, destroys worn out or damaged red blood cells and produces LYMPHOCYTES.

Spleenwort, any small fern of the genus *Asplenium*. Spleenworts grow from crevices in walls and rocks, and occasionally in hedgerows, and are characterized by the thickened ribs on either side of the veins in their tongue-like leaves.

Splenomegaly, enlargement of the SPLEEN. Usually an indication of disorder elsewhere in the body, such as infectious mononucleosis, LEUKAEMIA or MALARIA. The spleen may be surgically removed in severe cases.

Split, port in Croatia, w Yugoslavia, on the Dalmatian coast. Split was held by Venice from 1420 to 1797, when it passed to Austria. It became part of Yugoslavia in 1918. Industries: shipbuilding, textiles, chemicals, tourism. Pop. (1971) 152,905.

Splitting the atom. See NUCLEAR FISSION.

Spock, Benjamin McLane (1903-), US paediatrician and writer whose *The Common Sense Book of Baby and Child Care* (1946) reversed the trend in child-rearing by calling for parental warmth and understanding of a child's individual nature, rather than rigid following of feeding and other schedules.

Spode, Josiah (1754-1827), British potter, who learned the trade in the workshops of his father at Stoke-on-Trent. He gave his name to what is known as Spode porcelain, which became the standard English bone china. For this hybrid porcelain he used bone ash and feldspar in the paste as well as china clay and china stone. In 1806 he became potter to George III.

Spode ceramics, porcelain ware produced at the Stoke factory in Staffordshire, England, by Josiah SPODE the younger from c.1800.

Spodumene, silicate mineral, lithium aluminium silicate ($LiAlSi_2O_6$). It displays monoclinic system prismatic crystals or masses and is opaque or transparent in many hues. Spodumene is the chief source of lithium and transparent lilac and green varieties are used as gems. Hardness 6.5-7; s.g. 3.2.

Spohr, Ludwig (1784-1859), German violinist. One of the most famous virtuoso violinists of his day, he was also a prolific composer.

Spondee, metrical foot of two stressed or two long syllables. Spondaic metre is found in Greek poetry in the slow, solemn hymns sung at a "spondee" or drink-offering.

Sponge, primitive, multi-celled aquatic animal. Its extremely simple structure is supported by a skeleton of lime, silica or spongin. There is no mouth, nervous system or cellular co-ordination, nor are there any internal organs. Sponges repro-

duce sexually and by asexual budding. There are about 5,000 species, including the simple sponge *Leucosolenia*. Length: 1mm–2m (0.4in–6ft). Phylum Porifera. See also pp. 2, 11, 53, 328.

Spontaneous combustion, outbreak of fire without external application of heat. When combustible material, such as damp hay, paper or rags, slowly oxidized by bacteria or air, the temperature may rise to the ignition point.

Spoonbill, any of several species of wading birds, each with a long bill that is flat and rounded at the tip; species are found in tropical climates throughout the world. It has large wings, long legs, a short tail, and white or pinkish plumage; it feeds on small plant and animal matter. Length: 90cm (3ft). Family: Threskiornithidae. See also pp. 314, 330.

Spoonerism (metathesis), slip of the tongue, in which the first syllable or sounds of two or more words are interchanged. The term is named after William Archibald Spooner (1844–1930), warden of New College, Oxford (1903–24), who made many such transpositions including "You have deliberately tasted two worms and you can leave Oxford by the town drain."

Sporades, two island groups in E and SE Greece, in the Aegean Sea. The Northern Sporades, off the coast of Thessaly, include the islands of Skiros, Skíathos, Skópelos and Iliodoría. The Southern Sporades, off the coast of Turkey, include islands of the Dodecanese, Ikaría, Sámos and Khíos. Products: olive oil, wine, citrus fruits.

Sporangium, walled structure that produces spores in plants and some protozoa. It is found in groups on fern fronds.

Spore, small reproductive body that detaches from the parent plant to produce new plants. Mostly microscopic, spores may consist of one or several cells and are produced in large numbers. Some germinate rapidly, others "rest", surviving unfavourable environmental conditions. Although they occur in all plant groups, spores are particularly characteristic of FUNGI and FERNS.

Sporophyte, asexual stage in the life cycle of plants that produce spores and whose nuclei are diploid (having chromosomes in pairs). See also ALTERNATION OF GENERATIONS; GAMETOPHYTE.

Sporozoa, class of parasitic PROTOZOA characterized by reproduction by sporulation (asexual multiple fission) and the absence of special locomotive apparatus for much of their lives. The best example is PLASMODIUM, which causes MALARIA. See also p. 10.

Sports, recreational or competitive activities in which physical skill and prowess may be shown. Sports are distinguished from games in that a sport is usually played according to a strict set of specified rules. Individual sports, particularly running, jumping and wrestling, may derive from the psychological need for play; they have been common in most human societies, and have been organized into competitions at least since Greek times. Team sports, on the other hand, are for the most part 18th- to 20th-century origin. More ancient team games, such as the ball games of the Toltecs, the Mongol game *bushkazi*, American Indian lacrosse and medieval English football, were generally rough and had ill-defined rules. See also articles on individual sports and sportsmen.

Sports car racing. See MOTOR RACING.

Sprain, in the human body, injury to the ligaments of a joint, usually consisting of the tearing or overstretching of a ligament with associated bleeding. Symptoms include severe pain and visible bruising or swelling of the tissue. Treatment includes bandaging and support, immobilization of the limb and, in severe cases, physiotherapy.

Sprat, also called brisling, small herring-like commercial fish found in the N Atlantic Ocean. It is slender and silvery. Length: to 12.5 cm (5in). Family Clupeidae; species *Clupea sprattus*. See also p. 745.

Sprengel, Christian (1750–1816), German botanist and teacher whose studies of

sex in plants and theories of fertilization form a basis for much knowledge in this field. He discovered that nectaries, organs that produce NECTAR in flowers, have specific colours which attract insects. Insects, he determined, convey POLLEN to the PISTILS of certain flowers from the STAMENS of others.

Spring, Howard (1889–1965), British novelist who produced his first novel *Shabby Tiger* in 1934. His other novels include *O Absalom!* (1938), *Fame is the Spur* (1940) and *I Met a Lady* (1961).

Spring, season of the year between winter and summer. It is calculated astronomically from the vernal EQUINOX (20 or 21 March) to the summer SOLSTICE (21 or 22 June). It is the season of planting and growing, and is celebrated in many countries by festivals based on fertility.

Spring, natural opening for discharge of water from an underground source. Springs are an important part of the water cycle. They may emerge at points on dry land or in beds of streams or ponds. The composition of spring water varies with the surrounding soil or rocks.

Springbok, or **springbuck**, small horned ANTELOPE native to southern Africa; the national emblem of South Africa. The reddish-brown colour on the back shades into a dark horizontal band just above the white underside. Height: to 80cm (3ft) at the shoulder. Family Bovidae; species *Antidorcas marsupialis*. See also p. 299.

Springboks, name given to South Africa's national rugby union team, but also used of South African teams in other sports. On the playing field, the Springboks have a reputation for strong forward play, but they have also produced many fast-running backs. In the 1970s, political pressure on their traditional rivals prevented several Springbok tours abroad, although the British Lions, New Zealand All Blacks, and French rugby teams visited South Africa.

Springer spaniel, also called English Springer spaniel, one of the oldest breeds, originally trained to spring game; today it is more commonly used as a gun dog. It has a square head with a strong muzzle and long pendulous ears. The straight compact body is set on medium-length feathered legs. The close wavy coat may be brown and white or black and white. Height: to 51cm (20in); weight: to 23kg (50lb).

Springfield, state capital of Illinois, 298km (185 miles) SW of Chicago and founded in 1818. LINCOLN is buried at Oak Ridge cemetery. The centre of a fertile farming area, its industries include machinery, electronics and fertilizers. Pop. (1970) 91,753.

Springing line, in architecture, the point dividing the bottom of an arch from its supporting columns. The first block of the arch above the springing line is known as a springer.

Spring line, geological term describing the emergence of a number of springs above the contact point of a permeable rock strata and an impermeable barrier. In England it is particularly common on the NORTH and SOUTH DOWNS. See also p. 217.

Springtail, tiny, wingless insect found throughout the world. There are about 2,000 species, and they live in damp places such as rotting vegetation and under stones and fallen logs. They vary in colour and can jump 7.5–10cm (3–4in) by forcing downwards and backwards using a lever-like, forked tail under the abdomen. Length: 3–10mm (0.1–0.4in). Order Collembola. See also p. 36.

Spring tides. See TIDE.

Springing. See RUNNING.

Sprite, small and elusive supernatural being such as a goblin or an ELF. Often portrayed as being mischievous, it was commonly associated with a specific location such as woodland, marsh or lakeland.

Spruce, various evergreen trees, related to firs, native to mountainous or cooler temperate regions of the Northern Hemisphere. Pyramid-shaped and dense, they have angular rather than flattened needles which fall off easily, and pendulous cones.

The timber is used in cabinet-making, and some species yield TURPENTINE. Height: to 52m (17ft). Family Pinaceae; genus *Picea*. See also pp. 368–369.

Sprue, disorder found mainly in E Asia, caused by inadequate diet (insufficient animal PROTEIN, cereal, fruit, vitamins and minerals) and bacterial contamination of the small intestine. Treatment is the administration of FOLIC ACID.

Sprung rhythm, principle of poetic rhythm in which stresses rather than the number of syllables within a line provides the rhythm of the poem. The number of unstressed syllables is not restricted. Gerard Manley HOPKINS is considered to have contributed the principle to English poetry, although sprung rhythm is present in many traditional and popular verses.

Spurge, any of a widely distributed group of herbs, shrubs and trees. Some are succulents and others are cactus-like. They exude a milky juice when cut and have small flowers surrounded by large, colourful, flower-like bracts, as in the POINSETTIA. Family Euphorbiaceae; genus *Euphorbia*.

Sputnik, the world's first artificial satellite, launched by the USSR on 4 Oct. 1957. Weighing 83.5kg (184lb) and equipped with a radio transmitter, Sputnik 1 circled the Earth for several months. See also pp. 930, 1026, 1026.

Squamata, lizards and snakes, the largest order of reptiles. Although most lizards can be distinguished from snakes by their legs, several species, including the slow-worm, are legless. Lizards, however, all have eyelids, which snakes lack.

Square, rectangle with four sides of the same length. Also a square results when a number of quantity is multiplied by itself; the square of 3 is 9, the square of x is x^2 . See also p. 778.

Square dance, US folk dance in which an even number of couples, almost always four, form a square, within which framework the dance progresses. The square dance is derived from English country dances and is made up of various patterns called out to the dancers by a "Caller". See also QUADRILLE.

Square Deal, phrase used by Theodore ROOSEVELT in 1903 to denote his commitment to fair play between economic interest groups. His policies include new rules that regulated large corporations more closely and limited their political dominance. It became part of the reform programme of the Progressive Party.

Square root, (symbol $\sqrt{\quad}$), number or quantity that must be multiplied by itself to give a specified number or quantity. The square root of 4 is 2, i.e. $\sqrt{4} = 2$; $\sqrt{2} = 1.414213$. A negative number has imaginary square roots. See also p. 778.

Squash, any of several species of vine fruits of various shapes, similar in skin texture to pumpkins and marrows, all of which belong to the genus *Cucurbita*. Squashes are native to the Americas, and are cultivated as vegetables. See also p. 685.

Squash rackets, ball game played by two or four people on an enclosed, rectangular, four-walled court 9.8m (32ft) long and 6.4m (21ft) wide. The front wall is marked off in three horizontal sections, each divided from the others by a horizontal line. The bottom section, the "telltale", is 47.8cm (19in) high and covered with tin to make a noise when hit by the ball. The next section, extending to 1.8m (6ft) above the floor, is marked by the "cut" line; the service ball must first hit above it. The third line is 4.6m (21ft) above the floor and balls hitting the wall above this are "out". Players use small, round-headed rackets and a small, black or green hard-rubber ball. Balls may bounce off front, side, and back walls but may bounce only once on the floor before being struck. Points are gained when the ball bounces more than once there. Only the server can score points and the first player to score 9 points wins. If there is a draw, a player must gain two successive points to win.

Squid, any of numerous species of marine cephalopod MOLLUSCS that have a cylindrical body with an internal horny plate (the pen) which serves as a skeleton. It has

eight short suckered tentacles surrounding the mouth, in addition to which there are two longer, arm-like tentacles that can be shot out to seize moving prey. The largest species, the giant squid (*Architeuthis* spp.) may reach 20m (65ft) in length. Class Cephalopoda; order Teuthoidea. See also pp. 24–25, 340.

Squint. See STRABISMUS.

Squire. See ESQUIRE.

Squirrel, any of numerous species of primary arboreal, diurnal rodents distributed throughout the world. Species of Eurasia, the USA and South America, such as the common grey squirrel, red squirrel and flying squirrels, are the best known. Most species feed on nuts, seeds, fruit, insects, and some eat eggs and young birds. Most have short fur and characteristically bushy tails. Family Sciuridae. See also pp. 92, 304, 307, 310–313, 349, 736–739.

Squid, any of several species of fish that live throughout the world in tropical seas. Bright red, often with white streaks or spots, they have large eyes and sharp spines on their gill covers and fins. Length: to 61cm (2ft). Family Holocentridae.

Squirrel monkey, either of at least two species of small, diurnal, arboreal monkeys of tropical America; it has thick, dark fur and a long, heavy tail. *Saimiri sciureus* has a cap of greyish fur; *S. oerstedii* has a black cap and reddish fur on its back. Both are gregarious and live primarily on fruit, but also eat insects and small animals. Length: to 40cm (16in); tail: 47cm (19in). Family Cebidae.

Sri Lanka, island republic in the Indian Ocean, 32km (20 miles) SE of India; formerly Ceylon. Much of the island is forested or grassland. The economy is largely agricultural, tea, rubber and coconuts being exported. Graphite is the chief mineral export. The capital is Colombo. Area: 65,610sq km (25,332sq miles). Pop. (1975 est.) 13,986,000. See also p. 2142.

Srivijaya Empire, BUDDHIST realm in the Malay Archipelago during the 7th–13th centuries. It began on Sumatra but expanded to control the Strait of Malacca. It eventually controlled the international sea trade, establishing commercial relations with China and India, and its capital PALEMBANG was famous as a centre of Buddhist learning and culture.

SS, abbreviation of *Schutzstaffel*, an élite corps of the Nazi Party. Headed by Heinrich HIMMLER, it was originally responsible for domestic security, but its powers after 1936 were enlarged and were absolute throughout German-occupied Europe during WWII.

Ssu-ma Kuang (1019–86), Chinese scholar, statesman and historian of the SUNG DYNASTY who opposed the radical schemes of WANG AN-SHIH. His history of China from 403 BC to AD 959, *Comprehensive Mirror for Aid in Government*, is one of China's greatest historical works.

Stabilator, aircraft, symmetrical aerofoil hinged at its centre for longitudinal control of an aircraft. It is used in place of the stabilizer-elevator system that was found to be ineffective in the transonic speed range. The stabilator also operates efficiently at low speeds.

Stabilizers, in aeronautical engineering, the vertical and horizontal fins usually placed together in the form of a tailplane to prevent erratic rolling and pitching respectively. Like the wings, the horizontal fins have an aerofoil shape and can provide lift at take-off. In flight, however, they act only as stabilizers and in some designs the air thrust on them acts downwards. In marine engineering, fins or tanks are used to keep a submarine or ship steady in rough seas.

Staël, Anne-Louise-Germaine, Madame de (1766–1817), French author whose salon became an intellectual and political centre. She criticized NAPOLEON I and was exiled several times. Her novels *Delphine* (1802) and *Corinne* (1807) are considered among the first FEMINIST novels.

Staël, Nicholas de (1914–55), French painter born in Russia. Best known as an abstract, CUBIST-influenced artist and noted for his use of rich colours, in his later work, though still abstract, he used forms

Staffa

discernibly inspired by landscape and other natural phenomena.

Staffa, small uninhabited island in the Inner Hebrides off the NW coast of Scotland, in Strathclyde Region. It has high cliffs and many caves, among them the famous Fingal's Cave. The island is 1.2km (0.75 miles) long and 0.5km (0.33 miles) wide.

Stafford, county district in W central STAFFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 599sq km (231sq miles). Pop. (1979 est.) 113,700.

Staffordshire, county in W central England. The terrain is composed of rolling hills with moorlands in the N. The region is drained chiefly by the River Trent. Cattle-raising is the chief farming activity, but the county is primarily industrial. It includes the POTTERIES around Stoke-on-Trent, noted for its manufacture of china, and the BLACK COUNTRY, where coal is mined and iron and steel are produced. Stafford is the county town. Area: 2,716sq km (1,049sq miles). Pop. 999,900.

Staffordshire bull terrier, fighting dog that was originally bred in England in the 19th century. It has a short, broad head with small ears and dark eyes. The wide-chested body is set on strong well-boned legs and the tail is short and tapered. Its smooth, short coat may be red, fawn, black or blue, with or without white markings. Height: to 40cm (16in) at the shoulder; weight: to 17kg (38lb).

Staffordshire Moorlands, county district in NE STAFFORDSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 576sq km (222sq miles). Pop. (1974 est.) 93,200.

Stag beetle, large, brown or black BEETLE of Eurasian oak forests; the male bears large antler-like mandibles. The larvae, which take about three years to mature, feed on rotten wood. Length: to 8cm (3in). Family Lucanidae; species *Lucanus cervus*. See also p.44.

Stage, in the theatre, the space in which actors perform before an audience; it generally, but not always, consists of a raised platform. The traditional PROSCENIUM arch stage has lost some popularity in favour of more OPEN STAGES.

Stagecoach (1939), US film. Directed by John Ford from a screenplay by Dudley Nichols, it remains one of the most influential of western films. Made with historical accuracy, it starred John Wayne, Claire Trevor, Thomas Mitchell and Donald Meek.

Stage-coach, heavy, horse-drawn, four-wheeled vehicle used to transport goods and passengers regularly between two or more points. Such coaches were used in England and France in the 17th century and were more widely used in the first half of the 19th century when the quality of roads improved. The coaches were usually drawn by four or six horses, which were changed at each station, or stage, along the route. See also p.486-487.

Stage machinery, in the theatre, devices used to produce rapid changes of scenery, lighting and other effects. Modern stage machinery has developed since the Italian Renaissance and may involve a large revolving stage, or one that is hydraulically controlled to allow it to be raised, lowered, moved sideways or inclined at an angle. Despite this sophistication, however, the 20th century has also witnessed a movement towards simplicity and informality in productions, as epitomized by THEATRE-IN-THE-ROUND and street theatre.

Staggers, disorder of horses, cattle and sheep. Symptoms include uncoordination, convulsions and paralysis. There are various causes of this disorder. It is often due to a tapeworm in the brain of sheep or to mineral deficiency in horses.

Staghound, breed of English hunting dog related to the St Hubert hound and to the English foxhound. It has a hard dense coat coloured black, white and tan. Height: to 58cm (23in).

Stagnation, in economics, situation in which the country's economy is sluggish, usually characterised by unemployment, inflation and low production.

Stained glass, dyed or superficially coloured glass used for decorative or pictorial effect in windows or other apertures. Most commonly found in church architecture, it was brought to its full flower during the Gothic period, particularly in France. Of Byzantine origin, stained glass is produced in its purest form by impregnating the components of glass with coloured dyes and arranging shapes cut from the resultant sheets to form patterns or images. These shapes are joined and supported by flexible strips of lead that create dark emphatic contours. Details are painted on to the glass surfaces in liquid enamel and fused to the surfaces by heat. The earliest complete surviving stained glass is to be found in AUGSBURG Cathedral, Bavaria, (1050-1150). In c.1150 stained-glass windows were created for the Abbey of Saint-Denis, Paris, and shortly after the great west window of Chartres Cathedral (1872-88). The Île de France soon became the art's great centre, and its influence spread throughout NW Europe, particularly to England. The art of stained glass was revived in the 19th century and in modern times concrete has supplanted the more graceful lead as a support for the glass. See also pp.546, 1333, 1350.

Stainer, Sir John (1840-1901), British organist, composer and scholar. He was organist of St Paul's Cathedral (1872-88) and wrote much sacred music, including the oratorio *The Crucifixion* (1887).

Stainless steel, alloys of iron that resist tarnishing. Besides carbon, contained in all steels, they contain metals such as nickel and chromium, which are the ingredients that make them rust-proof and resistant to chemical attack. Stainless steel is used to make utensils and cutlery, chemical reactors, and fittings of various kinds including trim for motor cars. Typical stainless steel alloys are known by the descriptions 18/8 and 18/8/2, these being the percentages, respectively, of chromium, nickel and molybdenum. See also pp.396-397.

Stair, Sir James Dalrymple, 1st Viscount (1619-95), Scottish statesman, lawyer and writer. He was favoured by CHARLES II, becoming president of the Court of Session (1671-79). *The Institutions of the Law of Scotland*, which he completed in 1681, is a distinguished treatise on Scottish law.

Stair, John Dalrymple, 1st Earl of (1648-1707), Scottish statesman. He was joint Secretary of State for Scotland (1691-95), but was forced to resign for his authorization of the massacre at GLENCOE. **Stakhanovism**, Soviet economic policy. It emphasized "socialist competition" in the accelerated industrialization of Josef STALIN's five-year economic plans in the 1930s. It was named after a coal miner, Grigoriyevich Stakhanov who in 1935 was said to have considerably exceeded his quota by mining 102 tonnes of coal.

Stalactite, icicle-like formation of calcite found hanging from the roofs of caves. It is made by the precipitation of LIMESTONE out of water that has seeped into limestone caves.

Stalagmite, deposit of crystalline CALCIUM CARBONATE rising from the floor of cavern, and formed by dripping water.

Stalin, Joseph Vissarionovich Dzhughashvili (1879-1953), Soviet Communist leader and head of the USSR. Educated at the Tiflis theological seminary, from which he was expelled in 1899 as a revolutionary, he became a BOLSHIEV in 1903. From 1913 he began to use the nickname "Stalin" (man of steel) while editor of the party newspaper, *Pravda*. He played an important role in the Civil War, as Commissar for Nationalities (1919-23). Following LENIN's death in 1924, Stalin was able to manoeuvre for supreme power suppressing his main rival TROTSKY and becoming by 1927 virtual dictator. He introduced forced industrialization and COLLECTIVIZATION, and began the purges of the 1930s to consolidate his power over the state; by 1938 more than 10 million people were believed to have been killed and Stalin controlled the party, the government and the police. In 1941 he

became premier and personally supervised the Soviet WWII war effort. His personality cult reached its peak in the postwar era when purges were revived, and his last years were characterized by increasing fear and suspicion. See also pp.1677-1679, 1722.

Stalingrad. See VOLGOGRAD.

Stalingrad, Battle of (1942-43), decisive conflict in WWII. In August the Germans attacked the Soviet city of Stalingrad, which stubbornly withstood months of artillery shelling. With great losses on both sides and Stalingrad reduced to rubble, a Soviet counter-offensive surrounded the German 6th army and forced it to surrender in February 1943. The battle marked the turning point in German fortunes on the eastern front. See also pp.1710, 1711, 1712.

Stall, aircraft's abrupt loss of lift. It occurs when the angle of attack increases to such a point that the flow of air over the top of the wing is less than that below it. Thus the aircraft loses its aerodynamic lift. See also pp.518-519.

Stamen, pollen-producing male organ of a flower. It consists of an anther and filament. See also PISTIL.

Stamford Bridge, Battle of (1066), English victory under HAROLD II over the Norwegians under HARALD HARDRADE and the Northumbrian earl, TOSTIG, at the crossing of the river Derwent north-east of York. Hardrada and Tostig were killed. While Harold was in the north, WILLIAM THE CONQUEROR landed on the south coast. See also pp.1300-1301.

Stamitz family, family of Bohemian musicians. Johann (1717-57) was concert master of the Court orchestra at Mannheim from 1745. By writing more than 70 symphonies and many concertos - including the first known for clarinet - he was significant in establishing both musical forms. Of his two sons Carl Phillip (1745-1801) was a virtuoso violin and viola player, and a prolific composer too. **Stamp Act** (1765), first direct tax levied on the American colonies by the British Parliament. It was devised to raise revenue to provide for troops defending the colonies. The Act required a stamp to be affixed to all legal papers, newspapers, advertisements and other documents. Colonists resisted the tax, attacking the stamp distributors and burning stamped paper. The Act was repealed in 1766. See p.1540.

Stamp duties, tax upon paper used in legal and commercial papers, first levied in Britain in 1670. The most common instance of a stamp duty in Britain today is the one required for a television licence. See also p.1540.

Stamping, method of forming metal. A flat blank of metal is stretched over a die and struck with a movable punch into the desired shape. See also p.408.

Stamp, postage, adhesive token which represents payment for sending a letter or parcel by post. Prepayment of postal charges with stamps started with the British Penny Post (one old penny for each half ounce) in 1840; previously, postal charges had been determined by distance and number of sheets. Postage stamps have long been collector's items.

Stamps, trading, sales scheme whereby a shop offers customers "stamps" in accordance with the amount of money they have spent; the stamps are collected and exchanged for goods. The practice originated in the USA in the late 19th century, and trading stamps became popular in Britain in the 1960s. The British Trading Stamps Act (1964) contains provisions to safeguard the public to whom trading stamps are offered.

Standard, Battle of the (1138), English victory over the Scots at Cowton Moor, Yorkshire. The English were preceded by a mast carrying the banners (standards) of St Peter of York, St John of Beverley and St Wilfred of Ripon.

Standard (reference) electrode, in electrochemistry, a half-cell combined with other half-cells and used as a reference. The basic standard is the hydrogen electrode - a platinum electrode immersed in a molar solution of hydrogen ions and

covered with an absorbent layer of platinum black, over which is bubbled molecular hydrogen. This is taken to have a ELECTRODE POTENTIAL of zero.

Standard of living, material well-being of a country measured by the per capita income of the population. It is used to compare the degree of economic development in various countries.

Stanford, Sir Charles Villiers (1852-1924), Irish composer. He composed prolifically in most areas of music and is famous chiefly for his settings of the Anglican services.

Stanford-Binet scales, intelligence tests derived from the first such tests devised by Alfred BINET in 1905. The present Stanford-Binet measures IQ from the age of three and is principally used to predict potential for success in school.

Stanhope, Lady Hester Lucy (1776-1839), British traveller, niece of William PITT. In 1810 she left England, settled among the DRUSES, a Syrian religious sect in Lebanon, and assumed the customs and religion of ISLAM.

Stanislavsky, Konstantin (1863-1938), Russian actor, director and teacher, real name Konstantin Sergeyevich Alekseyev. His teaching, which came to be called the METHOD, stressed ensemble acting with each actor making an exhaustive study of his character's background and psychology, identifying with the inner, emotional life of the character. He was most successful with the works of CHEKHOV and GORKY. See also pp.1577, 1877.

Stanley, Edward, 14th Earl of Derby. See DERBY, EDWARD GEORGE GEOFFREY SMITH-STANLEY.

Stanley, Sir Henry Morton (1841-1904), British explorer and journalist, b. John Rowlands. He was sent by the New York Herald to central Africa to find David LIVINGSTONE. This he accomplished in 1871. A courageous and tenacious explorer, Stanley made several other expeditions into Africa, making important geographic discoveries and establishing the Congo Free State for Belgium. See also pp.1276, 1277, 1288.

Stanley, Thomas. See DERBY, THOMAS STANLEY, 1ST EARL OF.

Stanley, Wendell Meredith (1904-71), US biochemist who shared the 1946 Nobel Prize in chemistry with John NORTHROP and James SUMNER for his research into viruses. In 1935 Stanley crystallized tobacco mosaic virus and showed that it consists of PROTEIN and NUCLEIC ACID MOLECULES in a rod-shaped form. This enabled the exact molecular structure and means of proliferation of this and other viruses to be determined. He also studied Influenza viruses and developed a VACCINE against the disease.

Stanleyville. See KISANGANI.

Stannaries, tin mines and mining towns in Cornwall Stannary Courts regulated trade and all offences, except those concerning life, limb or land, committed by the tin miners. The jurisdiction of these courts was abolished in 1897.

Stansgate, Viscount. See BENN, ANTHONY WEDGEWOOD.

Stanton, Elizabeth (1815-1902), US leader of the women's rights movement, which was formed in 1848 to demand suffrage for women in the USA.

Stanza, arrangement of lines to form a verse of a poem. Stanzas are characterized by the number of lines and type of metre, eg SPENSERIAN STANZA. A couplet has two lines; tercet and terza rima, three; quatrain, four, and ottava rima, eight.

Staphylococcus, common genus of bacteria belonging to a group of oval or spherical bacteria called cocci. They grow in grape-like clusters and live in air, water and in the bodies of human beings and animals. Pathogenic staphylococci cause a range of disorders, including food poisoning, pneumonia and SEPTICAEMIA. They may be destroyed by ANTIBIOTICS, although some strains have become resistant to such measures.

Staple, in medieval English history, a commodity, trade in which was channelled through one town in order to facilitate its control and the collection of duties. The most important was the wool staple. Nine

English, two Welsh and three Irish towns had been made wool staples in 1326 but the monopolies of these, which included York, Lincoln and Bristol, were abolished in 1328. The wool trade was controlled by the Company of the Merchants of the Staple until exports declined in the 16th century.

Star, hot, self-luminous celestial body composed of gas and held together by its own GRAVITATION. Most stars emit all forms of ELECTROMAGNETIC RADIATION, principally light and heat rays, produced through nuclear reactions occurring in the star's interior. The size of stars varies greatly: their diameters range from several hundred million kilometres for low-density red giant stars to earth-like dimensions for very dense white dwarfs. A neutron star may have a diameter of only a few kilometres. Stellar temperatures also vary enormously, from about 2,000°K to 80,000°K, and stars are grouped according to their luminosity and spectral type. Stars are classified according to their apparent brightness or magnitude. Their apparent brightness differs because they lie at different distances from the observer or because their intrinsic brightness varies. The spectral classification groups stars on the basis of distinctive features in their spectra. The most commonly used system is the M-K system based on the Harvard Classification. This categorization arranges stars in order of decreasing surface temperature and according to a colour gradient from blue to red. Each class is characterised by distinctive absorption lines in the spectrum representing specific elements and radicals. The six main types are B, A, F, G, K and M-type stars. There are five more groups of rarer type, W, O, R, N and S, which define somewhat different spectral characteristics. When stars are plotted on a graph according to their luminosity and their spectral class (see HERTZSPRUNG-RUSSELL DIAGRAM) most of them lie in a well-defined belt known as the main sequence. The Sun is a typical main sequence star.

Stars are believed to originate in nebulae or concentrations of interstellar material. In an embryo star the material shrinks as a result of gravitational attraction and heat is generated. The course of stellar evolution depends largely on the mass of the star in this initial stage. If the mass is extremely low no nuclear reactions take place and the star radiates feebly until its energy has been dissipated. With a star of a mass similar to that of the Sun, the material shrinks and heat generated at the core is carried to the surface by convection and the star shines brightly. When the core temperature is high enough nuclear reactions begin. Hydrogen nuclei combine to form helium nuclei, resulting in a loss of mass and the release of energy. The star remains stable at this stage (it is now a main-sequence star) for millions of years. The Sun is at this stage in its evolution. When the supply of hydrogen runs low the core heats up again while the surface layers expand and cool. The star is now a red giant. Further reactions follow but eventually there is no nuclear energy left and the star collapses into extremely dense white dwarf. After a very long period, all light and heat has been extinguished and the star becomes a dead black dwarf. A star with greater mass than the Sun evolves much more quickly. Such stars do not collapse into white dwarfs but undergo great changes in structure, producing very high temperatures in the outer layers, and the result is a SUPERNOVA outburst. The stars that we see with the naked eye belong to our GALAXY, the MILKY WAY. They are not evenly distributed but often occur in STAR CLUSTERS. Many stars that appear as a single point of light are in fact DOUBLE STARS or even multiple star systems. VARIABLE STARS do not shine constantly and their luminosity fluctuates either regularly or irregularly. See also pp.972-1007.

Star, sea. See STARFISH.

Star Carr, archaeological site in N Yorkshire, England. Remains of a lake-side community have been found there, dating

back to the 8th millennium BC. See also p.1174.

Starch, form of POLYSACCHARIDE in which CARBOHYDRATE is stored in many plants, becoming an important source of carbohydrate in the diet of animals. Consisting of linked GLUCOSE units it exists in two forms: amylose, in which the glucose chains are unbranched, and amylopectin, in which they are branched. It is made commercially from cereals, potatoes, etc., and used in the manufacture of adhesives and foods. See also p.910.

Star Chamber, meeting place of the king's council in Westminster Palace, London. Under the Tudors, it was a royal council constituted as a judicial tribunal and became unpopular for its arbitrary sentences passed without juries and its use of torture. It was especially detested by the opponents of CHARLES I and abolished in 1641. Its name derived from the stars decorating its ceiling.

Star cluster, group of genuinely associated stars moving together through space and having common characteristics. Star clusters are of two types. Globular clusters are symmetrical in shape and contain hundreds of thousands of POPULATION II stars. OPEN CLUSTERS vary greatly in the number of stars they contain and are usually made up of relatively young stars, sometimes surrounded by interstellar material. See also pp.994-995.

Starfish, any of numerous species of marine ECHINODERMS with a central disc body and 5 to 25 radiating arms. The mouth is on the underside of the disc and the stomach can be extruded to take in other echinoderms and shellfish. Calcareous spines are embedded in the skin. Starfish move by means of tube feet. Class Asteroidea. See also pp.2, 50-51, 335.

Stargazer, any of several species of bottom-dwelling marine fish, the eyes of which are located on top of a large flat head. The electric stargazer (family Uranoscopidae) lives in warm and temperate seas throughout the world; species may have shoulder spines or electric organs. Length: to 55cm (22in). The sand stargazer (family Dactyloscopidae), a much smaller fish, is found in tropical waters. Length: to 10cm (4in).

Stark, Dame Freya Madeline (1893-), British explorer and writer, who travelled widely in the Middle East, especially Arabia. Her explorations in the Hadramaut resulted in her famous book *The Southern Gates of Arabia* (1936). *The Valley of the Assassins* (1934) describes her journeys in Persia (Iran).

Stark, Johannes (1874-1957), German physicist. He received the 1919 Nobel Prize in physics for describing the STARK EFFECT, which he discovered in 1913, and for his work on the DOPPLER EFFECT.

Stark effect, in physics, splitting of the spectral lines of an ATOM or MOLECULE when it is placed in a strong electric field. It was discovered by Johannes STARK.

Starley, James (1831-81), British inventor of sewing machines and bicycles who worked in Coventry from 1857. In 1868 he produced his first bicycle (*The Coventry*). His "ordinary" or "penny farthing" bicycle of 1871 had centre pivot steering. He introduced the *Coventry* tricycle in 1876, adding differential gears in 1877. See also pp.488, 489.

Starling, Ernest Henry (1866-1927), British physiologist who contributed greatly to the knowledge of body functions. He made major discoveries about body tissues, the mechanical controls of the heart and the endocrine system.

Starling, any of several species of small, aggressive birds; exotic colourful species are found throughout the world. The common Eurasian starling, *Sturnus vulgaris*, is mottled black and brown. It feeds on the ground on insects and fruit, often damaging crops, and nests in large noisy colonies; it has been known to imitate the cries of other birds. In cities starlings can be pests: their massed nests cause havoc on buildings. Length: to 36cm (14in). Family Sturnidae.

Star of Africa, largest cut diamond in the world; it was cut from the Cullinan diamond in 1908. It weighs 530.2 carats (3½oz) and is now in the British sovereign's sceptre in the Crown Jewels. See also p.261.

Star of Bethlehem, bulbous houseplant native to South Africa. Fragrant, star-shaped, white flowers grow on a central spike rising from slender, arching leaves. It grows best in direct sunlight and slightly dry soil (equal parts of loam, peat moss and sand). Propagation is by cuttings or seeds. Height: to 46cm (18in). Family Liliaceae; genus *Ornithogalum*.

Star of David (Magen David, or Shield of David), six-pointed device formed by opposing two equilateral triangles. Used as an emblem by pagans, Christians and Muslims, it has evolved into a symbol of JUDAISM. Its origin is unknown but it is often traced to King DAVID; it was used by Jewish warriors on their shields.

Starr, Ringo (1940-), British musician, real name Richard Starkey. He was the drummer of the BEATLES group, and turned to film acting when the group split up.

Star-spangled Banner, The, US national anthem. The words were written by Francis Scott KEY. The music was taken from "To Anacreon in Heaven", a song by the English composer John Stafford Smith. Although long sung by the US Army and Navy, it did not officially become the national anthem until 1931.

Starvation, prolonged deprivation of food. In human beings it first results in the using-up of glycogen, a carbohydrate stored mainly in the liver. After this reserve has been depleted, fat and protein are progressively broken down to supply energy. As protein is broken down, wasting and weakness of the body develop. Death can be expected when normal body weight is halved. See also ANOREXIA; MALNUTRITION; pp.162-163, 1084, 1085.

State, Department of, government department in the USA charged with developing and maintaining foreign policy. Originally, the CONTINENTAL CONGRESS conducted foreign affairs. In 1777 a Committee for Foreign Affairs was established but its power was limited. The Department of Foreign Affairs was established in July 1789 but renamed the Department of State in September of that year. Thomas JEFFERSON being appointed its first Secretary in 1790. The department is primarily concerned with the execution of US foreign policy to promote long-term US security and well-being through continuous consultations with other nations. It also negotiates treaties and speaks for the USA in the UN. It is headed by a Secretary of State and is responsible to the President.

Staten Island, island in SE New York State, in New York Bay, 8km (5 miles) SW of Manhattan; separated from Long Island (L) by the Narrows and from New Jersey (W) by the narrow Arthur Kill; it is connected with Brooklyn by the Verrazano-Narrows Bridge (1964) and with New York City and Brooklyn by ferries. The island was first visited by Henry HUDSON in 1609 but hostile Indians prevented permanent settlement until 1661. Industries: shipbuilding, printing and publishing, oil refining, soap. Area: 166sq km (64sq miles). Pop. (1970) 295,443.

State of nature, fiction of political theory to describe the condition of man before the advent of any social organization. Thomas HOBBS was an early exponent of the concept as a starting point for his study of society, but where he posited a state of nature that was "nasty, brutish and short", ROUSSEAU claimed that the state of nature was more idyllic than society.

State of the Union Message, annual address given by the US President to CONGRESS, usually before the start of a new session. It is based on the constitutional requirement that the President shall keep Congress informed. The President usually uses the speech to outline his future legislative programme.

State Paper Office, British government department in which official records were kept. It was formed in the reign of ELIZABETH I when a collection of papers of state was installed at the Palace of WHITEHALL. In 1852 state papers were placed in the care of the MASTER OF THE ROLLS and by 1856 the State Papers Office had been absorbed by the PUBLIC RECORD OFFICE.

Star Chamber: the court is believed to have originated in medieval times.

Starfishes are commonly yellow, orange, pink and red. There are about 2,000 species.

Starlings were introduced from Europe and Asia to most countries of the world.

Star of David's origins are thought by some to be medieval and cabbalaistic.

States General

Statue of Liberty; the figure was covered with copper sheeting by designer Bartholdi.

Stavanger is one of the oldest towns in Norway but most buildings are now modern.

Steamships; L'Elise arriving in Paris after crossing from London in 1816.

David Steel speaking at the Liberal Party Conference at Scarborough in 1965.

States General. See **ESTATES GENERAL**.
Statham, John Brian (1930–), British cricketer who played for England and Lancashire. A fast bowler of remarkable accuracy, he played in 70 Test matches (1951–65), taking 252 wickets for an average of 24.84 runs. In his first-class career (1950–68) he dismissed 2,260 batsmen at an average of 16.36 runs each.

Static electricity, positive and negative electrical charges which are studied in the branch of physics known as **ELECTROSTATICS**. Any body with either an excess or a deficit of **ELECTRONS** is electrically charged. Two objects with a deficit (positive +) will repel each other if brought together, as will two excess (negative –) charges. Two objects with different charges will attract each other. **COULOMB'S LAW** describes the forces that charged bodies have on each other by relating the force to their charge and the distance between them. Static electricity may be produced by friction, eg by combing hair. The hair acquires a negative charge. Similarly, rubbing nylon material will produce static. See also pp.825, 866–867.

Statics, branch of **MECHANICS** which deals with the action of forces on objects, the forces being so arranged that the objects are at rest. Its topics include finding the resultant (net) of two or more forces; centres of gravity; moments; and stresses and strains. See also **DYNAMICS**; pp.822–823.

Stationers' Company, craft guild of London publishers, printers and booksellers. Formed in 1403 and chartered in 1557, it had a monopoly of publishing until 1694 and acted as the Tudors' and Stuarts' agency for censorship. Compulsory registering of all publications at Stationers' Hall ended in 1923. In 1933 it became the Stationers' and Newspaper Makers' Company.

Stationery Office, HM (HMSO), department of the British CIVIL SERVICE. It supplies the public service with paper, printing, bookbinding and office machinery, and publishes printed matter for sale in its own bookshops and through various agencies. It also publishes **HANSARD**.

Stations of the Cross, Roman Catholic devotion to commemorate events on the day **CHRIST** was crucified. Worshippers pray in turn at 14 pictures or sculptures showing the sufferings of **Jesus** from His sentence by **PILATE** to His death and burial.

Statistical mechanics, study of large-scale properties of matter based on the underlying laws of **QUANTUM MECHANICS** in conjunction with the statistical laws of large numbers. Quantum mechanics determines the possible energy states of a substance or system; the large number of molecules in such a system then allows the use of statistics to predict the probability of finding the system in any one of these states. The **ENTROPY** of the system is related to its number of possible states; a system left to itself will tend to approach the most probable distribution of energy states. See also **THERMODYNAMICS**; p.844.

Statistics, science of collecting and classifying numerical data. Statistics can be descriptive (simply summarizing the data obtained) or inferential (leading to conclusions or inferences about larger numbers of which the data obtained is a sample). Inferential statistics are used to give a greater degree of confidence to conclusions, since statistics make it possible to calculate the probability that a conclusion is in error. See also **CORRELATION**; **FACTOR ANALYSIS**; **SAMPLING**; **VALIDITY**; pp.806–807, 1863.

Statue of Liberty, large copper statue of a woman, standing on Liberty Island in New York Harbour, and a symbol of American democracy. It was built to commemorate the 1876 centenary of US independence and was designed by **Frédéric-Auguste Bartholdi**. The supporting framework was designed and built by **Alexandre-Gustave Eiffel**. The statue's correct name is *Liberty Enlightening the World*. It stands 46m (151ft) tall to the top of the torch in the uplifted right hand.

Status, in sociology, a person's social position in a hierarchically arranged society, in

which position is based on various factors including lifestyle, prestige, income and education. Status can be inherited or derive from such things as socially enviable possessions (status symbols), valued talents, or friendships with people of high status. A status group is any community of individuals who share the traits of a particular status.

Statute, law in Britain passed by both Houses of Parliament and given the royal assent. In origin it was simply any written document which altered or confirmed the **COMMON LAW**. In the 12th century a statute was thus a royal edict. But as Parliament developed in the 13th and 14th centuries it came to be held that for a statute to have force it must receive the consent of **Lords and Commons**, even though it was rare for it to originate except from the monarch.

Staudinger, Hermann (1881–1965), German chemist, awarded the 1953 Nobel Prize in chemistry for his work on the structure of **PLASTICS**, which had been thought to be random aggregations of **MOLECULES**. He showed that such plastics are **POLYMERS**, similar to **CELLULOSE**, in which the molecules are bonded together to form a long chain. This discovery contributed to the growth of the modern plastics industry.

Staurolite, silicate mineral, iron magnesium aluminum silicate, found in **SCHISTS** and **GNEISSES**. It has orthorhombic system, prismatic and flattened crystals and is glassy brown in colour. Hardness 7–7.5; s.g. 3.6.

Stavanger, port in SW Norway, on the S shore of the Boknafjord. Founded in the 8th century, Stavanger was an episcopal see from the 11th century until 1682 and there is a 12th-century cathedral in the city. Industries: shipbuilding, fishing and fish processing. Pop. (1971 est.) 82,000.

Stave, or staff, in **MUSICAL NOTATION**, the parallel horizontal lines on or between which notes are written. It was introduced, probably by the monk **Guido d'Arezzo** (d.1050), who fixed the written representation of notes on four lines. The number of lines in a modern stave is five.

Stawell Gift, Australian professional sprinting race, held annually in the small mining town of Stawell, Victoria. First contested in 1878, it is raced over 130 yards (118.8m) on a handicap basis, a series of heats producing five runners to contest the final.

Stay of proceedings, in law, postponement or cancellation of civil proceedings by a court order.

Stead, Christian Karlson (1932–), New Zealand poet, novelist and critic. His works include *Crossing the Bar* (1972), *The Shed* (1975) and *The New Poetics* (1975).

Stead, Christina Ellen (1902–), Australian novelist whose powerful works include *The Man Who Loved Children* (1940), *The People With the Dogs* (1951), *Little Hotel* (1974) and *Miss Herbert* (1976).

Stead, William Thomas (1849–1912), British radical journalist who successfully campaigned against child prostitution.

Steady-state theory, in **COSMOLOGY**, theory concerning the origin and evolution of the universe. Like the **BIG BANG** theory, it proposes that the universe is expanding but differs in suggesting that new galaxies are continually created to keep the universe at a constant density. Unlike the big bang theory such a universe would have no beginning. It was first proposed by Sir **James Jeans** around 1920 and developed after WWII by Sir **Fred Hoyle**, **Thomas Gold** and **Hermann Bondi**. Recent observations in astronomy have produced evidence that is more in favour of the big bang theory.

Steam, gaseous form of water. As commonly seen in the home it contains minute drops of water and is technically called wet steam. The pure gas, dry steam, is obtained by heating steam at temperatures well above the boiling point of water, 100°C (212°F). It is widely used in industry for heating, transporting heat (in heat exchangers) and to drive turbines.

Steam engine. See **ENGINE**.

Steam hammer, heavy hammer powered

by steam, invented in 1839 by **James Nasmyth** to forge the largest metal component to that date, namely the paddle wheel of the steamship *Great Britain*.

Steam pump, apparatus used in factories to circulate liquids such as boiler feed-water and slurries. Steam pumps usually have a steam-powered piston at one end, connected to another piston fitted with a plunger which does the pumping.

Steamroller, heavy road vehicle fitted with a large frontal roller, and propelled by **STEAM**. Formerly used in roadbuilding, steamrollers have been largely superseded by diesel or petrol driven rollers. See also p.522.

Steamships, vessels powered by some form of steam engine. They first appeared as French paddle boats of the late 18th century. At the turn of the 19th century larger steamboats of this kind were built in England and the USA to carry river passengers. The first transatlantic crossing by a steamship took place in 1819, although this was assisted by sail. By the 1840s steamships of more than 1,000 tonnes were carrying passengers regularly. They were often built of iron and steel and had coal-fired steam engines; screw propellers began to replace paddles at this time. The next developments were **STEAM TURBINE** engines (initially for warships) and oil fuel instead of coal. During the second quarter of the 20th century most steamships were superseded by vessels powered by marine diesel engines. See also **SHIP**; pp.470–471.

Steam turbine, **ENGINE** consisting of rotating blades which are turned by steam. **TURBINES** are commonly used to drive ships and, in tandem with a **GENERATOR**, to make electricity in power stations. See also pp.424, 424–425.

Stearate, salt or ester of **STEARIC ACID** ($C_{17}H_{35}COOH$), one of the most common fatty acids occurring in natural animal and vegetable fats. Stearates, especially the sodium and potassium salts, are used in soaps, lubricants, cosmetics, food additives and pharmaceuticals.

Stearic acid, organic chemical compound commonly found as a glyceride in animal and vegetable fats, together with **palmitic acid** and **oleic acid**. It has the formula $CH_3(CH_2)_{16}COOH$ and is used in ointments, creams and soap. Properties: s.g. 0.85; m.p. 70°C (158°F).

Stearin, glyceryl tristearate, $C_{57}H_{110}O_6$. It is present in many animal and vegetable fats, particularly the hard ones such as tallow and cacao butter. Stearin is prepared from **STEARIC ACID** and **glycerol** with **aluminium oxide** as a **CATALYST**.

Steatite. See **SOAPSTONE**.

Steel, David Martin Scott (1938–), British politician. Liberal MP for Roxburgh, Selkirk and Peebles since 1965, he was elected leader of the Liberal Party in 1976. In 1977 he set up the 'Lib-Lab Pact' between his party and the Labour government. This lasted until 1978. In 1981 he allied the Liberals with the new Social Democratic Party (SDP).

Steel, alloy of iron, containing a little carbon, commercially the most important metal. Its malleability distinguishes it from **CAST IRON** and its freedom of slag from **WROUGHT IRON**. First made in ancient times, it was not until the development of the **BESSEMER** and **open-hearth** processes in the 19th century that steel became available for large-scale uses. Low-alloy steels, with less than 5% of nickel, chromium and molybdenum or other metals added, are exceptionally strong and are used for the structural members of buildings, bridges and machine parts. High-alloy steels, such as stainless steel, with 5% of other metals, are used for tableware and cooking utensils, where appearance and resistance to corrosion are necessary. See also pp.394–397.

Steele, Sir Richard (1672–1729), British essayist and dramatist, b. Dublin. In partnership with **Joseph Addison** he set the civilized tone of the Augustan age in his publications, the *Tatler* (1709–11) and the *Spectator* (1711–12). See also pp.1478, 1478.

Steel engraving, **INTAGLIO** printing process. Steel plates, unlike copper or

brass, made large numbers of proofs possible, and were popular in the 19th century until superseded by photomechanical processes. See also pp.612, 615.

Steel-framed building, construction method widely used by architects and developers. PAXTON and EIFFEL pioneered the use of tall cast iron buildings but only with the late 19th-century refinements of mass-produced and standardized steel units could architects such as JENNEY, SULLIVAN and LLOYD WRIGHT develop urban building vertically as large blocks and SKYSCRAPERS. PRE-STRESSED CONCRETE beams further increased the capacity of steel-framed structures to withstand earthquakes and high-altitude winds. See also pp.550-551, 1658-1659, 1688-1689.

Steelmaking, conversion of iron into one of its various alloys known collectively as STEEL. The technique became possible on a large scale only when slag could be removed from the molten iron alloy, and the carbon content carefully controlled. This happened in the mid-19th century with the BESSEMER and open hearth processes, in which excess carbon was air-blasted out from the steel as carbon monoxide, which then combined with oxygen to leave the furnace as carbon dioxide gas, so preventing the formation of oxide slag. This is essentially the blast furnace process still used, although it is being replaced by processes using electric arc furnaces, or by ones in which an oxygen lance is employed to develop heat more quickly. See also pp.396-397.

Steelyard, weighing balance used since at least 315 BC. It is a metal bar suspended horizontally near one end so that the shorter arm supports the object to be weighed and the longer arm supports a small weight which can be moved on a graduated scale to balance the object being weighed. See also p.822.

Steelyard, Merchants of, the members of the German merchant guild based at the Steelyard by the River Thames, London. Established c. 1250, merchants belonging to this branch of the HANSEATIC LEAGUE enjoyed many privileges, such as exemption from customs dues, that were greatly resented by English merchants. The Steelyard was closed in 1598 by Queen Elizabeth I.

Steen, Jan (1626-79), Dutch painter. He and painted everyday scenes including those of tavern life. He used brilliant light and cool colours to emphasize action and expression as in *Skittle Players Outside an Inn* (c. 1660).

Steenbok, or steinbok, or grysbok, species of small, slender-legged ANTELOPES native to the grasslands of East and South Africa. Their coats are shades of reddish brown stippled with white, and the males carry short spired horns. Length: to 85cm (34in); weight: to 14kg (30lb). Family Bovidae; genus *Raphicerus* or *Nototragus*. See also p.299.

Steeplechase, athletic test of endurance and hurdling skill. The course, over 3,000m, includes 35 obstacles: 4 hurdles and one water jump in each lap. The steeplechase, which derives from cross-country running, was staged first at the OLYMPIC GAMES in 1900.

Steeplechase, horse-race over a course with obstacles to be jumped. The term originated when church steeples were used as landmarks to guide riders in cross-country horse-races. In modern steeplechasing, horses race over a distance of two miles (3.2km) or more. There must be at least one ditch and six birch fences for every mile, including one water-jump.

Steer, Philip Wilson (1860-1942), British painter of landscapes, portraits and genre pictures in a style influenced by CONSTABLE and TURNER and by IMPRESSIONISM, which he and SICKERT helped to introduce to England.

Steering, in a motor vehicle, mechanism that allows the front wheels to be angled so that the vehicle can go round bends in the road. In rack-and-pinion steering, the most common type, rotation of the steering wheel turns a helical pinion gear against a toothed rack, whose movement actuates the rods that pivot the roads

wheels. In heavy cars and lorries, hydraulic pressure provides power-assisted steering to lessen the effort for the driver. See also p.496.

Stegosaur, any of several species of ornithischian DINOSAURS of the late Jurassic and early Cretaceous periods of the w. USA. It walked on all fours and had a small head, a massive body and a long tapering tail which ended in defensive spikes. Along its spine was a row of vertically-mounted bony plates. Length: to 6m (20ft). See also pp.184, 281, 281.

Steiger, Rod (1925-), us actor whose film career included appearances in *On the Waterfront* (1954), *The Pawnbroker* (1965), *The Illustrated Man* (1969), *Waterloo* (1971) and *W.C. Fields and Me* (1976). He received an OSCAR for his performance in *In The Heat of the Night* (1967).

Stein, Sir Mark Aurel (1852-1943), British archaeologist and scholar, b. Hungary. He was Principal of Oriental College, Lahore, and registrar of Punjab University (1888-99). He transferred to the Archaeological Survey, and between 1906 and 1942 made explorations in Central Asia and Persia.

Stein, Gertrude (1874-1946), us author and critic. She went to Paris in 1903, establishing a cultural salon, where she entertained and influenced many great artists and writers including CÉZANNE, PICASSO, HEMINGWAY and FITZGERALD. Influenced by Cubist theories, her own writing includes *Three Lives* (1909) and *The Autobiography of Alice B. Toklas* (1933). See also p.1772.

Stein, John ("Jock") (1923-), British footballer and manager. From 1948 to 1956 he played for Albion Rovers, Llanelli and Glasgow Celtic. In 1965 he rejoined Celtic as manager and under his guidance the club won numerous domestic and international honours, including the EUROPEAN CUP in 1967.

Stein, William Howard (1911-1980), us bio-chemist who shared the 1972 Nobel Prize in chemistry with ANFINSEN and MOORE for research into the molecular structure of PROTEINS. Stein developed techniques for the analysis of PEPTIDES and AMINO ACIDS obtained from proteins and applied these methods to determining the molecular structure of the ENZYME ribonuclease which was of great importance for the understanding of processes involved in protein synthesis within CELLS.

Steinbeck, John Ernst (1902-68), us novelist whose works are characterized by realistic dialogue and an understanding for the world's downtrodden. Among his novels are *Of Mice and Men* (1937), *The Grapes of Wrath* (1939), *Cannery Row* (1945), *East of Eden* (1952) and *The Winter of Our Discontent* (1961). He was awarded the Nobel Prize in literature in 1962. See also p.1691.

Steiner, Jakob (1796-1863), German-Swiss mathematician. He pioneered synthetic geometry, which is concerned with those geometric properties of a figure that remain unchanged when the figure is projected onto a plane surface.

Steiner, Rudolf (1861-1925), Austrian philosopher and educationalist who helped to found the German THEOSOPHY movement. He later developed a philosophy of his own, called anthroposophy, which sought to explain the world in terms of man's spiritual nature or thinking independent of the senses.

Steinheim man, early representative of *Homo sapiens*, the skull of which was discovered in Steinheim, near Stuttgart, Germany, in 1933; it dates from the Mindel-Riss interglacial period, about 250,000 to 200,000 years ago. The brain volume is estimated at 1,150cc. The brow ridges are like those of *Homo erectus*, but the rounded back of the skull more closely resembles that of Neanderthal man, who appeared later. See also p.114.

Steinway family, German-us family of piano makers. Henry Engelhard (1797-1871) opened a piano business in Germany in 1835, emigrated to the USA in 1849 and, with his sons, founded the New York firm (which still exists) in 1853. It produced the first Steinway grand piano in

1856; the London branch of the firm was opened in 1875.

Stella, Frank (1936-), us painter. His work, in which he reacts against ABSTRACT EXPRESSIONISM, consists of basic geometric shapes set against simple backgrounds.

Stella, Joseph (1880-1946), us painter, b. Italy, who went to New York in about 1902 to study medicine but became an artist instead. He was influenced by CUBISM and FUTURISM, as can be seen in his famous paintings of Brooklyn Bridge.

Stellar parallax, method of using PARALLAX to estimate the distances to the nearer stars. It is based on the apparent changes in star position over periods of six months, during which the Earth has moved from one side of its orbit round the Sun to the other. This known distance is then used as the base of a triangle from which to calculate the star's distance. The apparent movement of the star whose distance is being estimated is judged against that of a fixed or stationary star. For the purpose of the calculation the fixed star is assumed to be at infinity. See also p.916.

Stellenbosch, town in s South Africa, in Cape Province, 40km (25 miles) e of Cape Town. Founded in 1679, it is one of the oldest European settlements in South Africa. Stellenbosch is situated in a fertile river valley and serves as a centre for the surrounding fruit-growing and wine-making region. There is also a brick and tile manufacturing industry. Pop. (1969 est.) 29,900.

Stem, main, upward-growing part of a plant that bears leaves, buds and flowers. The internal structure is composed of VASCULAR tissue arranged in a ring (in dicotyledons) or scattered (in monocotyledons). Stems are usually erect, but may be climbing (vine) or prostrate (stolon). They may also be SUCCULENT (cactus) or modified into underground structures (rhizomes, tubers, corms, bulbs). Stems vary in size from the thread-like stalks of aquatic plants to tree-trunks.

Stendhal (1783-1842), pseudonym of Marie-Henri Beyle, French novelist. His first novel *Armance* (1823) was scorned by critics, but in 1831 he published the first of his two great novels *Le Rouge et le Noir*. This was followed in 1839 by *La Chartreuse de Parme*. See also p.1574.

Steno, Nicolaus (1638-86), Danish geologist and anatomist. In *The Prodrum* (1669; English trans., 1916) he laid the foundation of the science of CRYSTALLOGRAPHY by reporting equal angles between corresponding faces of quartz crystals. He proposed that fossils are the remains of ancient living organisms and that many rocks arise from SEDIMENTATION. See also p.256.

Stenosis, abnormal narrowing of a passage, eg that between the stomach and the duodenum. It is usually congenital and may be repaired surgically.

Stephanotis, climbing shrub native to Madagascar, commonly grown as a greenhouse plant elsewhere. Its branches may reach several metres in length and are thickly covered with large, white, strongly scented flowers and thick oval leaves. Family Asclepiadaceae; species *Stephanotis floribunda*.

Stephen, Saint (977-1038), Stephen I of Hungary (r. 1000-38), the first king of the Árpád dynasty. His chief work was to continue the Christianizing of Hungary begun by his father, by endowing abbies, inviting foreign prelates to Hungary and suppressing paganism. He was canonized in 1083.

Stephen, name of ten Roman Catholic popes. Stephen I (r. 254-57), saint and martyr, became involved in disputes with St Cyprian, Bishop of Carthage, of which the most bitter was over the validity, (which Cyprian upheld) of rebaptism of heretics or schismatics. Stephen II (752) died a few days after his election and was never consecrated. He is not usually counted as a pope and the succeeding Stephens are given alternative numbers. Stephen II (or III) (r. 752-57) sought the aid of the FRANKS against the LOMBARDS who were threatening Rome. He was responsible for the pact with Pepin, King of the Franks, which resulted in the Donation of

Rod Steiger as the gangster Al Capone in the 1958 film *The Al Capone Story*.

Joseph Stella's portrait of Alfred Casella. Many of his works celebrate urban America.

Stendhal expressed the belief that happiness could be achieved through will.

Stephanotis; in winter it develops long branches covered with leaves.

Stephen

Steppes in the USSR. They receive less rain than prairies but more than deserts.

Sternberg's film *Underworld* (1927) led to his long association with Paramount.

Stethoscope; before its invention a doctor put his ear to the patient's body.

R. L. Stevenson's *Treasure Island* was conceived as an amusement for his stepson.

Pepin (755) that ceded territories in the exarchate of Ravenna, Venetia and Istria to the papacy, the basis of the PAPAL STATES. See also HCl p.152. Stephen III (or IV) (r.768-72) was elected after the expulsion of the Lombard candidate Philip. He tried unsuccessfully to prevent the marriage between CHARLEMAGNE and the daughter of the Lombard king, but later allied himself with the Lombards against the Franks. The other Stephens were Stephen IV (or V) (r.816-17); Stephen V (or VI) (r.885-91); Stephen VI (or VII) (r.896-97); Stephen VII (or VIII) (r.929-31); Stephen VIII (or IX) (r.939-42); Stephen IX (or X) (r.1057-58).

Stephen (c.1097-1154), King of England (r.1135-54), grandson through his mother of WILLIAM THE CONQUEROR. When HENRY I settled the succession on his daughter, MATILDA, Stephen and other barons swore fealty to her. On Henry's death (1135), however, he claimed the throne and was crowned. Harassed by the Scots and Matilda's supporters, Stephen was temporarily deposed in 1141. Although he re-established himself as king, he could no longer control his barons and by a treaty confirmed at Westminster (1153) he conceded the succession to Matilda's son Henry, who on Stephen's death (1154) reigned as HENRY II. See also pp.1312, 1312.

Stephen I, King of Hungary. See STEPHEN, SAINT.

Stephen, Sir James Fitzjames (1829-94), British jurist and historian. He reformed and codified Indian law (1869-72) and subsequently made a major contribution to the codification of English criminal law. He was a high court judge (1879-91), and his standard *History of the Criminal Law of England* was published in 1883.

Stephen, Sir Leslie (1832-1904), British writer and critic. He edited the *Cornhill Magazine* (1871-82), and was the first editor of the *Dictionary of National Biography* (1882-91).

Stephen Harding, Saint (c.1048-1134), English monastic reformer. After travelling widely in Europe, he joined a religious community at Molesme, Burgundy, but left because of the lax observance there of the Rule of St BENEDICT. With St Robert de Molesme he established a house at Cîteaux, where he became abbot in 1109. The CISTERCIANS date from his abbacy.

Stephens, James (1882-1950), Irish poet and novelist who was a leading figure in the IRISH LITERARY RENAISSANCE. His novels, many of which incorporate Irish legend and folklore include *The Crock of Gold* (1912) and *Deirdre* (1923). Among his volumes of poetry is *The Hill of Vision* (1912). See also p.1766.

Stephenson, George (1781-1848), British engineer and inventor, regarded as the father of the locomotive. He built his first locomotive, the *Blucher*, in 1814 in which flanged wheels were incorporated for the first time. His most famous locomotive, the *Rocket*, was built in 1829 and set a record speed of 47km/h (29mph). It later ran on the Liverpool to Manchester line, which he also built. See also p.506.

Stephenson, Robert (1803-59), British engineer, son of George STEPHENSON. Between 1845 and 1850 he built the tubular Britannia Bridge over the Menai Strait, N Wales. See also p.533.

Stephenson, Sir William (1896-), Canadian industrialist who worked for British and US intelligence. He was CHURCHILL's representative in New York and head of British Security Co-ordination in WWII. With J. Edgar HOOVER, he helped to establish the FBI.

Steppe, extensive, semi-arid plains of central Eurasia. The word is a Tartar term that has been adopted by geographers. The steppe includes three zones of vegetation; the forest steppe; the grassland prairie, which is now usually cultivated; and the non-tillable steppe, which is semi-desert and fertile only after irrigation.

Stereochemistry, study of the chemical and physical properties of compounds as affected by the ways in which the atoms of their molecules are arranged in space.

Such arrangements can result in two or more compounds having the same numbers and kinds of atoms but differently shaped molecules, which are called stereoisomers. Stereochemistry also deals with optical isomerism, in which the configuration of one molecule is the mirror image of another. These are known as L (*levulo*) and D (*dextro*) forms. An L form may have completely different properties to a D form, and the separation between the two is made from the sense in which each rotates the plane of POLARIZED LIGHT. In the amino acids of higher organisms only the L-amino acid form appears. See also pp.894-897.

Stereophonic sound, method of reproducing sound so that it gives the illusion of both location and direction; at least two separate channels are required. In stereophonic LONG-PLAYING RECORDS, the groove is modulated in two planes - the lateral and the vertical (groove depth). Depth variations correspond to the difference between the left and right channels of the stereo-recording and lateral modulations correspond to their sum. Two transducers in the pick-up cartridge feed two separate amplifiers and two widely-spaced loudspeakers.

Stereoscope, optical binocular device that produces an apparently three-dimensional image by presenting two slightly different plane images, usually photographs, to each eye.

Stereotype, in printing, duplicate printing plate made from the original (which is reserved for making further duplicates as necessary). A traditional method of making stereotypes is to press papier mâché into the original and producing a negative mould from which a duplicate plate is electroplated or cast. See also p.614.

Stereotyping, tendency to ascribe to anyone characteristics that can be attributed to a group or CLASS of which he is a member. The stereotyped judgement, however, may or may not apply to him, and thus stereotyping is a form of categorization.

Sterility, in men, inability to father children because of a deficiency in the number or quality of SPERM. The cause may be essentially hormonal, or it may be a physical abnormality either inherited, congenital or as a result of disease. In women the condition is called infertility, and is generally a result of a malfunction in OVULATION, sometimes caused by an obstruction of the Fallopian tubes. See also HYSTERECTOMY; VASECTOMY; pp.1078-1079.

Sterilization, in medicine and bacteriology, killing of all bacteria, viruses and spores present within a certain environment. This prevents the spread of infection and permits scientists to work in strictly controllable conditions. It is only since the 19th century that sterilization has been widely practised. Joseph LISTER introduced antiseptic methods in surgery, and Louis PASTEUR demonstrated the existence of germs. Sterilization usually involves the application of heat, but chemicals such as ethanol are used when the application of heat is impracticable, for instance in sterilizing the skin.

Sterling, term for British currency thought to derive from the *sterling*, the 11th-century penny bearing the design of a star. It is used to distinguish the British pound from pounds of other currencies and can also be used to describe the quality and standard weight of coins. The sterling silver mark on silver (the stamp of a lion passant) represents a purity of more than 90%. See also pp.1786-1787.

Stern, Isaac (1920-), US violinist, b. USSR, who studied at the San Francisco Conservatory and made his debut in 1931. He has made extensive world tours and established a reputation as one of the world's leading virtuosos.

Stern, Otto (1888-1969), German-born US physicist. An outstanding experimental physicist, he was awarded the 1943 Nobel Prize in physics for developing the molecular beam as a tool for studying the characteristics of MOLECULES and for his measurement of the magnetic moment of the PROTON.

Sternberg, Josef von (1894-1969), US film

director, b. Austria. He is famed for his sophisticated, sensual films starring Marlene Dietrich, including *The Blue Angel* (1930), *Morocco* (1930) and *The Devil Is a Woman* (1935).

Sterne, Laurence (1713-68), British novelist whose reputation was established with *Tristram Shandy* (1760-67), a richly humorous novel whose techniques anticipated much 20th-century fiction. A *Sentimental Journey Through France and Italy* appeared in 1768. See also p.1478.

Sternum, or breast bone, flat, narrow bone in front of the chest between the breasts. It is generally divided into three regions: the manubrium, or upper part; the body; and the xiphoid process, or lower and more flexible cartilaginous part. The top of the manubrium is attached by ligaments to the collarbones and the body is joined to the ribs by seven pairs of costal cartilages. See also pp.146-147.

Steroid, class of organic compounds characterized by a basic molecular structure of 17 carbon atoms arranged in four rings and bounded by up to 28 hydrogen atoms. Steroids are widely distributed in animals and plants; the most abundant are the sterols (steroid alcohols), such as cholesterol. Another important group are the steroid HORMONES, including the corticosteroids, secreted by the adrenal cortex, and the sex hormones. The sex hormones are the oestrogens (such as oestrone) and progesterone, produced by the ovaries, and androgens (such as testosterone and androsterone) secreted by the testes. Synthetic steroids are widely used in medicine. See also p.907.

Stesichorus (c.630-555 BC), Greek lyric poet, originally called Teisias. Legend holds that he was a master of the choral hymn celebrating the heroes of epic poetry. See also p.1208.

Stethoscope, instrument that enables an examiner to hear the sounds of activity in various parts of the body, such as the heart, blood vessels, lungs and intestines. It consists of two earpieces attached to flexible rubber tubes which lead to either a disc or a cone.

Stettin. See SZCZECIN.

Stevens, Wallace (1879-1955), US poet and lawyer. His work includes *Harnum* (1923), *Ideas of Order* (1935), *The Man with the Blue Guitar* (1937) and *Parts of a World* (1942). See also p.1773.

Stevenson, Adlai Ewing (1900-65), US politician and ambassador to the UN (1961). He was an adviser at the San Francisco Conference in 1945 that set up the UN. He became governor of Illinois in 1948 and was twice unsuccessful Democratic candidate for the presidency (1952, 1956).

Stevenson, Robert (1772-1850), British civil engineer, famous chiefly for his lighthouses. He invented the intermittent and flashing lights.

Stevenson, Robert Louis (1850-94), Scottish novelist, essayist and poet. His novels include *Treasure Island* (1881), *Dr Jekyll and Mr Hyde* (1886), *Kidnapped* (1886), *The Black Arrow* (1888) and *The Master of Ballantrae* (1889). A *Child's Garden of Verses* appeared in 1885. See also pp.1768-1769, 1769.

Stevenson, Teophilo (1951-), Cuban amateur boxer. He won the Olympic heavyweight gold medal in 1972 and 1976, became World Amateur Champion in 1974 and won a gold medal in the Pan-American Games of 1975.

Steward, Lord High, office of honorary servant of the British sovereign, originating in the 11th century. HENRY II gave the office to the earls of Leicester, later to be acquired by Simon de Montfort and then passed to members of the Royal Family. Since 1421 appointments have been made only for special occasions.

Steward of the Household, Lord, office of the servant of the British Royal household. Several stewards were appointed in the 11th century, but since the early 14th century the office has been restricted to one person. The office evolved into one of considerable political influence, then reverted to that of personal service to the sovereign, including organization of the Royal household.

Stewart, Prince Charles Edward. See STUART, CHARLES EDWARD.

Stewart, Douglas Alexander (1913–), New Zealand poet, playwright and critic. He edited the influential literary *Red Page* in the *Sydney Bulletin* from 1940–61 and had a strong interest in Australian folk-literature, editing *Australian Bush Ballads* (1955).

Stewart, Dugald (1753–1828), Scottish philosopher who was one of the main advocates of COMMONSENSE REALISM. Like Thomas REID, Stewart believed that philosophy should employ scientific methods to become a less nebulous discipline.

Stewart, Jackie (1939–), Scottish Formula 1 racing driver. He retired in 1973 after winning a record 27 Grands Prix races.

Stewart, James Francis Edward. See STUART, JAMES FRANCIS EDWARD.

Stewart, James Innes Mackintosh. See INNES, MICHAEL.

Stewart, James Maitland (1908–), US film actor. His notable films include *Mr Smith Goes to Washington* (1939), *The Philadelphia Story* (1940), *Harvey* (1950), *Vertigo* (1958), *Anatomy of a Murder* (1959), *The Man who Shot Liberty Valance* (1962), *Shenandoah* (1965) and *The Shootist* (1976).

Stewart, Mary. See MARY, QUEEN OF SCOTS.

Stewart, Robert, Viscount Castlereagh. See CASTLEREAGH, ROBERT STEWART, VISCOUNT.

Stewart, river in Yukon Territory, Canada. It rises in the Mackenzie Mts and flows w to the Yukon River 81km (50 miles) s of Dawson. It was discovered by Robert Campbell of the Hudson's Bay Co in 1850. Length: 533km (331 miles).

Stewart Island, part of New Zealand, 32km (20 miles) s of South Island. A mountainous and forested region, it has become popular as a tourist resort. Exports include frozen fish. Area: 1,748sq km (675sq miles). Pop. (1975 est.) 410.

Stewarts. See STUART.

Steyn, Martinus Theunis (1857–1916), South African statesman. The last president of the ORANGE FREE STATE from 1896 to 1900, he served in the SOUTH AFRICAN WAR and later helped to form the Union of South Africa.

Stibnite, sulphide mineral, ANTIMONY trisulphide (Sb_2S_3) found in low-temperature veins and rock impregnations. It occurs as orthorhombic system aggregates of either prismatic crystals or granular masses and is opaque, sometimes iridescent and grey or black in colour. Hardness 2; s.g. 4.6. Stibnite is an important ore of antimony.

Stick insect, any of numerous species of herbivorous insects of the order Phasmoda which strongly resemble the shape and colour of the twigs upon which they rest. Some sway backwards and forwards, mimicking a wind-blown twig, and lay eggs which resemble seeds. Length: to 32cm (1 in). See also LEAF INSECT; pp.37, 41, 303.

Stickleback, small fish found in fresh, brackish and salt water. It is usually brown and green, and may be identified by the number of bony plates and spines along its sides and back. Its mating and courtship behaviour have been much studied: the male builds a nest of water plants and, with an elaborate ritual, drives the female into it. He then watches the eggs and cares for the young. Length: 8–11cm (3–4.5 in). The 12 or so species include the three-spined *Gasterosteus aculeatus*. Family Gasterosteidae. See also pp.57, 189, 328.

Stigand (d.1072), Anglo-Saxon prelate. In 1052 he was appointed Archbishop of Canterbury and Bishop of Winchester. He crowned WILLIAM I King of England but was replaced as Archbishop by LANFRANC in 1070.

Stigma, in botany, the free upper part of the style of the female organs of a flower, to which a pollen grain adheres before FERTILIZATION. See also p.383.

Stijl, De, movement in modern art that originated in The Netherlands with the art periodical of that name founded by Theo van DOESBURG in 1917. It was at first asso-

ciated with the principles of NEO-PLASTICISM, of which MONDRIAN was the major exponent. From the mid-1920s the movement included Dadaists such as ARP and KUPKA and, although lacking in cohesion, De Stijl ideas were representative of the avant-garde movement as a whole. See also pp.1658, 1686.

Stilbite, hydrated silicate mineral containing calcium, sodium and aluminium; one of the ZEOLITE group. It displays monoclinic-system radiating tabular crystals or aggregates and is white, yellow, red or brown in colour. Hardness 3.5–4; s.g. 2.1.

Stilicho, Flavius (c.259–408), Roman general of Vandal origin. He acted as regent for the young Emperor Honorius and in this post was the effective ruler of the Western Empire.

Still. See DISTILLING.

Still, Andrew Taylor (1828–1917), US founder of OSTEOPATHY. After three of his children died in an epidemic of spinal MENINGITIS, he devised treatment based on the theory that most physical disorders were caused by "structural derangement" of the body, which could be remedied by manipulations of bones and muscles without the use of drugs.

Still birth, expulsion of a dead foetus after more than 28 weeks within the womb.

Still-life, painting of everyday objects, such as flowers, cooking utensils or books, usually grouped together and viewed in close-up. Before the Renaissance, still-life groupings never formed more than a minor part of the religious and allegorical paintings then in vogue. Still-life became an independent art form in the 16th century, much influenced by the work of CARAVAGGIO, and reached what is often considered its peak in the Netherlands in the 17th century, in the work of such artists as SNYDERS and de HEEM. CHARDIN was the first important French still-life painter. It has remained an art form popular with both artists and the public. Through the works of CÉZANNE and others, still-life has played an important part in the development of abstract art. See also pp.1445, 1657.

Stilt, long-legged wading marsh bird. It defends its nest with an elaborate display that includes playing dead or distractions in flight. Length: 35–45cm (14–18 in). Family Recurvirostridae.

Stilton, blue-veined, crumbly cheese made originally in the English village (in Huntingdonshire) which gave it its name. Penicillium, a blue mould, contributes to the rich aroma and taste of the cheese. See also p.727.

Stimulant, drug that increases the rate of activity of some part of the body or mind. Many stimulants are used in medicine, such as digitalis, which acts on weakened heart muscles, and oxytocin, which induces contractions of the womb in childbirth. There are a number of stimulants which act on the central nervous system. Amphetamines are experienced as mood elevators and they also increase alertness. Barbiturates are depressants which initially have the effect of stimulants. This paradoxical effect is found in many hypnotic drugs. Many common drinks such as tea, coffee and colas contain the stimulant caffeine in small amounts.

Stimulus, in psychology, any change in energy, either external or internal, that influences the RECEPTORS of the nervous system.

Stinging nettle. See NETTLE.

Stingray, any of several species of bottom-dwelling elasmobranch fish that live in marine waters and in some rivers in South America. It is flattened dorso-ventrally, with wing-like fins extending around the head. It has a long, slender tail which can inflict a venomous sting to stun prey, and can cause serious injury to a human being. Width: to 2.1m (7ft). Family Dasyatidae.

Stinkhorn, any of several species of foul-smelling Basidiomycete fungi. At first it resembles a small, whitish "egg", which contains the unripe fruit body (receptacle). When ripe the receptacle elongates, rupturing the egg. It carries with it a glutinous spore mass which attracts the flies that disperse the spores on their

bodies. Genus *Phallus*. See also pp.353–354, 354.

Stinkwood, tree of the laurel family that grows in southern Africa. It has an unpleasant odour but valuable timber. Species *Ocotea bullata*.

Stirling, James (1820–1909), Scottish philosopher who was responsible for the introduction into Britain of the works of HEGEL. His book, *The Secret of Hegel*, was published in 1865.

Stirling, town in central Scotland, on the River Forth; former county town of Stirlingshire. It is dominated by Stirling Castle, situated 128m (420ft) above the river. Stirling is also the seat of a university, founded in 1967. A market town, it has agricultural engineering, asbestos, carpet and food processing industries. Pop. (1974 est.) 211,944.

Stirling Bridge, Battle of (1297), victory by the Scots under William WALLACE over the English under John de Warenne, EDWARD I's guardian of Scotland after his conquest of it in 1296.

Stirling (shire), former county in central Scotland; since 1975 it has been part of Central Region. The county consists of highlands in the nw and lowlands in the se. The region is drained chiefly by the Forth River. The rearing of livestock, particularly dairy cattle, is a major agricultural activity. Sheep are grazed on the hills. Industries include coalmining, leather goods, brewing and paper. Stirling was the county town. Area: 1,168sq km (451sq miles). Pop. (1971 est.) 209,240.

Stoat, carnivorous mammal of the weasel family. Its slim body is about 30cm (12 in) long, including the tail, and like others of the family it has short legs and moves sinuously. It preys upon rabbits and smaller animals in many temperate and northern parts of the world. In the latter regions its fur turns from red-brown and white to white in winter, when it is known as ERMINE. Family Mustelidae; species *Mustela erminea*. See also pp.287, 304.

Stock, or gilliflower, annual plant native to s Europe, South Africa and parts of Asia, cultivated as a garden flower. It has oblong leaves and pink, purple or white flower clusters. Evening stock has aromatic lilac flowers; height: to 80cm (31 in). Family Cruciferae; species *Matthiola bicornis*.

Stock, or share, certificate of ownership of shares in a company. A company may issue shares of stock upon its formation and may issue additional shares when it needs more capital. The ownership of stock implies sharing in the control of the company's operations and majority stockholders may have decisive influence upon the operation of the company.

Stock, mass of plutonic rock (rock heated deep within the Earth) solidified at depth. It is dome-shaped but is regarded as being smaller than a BATHOLITH, which it otherwise resembles. The granites of Cornwall and Devon are examples. See also p.209.

Stockbroker, agent who buys and sells STOCKS or SHARES on behalf of another. He is employed because of his specialized knowledge of the stock market and is paid a commission proportionate to the value of the transaction.

Stock car racing. See MOTOR RACING.

Stock exchange, market which deals in STOCK and SHARE transactions. Beginning in coffee houses in the 18th century, the first stock exchange opened in London in 1773, with provincial exchanges quickly being established in other commercial centres. Soon there were stock exchanges in major cities throughout the world. Essentially an auction market, a stock exchange provides a convenient arrangement for both vendors and purchasers because all transactions are conducted by STOCKBROKERS and STOCKJOBBERs. The largest stock exchanges are in London and New York.

Stockhausen, Karlheinz (1928–), German composer and theorist who studied in Paris (1951–53) with MESSIAEN and MILHAUD. One of the foremost and most successful exponents of ELECTRONIC MUSIC. Thwarting the bulk of musical tradition, his interest centres on the fundamental

James Stewart in 1970 with a beard for his part in the film *Fools Parade*.

Stick insects feed at night, remaining motionless during the hours of light.

Stirling Castle, which dates from 1460, was a favourite home of the Stuarts.

Stock Exchange; a view of the floor of the London Stock Exchange, taken in 1963.

Stockholm

acoustical aspects of music and the relationships between juxtaposed sounds.

Stockholm, port and capital of Sweden, on Lake Mälaren's outlet to the Baltic Sea. Founded in the mid-13th century it became an important trade centre and was dominated by the HANSEATIC LEAGUE. GUSTAVUS I made Stockholm the centre of his kingdom, and put an end to the privileges of Hanseatic merchants. The city became the capital of Sweden in 1436, developed as an intellectual centre in the 17th century and attracted such people as DESCARTES. Industrial development dates from the mid-19th century. Built on several islands and peninsulas, modern Stockholm has wide streets, parks and well-planned residential areas. Industries include textiles, clothing, paper and printing, food processing, rubber, chemicals, shipbuilding, beer, metal and machine manufacturing. Pop. (1979 est.) 1,524,266.

Stockjobber, dealer on the STOCK EXCHANGE who buys and sells stocks and shares at "wholesale" level. He deals in shares on behalf of STOCKBROKERS and does not deal directly with the public. His profit derives from the "jobber's turn", the difference between the buying and selling prices of shares.

Stockport, county district in SE GREATER MANCHESTER, England; created in 1974 under the Local Government Act (1972). Area: 126sq km (49sq miles). Pop. (1979 est.) 291,700.

Stocks, instrument of punishment used in Britain until the 19th century. A wooden device with holes in which the legs or arms were secured, stocks are positioned in the main thoroughfare so that offenders were the object of public ridicule. See also PILORY.

Stockton-Darlington Railway, the world's first passenger railway, opened in 1825. It ran from Darlington to Stockton in County Durham, and its steam locomotive *Locomotion* was built by George STEPHENSON. It travelled at 24km/h (15mph) and carried 450 passengers on its first run. See also pp.506, 1568.

Stockton-on-Tees, county region in central CLEVELAND; created in 1974 under the Local Government Act (1972). Area: 195sq km (75sq miles). Pop. (1979 est.) 171,800.

Stoics, followers of the school of philosophy founded by ZENO in c. 300 BC. Their name derives from their meeting-place, the *Stoa Poecile* (painted porch) where Zeno lectured in Athens. The ethical aspect of stoicism is the most important. Founded on the premise that virtue is attainable only by living in harmony with nature, it stressed the importance of self-sufficiency and of equanimity in adversity. The philosophy of stoicisms was given its first systematic expression by CHRYSIPPUS in the 3rd century BC. It was introduced into Rome in the 2nd century BC by Panaetius of Rhodes. There is found its greatest adherents, SENECA, EPICETUS and MARCUS AURELIUS.

Stoke-on-Trent, city and county district in NW STAFFORDSHIRE, W central England. The city, on the River Trent, is the centre of the POTTERIES and is noted for its manufacture of china. The county district was created in 1974 under the Local Government Act (1972). Area: 93sq km (36sq miles). Pop. (1979 est.) 257,200.

Stoker, Bram (1847-1912), Irish novelist. His most famous book is *Dracula*, (1897), which has had many stage, film and television adaptations.

Stokes, Sir George Gabriel (1819-1903), British mathematician and physicist. He is remembered for his work with viscous fluids; his law of viscosity, describing the movement of a solid sphere in a fluid (STOKES'S LAW); and for his theorem of VECTOR ANALYSIS. He also worked on FLUORESCENCE (including the origination of the term); the concept of an ETHER; and the wave theory of light. He was a pioneer in GEODESY.

Stokes's law, in fluid mechanics, gives the terminal (final) velocity at which particles fall in a fluid (liquid or gas). For particles of radius r (less than 0.1mm) the terminal velocity is $2(d_1 - d_2)gr^2/9\eta$ where d_1 and d_2 are the densities of the particle and the

fluid, g is the gravitational constant and η the viscosity of the fluid.

Stokowski, Leopold (1882-1977), US conductor, b. Britain, who was director of the Cincinnati Symphony (1909-12) and conductor for the Philadelphia Orchestra (1912-36). He became known for his individual interpretations and flexibility of approach. He transcribed BACH's organ works for orchestra and was also musical supervisor of Walt DISNEY's *Fantasia* (1939), in which he appeared as conductor.

Stole, ecclesiastical vestment consisting of a long band of silk, coloured according to the liturgical calendar. It is worn by Anglican and Roman Catholic bishops, priests and deacons and by some Protestant clergy.

Stolon, or runner, modified underground or aerial stem growing from the basal node of a plant. Slender, elongated and prostrate, stolons develop adventitious roots. Aerial stolons are characteristic of strawberries; underground stolons are characteristic of white potato plants. See also TUBER.

Stolypin, Peter Arkadievich (1862-1911), Russian statesman, Minister of the Interior and Premier (1906-11). He suppressed the 1905 revolution but introduced reforms, dissolving the Second DUMA in 1907 and changing the electoral laws for the Third Duma. See also pp.1649, 1649.

Stomach, J-shaped organ, lying to the left and slightly below the diaphragm in man; one of the organs of the DIGESTIVE SYSTEM. It is connected at its upper end (fundus) to the gullet (oesophagus) at the cardiac orifice. At the lower end (pyloric section) it connects with the small intestine at the pylorus. The stomach itself is lined by three layers of muscle (longitudinal, circular and oblique) and a mucous layer, the gastric mucosa, that lies in folds (rugae) and contains gastric glands. These glands secrete hydrochloric acid that destroys any food bacteria, dissolves salt in the food, and makes possible the action of pepsin, the ENZYME secreted by the glands, that digests PROTEINS alone. Gastric gland secretion is controlled by psychic stimuli - the sight, smell and taste of food - and by hormonal stimuli, chiefly the HORMONE gastrin. As the food is digested, it is churned by muscular action, into a thick liquid state called chyme, at which point it passes the small intestine. See also pp.160, 160.

Stomach ache, symptom that may be ascribed to systemic disorder, psychosomatic conditions or disorder of other organs as well as to actual stomach disorders. These include ulcers, dyspepsia or gastric indigestion.

Stomata, in botany, pores mostly found on the undersides of leaves through which atmospheric gases pass in and out, for RESPIRATION and PHOTOSYNTHESIS. Surrounding each stoma are two guard cells which swell and close the stoma to prevent excessive loss of water vapour. See also TRANSPIRATION.

Stone Age, period in man's evolution during which he used stone tools and weapons. It was during this time that he progressed from making crude flaked pebble tools to finely worked arrowheads and polished and hafted axes. See also EOLITHIC AGE; MESOLITHIC AGE; NEOLITHIC AGE; PALAEOOLITHIC AGE; pp.1174-1175.

Stonechat, small thrush found in open heath and scrubland of Europe, Africa and Asia. Its name comes from its characteristic cry which sounds like stones struck upon one another. The plumage of the male is black, white and rust-brown. Stonechats feed on insects on the ground. Species *Saxicola torquata*.

Stonecrop, any plant of the genus *Sedum* of the family Crassulaceae, especially creeping sedum (*S. acre*), a succulent, low-growing plant of European origin with pungent fleshy leaves and yellow flowers found in rocky areas.

Stonefish, bottom-dwelling marine fish that lives in tropical waters of the Indo-Pacific Ocean. It has a warty, slime-covered body and sharp dorsal spines with which it can inflict a painful, sometimes

deadly, sting to human beings. Length: to 33cm (13in). Family Synbranchidae; species *Synbranchia verrucosa*. See also p.341.

Stonefly, or salmon fly, soft-bodied insect with long, narrow front wings and chewing mouthparts, found throughout the world. The aquatic nymphs have branched gills, and the adults, used as bait, are brown to black. Length: 5-60mm (0.2-2.5in). Order Plecoptera.

Stone fruit. See DRUPE.

Stonehenge, group of prehistoric standing stones on Salisbury Plain, Wiltshire, S England, 13km (8 miles) N of Salisbury. Thought to have been erected in the 2nd millennium BC, its four series of stones are circled by a ditch 91m (300ft) in diameter. The outermost series are made of sandstone and arranged in a circle. They enclose a circle of bluestone MENHIRS. The third series is horseshoe-shaped; the inner ring is ovoid with an Altar Stone within its confines. A huge upright Heelstone is positioned to the N of the circle. Early beliefs that Stonehenge was a Druid temple have been discredited. A later theory proposed that Stonehenge was used as an astronomical instrument. It was claimed, however, that the BRONZE AGE culture in which Stonehenge was created was not sophisticated enough to support this theory. See also pp.776, 1175, 1175, 1218.

Stonemasonry. See MASONRY.

Stones, Dwight (1953-), US high jumper. World record holder at 2.31m (7ft 7in) before the 1976 Olympic Games, he was only third in the Olympic competition, the wet conditions affecting this technique. At age 18, he had won a bronze medal for coming third in the high jump at the Munich Olympics.

Stoneware, opaque, non-porous, high-fired clay ware, well vitrified and intermediate between PORCELAIN and EARTHENWARE. Stoneware is often salt-glazed for utility pieces and is used for vessels and tiles. See also p.546.

Stoneworts, largest of the freshwater ALGAE. They are simple plants and are known as stoneworts because they become encrusted with hard calcium salts. Class Charophyceae.

Stoney, George Johnstone (1826-1911), British physicist who named the electron. He worked on the kinetic theory of gases and estimated the number of molecules in a volume of gas at standard temperature and pressure. His estimate of an electron's charge was incorrect because he used an incorrect value for the number of atoms in a gramme of hydrogen.

Stony-iron meteorite, type of METEORITE containing intermixed amounts of both silicate minerals (stone) and metal (nickel and iron). In some, called pallasites, separate stony fragments are contained in a cohesive mass of nickel-iron. Others, called mesosiderites, resemble stony meteorites but with an unusually large amount of interspersed metal. See also p.970.

Stony meteorite. See MASONRY.

Stoolball, bat and ball game of ancient origins. It is played by two teams of 11 on a pitch between two posts surmounted by a small, square board. The bowler or pitcher throws the ball underarm at the board from a point between the posts while the batter defends the board, or wicket, with a short, rounded bat. The batter is out if the ball hits the board or is caught by a fielder. Points are scored by running between the two posts.

Stopes, Marie Charlotte Carmichael, (1880-1958), British pioneer of birth control. After obtaining a doctorate in botany from Munich University in 1904, she began an academic career at Manchester University. She soon became concerned about inadequate contraceptive measures and campaigned for a more rational and open approach to contraception, and established the first birth control clinic in Britain in 1921. She wrote *Wise Parenthood* (1918) and *Contraception: Its Theory, History and Practice* (1923; 1931).

Stoppard, Tom (1937-), British dramatist, b. Thomas Straussler in Czechoslo-

vakia, whose work explores the philosophical problems of reality and communication with great wit and dramatic ingenuity. His reputation was established with *Rosencrantz and Guildenstern are Dead* (1966); other plays include *Jumpers* (1972), *Travesties* (1974), *Dirty Linen* (1976), a radio play, *Artist Descending a Staircase* (1972), and *Professional Foul* (1977) for television.

Storey, David Malcolm (1933-), British novelist and dramatist whose works are noted for their naturalistic approach to the emotional pressures of working people in everyday situations. His reputation was established in 1960 with the novel *This Sporting Life*. His plays include *In Celebration* (1969), *The Changing Room* (1971) and *Life Class* (1973). Saville (1976) won the Booker Prize for Fiction.

Stork, long-legged wading bird that lives along rivers, lakes, and marshes in temperate and tropical regions. Usually black, white and grey, storks have straight bills, long necks, robust bodies, long broad wings and partly webbed toes. They are diurnal birds, feeding on small animals and sometimes carrion. Length: 0.8-1.5m (2.5-5ft). Family Ciconiidae. See also pp.79, 298, 312, 330.

Storm, Theodor (1817-88), German novelist and lyric poet; his belief that literature should stem from the emotion is reflected in his verse. His best-known work is *The Rider of the White Horse* (1888). See also p.1575.

Storm, any strong disturbance of the atmosphere, usually accompanied by high winds and by various forms of precipitation. A storm wind is defined on the BEAUFORT SCALE as a wind with a speed of 103 to 117km/h (64-73mph). Storms may be categorized according to the dominant element in the disturbance. For example, there are snowstorms, thunderstorms, hailstorms and SANDSTORMS. See also pp.248-250.

Storm and Stress. See STURM UND DRANG.

Stormont, suburb in E Belfast, seat and government of NORTHERN IRELAND. The Parliament was established in 1921 with a House of Commons of 52 members and Senate of 25 members. Its legislative responsibility covered domestic matters only. Serious religious disputes led to its collapse in 1974, and Britain assumed direct rule.

Storm petrel. See PETREL.

Storm-troopers (Nazi). See SA.

Stornoway, largest town in the HEBRIDES, NW Scotland, on the E coast of the Isle of Lewis. It is an administrative centre for the Western Isles region, formed in 1975 by the Local Government Act of 1972. The main activities are fishing and weaving. Pop. (1971) 5,247.

Stoss, Veit (c.1440-1533), German GOTHIC sculptor, painter and engraver. He went to Cracow, Poland, in 1477 where he carved his masterpiece, the high altar for the Church of St Mary. Among his other works are the tomb of King Casimir IV in Cracow Cathedral and the painting *Annunciation* (1518).

Stour, name of several rivers in England, of which the chief two are the Suffolk Stour, which rises in Cambridgeshire, flows E forming part of the Suffolk-Essex border, and enters the North Sea at Harwich. Length: 76km (47 miles). The Kentish, or Great, Stour rises in Kent, ESE of Ashford, and flows NE to Pegwell Bay, N of Sandwich. Length: 64km (40 miles).

Stout, Rex (1886-1975), US author, known for his many mystery stories featuring Nero Wolfe, a detective who solved crimes from the safety of his study.

Stout, Sir Robert (1844-1930), New Zealand politician, b. Scotland. He became an MP in 1975 as a member of the new Radical Party. He was Prime Minister (1884-87) and Lord Chief Justice (1899-1926).

Stow, John (c.1525-1605), British antiquary and historian. He is best known for his *Survey of London* (1598) and *Annals of England* (1592). He also edited the *Works of Geoffrey Chaucer* (1561), and was employed by the Archbishop of Canterbury to edit chronicles dating back to medieval times.

Stow, Julian Randolph (1935–), expatriate Australian poet and novelist. His works, which use a psychological approach to the characters, include *Our-rider* (1962), a book of verse, and the novel *Tourmaline* (1963).

Stowe, Harriet Beecher (1811–96), US writer, an advocate of the abolition of slavery. Her novel *Uncle Tom's Cabin*, (1851–52) sold more than 300,000 copies in one year and helped to synthesize the opposition to slavery which led up to the AMERICAN CIVIL WAR. She later wrote a second novel about slavery, *Dred* (1856). **STP** (standard temperature and pressure), in physics, reference conditions under which the weights of equal volumes of different gases may be compared. The standard temperature is 0°C (32°F) and standard pressure is 760 mm of mercury. **Strabismus**, also called squinting, in human anatomy, condition in which the eyes cannot be aligned to look in the same direction. One eye only may be deviant, resulting in cross-eye (esotropia), wall-eye (exotropia) or direction of one eye upwards (hypertropia) or downwards (hypotropia). It is generally the result of abnormality in nervous controls; non-alignment due to defects of the eye muscles is rare. The deviant eye may become functionally blind as its unwanted image is suppressed. Severe cases may be treated using surgery.

Strabo (c.64 BC–AD 24), Greek historian and geographer. He travelled widely, collecting material for *Historical Sketches*, most of which have been lost. His *Geographical Sketches*, containing geographical and historical information of the ancient world, has survived almost intact.

Stracey, John Henry (1950–), British welterweight boxer. He started boxing professionally in 1969 and in 1973 beat Bobby Arthur to become British Champion. In 1974 he won the European Championship and in 1975 the World Championship, which he lost to Carlos Palamino in 1976.

Strachey, Giles Lytton (1880–1932), British author who was one of the leading members of the BLOOMSBURY GROUP. He revolutionized the art of writing biographies and they include *Eminent Victorians* (1918), *Queen Victoria* (1921) and *Elizabeth and Essex* (1928).

Stradivari, Antonio (c. 1644–1737), Italian violin maker; his name is often latinized to Stradivarius. Apprenticed to Nicolò AMATI, he was making violins under his own name by 1666. Stradivari perfected violin design and his instruments remain unsurpassed in brilliance of tone. He is believed to have made at least 1,116 violins, violas and cellos.

Stratford, Thomas Wentworth, 1st Earl of (1593–1641), English nobleman, leading adviser of CHARLES I. Wentworth was appointed Lord President of the North in 1628 and a privy councillor in 1629. As Lord Deputy of Ireland (1633–39) he sought to strengthen royal authority, defend PROTESTANTISM and stimulate agriculture and trade. He was made an earl in 1640. Stratford's advocacy of sovereign power led to conflict with Parliament and his IMPEACHMENT in 1640. The charges could not be substantiated and the "inflexibles" in Parliament brought in a bill of ATTAINDER. Wentworth was convicted and executed, the king reluctantly acquiescing in the hope of appeasing Parliament. See also pp.1421, 1421.

Strain, change in dimensions of an object subjected to STRESS. Linear strain is the ratio of the change in length of a bar to its original length while being stretched or compressed. Shearing strain describes the change in shape of a body whose opposite faces are pushed in different directions. HOOK'S LAW for elastic bodies states that strain is proportional to stress up to the body's elastic limit.

Strain gauge, device used to measure mechanical STRAIN such as that caused by the movement of a bridge or glacier. See also p.848.

Straits Settlements, possessions of the British EAST INDIA COMPANY in SE Asia which in 1867 came under British colonial authority. The Straits Settlements were

dissolved in 1946, SINGAPORE becoming a Crown colony and the remainder being incorporated in the MALAYAN UNION.

Strange Case of Dr Jekyll and Mr Hyde, The (1886). See JEKYLL and HYDE.

Strangeness, in physics, concept introduced in 1953 by Murray GELL-MANN to explain the unexpected stability of ELEMENTARY PARTICLES such as KAONS and HYPERONS. He assigned an integral strangeness number to other "ordinary" particles, such as electrons and protons. **Strapwork**, architectural surface decoration, commonly of ceilings, involving a low relief of braiding, interlaced scrollwork, cross-hatching and shield forms, often perforated with small holes. It may be executed in plaster, wood, stone, metal or papier mâché. Strapwork originated in The Netherlands c.1540 and was introduced to Britain in the late 16th century. **Strasberg, Lee** (1901–), US theatrical director, b. Poland. With Harold Clurman and Cheryl Crawford he founded the Group Theater (1931), where he began teaching the Stanislavsky method of acting, which insists on the actor's inner identification with the character. Then with Elia KAZAN and Crawford he founded the Actor's Studio (1947).

Strasbourg, city in E France, on the River Ill 4km (2 miles) W of its confluence with the River Rhine; capital of Bas-Rhin département and the commercial capital of Alsace region. Known in Roman times as Argentoratum, the city was destroyed by the Huns in the 5th century. It became part of the HOLY ROMAN EMPIRE in 923 and developed into an important commercial centre. It became a free imperial city in 1262. Strasbourg was a centre of medieval German literature and of 16th-century Protestantism. It was seized by France in 1681, regained by Germany after the FRANCO-PRUSSIAN WAR, but recovered by France at the end of WWI. German troops occupied the city during WWII. The former University of Strasbourg dates from 1621. Industries: metallurgy, oil refining, food processing. Its river port on the Rhine is France's chief grain port. Pop. (1975) 257,303.

Strassmann, Fritz (1902–), West German chemist. In 1938 he opened the nuclear era when he discovered, with Otto Hahn, the process of splitting uranium atoms (NUCLEAR FISSION) by bombardment with neutrons. He shared the Fermi Award of the US Atomic Energy Commission with Otto Hahn and Lise Meitner. **Strategic Arms Limitation Talks**. See SALT AGREEMENTS.

Stratford-on-Avon, county district in S WARWICKSHIRE, England; created in 1974 under the Local Government Act (1972). Area: 977sq km (377sq miles). Pop. (1979 est.) 99,200.

Stratford-upon-Avon, birthplace of William SHAKESPEARE and home of the ROYAL SHAKESPEARE COMPANY. David GARRICK held a small Shakespeare festival in Stratford in 1769 and moves to commemorate the tercentenary of Shakespeare's birth led in 1879 to the opening of a Memorial Theatre. By WWII, the season has lengthened to fill most of the year and the appointment of Peter HALL led to the grant of a royal charter in 1961.

Strathclyde, region in W Scotland, formed in 1975 from most of the former county of ARGYLL and a small part of the former county of GLASGOW. Area: 13,727sq km (5,300sq miles). Pop. (1975 est.) 2,504,000.

Strathcona and Mount Royal, Donald Alexander Smith, 1st Baron (1820–1914), Scottish-born Canadian fur trader, financier and statesman. Joining the HUDSON'S BAY COMPANY in 1838, he rose to become its resident governor at Montreal and helped to finance the CANADIAN PACIFIC Railway. He became High Commissioner for Canada in London in 1896 and was made a peer the following year.

Stratification, in sociology, a hierarchical system of social organization in which the extent to which members of groups possess socially esteemed traits determines their position. Usually these traits include wealth, status and power. Basic kinds of stratification are CLASS, CASTE and ESTATE.

Stratification, layering in rocks. It occurs in sedimentary rocks and in those igneous rocks formed from lava flows and volcanic fragmental deposits. Layers range in depth and vary in shape. Strata may occur as thin sheets covering many square kilometres or as thick bodies extending only a few square metres. Separations between individual layers are called stratification planes. They parallel the strata they bound, being horizontal near flat layers and exhibiting inclination on a sloping surface. See also STRATUM; STRATIGRAPHY; pp.208, 210.

Stratigraphy, branch of geology dealing with stratified or layered rocks. SEDIMENTARY ROCKS are layered in the order of deposition, usually by water. These may then have undergone metamorphism, folding, faulting or igneous intrusion. Some IGNEOUS ROCKS are also stratified, particularly those associated with volcanic systems that continue to produce material. See also pp.210, 262, 264.

Stratocirrus, or cirrostratus, cloud, almost transparent cloud that usually lies at a height of more than 7km (4 miles) and constitutes a continuous layer into which wispy cirrus clouds have fused. See also pp.249–251.

Stratocumulus cloud, low-lying cloud of various forms. In its most distinctive appearance each cloudlet has a puffy shape, arranged in a regular dappled pattern. It is usually at a height of less than 2km (1 mile). See also pp.246–247.

Stratosphere, section of the Earth's atmosphere between the troposphere and the higher mesosphere. It is about 40km (25 miles) thick and for half this distance the temperature is fairly constant (–60° to –50°C (–76° to –38°F) and then rises to a maximum of –1°C (30°F). The stratosphere contains most of the atmosphere's ozone. See also PE pp.66–67.

Stratum, in geology, single layer or bed of SEDIMENTARY ROCK. In biology, it is a layer of tissue, as in the stratum basale of the uterus. In archaeology, strata refer to cultural layers.

Stratus cloud, low-lying cloud (below 2km; 1 mile) which is patchy and formless. It is the sort of cloud that drifts raggedly across hilly country, obscuring local features. See also pp.249–251.

Straub, Johann Baptiste (1704–1784), German rococo sculptor who worked initially in Vienna (1728–34) and later in Munich. His major works include the high altar for the church of St Michael, Bergam-Laim, Munich, and the altar for the monastery at Ettal.
